**T.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Design of Steel Structures**

Day & Date: Wednesday, 25-01-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory it should be solved in first 30 minutes in answer Book. Page No.3 (starting page of the Answer Book) Each question carries one mark.
- 2) Don't forget to mention the question paper Set (P/Q/R/S) at the top of the Same page.
- 3) Use of scientific non programmable calculator is allowed.
- 4) Assume suitable data if necessary and mention it clearly before the Solution.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) Load on connection is not eccentric for \_\_\_\_\_.
  - a) Lap Joint
  - b) Single-cover butt joint
  - c) Double-cover butt joint
  - d) Any of the joints mentioned above
- 2) If the same number of bolts has been used in the joints, then which of the following will yield highest efficiency \_\_\_\_\_.
  - a) chain
  - b) Diamond
  - c) Staggered
  - d) staggered diamond
- 3) If the diameter of a bolt is 20 mm, then the maximum number of bolts(s) that can be accommodated in one row in a 140 mm wide flat is (are) \_\_\_\_\_.
  - a) 2
  - b) 3
  - c) 6
  - d) 1
- 4) For a single unequal angle tie member, the leg preferred for making connection is the \_\_\_\_\_.
  - a) Longer one
  - b) Shorter one
  - c) Any of the two
  - d) Longer if bolted and shorter if welded
- 5) Minimum number of battens required in a built up column are \_\_\_\_\_.
  - a) 2
  - b) 3
  - c) 4
  - d) 6

6) In figure shown below

- a) Both 1 and 2 are shear connections
  - b) Both 1 and 2 are tension connections
  - c) 1 is shear connection and 2 is a tension connection
  - d) 1 is tension connection and 2 is a shear connection
- 7) The slenderness ratio of a lacing member should not be greater than \_\_\_\_.
- a) 180
  - b) 150
  - c) 145
  - d) 165
- 8) The shape factor for triangular section is \_\_\_\_.
- a) 1.50
  - b) 1.14
  - c) 2.34
  - d) 1.78
- 9) For welded plate girder, the  $b/t_f$  and  $d/t_w$  ratios are respectively 6.7 and 91. The section of the plate girder will be classified as \_\_\_\_.
- a) Plastic
  - b) Compact
  - c) Semi-compact
  - d) Slender
- 10) The net tensile strength of plate per pitch is 63.76 kN and strength of solid plate per pitch length is 106.27 kN then the efficiency of the joint is \_\_\_\_.
- a) 59.99%
  - b) 16.67%
  - c) 166.67%
  - d) 95.99%
- 11) A beam section is classified as low shear case when the factored shear force is less than
- a)  $0.4V_d$
  - b)  $0.6V_d$
  - c)  $0.8V_d$
  - d)  $V_d$
- 12) The partial safety factors for dead load and live load for a roof truss for limit state of serviceability are respectively \_\_\_\_.
- a) and 1.5
  - b) 1.2 and 1.0
  - c) 1.0 and 1.0
  - d) 1.2 and 1.5
- 13) If the number of possible plastic hinges are 4 and the degree of indeterminacy of the structure is 2 then the number of possible independent mechanism (n) will be \_\_\_\_.
- a) 6
  - b) 4
  - c) 2
  - d) 1
- 14) A frame has an indeterminacy of 2 and the numbers of possible plastic hinges are 3. The collapse will be
- a) Partial
  - b) Complete
  - c) Over complete
  - d) Cannot be ascertained

-----	---

**T.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Design of Steel Structures**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any three questions from each section Q.2 and Q.5 are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly before the Solution.  
 4) Draw the appropriate sketches wherever necessary.  
 5) Use of scientific non programmable calculator is allowed.  
 6) Use of IS 800-2007 and IS 875 are allowed, but not allowed for MCQ (Q.No.1)

**Section – I**

- Q.2 a)** Explain plastic section, compact section, semi-compact section, slender section **05**
- b)** The loads on a floor beam of a commercial building are as below: **05**  
 Dead load:  $6 \text{ kN/m}^2$   
 Live load:  $4 \text{ kN/m}^2$   
 Roof finish :  $1.5 \text{ kN/m}^2$   
 Determine the design load for limit state of strength and limit state of serviceability.
- Q.3 a)** Compute the tensile strength of an angle section ISA 150 x 115 x 8 mm of Fe 410 grade of steel connected with the gusset plate as shown in fig. **05**  
 below for the following cases  
 i) Gross section yielding  
 ii) Net section Rupture

- b)** Calculate the value of the least radius of gyration for compound column consisting of ISHB 250@536.6 N/m with one cover plate 300 mm x 20 mm on each flange. **04**

- Q.4** Design a double angle discontinuous strut to carry factored load of 135kN resulting from the combination with wind load. The length of the strut is 3.0 m between intersections. The angles are placed back-to-back (with long leg connected) and are tack bolted. Use steel of grade Fe 410. **09**
- a) Angles are placed on opposite sides of 12 mm gusset plate.  
b) Angles are placed on same side of 12 mm gusset plate.
- Q.5** Design the built up column 9 m long to carry factored axial compressive load of 1100 kN. The column is restrained in position but not in direction at both the ends. Design the column with connecting system as battens with bolted connections. Use two channel sections back-to-back. Use steel of grade Fe 410 **09**

**Section - II**

- Q.6** Find the shape factor for following sections. **10**
- a) Square of side 'a' with its diagonal parallel to zz-axis  
b) Triangular section
- Q.7** Design a laterally unsupported beam for the following data **09**
- Effective span = 4 m  
Maximum bending moment = 550 kN-m  
Maximum shear force = 200 kN  
Steel of grade Fe 410
- Q.8** Design an I section purlin for an industrial building situated in the outskirts of Allahabad, to support a galvanized corrugated iron sheet roof for the following data: **09**
- Roof cover = Galvanised corrugated (GC) sheeting (130 N/m<sup>2</sup>)  
Spacing of trusses = 6m  
Span of truss = 15 m  
Spacing of purlins = 1.5m  
Inclination of main rafter to horizontal = 30°  
Weight of GI sheets = 30 N/m<sup>2</sup>  
Wind load = 2.0kN/m<sup>2</sup>
- Q.9** A column ISHB 350 @ 661.2 N/m carries an axial compressive factored load of 1700 kN. Design a suitable bolted gusset base. The base rests on M20 grade concrete pedestal. Use 24 mm diameter bolts of grade 4.6 for making the connection. **09**

<b>Seat No.</b>	
-----------------	--

Day & Date: Wednesday, 25-01-2023  
Time: 10:00 AM To 01:00 PM

**Instructions:**

- 1) Q. No. 1 is compulsory it should be solved in first 30 minutes in answer Book. Page No.3 (starting page of the Answer Book) Each question carries one mark.
- 2) Don't forget to mention the question paper Set (P/Q/R/S) at the top of the Same page.
- 3) Use of scientific non programmable calculator is allowed.
- 4) Assume suitable data if necessary and mention it clearly before the Solution.

## Marks:14

14

- 1) The shape factor for triangular section is \_\_\_\_\_.  
a) 1.50                                      b) 1.14  
c) 2.34                                      d) 1.78
- 2) For welded plate girder, the  $b/t_f$  and  $d/t_w$  ratios are respectively 6.7 and 91. The section of the plate girder will be classified as \_\_\_\_\_.  
a) Plastic                                      b) Compact  
c) Semi-compact                            d) Slender
- 3) The net tensile strength of plate per pitch is 63.76 kN and strength of solid plate per pitch length is 106.27 kN then the efficiency of the joint is \_\_\_\_\_.  
a) 59.99%                                      b) 16.67%  
c) 166.67%                                      d) 95.99%
- 4) A beam section is classified as low shear case when the factored shear force is less than \_\_\_\_\_.  
a)  $0.4V_d$                                       b)  $0.6V_d$   
c)  $0.8V_d$                                       d)  $V_d$
- 5) The partial safety factors for dead load and live load for a roof truss for limit state of serviceability are respectively \_\_\_\_\_.  
a) and 1.5                                      b) 1.2 and 1.0  
c) 1.0 and 1.0                                d) 1.2 and 1.5
- 6) If the number of possible plastic hinges are 4 and the degree of indeterminacy of the structure is 2 then the number of possible independent mechanism (n) will be \_\_\_\_\_.  
a) 6    b) 4  
c) 2    d) 1

- 7) A frame has an indeterminacy of 2 and the numbers of possible plastic hinges are 3. The collapse will be
- Partial
  - Complete
  - Over complete
  - Cannot be ascertained
- 8) Load on connection is not eccentric for \_\_\_\_\_.  
  - Lap Joint
  - Single-cover butt joint
  - Double-cover butt joint
  - Any of the joints mentioned above
- 9) If the same number of bolts has been used in the joints, then which of the following will yield highest efficiency \_\_\_\_\_.  
  - chain
  - Diamond
  - Staggered
  - staggered diamond
- 10) If the diameter of a bolt is 20 mm, then the maximum number of bolts(s) that can be accommodated in one row in a 140 mm wide flat is (are) \_\_\_\_\_.  
  - 2
  - 3
  - 6
  - 1
- 11) For a single unequal angle tie member, the leg preferred for making connection is the \_\_\_\_\_.  
  - Longer one
  - Shorter one
  - Any of the two
  - Longer if bolted and shorter if welded
- 12) Minimum number of battens required in a built up column are \_\_\_\_\_.  
  - 2
  - 3
  - 4
  - 6
- 13) In figure shown below

- Both 1 and 2 are shear connections
  - Both 1 and 2 are tension connections
  - 1 is shear connection and 2 is a tension connection
  - 1 is tension connection and 2 is a shear connection
- 14) The slenderness ratio of a lacing member should not be greater than \_\_\_\_\_.  
  - 180
  - 150
  - 145
  - 165

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

1) In figure shown below

- Both 1 and 2 are shear connections
  - Both 1 and 2 are tension connections
  - 1 is shear connection and 2 is a tension connection
  - 1 is tension connection and 2 is a shear connection
- 2) The slenderness ratio of a lacing member should not be greater than \_\_\_\_.
- 180
  - 150
  - 145
  - 165
- 3) The shape factor for triangular section is \_\_\_\_.
- 1.50
  - 1.14
  - 2.34
  - 1.78
- 4) For welded plate girder, the  $b/t_f$  and  $d/t_w$  ratios are respectively 6.7 and 91. The section of the plate girder will be classified as \_\_\_\_.
- Plastic
  - Compact
  - Semi-compact
  - Slender
- 5) The net tensile strength of plate per pitch is 63.76 kN and strength of solid plate per pitch length is 106.27 kN then the efficiency of the joint is \_\_\_\_.
- 59.99%
  - 16.67%
  - 166.67%
  - 95.99%

- 6) A beam section is classified as low shear case when the factored shear force is less than
  - a)  $0.4V_d$
  - b)  $0.6V_d$
  - c)  $0.8V_d$
  - d)  $V_d$
- 7) The partial safety factors for dead load and live load for a roof truss for limit state of serviceability are respectively \_\_\_\_\_.
  - a) and 1.5
  - b) 1.2 and 1.0
  - c) 1.0 and 1.0
  - d) 1.2 and 1.5
- 8) If the number of possible plastic hinges are 4 and the degree of indeterminacy of the structure is 2 then the number of possible independent mechanism (n) will be \_\_\_\_\_.
  - a) 6
  - b) 4
  - c) 2
  - d) 1
- 9) A frame has an indeterminacy of 2 and the numbers of possible plastic hinges are 3. The collapse will be
  - a) Partial
  - b) Complete
  - c) Over complete
  - d) Cannot be ascertained
- 10) Load on connection is not eccentric for \_\_\_\_\_.
  - a) Lap Joint
  - b) Single-cover butt joint
  - c) Double-cover butt joint
  - d) Any of the joints mentioned above
- 11) If the same number of bolts has been used in the joints, then which of the following will yield highest efficiency \_\_\_\_\_.
  - a) chain
  - b) Diamond
  - c) Staggered
  - d) staggered diamond
- 12) If the diameter of a bolt is 20 mm, then the maximum number of bolts(s) that can be accommodated in one row in a 140 mm wide flat is (are) \_\_\_\_\_.
  - a) 2
  - b) 3
  - c) 6
  - d) 1
- 13) For a single unequal angle tie member, the leg preferred for making connection is the \_\_\_\_\_.
  - a) Longer one
  - b) Shorter one
  - c) Any of the two
  - d) Longer if bolted and shorter if welded
- 14) Minimum number of battens required in a built up column are \_\_\_\_\_.
  - a) 2
  - b) 3
  - c) 4
  - d) 6

 below for the following cases  
 i) Gross section yielding  
 ii) Net section Rupture

- b)** Calculate the value of the least radius of gyration for compound column consisting of ISHB 250@536.6 N/m with one cover plate 300 mm x 20 mm on each flange. **04**

- Q.4** Design a double angle discontinuous strut to carry factored load of 135kN resulting from the combination with wind load. The length of the strut is 3.0 m between intersections. The angles are placed back-to-back (with long leg connected) and are tack bolted. Use steel of grade Fe 410. **09**
- a) Angles are placed on opposite sides of 12 mm gusset plate.  
b) Angles are placed on same side of 12 mm gusset plate.
- Q.5** Design the built up column 9 m long to carry factored axial compressive load of 1100 kN. The column is restrained in position but not in direction at both the ends. Design the column with connecting system as battens with bolted connections. Use two channel sections back-to-back. Use steel of grade Fe 410 **09**

**Section - II**

- Q.6** Find the shape factor for following sections. **10**
- a) Square of side 'a' with its diagonal parallel to zz-axis  
b) Triangular section
- Q.7** Design a laterally unsupported beam for the following data **09**
- Effective span = 4 m  
Maximum bending moment = 550 kN-m  
Maximum shear force = 200 kN  
Steel of grade Fe 410
- Q.8** Design an I section purlin for an industrial building situated in the outskirts of Allahabad, to support a galvanized corrugated iron sheet roof for the following data: **09**
- Roof cover = Galvanised corrugated (GC) sheeting (130 N/m<sup>2</sup>)  
Spacing of trusses = 6m  
Span of truss = 15 m  
Spacing of purlins = 1.5m  
Inclination of main rafter to horizontal = 30°  
Weight of GI sheets = 30 N/m<sup>2</sup>  
Wind load = 2.0kN/m<sup>2</sup>
- Q.9** A column ISHB 350 @ 661.2 N/m carries an axial compressive factored load of 1700 kN. Design a suitable bolted gusset base. The base rests on M20 grade concrete pedestal. Use 24 mm diameter bolts of grade 4.6 for making the connection. **09**

**Geotechnical Engineering**

Day & Date: Tuesday, 31-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Which of the following is a unit less quantity?  
 a) Coefficient of consolidation      b) Coefficient of permeability  
 c) Compression Index                  d) Coefficient of volume change
- 2) The degree of saturation of a soil can be defined as the ratio of  
 a) weight of water to dry soil weight  
 b) volume of water to gross volume of soil  
 c) volume of water to volume of voids  
 d) weight of water to weight of soil
- 3) The shear test in which full consolidation occurs and no excess pore pressure is set up at any stage is known as \_\_\_\_\_.  
 a) CD test                                      b) CU test  
 c) UU test                                      d) None of these
- 4) For active state to develop, the backfill of the retaining wall should undergo \_\_\_\_\_.  
 a) Zero expansion                              b) Zero compression  
 c) Maximum expansion                      d) Maximum compression
- 5) The y-intercept of coulomb's failure envelope is equal to \_\_\_\_\_.  
 a) Cohesion                                      b) Maximum shear stress  
 c) Maximum normal stress                  d) Angle of shearing resistance
- 6) If a cohesive soil specimen is subjected to a vertical compressive load, the inclination of the cracks to the horizontal is \_\_\_\_\_.  
 a) 90°    b) 45°  
 c) 22.5°    d) 0°
- 7) If the poisons ratio of a backfill material is 0.5, the theoretical value of coefficient of earth pressure at rest is \_\_\_\_\_.  
 a) 0.33    b) 1.0  
 c) 0.5    d) 1.5
- 8) Optimum moisture content is the moisture content when \_\_\_\_\_.  
 a) settlement is maximum                  b) permeability is maximum  
 c) shear strength is maximum              d) dry density is maximum

- 9) For a standard compaction test, the mass of the hammer and drop of hammer are as follows \_\_\_\_\_.  
 a) 2.6 kg and 450mm                      b) 2.6 kg and 310mm  
 c) 4.8 kg and 310mm                      d) 4.89 kg and 450mm
- 10) With an increase in the liquid limit, compression index \_\_\_\_\_.  
 a) decreases                                  b) increases  
 c) remains constant                      d) may increase or decreases
- 11) The unit weight of a completely saturated soil is given by \_\_\_\_\_.  
 a)  $\frac{(G + e)\gamma_w}{1 + e}$                                   b)  $\frac{(G - 1)\gamma_w}{1 + e}$   
 c)  $\frac{(1 + e)\gamma_w}{1 - e}$                                   d)  $\frac{(1 - e)\gamma_w}{G + e}$
- 12) The maximum depth of excavation that can be made in a saturated clay having  $C = 40 \text{ kN/m}^2$ ,  $\Phi = 0^\circ$ ,  $\gamma = 20 \text{ kN/m}^3$  without any lateral support.  
 a) 5m    b) 8m  
 c) 9m    d) 10m
- 13) As per Rankin's theory, the wall friction is \_\_\_\_\_.  
 a) Equal to  $\Phi$                                   b) greater than  $\Phi$   
 c) less than  $\Phi$                                   d) zero
- 14) The constant head permeability test is suitable for \_\_\_\_\_.  
 a) coarse-grained soils                      b) fine-grained soils  
 c) both these soil                              d) neither of these soils

**T.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**

**CIVIL ENGINEERING**  
**Geotechnical Engineering**

Day & Date: Tuesday, 31-01-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q.No.2 and Q.No.6 are compulsory.  
2) Solve any two question from remaining from each Section.  
3) Figures to the right indicates full marks.  
4) Assume suitable data wherever needed and mention it clearly.

**Section – I**

- Q.2 Answer any four questions. 08**
- List the various methods of water content determination of soil.
  - Draw Three Phase diagram and show details.
  - Define Degree of saturation and air content.
  - Enlist various methods of Laboratory methods to find strength parameters of soil.
  - Draw strength envelope for cohesive and non-cohesive soil.
- Q.3 a) Porosity of soil sample is 30%, and specific gravity of its particle is 2.65. 05**  
Calculate its void ratio, dry unit weight, saturated unit weight, and submerged unit weight. Also calculate the bulk unit weight of soil, if its degree of saturation is 70%.
- b) Explain the salient features of IS plasticity chart. 05**
- Q.4 a) A falling head permeability test is to be performed on a soil sample whose 05**  
permeability is  $2 \times 10^{-5}$  cm/s. What diameter of stand pipe should be used if the head is to drop from 30 cm to 25 cm in 2 minutes? The C.S. area and length of sample are 50 cm<sup>2</sup> and 8.5 cm respectively. How much time will it take for the head to drop from 45 to 30 cm for the same soil?
- b) Write a note on characteristics of flow net. 05**
- Q.5 a) Compare Direct Box shear test with Triaxial Compression Test. 05**
- b) Consolidated undrained triaxial tests are performed on two identical 05**  
specimens of saturated, remolded soil with pore pressure measurements. The observations are recorded in the table below. Determine the values of the shear parameters, for the soil both in terms of total and effective stresses.

Cell Pressure (kPa)	Deviator stress at failure (kPa)	Pore pressure at failure (kPa)
250	179	100
350	242	150

## Section - II

**Q.6 Answer any four questions. 08**

- Define zero air void line.
- Draw a typical e-p curve and label its various parts.
- Enlist the assumptions made in Rankine's theory.
- Define Passive earth pressure.
- Define compression Index.

**Q.7 a) Explain the various types of rollers used for compaction with their suitability. 05**

- b) The following results were obtained from a standard compaction test on a sample of soil. 05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

**Q.8 a) Derive Terzaghi's equation governing 1-D consolidation. State assumptions associated with the equations. 05**

- b) The laboratory consolidation data for an undisturbed clay sample are as follows  $e_1 = 1.00$ ,  $\sigma_1 = 85 \text{ kN/m}^2$  and  $e_2 = 0.80$ ,  $\sigma_2 = 465 \text{ kN/m}^2$ . Find the compression index. 05**

**Q.9 a) Derive the earth pressure coefficient for active case. 05**

- b) A retaining wall 10 m height with a smooth vertical back retains a backfill with  $C = 0 \text{ kN/m}^2$ ,  $\Phi = 25^\circ$  and  $\gamma = 17 \text{ kN/m}^3$ . What is the total Rankine's active thrust on the wall. 05**

## Section - II

**Q.6 Answer any four questions. 08**

- a) Define zero air void line.
- b) Draw a typical e-p curve and label its various parts.
- c) Enlist the assumptions made in Rankine's theory.
- d) Define Passive earth pressure.
- e) Define compression Index.

**Q.7 a) Explain the various types of rollers used for compaction with their suitability. 05**

- b) The following results were obtained from a standard compaction test on a sample of soil. 05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

**Q.8 a) Derive Terzaghi's equation governing 1-D consolidation. State assumptions associated with the equations. 05**

- b) The laboratory consolidation data for an undisturbed clay sample are as follows  $e_1 = 1.00$ ,  $\sigma_1 = 85 \text{ kN/m}^2$  and  $e_2 = 0.80$ ,  $\sigma_2 = 465 \text{ kN/m}^2$ . Find the compression index. 05**

**Q.9 a) Derive the earth pressure coefficient for active case. 05**

- b) A retaining wall 10 m height with a smooth vertical back retains a backfill with  $C = 0 \text{ kN/m}^2$ ,  $\Phi = 25^\circ$  and  $\gamma = 17 \text{ kN/m}^3$ . What is the total Rankine's active thrust on the wall. 05**

**S**

- 8) As per Rankin's theory, the wall friction is \_\_\_\_\_.
  - a) Equal to  $\Phi$
  - b) greater than  $\Phi$
  - c) less than  $\Phi$
  - d) zero
- 9) The constant head permeability test is suitable for \_\_\_\_\_.
  - a) coarse-grained soils
  - b) fine-grained soils
  - c) both these soils
  - d) neither of these soils
- 10) Which of the following is a unit less quantity?
  - a) Coefficient of consolidation
  - b) Coefficient of permeability
  - c) Compression Index
  - d) Coefficient of volume change
- 11) The degree of saturation of a soil can be defined as the ratio of
  - a) weight of water to dry soil weight
  - b) volume of water to gross volume of soil
  - c) volume of water to volume of voids
  - d) weight of water to weight of soil
- 12) The shear test in which full consolidation occurs and no excess pore pressure is set up at any stage is known as \_\_\_\_\_.
  - a) CD test
  - b) CU test
  - c) UU test
  - d) None of these
- 13) For active state to develop, the backfill of the retaining wall should undergo \_\_\_\_\_.
  - a) Zero expansion
  - b) Zero compression
  - c) Maximum expansion
  - d) Maximum compression
- 14) The y-intercept of Coulomb's failure envelope is equal to \_\_\_\_\_.
  - a) Cohesion
  - b) Maximum shear stress
  - c) Maximum normal stress
  - d) Angle of shearing resistance

**T.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Geotechnical Engineering**

Day & Date: Tuesday, 31-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q.No.2 and Q.No.6 are compulsory.  
 2) Solve any two question from remaining from each Section.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**Section – I**

- Q.2 Answer any four questions. 08**
- List the various methods of water content determination of soil.
  - Draw Three Phase diagram and show details.
  - Define Degree of saturation and air content.
  - Enlist various methods of Laboratory methods to find strength parameters of soil.
  - Draw strength envelope for cohesive and non-cohesive soil.
- Q.3 a) Porosity of soil sample is 30%, and specific gravity of its particle is 2.65. 05**  
 Calculate its void ratio, dry unit weight, saturated unit weight, and submerged unit weight. Also calculate the bulk unit weight of soil, if its degree of saturation is 70%.
- b) Explain the salient features of IS plasticity chart. 05**
- Q.4 a) A falling head permeability test is to be performed on a soil sample whose 05**  
 permeability is  $2 \times 10^{-5}$  cm/s. What diameter of stand pipe should be used if the head is to drop from 30 cm to 25 cm in 2 minutes? The C.S. area and length of sample are 50 cm<sup>2</sup> and 8.5 cm respectively. How much time will it take for the head to drop from 45 to 30 cm for the same soil?
- b) Write a note on characteristics of flow net. 05**
- Q.5 a) Compare Direct Box shear test with Triaxial Compression Test. 05**  
**b) Consolidated undrained triaxial tests are performed on two identical 05**  
 specimens of saturated, remolded soil with pore pressure measurements. The observations are recorded in the table below. Determine the values of the shear parameters, for the soil both in terms of total and effective stresses.

Cell Pressure (kPa)	Deviator stress at failure (kPa)	Pore pressure at failure (kPa)
250	179	100
350	242	150

## Section - II

**Q.6 Answer any four questions. 08**

- Define zero air void line.
- Draw a typical e-p curve and label its various parts.
- Enlist the assumptions made in Rankine's theory.
- Define Passive earth pressure.
- Define compression Index.

**Q.7 a) Explain the various types of rollers used for compaction with their suitability. 05**

- b) The following results were obtained from a standard compaction test on a sample of soil. 05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

**Q.8 a) Derive Terzaghi's equation governing 1-D consolidation. State assumptions associated with the equations. 05**

- b) The laboratory consolidation data for an undisturbed clay sample are as follows  $e_1 = 1.00$ ,  $\sigma_1 = 85 \text{ kN/m}^2$  and  $e_2 = 0.80$ ,  $\sigma_2 = 465 \text{ kN/m}^2$ . Find the compression index. 05**

**Q.9 a) Derive the earth pressure coefficient for active case. 05**

- b) A retaining wall 10 m height with a smooth vertical back retains a backfill with  $C = 0 \text{ kN/m}^2$ ,  $\Phi = 25^\circ$  and  $\gamma = 17 \text{ kN/m}^3$ . What is the total Rankine's active thrust on the wall. 05**

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov - 2022**  
**CIVIL ENGINEERING**  
**Highway & Tunnel Engineering**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options. 14**

- 1) Identify the correct order of engineering surveys for highway alignment \_\_\_\_\_.
  - a) Final location and detailed surveys, map study, Reconnaissance Survey, Preliminary survey
  - b) Reconnaissance Survey, Final location and detailed surveys, map study and Preliminary survey
  - c) Map study, Reconnaissance Survey, Preliminary survey and Final location and detailed surveys
  - d) Preliminary survey, Final location and detailed surveys, map study and Reconnaissance Survey
  
- 2) The extra widening required for a two-lane national highway at a horizontal curve of 300m radius, considering the wheelbase of 8m and a design speed of 100kmph \_\_\_\_\_.
 

a) 0.42m	b) 0.62m
c) 0.82m	d) 0.92m
  
- 3) Which of the following are requirements for the design of a transition curve for a highway system?
  - 1) Rate of change of grade
  - 2) Rate of change of radial acceleration
  - 3) Rate of change of super elevation
  - 4) Rate of change of curvature

Select the correct answer using the code given below:

a) 1,2 and 3	b) 2,1 and 4
c) 1,3 and 4	d) 2,3 and 4
  
- 4) The specific gravity of the paving bitumen as per IS-73-1992 lies between \_\_\_\_\_.
 

a) 1.06 to 1.10	b) 1.02 to 10.06
c) 0.97 to 1.02	d) 0.92 to 0.97

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) In Section - I, Q. No. 2 is compulsory and solve any ONE full question from remaining questions Q. No. 3 and 4.  
 2) In Section - II, Q. No. 5 is compulsory and solve any ONE full question from remaining questions Q. No. 6 and 7.  
 3) Assume suitable data wherever needed and mention it clearly.

**Section – I**

**Q.2 Answer any two questions.** **10**

- a) Briefly explain the engineering surveys needed for locating a new highway.
- b) Write a short on the importance of
  - 1) Camber
  - 2) Shoulders
  - 3) Super elevation
- c) Derive the expression for finding the overtaking sight distance on a highway.

**Q.3 Answer any three questions.** **18**

- a) The speeds of overtaking and overtaken vehicle are 65 and 40kmph respectively. If the average acceleration is  $0.92\text{m/sec}^2$ . Determine the overtaking sight distance indicating the details of the overtaking operations. Assume the reaction time of the driver = 2.0sec.
- b) A valley curve of the State Highway is formed by a descending gradient of 1 in 20 meeting an ascending gradient of 1 in 30. Design the length of a valley curve to fulfill both comfort condition and head light sight distance required for a design speed of 80kmph. Assume allowable rate of change of centrifugal acceleration  $C=0.60\text{m/sec}^3$ . Consider reaction time=2.5sec and coefficient of longitudinal friction,  $f=0.35$
- c) The load-penetration values of CBR tests conducted on soil specimens are given below. Determine the average CBR value of the soil if 10 divisions of the dial represent 40 kg load, on in the calibration chart of the proving ring. Plot the graph.

Penetration, mm	Load in Divisions
0.0	0
0.5	10
1.0	18
1.5	26
2.0	34
2.5	40
3.0	50
4.0	62
5.0	70
7.5	87
10.0	95
12.5	109

- d) A two-lane highway has a horizontal curve of a radius of 250m and the total pavement width is 7.6m at the curve. A minimum sight distance of 240m is to be provided at this curve. Assuming the length of the curve to be greater than the sight distance, determine the set-back distance up to which all obstructions should be removed.

**Q.4 Answer any three questions.****18**

- a) Explain ESWL. Briefly explain the graphical method determination of ESWL.
- b) Define Vehicle Damage Factor. Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16t.
- 1) LCV with rear axle load of 2.0t
  - 2) HCV with rear axle load of 15.5t
- c) Explain the plate bearing test procedure and how the modulus of subgrade reaction, K is determined.
- d) List different tests on road aggregates and mention their advantages and limitations.

**Section – II****Q.5 Answer any two questions.****10**

- a) C.C. Pavement is constructed using the following data
- 1) Modulus of elasticity  $3 \times 10^5 \text{ kg/cm}^2$
  - 2) Poisson's ratio=0.15
  - 3) Thickness of CC pavement = 18 cm
  - 4) Modulus of subgrade reaction- $6.0 \text{ kg/cm}^3$
  - 5) Wheel load = 5100 kg
  - 6) Radius of loaded area = 15 cm
  - 7) Relative stiffness of slab to subgrade ( $l$ ) =70.61cm
  - 8) Equivalent radius of resisting section( $b$ )=14cm
- Calculate stresses at the Interior, Edge, and corner by Westergaard's method.
- b) A traffic survey conducted on four lane divided carriageway road reported traffic of 1400 CVPD (in each directions). Assuming growth rate of 5% with design life 20 years and vehicle damage factor of 3.5, calculate design traffic to be used in pavement design in terms of million standard axles (msa) as per IRC, lane distribution factor=0.75.
- c) Explain in detail the factors to be considered for the design of flexible pavement.

**Q.6 Answer any three questions.****18**

- a) Mention the specifications of materials and construction steps for Bituminous Concrete (BC) roads.
- b) State the objectives of tunnel lining & discuss different materials used in tunnel lining.
- c) If the CBR of the soil used in the upper 500 mm of the embankment is 8% and the CBR of the borrow soil used for preparing the 500 mm thick compacted subgrade above embankment is 20%, what is the effective subgrade Modulus/CBR for design of flexible pavement? Consider Poisson's ratio=0.35. Use surface deflection,  $\delta = 1.41 \text{ mm}$  from IIT PAVE software. Draw a neat sketch of equivalent subgrade system diagram.

- d) Write a brief note on surface and sub surface drainage of road system.

**Q.7 Answer any three questions.**

**18**

- a) Determine the warping stresses at interior, edge and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m interval and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction  $K$  is  $6.9 \text{ kg/cm}^3$  and radius of loaded area is 15cm. Assume temperature differential during day to be  $0.6^\circ\text{C}$  per cm slab thickness (for warping stress at interior and edge) and maximum temperature differential of  $0.4^\circ\text{C}$  per cm slab thickness during the night (for warping stress at the corner). Assume  $e=10 \times 10^{-6}$  per  $^\circ\text{C}$ ,  $E=3 \times 10^5 \text{ kg/cm}^2$ ,  $\mu=0.15$ . Use Bradbury chart given in **Figure-1**.
- b) State methods of tunneling in soft rock. Explain with sketch any one method.
- c) With the help of a neat diagram, explain the method of determining the aggregate mixes by Rothfutch's method.
- d) With the help of a neat sketch explain the different components parts of a flexible pavement. Also mention their functions.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.
  - a) Tensile strain at the bottom of subgrade and vertical compressive strain on top of bituminous layer
  - b) Tensile strain at the top of subgrade and vertical compressive strain on bottom of bituminous layer
  - c) Tensile strain at the bottom of bituminous layer and vertical compressive strain on top of subgrade
  - d) Vertical compressive strain at the bottom of subgrade and Tensile strain at the bottom of bituminous layer
- 2) Bitumen grade 80/100 indicates that under the standard test conditions, the penetration value of bitumen would vary from,
 

a) 0.8mm to 1mm	b) 8mm to 10mm
c) 8cm to 10cm	d) 0.08mm to 0.1mm
- 3) If ruling gradient is 1 in 20 on a horizontal curve of radius 75m, then compensated grade should be \_\_\_\_\_.
 

a) 1 in 20	b) 1 in 15
c) 1 in 30	d) 1 in 25
- 4) What are the standards for testing of road macadam in Aggregate Impact Test?
 

a) 14kg wt, 38cm drop, 15 blows	b) 14kg wt, 35cm drop, 20 blows
c) 18kg wt, 35cm drop, 15 blows	d) 18kg wt, 30cm drop, 20 blows
- 5) In tunnelling mucking means \_\_\_\_\_.
 

a) Drilling holes	b) blasting
c) Removal of debris	d) none
- 6) Which one of the following methods of tunneling is used in hard rock?
 

a) Forepoling method	b) Needle beam method
c) Heading and benching method	d) Shield tunneling method

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) What are the standards for testing of road macadam in Aggregate Impact Test?
 

a) 14kg wt, 38cm drop, 15 blows	b) 14kg wt, 35cm drop, 20 blows
c) 18kg wt, 35cm drop, 15 blows	d) 18kg wt, 30cm drop, 20 blows
- 2) In tunnelling mucking means \_\_\_\_\_.
 

a) Drilling holes	b) blasting
c) Removal of debris	d) none
- 3) Which one of the following methods of tunneling is used in hard rock?
 

a) Forepoling method	b) Needle beam method
c) Heading and benching method	d) Shield tunneling method
- 4) The value of camber recommended for cement concrete roads in areas of heavy rainfall is, \_\_\_\_\_.
 

a) 1 in 50	b) 1 in 25
c) 1 in 40	d) 1 in 33
- 5) Identify the correct order of engineering surveys for highway alignment \_\_\_\_\_.
 

a) Final location and detailed surveys, map study, Reconnaissance Survey, Preliminary survey
b) Reconnaissance Survey, Final location and detailed surveys, map study and Preliminary survey
c) Map study, Reconnaissance Survey, Preliminary survey and Final location and detailed surveys
d) Preliminary survey, Final location and detailed surveys, map study and Reconnaissance Survey
- 6) The extra widening required for a two-lane national highway at a horizontal curve of 300m radius, considering the wheelbase of 8m and a design speed of 100kmph \_\_\_\_\_.
 

a) 0.42m	b) 0.62m
c) 0.82m	d) 0.92m

- 7) Which of the following are requirements for the design of a transition curve for a highway system?
- 1) Rate of change of grade
  - 2) Rate of change of radial acceleration
  - 3) Rate of change of super elevation
  - 4) Rate of change of curvature
- Select the correct answer using the code given below:
- |              |              |
|--------------|--------------|
| a) 1,2 and 3 | b) 2,1 and 4 |
| c) 1,3 and 4 | d) 2,3 and 4 |
- 8) The specific gravity of the paving bitumen as per IS-73-1992 lies between \_\_\_\_\_
- |                 |                  |
|-----------------|------------------|
| a) 1.06 to 1.10 | b) 1.02 to 10.06 |
| c) 0.97 to 1.02 | d) 0.92 to 0.97  |
- 9) For a given road, the safe stopping sight distance is 80m and the passing sight distance is 300m. What is the intermediate sight distance?
- |         |         |
|---------|---------|
| a) 220m | b) 190m |
| c) 160m | d) 150m |
- 10) The recommended camber value for a thin bituminous surface for a heavy rainfall area \_\_\_\_\_.
- |         |         |
|---------|---------|
| a) 2.0% | b) 1.5% |
| c) 3.0% | d) 2.5% |
- 11) Which one of the following pairs is **NOT** correctly matched?
- |                      |                         |
|----------------------|-------------------------|
| a) Horizontal Curves | Super elevation         |
| b) Los Angeles Test  | Hardness of aggregates  |
| c) Impact Test       | Toughness of aggregates |
| d) Soundness Test    | Purity of aggregates    |
- 12) Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.
- a) Tensile strain at the bottom of subgrade and vertical compressive strain on top of bituminous layer
  - b) Tensile strain at the top of subgrade and vertical compressive strain on bottom of bituminous layer
  - c) Tensile strain at the bottom of bituminous layer and vertical compressive strain on top of subgrade
  - d) Vertical compressive strain at the bottom of subgrade and Tensile strain at the bottom of bituminous layer
- 13) Bitumen grade 80/100 indicates that under the standard test conditions, the penetration value of bitumen would vary from,
- |                 |                    |
|-----------------|--------------------|
| a) 0.8mm to 1mm | b) 8mm to 10mm     |
| c) 8cm to 10cm  | d) 0.08mm to 0.1mm |
- 14) If ruling gradient is 1 in 20 on a horizontal curve of radius 75m, then compensated grade should be \_\_\_\_\_.

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov – 2022**  
**CIVIL ENGINEERING**  
**Highway & Tunnel Engineering**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) In Section - I, Q. No. 2 is compulsory and solve any ONE full question from remaining questions Q. No. 3 and 4.  
 2) In Section - II, Q. No. 5 is compulsory and solve any ONE full question from remaining questions Q. No. 6 and 7.  
 3) Assume suitable data wherever needed and mention it clearly.

**Section – I**

**Q.2 Answer any two questions. 10**

- Briefly explain the engineering surveys needed for locating a new highway.
- Write a short on the importance of
  - Camber
  - Shoulders
  - Super elevation
- Derive the expression for finding the overtaking sight distance on a highway.

**Q.3 Answer any three questions. 18**

- The speeds of overtaking and overtaken vehicle are 65 and 40kmph respectively. If the average acceleration is  $0.92\text{m/sec}^2$ . Determine the overtaking sight distance indicating the details of the overtaking operations. Assume the reaction time of the driver = 2.0sec.
- A valley curve of the State Highway is formed by a descending gradient of 1 in 20 meeting an ascending gradient of 1 in 30. Design the length of a valley curve to fulfill both comfort condition and head light sight distance required for a design speed of 80kmph. Assume allowable rate of change of centrifugal acceleration  $C=0.60\text{m/sec}^3$ . Consider reaction time=2.5sec and coefficient of longitudinal friction,  $f=0.35$
- The load-penetration values of CBR tests conducted on soil specimens are given below. Determine the average CBR value of the soil if 10 divisions of the dial represent 40 kg load, on in the calibration chart of the proving ring. Plot the graph.

Penetration, mm	Load in Divisions
0.0	0
0.5	10
1.0	18
1.5	26
2.0	34
2.5	40
3.0	50
4.0	62
5.0	70
7.5	87
10.0	95
12.5	109

- d) A two-lane highway has a horizontal curve of a radius of 250m and the total pavement width is 7.6m at the curve. A minimum sight distance of 240m is to be provided at this curve. Assuming the length of the curve to be greater than the sight distance, determine the set-back distance up to which all obstructions should be removed.

**Q.4 Answer any three questions.****18**

- a) Explain ESWL. Briefly explain the graphical method determination of ESWL.
- b) Define Vehicle Damage Factor. Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16t.
  - 1) LCV with rear axle load of 2.0t
  - 2) HCV with rear axle load of 15.5t
- c) Explain the plate bearing test procedure and how the modulus of subgrade reaction, K is determined.
- d) List different tests on road aggregates and mention their advantages and limitations.

**Section – II****Q.5 Answer any two questions.****10**

- a) C.C. Pavement is constructed using the following data
  - 1) Modulus of elasticity  $3 \times 10^5 \text{ kg/cm}^2$
  - 2) Poisson's ratio=0.15
  - 3) Thickness of CC pavement = 18 cm
  - 4) Modulus of subgrade reaction- $6.0 \text{ kg/cm}^3$
  - 5) Wheel load = 5100 kg
  - 6) Radius of loaded area = 15 cm
  - 7) Relative stiffness of slab to subgrade ( $l$ ) =70.61cm
  - 8) Equivalent radius of resisting section( $b$ )=14cm
 Calculate stresses at the Interior, Edge, and corner by Westergaard's method.
- b) A traffic survey conducted on four lane divided carriageway road reported traffic of 1400 CVPD (in each directions). Assuming growth rate of 5% with design life 20 years and vehicle damage factor of 3.5, calculate design traffic to be used in pavement design in terms of million standard axles (msa) as per IRC, lane distribution factor=0.75.
- c) Explain in detail the factors to be considered for the design of flexible pavement.

**Q.6 Answer any three questions.****18**

- a) Mention the specifications of materials and construction steps for Bituminous Concrete (BC) roads.
- b) State the objectives of tunnel lining & discuss different materials used in tunnel lining.
- c) If the CBR of the soil used in the upper 500 mm of the embankment is 8% and the CBR of the borrow soil used for preparing the 500 mm thick compacted subgrade above embankment is 20%, what is the effective subgrade Modulus/CBR for design of flexible pavement? Consider Poisson's ratio=0.35. Use surface deflection,  $\delta = 1.41 \text{ mm}$  from IIT PAVE software. Draw a neat sketch of equivalent subgrade system diagram.

- d) Write a brief note on surface and sub surface drainage of road system.

**Q.7 Answer any three questions.**

**18**

- a) Determine the warping stresses at interior, edge and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m interval and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction  $K$  is  $6.9 \text{ kg/cm}^3$  and radius of loaded area is 15cm. Assume temperature differential during day to be  $0.6^\circ\text{C}$  per cm slab thickness (for warping stress at interior and edge) and maximum temperature differential of  $0.4^\circ\text{C}$  per cm slab thickness during the night (for warping stress at the corner). Assume  $e=10 \times 10^{-6}$  per  $^\circ\text{C}$ ,  $E=3 \times 10^5 \text{ kg/cm}^2$ ,  $\mu=0.15$ . Use Bradbury chart given in **Figure-1**.
- b) State methods of tunneling in soft rock. Explain with sketch any one method.
- c) With the help of a neat diagram, explain the method of determining the aggregate mixes by Rothfutch's method.
- d) With the help of a neat sketch explain the different components parts of a flexible pavement. Also mention their functions.

**Fig. I – Bradbury Chart**

## Highway & Tunnel Engineering

Max. Marks: 70

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Figures to the right indicates full marks.
- 4) Assume suitable data wherever needed and mention it clearly.

Marks: 14

14

- 1) The recommended camber value for a thin bituminous surface for a heavy rainfall area \_\_\_\_\_.  
a) 2.0%                                      b) 1.5%  
c) 3.0%                                      d) 2.5%
- 2) Which one of the following pairs is **NOT** correctly matched?  
a) Horizontal Curves                      Super elevation  
b) Los Angeles Test                      Hardness of aggregates  
c) Impact Test                              Toughness of aggregates  
d) Soundness Test                          Purity of aggregates
- 3) Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.  
a) Tensile strain at the bottom of subgrade and vertical compressive strain on top of bituminous layer  
b) Tensile strain at the top of subgrade and vertical compressive strain on bottom of bituminous layer  
c) Tensile strain at the bottom of bituminous layer and vertical compressive strain on top of subgrade  
d) Vertical compressive strain at the bottom of subgrade and Tensile strain at the bottom of bituminous layer
- 4) Bitumen grade 80/100 indicates that under the standard test conditions, the penetration value of bitumen would vary from,  
a) 0.8mm to 1mm                              b) 8mm to 10mm  
c) 8cm to 10cm                                d) 0.08mm to 0.1mm
- 5) If ruling gradient is 1 in 20 on a horizontal curve of radius 75m, then compensated grade should be \_\_\_\_\_.  
a) 1 in 20                                      b) 1 in 15  
c) 1 in 30                                      d) 1 in 25
- 6) What are the standards for testing of road macadam in Aggregate Impact Test?  
a) 14kg wt, 38cm drop, 15 blows      b) 14kg wt, 35cm drop, 20 blows  
c) 18kg wt, 35cm drop, 15 blows      d) 18kg wt, 30cm drop, 20 blows

Marks: 14

14

- 1) Catchment area is also known as \_\_\_\_\_.
  - a) Watershed area
  - b) Drainage Basin
  - c) Basin
  - d) All the above
- 2) Evaporation is a \_\_\_\_\_.
  - a) Cooling process
  - b) Heating process
  - c) Combined process
  - d) None of above
- 3) Khosla's formula for monthly runoff  $R_m$  due to monthly rainfall  $P_m$  is  $R_m = P_m - L_m$  Where  $L_m$  is \_\_\_\_\_.
  - a) a constant
  - b) monthly loss and depends on the mean monthly catchment temperature
  - c) a monthly loss coefficient depending on the antecedent precipitation index
  - d) a monthly loss depending on the infiltration characteristics of the catchment
- 4) The theory or unit hydrograph was first introduced by \_\_\_\_\_.
  - a) Snyder
  - b) VenTe chow
  - c) Bernard
  - d) L. K. Sherman
- 5) A hyetograph is a plot of \_\_\_\_\_.
  - a) Cumulative rainfall vs time
  - b) Rainfall intensity vs time
  - c) Rainfall depth vs duration
  - d) Discharge vs time
- 6) When the slope of the ground is more than  $16^\circ$ , it has an effect in \_\_\_\_\_.
  - a) Increasing the rate of infiltration
  - b) Reducing the rate of infiltration
  - c) Has no effect on the rate of infiltration
  - d) None of these

- 7) Direct runoff, is made up of \_\_\_\_\_.  
a) Surface runoff prompt interflow and channel precipitation  
b) Surface runoff, infiltration and evapotranspiration  
c) Overland flow and infiltration  
d) Rainfall and evaporation
- 8) Frequency of Irrigation is dependent upon the type of \_\_\_\_\_.  
a) Soil and crop  
b) Soil and climate  
c) Soil, crop and climate  
d) Soil, crop, climate and fertilizer
- 9) Crop period is the time that crop takes from \_\_\_\_\_.  
a) From first watering to last watering  
b) From sowing to its Harvesting  
c) From sowing to last Harvesting  
d) From first watering before sowing to its Harvesting
- 10) Lift irrigation is a flow \_\_\_\_\_.  
a) By gravity  
b) From low level to higher level  
c) In delta region  
d) Through sprinkler heads
- 11) If the depth is 8.64 cm on a field over a base period of 10 days then duty is \_\_\_\_\_.  
a) 10 ha/cumec  
b) 100 ha/cumec  
c) 864 ha/cumec  
d) 1000 ha/cumec
- 12) The moisture held by the well-drained soil against gravity drainage by the force of surface tension between the soil drains and water drops is called \_\_\_\_\_.  
a) Field capacity water  
b) Hygroscopic water  
c) Capillary water  
d) Water of adhesion
- 13) Crops grown during monsoon month and harvested in October are called as \_\_\_\_\_ Crops.  
a) Rabbi  
b) Kharif  
c) Rabbi and Kharif  
d) Hot weather
- 14) If the duty for a crop with base period 120 days is 1500 Hectares/cumec then its delta is \_\_\_\_\_.  
a) 69.12  
b) 108  
c) 0.6912  
d) None of these

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Hydrology and Water Resources Engineering**

Day & Date: Tuesday, 07-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. 2 & Q. 6 are compulsory.  
 2) Attempt any two questions from remaining questions of each section.  
 3) Make suitable assumptions only if necessary. But state them clearly.

**Section – I**

- Q.2 a)** Define infiltration, List the factors that affect the infiltration, Also, explain the working of Ring infiltrometer with sketch. **04**
- b)** Figure shows a typical layout of catchment area ABCDF. Six rain gauge station are established at A B CD E & F as shown in figure precipitation observed at six rain gauge station in July 2021 is as follows. **06**

Station	A	B	C	D	E	F
Precipitation (mm)	100	120	130	180	125	150

Find the average precipitation over the catchment during July - 2021 by Thiessen's polygon method.

- Q.3 a)** What is meant by runoff? Explain methods of separation of Base flow? **04**
- b)** The ordinates of 4 hr UG are given below. Derive the ordinates of 12 hr UG. **05**

Time (hrs)	0	4	8	12	16	20	24	28	32	36	40	44
4Hr. UHO	0	20	80	130	150	130	90	52	27	15	5	0

- Q.4 a)** Define term design flood? List the methods of estimation of flood? Explain any one in detail. **04**
- b)** Estimate the stream flow for the measurement data as given below. **05**

Distance (m)	0	2	4	6	8	10	12	14	16	18	20
Depth (m)	0	0.5	1.2	1.8	2.4	2.6	2.0	1.8	1.6	1	0
Velocity at 0.2 d	0	0.3	0.4	0.6	0.9	1.2	0.9	0.7	0.5	0.3	0
Velocity at 0.8 d	0	0.2	0.3	0.35	0.4	0.45	0.4	0.5	0.4	0.2	0

- Q.5 a)** Discuss Various types of aquifers with reference to ground water availability. **04**
- b)** Diameter of well is 8m. Normal water level is 6 m below G.L. Pumping depresses water level to 16m below GL. 4 hours after stopping pumping water recuperated by 6 m. What is the specific capacity of the well? Find the yield of well for drawdown of 6 m. **05**

### Section – II

- Q.6 a)** After How many days will you supply water to soil (clay Loam), in order to ensure efficient irrigation of the given crop if: **06**
- Field capacity of soil – 27 %
  - Permanent wilting point –14 %
  - Density of soil – 1.5 gm/cm<sup>3</sup>
  - Effective depth of root zone – 75 cm
  - Daily consumptive use of water for a given crop – 11 mm
- b)** What is meant by 'Duty' and 'Delta' of canal water? Develop the relationship between duty and delta for given base period. **04**
- Q.7 a)** What is meant by furrow irrigation and sprinkler irrigation? Which one is preferred in India and Why? **05**
- b)** Discuss the concept of 'Bandhara irrigation system' with its necessity and layout. **04**
- Q.8 a)** Write a note on preparation of land for irrigation. **04**
- b)** Describe with neat sketch, general layout of a lift irrigation scheme. Briefly explain design procedure of lift irrigation scheme. **05**
- Q.9 a)** Discuss the concept of watershed management with reference to soil and water conservation. **05**
- b)** Write a note on canal revenue assessment methods. **04**

<b>Seat No.</b>

Max. Marks: 70

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Figures to the right indicates full marks.
- 4) Assume suitable data wherever needed and mention it clearly.

### MCQ/Objective Type Questions

Marks: 14

14

- 1) Frequency of Irrigation is dependent upon the type of \_\_\_\_\_.
  - a) Soil and crop
  - b) Soil and climate
  - c) Soil, crop and climate
  - d) Soil, crop, climate and fertilizer
- 2) Crop period is the time that crop takes from \_\_\_\_\_.
  - a) From first watering to last watering
  - b) From sowing to its Harvesting
  - c) From sowing to last Harvesting
  - d) From first watering before sowing to its Harvesting
- 3) Lift irrigation is a flow \_\_\_\_\_.
  - a) By gravity
  - b) From low level to higher level
  - c) In delta region
  - d) Through sprinkler heads
- 4) If the depth is 8.64 cm on a field over a base period of 10 days then duty is \_\_\_\_\_.
  - a) 10 ha/cumec
  - b) 100 ha/cumec
  - c) 864 ha/cumec
  - d) 1000 ha/cumec
- 5) The moisture held by the well-drained soil against gravity drainage by the force of surface tension between the soil drains and water drops is called \_\_\_\_\_.
  - a) Field capacity water
  - b) Hygroscopic water
  - c) Capillary water
  - d) Water of adhesion
- 6) Crops grown during monsoon month and harvested in October are called as \_\_\_\_\_ Crops.
  - a) Rabbi
  - b) Kharif
  - c) Rabbi and Kharif
  - d) Hot weather
- 7) If the duty for a crop with base period 120 days is 1500 Hectares/cumec then its delta is \_\_\_\_\_.
  - a) 69.12
  - b) 108
  - c) 0.6912
  - d) None of these

- 8) Catchment area is also known as \_\_\_\_\_.  
a) Watershed area                      b) Drainage Basin  
c) Basin                                      d) All the above
- 9) Evaporation is a \_\_\_\_\_.  
a) Cooling process                      b) Heating process  
c) Combined process                      d) None of above
- 10) Khosla's formula for monthly runoff  $R_m$  due to monthly rainfall  $P_m$  is  $R_m = P_m - L_m$  Where  $L_m$  is \_\_\_\_\_.  
a) a constant  
b) monthly loss and depends on the mean monthly catchment temperature  
c) a monthly loss coefficient depending on the antecedent precipitation index  
d) a monthly loss depending on the infiltration characteristics of the catchment
- 11) The theory or unit hydrograph was first introduced by \_\_\_\_\_.  
a) Snyder                                      b) VenTe chow  
c) Bernard                                      d) L. K. Sherman
- 12) A hyetograph is a plot of \_\_\_\_\_.  
a) Cumulative rainfall vs time                      b) Rainfall intensity vs time  
c) Rainfall depth vs duration                      d) Discharge vs time
- 13) When the slope of the ground is more than  $16^\circ$ , it has an effect in \_\_\_\_\_.  
a) Increasing the rate of infiltration  
b) Reducing the rate of infiltration  
c) Has no effect on the rate of infiltration  
d) None of these
- 14) Direct runoff, is made up of \_\_\_\_\_.  
a) Surface runoff prompt interflow and channel precipitation  
b) Surface runoff, infiltration and evapotranspiration  
c) Overland flow and infiltration  
d) Rainfall and evaporation

 3) Make suitable assumptions only if necessary. But state them clearly.

**Section – I**

- Q.2 a)** Define infiltration, List the factors that affect the infiltration, Also, explain the working of Ring infiltrometer with sketch. **04**
- b)** Figure shows a typical layout of catchment area ABCDF. Six rain gauge station are established at A B CD E & F as shown in figure precipitation observed at six rain gauge station in July 2021 is as follows. **06**

Station	A	B	C	D	E	F
Precipitation (mm)	100	120	130	180	125	150

Find the average precipitation over the catchment during July - 2021 by Thiessen's polygon method.

- Q.3 a)** What is meant by runoff? Explain methods of separation of Base flow? **04**
- b)** The ordinates of 4 hr UG are given below. Derive the ordinates of 12 hr UG. **05**

Time (hrs)	0	4	8	12	16	20	24	28	32	36	40	44
4Hr. UHO	0	20	80	130	150	130	90	52	27	15	5	0

- Q.4** a) Define term design flood? List the methods of estimation of flood? Explain any one in detail. **04**
- b) Estimate the stream flow for the measurement data as given below. **05**

Distance (m)	0	2	4	6	8	10	12	14	16	18	20
Depth (m)	0	0.5	1.2	1.8	2.4	2.6	2.0	1.8	1.6	1	0
Velocity at 0.2 d	0	0.3	0.4	0.6	0.9	1.2	0.9	0.7	0.5	0.3	0
Velocity at 0.8 d	0	0.2	0.3	0.35	0.4	0.45	0.4	0.5	0.4	0.2	0

- Q.5** a) Discuss Various types of aquifers with reference to ground water availability. **04**
- b) Diameter of well is 8m. Normal water level is 6 m below G.L. Pumping depresses water level to 16m below GL. 4 hours after stopping pumping water recuperated by 6 m. What is the specific capacity of the well? Find the yield of well for drawdown of 6 m. **05**

### Section – II

- Q.6** a) After How many days will you supply water to soil (clay Loam), in order to ensure efficient irrigation of the given crop if:  
 i) Field capacity of soil – 27 %  
 ii) Permanent wilting point –14 %  
 iii) Density of soil – 1.5 gm/cm<sup>3</sup>  
 iv) Effective depth of root zone – 75 cm  
 v) Daily consumptive use of water for a given crop – 11 mm **06**
- b) What is meant by 'Duty' and 'Delta' of canal water? Develop the relationship between duty and delta for given base period. **04**
- Q.7** a) What is meant by furrow irrigation and sprinkler irrigation? Which one is preferred in India and Why? **05**
- b) Discuss the concept of 'Bandhara irrigation system' with its necessity and layout. **04**
- Q.8** a) Write a note on preparation of land for irrigation. **04**
- b) Describe with neat sketch, general layout of a lift irrigation scheme. Briefly explain design procedure of lift irrigation scheme. **05**
- Q.9** a) Discuss the concept of watershed management with reference to soil and water conservation. **05**
- b) Write a note on canal revenue assessment methods. **04**

<b>Seat No.</b>

# Hydrology and Water Resources Engineering

Max. Marks: 70

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Figures to the right indicates full marks.
- 4) Assume suitable data wherever needed and mention it clearly.

Marks: 14

14

- 1) If the depth is 8.64 cm on a field over a base period of 10 days then duty is \_\_\_\_\_.  
a) 10 ha/cumec                      b) 100 ha/cumec  
c) 864 ha/cumec                    d) 1000 ha/cumec
- 2) The moisture held by the well-drained soil against gravity drainage by the force of surface tension between the soil drains and water drops is called \_\_\_\_\_.  
a) Field capacity water              b) Hygroscopic water  
c) Capillary water                  d) Water of adhesion
- 3) Crops grown during monsoon month and harvested in October are called as \_\_\_\_\_ Crops.  
a) Rabbi                                 b) Kharif  
c) Rabbi and Kharif                 d) Hot weather
- 4) If the duty for a crop with base period 120 days is 1500 Hectares/cumec then its delta is \_\_\_\_\_.  
a) 69.12                                 b) 108  
c) 0.6912                                d) None of these
- 5) Catchment area is also known as \_\_\_\_\_.  
a) Watershed area                    b) Drainage Basin  
c) Basin                                  d) All the above
- 6) Evaporation is a \_\_\_\_\_.  
a) Cooling process                    b) Heating process  
c) Combined process                d) None of above
- 7) Khosla's formula for monthly runoff  $R_m$  due to monthly rainfall  $P_m$  is  $R_m = P_m - L_m$  Where  $L_m$  is \_\_\_\_\_.  
a) a constant  
b) monthly loss and depends on the mean monthly catchment temperature  
c) a monthly loss coefficient depending on the antecedent precipitation index  
d) a monthly loss depending on the infiltration characteristics of the catchment

- 8) The theory of unit hydrograph was first introduced by \_\_\_\_\_.
  - a) Snyder
  - b) VenTe chow
  - c) Bernard
  - d) L. K. Sherman
- 9) A hyetograph is a plot of \_\_\_\_\_.
  - a) Cumulative rainfall vs time
  - b) Rainfall intensity vs time
  - c) Rainfall depth vs duration
  - d) Discharge vs time
- 10) When the slope of the ground is more than  $16^\circ$ , it has an effect in \_\_\_\_\_.
  - a) Increasing the rate of infiltration
  - b) Reducing the rate of infiltration
  - c) Has no effect on the rate of infiltration
  - d) None of these
- 11) Direct runoff, is made up of \_\_\_\_\_.
  - a) Surface runoff prompt interflow and channel precipitation
  - b) Surface runoff, infiltration and evapotranspiration
  - c) Overland flow and infiltration
  - d) Rainfall and evaporation
- 12) Frequency of Irrigation is dependent upon the type of \_\_\_\_\_.
  - a) Soil and crop
  - b) Soil and climate
  - c) Soil, crop and climate
  - d) Soil, crop, climate and fertilizer
- 13) Crop period is the time that crop takes from \_\_\_\_\_.
  - a) From first watering to last watering
  - b) From sowing to its Harvesting
  - c) From sowing to last Harvesting
  - d) From first watering before sowing to its Harvesting
- 14) Lift irrigation is a flow \_\_\_\_\_.
  - a) By gravity
  - b) From low level to higher level
  - c) In delta region
  - d) Through sprinkler heads

Day & Date: Tuesday, 07-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. 2 & Q. 6 are compulsory.  
 2) Attempt any two questions from remaining questions of each section.  
 3) Make suitable assumptions only if necessary. But state them clearly.

**Section – I**

- Q.2** a) Define infiltration, List the factors that affect the infiltration, Also, explain the working of Ring infiltrometer with sketch. **04**
- b) Figure shows a typical layout of catchment area ABCDF. Six rain gauge station are established at A B CD E & F as shown in figure precipitation observed at six rain gauge station in July 2021 is as follows. **06**

Station	A	B	C	D	E	F
Precipitation (mm)	100	120	130	180	125	150

Find the average precipitation over the catchment during July - 2021 by Thiessen's polygon method.

- Q.3** a) What is meant by runoff? Explain methods of separation of Base flow? **04**
- b) The ordinates of 4 hr UG are given below. Derive the ordinates of 12 hr UG. **05**

Time (hrs)	0	4	8	12	16	20	24	28	32	36	40	44
4Hr. UHO	0	20	80	130	150	130	90	52	27	15	5	0

- Q.4 a)** Define term design flood? List the methods of estimation of flood? Explain any one in detail. **04**
- b)** Estimate the stream flow for the measurement data as given below. **05**

Distance (m)	0	2	4	6	8	10	12	14	16	18	20
Depth (m)	0	0.5	1.2	1.8	2.4	2.6	2.0	1.8	1.6	1	0
Velocity at 0.2 d	0	0.3	0.4	0.6	0.9	1.2	0.9	0.7	0.5	0.3	0
Velocity at 0.8 d	0	0.2	0.3	0.35	0.4	0.45	0.4	0.5	0.4	0.2	0

- Q.5 a)** Discuss Various types of aquifers with reference to ground water availability. **04**
- b)** Diameter of well is 8m. Normal water level is 6 m below G.L. Pumping depresses water level to 16m below GL. 4 hours after stopping pumping water recuperated by 6 m. What is the specific capacity of the well? Find the yield of well for drawdown of 6 m. **05**

### Section – II

- Q.6 a)** After How many days will you supply water to soil (clay Loam), in order to ensure efficient irrigation of the given crop if: **06**
- Field capacity of soil – 27 %
  - Permanent wilting point –14 %
  - Density of soil – 1.5 gm/cm<sup>3</sup>
  - Effective depth of root zone – 75 cm
  - Daily consumptive use of water for a given crop – 11 mm
- b)** What is meant by 'Duty' and 'Delta' of canal water? Develop the relationship between duty and delta for given base period. **04**
- Q.7 a)** What is meant by furrow irrigation and sprinkler irrigation? Which one is preferred in India and Why? **05**

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) The maximum stress in compression steel for mild steel is
 

a) $0.87 f_y$	b) $< 0.87 f_y$
c) $f_y$	d) $0.446 f_{ck}$
- 2) The minimum reinforcement when tor steel used is \_\_\_\_\_ of gross area.
 

a) 0.12%	b) 0.15%
c) 0.18%	d) 0.20%
- 3) An RCC beam of 200mm X 300mm effective is subjected to factored shear force 30 kN. The maximum nominal shear stress is \_\_\_\_\_ MPa
 

a) 0.6	b) 0.5
c) 0.4	d) 0.2
- 4) Deflection of doubly reinforced beam are \_\_\_\_\_ compared to singly reinforced beams of same depth
 

a) more	b) less
c) equal	d) none of above
- 5) In LSM total area of stress block is \_\_\_\_\_.
 

a) $0.36 f_{ck} X_u$	b) $0.67 f_{ck} X_u$
c) $1.15 f_{ck} X_u$	d) $0.87 f_{ck} X_u$
- 6) The simple or continuous slabs are analyzed for \_\_\_\_\_.
 

a) Design foundation	b) Design reinforcement
c) Design moments	d) Design slab
- 7) What is assumption in steel beam theory of doubly reinforced beam
 

a) Only steel bar resists tension
b) Only concrete bar resists tension
c) Stress in tension steel equal to stress in compression steel
d) Both concrete and steel resist compression

**Design of Concrete Structures I**

Day & Date: Thursday, 09-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. 5 and Q. 6 are compulsory.  
2) Solve any two questions from remaining questions of each Section.  
3) Use of IS 456 & non programmable calculator is allowed.  
4) Assume suitable data if necessary and mention it clearly.  
5) Draw neat sketches wherever necessary.

**Section – I**

- Q.2** A roof of clear dimensions 4m x 5m supported on walls of 230mm thickness, with corners are held down. All the four edges of the slab are discontinuous. Design the slab, if the beam is carrying a live load of 3.5 kN/m<sup>2</sup>. Use M 20 & Fe 415 steel **09**
- Q.3** A rectangular beam is to be simply supported on support of 250mm width. The clear span of the beam is 5.8m. The beam is having width of 300mm. The super imposed load is 12kN/m. Design the section. Use M 20 & Fe 415 steel **09**
- Q.4** A doubly reinforced beam has width of 250mm & 450mm deep to center of tensile reinforcement. It is reinforced with 2-16mm diameter in compression zone with an effective cover of 50mm & 4-25mm diameter as tensile steel. Find the flexure strength & safe UDL on the simply supported beam of span 6m. Use M20 concrete & Fe 250 steel. **09**
- Q.5** A Tee beam RC floor system consists of 120mm thick slab supported by beams at 3m center to center. The effective width & depth of web 300mm x 580mm. Main reinforcement consists of 8-20mm diameter. The grade of concrete & steel used are M20 & Fe415 grade respectively. Determine the moment of resistance of Tee beam if it used as simply supported beam of span 3.6m. **10**

**Section – II**

- Q.6** Design a rectangular beam of effective spans 7m to carry a dead load of 10 kN/m & live load of 12 kN/m. The beam is continuous over 3 spans & is supported by columns. Use M20 concrete & Fe 415 steel. **10**
- Q.7** Determine the reinforcement required for beam size 300mm x 600mm subjected to a factored bending moment 120 kNm, a factored shear force 90 kN & a factored torsion moment of 50 kNm. Use M 20 concrete & Fe 415 steel. **09**
- Q.8** A short column 400mm x 400mm is provided with 8-16mm diameter, if the length of column is 2.25m. It is effectively held in position at both ends & restrained against rotation at one end. Find ultimate load for column. Use M20 & Fe415. **09**

- Q.9** Design a circular column with helical reinforcement to carry an axial load of 1800 kN. The column has spiral ties. The column is 3.2m long & is effectively held in at both ends, but not restrained against rotation.  
Use M 25 concrete & Fe 500 steel.

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) A 12m long R.C T-beam is spaced at 3.25m with web of 0.4m wide and 1m deep, supports flange slab of 100mm thick. The effective flange width of beam will be
 

a) 3 m	b) 3.25 m
c) 2.5 m	d) 2 m
- 2) Force on 300mm x 500 mm deep beam, subjected to shear force of 150 kN and torsion 30 kNm, then equivalent shear is
 

a) 80 kN	b) 246 kN
c) 210 kN	d) 310 kN
- 3) In effective width of flange formula  $L_o$  defined as distance between points of zero Moment is considered due to
 

a) Within $L_o$ stresses are uniform
b) Strain compatibility
c) Beyond $L_o$ , flange will be in tension and ineffective
d) None of above
- 4) What is the recommended value of effective length if the column is effectively held in position and fixed against rotation in both ends
 

a) 0.81	b) 0.51
c) 0.651	d) 0.911
- 5) The strength of the column with helical reinforcement shall \_\_\_\_ be times the strength of similar column with lateral ties.
 

a) 2.0	b) 1.05
c) 3.0	d) 1.5
- 6) An RCC column can have maximum tension reinforcement is \_\_\_\_\_.
 

a) 6% bD	b) 2% bD
c) 3% bD	d) 4% bD
- 7) Torsion effect is significant in case of \_\_\_\_\_.
 

a) Lintel Beam	b) T Beam
c) L beam	d) Cantilever beam

**Section – I**

- Q.2** A roof of clear dimensions 4m x 5m supported on walls of 230mm thickness, with corners are held down. All the four edges of the slab are discontinuous. Design the slab, if the beam is carrying a live load of 3.5 kN/m<sup>2</sup>. Use M 20 & Fe 415 steel **09**
- Q.3** A rectangular beam is to be simply supported on support of 250mm width. The clear span of the beam is 5.8m. The beam is having width of 300mm. The super imposed load is 12kN/m. Design the section. Use M 20 & Fe 415 steel **09**
- Q.4** A doubly reinforced beam has width of 250mm & 450mm deep to center of tensile reinforcement. It is reinforced with 2-16mm diameter in compression zone with an effective cover of 50mm & 4-25mm diameter as tensile steel. Find the flexure strength & safe UDL on the simply supported beam of span 6m. Use M20 concrete & Fe 250 steel. **09**
- Q.5** A Tee beam RC floor system consists of 120mm thick slab supported by beams at 3m center to center. The effective width & depth of web 300mm x 580mm. Main reinforcement consists of 8-20mm diameter. The grade of concrete & steel used are M20 & Fe415 grade respectively. Determine the moment of resistance of Tee beam if it used as simply supported beam of span 3.6m. **10**

**Section – II**

- Q.6** Design a rectangular beam of effective spans 7m to carry a dead load of 10 kN/m & live load of 12 kN/m. The beam is continuous over 3 spans & is supported by columns. Use M20 concrete & Fe 415 steel. **10**
- Q.7** Determine the reinforcement required for beam size 300mm x 600mm subjected to a factored bending moment 120 kNm, a factored shear force 90 kN & a factored torsion moment of 50 kNm. Use M 20 concrete & Fe 415 steel. **09**
- Q.8** A short column 400mm x 400mm is provided with 8-16mm diameter, if the length of column is 2.25m. It is effectively held in position at both ends & restrained against rotation at one end. Find ultimate load for column. Use M20 & Fe415. **09**

- Q.9** Design a circular column with helical reinforcement to carry an axial load of 1800 kN. The column has spiral ties. The column is 3.2m long & is effectively held in at both ends, but not restrained against rotation.  
Use M 25 concrete & Fe 500 steel.

**CIVIL ENGINEERING**

**Design of Concrete Structures I**

Day & Date: Thursday, 09-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) What is the recommended value of effective length if the column is effectively held in position and fixed against rotation in both ends
 

a) 0.81	b) 0.51
c) 0.651	d) 0.911
- 2) The strength of the column with helical reinforcement shall \_\_\_\_\_ be times the strength of similar column with lateral ties.
 

a) 2.0	b) 1.05
c) 3.0	d) 1.5
- 3) An RCC column can have maximum tension reinforcement is \_\_\_\_\_.
 

a) 6% bD	b) 2% bD
c) 3% bD	d) 4% bD
- 4) Torsion effect is significant in case of \_\_\_\_\_.
 

a) Lintel Beam	b) T Beam
c) L beam	d) Cantilever beam
- 5) The maximum stress in compression steel for mild steel is
 

a) $0.87 f_y$	b) $< 0.87 f_y$
c) $f_y$	d) $0.446 f_{ck}$
- 6) The minimum reinforcement when tor steel used is \_\_\_\_\_ of gross area.
 

a) 0.12%	b) 0.15%
c) 0.18%	d) 0.20%
- 7) An RCC beam of 200mm X 300mm effective is subjected to factored shear force 30 kN. The maximum nominal shear stress is \_\_\_\_\_ MPa
 

a) 0.6	b) 0.5
c) 0.4	d) 0.2
- 8) Deflection of doubly reinforced beam are \_\_\_\_\_ compared to singly reinforced beams of same depth
 

a) more	b) less
c) equal	d) none of above

- 9) In LSM total area of stress block is \_\_\_\_\_.  
a)  $0.36 f_{ck} X_u$                       b)  $0.67 f_{ck} X_u$   
c)  $1.15 f_{ck} X_u$                       d)  $0.87 f_{ck} X_u$
- 10) The simple or continuous slabs are analyzed for \_\_\_\_\_.  
a) Design foundation                      b) Design reinforcement  
c) Design moments                      d) Design slab
- 11) What is assumption in steel beam theory of doubly reinforced beam  
a) Only steel bar resists tension  
b) Only concrete bar resists tension  
c) Stress in tension steel equal to stress in compression steel  
d) Both concrete and steel resist compression
- 12) A 12m long R.C T-beam is spaced at 3.25m with web of 0.4m wide and 1m deep, supports flange slab of 100mm thick. The effective flange width of beam will be  
a) 3 m                                      b) 3.25 m  
c) 2.5 m                                      d) 2 m
- 13) Force on 300mm x 500 mm deep beam, subjected to shear force of 150 kN and torsion 30 kNm, then equivalent shear is  
a) 80 kN                                      b) 246 kN  
c) 210 kN                                      d) 310 kN
- 14) In effective width of flange formula  $L_o$  defined as distance between points of zero Moment is considered due to  
a) Within  $L_o$  stresses are uniform  
b) Strain compatibility  
c) Beyond  $L_o$ , flange will be in tension and ineffective  
d) None of above

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Sewage treatment units are generally designed for \_\_\_\_\_.  
 a) Maximum Flow only                      b) Minimum Flow only  
 c) Average Flow only                      d) Both a) and b)
- 2) Detention period for Grit Chamber is \_\_\_\_\_.  
 a) 1 minute                                      b) 2-4 hours  
 c) 5-7 hours                                      d) None of these
- 3) Activated Sludge is the \_\_\_\_\_.  
 a) Aerated sludge in Aeration Unit  
 b) Settled Sludge in the humus tank  
 c) Sludge in secondary tank, rich in microbial mass  
 d) Sludge in secondary tank, rich in nutrients
- 4) Low F/M ratio in ASP means \_\_\_\_\_.  
 a) Lower BOD Removal                      b) Higher BOD Removal  
 c) No Effect                                      d) None of the above
- 5) Amount of DO% present in the zone of active decomposition, is \_\_\_\_\_.  
 a) < 40    b) 40 - 50  
 c) 50 - 100                                      d) > 100
- 6) The Root Zone Technology is used to remove \_\_\_\_\_.  
 a) Heavy metals                                      b) Organic matter  
 c) Pathogens                                      d) All of above
- 7) The Stable atmospheric condition is \_\_\_\_\_ for dispersion process.  
 a) Favorable                                      b) Unfavorable  
 c) both a) and b)                                      d) None of the above
- 8) \_\_\_\_\_ Property/ properties of MSW is/are for landfill design.  
 a) Permeability                                      b) Density  
 c) Field capacity                                      d) All of above

- 9) \_\_\_\_\_ is ultimate disposal option considered in Municipal Solid Waste (MSW) management.
- |               |                 |
|---------------|-----------------|
| a) Landfill   | b) Incineration |
| c) Composting | d) Open burning |
- 10) Bacterial-algal-symbiosis is observed in \_\_\_\_\_.
- |                            |                    |
|----------------------------|--------------------|
| a) Aerated lagoon          | b) Oxidation ditch |
| c) Aerobic oxidation ponds | d) Anaerobic ponds |
- 11) \_\_\_\_\_ solves problem of air pollution but creates problem of water pollution.
- |            |              |
|------------|--------------|
| a) ESP     | b) Bag house |
| c) Cyclone | d) Scrubbers |
- 12) The anaerobic method of mechanical composting as prescribed in India, is called the \_\_\_\_\_.
- |                     |                     |
|---------------------|---------------------|
| a) Indore method    | b) Mangalore method |
| c) Bangalore method | d) None of these    |
- 13) Which gas is mainly produced due to burning of petrol?
- |                    |                    |

P

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov - 2022**  
**CIVIL ENGINEERING**  
**Environmental Engineering - II**

Day &amp; Date: Tuesday, 14-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:**
- 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
  - 2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
  - 3) Figures to the right indicate full marks.
  - 4) Assume suitable data wherever necessary and mention it clearly.
  - 5) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2**
- a) A town has a population of 1,50,000 persons with per capita water supply of 200 litres/day. Assuming 85% of water usage is appears to be sewage, design a sewer running 0.7 times full at maximum discharge. Take a constant value of  $N = 0.013$  at all depths of flow. The sewer is to be laid at a slope of 1 in 500. Take a peak factor of 3. **06**
  - b) Explain dry weather flow with a neat diagram. Explain various factors affecting dry weather flow. **04**
- Q.3**
- a) The BOD of a sewage incubated for one day at  $27^{\circ}\text{C}$  has been found to be 160 mg/L. What will be the 2- day  $20^{\circ}\text{C}$  BOD. Assume  $K = 0.2$  (Base 10) at  $20^{\circ}\text{C}$ . **05**
  - b) Explain Tricking filter in wastewater treatment plant with neat diagram. **04**
- Q.4**
- a) Explain grit chamber in WWTP with a neat diagram. Enlist design criteria of the same. **05**
  - b) Write short note on aerobic process with a typical sketch. **04**
- Q.5** Write short notes on following (any three): **09**
- a) Sludge Volume Index
  - b) Hydraulic Retention time & F/ M Ratio
  - c) Types of Screens
  - d) Skimming Tank

**Section - II**

- Q.6**
- a) Differentiate between primary and secondary air pollutants. **05**
  - b) Using the following data, find out DO at the end of 1 & 2 days, **05**

Parameters	River	Wastewater
Flow ( $\text{m}^3/\text{s}$ )	25	2
DO ( $\text{mg/L}$ )	9.1	0
5 day BOD ( $\text{mg/L}$ )	2.0	200

Take Deoxygenation constant, as 0.10 per day (base e) & re-oxygenation constant as 0.30 per day (base e). Take saturation DO as 9.10 mg/L

- Q.7**   **a)**   Describe bag filters with neat diagram. **05**  
          **b)**   Discuss the advantages and disadvantages of incineration. **04**
- Q.8**   **a)**   Illustrate the factors responsible for the rate of solid waste generation. **05**  
          **b)**   Discuss the characteristics of 'hazardous waste' as per CPCB guidelines. **04**
- Q.9**   **Write short notes on following (any three):** **09**  
          **a)**   Composting  
          **b)**   Lapse Rate  
          **c)**   ESP  
          **d)**   Streeter Phelps's Equation

Max. Marks: 56

- Instructions:**
- 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
  - 2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
  - 3) Figures to the right indicate full marks.
  - 4) Assume suitable data wherever necessary and mention it clearly.
  - 5) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2**
- a) A town has a population of 1,50,000 persons with per capita water supply of 200 litres/day. Assuming 85% of water usage is appears to be sewage, design a sewer running 0.7 times full at maximum discharge. Take a constant value of  $N = 0.013$  at all depths of flow. The sewer is to be laid at a slope of 1 in 500. Take a peak factor of 3. **06**
  - b) Explain dry weather flow with a neat diagram. Explain various factors affecting dry weather flow. **04**
- Q.3**
- a) The BOD of a sewage incubated for one day at  $27^{\circ}\text{C}$  has been found to be 160 mg/L. What will be the 2- day  $20^{\circ}\text{C}$  BOD. Assume  $K = 0.2$  (Base 10) at  $20^{\circ}\text{C}$ . **05**
  - b) Explain Tricking filter in wastewater treatment plant with neat diagram. **04**
- Q.4**
- a) Explain grit chamber in WWTP with a neat diagram. Enlist design criteria of the same. **05**
  - b) Write short note on aerobic process with a typical sketch. **04**
- Q.5** Write short notes on following (any three): **09**
- a) Sludge Volume Index
  - b) Hydraulic Retention time & F/ M Ratio
  - c) Types of Screens
  - d) Skimming Tank

**Section - II**

- Q.6**
- a) Differentiate between primary and secondary air pollutants. **05**
  - b) Using the following data, find out DO at the end of 1 & 2 days, **05**

Parameters	River	Wastewater
Flow ( $\text{m}^3/\text{s}$ )	25	2
DO ( $\text{mg/L}$ )	9.1	0
5 day BOD ( $\text{mg/L}$ )	2.0	200

Take Deoxygenation constant, as 0.10 per day (base e) & re-oxygenation constant as 0.30 per day (base e). Take saturation DO as 9.10 mg/L

- Q.7**   **a)**   Describe bag filters with neat diagram. **05**  
         **b)**   Discuss the advantages and disadvantages of incineration. **04**
- Q.8**   **a)**   Illustrate the factors responsible for the rate of solid waste generation. **05**  
         **b)**   Discuss the characteristics of 'hazardous waste' as per CPCB guidelines. **04**
- Q.9**   **Write short notes on following (any three):** **09**  
         **a)**   Composting  
         **b)**   Lapse Rate  
         **c)**   ESP  
         **d)**   Streeter Phelps's Equation

Day & Date: Tuesday, 14-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) \_\_\_\_\_ solves problem of air pollution but creates problem of water pollution.
 

a) ESP	b) Bag house
c) Cyclone	d) Scrubbers
- 2) The anaerobic method of mechanical composting as prescribed in India, is called the \_\_\_\_\_.
 

a) Indore method	b) Mangalore method
c) Bangalore method	d) None of these
- 3) Which gas is mainly produced due to burning of petrol?
 

a) CO	b) SO <sub>2</sub>
c) NO <sub>2</sub>	d) NO <sub>3</sub>
- 4) Paper waste is considered as \_\_\_\_\_.
 

a) Garbage	
b) Rubbish	
c) Construction and demolition waste	
d) All of above	
- 5) Sewage treatment units are generally designed for \_\_\_\_\_.
 

a) Maximum Flow only	b) Minimum Flow only
c) Average Flow only	d) Both a) and b)
- 6) Detention period for Grit Chamber is \_\_\_\_\_.
 

a) 1 minute	b) 2-4 hours
c) 5-7 hours	d) None of these
- 7) Activated Sludge is the \_\_\_\_\_.
 

a) Aerated sludge in Aeration Unit	
b) Settled Sludge in the humus tank	
c) Sludge in secondary tank, rich in microbial mass	
d) Sludge in secondary tank, rich in nutrients	
- 8) Low F/M ratio in ASP means \_\_\_\_\_.
 

a) Lower BOD Removal	b) Higher BOD Removal
c) No Effect	d) None of the above

### MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

14

- The Root Zone Technology is used to remove \_\_\_\_\_.
  - Heavy metals
  - Organic matter
  - Pathogens
  - All of above
- The Stable atmospheric condition is \_\_\_\_\_ for dispersion process.
  - Favorable
  - Unfavorable
  - both a) and b)
  - None of the above
- \_\_\_\_\_ Property/ properties of MSW is/are for landfill design.
  - Permeability
  - Density
  - Field capacity
  - All of above
- \_\_\_\_\_ is ultimate disposal option considered in Municipal Solid Waste (MSW) management.
  - Landfill
  - Incineration
  - Composting
  - Open burning
- Bacterial-algal-symbiosis is observed in \_\_\_\_\_.
  - Aerated lagoon
  - Oxidation ditch
  - Aerobic oxidation ponds
  - Anaerobic ponds
- \_\_\_\_\_ solves problem of air pollution but creates problem of water pollution.
  - ESP
  - Bag house
  - Cyclone
  - Scrubbers
- The anaerobic method of mechanical composting as prescribed in India, is called the \_\_\_\_\_.
  - Indore method
  - Mangalore method
  - Bangalore method
  - None of these
- Which gas is mainly produced due to burning of petrol?
  - CO
  - SO<sub>2</sub>
  - NO<sub>2</sub>
  - NO<sub>3</sub>

- 9) Paper waste is considered as \_\_\_\_\_.  
a) Garbage  
b) Rubbish  
c) Construction and demolition waste  
d) All of above
- 10) Sewage treatment units are generally designed for \_\_\_\_\_.  
a) Maximum Flow only                      b) Minimum Flow only  
c) Average Flow only                      d) Both a) and b)
- 11) Detention period for Grit Chamber is \_\_\_\_\_.  
a) 1 minute                                      b) 2-4 hours  
c) 5-7 hours                                      d) None of these
- 12) Activated Sludge is the \_\_\_\_\_.  
a) Aerated sludge in Aeration Unit  
b) Settled Sludge in the humus tank  
c) Sludge in secondary tank, rich in microbial mass  
d) Sludge in secondary tank, rich in nutrients
- 13) Low F/M ratio in ASP means \_\_\_\_\_.  
a) Lower BOD Removal                      b) Higher BOD Removal  
c) No Effect                                      d) None of the above
- 14) Amount of DO% present in the zone of active decomposition, is \_\_\_\_\_.  
a) < 40    b) 40 - 50  
c) 50 - 100    d) > 100

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks.  
4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options. 14**

- 1) Production and use of harmful chemicals is under ban in \_\_\_\_\_ countries.  
a) Developing countries                      b) Developed countries  
c) Third world countries                      d) All of these
- 2) Which of the following groups of people is more vulnerable in the event of disaster?  
a) Men, boys, old people                      b) Men, women, boys  
c) Women, children, old people                      d) None of the above
- 3) The extent to which a community, structure, services or geographic area is likely to be damaged or disrupted by the impact of particular hazard is termed as  
a) Capacity    b) Vulnerability  
c) Risk    d) Hazard assessment
- 4) Vulnerability analysis comes in which part of the Disaster Management Cycle  
a) Mitigation    b) Preparedness  
c) Response    d) Recovery
- 5) Disaster Management includes:  
a) Mitigation    b) Reconstruction  
c) Rehabilitation    d) All of the above
- 6) Which of the following is considered as objective of disaster management?  
a) Dispose dead bodies  
b) Supplying of essential commodities  
c) Rehabilitation of disaster victims  
d) All of these
- 7) The role of which agency is important in disaster prevention.  
a) Media    b) Police  
c) Government official    d) Public

- 8) What are the important measure to be taken in community level of disaster preparedness
- a) Increased awareness
  - b) Provision of early and timely warning
  - c) Land use planning
  - d) All of the above
- 9) What are the major types oriented to mitigation measures of hazards and disasters?
- a) Public mitigation measures
  - b) Community mitigation measures
  - c) Both a and b
  - d) None of the above
- 10) Disaster management is aimed at-
- a) Resettling people in the closest unaffected urban area
  - b) Collection of valuable data for future management objectives
  - c) Strengthening sewage and drinking water treatment facilities to resist the impact of a future disaster
  - d) Restoring communities' services, facilities, and residences to pre-disaster levels
- 11) Structural and Non-structural measures are elements of high category of Risk Reduction measures
- a) Socio-economic measures
  - b) Physical measures
  - c) Environmental measures
  - d) Post disaster measures
- 12) Rehabilitation is the priority of which of the following phase?
- a) Phase of emergency
  - b) Transitional Phase
  - c) Reconstruction Phase
  - d) Mock drill
- 13) What is it called when a large number of people in a community get a disease at the same time?
- a) Influx
  - b) Black death
  - c) Epidemic
  - d) Pandemic
- 14) The cycle of disaster consists of the following components
- a) Mitigation, Preparedness, Response, Recovery
  - b) Preparedness, vulnerability assessment, risk assessment, recovery
  - c) Mitigation, Risk assessment, Response and Recovery
  - d) None of the above

**Risk Assessment and Vulnerability Analysis**

Day & Date: Thursday 16-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Solve any two questions from Section – I out of Q.2, Q.3 & Q.4  
 2) Solve any two Questions from Section – II out of Q.5, Q.6 & Q.7  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data wherever needed & mention it clearly.

**Section – I**

- Q.2** a) What are the different elements of Risk? Explain in detail. **07**  
 b) Define: **07**  
     i) Risk  
     ii) Vulnerability  
     iii) Hazard  
     iv) Disasters
- Q.3** a) Explain various problems involved in the risk assessment process. **07**  
 b) Explain participatory risk assessment methods. **07**
- Q.4** a) Explain different social and economic factors of vulnerability. **07**  
 b) Explain vulnerability in the city and different risks in urban areas. **07**

**Section – II**

- Q.5** a) Explain hazard resistant design and construction. **07**  
 b) Write a note on systematic management and strategic planning for vulnerability reduction. **07**
- Q.6** a) Explain the role of information and communication technology in health response. **07**  
 b) Explain the role of education and training in Health management of disaster. **07**
- Q.7** a) Explain uses of remote sensing techniques in disaster preparedness. **07**  
 b) What are emerging techniques in disaster preparedness? Enlist all the techniques **07**

**T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2022  
CIVIL ENGINEERING**

**Risk Assessment and Vulnerability Analysis**

Day & Date: Thursday 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks.  
4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options. 14**

- 1) Structural and Non-structural measures are elements of high category of Risk Reduction measures
  - a) Socio-economic measures      b) Physical measures
  - c) Environmental measures      d) Post disaster measures
- 2) Rehabilitation is the priority of which of the following phase?
  - a) Phase of emergency      b) Transitional Phase
  - c) Reconstruction Phase      d) Mock drill
- 3) What is it called when a large number of people in a community get a disease at the same time?
  - a) Influx      b) Black death
  - c) Epidemic      d) Pandemic
- 4) The cycle of disaster consists of the following components
  - a) Mitigation, Preparedness, Response, Recovery
  - b) Preparedness, vulnerability assessment, risk assessment, recovery
  - c) Mitigation, Risk assessment, Response and Recovery
  - d) None of the above
- 5) Production and use of harmful chemicals is under ban in \_\_\_\_\_ countries.
  - a) Developing countries      b) Developed countries
  - c) Third world countries      d) All of these
- 6) Which of the following groups of people is more vulnerable in the event of disaster?
  - a) Men, boys, old people      b) Men, women, boys
  - c) Women, children, old people      d) None of the above
- 7) The extent to which a community, structure, services or geographic area is likely to be damaged or disrupted by the impact of particular hazard is termed as
  - a) Capacity      b) Vulnerability
  - c) Risk      d) Hazard assessment

- 8) Vulnerability analysis comes in which part of the Disaster Management Cycle
- a) Mitigation
  - b) Preparedness
  - c) Response
  - d) Recovery
- 9) Disaster Management includes:
- a) Mitigation
  - b) Reconstruction
  - c) Rehabilitation
  - d) All of the above
- 10) Which of the following is considered as objective of disaster management?
- a) Dispose dead bodies
  - b) Supplying of essential commodities
  - c) Rehabilitation of disaster victims
  - d) All of these
- 11) The role of which agency is important in disaster prevention.
- a) Media
  - b) Police
  - c) Government official
  - d) Public
- 12) What are the important measure to be taken in community level of disaster preparedness
- a) Increased awareness
  - b) Provision of early and timely warning
  - c) Land use planning
  - d) All of the above
- 13) What are the major types oriented to mitigation measures of hazards and disasters?
- a) Public mitigation measures
  - b) Community mitigation measures
  - c) Both a and b
  - d) None of the above
- 14) Disaster management is aimed at-
- a) Resettling people in the closest unaffected urban area
  - b) Collection of valuable data for future management objectives
  - c) Strengthening sewage and drinking water treatment facilities to resist the impact of a future disaster
  - d) Restoring communities' services, facilities, and residences to pre-disaster levels

**T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2022**  
**CIVIL ENGINEERING**

**Risk Assessment and Vulnerability Analysis**

Day & Date: Thursday 16-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from Section – I out of Q.2, Q.3 & Q.4  
 2) Solve any two Questions from Section – II out of Q.5, Q.6 & Q.7  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data wherever needed & mention it clearly.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> What are the different elements of Risk? Explain in detail.           | <b>07</b> |
|            | <b>b)</b> Define:   | <b>07</b> |
|            | i) Risk   |           |
|            | ii) Vulnerability   |           |
|            | iii) Hazard   |           |
|            | iv) Disasters   |           |
| <b>Q.3</b> | <b>a)</b> Explain various problems involved in the risk assessment process.     | <b>07</b> |
|            | <b>b)</b> Explain participatory risk assessment methods.                        | <b>07</b> |
| <b>Q.4</b> | <b>a)</b> Explain different social and economic factors of vulnerability.       | <b>07</b> |
|            | <b>b)</b> Explain vulnerability in the city and different risks in urban areas. | <b>07</b> |

**Section – II**

- |            |   |           |
|------------|---|-----------|
| <b>Q.5</b> | <b>a)</b> Explain hazard resistant design and construction.   | <b>07</b> |
|            | <b>b)</b> Write a note on systematic management and strategic planning for vulnerability reduction. | <b>07</b> |
| <b>Q.6</b> | <b>a)</b> Explain the role of information and communication technology in health response.          | <b>07</b> |
|            | <b>b)</b> Explain the role of education and training in Health management of disaster.              | <b>07</b> |
| <b>Q.7</b> | <b>a)</b> Explain uses of remote sensing techniques in disaster preparedness.                       | <b>07</b> |
|            | <b>b)</b> What are emerging techniques in disaster preparedness? Enlist all the techniques          | <b>07</b> |

## CIVIL ENGINEERING

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks.  
4) Assume suitable data wherever needed and mention it clearly.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The 'rural road development plan: Vision 2021' aims to provide basic access to villages in how many phases?  
a) One  
b) Two  
c) Three  
d) four
- 2) The economical option during the construction of a road around a hill is \_\_\_\_\_.  
a) Cut the hill  
b) Provide a tunnel  
c) Provide a road around the hill  
d) Look for other alternative approaches
- 3) The coefficient of lateral friction as recommended by IRC is \_\_\_\_\_.  
a) 0.15  
b) 0.40  
c) 0.35  
d) 0.30
- 4) The braking efficiency for a vehicle moving with a speed of 18kmph, having a lag distance of 14m and coefficient of longitudinal friction is 0.36.  
a) 25.28%  
b) 25.4%  
c) 25.6%  
d) 25.8%
- 5) The desirable width as per IRC for median on rural roads is \_\_\_\_\_.  
a) 3m  
b) 5m  
c) 8m  
d) 14m
- 6) The minimum shoulder width recommended by IRC is \_\_\_\_\_.  
a) 1.0m  
b) 1.5m  
c) 2.0m  
d) 2.5m
- 7) What does MORTH stand for?  
a) Ministry of Road Traffic and Highways  
b) Model of Road Transit on Highways  
c) Ministry of Road Transport and Highways  
d) Model of Road Traffic in Highways
- 8) Which of the below indices is a measure of shearing strength of soil at the plastic limit?  
a) Plasticity index  
b) Consistency index  
c) Flow index  
d) Toughness index

- 9) The seepage flow is present in \_\_\_\_\_.  
a) Surface drainage                      b) Sub surface drainage  
c) Camber                                  d) Cross slope
- 10) Which is the most preferred shape of drainage?  
a) Rectangular                              b) Trapezoidal  
c) Triangular                                d) Circular
- 11) Under which situation is cutback bitumen used as a stabilizing agent?  
a) Low density                                b) High density  
c) High natural moisture content      d) Low natural moisture content
- 12) Frost protection layer is provided in between which layers?  
a) Surface and base course  
b) Sub-base and base course  
c) Subgrade and sub-base course  
d) Surface and sub-base course
- 13) The maintenance operations do not involve \_\_\_\_\_.  
a) Survey work  
b) Assessment of road condition  
c) Diagnosis  
d) Adopting the most appropriate steps
- 14) The maintenance works are not possible for \_\_\_\_\_.  
a) Shoulder                                    b) Pavement  
c) Embankment                                d) Sub grade

<b>Seat No.</b>

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Solve any two questions from Section -I  
 2) Solve any two Questions from Section -II  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed & mention it clearly.

**Section – I**

- Q.2** a) Explain the guidelines laid down in recent 20-year plans. **07**  
 b) Define alignment and explain factors controlling the alignment. **07**
- Q.3** a) What is the importance of studying the behavior of soil as a road construction material? **07**  
 b) What are the advantages and specifications for construction of cement concrete pavement? **07**
- Q.4** a) Define super elevation & explain the factors on which the design of super elevation depends. **07**  
 b) Calculate minimum sight distance required to avoid a head on collision of two cars approaching from the opposite directions at 90 & 60 kmph. Assume a reaction time 2.5 sec coefficient of friction of 0.7 & brake efficiency. **07**

**Section – II**

- Q.5** a) What are the requirements of good road drainage system? **07**  
 b) Write an explanatory note on cross drainage and drainage structure. **07**
- Q.6** a) Explain the specification of material for the construction of subgrade for pavement. **07**  
 b) Enlist the test for quality control as per IRC and explain any one in detail. **07**
- Q.7** a) Enlist the classification of maintenance activities and explain any two activities. **07**  
 b) Explain briefly maintenance of unpaved roads. **07**

  - a) Shoulder
  - b) Pavement
  - c) Embankment
  - d) Sub grade
- 5) The 'rural road development plan: Vision 2021' aims to provide basic access to villages in how many phases?
  - a) One
  - b) Two
  - c) Three
  - d) four
- 6) The economical option during the construction of a road around a hill is \_\_\_\_\_.
  - a) Cut the hill
  - b) Provide a tunnel
  - c) Provide a road around the hill
  - d) Look for other alternative approaches
- 7) The coefficient of lateral friction as recommended by IRC is \_\_\_\_\_.
  - a) 0.15
  - b) 0.40
  - c) 0.35
  - d) 0.30

- 8) The braking efficiency for a vehicle moving with a speed of 18kmph, having a lag distance of 14m and coefficient of longitudinal friction is 0.36.
  - a) 25.28%
  - b) 25.4%
  - c) 25.6%
  - d) 25.8%
- 9) The desirable width as per IRC for median on rural roads is \_\_\_\_\_.
  - a) 3m
  - b) 5m
  - c) 8m
  - d) 14m
- 10) The minimum shoulder width recommended by IRC is \_\_\_\_\_.
  - a) 1.0m
  - b) 1.5m
  - c) 2.0m
  - d) 2.5m
- 11) What does MORTH stand for?
  - a) Ministry of Road Traffic and Highways
  - b) Model of Road Transit on Highways
  - c) Ministry of Road Transport and Highways
  - d) Model of Road Traffic in Highways
- 12) Which of the below indices is a measure of shearing strength of soil at the plastic limit?
  - a) Plasticity index
  - b) Consistency index
  - c) Flow index
  - d) Toughness index
- 13) The seepage flow is present in \_\_\_\_\_.
  - a) Surface drainage
  - b) Sub surface drainage
  - c) Camber
  - d) Cross slope
- 14) Which is the most preferred shape of drainage?
  - a) Rectangular
  - b) Trapezoidal
  - c) Triangular
  - d) Circular

**T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2022**

**CIVIL ENGINEERING**

**Planning and Design of Rural Roads**

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from Section -I  
2) Solve any two Questions from Section -II  
3) Figures to the right indicates full marks.  
4) Assume suitable data wherever needed & mention it clearly.

**Section – I**

- |            |  |           |
|------------|--|-----------|
| <b>Q.2</b> | <b>a)</b> Explain the guidelines laid down in recent 20-year plans.  | <b>07</b> |
|            | <b>b)</b> Define alignment and explain factors controlling the alignment.  | <b>07</b> |
| <b>Q.3</b> | <b>a)</b> What is the importance of studying the behavior of soil as a road construction material?   | <b>07</b> |
|            | <b>b)</b> What are the advantages and specifications for construction of cement concrete pavement?   | <b>07</b> |
| <b>Q.4</b> | <b>a)</b> Define super elevation & explain the factors on which the design of super elevation depends.   | <b>07</b> |
|            | <b>b)</b> Calculate minimum sight distance required to avoid a head on collision of two cars approaching from the opposite directions at 90 & 60 kmph. Assume a reaction time 2.5 sec coefficient of friction of 0.7 & brake efficiency. | <b>07</b> |

**Section – II**

- |            |  |           |
|------------|--|-----------|
| <b>Q.5</b> | <b>a)</b> What are the requirements of good road drainage system?                              | <b>07</b> |
|            | <b>b)</b> Write an explanatory note on cross drainage and drainage structure.                  | <b>07</b> |
| <b>Q.6</b> | <b>a)</b> Explain the specification of material for the construction of subgrade for pavement. | <b>07</b> |
|            | <b>b)</b> Enlist the test for quality control as per IRC and explain any one in detail.        | <b>07</b> |
| <b>Q.7</b> | <b>a)</b> Enlist the classification of maintenance activities and explain any two activities.  | <b>07</b> |
|            | <b>b)</b> Explain briefly maintenance of unpaved roads.  | <b>07</b> |

**T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2022**

## Max. Marks: 70

### MCQ/Objective Type Questions

Marks: 14

- 1) The minimum shoulder width recommended by IRC is \_\_\_\_\_.  
a) 1.0m                                      b) 1.5m  
c) 2.0m                                      d) 2.5m
- 2) What does MORTH stand for?  
a) Ministry of Road Traffic and Highways  
b) Model of Road Transit on Highways  
c) Ministry of Road Transport and Highways  
d) Model of Road Traffic in Highways
- 3) Which of the below indices is a measure of shearing strength of soil at the plastic limit?  
a) Plasticity index                                      b) Consistency index  
c) Flow index    d) Toughness index
- 4) The seepage flow is present in \_\_\_\_\_.  
a) Surface drainage                                      b) Sub surface drainage  
c) Camber    d) Cross slope
- 5) Which is the most preferred shape of drainage?  
a) Rectangular    b) Trapezoidal  
c) Triangular    d) Circular
- 6) Under which situation is cutback bitumen used as a stabilizing agent?  
a) Low density    b) High density  
c) High natural moisture content      d) Low natural moisture content
- 7) Frost protection layer is provided in between which layers?  
a) Surface and base course  
b) Sub-base and base course  
c) Subgrade and sub-base course  
d) Surface and sub-base course
- 8) The maintenance operations do not involve \_\_\_\_\_.  
a) Survey work  
b) Assessment of road condition  
c) Diagnosis  
d) Adopting the most appropriate steps

- 9) The maintenance works are not possible for \_\_\_\_\_.
  - a) Shoulder
  - b) Pavement
  - c) Embankment
  - d) Sub grade
- 10) The 'rural road development plan: Vision 2021' aims to provide basic access to villages in how many phases?
  - a) One
  - b) Two
  - c) Three
  - d) four
- 11) The economical option during the construction of a road around a hill is \_\_\_\_\_.
  - a) Cut the hill
  - b) Provide a tunnel
  - c) Provide a road around the hill
  - d) Look for other alternative approaches
- 12) The coefficient of lateral friction as recommended by IRC is \_\_\_\_\_.
  - a) 0.15
  - b) 0.40
  - c) 0.35
  - d) 0.30
- 13) The braking efficiency for a vehicle moving with a speed of 18kmph, having a lag distance of 14m and coefficient of longitudinal friction is 0.36.
  - a) 25.28%
  - b) 25.4%
  - c) 25.6%
  - d) 25.8%
- 14) The desirable width as per IRC for median on rural roads is \_\_\_\_\_.
  - a) 3m
  - b) 5m
  - c) 8m
  - d) 14m

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Factors affecting the performance of green material/product is/are \_\_\_\_\_.  
 a) Surrounding buildings                      b) Population  
 c) Vehicles                                        d) All of the above
- 2) Sustainable building means that \_\_\_\_\_.  
 a) Green building                                b) Environmental building  
 c) Both a) & b)                                    d) None of these
- 3) Which of the following is not the purpose of a green building?  
 a) To reduce use of water  
 b) To minimize damage of the environment  
 c) Re-use of waste materials  
 d) None of the above
- 4) Resource efficiency can be achieved by utilizing materials to \_\_\_\_\_.  
 a) Recycled content                              b) Reusable content  
 c) Reusable packaging                         d) None of the above
- 5) Which of the following is not correct constituent in ideal CSEB?  
 a) Silt- 15%                                        b) Gravel- 20%  
 c) Clay-20%                                        d) Sand- 50%
- 6) SMB is a building material made primarily from \_\_\_\_\_ compressed at high pressure to form blocks.  
 a) Damp soil                                        b) Cement  
 c) Lime    d) None of the above
- 7) Embodied energy is the energy consumed by \_\_\_\_\_ associated with the production of a product.  
 a) Construction                                   b) Transportation  
 c) Manufacturing                                 d) All of the above
- 8) \_\_\_\_\_ is necessary to demolish and dispose of the building at the end of its life.  
 a) Initial embodied energy                      b) Recurring embodied energy  
 c) Both of the above                              d) None of the above
- 9) Which of the following is not the factor while selecting the car?  
 a) CO<sub>2</sub> rating                                      b) Fuel type  
 c) Model    d) None of the above

- 10) The light-weight concrete is prepared by \_\_\_\_\_.  
a) Mixing Portland cement with sawdust in specified proportion in the concrete  
b) Using coke-breeze, cinder or slag as aggregate in the concrete  
c) Mixing aluminum in the concrete  
d) Mixing steel in the concrete
- 11) \_\_\_\_\_ undergo chemical change in their composition when heated.  
a) Thermoplastics  
b) Thermoset plastics  
c) Thermal plastics  
d) None of the above
- 12) PET bottles take \_\_\_\_\_ years to biodegrade.  
a) 50  
b) 100  
c) 200  
d) 500
- 13) The vast majority of DCCs end up in landfill, or \_\_\_\_\_.  
a) Incineration  
b) Recycling industry  
c) Composting  
d) All of the above
- 14) Full form of GRIHA is \_\_\_\_\_.  
a) Green Rating for Indian Habitat Assessment  
b) Green Rating for Integrated Habitat Assessment  
c) Green Rating for International Habitat Assessment  
d) Green Rating for Information Habitat Assessment

Day &amp; Date: Thursday, 16-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Question no. 6 is compulsory in section II, and solve any two questions from the remaining  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data wherever necessary and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> What is embodied energy? Explain initial recurring embodied energy of building. | <b>05</b> |
|            | <b>b)</b> Explain numerous activities that affects the carbon footprints of individuals.  | <b>05</b> |
| <b>Q.3</b> | <b>a)</b> How Resource efficiency can be accomplished by utilizing green material?        | <b>05</b> |
|            | <b>b)</b> Discuss process of selection of bamboo in the construction of green building.   | <b>04</b> |
| <b>Q.4</b> | <b>a)</b> Explain properties of eco-friendly materials in detail.                         | <b>05</b> |
|            | <b>b)</b> Explain compressed Stabilized Earth Blocks in detail.                           | <b>04</b> |
| <b>Q.5</b> | <b>a)</b> Explain the properties & advantages of filler materials.                        | <b>05</b> |
|            | <b>b)</b> Explain Composite panel and its advantages in green building.                   | <b>04</b> |

**Section – II**

- |            |  |           |
|------------|--|-----------|
| <b>Q.6</b> | <b>a)</b> Differentiate Recycle and Reuse of solid waste   | <b>05</b> |
|            | <b>b)</b> Explain initial & recurring application in life cycle of concrete in detail. What are eco audits & eco tools? Explain with examples. | <b>05</b> |
| <b>Q.7</b> | <b>a)</b> Explain various Plastic recycling process in detail.   | <b>05</b> |
|            | <b>b)</b> Provide numerous techniques for designing green concrete materials for 2BHK house having build-up area of 26 m <sup>2</sup> .        | <b>04</b> |
| <b>Q.8</b> | <b>a)</b> Explain various methodologies in material substitution for eco-efficient design of 10-storey commercial building.                    | <b>05</b> |
|            | <b>b)</b> Explain the difference between thermoplastics and thermoset plastics with example.   | <b>04</b> |
| <b>Q.9</b> | <b>a)</b> Discuss effects of toxic waste on environment.   | <b>05</b> |
|            | <b>b)</b> Define reducing of waste. Discuss advantages of reducing of waste with a practical example.  | <b>04</b> |

**T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2022  
CIVIL ENGINEERING**

**Construction Materials: Sustainability and Usability**

Day & Date: Thursday, 16-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Question no. 6 is compulsory in section II, and solve any two questions from the remaining  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data wherever necessary and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> What is embodied energy? Explain initial recurring embodied energy of building. | <b>05</b> |
|            | <b>b)</b> Explain numerous activities that affects the carbon footprints of individuals.  | <b>05</b> |
| <b>Q.3</b> | <b>a)</b> How Resource efficiency can be accomplished by utilizing green material?        | <b>05</b> |
|            | <b>b)</b> Discuss process of selection of bamboo in the construction of green building.   | <b>04</b> |
| <b>Q.4</b> | <b>a)</b> Explain properties of eco-friendly materials in detail.                         | <b>05</b> |
|            | <b>b)</b> Explain compressed Stabilized Earth Blocks in detail.                           | <b>04</b> |
| <b>Q.5</b> | <b>a)</b> Explain the properties & advantages of filler materials.                        | <b>05</b> |
|            | <b>b)</b> Explain Composite panel and its advantages in green building.                   | <b>04</b> |

**Section – II**

- |            |  |           |
|------------|--|-----------|
| <b>Q.6</b> | <b>a)</b> Differentiate Recycle and Reuse of solid waste   | <b>05</b> |
|            | <b>b)</b> Explain initial & recurring application in life cycle of concrete in detail. What are eco audits & eco tools? Explain with examples. | <b>05</b> |
| <b>Q.7</b> | <b>a)</b> Explain various Plastic recycling process in detail.   | <b>05</b> |
|            | <b>b)</b> Provide numerous techniques for designing green concrete materials for 2BHK house having build-up area of 26 m <sup>2</sup> .        | <b>04</b> |
| <b>Q.8</b> | <b>a)</b> Explain various methodologies in material substitution for eco-efficient design of 10-storey commercial building.                    | <b>05</b> |
|            | <b>b)</b> Explain the difference between thermoplastics and thermoset plastics with example.   | <b>04</b> |
| <b>Q.9</b> | <b>a)</b> Discuss effects of toxic waste on environment.   | <b>05</b> |
|            | <b>b)</b> Define reducing of waste. Discuss advantages of reducing of waste with a practical example.  | <b>04</b> |

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) SMB is a building material made primarily from \_\_\_\_\_ compressed at high pressure to form blocks.
 

a) Damp soil	b) Cement
c) Lime	d) None of the above
- 2) Embodied energy is the energy consumed by \_\_\_\_\_ associated with the production of a product.
 

a) Construction	b) Transportation
c) Manufacturing	d) All of the above
- 3) \_\_\_\_\_ is necessary to demolish and dispose of the building at the end of its life.
 

a) Initial embodied energy	b) Recurring embodied energy
c) Both of the above	d) None of the above
- 4) Which of the following is not the factor while selecting the car?
 

a) CO <sub>2</sub> rating	b) Fuel type
c) Model	d) None of the above
- 5) The light-weight concrete is prepared by \_\_\_\_\_.
 

a) Mixing Portland cement with sawdust in specified proportion in the concrete
b) Using coke-breeze, cinder or slag as aggregate in the concrete
c) Mixing aluminum in the concrete
d) Mixing steel in the concrete
- 6) \_\_\_\_\_ undergo chemical change in their composition when heated.
 

a) Thermoplastics	b) Thermoset plastics
c) Thermal plastics	d) None of the above
- 7) PET bottles take \_\_\_\_\_ years to biodegrade.
 

a) 50	b) 100
c) 200	d) 500
- 8) The vast majority of DCCs end up in landfill, or \_\_\_\_\_.
 

a) Incineration	b) Recycling industry
c) Composing	d) All of the above

- 9) Full form of GRIHA is \_\_\_\_\_.  
a) Green Rating for Indian Habitat Assessment  
b) Green Rating for Integrated Habitat Assessment  
c) Green Rating for International Habitat Assessment  
d) Green Rating for Information Habitat Assessment
- 10) Factors affecting the performance of green material/product is/are \_\_\_\_\_.  
a) Surrounding buildings                      b) Population  
c) Vehicles                                      d) All of the above
- 11) Sustainable building means that \_\_\_\_\_.  
a) Green building                              b) Environmental building  
c) Both a) & b)                                  d) None of these
- 12) Which of the following is not the purpose of a green building?  
a) To reduce use of water  
b) To minimize damage of the environment  
c) Re-use of waste materials  
d) None of the above
- 13) Resource efficiency can be achieved by utilizing materials to \_\_\_\_\_.  
a) Recycled content                              b) Reusable content  
c) Reusable packaging                          d) None of the above
- 14) Which of the following is not correct constituent in ideal CSEB?  
a) Silt- 15%                                      b) Gravel- 20%  
c) Clay-20%                                      d) Sand- 50%

## Managing Innovation and Entrepreneurship

Max. Marks: 70

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

Duration: 30 Minutes

Marks:14

14

- 1) What are the reasons for resistance to change?
  - a) Fear of failure
  - b) Inertia
  - c) Lack of confidence
  - d) All of the above
- 2) Which among the following is an important school of creative thinking?
  - a) Design Thinking
  - b) Behavior Thinking
  - c) Linear Thinking
  - d) Profit Thinking
- 3) Elkington introduced the sustainability concept as a "triple bottom line." What are the three important dimensions (3P's) of sustainability?
  - a) People, Planet, and Profit
  - b) People, Profit, and Product
  - c) Process, People, and Product
  - d) Profit, People, and Process
- 4) Who is not involved in the selection of ideas in idea management?
  - a) Internal experts
  - b) External experts
  - c) A mix of Internal and External Experts
  - d) Basic raw material supplier
- 5) Which one of the following is not a type of innovation according to industry system?
  - a) Product innovation
  - b) Process innovation
  - c) Personnel Innovation
  - d) Business Model innovation
- 6) Innovation is defined as:
  - a) The commercialization of a new product or process
  - b) A new product or process idea
  - c) The implementation of a new production method
  - d) The invention of a new product or process
- 7) Who is an idea Champion?
  - a) The one who defeats elephant of ideas
  - b) The rider who shapes the path for elephant
  - c) The one who open new channels for idea to move forward
  - d) All the above

- 8) An entrepreneur is someone who
- Organize a business
  - Manages a business
  - Takes risks
  - All of the above
- 9) What are the elements in the four action framework of Blue Ocean Strategy?
- Eliminate, Reduce, Reuse, and Recycle
  - Eliminate, Reduce, Raise, and Create
  - Eliminate, Recreate, Recycle, and Reuse
  - Reduce, Reuse, Recycle, and Recreate
- 10) Match the following:
- |                           |                           |
|---------------------------|---------------------------|
| 1) Base technologies      | i) Decline phase          |
| 2) Key technologies       | ii) Maturity phase        |
| 3) Pacing technologies    | iii) Growth phase         |
| 4) Emerging technologies  | iv) Emerging phase        |
| a) 3-ii, 1-iii, 2-i, 4-iv | b) 1-i, 2-iii, 3-ii, 4-iv |
| c) 4-ii, 2-i, 3-iv, 1-iii | d) 1-iv, 2-iii, 3-ii, 4-i |
- 11) What are the benefits of innovations resulting from economic initiatives?
- Reduced expenses
  - Productivity gains through modernization of production tools
  - Ability to meet growing demand for eco-responsible and personalized products.
  - All of the above
- 12) What is the main objective of granting a patent?
- To encourage and develop new technology and Industry
  - To create monopoly
  - To make the patent commercial
  - All the above
- 13) Which of the following statement is true:
- Patent is valid within geographical boundary.
  - Patent last for 15 years.
  - The person who pays for the invention owns the patent.
  - None of the above
- 14) What are the benefits of innovations resulting from economic initiatives?
- Reduced expenses
  - Productivity gains through modernization of production tools
  - Ability to meet growing demand for eco-responsible and personalized products
  - All of the above

**Managing Innovation and Entrepreneurship**

Day & Date: Thursday, 16-02-2023

Max. Marks: 70

Time: 10:00 AM To 01:00 PM

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) Innovation is defined as:
  - a) The commercialization of a new product or process
  - b) A new product or process idea
  - c) The implementation of a new production method
  - d) The invention of a new product or process
- 2) Who is an idea Champion?
  - a) The one who defeats elephant of ideas
  - b) The rider who shapes the path for elephant
  - c) The one who open new channels for idea to move forward
  - d) All the above
- 3) An entrepreneur is someone who
 

a) Organize a business	b) Manages a business
c) Takes risks	d) All of the above
- 4) What are the elements in the four action framework of Blue Ocean Strategy?
  - a) Eliminate, Reduce, Reuse, and Recycle
  - b) Eliminate, Reduce, Raise, and Create
  - c) Eliminate, Recreate, Recycle, and Reuse
  - d) Reduce, Reuse, Recycle, and Recreate
- 5) Match the following:
 

1) Base technologies	i) Decline phase
2) Key technologies	ii) Maturity phase
3) Pacing technologies	iii) Growth phase
4) Emerging technologies	iv) Emerging phase
a) 3-ii, 1-iii, 2-i, 4-iv	b) 1-i, 2-iii, 3-ii, 4-iv
c) 4-ii, 2-i, 3-iv, 1-iii	d) 1-iv, 2-iii, 3-ii, 4-i
- 6) What are the benefits of innovations resulting from economic initiatives?
  - a) Reduced expenses
  - b) Productivity gains through modernization of production tools
  - c) Ability to meet growing demand for eco-responsible and personalized products.
  - d) All of the above

- 7) What is the main objective of granting a patent?
- a) To encourage and develop new technology and Industry
  - b) To create monopoly
  - c) To make the patent commercial
  - d) All the above
- 8) Which of the following statement is true:
- a) Patent is valid within geographical boundary.
  - b) Patent last for 15 years.
  - c) The person who pays for the invention owns the patent.
  - d) None of the above
- 9) What are the benefits of innovations resulting from economic initiatives?
- a) Reduced expenses
  - b) Productivity gains through modernization of production tools
  - c) Ability to meet growing demand for eco-responsible and personalized products
  - d) All of the above
- 10) What are the reasons for resistance to change?
- a) Fear of failure
  - b) Inertia
  - c) Lack of confidence
  - d) All of the above
- 11) Which among the following is an important school of creative thinking?
- a) Design Thinking
  - b) Behavior Thinking
  - c) Linear Thinking
  - d) Profit Thinking
- 12) Elkington introduced the sustainability concept as a "triple bottom line." What are the three important dimensions (3P's) of sustainability?
- a) People, Planet, and Profit
  - b) People, Profit, and Product
  - c) Process, People, and Product
  - d) Profit, People, and Process
- 13) Who is not involved in the selection of ideas in idea management?
- a) Internal experts
  - b) External experts
  - c) A mix of Internal and External Experts
  - d) Basic raw material supplier
- 14) Which one of the following is not a type of innovation according to industry system?

  - a)  $(L + 5)5$
  - b)  $(L/3 + 5)10$
  - c)  $(L - 5)5$
  - d)  $(L/3 - 5)10$
- 5) Anchor bolts are provided in column base to \_\_\_\_\_.
  - i) Resist the tension forces
  - ii) Fix columns in place during erection
  - iii) Serve as reinforcement in concrete pedestal below the base plate of the above
  - a) i, ii are correct
  - b) ii, iii are correct
  - c) iii and i are correct
  - d) all are correct
- 6) The partial safety factor for the material of bolts is \_\_\_\_\_.
  - a) 1.0
  - b) 1.10
  - c) 1.15
  - d) 1.25
- 7) Which of the following sections has a minimum value of shape factor?
  - a) Rectangle
  - b) Tube section
  - c) Circle
  - d) I section
- 8) The slenderness ratio of lacing flat is limited to \_\_\_\_\_.
  - a) 350
  - b) 145
  - c) 180
  - d) 250

- 9) The best double angle compression member section is \_\_\_\_\_.  
a) Equal angle on same side of gusset  
b) Unequal angles with long legs back-to-back  
c) Unequal angles with short legs back-to-back  
d) Equal angle on opposite side of gusset plate
- 10) What is the minimum pitch distance according to IS 800:2007 if  $d$  is the bolt diameter?  
a)  $2d$   
b)  $d$   
c)  $1.7d$   
d)  $2.5d$
- 11) The effective length of a structural steel compression member of length  $L$  effectively held in position and restrained against rotation at one end but neither held in position nor restrained against rotation at the other end, is \_\_\_\_\_.  
a)  $2L$   
b)  $1.2L$   
c)  $0.8L$   
d)  $L$
- 12) Splices for compression members are designed as \_\_\_\_\_.  
a) Short column  
b) Intermediate column  
c) Long column  
d) Depends upon its thickness
- 13) Minimum number of battens required in a built-up column are \_\_\_\_\_.  
a) 2  
b) 3  
c) 4  
d) 6
- 14) A frame has an indeterminacy of 2 and the numbers of possible plastic hinges are 3. The collapse will be \_\_\_\_\_.  
a) Partial  
b) Complete  
c) Over complete  
d) Cannot be ascertained

<b>Set</b>	<b>P</b>
------------	----------

**T.Y. (B. Tech) (Sem – I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Design of Steel Structures**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any 3 questions from each section. Q.2 and Q.6 are compulsory.  
 2) Figures to the right indicates full marks.  
 3) Use of scientific non programmable calculator is allowed.  
 4) Draw the appropriate sketches wherever necessary.  
 5) Assume suitable data if necessary and mention it clearly before the solution.  
 6) Use of IS 800-2007 & IS 875 are allowed, but not allowed for MCQ (Q.1)

**Section – I**

- Q.2**   **a)**   Explain the advantages and disadvantages of steel structures. **05**  
           **b)**   A ground floor column is subjected to following service loads: **05**  
                   Dead load: 500 kN axial compression  
                   Live load: 250 kN axial compression  
                   Wind load: 150 kN axial compression  
                   Determine the design load combination for limit state of strength and limit state of serviceability.
- Q.3**   Design a bridge truss diagonal subjected to a factored tensile load of 290 kN. **09**  
           Length of diagonal is 3 m. The tension member is connected to gusset plate of 16 mm thick. Use 20 mm diameter bolts of grade 4.6
- Q.4**   Design a double angle discontinuous strut to carry a factored load of 145 kN, **09**  
           resulting from combination with wind load. The length of the strut is 2.8 m between intersections. The two angles are placed back-to-back (with long legs connected) and are tack bolted. Use steel of grade Fe410.  
           **a)**   Angles are placed on opposite sides of 12 mm gusset plate  
           **b)**   Angles are placed on same side of 12 mm gusset plate
- Q.5**   Design a battened column with two channels back-to-back of length 7 m to **09**  
           carry an axial factored load of 900kN. The column may be assumed to have restrained in position but not restrained in direction at both ends.

## Section – II

- Q.6** A portal frame ABCD fixed at A and hinged at D and subjected to two-point loads  $W$  acting at midpoint of BC and at B respectively. Take  $AB = L/2$ ,  $BC = L/2$ ,  $CD = L/2$  and  $DE = L/2$ . Also take the plastic moment capacity of  $AB = M_p$ ,  $BC = M_p$  and  $CD = M_p$ . Find the collapse load for the portal frame also draw the plastic moment diagram **10**

- Q.7** A simply supported steel joist of 4.0 m effective span is laterally supported throughout. It carries a total uniformly distributed load of 35 kN (inclusive of self weight) Design an appropriate section using steel of grade Fe 410. **09**
- Q.8** Design I section purlin to support galvanized corrugated iron sheet roof truss of span 12 m. The purlins are 1.5 m apart over roof trusses spaced 6 m center to center. The roof surface has an inclination of  $30^\circ$  to horizontal. The weight of corrugated iron sheet is  $0.133 \text{ kN/m}^2$ . The weight of fixtures etc. is  $0.055 \text{ kN/m}^2$  intensity of wind pressure for the medium permeability is  $1.8 \text{ kN/m}^2$  use grade of steel Fe 410. **09**
- Q.9** A column section ISHB 350 @ 661.2 N/m carries a factored axial compressive load of 1500kN and factored bending moment of 80kN-m. Design the base plate and its connection assume concrete pedestal of M20 grade. **09**

<b>Seat No.</b>

Day & Date: Wednesday, 25-01-2023  
Time: 10:00 AM To 01:00 PM

**Instructions:** 1) Q. No. 1 is compulsory it should be solved in first 30 minutes in answer Book. Page No.3 (starting page of the Answer Book) Each question carries one mark.

### MCQ/Objective Type Questions

Marks: 14

14

- Page 5 of 16

- 9) As per IS 800 purlins are designed as a \_\_\_\_\_.  
a) Simply supported beams      b) Cantilever beams  
c) Continuous beams      d) Compression member
- 10) In case of an axially loaded column machined for full bearing, the fastenings connecting the column to the base plate in gusseted base are designed for \_\_\_\_\_.  
a) 100% of column load      b) 50% of column load  
c) 25% of column load      d) Erection loads only
- 11) The self-weight of a roof truss ( $N/m^2$ ) may be obtained by \_\_\_\_\_.  
a)  $(L + 5)5$       b)  $(L/3 + 5)10$   
c)  $(L - 5)5$       d)  $(L/3 - 5)10$
- 12) Anchor bolts are provided in column base to \_\_\_\_\_.  
i) Resist the tension forces  
ii) Fix columns in place during erection  
iii) Serve as reinforcement in concrete pedestal below the base plate of the above  
a) i, ii are correct      b) ii, iii are correct  
c) iii and i are correct      d) all are correct
- 13) The partial safety factor for the material of bolts is \_\_\_\_\_.  
a) 1.0      b) 1.10  
c) 1.15      d) 1.25
- 14) Which of the following sections has a minimum value of shape factor?  
a) Rectangle      b) Tube section  
c) Circle      d) I section

2) Don't forget to mention the question paper Set (P/Q/R/S) at the top of the Same page.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given options.**

14

- 1) The partial safety factor for the material of bolts is \_\_\_\_\_.  
a) 1.0                                      b) 1.10  
c) 1.15                                      d) 1.25
- 2) Which of the following sections has a minimum value of shape factor?  
a) Rectangle                                b) Tube section  
c) Circle                                      d) I section
- 3) The slenderness ratio of lacing flat is limited to \_\_\_\_\_.  
a) 350    b) 145  
c) 180    d) 250
- 4) The best double angle compression member section is \_\_\_\_\_.  
a) Equal angle on same side of gusset  
b) Unequal angles with long legs back-to-back  
c) Unequal angles with short legs back-to-back  
d) Equal angle on opposite side of gusset plate
- 5) What is the minimum pitch distance according to IS 800:2007 if  $d$  is the bolt diameter?  
a)  $2d$     b)  $d$   
c)  $1.7d$                                         d)  $2.5d$
- 6) The effective length of a structural steel compression member of length  $L$  effectively held in position and restrained against rotation at one end but neither held in position nor restrained against rotation at the other end, is \_\_\_\_\_.  
a)  $2L$     b)  $1.2L$   
c)  $0.8L$                                         d)  $L$
- 7) Splices for compression members are designed as \_\_\_\_\_.  
a) Short column                              b) Intermediate column  
c) Long column                                d) Depends upon its thickness
- 8) Minimum number of battens required in a built-up column are \_\_\_\_\_.  
a) 2    b) 3  
c) 4    d) 6

- 9) A frame has an indeterminacy of 2 and the numbers of possible plastic hinges are 3. The collapse will be \_\_\_\_\_.
  - a) Partial
  - b) Complete
  - c) Over complete
  - d) Cannot be ascertained
- 10) Which of the following is a serviceability criterion?
  - a) Stability against overturning
  - b) Sway stability
  - c) Fire resistance
  - d) Fatigue
- 11) As per IS 800 purlins are designed as a \_\_\_\_\_.
  - a) Simply supported beams
  - b) Cantilever beams
  - c) Continuous beams
  - d) Compression member
- 12) In case of an axially loaded column machined for full bearing, the fastenings connecting the column to the base plate in gusseted base are designed for \_\_\_\_\_.
  - a) 100% of column load
  - b) 50% of column load
  - c) 25% of column load
  - d) Erection loads only
- 13) The self-weight of a roof truss ( $N/m^2$ ) may be obtained by \_\_\_\_\_.
  - a)  $(L + 5)5$
  - b)  $(L/3 + 5)10$
  - c)  $(L - 5)5$
  - d)  $(L/3 - 5)10$
- 14) Anchor bolts are provided in column base to \_\_\_\_\_.
  - i) Resist the tension forces
  - ii) Fix columns in place during erection
  - iii) Serve as reinforcement in concrete pedestal below the base plate of the above
  - a) i, ii are correct
  - b) ii, iii are correct
  - c) iii and i are correct
  - d) all are correct

 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. No. 2 and Q. No. 6 is compulsory, attempt any Two questions from the remaining questions from each section I and section II.  
 2) Assume additional data, if required, and state it clearly.  
 3) Figures to the right indicate full marks.

**Section – I**

- Q.2 Attempt any Four.** **08**
- Draw grain size distribution curve and show  $D_{10}$ ,  $D_{30}$ , and  $D_{60}$  on it.
  - Name two soil belonging to Fine grained soil and that belonging to coarse grained soil.
  - Define air content and degree of saturation.
  - Draw labelled sketch of triaxial shear apparatus (minimum four parts labeled).
  - Draw graph used to calculate liquid limit for soil and show liquid limit on it.
- Q.3 Answer the following questions.**
- With suitable notation prove the relation  $e = \frac{wG}{S_r}$  **05**
  - A soil sample has equal amounts of voids and solids, and also amount of air and water in terms of volume is same; for this soil find **05**
    - void ratio of the soil
    - porosity
    - air content
    - % air void and
    - degree of saturation
- Q.4 Answer the following questions.**
- What is permeability of soil? Explain any four factors affecting permeability of soil. **05**
  - Soil strata of 3 layers of thickness 1, 1.5, and 2.0 m having the coefficient permeability of  $2 \times 10^{-3}$ ,  $1.5 \times 10^{-3}$  and  $3 \times 10^{-3}$  cm/s respectively. Estimate the average coefficient of permeability in the direction of **05**
    - Parallel to the bedding plane
    - Normal to the bedding plane
- Q.5 Answer the following questions.**
- What are different types of shear test based on drainage of soil. **05**
  - Consolidated undrained test were carried out on a soil sample and following observations were recorded. **05**

Test	Cell Pressure (kPa)	Deviator stress at failure (kPa)
1	250	179
2	350	242

Determine shear parameters of soil both in terms of total stress and effective stress, if another identical soil specimen was tested at a cell pressure of 400kPa, what would be deviator stress at failure?

## Section – II

**Q.6 Attempt any Four.****08**

- Define Maximum dry density and optimum moisture content.
- Define over-consolidation ratio and how it is used to classify the soil.
- Draw compaction curve along with zero air void line (label all parts).
- Draw typical  $e - p$  curve and label various parts of it.
- Write any four analogy between spring model and saturated soil (consolidation).

**Q.7 Answer the following questions.**

- Explain step wise procedure for field compaction of soil. **05**
- The following are the results of a standard compaction test performed on a sample of soil. **05**

Moisture content (%)	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (Kg)	1.7	1.89	2.05	1.99	1.99	1.92

- Plot compaction curve and hence find OMC and MDD
- Plot 10% air void line
- What is the air content and degree of saturation corresponding to MDD?

**Q.8 Answer the following questions.**

- Explain Cassagrande method for calculating coefficient of consolidation. **05**
- A clay specimen was tested in a laboratory consolidation device, which was 12.7 mm thick and the top and the bottom boundaries were drained. A 50% consolidation time on the specimen was obtained as 28.4 minutes. Determine the following: **05**
  - Time for 50% consolidation in the field with this soil with a 2.5 m thickness where only the top layer is drained
  - Time for 90% consolidation in the field with this soil with a 2.5 m thickness where only the top layer is drained

**Q.9 Answer the following questions.**

- Explain Culman's method for calculating earth pressure. **05**
- Calculate total passive earth pressure and its position with respect to bottom of wall acting on a retaining wall of height 9m retaining two layered soil on back side of it. Top layer 4.2m thick having  $\gamma = 18 \text{ kN/m}^3$ ,  $c = 0$  and  $\phi = 27^\circ$  followed by second layer having  $\gamma = 19 \text{ kN/m}^3$ ,  $c = 0$  and  $\phi = 30^\circ$  **05**

Day & Date: Tuesday, 31-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) In compaction test graph is plotted between water content and \_\_\_\_ density of soil.
 

a) Bulk	b) Submerged
c) Dry	d) Soil solid
- 2) Process of removal of water from the soil is called \_\_\_\_\_.
 

a) compaction	b) consolidation
c) compression	d) none
- 3) Graphical method for finding earth pressure is given by \_\_\_\_\_.
 

a) Terzaghi	b) Cassagrande
c) Boussinesq	d) Culman
- 4) Vane shear test is commonly used to find shear strength of \_\_\_\_\_ soil.
 

a) clayey	b) sandy
c) silty	d) soft clayey soil
- 5) Height of fall of rammer in modified compaction test is \_\_\_\_\_.
 

a) 250mm	b) 310mm
c) 400mm	d) 450mm
- 6) Which of following shear strength test is quick one \_\_\_\_\_?
 

a) UU test	b) CU test
c) CD test	d) none
- 7) Standard size of soil sample used for conducting unconfined compression test is \_\_\_\_\_.
 

a) 30mm dia. And 60mm height	b) 38mm dia. and 76mm height
------------------------------	------------------------------
- 8) If solid portion and void portion in a given mass of soil is same then porosity for this soil is \_\_\_\_\_.
 

a) 1	b) 0.75
c) 0.50	d) 0.25

- 9) Which factors do not affect the permeability of soil \_\_\_\_\_?  
a) shape of soil particle                      b) size of soil particle  
c) specific gravity                              d) porosity
- 10) Optimum moisture content of which soil is more at a given compaction effort \_\_\_\_\_.  
a) silt    b) clay  
c) sand     d) sandy clay
- 11) Which roller is most suitable for compacting clayey soil?  
a) Pneumatic                                    b) Vibratory  
c) Sheep foot                                   d) Smooth wheel
- 12) Coefficient of volume compressibility is the slope of which of following curve \_\_\_\_\_.  
a)  $e - p$  curve                                  b)  $e - \log p$  curve  
c) flow curve                                    d) none
- 13) If the soil is dry then percentage air void for this soil is \_\_\_\_\_.  
a) 1    b) 0  
c) 0.50     d) none
- 14) Permeability of the soil is more when the degree of saturation of soil is \_\_\_\_\_.  
a) 0%    b) 25%  
c) 50%     d) 100%

**T.Y. (B. Tech) (Sem - I) (Old) (CBCS) Examination: Oct/Nov 2022**  
**CIVIL ENGINEERING**  
**Geotechnical Engineering**

Day & Date: Tuesday, 31-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. No. 2 and Q. No. 6 is compulsory, attempt any Two questions from the remaining questions from each section I and section II.  
 2) Assume additional data, if required, and state it clearly.  
 3) Figures to the right indicate full marks.

**Section – I**

**Q.2 Attempt any Four.** **08**

- Draw grain size distribution curve and show  $D_{10}$ ,  $D_{30}$ , and  $D_{60}$  on it.
- Name two soil belonging to Fine grained soil and that belonging to coarse grained soil.
- Define air content and degree of saturation.
- Draw labelled sketch of triaxial shear apparatus (minimum four parts labeled).
- Draw graph used to calculate liquid limit for soil and show liquid limit on it.

**Q.3 Answer the following questions.**

- With suitable notation prove the relation  $e = \frac{wG}{S_r}$  **05**
- A soil sample has equal amounts of voids and solids, and also amount of air and water in terms of volume is same; for this soil find **05**
  - void ratio of the soil
  - porosity
  - air content
  - % air void and
  - degree of saturation

**Q.4 Answer the following questions.**

- What is permeability of soil? Explain any four factors affecting permeability of soil. **05**
- Soil strata of 3 layers of thickness 1, 1.5, and 2.0 m having the coefficient permeability of  $2 \times 10^{-3}$ ,  $1.5 \times 10^{-3}$  and  $3 \times 10^{-3}$  cm/s respectively. Estimate the average coefficient of permeability in the direction of **05**
  - Parallel to the bedding plane
  - Normal to the bedding plane

**Q.5 Answer the following questions.**

- What are different types of shear test based on drainage of soil. **05**
- Consolidated undrained test were carried out on a soil sample and following observations were recorded. **05**

Test	Cell Pressure (kPa)	Deviator stress at failure (kPa)
1	250	179
2	350	242

Determine shear parameters of soil both in terms of total stress and effective stress, if another identical soil specimen was tested at a cell pressure of 400kPa, what would be deviator stress at failure?

## Section – II

**Q.6 Attempt any Four.****08**

- Define Maximum dry density and optimum moisture content.
- Define over-consolidation ratio and how it is used to classify the soil.
- Draw compaction curve along with zero air void line (label all parts).
- Draw typical  $e - p$  curve and label various parts of it.
- Write any four analogy between spring model and saturated soil (consolidation).

**Q.7 Answer the following questions.**

- Explain step wise procedure for field compaction of soil. **05**
- The following are the results of a standard compaction test performed on a sample of soil. **05**

Moisture content (%)	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (Kg)	1.7	1.89	2.05	1.99	1.99	1.92

- Plot compaction curve and hence find OMC and MDD
- Plot 10% air void line
- What is the air content and degree of saturation corresponding to MDD?

**Q.8 Answer the following questions.**

- Explain Cassagrande method for calculating coefficient of consolidation. **05**
- A clay specimen was tested in a laboratory consolidation device, which was 12.7 mm thick and the top and the bottom boundaries were drained. A 50% consolidation time on the specimen was obtained as 28.4 minutes. Determine the following: **05**
  - Time for 50% consolidation in the field with this soil with a 2.5 m thickness where only the top layer is drained
  - Time for 90% consolidation in the field with this soil with a 2.5 m thickness where only the top layer is drained

**Q.9 Answer the following questions.**

- Explain Culman's method for calculating earth pressure. **05**
- Calculate total passive earth pressure and its position with respect to bottom of wall acting on a retaining wall of height 9m retaining two layered soil on back side of it. Top layer 4.2m thick having  $\gamma = 18 \text{ kN/m}^3$ ,  $c = 0$  and  $\phi = 27^\circ$  followed by second layer having  $\gamma = 19 \text{ kN/m}^3$ ,  $c = 0$  and  $\phi = 30^\circ$  **05**

## Marks: 14

14

- Page 1 of 16

- 9) Which is the odd one out?
- a) Deep well injection
  - b) Landfilling
  - c) Land Farming
  - d) Composting
- 10) Which of the following can be collected from landfills?
- a) Leachate
  - b) Gas
  - c) Both a) and b)
  - d) None of the above
- 11) In composting by trenching trenches of \_\_\_\_\_ m length are excavated.
- a) 4-10
  - b) 7-12
  - c) 10-20
  - d) Above 20
- 12) Controlled tipping method of disposal of refuse requires an area of \_\_\_\_\_  $\text{m}^2/\text{c}/\text{yr}$ .
- a) 0.1-0.3
  - b) 0.3-0.5
  - c) 0.5- 1.0
  - d) 1.0- 1.2
- 13) Which type of pollutant does Ozone belong to?
- a) Primary
  - b) Secondary
  - c) Natural
  - d) None of the above
- 14) The coning plume from the stacks is observed in \_\_\_\_\_ type of atmosphere.
- a) Stable
  - b) Unstable
  - c) Inversion
  - d) Neutral

Set **P**

**T.Y. (B.Tech.) (Sem – I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**Civil Engineering**  
**Waste Water Engineering & Air Pollution**

Day &amp; Date: Friday, 24-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) In Section – I, Q. No. 2 is compulsory and solve any two questions from the remaining questions i.e. Q. No. 3, 4, & 5  
 2) In Section – II, Q. No. 6 is compulsory and solve any two questions from the remaining questions i.e. Q. No. 7, 8, & 9  
 3) Figures to the right indicate full marks  
 4) Assume suitable data wherever needed & mention it clearly.  
 5) Use of non-programmable calculator is allowed.

**Section - I**

**Q.2 Answer the following questions.**

- a) Explain biological process in trickling filter with sketch. **05**  
 b) The BOD of a sewage incubated for one day at 25° C has been found to be 150 mg/L. What will be the 5- day 20°C BOD. Assume K – 0.12 (Base 10) at 20° C. **05**

**Q.3 Answer the following questions.**

- a) A town has a population of 1,00,000 persons with per capita water supply of 200 litres/day. Assuming 80% of water usage is appears to be sewage, design a sewer running 0.7 times full at maximum discharge. Take a constant value of N= 0.013 at all depths of flow. The sewer is to be laid at a slope of 1 in 500. Take a peak factor of 3. **05**  
 b) Write advantages and disadvantages of stabilization pond. **04**

**Q.4 Answer the following questions.**

- A continuous flow completely stirred ASP is designed with following data- **09**  
 i. Wastewater discharge - 4000 m<sup>3</sup>/d  
 ii. Standard BOD of influent - 300 mg/L  
 iii. Effluent BOD - 35 mg/L  
 iv. MLSS - 2500 mg/L  
 v. Sludge age - 10 days  
 vi. Y - 0.65  
 vii. K<sub>d</sub> - 0.05  
 Find:  
 a) Reactor volume  
 b) F/M Ratio  
 c) Oxygen requirement

**Q.5 Write short notes on following (any three):**

- a) Septic tank  
 b) Grit chamber  
 c) Disposal of sludge  
 d) Anaerobic pond

**09**

**Section - II**

- Q.6** a) Discuss the procedure involved in 'self-purification' of stream. **05**  
b) A stream, saturated with DO has flow of  $1.2 \text{ m}^3/\text{s}$ , BOD of  $4 \text{ mg/L}$  and rate constant of 0.3 per day. It receives an effluent discharge of  $0.25 \text{ m}^3/\text{s}$ . Having BOD  $20 \text{ mg/L}$ , DO  $5 \text{ mg/L}$  and rate constant 0.13 per day. The average velocity of flow of the stream is  $0.15 \text{ m/s}$ . Calculate the DO deficit at point 20 km & 40 km downstream. Assume that the temperature is  $20^\circ\text{C}$  throughout and BOD is measured at 5 days. Take saturation DO at  $20^\circ\text{C}$  as  $9.17 \text{ mg/L}$ . **05**
- Q.7** a) With the help of diagram explain constructed wetlands. **05**  
b) List different composting methods and explain 'Bangalore method' of composting. **04**
- Q.8** a) Explain functional outlines for solid waste disposal. **05**  
b) Illustrate the classification of solid wastes based on various types. **04**
- Q.9** Write short notes on following (any three): **09**  
a) ESP  
b) Ozone Depletion  
c) Decentralized treatment systems  
d) Cyclone Precipitator

## Waste Water Engineering & Air Pollution

Max. Marks: 70

Time: 10:00 AM To 01:00 PM

4) Assume suitable data wherever needed and mention it clearly.

### MCQ/Objective Type Questions

Marks: 14

14

- [illegible]

- 9) Which is the odd one out?  
a) Deep well injection                      b) Landfilling  
c) Land Farming                              d) Composting
- 10) Which of the following can be collected from landfills?  
a) Leachate                                      b) Gas  
c) Both a) and b)                              d) None of the above
- 11) In composting by trenching trenches of \_\_\_\_\_ m length are excavated.  
a) 4-10    b) 7-12  
c) 10-20    d) Above 20
- 12) Controlled tipping method of disposal of refuse requires an area of \_\_\_\_\_  $\text{m}^2/\text{c}/\text{yr}$ .  
a) 0.1-0.3    b) 0.3-0.5  
c) 0.5- 1.0    d) 1.0- 1.2
- 13) Which type of pollutant does Ozone belong to?  
a) Primary    b) Secondary  
c) Natural    d) None of the above
- 14) The coning plume from the stacks is observed in \_\_\_\_\_ type of atmosphere.  
a) Stable    b) Unstable  
c) Inversion    d) Neutral

Set Q
-------

**T.Y. (B.Tech.) (Sem – I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**Civil Engineering**  
**Waste Water Engineering & Air Pollution**

Day &amp; Date: Friday, 24-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) In Section – I, Q. No. 2 is compulsory and solve any two questions from the remaining questions i.e. Q. No. 3, 4, & 5  
 2) In Section – II, Q. No. 6 is compulsory and solve any two questions from the remaining questions i.e. Q. No. 7, 8, & 9  
 3) Figures to the right indicate full marks  
 4) Assume suitable data wherever needed & mention it clearly.  
 5) Use of non-programmable calculator is allowed.

**Section - I**

**Q.2 Answer the following questions.**

- a) Explain biological process in trickling filter with sketch. **05**  
 b) The BOD of a sewage incubated for one day at 25° C has been found to be 150 mg/L. What will be the 5- day 20°C BOD. Assume K – 0.12 (Base 10) at 20° C. **05**

**Q.3 Answer the following questions.**

- a) A town has a population of 1,00,000 persons with per capita water supply of 200 litres/day. Assuming 80% of water usage is appears to be sewage, design a sewer running 0.7 times full at maximum discharge. Take a constant value of N= 0.013 at all depths of flow. The sewer is to be laid at a slope of 1 in 500. Take a peak factor of 3. **05**  
 b) Write advantages and disadvantages of stabilization pond. **04**

**Q.4 Answer the following questions.**

- A continuous flow completely stirred ASP is designed with following data- **09**  
 i. Wastewater discharge - 4000 m<sup>3</sup>/d  
 ii. Standard BOD of influent - 300 mg/L  
 iii. Effluent BOD - 35 mg/L  
 iv. MLSS - 2500 mg/L  
 v. Sludge age - 10 days  
 vi. Y - 0.65  
 vii. K<sub>d</sub> - 0.05  
 Find:  
 a) Reactor volume  
 b) F/M Ratio  
 c) Oxygen requirement

**Q.5 Write short notes on following (any three):**

- a) Septic tank  
 b) Grit chamber  
 c) Disposal of sludge  
 d) Anaerobic pond

**09**

**Section - II**

- Q.6** a) Discuss the procedure involved in 'self-purification' of stream. **05**  
b) A stream, saturated with DO has flow of  $1.2 \text{ m}^3/\text{s}$ , BOD of  $4 \text{ mg/L}$  and rate constant of 0.3 per day. It receives an effluent discharge of  $0.25 \text{ m}^3/\text{s}$ . Having BOD  $20 \text{ mg/L}$ , DO  $5 \text{ mg/L}$  and rate constant 0.13 per day. The average velocity of flow of the stream is  $0.15 \text{ m/s}$ . Calculate the DO deficit at point 20 km & 40 km downstream. Assume that the temperature is  $20^\circ\text{C}$  throughout and BOD is measured at 5 days. Take saturation DO at  $20^\circ\text{C}$  as  $9.17 \text{ mg/L}$ . **05**
- Q.7** a) With the help of diagram explain constructed wetlands. **05**  
b) List different composting methods and explain 'Bangalore method' of composting. **04**
- Q.8** a) Explain functional outlines for solid waste disposal. **05**  
b) Illustrate the classification of solid wastes based on various types. **04**
- Q.9** Write short notes on following (any three): **09**  
a) ESP  
b) Ozone Depletion  
c) Decentralized treatment systems  
d) Cyclone Precipitator

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The stopping sight distance depends upon \_\_\_\_\_.
  - a) total reaction time
  - b) speed of vehicle
  - c) efficiency of brakes
  - d) all of the above
- 2) On a single lane road with two-way traffic, the minimum stopping sight distance is equal to \_\_\_\_\_.
  - a) Stopping distance
  - b) two times the stopping distance
  - c) half the stopping distance
  - d) three times the stopping distance
- 3) Select the strength parameter of concrete used in design of plain jointed cement concrete pavements from the following choices:
  - a) Tensile strength
  - b) Compressive strength
  - c) Flexural strength
  - d) Shear strength.
- 4) Maximum number of vehicles can be parked with \_\_\_\_\_.
  - a) Parallel parking
  - b) 30° angle parking
  - c) 45° angle parking
  - d) 90° angle parking
- 5) The standard plate size in a plate bearing test for finding modulus of subgrade Reaction (k) value is \_\_\_\_\_.
  - a) 100 cm diameter
  - b) 50 cm diameter
  - c) 75 cm diameter
  - d) 25 cm diameter
- 6) The function of an expansion joint in rigid pavements is to \_\_\_\_\_.
  - a) Relieve warping stresses
  - b) Relieve shrinkage stresses
  - c) Resist stresses due to expansion
  - d) Allow free expansion
- 7) in highway construction, rolling starts from \_\_\_\_\_.
  - a) Sides and proceed to center
  - b) Center and proceed to sides
  - c) One side and proceed to other side
  - d) Any of the above

 2) In Section - II, Q. No. 6 is compulsory and solve any TWO questions from remaining questions (Q. No. 7, 8 & 9).  
 3) Figure on right indicates full marks.  
 4) Assume suitable data wherever needed & mention it clearly.

**Section – I**

**Q.2 Solve the following questions. 08**

The radius of a horizontal circular curve is 150 m. The design speed is 60 kmph and the design coefficient of lateral friction is 0.15.

- Calculate the super elevation required if full lateral friction is assumed to develop.
- Calculate the coefficient of friction needed if no super elevation is provided.
- Calculate the equilibrium super elevation if the pressure on inner and outer wheels should be equal.

**Q.3 Solve any two questions 10**

- Write a note on Third 20 Year Road Plan.
- Mention the different cross-sectional elements of highway and explain any one in detail.
- State different types of pavements and discuss their suitability.

**Q.4 Solve any two questions 10**

- Explain various characteristics of road transport in comparison with the other systems.
- Explain the factors controlling geometric design of roads
- Write a short note highway materials: Bitumen

**Q.5 Solve 10**

Explain different types of road surveys that are carried out before designing alignment.

**Section – II**

**Q.6 Solve any two questions 08**

- Differentiate between flexible & rigid pavement
- Find equivalent radius of resisting section of 20cm slab if contact area is  $707\text{cm}^2$
- Write a short on Softening point test on bitumen.

- Q.7 Solve any two questions** **10**
- a) Write a note on surface drainage system for highway.
  - b) Mention the specifications of materials and construction steps for Water Bound Macadam (WBM) road.
  - c) Write a short note on Pavement failures with its types.
- Q.8 Solve any two questions** **10**
- a) Explain highway user benefits.
  - b) Write a short note on highway cost & vehicular operation cost.
  - c) What is economic analysis & give the methods of it.
- Q.9 Solve** **10**
- With neat sketches explain different shapes of tunnel & its suitability.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Los Angeles testing machine is used to conduct \_\_\_\_\_.
  - a) Abrasion test
  - b) Impact test
  - c) Attrition test
  - d) Crushing strength test
- 2) When the bituminous surfacing is done on already existing black top road or over existing cement concrete road, the type of treatment given is \_\_\_\_\_.
  - a) Seal coat
  - b) Tack coat
  - c) Prime coat
  - d) Spray of emulsion
- 3) The critical combination of stresses for corner region in cement concrete roads is \_\_\_\_\_.
  - a) Load stress + warping stress frictional stress
  - b) Load stress + warping stress + frictional stress
  - c) Load stress + warping stress
  - d) Load stress + frictional stress
- 4) Tyre pressure influences the
  - a) Total depth of pavement
  - b) Quality of surface course
  - c) Both the above
  - d) None of the above
- 5) The most suitable equipment for compacting clayey soils is a
  - a) Smooth wheeled roller
  - b) Pneumatic tyred roller
  - c) Sheep foot roller
  - d) Vibrator
- 6) Flexible pavement distribute the wheel load \_\_\_\_\_.
  - a) Directly to sub-grade
  - b) Through structural action
  - c) Through a set of layers to the sub-grade
  - d) None of the above

- 7) In full face method of constructing tunnel, the first operation relates \_\_\_\_\_.  
a) Removal of bottom portion  
b) Excavation of one drift in the center  
c) Removal of top portion  
d) Excavation being done along the perimeter
- 8) The stopping sight distance depends upon \_\_\_\_\_.  
a) total reaction time  
b) speed of vehicle  
c) efficiency of brakes  
d) all of the above
- 9) On a single lane road with two-way traffic, the minimum stopping sight distance is equal to \_\_\_\_\_.  
a) Stopping distance  
b) two times the stopping distance  
c) half the stopping distance  
d) three times the stopping distance
- 10) Select the strength parameter of concrete used in design of plain jointed cement concrete pavements from the following choices:  
a) Tensile strength  
b) Compressive strength  
c) Flexural strength  
d) Shear strength.
- 11) Maximum number of vehicles can be parked with \_\_\_\_\_.  
a) Parallel parking  
b) 30° angle parking  
c) 45° angle parking  
d) 90° angle parking
- 12) The standard plate size in a plate bearing test for finding modulus of subgrade Reaction (k) value is \_\_\_\_\_.  
a) 100 cm diameter  
b) 50 cm diameter  
c) 75 cm diameter  
d) 25 cm diameter
- 13) The function of an expansion joint in rigid pavements is to \_\_\_\_\_.  
a) Relieve warping stresses  
b) Relieve shrinkage stresses  
c) Resist stresses due to expansion  
d) Allow free expansion
- 14) in highway construction, rolling starts from \_\_\_\_\_.

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) In Section - I, Q. No. 2 is compulsory and solve any TWO questions from remaining questions (Q. No. 3, 4 & 5).  
 2) In Section - II, Q. No. 6 is compulsory and solve any TWO questions from remaining questions (Q. No. 7, 8 & 9).  
 3) Figure on right indicates full marks.  
 4) Assume suitable data wherever needed & mention it clearly.

**Section – I**

**Q.2 Solve the following questions. 08**

The radius of a horizontal circular curve is 150 m. The design speed is 60 kmph and the design coefficient of lateral friction is 0.15.

- Calculate the super elevation required if full lateral friction is assumed to develop.
- Calculate the coefficient of friction needed if no super elevation is provided.
- Calculate the equilibrium super elevation if the pressure on inner and outer wheels should be equal.

**Q.3 Solve any two questions 10**

- Write a note on Third 20 Year Road Plan.
- Mention the different cross-sectional elements of highway and explain any one in detail.
- State different types of pavements and discuss their suitability.

**Q.4 Solve any two questions 10**

- Explain various characteristics of road transport in comparison with the other systems.
- Explain the factors controlling geometric design of roads
- Write a short note highway materials: Bitumen

**Q.5 Solve 10**

Explain different types of road surveys that are carried out before designing alignment.

**Section – II**

**Q.6 Solve any two questions 08**

- Differentiate between flexible & rigid pavement
- Find equivalent radius of resisting section of 20cm slab if contact area is  $707\text{cm}^2$
- Write a short on Softening point test on bitumen.

- Q.7 Solve any two questions** **10**
- a) Write a note on surface drainage system for highway.
  - b) Mention the specifications of materials and construction steps for Water Bound Macadam (WBM) road.
  - c) Write a short note on Pavement failures with its types.
- Q.8 Solve any two questions** **10**
- a) Explain highway user benefits.
  - b) Write a short note on highway cost & vehicular operation cost.
  - c) What is economic analysis & give the methods of it.
- Q.9 Solve** **10**
- With neat sketches explain different shapes of tunnel & its suitability.

Day & Date: Tuesday, 07-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:**
- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
  - 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
  - 3) Figures to the right indicate full marks.
  - 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Tyre pressure influences the
  - a) Total depth of pavement
  - b) Quality of surface course
  - c) Both the above
  - d) None of the above
- 2) The most suitable equipment for compacting clayey soils is a
  - a) Smooth wheeled roller
  - b) Pneumatic tyred roller
  - c) Sheep foot roller
  - d) Vibrator
- 3) Flexible pavement distribute the wheel load \_\_\_\_\_.
  - a) Directly to sub-grade
  - b) Through structural action
  - c) Through a set of layers to the sub-grade
  - d) None of the above
- 4) In full face method of constructing tunnel, the first operation relates \_\_\_\_\_.
  - a) Removal of bottom portion
  - b) Excavation of one drift in the center
  - c) Removal of top portion
  - d) Excavation being done along the perimeter
- 5) The stopping sight distance depends upon \_\_\_\_\_.
  - a) total reaction time
  - b) speed of vehicle
  - c) efficiency of brakes
  - d) all of the above
- 6) On a single lane road with two-way traffic, the minimum stopping sight distance is equal to \_\_\_\_\_.
  - a) Stopping distance
  - b) two times the stopping distance
  - c) half the stopping distance
  - d) three times the stopping distance

- 7) Select the strength parameter of concrete used in design of plain jointed cement concrete pavements from the following choices:
- a) Tensile strength
  - b) Compressive strength
  - c) Flexural strength
  - d) Shear strength.
- 8) Maximum number of vehicles can be parked with \_\_\_\_\_.  
a) Parallel parking                      b) 30° angle parking  
c) 45° angle parking                      d) 90° angle parking
- 9) The standard plate size in a plate bearing test for finding modulus of subgrade Reaction (k) value is \_\_\_\_\_.  
a) 100 cm diameter                      b) 50 cm diameter  
c) 75 cm diameter                      d) 25 cm diameter
- 10) The function of an expansion joint in rigid pavements is to \_\_\_\_\_.  
a) Relieve warping stresses  
b) Relieve shrinkage stresses  
c) Resist stresses due to expansion  
d) Allow free expansion
- 11) in highway construction, rolling starts from \_\_\_\_\_.  
a) Sides and proceed to center  
b) Center and proceed to sides  
c) One side and proceed to other side  
d) Any of the above
- 12) Los Angeles testing machine is used to conduct \_\_\_\_\_.  
a) Abrasion test                      b) Impact test  
c) Attrition test                      d) Crushing strength test
- 13) When the bituminous surfacing is done on already existing black top road or over existing cement concrete road, the type of treatment given is \_\_\_\_\_.  
a) Seal coat                      b) Tack coat  
c) Prime coat                      d) Spray of emulsion
- 14) The critical combination of stresses for corner region in cement concrete roads is \_\_\_\_\_.  
a) Load stress + warping stress frictional stress  
b) Load stress + warping stress + frictional stress  
c) Load stress + warping stress  
d) Load stress + frictional stress

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) If the demand line drawn from a ridge in a flow mass curve does not intersect the curve again, it indicates that \_\_\_\_\_.  
 a) equal to the rate of rainfall  
 b) equal to the infiltration capacity  
 c) more than the infiltration capacity  
 d) has no relation either with the rainfall intensity or the infiltration capacity
- 2) Lysmeter is used to measure \_\_\_\_\_.  
 a) evaporation  
 b) evapotranspiration  
 c) transpiration  
 d) infiltration
- 3) The length of all streams per unit area of a watershed, is called: \_\_\_\_\_.  
 a) stream density  
 b) drainage density  
 c) drainage coefficient  
 d) distribution coefficient
- 4) Which index represents the average rate of infiltration only for that rainfall which contributes to runoff \_\_\_\_\_.  
 a)  $\phi$   
 b) W  
 c) both a and b  
 d) None of these
- 5) Stream flow may be measured in: \_\_\_\_\_.  
 a)  $m^3/sec$   
 b) m depth/sec  
 c) both (a) and (b)  
 d) Neither (a) or (b)
- 6) The Rational formula is restricted to the catchments of size less than: \_\_\_\_\_.  
 a) 500 ha  
 b) 5000 ha  
 c) 50000 ha  
 d) 5,00,000 ha
- 7) Which of the following formations does not contain any groundwater?  
 a) Aquifer  
 b) Aquifuge  
 c) Aquitard  
 d) Aquiclude

- 8) In the case of water table well, the piezometric surface \_\_\_\_\_.  
a) is above the ground level  
b) is below the Water level in the well  
c) Coincides with the water level in the well  
d) is between the water level in the well and ground level
- 9) Peninsular Component has total number of river links \_\_\_\_\_.  
a) 13 links  
b) 14 links  
c) 15 links  
d) 16 links
- 10) In portable sprinkler system \_\_\_\_\_ components are portable.  
a) main pipeline  
b) sub main pipeline  
c) sprinklers  
d) all of these
- 11) The duty of irrigation water for a given crop is maximum \_\_\_\_\_.  
a) on the field  
b) at the head of the main canal  
c) at the head of the water-course  
d) None of them
- 12) The Gross Irrigation Requirement (GIR) of water is equal to: \_\_\_\_\_.  
a)  $NIR + \eta_a$   
b)  $NIR + \eta_a * \eta_c$   
c)  $NIR / \eta_a * \eta_c$   
d) None of above  
where,  $\eta_a$  = water application efficiency  $\eta_c$  = water conveyance efficiency.
- 13) The drawback associated with Assessment of canal water by area basis \_\_\_\_\_.  
a) quantity of water used farmers is less  
b) Farmers near the head utilizes more water  
c) Farmers use to irrigate same area number of items  
d) Both a and b
- 14) Afforestation helps in \_\_\_\_\_.  
a) soil conservation  
b) water conservation  
c) Both of a and b  
d) None of these

**CIVIL ENGINEERING**

**Hydrology and Water Resources Engineering**

Day & Date: Thursday, 09-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. No. 2 and Q. No. 6 are compulsory.  
 2) Attempt any two questions from the remaining questions of each section.  
 3) Assume suitable data if necessary and state it clearly.

**Section – I**

- Q.2** a) Explain with sketch Thiessen's method for calculating average depth of Precipitation over an area. Discuss the relative merits of this method over other methods of computation. **05**
- b) The following data were collected during stream gauging operation in a river Compute the discharge. **05**

Distance from left water edge (m)	0	1.5	3.0	4.5	6.0	7.5	9.0
Depth (m)	0	1.3	2.5	1.7	1.0	0.4	0.0
Velocity at 0.2 d (m/s)	0	0.6	0.9	0.7	0.6	0.4	0.0
Velocity at 0.8 d (m/s)	0	0.4	0.6	0.5	0.4	0.3	0.0

- Q.3** a) What is flood and discuss various factors affecting flood? **04**
- b) The rainfall rates for successive 30 minutes interval up to 4 hrs are given in the table as below. If the surface runoff is 3.6 cm. determine the  $\phi$  and W index. **05**

Time (min)	0	30	60	90	120	150	180	210	240
Rainfall intensity (cm/hr)	0	1.3	2.8	4.2	3.9	2.8	2.2	1.8	0.9

- Q.4** a) What do you understand by recuperation test? Derive the expression used in this test? **04**
- b) Two storms each of 6-h duration having rainfall excess values of 3 and 2 cm respectively occur successively. The 2 cm ER follows the 3 cm rain. The 6-h UH for the catchment having following observations. Calculate the resulting DRH. **05**

Duration (h)	0	3	6	9	12	15	18	21	24
Ordinate of runoff hydrograph (m <sup>3</sup> /s)	0	10	15	21	30	25	20	10	5

- Q.5 a)** What is mean by Hydrograph? Explain procedure of finding runoff from a given Hydrograph. **04**
- b)** In an artesian aquifer of 8 m thick, a 10 cm diameter well is pumped at a constant rate of 100 lpm. The steady state drawdown observed in two wells located at 10 m and 50 m distance from the centre of the well are 3 m and 0.05 m respectively. Compute the transmissivity and the hydraulic conductivity of the aquifer. **05**

### Section – II

- Q.6 a)** Write a detailed note on 'National Perspective Plan' of National Water Development Academy for Inter-basin transfer of water in India. **05**
- b)** Discuss the concept of 'Bandhara irrigation system' with its advantages and disadvantages. **05**
- Q.7 a)** Describe with a neat sketch, general layout of a lift irrigation scheme. Briefly explain the Jack Well. **03**
- b)** The base period, intensity of irrigation and duty of various crops under a canal irrigation system are given below. Find the reservoir capacity if the canal losses are 25% and reservoir losses are 20%. **06**

Crop	Base period (days)	Duty at field (ha/cumec)	Area under the crop (Ha)
Wheat	120	1700	5000
Sugarcane	360	600	6000
Cotton	200	1500	2500
Rice	120	800	3500
Vegetables	120	900	2400

- Q.8 a)** Discuss the terms field capacity, wilting point and optimum water content. **03**
- b)** Write a short note on Application of Remote Sensing and GIS in watershed management. **06**
- Q.9 a)** Enlist the watershed erosion control measures which are effective in preventing and delaying sediment deposition in reservoirs. **03**
- b)** The field capacity of a certain soil is 15% & the moisture content of the soil before irrigation is 8%. Determine the depth up to which the soil profile will be wetted with an application of 60 mm of water. Take dry weight of soil as 15.3 kN/m<sup>3</sup>. **06**

Max. Marks: 70

- Instructions:**
- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.
  - 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
  - 3) Figures to right indicates full marks.
  - 4) Assume suitable data if necessary and state it clearly.

## Marks: 14

14

- 1) In the case of water table well, the piezometric surface \_\_\_\_\_.
  - a) is above the ground level
  - b) is below the Water level in the well
  - c) Coincides with the water level in the well
  - d) is between the water level in the well and ground level
- 2) Peninsular Component has total number of river links \_\_\_\_\_.
  - a) 13 links
  - b) 14 links
  - c) 15 links
  - d) 16 links
- 3) In portable sprinkler system \_\_\_\_\_ components are portable.
  - a) main pipeline
  - b) sub main pipeline
  - c) sprinklers
  - d) all of these
- 4) The duty of irrigation water for a given crop is maximum \_\_\_\_\_.
  - a) on the field
  - b) at the head of the main canal
  - c) at the head of the water-course
  - d) None of them
- 5) The Gross Irrigation Requirement (GIR) of water is equal to: \_\_\_\_\_.
  - a)  $NIR + \eta_a$
  - b)  $NIR + \eta_a * \eta_c$
  - c)  $NIR / \eta_a * \eta_c$
  - d) None of above

where,  $\eta_a$  = water application efficiency  $\eta_c$  = water conveyance efficiency.
- 6) The drawback associated with Assessment of canal water by area basis \_\_\_\_\_.
  - a) quantity of water used farmers is less
  - b) Farmers near the head utilizes more water
  - c) Farmers use to irrigate same area number of items
  - d) Both a and b
- 7) Afforestation helps in \_\_\_\_\_.
  - a) soil conservation
  - b) water conservation
  - c) Both of a and b
  - d) None of these

- 8) If the demand line drawn from a ridge in a flow mass curve does not intersect the curve again, it indicates that \_\_\_\_\_.  
a) equal to the rate of rainfall  
b) equal to the infiltration capacity  
c) more than the infiltration capacity  
d) has no relation either with the rainfall intensity or the infiltration capacity
- 9) Lysmeter is used to measure \_\_\_\_\_.  
a) evaporation  
b) evapotranspiration  
c) transpiration  
d) infiltration
- 10) The length of all streams per unit area of a watershed, is called: \_\_\_\_\_.  
a) stream density  
b) drainage density  
c) drainage coefficient  
d) distribution coefficient
- 11) Which index represents the average rate of infiltration only for that rainfall which contributes to runoff \_\_\_\_\_.  
a)  $\phi$   
b)  $W$   
c) both a and b  
d) None of these
- 12) Stream flow may be measured in: \_\_\_\_\_.  
a)  $\text{m}^3/\text{sec}$   
b) m depth/sec  
c) both (a) and (b)  
d) Neither (a) or (b)
- 13) The Rational formula is restricted to the catchments of size less than: \_\_\_\_\_.  
a) 500 ha  
b) 5000 ha  
c) 50000 ha  
d) 5,00,000 ha
- 14) Which of the following formations does not contain any groundwater?  
a) Aquifer  
b) Aquifuge  
c) Aquitard  
d) Aquiclude

- Instructions:** 1) Q. No. 2 and Q. No. 6 are compulsory.  
 2) Attempt any two questions from the remaining questions of each section.  
 3) Assume suitable data if necessary and state it clearly.

**Section – I**

- Q.2 a)** Explain with sketch Thiessen's method for calculating average depth of Precipitation over an area. Discuss the relative merits of this method over other methods of computation. **05**
- b)** The following data were collected during stream gauging operation in a river Compute the discharge. **05**

<b>Distance from left water edge (m)</b>	0	1.5	3.0	4.5	6.0	7.5	9.0
<b>Depth (m)</b>	0	1.3	2.5	1.7	1.0	0.4	0.0
<b>Velocity at 0.2 d (m/s)</b>	0	0.6	0.9	0.7	0.6	0.4	0.0
<b>Velocity at 0.8 d (m/s)</b>	0	0.4	0.6	0.5	0.4	0.3	0.0

- Q.3 a)** What is flood and discuss various factors affecting flood? **04**
- b)** The rainfall rates for successive 30 minutes interval up to 4 hrs are given in the table as below. If the surface runoff is 3.6 cm. determine the  $\phi$  and W index. **05**

<b>Time (min)</b>	0	30	60	90	120	150	180	210	240
<b>Rainfall intensity (cm/hr)</b>	0	1.3	2.8	4.2	3.9	2.8	2.2	1.8	0.9

- Q.4 a)** What do you understand by recuperation test? Derive the expression used in this test? **04**
- b)** Two storms each of 6-h duration having rainfall excess values of 3 and 2 cm respectively occur successively. The 2 cm ER follows the 3 cm rain. The 6-h UH for the catchment having following observations. Calculate the resulting DRH. **05**

<b>Duration (h)</b>	0	3	6	9	12	15	18	21	24
<b>Ordinate of runoff hydrograph (m<sup>3</sup>/s)</b>	0	10	15	21	30	25	20	10	5

- Q.5 a)** What is mean by Hydrograph? Explain procedure of finding runoff from a given Hydrograph. **04**
- b)** In an artesian aquifer of 8 m thick, a 10 cm diameter well is pumped at a constant rate of 100 lpm. The steady state drawdown observed in two wells located at 10 m and 50 m distance from the centre of the well are 3 m and 0.05 m respectively. Compute the transmissivity and the hydraulic conductivity of the aquifer. **05**

### Section – II

- Q.6 a)** Write a detailed note on 'National Perspective Plan' of National Water Development Academy for Inter-basin transfer of water in India. **05**
- b)** Discuss the concept of 'Bandhara irrigation system' with its advantages and disadvantages. **05**
- Q.7 a)** Describe with a neat sketch, general layout of a lift irrigation scheme. Briefly explain the Jack Well. **03**
- b)** The base period, intensity of irrigation and duty of various crops under a canal irrigation system are given below. Find the reservoir capacity if the canal losses are 25% and reservoir losses are 20%. **06**

Crop	Base period (days)	Duty at field (ha/cumec)	Area under the crop (Ha)
<b>Wheat</b>	120	1700	5000
<b>Sugarcane</b>	360	600	6000
<b>Cotton</b>	200	1500	2500
<b>Rice</b>	120	800	3500
<b>Vegetables</b>	120	900	2400

- Q.8 a)** Discuss the terms field capacity, wilting point and optimum water content. **03**
- b)** Write a short note on Application of Remote Sensing and GIS in watershed management. **06**
- Q.9 a)** Enlist the watershed erosion control measures which are effective in preventing and delaying sediment deposition in reservoirs. **03**
- b)** The field capacity of a certain soil is 15% & the moisture content of the soil before irrigation is 8%. Determine the depth up to which the soil profile will be wetted with an application of 60 mm of water. Take dry weight of soil as 15.3 kN/m<sup>3</sup>. **06**

Day & Date: Thursday, 09-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to right indicates full marks.  
 4) Assume suitable data if necessary and state it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The duty of irrigation water for a given crop is maximum \_\_\_\_\_.  
 a) on the field  
 b) at the head of the main canal  
 c) at the head of the water-course  
 d) None of them
- 2) The Gross Irrigation Requirement (GIR) of water is equal to: \_\_\_\_\_.  
 a)  $NIR + \eta_a$   
 b)  $NIR + \eta_a * \eta_c$   
 c)  $NIR / \eta_a * \eta_c$   
 d) None of above  
 where,  $\eta_a$  = water application efficiency  $\eta_c$  = water conveyance efficiency.
- 3) The drawback associated with Assessment of canal water by area basis \_\_\_\_\_.  
 a) quantity of water used farmers is less  
 b) Farmers near the head utilizes more water  
 c) Farmers use to irrigate same area number of items  
 d) Both a and b
- 4) Afforestation helps in \_\_\_\_\_.  
 a) soil conservation  
 b) water conservation  
 c) Both of a and b  
 d) None of these
- 5) If the demand line drawn from a ridge in a flow mass curve does not intersect the curve again, it indicates that \_\_\_\_\_.  
 a) equal to the rate of rainfall  
 b) equal to the infiltration capacity  
 c) more than the infiltration capacity  
 d) has no relation either with the rainfall intensity or the infiltration capacity
- 6) Lysmeter is used to measure \_\_\_\_\_.  
 a) evaporation  
 b) evapotranspiration  
 c) transpiration  
 d) infiltration

- ### MCQ/Objective Type Questions

Marks: 14

## 14

- Page 13 of 16

- 8) The drawback associated with Assessment of canal water by area basis \_\_\_\_\_.  
a) quantity of water used farmers is less  
b) Farmers near the head utilizes more water  
c) Farmers use to irrigate same area number of items  
d) Both a and b
- 9) Afforestation helps in \_\_\_\_\_.  
a) soil conservation                      b) water conservation  
c) Both of a and b                      d) None of these
- 10) If the demand line drawn from a ridge in a flow mass curve does not intersect the curve again, it indicates that \_\_\_\_\_.  
a) equal to the rate of rainfall  
b) equal to the infiltration capacity  
c) more than the infiltration capacity  
d) has no relation either with the rainfall intensity or the infiltration capacity
- 11) Lysmeter is used to measure \_\_\_\_\_.  
a) evaporation                      b) evapotranspiration  
c) transpiration                      d) infiltration
- 12) The length of all streams per unit area of a watershed, is called: \_\_\_\_\_.  
a) stream density                      b) drainage density  
c) drainage coefficient                      d) distribution coefficient
- 13) Which index represents the average rate of infiltration only for that rainfall which contributes to runoff \_\_\_\_\_.  
a)  $\phi$                       b)  $W$   
c) both a and b                      d) None of these
- 14) Stream flow may be measured in: \_\_\_\_\_.  
a)  $m^3/sec$                       b) m depth/sec  
c) both (a) and (b)                      d) Neither (a) or (b)

**Q.1 Choose the correct alternatives from the given options. 10**

- 1) Microeconomic theory deals with \_\_\_\_\_.
  - a) Economic behavior of individual economic decision-making units
  - b) Economy as whole
  - c) Trade relations
  - d) Economic growth of the society
- 2) In a mixed economy which sector (s) is / are found \_\_\_\_\_.
  - a) Private only
  - b) Public only
  - c) None
  - d) Both (a) public and (b) private
- 3) Who is known as father of economics?
  - a) Adam Smith
  - b) Prof. A. Samuelson
  - c) Alfred Marshall
  - d) J. R. Hicks
- 4) Which of these is an economic activity?
  - a) Father teaching his son at home instead of spending on coaching
  - b) A housewife making food for the family on her own
  - c) A hair dresser doing hair cut designing on payment
  - d) A singer giving a show on his son's wedding anniversary
- 5) Market system means: \_\_\_\_\_.
  - a) Socialism
  - b) Capitalism
  - c) A place where goods are traded
  - d) All of the above
- 6) Micro and Macro are not two independent approaches to economic analysis but they are complementary to each other.
  - a) False
  - b) True
  - c) Partly true
  - d) Partly False
- 7) Variable factor means those factors of production \_\_\_\_\_.
  - a) which can be only changed in the long run
  - b) which can be changed in the short run
  - c) which can be never be changed
  - d) All of the above

- 8)** Which one of the following is not the function of money?
- a) Medium of exchange
  - b) Measure of Happiness
  - c) Standard of deferred payment
  - d) Store of value
- 9)** Which one of the following is the objective of the RBI?
- a) To maintain term deposits of the households
  - b) To ensure price stability
  - c) To arrange loans for the businessmen
  - d) None of the above
- 10)** Which one of the following cost can never become zero?
- |                  |                  |

**T.Y. (B. Tech) (Sem - I) (Old) (CBCS) Examination: Oct/Nov-2022**

**CIVIL ENGINEERING**

**Professional Ethics & Human Value**

Day & Date: Monday 20-02-2023

Max. Marks: 40

Time: 10:00 AM To 12:00 PM

**Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Q.2** List the human values and explain any two in detail. **10**

**OR**

Distinguish between Kohlberg's and Gilligan's approach to ethical (moral) judgments.

**Q.3** Discuss in detail risk benefit analysis and reducing risk. **10**

**OR**

Explain the role of engineers as manager.

**Q.4 Write short notes on any four** **20**

- a) Objectives of Engineering Ethics
- b) Self confidence
- c) Commitment
- d) Difference between moral and ethics
- e) Intellectual property rights
- f) Code of ethics

**Professional Ethics & Human Value**

Day &amp; Date: Monday 20-02-2023

Max. Marks: 50

Time: 10:00 AM To 12:00 PM

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks:10

**Q.1 Choose the correct alternatives from the given options. 10**

- 1) \_\_\_\_\_ is defined as a set of attitudes concerned with the values of work, which forms the motivational orientation.
  - a) Integrity
  - b) Work ethic
  - c) Personal Values
  - d) Professional values
- 2) Belief that the privacy of others must always be maintained \_\_\_\_\_.
  - a) Confidentiality
  - b) Empathy
  - c) Ethics
  - d) Work ethics
- 3) Ethics has evolved with evaluation of \_\_\_\_\_.
  - a) Culture
  - b) Value
  - c) Society
  - d) Moral
- 4) Virtues are \_\_\_\_\_.
  - a) Moral
  - b) Ethics
  - c) Values
  - d) Positive and preferred values
- 5) Honestly is a \_\_\_\_\_.
  - a) Virtue
  - b) Truthfulness
  - c) Trustworthiness
  - d) Communication
- 6) Human life is lived at four levels individuals, family, society and \_\_\_\_\_.
  - a) Nature
  - b) Nurture
  - c) World
  - d) Universe
- 7) One of the basic desires of every human being is to be always \_\_\_\_\_.
  - a) Happy
  - b) Sad
  - c) Laugh
  - d) Earn money
- 8) Courage is the tendency to accept and face \_\_\_\_\_.
  - a) Self-confidence
  - b) Risks and difficult tasks in rational ways
  - c) Physical courage
  - d) Social courage
- 9) Commitment means \_\_\_\_\_.
  - a) Alignment to goals
  - b) Adherence to ethical principles
  - c) Empathy
  - d) All the above

- 10)** The objectives of professional ethics in engineering are
- a) To understand the moral values that ought to guide the Engineering profession
  - b) To resolve the moral issues in the profession, and
  - c) To justify the moral judgment concerning the profession
  - d) All the above

**T. Y. (B.Tech) (Sem-II) (New) (CBCS) Examination: Oct/Nov - 2022**

**CIVIL ENGINEERING**  
**Foundation Engineering**

Day & Date: Tuesday, 14-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Section-I Q. No. 2 is compulsory. Solve any two from remaining.  
2) Section-II Q. No. 6 is compulsory. Solve any two from remaining.  
3) Assume additional data, required and state it clearly.  
4) Figure to right indicate full marks.

**Section – I**

- Q.2 Attempt any two** **10**
- Effect of water table on bearing capacity.
  - Explain the functions of geotextiles.
  - Explain wash boring with neat sketch.
  - IS code method of finding bearing capacity.
- Q.3** **05**
- Explain the objectives of the soil exploration.
  - A sampling tube has inner diameter 70 mm and that of a cutting edge is equal to 68mm. Their outer diameters are 72mm and 74mm respectively. Determine the inside clearance, outside clearance and area ratio of the sampler. This tube is pushed at bottom of a borehole to a distance of 550 mm and length of sample covered is 80mm. Find the recovery ratio. **04**
- Q.4** **04**
- Write the difference between general shear failure and local shear failure.
  - A square footing fails by general shear in a cohesionless soil under an ultimate load of 3000kN. The footing is placed at a depth of 3m below ground level. Take  $\phi = 35^\circ$ ,  $N_q = 41.4$ ,  $N_\gamma = 42.4$  and  $\gamma = 19 \text{ KN/m}^3$ . Determine to size of the footing if the water table is at a great depth. **05**
- Q.5** **04**
- What is Expansive soil? What precautions to be taken while designing foundation in expansive soil?
  - Explain the below ground improvement techniques. **05**
    - Sand drains
    - Grouting

**Section – II**

- Q.6 Attempt any two** **10**
- Negative skin friction
  - Undreamed piles
  - Mat or raft foundations
  - Fellenius construction to locate critical slip centre

- Q.7**   **a)**   What are different types of shallow foundations? Explain with the help of neat sketches. **04**
- b)**   A trapezoidal footing is to be produced to support two square columns of 30 cm and 50 cm sides respectively. Columns are 6 metres apart and the safe bearing capacity of the soil is 400 kN/m<sup>2</sup>. The bigger column carries 5000 kN and the smaller 3000 kN. Design a suitable size of the footing so that it does not extend beyond the faces of the columns. **05**
- Q.8**   **a)**   Classify piles according to their functions. **04**
- b)**   A pile is driven in a uniform clay of large depth. The clay has an unconfined compression strength of 80 kN/m<sup>2</sup>. The pile is 350mm diameter and 7 m long. Determine the safe frictional resistance of the pile, assuming a factor of safety of 3. Assume the adhesion factor  $\alpha = 0.7$ . **05**
- Q.9**   **a)**   Draw a neat labeled sketch of slope and enlist causes of failure of slope. **05**
- b)**   Calculate the factor of safety with respect to cohesion of clay, slope laid at 1 in 2 to a length of 11 m. If the angle of internal friction  $\phi = 10^\circ$ , Taylors stability number 0.064,  $C = 20 \text{ kN/m}^2$  and  $\gamma = 19 \text{ kN/m}^3$ . Determine the Critical height of the slope in this soil. **04**

 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given option. 14**

- 1) When the two column loads are unequal, with the outer column carrying heavier load and there is space limitation beyond the outer column, which of the following combined footing is adopted
  - a) Rectangular footing
  - b) Trapezoidal footing
  - c) Mat foundation
  - d) Strip footing
- 2) Location of critical slip circle for a given slope can be found by using method suggested by \_\_\_\_\_.
  - a) Taylor
  - b) Cassagrande
  - c) Fellenius
  - d) Bishop
- 3) Efficiency of pile group consisting of four piles by using Feld's rule is
  - a) 93.75
  - b) 81.25
  - c) 87.5
  - d) None
- 4) The bottom plug in well foundation is usually made up of \_\_\_\_\_.
  - a) Brick masonry
  - b) RCC
  - c) Cement concrete
  - d) None
- 5) Taylor's stability charts are based on the total stress using the \_\_\_\_\_.
  - a) Friction circle method
  - b) Method of slices
  - c)  $\phi = 0$  Analysis
  - d) None
- 6) For cantilever sheet pile supporting clayey soil having  $c=25$  KPa, pressure intensity at the top of wall is \_\_\_\_\_.
  - a) 0
  - b) -25 KPa
  - c) -50 Kpa
  - d) None
- 7) Anchored sheet pile wall embedded in cohesive soil, shape of the pressure distribution diagram below dredge level is
  - a) Parabolic
  - b) Triangular
  - c) Rectangular
  - d) None
- 8) If RQD of the sample is 47% then quality of sample is \_\_\_\_\_.
  - a) Poor
  - b) Good
  - c) Very Good
  - d) Fair

- 9) One of the purposes of soil exploration is \_\_\_\_\_.  
a) To understand the behavior of the structure  
b) To estimate the load coming on the soil  
c) To find the quantity and quality of water  
d) To determine basic properties of soil
- 10) In case of sandy soil, which settlement is predominant?  
a) Immediate settlement  
b) Consolidation settlement  
c) Secondary consolidation settlement  
d) None
- 11) The angle of shear resistance  $\phi > 36^\circ$  the type of failure in soil is \_\_\_\_\_.  
a) General shear failure                      b) Local shear failure  
c) Punching shear failure                      d) None
- 12) These type of soil deposit are often found near the mouths of rivers, along the perimeters of bays and beneath swamps or lagoons \_\_\_\_\_.  
a) Collapsible soil                                  b) Expansive soil  
c) Corrosive soil                                      d) Weak/Compressible soil
- 13) In case of plate load test seating load to be applied is \_\_\_\_\_.  
a) 5 KPa    b) 10 KPa  
c) 7 KPa    d) None
- 14) Mineral present in expansive soil is \_\_\_\_\_.  
a) Illite    b) Montmorillonite  
c) Kaolinite    d) None

- Explain the objectives of the soil exploration.
  - A sampling tube has inner diameter 70 mm and that of a cutting edge is equal to 68mm. Their outer diameters are 72mm and 74mm respectively. Determine the inside clearance, outside clearance and area ratio of the sampler. This tube is pushed at bottom of a borehole to a distance of 550 mm and length of sample covered is 80mm. Find the recovery ratio. **04**
- Q.4** **04**
- Write the difference between general shear failure and local shear failure.
  - A square footing fails by general shear in a cohesionless soil under an ultimate load of 3000kN. The footing is placed at a depth of 3m below ground level. Take  $\phi = 35^\circ$ ,  $N_q = 41.4$ ,  $N_\gamma = 42.4$  and  $\gamma = 19 \text{ KN/m}^3$ . Determine to size of the footing if the water table is at a great depth. **05**
- Q.5** **04**
- What is Expansive soil? What precautions to be taken while designing foundation in expansive soil?
  - Explain the below ground improvement techniques. **05**
    - Sand drains
    - Grouting

**Section – II**

- Q.6 Attempt any two** **10**
- Negative skin friction
  - Undreamed piles
  - Mat or raft foundations
  - Fellenius construction to locate critical slip centre

- Q.7** a) What are different types of shallow foundations? Explain with the help of neat sketches. **04**
- b) A trapezoidal footing is to be produced to support two square columns of 30 cm and 50 cm sides respectively. Columns are 6 metres apart and the safe bearing capacity of the soil is 400 kN/m<sup>2</sup>. The bigger column carries 5000 kN and the smaller 3000 kN. Design a suitable size of the footing so that it does not extend beyond the faces of the columns. **05**
- Q.8** a) Classify piles according to their functions. **04**
- b) A pile is driven in a uniform clay of large depth. The clay has an unconfined compression strength of 80 kN/m<sup>2</sup>. The pile is 350mm diameter and 7 m long. Determine the safe frictional resistance of the pile, assuming a factor of safety of 3. Assume the adhesion factor  $\alpha = 0.7$ . **05**
- Q.9** a) Draw a neat labeled sketch of slope and enlist causes of failure of slope. **05**
- b) Calculate the factor of safety with respect to cohesion of clay, slope laid at 1 in 2 to a length of 11 m. If the angle of internal friction  $\phi = 10^\circ$ , Taylors stability number 0.064,  $C = 20$  kN/m<sup>2</sup> and  $\gamma = 19$  kN/m<sup>3</sup>. Determine the Critical height of the slope in this soil. **04**

**Hydraulic Structures & Water Power Engg**

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The 'surcharge storage' in a dam reservoir is the volume of water stored between \_\_\_\_\_.  
 a) minimum and maximum reservoir levels  
 b) minimum and normal reservoir levels  
 c) normal and maximum reservoir levels  
 d) none of the above
- 2) Trap efficiency of a storage reservoir indicates the: \_\_\_\_\_.  
 a) sediment volume trapped in the reservoir  
 b) sediment volume let out from the reservoir  
 c) sediment volume trapped in relation to the sediment volume entering the reservoir  
 d) None of these
- 3) The horizontal component of the earthquake wave, producing instability in a dam, is the one, which acts: \_\_\_\_\_.  
 a) towards the reservoir  
 b) towards the dam  
 c) both (a) and (b)  
 d) none of the above
- 4) The most economical central angle of the arch rings in an arch dam, is: \_\_\_\_\_.  
 a) 123°-34'  
 b) 133°-34'  
 c) 143°-34'  
 d) 153°-34'
- 5) The most preferred soil for the central impervious core of a zoned embankment type of an earthen dam, is: \_\_\_\_\_.  
 a) highly impervious clay  
 b) highly pervious gravel  
 c) coarse sand  
 d) clay mixed with fine sand
- 6) When the water level standing against an earthen embankment, suddenly falls down, then there is an imminent risk of sliding failure, to the: \_\_\_\_\_.  
 a) upstream slope  
 b) downstream slope  
 c) both (a) and (b)  
 d) none of these

- 7) The 'safety valve' of a dam is its: \_\_\_\_\_.  
a) drainage gallery                      b) inspection gallery  
c) spillway                                  d) outlet sluices
- 8) The spillway involving weir type spills, giving increased discharge with the increase in reservoir level, are: \_\_\_\_\_.  
a) ogee spillways                      b) chute spillways  
c) side channel spillways              d) all of these
- 9) The critical exit gradient suggested in Khosla's theory of design of weirs and barrages, is \_\_\_\_\_.  
a) less for more porous soils              b) more for more porous soils  
c) equal for all kinds of soils              d) none of them
- 10) The value of Khosla's safe exit gradient for usually met alluvial river soils of our country, is: \_\_\_\_\_.  
a) 0    b) 1  
c)  $\infty$     d)  $1/4$  to  $1/6$
- 11) The canal, which may frequently encounter cross-drainage works, will be a: \_\_\_\_\_.  
a) watershed canal                      b) contour canal  
c) side slope canal                      d) none of them
- 12) Tortuosity of a meandering river is the ratio of \_\_\_\_\_.  
a) Meander belt to meander length  
b) Meander length to meander belt  
c) Curved length along the channel to the direct axial length of the river reach  
d) Direct axial length of the river reach to curved length along the channel
- 13) Aggrading rivers are \_\_\_\_\_.  
a) silting rivers                              b) scouring rivers  
c) rivers in regime                          d) meandering rivers
- 14) If the peak load for a power plant equals the plant capacity, then the ratio of capacity factor to load factor will be: \_\_\_\_\_.  
a) 1    b) 0  
c)  $<1$     d)  $>1$

**Hydraulic Structures & Water Power Engg**

Day & Date: Thursday, 16-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Figures to the right indicates full marks  
 2) Assume suitable data wherever needed and mention it clearly.  
 3) In Section – I, Q. No. 3 is compulsory. Attempt any two questions from the remaining questions.  
 4) In Section – II, Q. No. 9 is compulsory. Attempt any two questions from the remaining questions.

**Section – I**

- Q.2** a) What are the different methods of construction of earthen dam? Explain any one in details. **04**  
 b) What is mean by energy dissipation? Why it is required? Explain any one method of energy dissipation at downstream side of spillway. **05**
- Q.3** Section of Gravity dam along with drainage gallery is shown below. Analyse the stability of it when reservoir is full. Also find principal stress and shear stress at the toe and heel of dam. No tail water condition. Assume specific weight of concrete as  $23.544 \text{ kN./m}^3$ , coefficient of friction 0.7, and shear strength of concrete as  $1373.4 \text{ kN./m}^2$  **10**

- Q.4** a) What are the methods adopted to control seepage through the foundation of earthen dam? Explain any one with neat sketch. **04**  
 b) Explain different investigations those are carried out for planning of reservoir at a site. **05**
- Q.5** a) Enlist and explain different types of reservoirs. **04**  
 b) What is role of spillway gates? Explain Tainter and drum gate with neat sketches. **05**

**Section – II**

- Q.6**   **a)**   Explain the term weir and enlist the criterions of site selection for K.T Weir.   **04**  
         **b)**   What is mean by canal lining? What are its different types? Explain any one with its advantages and disadvantages.   **05**
- Q.7**   **a)**   What is role of cross drainage works in the canal alignment? Explain super passage with neat sketch.   **04**  
         **b)**   What is mean by water logging? Explain different techniques to overcome it with neat sketches.   **05**
- Q.8**   **a)**   Distinguish clearly between storage reservoir Hydropower plants and pumped-storage hydropower plants.   **04**  
         **b)**   What are different methods those are used for river training and bank protection? Explain any two with neat sketches   **05**
- Q.9**   **a)**   Explain the phenomenon of piping and under cutting for structures founded on permeable foundations.   **04**  
         **b)**   A runoff river plant is installed on a river having minimum flow of 12 cumec. If the plant is used as a peak load plant operating only for 6 hours per day. Determine firm capacity of plant without pondage and with pondage but allowing 10% of the water to be lost in evaporation and other losses. Head at the plant is 15 m and the plant efficiency may be assumed as 80%.   **06**

### MCQ/Objective Type Questions

Marks: 14

14

- 1) The canal, which may frequently encounter cross-drainage works, will be a: \_\_\_\_\_.
  - a) watershed canal
  - b) contour canal
  - c) side slope canal
  - d) none of them
- 2) Tortuosity of a meandering river is the ratio of \_\_\_\_\_.
  - a) Meander belt to meander length
  - b) Meander length to meander belt
  - c) Curved length along the channel to the direct axial length of the river reach
  - d) Direct axial length of the river reach to curved length along the channel
- 3) Aggrading rivers are \_\_\_\_\_.
  - a) silting rivers
  - b) scouring rivers
  - c) rivers in regime
  - d) meandering rivers
- 4) If the peak load for a power plant equals the plant capacity, then the ratio of capacity factor to load factor will be: \_\_\_\_\_.
  - a) 1
  - b) 0
  - c)  $<1$
  - d)  $>1$
- 5) The 'surcharge storage' in a dam reservoir is the volume of water stored between \_\_\_\_\_.
  - a) minimum and maximum reservoir levels
  - b) minimum and normal reservoir levels
  - c) normal and maximum reservoir levels
  - d) none of the above
- 6) Trap efficiency of a storage reservoir indicates the: \_\_\_\_\_.
  - a) sediment volume trapped in the reservoir
  - b) sediment volume let out from the reservoir
  - c) sediment volume trapped in relation to the sediment volume entering the reservoir
  - d) None of these

- 7) The horizontal component of the earthquake wave, producing instability in a dam, is the one, which acts: \_\_\_\_\_.  
a) towards the reservoir                      b) towards the dam  
c) both (a) and (b)                              d) none of the above
- 8) The most economical central angle of the arch rings in an arch dam, is: \_\_\_\_\_.  
a)  $123^{\circ}-34'$                                       b)  $133^{\circ}-34'$   
c)  $143^{\circ}-34'$                                       d)  $153^{\circ}-34'$
- 9) The most preferred soil for the central impervious core of a zoned embankment type of an earthen dam, is: \_\_\_\_\_.  
a) highly impervious clay                      b) highly pervious gravel  
c) coarse sand                                      d) clay mixed with fine sand
- 10) When the water level standing against an earthen embankment, suddenly falls down, then there is an imminent risk of sliding failure, to the: \_\_\_\_\_.  
a) upstream slope                                      b) downstream slope  
c) both (a) and (b)                                      d) none of these
- 11) The 'safety valve' of a dam is its: \_\_\_\_\_.  
a) drainage gallery                                      b) inspection gallery  
c) spillway    d) outlet sluices
- 12) The spillway involving weir type spills, giving increased discharge with the increase in reservoir level, are: \_\_\_\_\_.  
a) ogee spillways                                      b) chute spillways  
c) side channel spillways                                      d) all of these
- 13) The critical exit gradient suggested in Khosla's theory of design of weirs and barrages, is \_\_\_\_\_.  
a) less for more porous soils                      b) more for more porous soils  
c) equal for all kinds of soils                      d) none of them
- 14) The value of Khosla's safe exit gradient for usually met alluvial river soils of our country, is: \_\_\_\_\_.

- Q.8** a) Distinguish clearly between storage reservoir Hydropower plants and pumped-storage hydropower plants. **04**  
b) What are different methods that are used for river training and bank protection? Explain any two with neat sketches **05**
- Q.9** a) Explain the phenomenon of piping and under cutting for structures founded on permeable foundations. **04**  
b) A runoff river plant is installed on a river having minimum flow of 12 cumec. If the plant is used as a peak load plant operating only for 6 hours per day. Determine firm capacity of plant without pondage and with pondage but allowing 10% of the water to be lost in evaporation and other losses. Head at the plant is 15 m and the plant efficiency may be assumed as 80%. **06**

**Seat  
No.**

Max. Marks: 70

Marks: 14

Page 1 of 20

- 9) The mode of failure of a very short masonry member having  $h/t$  ratio of less than 4 is by \_\_\_\_\_.
  - a) Shear
  - b) Vertical tensile splitting
  - c) Buckling
  - d) Any of the above
- 10) If the ratio of center to center spacing of intersecting walls to actual thickness of intersecting wall is more than 20, then the stiffening coefficient for wall proper will be \_\_\_\_\_.
  - a) 0
  - b) Between 0 and 1
  - c) 1
  - d) Greater than 1
- 11) For earthquake resistant masonry buildings, the vertical distance between openings one above the other in a load bearing wall shall not be less than \_\_\_\_\_.
  - a) 50 cm
  - b) 60 cm
  - c) 75 cm
  - d) 100 cm
- 12) The effective height of free-standing non-load bearing wall and column respectively will be \_\_\_\_\_.
  - a)  $1.0H$  and  $1.0H$
  - b)  $1.5H$  and  $1.5H$
  - c)  $2.0H$  and  $1.5H$
  - d)  $2.0H$  and  $2.0H$
- 13) In a cavity wall, both leaves of which are load bearing, the effective thickness is taken as \_\_\_\_\_.
  - a) Sum of thickness of both leaf
  - b) Two-third of the sum of thickness of both the leaves
  - c) Actual thickness of the stronger leaf
  - d) Larger of b and c
- 14) Rich cement mortars are more liable to cracking as compared to lean mortars because rich mortars have \_\_\_\_\_.
  - a) High shrinkage
  - b) less strength
  - c) Both a and b
  - d) none

**T. Y. (B. Tech) (Sem – II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Masonry Structures**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q2 and Q6 are compulsory.  
 2) Attempt any 2 questions from the remaining questions in both Sections I and II respectively.  
 2) Figures to the right indicate full marks  
 3) Assume suitable data wherever needed and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

**Q.2 Attempt the following questions.**

- a) Enlist different types of mortars used in masonry construction. **02**  
 b) Design an interior wall of two storied building with 100mm thick RCC slab of effective span 2.65m. The wall is 3.6m long and is stiffened at both the ends by 100mm thick intersecting walls as shown in **Figure 1** below. The ceiling height of each floor is 3m. Considering basic compressive stress as  $0.96 \text{ N/mm}^2$  design wall AB. **08**

**Figure1**

Take Live Load from  
 Roof  $1.5 \text{ kN/m}^2$   
 Floor  $2 \text{ kN/m}^2$   
 Weight of  
 Roof  $1.96 \text{ kN/m}^2$   
 Floor  $0.2 \text{ kN/m}^2$

**Q.3 Attempt the following questions.**

- a) Discuss different types of classification of bricks. 02  
 b) Design an interior wall of three storied building with ceiling height 3m. The wall is stiffened by intersecting walls 200mm thick at 3600mm c/c as shown in **Figure 2**. 07

Take Load from  
 Roof 16kN/m  
 Floor 12.5kN/m

**Q.4 Attempt the following questions.**

- a) Explain in detail the properties of mortar. 02  
 b) Design an exterior wall of a workshop building 3.6m high carrying steel truss at the top with 4.5m spacing. The wall is securely tied at the roof and floor level as shown below in **Figure 3**. The loading may be considered as follows.  
 Concentrated reaction from truss at top of wall = 30kN.  
 Roof load = 7kN/m.  
 Neglect wind load. 07

**Figure3****Q.5 Attempt the following questions.**

- a) Define wall and list different types of walls with the help of neat sketches. 09  
 b) Explain briefly the factors affecting compressive strength of masonry.  
 c) Write short notes on effective height of masonry wall.

**Section – II****Q.6 Attempt the following questions.**

- a) Give the limitations of reinforced masonry. 02  
 b) Design an interior wall of two storied wall carrying concrete slab with ceiling height 3m. The wall is stiffened by intersecting walls 100mm thick at 3600mm c/c. also the wall has door opening size of 900 x 2000 mm at a distance 200mm from one side of intersecting walls. 08  
 Take Load from  
 Roof 15kN/m  
 Floor 12.5kN/m

**Q.7 Attempt the following questions.**

- a) Design an interior cross wall AB of a building supporting unequal roof slabs as shown in **Figure 4** below. Assuming triangular bearing pressure and loading as  $10 \text{ kN/m}^2$ . The storey height is  $3.8\text{m}$  and the wall is fixed to foundation block below.

**Figure4****Q.8 Attempt the following questions.**

09

- a) Design an external wall of single storied building. The inner leaf of which supports an eccentric load of  $7\text{kN/m}$  at an eccentricity of  $25\text{mm}$ . The wall is unstiffened at one end which supports a concrete roof at top and resist over a foundation block. Height of wall is  $4.0\text{m}$  as shown below in **Figure 5**.

**Figure5****Q.9 Attempt the following questions.**

09

- Explain the design criteria of walls subjected to transverse loading.
- Briefly discuss the steps involved in the design of eccentrically loaded solid wall.
- Explain the steps involved in consideration of loads and design of masonry wall with openings.

- 4) Assume suitable data wherever needed and mention it clearly.

Marks: 14

1) For earthquake resistant masonry buildings, the vertical distance between openings one above the other in a load bearing wall shall not be less than \_\_\_\_\_.

- a) 50 cm                      b) 60 cm  
c) 75 cm                      d) 100 cm

2) The effective height of free-standing non-load bearing wall and column respectively will be \_\_\_\_\_.

- a) 1.0H and 1.0H      b) 1.5H and 1.5H  
c) 2.0H and 1.5H      d) 2.0H and 2.0H

3) In a cavity wall, both leaves of which are load bearing, the effective thickness is taken as \_\_\_\_\_.

- Sum of thickness of both leaf
- Two-third of the sum of thickness of both the leaves
- Actual thickness of the stronger leaf
- Larger of b and c

4) Rich cement mortars are more liable to cracking as compared to lean mortars because rich mortars have \_\_\_\_\_.

- a) High shrinkage                      b) less strength  
c) Both a and b                        d) none

5) The code for masonry structures, "IS 1905 - 1987 Code of practice for structural use of unreinforced masonry" was published in year \_\_\_\_\_.

- a) 1968                      b) 1969  
c) 1970                      d) 1971

**6)** In As per IS 1905 a masonry wall is an isolated load bearing vertical member width of which does not exceeds \_\_\_\_\_ times its thickness.

- a) 2                      b) 3  
c) 4                      d) 5

7) Slenderness ratio of masonry wall depends upon \_\_\_\_\_.

- a) Height                                      b) Thickness  
c) both a and b                            d) none

**T. Y. (B. Tech) (Sem– II) (New) (CBCS) Examination: Oct/Nov-2022****CIVIL ENGINEERING****Pavement Design**

Day &amp; Date: Monday, 20-02-2023

Max. Marks: 70

Time: 10:00 AM To 01:00 PM

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

3) Figures to the right indicates full marks

4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

1) Identify the correct order of construction of flexible pavement from top to bottom.

- 1) Subgrade
- 2) Prime Coat
- 3) Tack Coat
- 4) Dense Bituminous Macadam
- 5) Bituminous Concrete
- 6) Wet Mix Macadam
- 7) Granular Subbase

Select the correct answer from below options:

- |                      |                      |
|----------------------|----------------------|
| a) 1,2,3,4,5,6,7     | b) 1,7,6,2,4,3 and 5 |
| c) 1,6,7,3,5,2 and 4 | d) 5,3,4,2,6,7 and 1 |

2) In three-layer elastic system of pavement design, what is Layer-1,2 and 3 (From top to Bottom).

- a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB
- b) Layer-1- WMM and GSB, Layer-2-BC and DBM and Layer-3- Subgrade
- c) Layer-1-Subgrade, Layer-2- WMM and GSB and Layer-3- BC and DBM
- d) Layer-1- BC and DBM, Layer-2- WMM and GSB, Layer-3-Subgrade

3) \_\_\_\_\_ is a multiplier to convert the given number of commercial vehicles having different axle configurations and different axle weights into an equivalent number of standard axle load (80 kN single axle with dual wheels) repetitions.

- a) Lane Distribution Factor
- b) Vehicle Damage Factor
- c) Directional Distribution Factor
- d) Cumulative no of standard axles

- 4) Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.
- Tensile strain at the bottom of subgrade and vertical compressive strain on top of bituminous layer
  - Tensile strain at the top of subgrade and vertical compressive strain on bottom of bituminous layer
  - Tensile strain at the bottom of bituminous layer and vertical compressive strain on top of subgrade
  - Vertical compressive strain at the bottom of subgrade and Tensile strain at the bottom of bituminous layer
- 5) The vehicle carries a rear single axle weight of 16 tonnes, what is the EWLF? (Use fourth power rule and consider standard axle weight as 8.16 tonne)
- 15.78
  - 14.78
  - 13.78
  - 12.78
- 6) The transverse distribution of heavy vehicles across the width of the carriageway is called \_\_\_\_\_.
- Equivalent wheel load factor
  - Lane Distribution Factor
  - Vehicle Damage Factor
  - Equivalent Single Wheel Load Factor
- 7) In rigid pavement, when the width of the slab exceeds 4.5 to 5.0m, the type of joint required is?
- Contraction joint
  - Construction joint
  - Expansion joint
  - Longitudinal joint
- 8) Identify the correct order of concrete pavement layers in correct order from bottom to top.
- GSB, Subgrade, DEC, PQC and 125-micron Polyethylene sheet
  - 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
  - DLC, PQC, 125-micron Polyethylene sheet, GSB and Subgrade
  - Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC
- 9) The standard wheel load considered for the design of flexible pavement using IIT PAVE software is: \_\_\_\_\_.
- 10 kN on each single wheel
  - 20 kN on each single wheel
  - 30 kN on each single wheel
  - 40 kN on each single wheel
- 10) Arrange the correct sequence of design steps of flexible pavement design using IRC-37-2018.
- Select a trial thickness
  - Actual strains using IIT PAVE
  - Calculation of Allowable strains
  - Calculation of resilient modulus of all materials
  - Comparison of Actual strains and allowable strains
- 1, 2, 3, 4, 5
  - 5, 4, 2, 3, 1
  - 1, 4, 3, 2, 5
  - 4, 1, 5, 3, 2
- 11) In flexible pavement, the CTB and CTSB layers are designed based on \_\_\_\_\_.
- CBR Value of material
  - Modulus of subgrade reaction
  - Flexural strength
  - Unconfined Compressive strength

- 12) The main purpose of the Dry Lean Concrete (DLC) layer in rigid pavement is to \_\_\_\_\_.  
a) Provide good bond between two layers  
b) Provide a good riding surface  
c) Provide a effective drainage of pavement system  
d) Provide a uniform, stable and permanent support to the concrete slab laid over it
- 13) As per IS-456-2000, the flexural strength can be calculated using the below equation: ( $F_{cr}$  - *Flexural strength of concrete* &  $f_{ck}$  - *characteristic compressive strength of concrete*)  
a)  $F_{cr} = 0.7\sqrt{f_{ck}}$   
b)  $F_{cr} = 0.78\sqrt{f_{ck}}$   
c)  $F_{cr} = 0.75\sqrt{f_{ck}}$   
d)  $F_{cr} = 0.8\sqrt{f_{ck}}$
- 14) The dowel bars are designed based on \_\_\_\_\_.  
a) Yield stress of dowel bars  
b) Bearing stress of dowel bars  
c) Tensile strength of dowel bars  
d) Allowable working stress in dowel bar

**T. Y. (B. Tech) (Sem– II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Pavement Design**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) In Section – I, Q. No. 2 is compulsory. Solve any one full question from remaining question no. 3 and 4  
 2) In Section – II, Q. No. 5 is compulsory. Solve any one full question from remaining question no. 6 and 7  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**Section – I**

**Q.2 Answer any two questions** **10**

- a) Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain function of all layers.
- b) Explain ESWL. Briefly explain the graphical method of determination of ESWL.
- c) What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16 tonne.
  - 1) LCV with rear axle load of 2.0t
  - 2) HCV with rear axle load of 15.5t

**Q.3 Answer any two questions** **18**

- a) A flexible pavement of thickness 48cm is laid over a subgrade. A circular load of 16cm with uniform contact pressure  $6.5\text{kg/cm}^2$  is applied. Assume the elastic modulus of the subgrade as well as pavement layer to be  $900\text{kg/cm}^2$ . Use Deflection Factor chart given in **Fig-I**. Assuming homogenous elastic single layer system determine.
  - 1) The deflection of the pavement surface under the center of the load
  - 2) The total thickness of flexible pavement using data Design Wheel Load=5000kg, Tyre pressure= $6.0\text{kg/cm}^2$ , Elastic modulus= $150\text{kg/cm}^2$  and permissible deflection=0.25cm
- b) If the CBR of the soil used in the upper 500 mm of embankment is 8% and the CBR of the borrow soil used for preparing the 500 mm thick compacted subgrade above embankment is 20%, what is the effective subgrade Modulus/CBR for design of flexible pavement? Consider Poisson's ratio=0.35. Use surface deflection,  $\delta=1.41\text{mm}$  from IIT PAVE software. Draw a neat sketch of equivalent subgrade system diagram.
- c) Design a bituminous pavement as per IRC-37-2018 with Granular Base and Sub-base layers using the following input data.
  - 1) Four lane divided carriageway
  - 2) Initial traffic in the year of completion of construction = 5000 cvpd (two-way)
  - 3) Traffic growth rate per annum = 6.0 per cent
  - 4) Design life period = 20 years
  - 5) Vehicle damage factor = 5.2

- 6) Effective CBR of subgrade estimated = 7 %
- 7) Marshall mix design carried out on the bituminous mix to be used in the bottom bituminous layer (DBM) for an air void content of 3 % resulted in an effective bitumen content (by volume) of 11.5 %
- 8) Lane Distribution Factor=0.75
- 9) Computed horizontal tensile strain using IIT PAVE software = 0.000146.
- 10) Computed vertical compressive strain using IIT PAVE software = 0.000243
- 11) Consider VG-40 grade bitumen with resilient modulus of 3000 Mpa
- 12) Poisson's ratio=0.35

Assume trial thickness as below: BC-40mm, DBM-150mm, WMM-250mm and GSB- 230mm.

**Q.4 Answer any three questions**

**18**

- a) Draw a neat sketch of rigid pavement and show component parts of all layers. Briefly explain function of all layers.
- b) With sketch describe the significance of design wheel load and contact pressure in design of pavement.
- c) Find ESWT at depths of 50mm, 200mm and 400mm for a dual wheel carrying 2044 kN each. The centre-to-centre tyre spacing is 200mm and distance between the walls of the two tyres is 100 mm. Use (log) equation to calculate ESWL.
- d) Plate bearing tests were conducted using 30cm diameter plate on soil subgrade and over a base course of thickness 45cm. The pressure yielded at 0.5cm deflection on the subgrade and base course were 1.25kg/cm<sup>2</sup> and 8kg/cm<sup>2</sup> respectively. Design the thickness requirement of flexible pavement for a wheel load of 5100kg with tyre pressure of 8.0kg/cm<sup>2</sup> for an allowable deflection of 0.5cm using Burmister two-layer deflection factor chart shown in **Fig-II**.

**Section – II**

**Q.5 Answer any two questions**

**10**

- a) What is the objective of providing dowel bars and tie bars in rigid pavement?
- b) With a diagram explain the working principle of Benkelman beam for measurement of pavement deflection.
- c) C.C. Pavement is constructed using the following data:
  - 1) Modulus of elasticity  $3.3 \times 10^5$  kg/cm<sup>2</sup>
  - 2) Poisson's ratio=0.15
  - 3) Thickness of CC pavement = 18 cm
  - 4) Modulus of subgrade reaction-25kg/cm<sup>3</sup>
  - 5) Wheel load = 4100 kg
  - 6) Radius of loaded area = 12 cm
 Calculate stresses at Interior, Edge and corner by Westergaard's method.

**Q.6 Answer any two questions**

- a) Determine the warping stresses at interior, edge and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m interval and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction  $K$  is  $6.9\text{kg/cm}^3$  and radius of loaded area is 15cm. Assume temperature differential during day to be  $0.6^\circ\text{C}$  per cm slab thickness (for warping stress at interior and edge) and maximum temperature differential of  $0.4^\circ\text{C}$  per cm slab thickness during the night (for warping stress at the corner). Assume  $e=10 \times 10^{-6}\text{per}^\circ\text{C}$ ,  $E=3 \times 10^5 \text{ kg/cm}^2$ ,  $\mu=0.15$ . Use Bradbury chart given in **Figure-III**.
- b) Design the thickness cement concrete pavement as per IRC-58-2002 for a two-lane two-way National Highway in Gujarat State. The total two-way traffic is 3000 commercial vehicles per day at the end of the construction period. The design parameters are:
- 1) Flexural strength of Concrete= $81.5\text{kg/cm}^2$
  - 2) Effective Modulus of subgrade reaction of the DLC= $24.25\text{kg/cm}^3$
  - 3) Elastic modulus of concrete= $40417\text{kg/cm}^2$
  - 4) Poisson's ratio= $0.15$
  - 5) CBR of subgrade soil= $6.0\%$
  - 6) Coefficient of thermal coefficient= $10 \times 10^{-6}/^\circ\text{C}$
  - 7) Rate of traffic increase= $0.075$
  - 8) Spacing of contraction joints= $4.5\text{m}$
  - 9) Width of slab= $3.5\text{m}$
  - 10) Load Safety Factor= $1.2$
  - 11) Assume Trial Thickness= $33\text{cm}$
  - 12) The temperature differential= $21^\circ\text{C}$
  - 13) Tyre Pressure= $8\text{kg/cm}^2$
  - 14) Design life= $20$  years
  - 15) Wheel Load= $8000\text{kg}$
  - 16) Joint width= $2.0\text{cm}$
  - 17) Assume trial thickness= $19\text{cm}$

Note: Check for temperature stress at edge and Corner is not necessary  
The axle load spectrum obtained from axle load survey and stress ratio with allowable repetitions are given in **Table-1** and **2** respectively.

**Table-1** - Axle Load Survey Data with Stress from chart

Single Axle Loads			Tandem Axle Loads		
Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$	Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$
19-21	0.6	42.30	34-38	0.3	30.24
17-19	1.5	39.0	30-34	0.3	-
15-17	4.8	35.50	26-30	0.6	-

**Table-2** - Stress Ratio and Allowable Repetition in CC Pavement

Stress Ratio	Allowable Repetitions	Stress Ratio	Allowable Repetitions	Stress Ratio	Allowable Repetitions	Stress Ratio	Allowable Repetitions
0.45	$6.279 \times 10^7$	0.66	$5.83 \times 10^3$	0.55	$1.24 \times 10^4$	0.76	361
0.46	$1.4335 \times 10^8$	0.67	$4.41 \times 10^3$	0.56	$9.41 \times 10^3$	0.77	274
0.47	$5.2 \times 10^6$	0.68	$3.34 \times 10^3$	0.57	$7.12 \times 10^3$	0.78	207
0.48	$2.4 \times 10^6$	0.69	2531	0.58	$5.4 \times 10^3$	0.79	157
0.49	$1.287 \times 10^6$	0.70	1970	0.59	$4.08 \times 10^3$	0.80	119
0.50	$7.62 \times 10^5$	0.71	1451	0.60	$3.09 \times 10^3$	0.81	90
0.51	$4.85 \times 10^5$	0.72	1099	0.61	$2.34 \times 10^3$	0.82	68
0.52	$3.26 \times 10^5$	0.73	832	0.62	$1.77 \times 10^3$	0.83	52
0.53	$2.29 \times 10^5$	0.74	630	0.63	$1.34 \times 10^3$	0.84	39
0.54	$1.66 \times 10^5$	0.75	477	0.64	$1.02 \times 10^3$	0.85	30
				0.65	$7.7 \times 10^2$		

c) Design a Dowel bar as per IRC-58-2015 using given data below:

- 1) Slab thickness,  $h = 300$  mm
- 2) Joint width,  $z = 20$  mm
- 3) Modulus of subgrade reaction,  $k = 80$  MPa/m
- 4) Radius of relative stiffness,  $l = 1035.3$  mm
- 5)  $E$  for dowel bar  $= 2 \times 10^5$  MPa
- 6) Modulus of dowel support,  $k_{mds} = 415000$  MPa/m
- 7) Wheel load for dowel bar design  $= 80$  kN
- 8) Load Transfer  $= 40\%$
- 9) Characteristics compressive Strength of Concrete,  $f_{ck} = 40$  MPa for M40 grade
- 10) Assume Diameter of Dowel bar  $= 38$  mm, Length  $= 500$  mm & spacing  $= 300$  mm
- 11) First dowel bar is placed at a distance of 150 mm from the pavement edge

**Q.7 Answer any three questions**

**18**

a) Design a Tie bar as per IRC-58-2015 using given data below:

- 1) Slab Thickness  $= 0.33$  m
- 2) Lane width,  $b = 3.5$  m
- 3) Coefficient of friction,  $f = 1.5$
- 4) Density of concrete,  $kN/m^3 = 24$
- 5) Allowable tensile stress in plain bars, MPa  $= 125$
- 6) Allowable bond stress for plain tie bars, MPa  $= 1.75$
- 7) Allowable bond stress for deformed tie bars, MPa  $= 2.46$
- 8) Assume Diameter of Tie bar  $= 12$  mm
- 9) Design Tie bar at plain bars

b) Write a short note on any two:

- 1) Factors effecting flexible pavement design
- 2) Layered systems concepts of Pavement Design
- 3) Factors effecting Rigid Pavement Design
- 4) Principles of Rigid Pavement Design as per IRC-58-2015

- c) The BBD studies conducted on a two-lane existing pavement. Design the overlay thickness as per IRC-81 using the data given below: Use **Figure-IV** for overlay thickness.

- 1) Consider moisture correction factor seasonal correction factor= 1.04
- 2) Cumulative number of standard axles=100msa

Table-3-BBD Survey Data:

Chainage	17	17.05	17.1	17.15	17.2	17.25	17.3	17.35
Rebound Deflection, mm	0.84	0.83	0.32	1.57	0.52	0.44	0.43	0.67
Pavement Temperature, °C	37	37	37	37	37	37	37	37

- d) Explain how warping stresses are formed in C.C. pavements. Describe the Westergaard's equations to calculate warping stresses at critical locations.

Figure-I-Deflection Factor Chart (Single Layer)

Figure-II-Burmister two-layer deflection chart

Figure-III-Bradbury Chart

**T. Y. (B. Tech) (Sem– II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Pavement Design**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Identify the correct order of concrete pavement layers in correct order from bottom to top.
  - a) GSB, Subgrade, DEC, PQC and 125-micron Polyethylene sheet
  - b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
  - c) DLC, PQC, 125-micron Polyethylene sheet, GSB and Subgrade
  - d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC
- 2) The standard wheel load considered for the design of flexible pavement using IIT PAVE software is: \_\_\_\_\_.
  - a) 10 kN on each single wheel
  - b) 20 kN on each single wheel
  - c) 30 kN on each single wheel
  - d) 40 kN on each single wheel
- 3) Arrange the correct sequence of design steps of flexible pavement design using IRC-37-2018.
  - 1) Select a trial thickness
  - 2) Actual strains using IIT PAVE
  - 3) Calculation of Allowable strains
  - 4) Calculation of resilient modulus of all materials
  - 5) Comparison of Actual strains and allowable strains
  - a) 1, 2, 3, 4, 5
  - b) 5, 4, 2, 3, 1
  - c) 1, 4, 3, 2, 5
  - d) 4, 1, 5, 3, 2
- 4) In flexible pavement, the CTB and CTSB layers are designed based on \_\_\_\_\_.
  - a) CBR Value of material
  - b) Modulus of subgrade reaction
  - c) Flexural strength
  - d) Unconfined Compressive strength
- 5) The main purpose of the Dry Lean Concrete (DLC) layer in rigid pavement is to \_\_\_\_\_.
  - a) Provide good bond between two layers
  - b) Provide a good riding surface
  - c) Provide a effective drainage of pavement system
  - d) Provide a uniform, stable and permanent support to the concrete slab laid over it

- Page 12 of 40

- 12)** The vehicle carries a rear single axle weight of 16 tonnes, what is the EWLF? (Use fourth power rule and considerer standard axle weight as 8.16 tonne)
- |          |          |
|----------|----------|
| a) 15.78 | b) 14.78 |
| c) 13.78 | d) 12.78 |
- 13)** The transverse distribution of heavy vehicles across the width of the carriageway is called \_\_\_\_\_.
- |  |
|--|
| a) Equivalent wheel load factor        |
| b) Lane Distribution Factor            |
| c) Vehicle Damage Factor               |
| d) Equivalent Single Wheel Load Factor |
- 14)** In rigid pavement, when the width of the slab exceeds 4.5 to 5.0m, the type of joint required is?
- |                      |                       |
|----------------------|-----------------------|
| a) Contraction joint | b) Construction joint |

 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) In Section – I, Q. No. 2 is compulsory. Solve any one full question from remaining question no. 3 and 4  
 2) In Section – II, Q. No. 5 is compulsory. Solve any one full question from remaining question no. 6 and 7  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**Section – I**

**Q.2 Answer any two questions** **10**

- a) Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain function of all layers.
- b) Explain ESWL. Briefly explain the graphical method of determination of ESWL.
- c) What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16 tonne.
  - 1) LCV with rear axle load of 2.0t
  - 2) HCV with rear axle load of 15.5t

**Q.3 Answer any two questions** **18**

- a) A flexible pavement of thickness 48cm is laid over a subgrade. A circular load of 16cm with uniform contact pressure  $6.5\text{kg/cm}^2$  is applied. Assume the elastic modulus of the subgrade as well as pavement layer to be  $900\text{kg/cm}^2$ . Use Deflection Factor chart given in **Fig-I**. Assuming homogenous elastic single layer system determine.
  - 1) The deflection of the pavement surface under the center of the load
  - 2) The total thickness of flexible pavement using data Design Wheel Load=5000kg, Tyre pressure= $6.0\text{kg/cm}^2$ , Elastic modulus= $150\text{kg/cm}^2$  and permissible deflection= $0.25\text{cm}$
- b) If the CBR of the soil used in the upper 500 mm of embankment is 8% and the CBR of the borrow soil used for preparing the 500 mm thick compacted subgrade above embankment is 20%, what is the effective subgrade Modulus/CBR for design of flexible pavement? Consider Poisson's ratio=0.35. Use surface deflection,  $\delta=1.41\text{mm}$  from IIT PAVE software. Draw a neat sketch of equivalent subgrade system diagram.
- c) Design a bituminous pavement as per IRC-37-2018 with Granular Base and Sub-base layers using the following input data.
  - 1) Four lane divided carriageway
  - 2) Initial traffic in the year of completion of construction = 5000 cvpd (two-way)
  - 3) Traffic growth rate per annum = 6.0 per cent
  - 4) Design life period = 20 years
  - 5) Vehicle damage factor = 5.2

- 6) Effective CBR of subgrade estimated = 7 %
- 7) Marshall mix design carried out on the bituminous mix to be used in the bottom bituminous layer (DBM) for an air void content of 3 % resulted in an effective bitumen content (by volume) of 11.5 %
- 8) Lane Distribution Factor=0.75
- 9) Computed horizontal tensile strain using IIT PAVE software = 0.000146.
- 10) Computed vertical compressive strain using IIT PAVE software = 0.000243
- 11) Consider VG-40 grade bitumen with resilient modulus of 3000 Mpa
- 12) Poisson's ratio=0.35

Assume trial thickness as below: BC-40mm, DBM-150mm, WMM-250mm and GSB- 230mm.

**Q.4 Answer any three questions**

**18**

- a) Draw a neat sketch of rigid pavement and show component parts of all layers. Briefly explain function of all layers.
- b) With sketch describe the significance of design wheel load and contact pressure in design of pavement.
- c) Find ESWT at depths of 50mm, 200mm and 400mm for a dual wheel carrying 2044 kN each. The centre-to-centre tyre spacing is 200mm and distance between the walls of the two tyres is 100 mm. Use (log) equation to calculate ESWL.
- d) Plate bearing tests were conducted using 30cm diameter plate on soil subgrade and over a base course of thickness 45cm. The pressure yielded at 0.5cm deflection on the subgrade and base course were 1.25kg/cm<sup>2</sup> and 8kg/cm<sup>2</sup> respectively. Design the thickness requirement of flexible pavement for a wheel load of 5100kg with tyre pressure of 8.0kg/cm<sup>2</sup> for an allowable deflection of 0.5cm using Burmister two-layer deflection factor chart shown in **Fig-II**.

**Section – II**

**Q.5 Answer any two questions**

**10**

- a) What is the objective of providing dowel bars and tie bars in rigid pavement?
- b) With a diagram explain the working principle of Benkelman beam for measurement of pavement deflection.
- c) C.C. Pavement is constructed using the following data:
  - 1) Modulus of elasticity  $3.3 \times 10^5$  kg/cm<sup>2</sup>
  - 2) Poisson's ratio=0.15
  - 3) Thickness of CC pavement = 18 cm
  - 4) Modulus of subgrade reaction-25kg/cm<sup>3</sup>
  - 5) Wheel load = 4100 kg
  - 6) Radius of loaded area = 12 cm
 Calculate stresses at Interior, Edge and corner by Westergaard's method.

**Q.6 Answer any two questions**

- a) Determine the warping stresses at interior, edge and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m interval and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction  $K$  is  $6.9\text{kg/cm}^3$  and radius of loaded area is 15cm. Assume temperature differential during day to be  $0.6^\circ\text{C}$  per cm slab thickness (for warping stress at interior and edge) and maximum temperature differential of  $0.4^\circ\text{C}$  per cm slab thickness during the night (for warping stress at the corner). Assume  $e=10 \times 10^{-6}\text{per}^\circ\text{C}$ ,  $E=3 \times 10^5 \text{ kg/cm}^2$ ,  $\mu=0.15$ . Use Bradbury chart given in **Figure-III**.
- b) Design the thickness cement concrete pavement as per IRC-58-2002 for a two-lane two-way National Highway in Gujarat State. The total two-way traffic is 3000 commercial vehicles per day at the end of the construction period. The design parameters are:
- 1) Flexural strength of Concrete= $81.5\text{kg/cm}^2$
  - 2) Effective Modulus of subgrade reaction of the DLC= $24.25\text{kg/cm}^3$
  - 3) Elastic modulus of concrete= $40417\text{kg/cm}^2$
  - 4) Poisson's ratio= $0.15$
  - 5) CBR of subgrade soil= $6.0\%$
  - 6) Coefficient of thermal coefficient= $10 \times 10^{-6}/^\circ\text{C}$
  - 7) Rate of traffic increase= $0.075$
  - 8) Spacing of contraction joints= $4.5\text{m}$
  - 9) Width of slab= $3.5\text{m}$
  - 10) Load Safety Factor= $1.2$
  - 11) Assume Trial Thickness= $33\text{cm}$
  - 12) The temperature differential= $21^\circ\text{C}$
  - 13) Tyre Pressure= $8\text{kg/cm}^2$
  - 14) Design life= $20$  years
  - 15) Wheel Load= $8000\text{kg}$
  - 16) Joint width= $2.0\text{cm}$
  - 17) Assume trial thickness= $19\text{cm}$

Note: Check for temperature stress at edge and Corner is not necessary  
The axle load spectrum obtained from axle load survey and stress ratio with allowable repetitions are given in **Table-1** and **2** respectively.

**Table-1** - Axle Load Survey Data with Stress from chart

Single Axle Loads			Tandem Axle Loads		
Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$	Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$

c) Design a Dowel bar as per IRC-58-2015 using given data below:

- 1) Slab thickness,  $h = 300$  mm
- 2) Joint width,  $z = 20$  mm
- 3) Modulus of subgrade reaction,  $k = 80$  MPa/m
- 4) Radius of relative stiffness,  $l = 1035.3$  mm
- 5)  $E$  for dowel bar  $= 2 \times 10^5$  MPa
- 6) Modulus of dowel support,  $k_{mds} = 415000$  MPa/m
- 7) Wheel load for dowel bar design  $= 80$  kN
- 8) Load Transfer  $= 40\%$
- 9) Characteristics compressive Strength of Concrete,  $f_{ck} = 40$  MPa for M40 grade
- 10) Assume Diameter of Dowel bar  $= 38$  mm, Length  $= 500$  mm & spacing  $= 300$  mm
- 11) First dowel bar is placed at a distance of 150 mm from the pavement edge

#### Q.7 Answer any three questions

18

a) Design a Tie bar as per IRC-58-2015 using given data below:

- 1) Slab Thickness  $= 0.33$  m
- 2) Lane width,  $b = 3.5$  m
- 3) Coefficient of friction,  $f = 1.5$
- 4) Density of concrete,  $kN/m^3 = 24$
- 5) Allowable tensile stress in plain bars, MPa  $= 125$
- 6) Allowable bond stress for plain tie bars, MPa  $= 1.75$
- 7) Allowable bond stress for deformed tie bars, MPa  $= 2.46$
- 8) Assume Diameter of Tie bar  $= 12$  mm
- 9) Design Tie bar at plain bars

b) Write a short note on any two:

- 1) Factors effecting flexible pavement design
- 2) Layered systems concepts of Pavement Design
- 3) Factors effecting Rigid Pavement Design
- 4) Principles of Rigid Pavement Design as per IRC-58-2015

- c) The BBD studies conducted on a two-lane existing pavement. Design the overlay thickness as per IRC-81 using the data given below: Use **Figure-IV** for overlay thickness.

- 1) Consider moisture correction factor seasonal correction factor= 1.04
- 2) Cumulative number of standard axles=100msa

Table-3-BBD Survey Data:

Chainage	17	17.05	17.1	17.15	17.2	17.25	17.3	17.35
Rebound Deflection, mm	0.84	0.83	0.32	1.57	0.52	0.44	0.43	0.67
Pavement Temperature, °C	37	37	37	37	37	37	37	37

- d) Explain how warping stresses are formed in C.C. pavements. Describe the Westergaard's equations to calculate warping stresses at critical locations.

**Pavement Design**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) In flexible pavement, the CTB and CTSB layers are designed based on \_\_\_\_\_.  
 a) CBR Value of material                      b) Modulus of subgrade reaction  
 c) Flexural strength                              d) Unconfined Compressive strength
- 2) The main purpose of the Dry Lean Concrete (DLC) layer in rigid pavement is to \_\_\_\_\_.  
 a) Provide good bond between two layers  
 b) Provide a good riding surface  
 c) Provide a effective drainage of pavement system  
 d) Provide a uniform, stable and permanent support to the concrete slab laid over it
- 3) As per IS-456-2000, the flexural strength can be calculated using the below equation: ( $F_{cr}$  - Flexural strength of concrete &  $f_{ck}$  - characteristic compressive strength of concrete)  
 a)  $F_{cr} = 0.7\sqrt{f_{ck}}$                                       b)  $F_{cr} = 0.78\sqrt{f_{ck}}$   
 c)  $F_{cr} = 0.75\sqrt{f_{ck}}$                                       d)  $F_{cr} = 0.8\sqrt{f_{ck}}$
- 4) The dowel bars are designed based on \_\_\_\_\_.  
 a) Yield stress of dowel bars  
 b) Bearing stress of dowel bars  
 c) Tensile strength of dowel bars  
 d) Allowable working stress in dowel bar
- 5) Identify the correct order of construction of flexible pavement from top to bottom.  
 1) Subgrade  
 2) Prime Coat  
 3) Tack Coat  
 4) Dense Bituminous Macadam  
 5) Bituminous Concrete  
 6) Wet Mix Macadam  
 7) Granular Subbase

a) 1,2,3,4,5,6,7                      b) 1,7,6,2,4,3 and 5  
c) 1,6,7,3,5,2 and 4                d) 5,3,4,2,6,7 and 1

- 13)** The standard wheel load considered for the design of flexible pavement using IIT PAVE software is: \_\_\_\_\_.  
a) 10 kN on each single wheel      b) 20 kN on each single wheel  
c) 30 kN on each single wheel      d) 40 kN on each single wheel
- 14)** Arrange the correct sequence of design steps of flexible pavement design using IRC-37-2018.  
1) Select a trial thickness  
2) Actual strains using IIT PAVE  
3) Calculation of Allowable strains  
4) Calculation of resilient modulus of all materials  
5) Comparison of Actual strains and allowable strains  
a) 1, 2, 3, 4, 5      b) 5, 4, 2, 3, 1  
c) 1, 4, 3, 2, 5      d) 4, 1, 5, 3, 2

**Pavement Design**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) In Section – I, Q. No. 2 is compulsory. Solve any one full question from remaining question no. 3 and 4  
 2) In Section – II, Q. No. 5 is compulsory. Solve any one full question from remaining question no. 6 and 7  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**Section – I**

**Q.2 Answer any two questions** **10**

- Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain function of all layers.
- Explain ESWL. Briefly explain the graphical method of determination of ESWL.
- What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16 tonne.
  - LCV with rear axle load of 2.0t
  - HCV with rear axle load of 15.5t

**Q.3 Answer any two questions** **18**

- A flexible pavement of thickness 48cm is laid over a subgrade. A circular load of 16cm with uniform contact pressure  $6.5\text{kg/cm}^2$  is applied. Assume the elastic modulus of the subgrade as well as pavement layer to be  $900\text{kg/cm}^2$ . Use Deflection Factor chart given in **Fig-I**. Assuming homogenous elastic single layer system determine.
  - The deflection of the pavement surface under the center of the load
  - The total thickness of flexible pavement using data Design Wheel Load=5000kg, Tyre pressure= $6.0\text{kg/cm}^2$ , Elastic modulus= $150\text{kg/cm}^2$  and permissible deflection=0.25cm
- If the CBR of the soil used in the upper 500 mm of embankment is 8% and the CBR of the borrow soil used for preparing the 500 mm thick compacted subgrade above embankment is 20%, what is the effective subgrade Modulus/CBR for design of flexible pavement? Consider Poisson's ratio=0.35. Use surface deflection,  $\delta=1.41\text{mm}$  from IIT PAVE software. Draw a neat sketch of equivalent subgrade system diagram.
- Design a bituminous pavement as per IRC-37-2018 with Granular Base and Sub-base layers using the following input data.
  - Four lane divided carriageway
  - Initial traffic in the year of completion of construction = 5000 cvpd (two-way)
  - Traffic growth rate per annum = 6.0 per cent
  - Design life period = 20 years
  - Vehicle damage factor = 5.2

- 6) Effective CBR of subgrade estimated = 7 %
- 7) Marshall mix design carried out on the bituminous mix to be used in the bottom bituminous layer (DBM) for an air void content of 3 % resulted in an effective bitumen content (by volume) of 11.5 %
- 8) Lane Distribution Factor=0.75
- 9) Computed horizontal tensile strain using IIT PAVE software = 0.000146.
- 10) Computed vertical compressive strain using IIT PAVE software = 0.000243
- 11) Consider VG-40 grade bitumen with resilient modulus of 3000 Mpa
- 12) Poisson's ratio=0.35

Assume trial thickness as below: BC-40mm, DBM-150mm, WMM-250mm and GSB- 230mm.

**Q.4 Answer any three questions****18**

- a) Draw a neat sketch of rigid pavement and show component parts of all layers. Briefly explain function of all layers.
- b) With sketch describe the significance of design wheel load and contact pressure in design of pavement.
- c) Find ESWT at depths of 50mm, 200mm and 400mm for a dual wheel carrying 2044 kN each. The centre-to-centre tyre spacing is 200mm and distance between the walls of the two tyres is 100 mm. Use (log) equation to calculate ESWL.
- d) Plate bearing tests were conducted using 30cm diameter plate on soil subgrade and over a base course of thickness 45cm. The pressure yielded at 0.5cm deflection on the subgrade and base course were 1.25kg/cm<sup>2</sup> and 8kg/cm<sup>2</sup> respectively. Design the thickness requirement of flexible pavement for a wheel load of 5100kg with tyre pressure of 8.0kg/cm<sup>2</sup> for an allowable deflection of 0.5cm using Burmister two-layer deflection factor chart shown in **Fig-II**.

**Section – II****Q.5 Answer any two questions****10**

- a) What is the objective of providing dowel bars and tie bars in rigid pavement?
- b) With a diagram explain the working principle of Benkelman beam for measurement of pavement deflection.
- c) C.C. Pavement is constructed using the following data:
  - 1) Modulus of elasticity  $3.3 \times 10^5$  kg/cm<sup>2</sup>
  - 2) Poisson's ratio=0.15
  - 3) Thickness of CC pavement = 18 cm
  - 4) Modulus of subgrade reaction-25kg/cm<sup>3</sup>
  - 5) Wheel load = 4100 kg
  - 6) Radius of loaded area = 12 cm
 Calculate stresses at Interior, Edge and corner by Westergaard's method.

**Q.6 Answer any two questions**

- a) Determine the warping stresses at interior, edge and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m interval and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction  $K$  is  $6.9\text{kg/cm}^3$  and radius of loaded area is 15cm. Assume temperature differential during day to be  $0.6^\circ\text{C}$  per cm slab thickness (for warping stress at interior and edge) and maximum temperature differential of  $0.4^\circ\text{C}$  per cm slab thickness during the night (for warping stress at the corner). Assume  $e=10 \times 10^{-6}\text{per}^\circ\text{C}$ ,  $E=3 \times 10^5 \text{ kg/cm}^2$ ,  $\mu=0.15$ . Use Bradbury chart given in **Figure-III**.
- b) Design the thickness cement concrete pavement as per IRC-58-2002 for a two-lane two-way National Highway in Gujarat State. The total two-way traffic is 3000 commercial vehicles per day at the end of the construction period. The design parameters are:
- 1) Flexural strength of Concrete= $81.5\text{kg/cm}^2$
  - 2) Effective Modulus of subgrade reaction of the DLC= $24.25\text{kg/cm}^3$
  - 3) Elastic modulus of concrete= $40417\text{kg/cm}^2$
  - 4) Poisson's ratio= $0.15$
  - 5) CBR of subgrade soil= $6.0\%$
  - 6) Coefficient of thermal coefficient= $10 \times 10^{-6}/^\circ\text{C}$
  - 7) Rate of traffic increase= $0.075$
  - 8) Spacing of contraction joints= $4.5\text{m}$
  - 9) Width of slab= $3.5\text{m}$
  - 10) Load Safety Factor= $1.2$
  - 11) Assume Trial Thickness= $33\text{cm}$
  - 12) The temperature differential= $21^\circ\text{C}$
  - 13) Tyre Pressure= $8\text{kg/cm}^2$
  - 14) Design life= $20$  years
  - 15) Wheel Load= $8000\text{kg}$
  - 16) Joint width= $2.0\text{cm}$
  - 17) Assume trial thickness= $19\text{cm}$

Note: Check for temperature stress at edge and Corner is not necessary  
The axle load spectrum obtained from axle load survey and stress ratio with allowable repetitions are given in **Table-1** and **2** respectively.

**Table-1** - Axle Load Survey Data with Stress from chart

Single Axle Loads			Tandem Axle Loads		
Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$	Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$

				0.65	$7.7 \times 10^2$		

c) Design a Dowel bar as per IRC-58-2015 using given data below:

- 1) Slab thickness,  $h = 300$  mm
- 2) Joint width,  $z = 20$  mm
- 3) Modulus of subgrade reaction,  $k = 80$  MPa/m
- 4) Radius of relative stiffness,  $l = 1035.3$  mm
- 5)  $E$  for dowel bar  $= 2 \times 10^5$  MPa
- 6) Modulus of dowel support,  $k_{mds} = 415000$  MPa/m
- 7) Wheel load for dowel bar design  $= 80$  kN
- 8) Load Transfer  $= 40\%$
- 9) Characteristics compressive Strength of Concrete,  $f_{ck} = 40$  MPa for M40 grade
- 10) Assume Diameter of Dowel bar  $= 38$  mm, Length  $= 500$  mm & spacing  $= 300$  mm
- 11) First dowel bar is placed at a distance of 150 mm from the pavement edge

#### Q.7 Answer any three questions

18

a) Design a Tie bar as per IRC-58-2015 using given data below:

- 1) Slab Thickness  $= 0.33$  m
- 2) Lane width,  $b = 3.5$  m
- 3) Coefficient of friction,  $f = 1.5$
- 4) Density of concrete,  $kN/m^3 = 24$
- 5) Allowable tensile stress in plain bars, MPa  $= 125$
- 6) Allowable bond stress for plain tie bars, MPa  $= 1.75$
- 7) Allowable bond stress for deformed tie bars, MPa  $= 2.46$
- 8) Assume Diameter of Tie bar  $= 12$  mm
- 9) Design Tie bar at plain bars

b) Write a short note on any two:

- 1) Factors effecting flexible pavement design
- 2) Layered systems concepts of Pavement Design
- 3) Factors effecting Rigid Pavement Design
- 4) Principles of Rigid Pavement Design as per IRC-58-2015

- c) The BBD studies conducted on a two-lane existing pavement. Design the overlay thickness as per IRC-81 using the data given below: Use **Figure-IV** for overlay thickness.

- 1) Consider moisture correction factor seasonal correction factor= 1.04
- 2) Cumulative number of standard axles=100msa

Table-3-BBD Survey Data:

Chainage	17	17.05	17.1	17.15	17.2	17.25	17.3	17.35
Rebound Deflection, mm	0.84	0.83	0.32	1.57	0.52	0.44	0.43	0.67
Pavement Temperature, °C	37	37	37	37	37	37	37	37

- d) Explain how warping stresses are formed in C.C. pavements. Describe the Westergaard's equations to calculate warping stresses at critical locations.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The transverse distribution of heavy vehicles across the width of the carriageway is called \_\_\_\_\_.  
 a) Equivalent wheel load factor  
 b) Lane Distribution Factor  
 c) Vehicle Damage Factor  
 d) Equivalent Single Wheel Load Factor
- 2) In rigid pavement, when the width of the slab exceeds 4.5 to 5.0m, the type of joint required is?  
 a) Contraction joint  
 b) Construction joint  
 c) Expansion joint  
 d) Longitudinal joint
- 3) Identify the correct order of concrete pavement layers in correct order from bottom to top.  
 a) GSB, Subgrade, DEC, PQC and 125-micron Polyethylene sheet  
 b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC  
 c) DLC, PQC, 125-micron Polyethylene sheet, GSB and Subgrade  
 d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC
- 4) The standard wheel load considered for the design of flexible pavement using IIT PAVE software is: \_\_\_\_\_.  
 a) 10 kN on each single wheel  
 b) 20 kN on each single wheel  
 c) 30 kN on each single wheel  
 d) 40 kN on each single wheel
- 5) Arrange the correct sequence of design steps of flexible pavement design using IRC-37-2018.  
 1) Select a trial thickness  
 2) Actual strains using IIT PAVE  
 3) Calculation of Allowable strains  
 4) Calculation of resilient modulus of all materials  
 5) Comparison of Actual strains and allowable strains  
 a) 1, 2, 3, 4, 5  
 b) 5, 4, 2, 3, 1  
 c) 1, 4, 3, 2, 5  
 d) 4, 1, 5, 3, 2

- 6) In flexible pavement, the CTB and CTSB layers are designed based on \_\_\_\_\_.  
 a) CBR Value of material                      b) Modulus of subgrade reaction  
 c) Flexural strength                              d) Unconfined Compressive strength
- 7) The main purpose of the Dry Lean Concrete (DLC) layer in rigid pavement is to \_\_\_\_\_.  
 a) Provide good bond between two layers  
 b) Provide a good riding surface  
 c) Provide a effective drainage of pavement system  
 d) Provide a uniform, stable and permanent support to the concrete slab laid over it
- 8) As per IS-456-2000, the flexural strength can be calculated using the below equation: ( $F_{cr}$  - Flexural strength of concrete &  $f_{ck}$  - characteristic compressive strength of concrete)  
 a)  $F_{cr} = 0.7\sqrt{f_{ck}}$                               b)  $F_{cr} = 0.78\sqrt{f_{ck}}$   
 c)  $F_{cr} = 0.75\sqrt{f_{ck}}$                               d)  $F_{cr} = 0.8\sqrt{f_{ck}}$
- 9) The dowel bars are designed based on \_\_\_\_\_.  
 a) Yield stress of dowel bars  
 b) Bearing stress of dowel bars  
 c) Tensile strength of dowel bars  
 d) Allowable working stress in dowel bar
- 10) Identify the correct order of construction of flexible pavement from top to bottom.  
 1) Subgrade  
 2) Prime Coat  
 3) Tack Coat  
 4) Dense Bituminous Macadam  
 5) Bituminous Concrete  
 6) Wet Mix Macadam  
 7) Granular Subbase  
 Select the correct answer from below options:  
 a) 1,2,3,4,5,6,7                              b) 1,7,6,2,4,3 and 5  
 c) 1,6,7,3,5,2 and 4                              d) 5,3,4,2,6,7 and 1
- 11) In three-layer elastic system of pavement design, what is Layer-1,2 and 3 (From top to Bottom).  
 a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB  
 b) Layer-1- WMM and GSB, Layer-2-BC and DBM and Layer-3- Subgrade  
 c) Layer-1-Subgrade, Layer-2- WMM and GSB and Layer-3- BC and DBM  
 d) Layer-1- BC and DBM, Layer-2- WMM and GSB, Layer-3-Subgrade
- 12) \_\_\_\_\_ is a multiplier to convert the given number of commercial vehicles having different axle configurations and different axle weights into an equivalent number of standard axle load (80 kN single axle with dual wheels) repetitions.  
 a) Lane Distribution Factor  
 b) Vehicle Damage Factor  
 c) Directional Distribution Factor  
 d) Cumulative no of standard axles

- 13)** Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.
- a) Tensile strain at the bottom of subgrade and vertical compressive strain on top of bituminous layer
  - b) Tensile strain at the top of subgrade and vertical compressive strain on bottom of bituminous layer
  - c) Tensile strain at the bottom of bituminous layer and vertical compressive strain on top of subgrade
  - d) Vertical compressive strain at the bottom of subgrade and Tensile strain at the bottom of bituminous layer
- 14)** The vehicle carries a rear single axle weight of 16 tonnes, what is the EWLF? (Use fourth power rule and considerer standard axle weight as 8.16 tonne)
- |          |          |
|----------|----------|
| a) 15.78 | b) 14.78 |
| c) 13.78 | d) 12.78 |

**T. Y. (B. Tech) (Sem– II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Pavement Design**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) In Section – I, Q. No. 2 is compulsory. Solve any one full question from remaining question no. 3 and 4  
 2) In Section – II, Q. No. 5 is compulsory. Solve any one full question from remaining question no. 6 and 7  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**Section – I**

**Q.2 Answer any two questions** **10**

- a) Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain function of all layers.
- b) Explain ESWL. Briefly explain the graphical method of determination of ESWL.
- c) What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16 tonne.
  - 1) LCV with rear axle load of 2.0t
  - 2) HCV with rear axle load of 15.5t

**Q.3 Answer any two questions** **18**

- a) A flexible pavement of thickness 48cm is laid over a subgrade. A circular load of 16cm with uniform contact pressure  $6.5\text{kg/cm}^2$  is applied. Assume the elastic modulus of the subgrade as well as pavement layer to be  $900\text{kg/cm}^2$ . Use Deflection Factor chart given in **Fig-I**. Assuming homogenous elastic single layer system determine.
  - 1) The deflection of the pavement surface under the center of the load
  - 2) The total thickness of flexible pavement using data Design Wheel Load=5000kg, Tyre pressure= $6.0\text{kg/cm}^2$ , Elastic modulus= $150\text{kg/cm}^2$  and permissible deflection=0.25cm
- b) If the CBR of the soil used in the upper 500 mm of embankment is 8% and the CBR of the borrow soil used for preparing the 500 mm thick compacted subgrade above embankment is 20%, what is the effective subgrade Modulus/CBR for design of flexible pavement? Consider Poisson's ratio=0.35. Use surface deflection,  $\delta=1.41\text{mm}$  from IIT PAVE software. Draw a neat sketch of equivalent subgrade system diagram.
- c) Design a bituminous pavement as per IRC-37-2018 with Granular Base and Sub-base layers using the following input data.
  - 1) Four lane divided carriageway
  - 2) Initial traffic in the year of completion of construction = 5000 cvpd (two-way)
  - 3) Traffic growth rate per annum = 6.0 per cent
  - 4) Design life period = 20 years
  - 5) Vehicle damage factor = 5.2

- 6) Effective CBR of subgrade estimated = 7 %
- 7) Marshall mix design carried out on the bituminous mix to be used in the bottom bituminous layer (DBM) for an air void content of 3 % resulted in an effective bitumen content (by volume) of 11.5 %
- 8) Lane Distribution Factor=0.75
- 9) Computed horizontal tensile strain using IIT PAVE software = 0.000146.
- 10) Computed vertical compressive strain using IIT PAVE software = 0.000243
- 11) Consider VG-40 grade bitumen with resilient modulus of 3000 Mpa
- 12) Poisson's ratio=0.35

Assume trial thickness as below: BC-40mm, DBM-150mm, WMM-250mm and GSB- 230mm.

**Q.4 Answer any three questions**

**18**

- a) Draw a neat sketch of rigid pavement and show component parts of all layers. Briefly explain function of all layers.
- b) With sketch describe the significance of design wheel load and contact pressure in design of pavement.
- c) Find ESWT at depths of 50mm, 200mm and 400mm for a dual wheel carrying 2044 kN each. The centre-to-centre tyre spacing is 200mm and distance between the walls of the two tyres is 100 mm. Use (log) equation to calculate ESWL.
- d) Plate bearing tests were conducted using 30cm diameter plate on soil subgrade and over a base course of thickness 45cm. The pressure yielded at 0.5cm deflection on the subgrade and base course were 1.25kg/cm<sup>2</sup> and 8kg/cm<sup>2</sup> respectively. Design the thickness requirement of flexible pavement for a wheel load of 5100kg with tyre pressure of 8.0kg/cm<sup>2</sup> for an allowable deflection of 0.5cm using Burmister two-layer deflection factor chart shown in **Fig-II**.

**Section – II**

**Q.5 Answer any two questions**

**10**

- a) What is the objective of providing dowel bars and tie bars in rigid pavement?
- b) With a diagram explain the working principle of Benkelman beam for measurement of pavement deflection.
- c) C.C. Pavement is constructed using the following data:
  - 1) Modulus of elasticity  $3.3 \times 10^5$  kg/cm<sup>2</sup>
  - 2) Poisson's ratio=0.15
  - 3) Thickness of CC pavement = 18 cm
  - 4) Modulus of subgrade reaction-25kg/cm<sup>3</sup>
  - 5) Wheel load = 4100 kg
  - 6) Radius of loaded area = 12 cm
 Calculate stresses at Interior, Edge and corner by Westergaard's method.

**Q.6 Answer any two questions**

- a) Determine the warping stresses at interior, edge and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m interval and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction  $K$  is  $6.9\text{kg/cm}^3$  and radius of loaded area is 15cm. Assume temperature differential during day to be  $0.6^\circ\text{C}$  per cm slab thickness (for warping stress at interior and edge) and maximum temperature differential of  $0.4^\circ\text{C}$  per cm slab thickness during the night (for warping stress at the corner). Assume  $e=10 \times 10^{-6}\text{per}^\circ\text{C}$ ,  $E=3 \times 10^5 \text{ kg/cm}^2$ ,  $\mu=0.15$ . Use Bradbury chart given in **Figure-III**.
- b) Design the thickness cement concrete pavement as per IRC-58-2002 for a two-lane two-way National Highway in Gujarat State. The total two-way traffic is 3000 commercial vehicles per day at the end of the construction period. The design parameters are:
- 1) Flexural strength of Concrete= $81.5\text{kg/cm}^2$
  - 2) Effective Modulus of subgrade reaction of the DLC= $24.25\text{kg/cm}^3$
  - 3) Elastic modulus of concrete= $40417\text{kg/cm}^2$
  - 4) Poisson's ratio= $0.15$
  - 5) CBR of subgrade soil= $6.0\%$
  - 6) Coefficient of thermal coefficient= $10 \times 10^{-6}/^\circ\text{C}$
  - 7) Rate of traffic increase= $0.075$
  - 8) Spacing of contraction joints= $4.5\text{m}$
  - 9) Width of slab= $3.5\text{m}$
  - 10) Load Safety Factor= $1.2$
  - 11) Assume Trial Thickness= $33\text{cm}$
  - 12) The temperature differential= $21^\circ\text{C}$
  - 13) Tyre Pressure= $8\text{kg/cm}^2$
  - 14) Design life= $20$  years
  - 15) Wheel Load= $8000\text{kg}$
  - 16) Joint width= $2.0\text{cm}$
  - 17) Assume trial thickness= $19\text{cm}$

Note: Check for temperature stress at edge and Corner is not necessary  
The axle load spectrum obtained from axle load survey and stress ratio with allowable repetitions are given in **Table-1** and **2** respectively.

**Table-1** - Axle Load Survey Data with Stress from chart

Single Axle Loads			Tandem Axle Loads		
Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$	Axle Load class, tons	Percentage of axle loads	Stress, $\text{kg/cm}^2$
19-21	0.6	42.30	34-38	0.3	30.24
17-19	1.5	39.0	30-34	0.3	-
15-17	4.8	35.50	26-30	0.6	-
13-15	10.8	33.80	22-26	1.8	-
11-13	22	-	18-22	1.5	-

< 9	30.0	-	<14	2.0	-

**Table-2** - Stress Ratio and Allowable Repetition in CC Pavement

Stress Ratio	Allowable Repetitions	Stress Ratio	Allowable Repetitions	Stress Ratio	Allowable Repetitions	Stress Ratio	Allowable Repetitions
0.45	$6.279 \times 10^7$	0.66	$5.83 \times 10^3$	0.55	$1.24 \times 10^4$	0.76	361
0.46	$1.4335 \times 10^8$	0.67	$4.41 \times 10^3$	0.56	$9.41 \times 10^3$	0.77	274
0.47	$5.2 \times 10^6$	0.68	$3.34 \times 10^3$	0.57	$7.12 \times 10^3$	0.78	207
0.48	$2.4 \times 10^6$	0.69	2531	0.58	$5.4 \times 10^3$	0.79	157
0.49	$1.287 \times 10^6$	0.70	1970	0.59	$4.08 \times 10^3$	0.80	119
0.50	$7.62 \times 10^5$	0.71	1451	0.60	$3.09 \times 10^3$	0.81	90
0.51	$4.85 \times 10^5$	0.72	1099	0.61	$2.34 \times 10^3$	0.82	68
0.52	$3.26 \times 10^5$	0.73	832	0.62	$1.77 \times 10^3$	0.83	52
0.53	$2.29 \times 10^5$	0.74	630	0.63	$1.34 \times 10^3$	0.84	39
0.54	$1.66 \times 10^5$	0.75	477	0.64	$1.02 \times 10^3$	0.85	30
				0.65	$7.7 \times 10^2$		

c) Design a Dowel bar as per IRC-58-2015 using given data below:

- 1) Slab thickness,  $h = 300$  mm
- 2) Joint width,  $z = 20$  mm
- 3) Modulus of subgrade reaction,  $k = 80$  MPa/m
- 4) Radius of relative stiffness,  $l = 1035.3$  mm
- 5)  $E$  for dowel bar  $= 2 \times 10^5$  MPa
- 6) Modulus of dowel support,  $k_{mds} = 415000$  MPa/m
- 7) Wheel load for dowel bar design  $= 80$  kN
- 8) Load Transfer  $= 40\%$
- 9) Characteristics compressive Strength of Concrete,  $f_{ck} = 40$  MPa for M40 grade
- 10) Assume Diameter of Dowel bar  $= 38$  mm, Length  $= 500$  mm & spacing  $= 300$  mm
- 11) First dowel bar is placed at a distance of 150 mm from the pavement edge

**Q.7 Answer any three questions**

**18**

a) Design a Tie bar as per IRC-58-2015 using given data below:

- 1) Slab Thickness  $= 0.33$  m
- 2) Lane width,  $b = 3.5$  m
- 3) Coefficient of friction,  $f = 1.5$
- 4) Density of concrete,  $kN/m^3 = 24$
- 5) Allowable tensile stress in plain bars, MPa  $= 125$
- 6) Allowable bond stress for plain tie bars, MPa  $= 1.75$
- 7) Allowable bond stress for deformed tie bars, MPa  $= 2.46$
- 8) Assume Diameter of Tie bar  $= 12$  mm
- 9) Design Tie bar at plain bars

b) Write a short note on any two:

- 1) Factors effecting flexible pavement design
- 2) Layered systems concepts of Pavement Design
- 3) Factors effecting Rigid Pavement Design
- 4) Principles of Rigid Pavement Design as per IRC-58-2015

- c) The BBD studies conducted on a two-lane existing pavement. Design the overlay thickness as per IRC-81 using the data given below: Use **Figure-IV** for overlay thickness.

- 1) Consider moisture correction factor seasonal correction factor= 1.04
- 2) Cumulative number of standard axles=100msa

Table-3-BBD Survey Data:

Chainage	17	17.05	17.1	17.15	17.2	17.25	17.3	17.35
Rebound Deflection, mm	0.84	0.83	0.32	1.57	0.52	0.44	0.43	0.67
Pavement Temperature, °C	37	37	37	37	37	37	37	37

- d) Explain how warping stresses are formed in C.C. pavements. Describe the Westergaard's equations to calculate warping stresses at critical locations.

Day &amp; Date: Monday, 20-02-2023

Max. Marks: 70

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) \_\_\_\_\_ offers a set of techniques that give you the Practical Performance Analyst the opportunity to understand change in application.
  - a) Capacity building
  - b) Life cycle technique
  - c) Performance Modeling
  - d) None
- 2) The best practices in IT Infrastructure include \_\_\_\_\_.
  - a) Knowledge Gathering
  - b) Creation of Standards
  - c) Maintaining Consistency
  - d) all of these
- 3) \_\_\_\_\_ risk is an institutional risk.
  - a) Site related
  - b) Operation
  - c) Cultural
  - d) None
- 4) 'Insurance requirements is a \_\_\_\_\_ risk mitigation technique'.
  - a) Contractual
  - b) Operation
  - c) Cultural
  - d) None
- 5) '\_\_\_\_\_ discoveries could lead to delays in approvals'.
  - a) Historical
  - b) Archaeological
  - c) Cultural
  - d) None
- 6) 'Partnering and team building is a \_\_\_\_\_ risk mitigation methodology'.
  - a) Non-Contractual
  - b) Operation
  - c) Cultural
  - d) Site related
- 7) Political instability comes under \_\_\_\_\_ risk.
  - a) Contractual
  - b) Operation
  - c) Economic
  - d) Site related
- 8) The assertion 'improper geological investigations is site related risk' is, \_\_\_\_\_.
  - a) True
  - b) False
  - c) Partially true
  - d) None

- 9) A life cycle assessment (LCA) measures the \_\_\_\_\_ impacts of a product or service.
- |               |                  |

**T.Y (B.Tech.) (Sem-II) (New) (CBCS) Examination: Oct/Nov- 2022**  
**CIVIL ENGINEERING**

**Infrastructure Planning and Management**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Smart city \_\_\_\_\_.  
 a) can provide opportunity to develop  
 b) should provide cost effective health care  
 c) should provide modern lifestyle for future generation  
 d) None of these
- 2) India has \_\_\_\_\_ largest railway network in the world.  
 a) first  
 b) second  
 c) third  
 d) fourth
- 3) About \_\_\_\_\_ % of energy developed in India is by thermal power plants.  
 a) 51  
 b) 61  
 c) 71  
 d) 81
- 4) \_\_\_\_\_ is the suitable final work plan to a time scale.  
 a) Budgeting  
 b) Scheduling  
 c) Work flow  
 d) Auditing
- 5) \_\_\_\_\_ offers a set of techniques that give you the Practical Performance Analyst the opportunity to understand change in application.  
 a) Capacity building  
 b) Life cycle technique  
 c) Performance Modeling  
 d) None
- 6) The best practices in IT Infrastructure include \_\_\_\_\_.  
 a) Knowledge Gathering  
 b) Creation of Standards  
 c) Maintaining Consistency  
 d) all of these
- 7) \_\_\_\_\_ risk is an institutional risk.  
 a) Site related  
 b) Operation  
 c) Cultural  
 d) None
- 8) 'Insurance requirements is a \_\_\_\_\_ risk mitigation technique'.  
 a) Contractual  
 b) Operation  
 c) Cultural  
 d) None
- 9) '\_\_\_\_\_ discoveries could lead to delays in approvals'.  
 a) Historical  
 b) Archaeological  
 c) Cultural  
 d) None

- 10)** 'Partnering and team building is a \_\_\_\_\_ risk mitigation methodology'.
- a) Non-Contractual
  - b) Operation
  - c) Cultural
  - d) Site related
- 11)** Political instability comes under \_\_\_\_\_ risk.
- a) Contractual
  - b) Operation
  - c) Economic
  - d) Site related
- 12)** The assertion 'improper geological investigations is site related risk' is, \_\_\_\_\_.
- a) True
  - b) False
  - c) Partially true
  - d) None
- 13)** A life cycle assessment (LCA) measures the \_\_\_\_\_ impacts of a product or service.
- a) Mechanical
  - b) Environmental
  - c) Political
  - d) Social
- 14)** Role of civil engineering is \_\_\_\_\_.
- a) providing good transportation facilities
  - b) providing well planned water supply
  - c) providing good infrastructure
  - d) all of above

<b>Seat No.</b>

**T.Y (B.Tech.) (Sem-II) (New) (CBCS) Examination: Oct/Nov- 2022**  
**CIVIL ENGINEERING**

**Infrastructure Planning and Management**

Day &amp; Date: Monday, 20-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Solve any two questions from Section I.  
 2) Solve any two questions from Section II.  
 3) Assume suitable data if required and mention it clearly.

**Section – I**

- Q.2** a) What is project life cycle? Explain in brief. **05**  
 b) Enlist different players involved in an infrastructure project. **04**  
 c) Classify infrastructures with examples. **05**
- Q.3** a) Enlist risks involved in Infrastructure projects. Explain any one in brief. **05**  
 b) Describe the duties of an Infrastructure engineer. **04**  
 c) Write the importance of Special Economic Zone. Highlight its advantages. **05**
- Q.4** a) Demonstrate the usefulness of public private partnership (PPP). Identify the sectors which can adopt it. **06**  
 b) Compare merits and demerits of privatization of different sectors. **08**

**Section – II**

- Q.5** a) State the importance of Project planning. **05**  
 b) Elaborate the meaning of Performance Modelling and Life Cycle Analysis techniques. **05**  
 c) How can be Improved the Government's role in infrastructure Implementation? **04**
- Q.6** a) What are the stages in successful planning of infrastructure? Write in detail all the stages involved. **08**  
 b) Explain 'An integrated framework for successful Infrastructure'. **06**
- Q.7** **Write notes on (Any two).** **14**  
 a) Role of infrastructure in development of Nation  
 b) Construction risks mitigation  
 c) Transportation Sector of infrastructure

## Solid and Hazardous Waste Management

Max. Marks: 70

### MCQ/Objective Type Questions

Marks: 14

- 1) Composting process is affected due to \_\_\_\_\_.  
a) Temperature                      b) Moisture content  
c) C/N ratio                          d) All of the above
- 2) Household hazardous waste includes batteries and \_\_\_\_\_.  
a) Radioactive waste                b) Food waste  
c) Leachate                          d) Nail Polish
- 3) What is recovered in the magnetic separation?  
a) Ferrous materials                b) Non-Ferrous materials  
c) Heat                                d) None of the above
- 4) Separation, processing of solid waste are used to reduce \_\_\_\_\_.  
a) Volume of S.W.                    b) Weight of S.W.  
c) Both a) and b)                    d) None of the above
- 5) The composting process of SWM is \_\_\_\_\_.  
a) Endothermic                      b) Exothermic  
c) Heterothermal                    d) None of the above
- 6) \_\_\_\_\_ is the cheapest method of waste disposal.  
a) Incineration                      b) Pyrolysis  
c) Landfills                          d) Composting
- 7) Biomedical Wastes and management rules was implemented in year \_\_\_\_\_.  
a) 1980                                b) 1998  
c) 2000                                d) 2016
- 8) What is the main purpose of hazard identification?  
a) To minimize the effect of a consequence  
b) For better risk management  
c) To characterize adverse effect of toxins  
d) To reduce probability of occurrence

Set **P**

**T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Solid and Hazardous Waste Management**

Day &amp; Date: Monday, 20-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Question no. 6 is compulsory in section II, and solve any two questions from the remaining.  
 2) Figures to the right indicates full marks  
 3) Assume suitable data wherever needed and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2 a)** Estimate the moisture content of solid waste sample of 150 kg using the following data **05**

Sr. No.	Component	% by mass	Moisture content (%)
1	food waste	15	62
2	paper	30	10
3	cardboards	08	06
4	plastic	12	03
5	grass	12	60
6	wood	06	04
7	metals	17	03

- b)** Explain various factors affecting Solid waste management of a city. **05**

- Q.3 a)** Enlist and explain numerous types of incinerators with a neat sketch. **05**

- b)** Solid waste weighing 250 tonnes is used for incineration as per MSW norms. Calculate heat value in kJ/kg using Ultimate analysis method. **04**

Following constituents of the waste are:

Carbon - 180 tonnes

Hydrogen - 10 tonnes

Oxygen - 60 tonnes

- Q.4 a)** Explain methodology, and factors affecting composting process. **05**

- b)** Explain advantages of shredding in detail. **04**

- Q.5 Write short notes on following (any three):** **09**

- Bangalore composting
- Recycling of plastic waste
- SWM rules
- Physical characteristics of solid waste

**Section – II**

<b>Q.6</b>	<b>a)</b> Define “hazards” and discuss the characteristics of “hazards”.	<b>06</b>
	<b>b)</b> Classify the types of hazards.	<b>04</b>
<b>Q.7</b>	<b>a)</b> Analyze the risk assessment plan in case of earthquake.	<b>05</b>
	<b>b)</b> Discuss the various qualitative assessment of damage.	<b>04</b>
<b>Q.8</b>	<b>a)</b> Discuss the various types of hazardous wastes.	<b>05</b>
	<b>b)</b> Illustrate the characteristics of hazardous waste using examples.	<b>04</b>
<b>Q.9</b>	<b>a)</b> Discuss the guidelines for storage of hazardous waste.	<b>05</b>
	<b>b)</b> Describe the various types of Landfills.	<b>04</b>

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) What is the main purpose of hazard identification?  
 a) To minimize the effect of a consequence  
 b) For better risk management  
 c) To characterize adverse effect of toxins  
 d) To reduce probability of occurrence
- 2) Characteristic of hazardous waste that causes fire is \_\_\_\_\_.  
 a) Ignitibility  
 b) Corrosivity  
 c) Reactivity  
 d) Toxicity
- 3) Acidic waste possess \_\_\_\_\_ character.  
 a) Ignitable  
 b) Corrosive  
 c) Toxic  
 d) Reactive
- 4) Which of the following is the most important variable in the construction of soil liners?  
 a) Type of compaction  
 b) Permeability  
 c) Flammability  
 d) Ignitability
- 5) Drainage pipes of leachate collection system is filled with \_\_\_\_\_.  
 a) Gravel  
 b) Dust  
 c) Clay  
 d) Grass
- 6) What is the normal storage time of incinerable hazardous waste at the incinerator site?  
 a) 4 months  
 b) 5 months  
 c) 6 months  
 d) 7 months
- 7) According to CPCB the major criteria considered for selection of technologies are \_\_\_\_\_.  
 a) Waste quantity  
 b) Chemical analysis  
 c) Lead content  
 d) Mercury content
- 8) Composting process is affected due to \_\_\_\_\_.  
 a) Temperature  
 b) Moisture content  
 c) C/N ratio  
 d) All of the above

- 9) Household hazardous waste includes batteries and \_\_\_\_\_.  
a) Radioactive waste                      b) Food waste  
c) Leachate                                  d) Nail Polish
- 10) What is recovered in the magnetic separation?  
a) Ferrous materials                      b) Non-Ferrous materials  
c) Heat                                      d) None of the above
- 11) Separation, processing of solid waste are used to reduce \_\_\_\_\_.  
a) Volume of S.W.                      b) Weight of S.W.

Set **R**

**T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Solid and Hazardous Waste Management**

Day &amp; Date: Monday, 20-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Question no. 6 is compulsory in section II, and solve any two questions from the remaining.  
 2) Figures to the right indicates full marks  
 3) Assume suitable data wherever needed and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2 a)** Estimate the moisture content of solid waste sample of 150 kg using the following data **05**

Sr. No.	Component	% by mass	Moisture content (%)
1	food waste	15	62
2	paper	30	10
3	cardboards	08	06
4	plastic	12	03
5	grass	12	60
6	wood	06	04
7	metals	17	03

- b)** Explain various factors affecting Solid waste management of a city. **05**

- Q.3 a)** Enlist and explain numerous types of incinerators with a neat sketch. **05**

- b)** Solid waste weighing 250 tonnes is used for incineration as per MSW norms. Calculate heat value in kJ/kg using Ultimate analysis method. **04**

Following constituents of the waste are:

Carbon - 180 tonnes

Hydrogen - 10 tonnes

Oxygen - 60 tonnes

- Q.4 a)** Explain methodology, and factors affecting composting process. **05**

- b)** Explain advantages of shredding in detail. **04**

- Q.5 Write short notes on following (any three):** **09**

- Bangalore composting
- Recycling of plastic waste
- SWM rules
- Physical characteristics of solid waste

**Section – II**

<b>Q.6</b>	<b>a)</b> Define “hazards” and discuss the characteristics of “hazards”.	<b>06</b>
	<b>b)</b> Classify the types of hazards.	<b>04</b>
<b>Q.7</b>	<b>a)</b> Analyze the risk assessment plan in case of earthquake.	<b>05</b>
	<b>b)</b> Discuss the various qualitative assessment of damage.	<b>04</b>
<b>Q.8</b>	<b>a)</b> Discuss the various types of hazardous wastes.	<b>05</b>
	<b>b)</b> Illustrate the characteristics of hazardous waste using examples.	<b>04</b>
<b>Q.9</b>	<b>a)</b> Discuss the guidelines for storage of hazardous waste.	<b>05</b>
	<b>b)</b> Describe the various types of Landfills.	<b>04</b>

**T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Solid and Hazardous Waste Management**

Day & Date: Monday, 20-02-2023

Max. Marks: 70

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) \_\_\_\_\_ is the cheapest method of waste disposal.
 

a) Incineration	b) Pyrolysis
c) Landfills	d) Composting
- 2) Biomedical Wastes and management rules was implemented in year \_\_\_\_\_.
 

a) 1980	b) 1998
c) 2000	d) 2016
- 3) What is the main purpose of hazard identification?
 

a) To minimize the effect of a consequence
b) For better risk management
c) To characterize adverse effect of toxins
d) To reduce probability of occurrence
- 4) Characteristic of hazardous waste that causes fire is \_\_\_\_\_.
 

a) Ignitability	b) Corrosivity
c) Reactivity	d) Toxicity
- 5) Acidic waste possess \_\_\_\_\_ character.
 

a) Ignitable	b) Corrosive
c) Toxic	d) Reactive
- 6) Which of the following is the most important variable in the construction of soil liners?
 

a) Type of compaction	b) Permeability
c) Flammability	d) Ignitability
- 7) Drainage pipes of leachate collection system is filled with \_\_\_\_\_.
 

a) Gravel	b) Dust
c) Clay	d) Grass
- 8) What is the normal storage time of incinerable hazardous waste at the incinerator site?
 

a) 4 months	b) 5 months
c) 6 months	d) 7 months

- 9) According to CPCB the major criteria considered for selection of technologies are \_\_\_\_\_.
  - a) Waste quantity
  - b) Chemical analysis
  - c) Lead content
  - d) Mercury content
- 10) Composting process is affected due to \_\_\_\_\_.
  - a) Temperature
  - b) Moisture content
  - c) C/N ratio
  - d) All of the above
- 11) Household hazardous waste includes batteries and \_\_\_\_\_.
  - a) Radioactive waste
  - b) Food waste
  - c) Leachate
  - d) Nail Polish
- 12) What is recovered in the magnetic separation?
  - a) Ferrous materials
  - b) Non-Ferrous materials
  - c) Heat
  - d) None of the above
- 13) Separation, processing of solid waste are used to reduce \_\_\_\_\_.
  - a) Volume of S.W.
  - b) Weight of S.W.
  - c) Both a) and b)
  - d) None of the above
- 14) The composting process of SWM is \_\_\_\_\_.
  - a) Endothermic
  - b) Exothermic
  - c) Heterothermic
  - d) None of the above

 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) At critical depth discharge is \_\_\_\_\_.  
 a) maximum for given specific energy  
 b) minimum for given specific energy  
 c) maximum for given specific force  
 d) minimum for given specific force
- 2) Uniform flow in open channel exists when the flow is steady and the channel is \_\_\_\_\_.  
 a) Friction less  
 b) Non prismatic  
 c) Prismatic  
 d) Prismatic and depth of flow is constant along the channel
- 3) If the Froude's number is 8.2 then the jump is known as \_\_\_\_\_.  
 a) Steady  
 b) Oscillating  
 c) Undular  
 d) none
- 4) Specific force represents the sum of pressure force and \_\_\_\_\_.  
 a) Datum head  
 b) Momentum flux per unit weight  
 c) Momentum flux and datum head  
 d) None
- 5) The flow in open channel may be characterized as laminar when \_\_\_\_\_.  
 a)  $Re < 500$   
 b)  $Re > 2000$   
 c)  $Re > 4000$   
 d)  $500 < Re < 2000$
- 6) For the trapezoidal section \_\_\_\_\_.  
 a) Side slope equal to  $45^\circ$   
 b) Depth of flow equal to half bed width  
 c) Shape is of half hexagon  
 d) None

- 7) River plains are made up of \_\_\_\_\_.  
a) Alluvium Black soil                      b) Red soil  
c) Black soil                                      d) None
- 8) The maximum velocity in open channel occurs at \_\_\_\_\_.  
a) Near the channel bottom                  b) At the free surface  
c) Little below the free surface              d) None
- 9) On what basis for designing the regime state is obtained?  
a) Silt and Velocity of Flow                  b) Silt  
c) Velocity    d) Depth of Channel
- 10) Whose theory was the first to provide semi-theoretical analysis of the problem of incipient condition of bed motion?  
a) Lacey's theory                                  b) Kennedy's theory  
c) Shield's theory                                d) Strickler's equation
- 11) The Lacey's equation for a regime channel consists of a set of 'x' independent equation relating to flow, where 'x' is equal to \_\_\_\_\_.  
a) 1    b) 3  
c) 5    d) 8
- 12) River training work serves the following purposes:  
a) Protect the river bed and banks  
b) Direct the river flow in desired condition  
c) Increase or decrease of the river discharge  
d) Protect the surrounding land from flooding
- 13) The dimension of Kinematic viscosity is \_\_\_\_\_.  
a)  $LT^{-2}$     b)  $L^2T^{-1}$   
c)  $L^3T^{-1}$     d)  $LT^{-1}$
- 14) Kinematic similarity between model and prototype is the similarity of \_\_\_\_\_.  
a) Discharge    b) Streamline pattern  
c) Shape    d) Forces

CIVIL ENGINEERING**

**Open Channel Flow & River Hydraulics**

Day & Date: Monday, 20-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Figures to the right indicates full marks  
2) All questions are compulsory.  
3) Draw neat sketches wherever necessary.  
4) Use of non programmable calculator is permitted.

**Section – I**

**Q.2 Solve any four** **16**

- Define kinetic energy correction factor ( $\alpha$ ) and momentum correction factor ( $\beta$ ) and derive their expressions.
- What do you understand by most economical channel section? and show that for trapezoidal section Half of top width = Length of one of sloping side and hydraulic mean depth = half the depth of flow.
- A 3.5 m wide rectangular channel convey's 10 m<sup>3</sup>/s of water with velocity 5 m/s. State is there formation of hydraulic jump if yes calculate height, length and strength of Jump and what is loss of energy per kg of water.
- Derive the modified GVF equation and draw a neat sketch and show all details.
- Derive the expression for Hydraulic Jump. Assume suitable data.

**Q.3 Solve any Two** **12**

- A hydraulic jump is formed in a 5.0 m wide rectangular channel carrying a discharge of 20 m<sup>3</sup>/sec. The pre jump depth is 0.5 m. Find the post jump depth, post jump Froude's number and energy loss in the jump.
- What is specific energy curve? Draw a neat sketch and show all details.
- A discharge of 800 m<sup>3</sup>/s flows down a spillway and then passes on a 55 m wide concrete apron ( $n = 0.012$ ) the velocity of water at the toe of spillway is 10 m/s. A tail water depth of 4.40 m the channel below causes a hydraulic jump on the horizontal apron. Determine,
  - Depth before the jump
  - Length of jump
  - Energy loss in jump
  - Specific force at the toe

**Section – II**

**Q.4 Solve any four** **16**

- Write short notes on
  - Spurs
  - Meandering of river
- Design a regime channel by using 'Lacey's theory' from the data discharge = 50 m<sup>3</sup>/sec and silt factor = 1.12
- A model of water meter is tested in 110 mm diameter pipe. The discharge was 50 lit/sec and pressure difference is 0.10 N/mm<sup>2</sup>. What will be the discharge in pipe of 550 mm diameter pipe and what will be the pressure?

- d) What do you understand by river training works? Explain its types with examples.
- e) Draw a neat sketch of current meter and explain its working in details.

**Q.5 Solve any two****12**

- a) Oil of kinematic viscosity is  $5.5 \times 10^{-5} \text{ m}^2/\text{sec}$  is used in prototype in which both gravity and viscous forces are important. What should be the viscosity of liquid used in dynamically similar model of scale 1:9? Also find discharge ratio and time ratio for this model.
- b) Explain 'Similitude' and what are its types? and derive the equation for Froude's number.
- c) Design a regime channel by using 'Kennedy's Theory' using the following data
  - 1) Discharge  $40 \text{ m}^3/\text{sec}$
  - 2) Kutter's Coefficient ( $N=0.0022$ )
  - 3)  $m=1$ , side slope 0.5: 1, B/D 7.5 also find bed slope

- Define kinetic energy correction factor ( $\alpha$ ) and momentum correction factor ( $\beta$ ) and derive their expressions.
- What do you understand by most economical channel section? and show that for trapezoidal section Half of top width = Length of one of sloping side and hydraulic mean depth - half the depth of flow.
- A 3.5 m wide rectangular channel convey's 10 m<sup>3</sup>/s of water with velocity 5 m/s. State is there formation of hydraulic jump if yes calculate height, length and strength of Jump and what is loss of energy per kg of water.
- Derive the modified GVF equation and draw a neat sketch and show all details.
- Derive the expression for Hydraulic Jump. Assume suitable data.

**Q.3 Solve any Two** **12**

- A hydraulic jump is formed in a 5.0 m wide rectangular channel carrying a discharge of 20 m<sup>3</sup>/sec. The pre jump depth is 0.5 m. Find the post jump depth, post jump Froude's number and energy loss in the jump.
- What is specific energy curve? Draw a neat sketch and show all details.
- A discharge of 800 m<sup>3</sup>/s flows down a spillway and then passes on a 55 m wide concrete apron ( $n = 0.012$ ) the velocity of water at the toe of spillway is 10 m/s. A tail water depth of 4.40 m the channel below causes a hydraulic jump on the horizontal apron. Determine,
  - Depth before the jump
  - Length of jump
  - Energy loss in jump
  - Specific force at the toe

**Section – II**

**Q.4 Solve any four** **16**

- Write short notes on
  - Spurs
  - Meandering of river
- Design a regime channel by using 'Lacey's theory' from the data discharge = 50 m<sup>3</sup>/sec and silt factor = 1.12
- A model of water meter is tested in 110 mm diameter pipe. The discharge was 50 lit/sec and pressure difference is 0.10 N/mm<sup>2</sup>. What will be the discharge in pipe of 550 mm diameter pipe and what will be the pressure?

- d) What do you understand by river training works? Explain its types with examples.
- e) Draw a neat sketch of current meter and explain its working in details.

**Q.5 Solve any two****12**

- a) Oil of kinematic viscosity is  $5.5 \times 10^{-5} \text{ m}^2/\text{sec}$  is used in prototype in which both gravity and viscous forces are important. What should be the viscosity of liquid used in dynamically similar model of scale 1:9? Also find discharge ratio and time ratio for this model.
- b) Explain 'Similitude' and what are its types? and derive the equation for Froude's number.
- c) Design a regime channel by using 'Kennedy's Theory' using the following data
  - 1) Discharge  $40 \text{ m}^3/\text{sec}$
  - 2) Kutter's Coefficient ( $N=0.0022$ )
  - 3)  $m=1$ , side slope 0.5: 1, B/D 7.5 also find bed slope

**Open Channel Flow & River Hydraulics**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) For the trapezoidal section \_\_\_\_\_.  
 a) Side slope equal to  $45^\circ$   
 b) Depth of flow equal to half bed width  
 c) Shape is of half hexagon  
 d) None
- 2) River plains are made up of \_\_\_\_\_.  
 a) Alluvium Black soil                      b) Red soil  
 c) Black soil                                      d) None
- 3) The maximum velocity in open channel occurs at \_\_\_\_\_.  
 a) Near the channel bottom                  b) At the free surface  
 c) Little below the free surface              d) None
- 4) On what basis for designing the regime state is obtained?  
 a) Silt and Velocity of Flow                  b) Silt  
 c) Velocity    d) Depth of Channel
- 5) Whose theory was the first to provide semi-theoretical analysis of the problem of incipient condition of bed motion?  
 a) Lacey's theory                                  b) Kennedy's theory  
 c) Shield's theory                                d) Strickler's equation
- 6) The Lacey's equation for a regime channel consists of a set of 'x' independent equation relating to flow, where 'x' is equal to \_\_\_\_\_.  
 a) 1    b) 3  
 c) 5    d) 8
- 7) River training work serves the following purposes:  
 a) Protect the river bed and banks  
 b) Direct the river flow in desired condition  
 c) Increase or decrease of the river discharge  
 d) Protect the surrounding land from flooding
- 8) The dimension of Kinematic viscosity is \_\_\_\_\_.  
 a)  $LT^{-2}$     b)  $L^2T^{-1}$   
 c)  $L^3T^{-1}$     d)  $LT^{-1}$

- 9) Kinematic similarity between model and prototype is the similarity of \_\_\_\_\_.
  - a) Discharge
  - b) Streamline pattern
  - c) Shape
  - d) Forces
- 10) At critical depth discharge is \_\_\_\_\_.
  - a) maximum for given specific energy
  - b) minimum for given specific energy
  - c) maximum for given specific force
  - d) minimum for given specific force
- 11) Uniform flow in open channel exists when the flow is steady and the channel is \_\_\_\_\_.
  - a) Friction less
  - b) Non prismatic
  - c) Prismatic
  - d) Prismatic and depth of flow is constant along the channel
- 12) If the Froude's number is 8.2 then the jump is known as \_\_\_\_\_.
  - a) Steady
  - b) Oscillating
  - c) Undular
  - d) none
- 13) Specific force represents the sum of pressure force and \_\_\_\_\_.
  - a) Datum head
  - b) Momentum flux per unit weight
  - c) Momentum flux and datum head
  - d) None
- 14) The flow in open channel may be characterized as laminar when \_\_\_\_\_.
  - a)  $Re < 500$
  - b)  $Re > 2000$
  - c)  $Re > 4000$
  - d)  $500 < Re < 2000$

 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark except MCQ. 13 which carry 2 marks.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) IS 456:2000 is not allowed while solving the MCQ.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.** **14**

- 1) In reinforced cement concrete structures, the steel reinforcement consists of \_\_\_\_\_. **01**
  - a) Deformed bars
  - b) Cold twisted bars
  - c) Mild steel and medium tensile steel bars
  - d) All of these
- 2) The horizontal distance between parallel main reinforcement bars in a solid slab shall not be more than **01**
  - a) Two times the effective depth of solid slab or 300 mm whichever is less
  - b) Two times the effective depth of solid slab or 450 mm whichever is less
  - c) Three times the effective depth of solid slab or 300 mm whichever is less
  - d) Three times the effective depth of solid slab or 450 mm whichever is less
- 3) In an under-reinforced concrete beam **01**
  - a) actual depth of neutral axis is less than the critical depth of neutral axis
  - b) moment of resistance is less than that of balanced sections
  - c) both (a) and (b)
  - d) none of these
- 4) The side face reinforcement, if required in a T beam will be **01**
  - a) 0.1 % of the web area
  - b) 0.15% of the web area
  - c) 0.02 to 0.03% of the web area
  - d) Half of the longitudinal reinforcement
- 5) The width of the flange of the L-beam is taken as **01**
  - a) one-sixth of the effective span of L-beam
  - b) breadth of rib plus one-half of the clear distance between the rib
  - c) breadth of rib plus four times the thickness of the slab
  - d) minimum value of (a), (b) or (c)

- 6) The bending moment coefficient of a continuous beam at end supports for the dead load and live load is \_\_\_\_\_ of the effective span. **01**  
a)  $-1/10$  b)  $-1/12$   
c)  $1/10$  d)  $1/12$
- 7) According to IS 456:2000, the maximum compressive strain in concrete under axial compression is \_\_\_\_\_. **01**  
a) 0.0035 b) 0.002  
c) 0.0030 d) 0.0045
- 8) Columns may be made of plain concrete if their unsupported lengths do not exceed their least lateral dimension \_\_\_\_\_. **01**  
a) Two times b) Three times  
c) Four times d) Five times
- 9) The torsion resisting capacity of a given reinforced concrete section \_\_\_\_\_. **01**  
a) decreases with decrease in stirrup spacing  
b) decreases with increase in longitudinal bars  
c) does not depend upon stirrup and longitudinal steels  
d) increases with increase in stirrup and longitudinal steels
- 10) The longitudinal shearing stresses acting on the surface between the steel and concrete are called \_\_\_\_\_. **01**  
a) bond stresses b) tensile stresses  
c) compressive stresses d) None of these
- 11) A T beam behaves as a rectangular beam of a width equal to its flange if its neutral axis \_\_\_\_\_. **01**  
a) Falls within flange  
b) Falls below flange  
c) Coincides with the geometrical centre of beam  
d) Falls below the centroidal axis of the beam
- 12) In case of over reinforced section which element fails first \_\_\_\_\_. **01**  
a) Both steel and concrete simultaneously  
b) Neither steel or concrete  
c) Steel  
d) Concrete
- 13) The rectangular beam of width, 250 mm is having effective depth of 327 mm. The concrete grade is M20 and the grade of reinforcing steel is Fe415. As per limit state method, the lever arm in a balanced section is equal to \_\_\_\_\_. **02**  
a) 157mm b) 183mm  
c) 209mm d) 262mm

**Design of Concrete Structures- I**

Day & Date: Wednesday, 22-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. No. 2 & 6 are compulsory  
2) Solve any two questions from question no. 3 to 5 in Section – I.  
3) Solve any two questions from question no. 7 to 9 in Section – II.  
4) Use of IS 456:2000 Original and non-programmable calculator is allowed.  
5) Assume suitable data if required and state it clearly.

**Section – I**

- Q.2** A rectangular section of effective size 300 mm x 500 mm effective subjected to a factored moment of 220 kNm. find the reinforcement required. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. **08**
- Q.3** A hall has clear dimension 3m x 9m. with wall thickness 230mm. The live load on the slab is 3 kN/m<sup>2</sup> excluding floor finish. Use M<sub>20</sub> grade concrete and Fe<sub>500</sub> steel, design the slab. **10**
- Q.4** Design a rectangular beam of section 230mm x 600mm of effective span 6m. Effective cover for reinforcement should be kept as 50mm. Imposed load on the beam is 40 kN/m. Concrete used is M<sub>25</sub> and steel is Fe<sub>415</sub>. **10**
- Q.5** A T- beam slab floor has 125 mm thick slab forming part of T-beams which are of 8m clear span. The end bearings are 450 mm thick. Spacing of T- beams is 3.2 m. The live load on the floor is 3 kN/m<sup>2</sup>. Design one of the intermediate beam. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**

**Section – II**

- Q.6** Find the area of steel required for a short reinforced concrete column 400 mm x 400 mm to carry an axial load of 1000 kN. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. **08**
- Q.7** Determine reinforcement required for a beam size 230 mm x 600 mm subjected to shear force of 60kN, torsional moment of 35 kN.m and bending moment of 80 kN.m. Use M<sub>20</sub> concrete and Fe<sub>500</sub> steel. **10**
- Q.8** Design a circular column of diameter 400 mm subjected to a load of 1300 kN. The column is having spiral ties. The column is 3 m long and is effectively held in position at both ends but not restrained against rotation. Use M<sub>25</sub> concrete and Fe<sub>415</sub> steel. **10**
- Q.9** Design a continuous rectangular beam of span 7 m to carry a dead load of 10 kN/m and a live load of 15 kN/m. The beam is continuous over more than 3 spans and is supported by columns. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**

**T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022  
CIVIL ENGINEERING**

**Design of Concrete Structures- I**

Day & Date: Wednesday, 22-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. No. 2 & 6 are compulsory  
 2) Solve any two questions from question no. 3 to 5 in Section – I.  
 3) Solve any two questions from question no. 7 to 9 in Section – II.  
 4) Use of IS 456:2000 Original and non-programmable calculator is allowed.  
 5) Assume suitable data if required and state it clearly.

**Section – I**

- Q.2** A rectangular section of effective size 300 mm x 500 mm effective subjected to a factored moment of 220 kNm. find the reinforcement required. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. **08**
- Q.3** A hall has clear dimension 3m x 9m. with wall thickness 230mm. The live load on the slab is 3 kN/m<sup>2</sup> excluding floor finish. Use M<sub>20</sub> grade concrete and Fe<sub>500</sub> steel, design the slab. **10**
- Q.4** Design a rectangular beam of section 230mm x 600mm of effective span 6m. Effective cover for reinforcement should be kept as 50mm. Imposed load on the beam is 40 kN/m. Concrete used is M<sub>25</sub> and steel is Fe<sub>415</sub>. **10**
- Q.5** A T- beam slab floor has 125 mm thick slab forming part of T-beams which are of 8m clear span. The end bearings are 450 mm thick. Spacing of T- beams is 3.2 m. The live load on the floor is 3 kN/m<sup>2</sup>. Design one of the intermediate beam. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**

**Section – II**

- Q.6** Find the area of steel required for a short reinforced concrete column 400 mm x 400 mm to carry an axial load of 1000 kN. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. **08**
- Q.7** Determine reinforcement required for a beam size 230 mm x 600 mm subjected to shear force of 60kN, torsional moment of 35 kN.m and bending moment of 80 kN.m. Use M<sub>20</sub> concrete and Fe<sub>500</sub> steel. **10**
- Q.8** Design a circular column of diameter 400 mm subjected to a load of 1300 kN. The column is having spiral ties. The column is 3 m long and is effectively held in position at both ends but not restrained against rotation. Use M<sub>25</sub> concrete and Fe<sub>415</sub> steel. **10**
- Q.9** Design a continuous rectangular beam of span 7 m to carry a dead load of 10 kN/m and a live load of 15 kN/m. The beam is continuous over more than 3 spans and is supported by columns. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**

**CIVIL ENGINEERING**

**Design of Concrete Structures- I**

Day & Date: Wednesday, 22-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark except MCQ. 13 which carry 2 marks.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) IS 456:2000 is not allowed while solving the MCQ.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.** **14**

- 1) The bending moment coefficient of a continuous beam at end supports for the dead load and live load is \_\_\_\_\_ of the effective span. **01**
  - a)  $-1/10$
  - b)  $-1/12$
  - c)  $1/10$
  - d)  $1/12$
- 2) According to IS 456:2000, the maximum compressive strain in concrete under axial compression is \_\_\_\_\_. **01**
  - a) 0.0035
  - b) 0.002
  - c) 0.0030
  - d) 0.0045
- 3) Columns may be made of plain concrete if their unsupported lengths do not exceed their least lateral dimension \_\_\_\_\_. **01**
  - a) Two times
  - b) Three times
  - c) Four times
  - d) Five times
- 4) The torsion resisting capacity of a given reinforced concrete section \_\_\_\_\_. **01**
  - a) decreases with decrease in stirrup spacing
  - b) decreases with increase in longitudinal bars
  - c) does not depend upon stirrup and longitudinal steels
  - d) increases with increase in stirrup and longitudinal steels
- 5) The longitudinal shearing stresses acting on the surface between the steel and concrete are called \_\_\_\_\_. **01**
  - a) bond stresses
  - b) tensile stresses
  - c) compressive stresses
  - d) None of these
- 6) A T beam behaves as a rectangular beam of a width equal to its flange if its neutral axis \_\_\_\_\_. **01**
  - a) Falls within flange
  - b) Falls below flange
  - c) Coincides with the geometrical centre of beam
  - d) Falls below the centroidal axis of the beam

- 7) In case of over reinforced section which element fails first \_\_\_\_\_. **01**  
a) Both steel and concrete simultaneously  
b) Neither steel or concrete  
c) Steel  
d) Concrete
- 8) In reinforced cement concrete structures, the steel reinforcement consists of \_\_\_\_\_. **01**  
a) Deformed bars  
b) Cold twisted bars  
c) Mild steel and medium tensile steel bars  
d) All of these
- 9) The horizontal distance between parallel main reinforcement bars in a solid slab shall not be more than **01**  
a) Two times the effective depth of solid slab or 300 mm whichever is less  
b) Two times the effective depth of solid slab or 450 mm whichever is less  
c) Three times the effective depth of solid slab or 300 mm whichever is less  
d) Three times the effective depth of solid slab or 450 mm whichever is less
- 10) In an under-reinforced concrete beam **01**  
a) actual depth of neutral axis is less than the critical depth of neutral axis  
b) moment of resistance is less than that of balanced sections  
c) both (a) and (b)  
d) none of these
- 11) The side face reinforcement, if required in a T beam will be **01**  
a) 0.1 % of the web area  
b) 0.15% of the web area  
c) 0.02 to 0.03% of the web area  
d) Half of the longitudinal reinforcement
- 12) The width of the flange of the L-beam is taken as **01**  
a) one-sixth of the effective span of L-beam  
b) breadth of rib plus one-half of the clear distance between the rib  
c) breadth of rib plus four times the thickness of the slab  
d) minimum value of (a), (b) or (c)
- 13) The rectangular beam of width, 250 mm is having effective depth of 327 mm. The concrete grade is M20 and the grade of reinforcing steel is Fe415. As per limit state method, the lever arm in a balanced section is equal to \_\_\_\_\_. **02**  
a) 157mm  
b) 183mm  
c) 209mm  
d) 262mm

## Principles of Management and Quantitative Techniques

Max. Marks: 70

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) MBO is developed by \_\_\_\_\_.  
a) Gilberth                                      b) Peter Drucker  
c) Fayol    d) Taylor
- 2) F.W. Taylor introduced \_\_\_\_\_.  
a) Line organization                            b) Line & staff organization  
c) Functional organization                 d) Effective organization
- 3) Simplex method is the method used for \_\_\_\_\_.  
a) value analysis                                b) network analysis  
c) linear programming                        d) queuing theory
- 4) Transportation problem can be solved if \_\_\_\_\_.  
a) No. of rows = no. of columns            b) No. of rows  $\geq$  no. of columns  
c) No. of rows  $\leq$  no. of columns            d) All of these
- 5) Hungarian trial and error method is suitable for solving \_\_\_\_\_.  
a) Transportation problem                    b) Assignment problem  
c) Games theory                                d) Simplex method
- 6) Decision making under risk is \_\_\_\_\_.  
a) Deterministic                                b) Probabilistic  
c) Uncertain                                      d) None of these
- 7) Games without a saddle point require players to play \_\_\_\_\_.  
a) Pure strategy                                 b) Mixed strategy  
c) Market strategy                              d) None of these
- 8) In ABC analysis least monitoring and control is required for \_\_\_\_\_.  
a) A class items                                 b) B class items  
c) C class items                                 d) All of these
- 9) The cost of keeping items in inventory is called \_\_\_\_\_.  
a) Set up cost                                    b) Holding cost  
c) Shortage cos                                 d) None of these
- 10) EOQ model helps to find \_\_\_\_\_.  
a) Optimum size of order                      b) Time interval between order  
c) Both (a) and (b)                            d) None of these

- 11)** What is at the heart of any ERP?
- |                |              |
|----------------|--------------|
| a) Information | b) Employees |
| c) Customers   | d) Database  |
- 12)** Break even analysis consists of \_\_\_\_\_.  
a) fixed expenses                      b) variable cost  
c) sales revenue                        d) All of these
- 13)** Average Chart and Range Chart is used for \_\_\_\_\_.  
a) Attributes                              b) Variables  
c) Both (a) and (b)                      d) none
- 14)** The percent of the sample means will have values that are within  $\pm 3$  standard deviations of the distribution mean is \_\_\_\_\_.  
a) 95.5                                      b) 96.7  
c) 97.6                                      d) 99.7

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicates full marks.  
 3) Assume suitable data wherever necessary and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

**Q.2 Attempt the following questions.**

**08**

- a) Enlist and write a note on the “Function of Management”.  
 b) A firm produces three products. These products are processed on three different machines. The time required to manufacture one of each of the three products and the daily capacity of three machines is given in the table below:

Machine	Time per unit (minutes)			Machine capacity (minutes/day)
M1	2	3	2	440
M2	4	—	3	470
M3	2	5	—	430

Formulate the above data in LPP which is required to determine the daily number of units to be manufactured for each product. The profit per units for product 1, 2 and 3 is Rs. 40/-, Rs. 30/- and Rs. 60/- respectively.

**Q.3 Attempt the following question.**

**06**

- a) Use Simplex Method to solve the following LPP.

$$\text{Max. } Z = 6x_1 + 8x_2$$

Subject to

$$30x_1 + 20x_2 \leq 300$$

$$5x_1 + 10x_2 \leq 110$$

$$x_1, x_2 \geq 0$$

- b) Find the initial basic feasible solution by Least Cost Method.

**04**

	W1	W2	W3	W4	Supply
F1	48	60	56	58	140
F2	45	55	53	60	260
F3	50	65	60	62	360
F4	52	64	55	61	220
Demand	200	320	250	210	

**Q.4 Attempt below question.**

- a) A company is bringing out a new product in market with three strategy of production line like full, partial and minimal. The state of nature may be Good demand, fair demand and poor demand with following payoff of profit as shown in table below:

**03**

State of Nature (Demand)	Production Line		
	Full	Partial	Minimal
Good	80	70	50
Fair	50	45	40
Poor	-25	-10	0

Take optimal decision under each of the following decision rules:

- 1) Maximax
- 2) Maximin
- 3) Laplace

- b) Construct the dual to the primal problem:

**03**

$$\text{Max. } Z = 3x_1 + 5x_2$$

Subject to

$$2x_1 + 6x_2 \leq 50$$

$$3x_1 + 2x_2 \leq 35$$

$$5x_1 - 3x_2 \leq 10$$

$$-x_2 \geq -20$$

$$x_1, x_2 \geq 0$$

- c) Find the Saddle Point using the dominance rule.

**04**

		Player B		
		B1	B2	B3
Player A	A1	5	9	3
	A2	6	-12	-11
	A3	8	16	10

**Section – II****Q.5 Attempt above question.**

- a) Explain in brief about “Inventory and cost associated with Inventory” along with objective of Inventory management?
- b) A construction company consumes 4000 bags of cement per month. Price per bag of cement is Rs. 320/-. Inventory cost is Rs. 30/- and procurement cost per order is Rs. 500/-  
Find economic order quantity and number of order to be placed per month?

**06****04****Q.6 Attempt above question**

- a) Explain in brief “ERP” system and its use in Civil construction sector.
- b) Explain in brief various technical terms of “Break Even Analysis” with neat sketch.

**04****05**

**Q.7 Attempt above question**

- a) Explain in brief “Importance of Quality Control Technique in construction sector”? **04**
- b) Construct X Control Chart using following data as given below:  $A_2 = 0.58$  **05**

	Sample Observation				
Sample No.	I	II	III	IV	V
1	42	65	75	81	87
2	42	45	68	70	90

### MCQ/Objective Type Questions

Marks: 14

- 1) In ABC analysis least monitoring and control is required for \_\_\_\_\_.  
a) A class items                                      b) B class items  
c) C class items                                      d) All of these
- 2) The cost of keeping items in inventory is called \_\_\_\_\_.  
a) Set up cost    b) Holding cost  
c) Shortage cos                                        d) None of these
- 3) EOQ model helps to find \_\_\_\_\_.  
a) Optimum size of order                          b) Time interval between order  
c) Both (a) and (b)                                 d) None of these
- 4) What is at the heart of any ERP?  
a) Information    b) Employees  
c) Customers    d) Database
- 5) Break even analysis consists of \_\_\_\_\_.  
a) fixed expenses                                    b) variable cost  
c) sales revenue                                      d) All of these
- 6) Average Chart and Range Chart is used for \_\_\_\_\_.  
a) Attributes    b) Variables  
c) Both (a) and (b)                                 d) none
- 7) The percent of the sample means will have values that are within  $\pm 3$  standard deviations of the distribution mean is \_\_\_\_\_.  
a) 95.5    b) 96.7  
c) 97.6    d) 99.7
- 8) MBO is developed by \_\_\_\_\_.  
a) Gilberth    b) Peter Drucker  
c) Fayol     d) Taylor
- 9) F.W. Taylor introduced \_\_\_\_\_.  
a) Line organization                                 b) Line & staff organization  
c) Functional organization                        d) Effective organization

- 10)** Simplex method is the method used for \_\_\_\_\_.  
a) value analysis                      b) network analysis  
c) linear programming                d) queuing theory
- 11)** Transportation problem can be solved if \_\_\_\_\_.  
a) No. of rows = no. of columns    b) No. of rows  $\geq$  no. of columns  
c) No. of rows  $\leq$  no. of columns    d) All of these
- 12)** Hungarian trial and error method is suitable for solving \_\_\_\_\_.  
a) Transportation problem            b) Assignment problem  
c) Games theory                        d) Simplex method
- 13)** Decision making under risk is \_\_\_\_\_.  
a) Deterministic                        b) Probabilistic  
c) Uncertain                              d) None of these
- 14)** Games without a saddle point require players to play \_\_\_\_\_.  
a) Pure strategy                        b) Mixed strategy  
c) Market strategy                      d) None of these

 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicates full marks.  
 3) Assume suitable data wherever necessary and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

**Q.2 Attempt the following questions.**

**08**

- a) Enlist and write a note on the “Function of Management”.  
 b) A firm produces three products. These products are processed on three different machines. The time required to manufacture one of each of the three products and the daily capacity of three machines is given in the table below:

Machine	Time per unit (minutes)			Machine capacity (minutes/day)
M1	2	3	2	440
M2	4	—	3	470
M3	2	5	—	430

Formulate the above data in LPP which is required to determine the daily number of units to be manufactured for each product. The profit per units for product 1, 2 and 3 is Rs. 40/-, Rs. 30/- and Rs. 60/- respectively.

**Q.3 Attempt the following question.**

**06**

- a) Use Simplex Method to solve the following LPP.

$$\text{Max. } Z = 6x_1 + 8x_2$$

Subject to

$$30x_1 + 20x_2 \leq 300$$

$$5x_1 + 10x_2 \leq 110$$

$$x_1, x_2 \geq 0$$

- b) Find the initial basic feasible solution by Least Cost Method.

**04**

	W1	W2	W3	W4	Supply
F1	48	60	56	58	140
F2	45	55	53	60	260

Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) What is at the heart of any ERP?
 

a) Information	b) Employees
c) Customers	d) Database
- 2) Break even analysis consists of \_\_\_\_\_.
 

a) fixed expenses	b) variable cost
c) sales revenue	d) All of these
- 3) Average Chart and Range Chart is used for \_\_\_\_\_.
 

a) Attributes	b) Variables
c) Both (a) and (b)	d) none
- 4) The percent of the sample means will have values that are within  $\pm 3$  standard deviations of the distribution mean is \_\_\_\_\_.
 

a) 95.5	b) 96.7
c) 97.6	d) 99.7
- 5) MBO is developed by \_\_\_\_\_.
 

a) Gilberth	b) Peter Drucker
c) Fayol	d) Taylor
- 6) F.W. Taylor introduced \_\_\_\_\_.
 

a) Line organization	b) Line & staff organization
c) Functional organization	d) Effective organization
- 7) Simplex method is the method used for \_\_\_\_\_.
 

a) value analysis	b) network analysis
c) linear programming	d) queuing theory
- 8) Transportation problem can be solved if \_\_\_\_\_.
 

a) No. of rows = no. of columns	b) No. of rows $\geq$ no. of columns
c) No. of rows $\leq$ no. of columns	d) All of these
- 9) Hungarian trial and error method is suitable for solving \_\_\_\_\_.
 

a) Transportation problem	b) Assignment problem
c) Games theory	d) Simplex method

- 10) Decision making under risk is \_\_\_\_\_.
  - a) Deterministic
  - b) Probabilistic
  - c) Uncertain
  - d) None of these
- 11) Games without a saddle point require players to play \_\_\_\_\_.
  - a) Pure strategy
  - b) Mixed strategy
  - c) Market strategy
  - d) None of these
- 12) In ABC analysis least monitoring and control is required for \_\_\_\_\_.
  - a) A class items
  - b) B class items
  - c) C class items
  - d) All of these
- 13) The cost of keeping items in inventory is called \_\_\_\_\_.
  - a) Set up cost
  - b) Holding cost
  - c) Shortage cost
  - d) None of these
- 14) EOQ model helps to find \_\_\_\_\_.
  - a) Optimum size of order
  - b) Time interval between order
  - c) Both (a) and (b)
  - d) None of these

Set **R**

**T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Principles of Management and Quantitative Techniques**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicates full marks.  
 3) Assume suitable data wherever necessary and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

**Q.2 Attempt the following questions.**

**08**

- a) Enlist and write a note on the “Function of Management”.  
 b) A firm produces three products. These products are processed on three different machines. The time required to manufacture one of each of the three products and the daily capacity of three machines is given in the table below:

Machine	Time per unit (minutes)			Machine capacity (minutes/day)
M1	2	3	2	440
M2	4	—	3	470
M3	2	5	—	430

Formulate the above data in LPP which is required to determine the daily number of units to be manufactured for each product. The profit per units for product 1, 2 and 3 is Rs. 40/-, Rs. 30/- and Rs. 60/- respectively.

**Q.3 Attempt the following question.**

- a) Use Simplex Method to solve the following LPP.

**06**

$$\text{Max. } Z = 6x_1 + 8x_2$$

Subject to

$$30x_1 + 20x_2 \leq 300$$

$$5x_1 + 10x_2 \leq 110$$

$$x_1, x_2 \geq 0$$

- b) Find the initial basic feasible solution by Least Cost Method.

**04**

	W1	W2	W3	W4	Supply
F1	48	60	56	58	140
F2	45	55	53	60	260
F3	50	65	60	62	360
F4	52	64	55	61	220
Demand	200	320	250	210	

**Q.4 Attempt below question.**

- a) A company is bringing out a new product in market with three strategy of production line like full, partial and minimal. The state of nature may be Good demand, fair demand and poor demand with following payoff of profit as shown in table below:

**03**

State of Nature (Demand)	Production Line		
	Full	Partial	Minimal
Good	80	70	50
Fair	50	45	40
Poor	-25	-10	0

Take optimal decision under each of the following decision rules:

- 1) Maximax
- 2) Maximin
- 3) Laplace

- b) Construct the dual to the primal problem:

**03**

$$\text{Max. } Z = 3x_1 + 5x_2$$

Subject to

$$2x_1 + 6x_2 \leq 50$$

$$3x_1 + 2x_2 \leq 35$$

$$5x_1 - 3x_2 \leq 10$$

$$-x_2 \geq -20$$

$$x_1, x_2 \geq 0$$

- c) Find the Saddle Point using the dominance rule.

**04**

		Player B		
		B1	B2	B3
Player A	A1	5	9	3
	A2	6	-12	-11
	A3	8	16	10

**Section – II****Q.5 Attempt above question.**

- a) Explain in brief about “Inventory and cost associated with Inventory” along with objective of Inventory management?

**06**

- b) A construction company consumes 4000 bags of cement per month. Price per bag of cement is Rs. 320/-. Inventory cost is Rs. 30/- and procurement cost per order is Rs. 500/-

**04**

Find economic order quantity and number of order to be placed per month?

**Q.6 Attempt above question**

- a) Explain in brief “ERP” system and its use in Civil construction sector.
- b) Explain in brief various technical terms of “Break Even Analysis” with neat sketch.

**04****05**

**Q.7 Attempt above question**

- a) Explain in brief “Importance of Quality Control Technique in construction sector”? **04**
- b) Construct X Control Chart using following data as given below:  $A_2 = 0.58$  **05**

	Sample Observation				
Sample No.	I	II	III	IV	V
1	42	65	75	81	87
2	42	45	68	70	90
3	19	24	80	81	81
4	36	54	69	77	84
5	42	51	60	59	78

<b>Seat No.</b>

## Principles of Management and Quantitative Techniques

Max. Marks: 70

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Decision making under risk is \_\_\_\_\_.  
a) Deterministic                      b) Probabilistic  
c) Uncertain                          d) None of these
- 2) Games without a saddle point require players to play \_\_\_\_\_.  
a) Pure strategy                      b) Mixed strategy  
c) Market strategy                  d) None of these
- 3) In ABC analysis least monitoring and control is required for \_\_\_\_\_.  
a) A class items                      b) B class items  
c) C class items                      d) All of these
- 4) The cost of keeping items in inventory is called \_\_\_\_\_.  
a) Set up cost                        b) Holding cost  
c) Shortage cos                      d) None of these
- 5) EOQ model helps to find \_\_\_\_\_.  
a) Optimum size of order            b) Time interval between order  
c) Both (a) and (b)                  d) None of these
- 6) What is at the heart of any ERP?  
a) Information                        b) Employees  
c) Customers                         d) Database
- 7) Break even analysis consists of \_\_\_\_\_.  
a) fixed expenses                    b) variable cost  
c) sales revenue                      d) All of these
- 8) Average Chart and Range Chart is used for \_\_\_\_\_.  
a) Attributes                         b) Variables  
c) Both (a) and (b)                  d) none
- 9) The percent of the sample means will have values that are within  $\pm 3$  standard deviations of the distribution mean is \_\_\_\_\_.  
a) 95.5                                  b) 96.7  
c) 97.6                                  d) 99.7

- 10)** MBO is developed by \_\_\_\_\_.  
a) Gilberth                      b) Peter Drucker  
c) Fayol                         d) Taylor
- 11)** F.W. Taylor introduced \_\_\_\_\_.  
a) Line organization            b) Line & staff organization  
c) Functional organization     d) Effective organization
- 12)** Simplex method is the method used for \_\_\_\_\_.  
a) value analysis                b) network analysis  
c) linear programming          d) queuing theory
- 13)** Transportation problem can be solved if \_\_\_\_\_.  
a) No. of rows = no. of columns    b) No. of rows  $\geq$  no. of columns  
c) No. of rows  $\leq$  no. of columns    d) All of these
- 14)** Hungarian trial and error method is suitable for solving \_\_\_\_\_.  
a) Transportation problem        b) Assignment problem  
c) Games theory                    d) Simplex method

**Principles of Management and Quantitative Techniques**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicates full marks.  
 3) Assume suitable data wherever necessary and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

**Q.2 Attempt the following questions.**

**08**

- a) Enlist and write a note on the “Function of Management”.  
 b) A firm produces three products. These products are processed on three different machines. The time required to manufacture one of each of the three products and the daily capacity of three machines is given in the table below:

Machine	Time per unit (minutes)			Machine capacity (minutes/day)
M1	2	3	2	440
M2	4	—	3	470
M3	2	5	—	430

Formulate the above data in LPP which is required to determine the daily number of units to be manufactured for each product. The profit per units for product 1, 2 and 3 is Rs. 40/-, Rs. 30/- and Rs. 60/- respectively.

**Q.3 Attempt the following question.**

**06**

- a) Use Simplex Method to solve the following LPP.

$$\text{Max. } Z = 6x_1 + 8x_2$$

Subject to

$$30x_1 + 20x_2 \leq 300$$

$$5x_1 + 10x_2 \leq 110$$

$$x_1, x_2 \geq 0$$

- b) Find the initial basic feasible solution by Least Cost Method.

**04**

	W1	W2	W3	W4	Supply
F1	48	60	56	58	140
F2	45	55	53	60	260
F3	50	65	60	62	360
F4	52	64	55	61	220
Demand	200	320	250	210	

**Q.4 Attempt below question.**

- a) A company is bringing out a new product in market with three strategy of production line like full, partial and minimal. The state of nature may be Good demand, fair demand and poor demand with following payoff of profit as shown in table below:

**03**

State of Nature (Demand)	Production Line		
	Full	Partial	Minimal
Good	80	70	50
Fair	50	45	40
Poor	-25	-10	0

Take optimal decision under each of the following decision rules:

- 1) Maximax
- 2) Maximin
- 3) Laplace

- b) Construct the dual to the primal problem:

**03**

$$\text{Max. } Z = 3x_1 + 5x_2$$

Subject to

$$2x_1 + 6x_2 \leq 50$$

$$3x_1 + 2x_2 \leq 35$$

$$5x_1 - 3x_2 \leq 10$$

$$-x_2 \geq -20$$

$$x_1, x_2 \geq 0$$

- c) Find the Saddle Point using the dominance rule.

**04**

		Player B		
		B1	B2	B3
Player A	A1	5	9	3
	A2	6	-12	-11
	A3	8	16	10

**Section – II****Q.5 Attempt above question.**

- a) Explain in brief about “Inventory and cost associated with Inventory” along with objective of Inventory management?
- b) A construction company consumes 4000 bags of cement per month. Price per bag of cement is Rs. 320/-. Inventory cost is Rs. 30/- and procurement cost per order is Rs. 500/-  
Find economic order quantity and number of order to be placed per month?

**06****04****Q.6 Attempt above question**

## Geosynthetics and Reinforced Soil Structures

Max. Marks: 50

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicate full marks

Marks: 10

**10**

- 1) The modern concept of reinforced earth was invented by \_\_\_\_\_.  
a) Terzaghi                                      b) Skempton  
c) Henri Vidal                                  d) Bjerrum
- 2) Why is carbon black added to geosynthetic?  
a) To increase tensile strength  
b) To reduce the effect of exposure to ultra violet rays  
c) To protect from biological degradation  
d) All of the above
- 3) What is the core of GCL made of \_\_\_\_\_.  
a) Thick non-woven geotextile        b) Bentonite clay  
c) Kaolinite clay                             d) Corrugated plastic sheet
- 4) In a PVD section which parts acts as a drainage medium \_\_\_\_\_.  
a) Geotextile                                    b) Cover Inner Core  
c) Both of the above                        d) None of the above
- 5) Which is the monomer of PVC \_\_\_\_\_.  
a) Nylon    b) Ethylene  
c) Vinyl chloride                              d) Teflon
- 6) The width of grips for performing the grab tensile strength is \_\_\_\_\_.  
a) 76 mm                                        b) 25 mm  
c) 50 mm                                        d) 200 mm
- 7) The result of the dynamic puncture test is reported in units of \_\_\_\_\_.  
a) kilo    b) Newtons Newtons  
c) mm    d) kPa
- 8) What are the hydraulic properties of geosynthetics?  
a) Gradient ratio                                b) Permittivity  
c) Transmissivity                                d) All the above

- 9)** What is abrasion resistance?
- a) It is the strip tensile strength of an abraded specimen
  - b) It is the wide width tensile strength of the abraded specimen
  - c) It is the ratio of the tensile strength of the abraded specimen to that of virgin specimen
  - d) It is the ratio of the tensile strength of the virgin specimen and the abraded specimen
- 10)** What are the disadvantages of reinforced concrete retaining walls?
- a) Construction height is limited due to practical reasons
  - b) Long construction times
  - c) Self-weight is so high that foundation should be strong
  - d) All of the above

**CIVIL ENGINEERING**

**Geosynthetics and Reinforced Soil Structures**

Day & Date: Monday, 27-02-2023  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicate full marks

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternative from the given option.**

**10**

- 1) What is the core of GCL made of \_\_\_\_\_.  
 a) Thick non-woven geotextile      b) Bentonite clay  
 c) Kaolinite clay                      d) Corrugated plastic sheet
- 2) In a PVD section which parts acts as a drainage medium \_\_\_\_\_.  
 a) Geotextile                              b) Cover Inner Core  
 c) Both of the above                      d) None of the above
- 3) Which is the monomer of PVC \_\_\_\_\_.  
 a) Nylon                                      b) Ethylene  
 c) Vinyl chloride                          d) Teflon
- 4) The width of grips for performing the grab tensile strength is \_\_\_\_\_.  
 a) 76 mm                                      b) 25 mm  
 c) 50 mm                                      d) 200 mm
- 5) The result of the dynamic puncture test is reported in units of \_\_\_\_\_.  
 a) kilo    b) Newtons Newtons  
 c) mm    d) kPa
- 6) What are the hydraulic properties of geosynthetics?  
 a) Gradient ratio                              b) Permittivity  
 c) Transmissivity                              d) All the above
- 7) What is abrasion resistance?  
 a) It is the strip tensile strength of an abraded specimen  
 b) It is the wide width tensile strength of the abraded specimen  
 c) It is the ratio of the tensile strength of the abraded specimen to that of virgin specimen  
 d) It is the ratio of the tensile strength of the virgin specimen and the abraded specimen
- 8) What are the disadvantages of reinforced concrete retaining walls?  
 a) Construction height is limited due to practical reasons  
 b) Long construction times  
 c) Self-weight is so high that foundation should be strong  
 d) All of the above

**T.Y. (B. Tech.) (Semester-II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Geosynthetics and Reinforced Soil Structures**

Day & Date: Monday, 27-02-2023

Max. Marks: 40

Time: 10:00 AM To 12:00 PM

**Instructions:** 1) Attempt any Eight questions.  
2) Figures to the right indicate full marks.

- |             |  |           |
|-------------|--|-----------|
| <b>Q.2</b>  | What is Geosynthetic? Explain advantages of geosynthetics.   | <b>05</b> |
| <b>Q.3</b>  | List out different types of Geosynthetics. Explain any four.   | <b>05</b> |
| <b>Q.4</b>  | Explain in detail Erosion Control. What are the different types of erosion forces & List different Protection Systems. | <b>05</b> |
| <b>Q.5</b>  | What is Landfill? Explain role of Geosynthetics in Landfills.  | <b>05</b> |
| <b>Q.6</b>  | What are the concepts of reinforced soil?  | <b>05</b> |
| <b>Q.7</b>  | What are the mechanical properties of geosynthetics?   | <b>05</b> |
| <b>Q.8</b>  | What is Embankment/Slope? Draw different failure modes of embankments.   | <b>05</b> |
| <b>Q.9</b>  | Explain in detail Pavement applications of Geosynthetics.  | <b>05</b> |
| <b>Q.10</b> | Write in detail functions of geosynthetics.  | <b>05</b> |
| <b>Q.11</b> | How are impact and abrasion test conducted?  | <b>05</b> |

 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options.**

**10**

- 1) Arrange the following survey in correct order which they conduct in locating the alignment of rural roads.
  - 1) Preliminary survey
  - 2) Reconnaissance
  - 3) Determination of final center line
  - 4) Final location & Detailed survey
  - a) 1, 2, 3 and 4
  - b) 2, 1, 3 and 4
  - c) 3, 2, 1 and 4
  - d) 4, 1, 2 and 3
- 2) The cross slope of the country for rolling terrain is lies between \_\_\_\_\_.
  - a) 0-10%
  - b) 10-25%
  - c) 25-60%
  - d) >60%
- 3) The standard width of single lane carriageway for both plain and rolling as well as mountainous and steep terrain shall be \_\_\_\_\_.
  - a) 3.5m
  - b) 5.5m
  - c) 3.75m
  - d) 7.0m
- 4) The Intermediate sight distance is equal to \_\_\_\_\_.
  - a) Equal to Stopping Sight Distance
  - b) Twice the Stopping Sight Distance
  - c) Thrice the Stopping Sight Distance
  - d) Equal to Overtaking Sight Distance
- 5) Maximum density requirement for construction of subgrade and earthen shoulders is \_\_\_\_\_.
  - a) 1.44gm/cc
  - b) 1.52gm/cc
  - c) 1.65gm/cc
  - d) 2.0gm/cc
- 6) Loas Angeles abrasion test of aggregate measures?
  - a) Strength Property
  - b) Hardness Property
  - c) Toughness Property
  - d) Durability
- 7) Specific Gravity of bitumen lies between \_\_\_\_\_.
  - a) 2-2.5
  - b) 1.0-1.05
  - c) 2.5-3
  - d) <0.5

- 8) The standard axle load considered for single axle in pavement design of rural road is \_\_\_\_\_.
  - a) 10.2 tonne
  - b) 15.0 tonne
  - c) 8.17 tonne
  - d) 14.2 tonne
- 9) Arrange the correct order of rural construction with flexible pavement from bottom to top: \_\_\_\_\_.
  - a) Drainage layer, Subgrade, subbase layer, Base Layer & Surface course
  - b) Surface course Subgrade, Drainage layer, subbase layer & Base Layer
  - c) Subgrade, Drainage layer, subbase layer, Base Layer & Surface course
  - d) Base Layer, Subgrade, Drainage layer, subbase layer & Surface course
- 10) The minimum camber value required for concrete surface is \_\_\_\_\_.
  - a) 4%
  - b) 3.5%
  - c) 3.0%
  - d) 2.0%

**CIVIL ENGINEERING**  
**TQM and MIS in Civil Engineering**

Day &amp; Date: Monday, 27-02-2023

Max. Marks: 50

Time: 10:00 AM To 12:00 PM

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options.**

**10**

- 1) What is the full form of TQM?
 

a) True quality machining	b) Total quality management
c) True quantitative machining	d) Total queue management
- 2) The objective of ISO-9000 family of Quality management is \_\_\_\_\_.
 

a) Customer satisfaction	b) Employee satisfaction
c) Skill enhancement	d) Environmental issues
- 3) Total Quality Management (TQM) focuses on \_\_\_\_\_.
 

a) Employee	b) Customer
c) Both (a) and (b)	d) None of the above
- 4) TQM & ISO both focuses on \_\_\_\_\_.
 

a) Customer	b) Employee
c) Supplier	d) All of the above
- 5) A fundamental attribute of TQM is \_\_\_\_\_.
 

a) Drawing control charts
b) Top management's direct involvement
c) Meeting ISO 9000 audit
d) All of above
- 6) The information of MIS comes from the \_\_\_\_\_.
 

a) Internal source
b) External source
c) Both internal and external source
d) None of the above
- 7) An information system that supports the planning and assessment needs of executive management is \_\_\_\_\_.
 

a) DSS	b) ERP
c) MIS	d) None of the above
- 8) The back bone of any organization is \_\_\_\_\_.
 

a) Information	b) Employee
c) Management	d) Capital

- 9)** Which one is not Prerequisite of an effective MIS?
- |                   |                       |
|-------------------|-----------------------|
| a) Database       | b) Support from staff |
| c) Both a) and b) | d) None of these      |
- 10)** A computer-based information system \_\_\_\_\_.
- |                           |                           |
|---------------------------|---------------------------|
| a) Require manually input | b) No need manually input |
| c) Auto input             | d) None of these          |

a) Time Value of money	b) Storage Value of Money
c) Time Machine	d) Cash Value of Machine
- 2) A Project assumed monetary gain or loss by discounting entire cash inflow or outflow by utilizing the necessary rate of return is
 

a) Net recorded cash value
b) Net discounted cash value
c) Net future value
d) Net present value
- 3) A sum of Rs 10000 is deposited in a bank as a fixed deposit for 3 years. The bank pays 9% interest annually. How much money, in Rs., will be received at the maturity if the fixed deposit is encashed?
 

a) 12950	b) 12700
c) 11800	d) none of the above
- 4) Which of the following equation is used to calculate the future value of the cash flow?
 

a) $NPV (1 - i)^n$	b) $NPV + (1 - i)^n$
c) $NPV(1 + i)^n$	d) $NPV / (1 + i)^n$
- 5) The internal rate of return is the discount rate for which the NPV is
 

a) less than 1	b) +ve
c) -ve	d) zero
- 6) Considers impact of cash flow even after payback period
 

a) Net present value
b) return on investment
c) Sensitivity analysis
d) simple payback period
- 7) The net present value (NPV) is
 

a) equal to the sum of the present values of all cash flows
b) equal to the sum of returns
c) equal to the sum of all cash flows
d) none of the above

- 8) While submitting a tender, the contractor is required to deposit some amount with the department as a guarantee of the tender known as
- a) Earnest money
  - b) Bank Guarantee
  - c) Security Deposit
  - d) Caution money
- 9) In India the flexible pavement is designed as per
- a) msa
  - b) Ksa
  - c) csa
  - d) Fsa
- 10) Make out an estimate for a work the following data are necessary- Drawing, Specification and \_\_\_\_.
- a) materials
  - b) Rates
  - c) labours
  - d) Transportation
- 11) The quantity of sand required for RCC (1:2:4) for 15 cubic metres of work is \_\_\_\_.
- a) 4.76 m<sup>3</sup>
  - b) 10.32 m<sup>3</sup>
  - c) 8.43 m<sup>3</sup>
  - d) 6.51 m<sup>3</sup>
- 12) Workout the years purchase of the property if the rate of interest is 6% per annum \_\_\_\_.
- a) 6
  - b) 16.67
  - c) 0.1667
  - d) 0.06
- 13) The value at the end of utility of property but without dismantling is known as \_\_\_\_.
- a) Scrap Value
  - b) Salvage value
  - c) Market value
  - d) Book value
- 14) Definition of "Employee" under the Minimum Wages Act, 1948 includes
- a) Skilled labour - Clerical labour
  - b) Skilled and unskilled both labour - Manual labour
  - c) Skilled and unskilled both labour - Manual and clerical both labour
  - d) Unskilled labour- Manual labour

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Engineering Economics, Estimation & Costing**

Day &amp; Date: Wednesday, 25-01-2023

Max. Marks: 56

Time: 02:00 PM To 05:00 PM

- Instructions:** 1) From Section – I Q. 2 is compulsory. Attempt any two out of Q. 3 to Q. 5.  
 2) From Section – II Q. 6 is compulsory. Attempt any two out of Q.7 to Q. 9.  
 3) Figures to the right indicates full marks

**Section – I**

- Q.2**    **A)**    Prepare a measurement sheet for the following items of construction of a compound wall around a plot of 6.50m × 12.20m. Assume the following specifications for the following items. **08**
- a)    Excavation Trench for foundation: Width=0.60m, Depth below GL=1.000m
- b)    PCC(M10) 0.10 thick below foundation: Width=0.60m,
- c)    UCR in foundation height = 0.800m
- d)    PCC(M10) 0.10 thick above foundation
- B)**    Also prepare an Abstract sheet for these items by assuming suitable market rates. **04**
- Q.3**    **A)**    What are thumb rules for determining the following quantities of materials? **04**
- a)    No.of cement bags required for construction of building
- b)    Steel reinforcement required for RCC in cement concrete
- B)**    Detailed specifications for buildings. **04**
- Q.4**    Carry out Rate analysis of following items of work **08**
- a)    Plane Cement Concrete (M10) in Foundation
- b)    UCR in Foundation
- Q.5**    Compare following methods of calculating depreciation **08**
- a)    Straight line method, declining balance method.
- b)    Sinking fund method, quantity survey method

**Section - II**

- Q.6**    **A)**    Prepare a tender notice for the work of construction of your house of G+1 storied RCC structure of 100 Sqm built up area. Make suitable assumptions for required data. **08**
- B)**    Compare Item Rate contract and Percentage rate contract. **04**
- Q.7**    Explain following Acts **08**
- a)    Minimum Wages Act
- b)    Workers Compensation Act

4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Crashing is \_\_\_\_\_.
  - a) Abandoning the project
  - b) Completing the project with all possible haste
  - c) Reduction in duration for few of the activities
  - d) Reducing cost of the project with all possible modifications
- 2) CPM method of network analysis is \_\_\_\_\_.
  - i) ideally suited for linearly extending works
  - ii) Meant essentially for R and D activities
  - iii) Activity Oriented
  - iv) Used for planning, scheduling and controlling purposes
  - a) i and ii
  - b) ii and iii
  - c) iii and iv
  - d) i and iv
- 3) Which one of the following is captured in the Work Breakdown Structure (WBS)?
  - a) The life cycle phases
  - b) The logical order of tasks
  - c) The scope of the project
  - d) Project costs
- 4) The critical path \_\_\_\_\_.
  - a) Is a path that operates from the starting node to the end node
  - b) Is a mixture of all paths
  - c) Is the longest path
  - d) Is the shortest path
- 5) Free float for any activity is defined as the difference between \_\_\_\_\_.
  - a) its earliest finish time and earliest start time for its successor activity
  - b) its latest start time and earliest start time
  - c) its latest finish time and earliest start time for its successor activity
  - d) its earliest finish time and latest start time for its successor activity
- 6) The time with which direct cost does not reduce with the increase in time is known as \_\_\_\_\_.
  - a) crash time
  - b) normal time
  - c) optimistic time
  - d) standard time

- 7) Independent float is the amount of time by which:
- a) Start of the activity can be delayed without affecting EST of subsequent activity
  - b) reduces the float of subsequent activities
  - c) completion of an activity can be delayed beyond EFT without affecting EST
  - d) completion of an activity can be delayed beyond earliest possible finishing time
- 8) According to Heinrich \_\_\_\_\_ % are unsafe conditions and \_\_\_\_\_ % are unsafe acts which are preventable.
- a) 10, 88 respectively
  - b) 2, 98 respectively
  - c) 98, 2 respectively
  - d) 88, 10 respectively
- 9) The very first thing you should do if you are the first to witness or discover an accident on the job site is to \_\_\_\_\_.
- a) Go find at least one co-worker to help you so you can work as a team
  - b) Go to the scene and help the person(s) injured
  - c) Find and fill out the necessary forms to document the incident
  - d) Activate the emergency response system
- 10) The highway accidents occur mostly at \_\_\_\_\_.
- a) Both day and night
  - b) Early morning hours
  - c) Night time
  - d) Day time
- 11) Which of these causes the most construction site fatalities?
- a) Electrocution
  - b) Trench collapses
  - c) Falls
  - d) Contact with chemicals
- 12) Which of the following earth moving machines has the shortest cycle time?
- a) Dragline
  - b) Hoe
  - c) Clamshell
  - d) Power Shovel
- 13) A \_\_\_\_\_ is very useful equipment and it can be used for construction work like to clear the site of work, to make the land level, etc.
- a) Scraper
  - b) Grader
  - c) Excavator
  - d) Bulldozer
- 14) In the production of prefabricated structures how does the material used in construction affect the element?
- a) material quality and economic design
  - b) smaller members
  - c) disuniting of members
  - d) Joints

Set **P**

**Fourth. Y. (B.Tech.) (Sem- I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Construction Engineering, Management & Construction Practices**

Day &amp; Date: Tuesday, 31-01-2023

Max. Marks: 56

Time: 02:00 PM To 05:00 PM

**Instructions:** 1) Figures to the right indicates full marks.

2) Q. No. 2 is compulsory. Attempt any two questions from Q. No.3 to Q. No. 5.

3) Q. No. 6 is compulsory. Attempt any two questions from Q. No.7 to Q. No. 9.

**Section – I**

**Q.2** Find Project details in the following table. **12**

Activity	Duration (Days)	Precedence
1-2	4	-
1-3	5	-
2-3	3	1-2
3-4	7	1-3, 2-3

- a) Draw the Bar Chart.
- b) Draw the CPM Network.
- c) Show the Critical Path and Duration of the Project.

**Q.3** Answer the following questions. **08**

- a) Explain stepwise procedure of network compression using suitable example.
- b) What are the three time estimates in PERT? Explain how to calculate expected time using these three time estimates.

**Q.4** Compare. **08**

- a) CPM with PERT
- b) Resource leveling with Resource smoothing

**Q.5** Answer following questions. **08**

- a) What is BIM? Which software is available as BIM? Explain the output of BIM.
- b) Explain reports possible using MS Project software.

**Section – II**

**Q.6** Write detailed Notes on. **12**

- a) Power Shovel
- b) Bulldozer
- c) Scraper

**Q.7** Explain. **08**

- a) Safety Measures in Construction
- b) Safety- against accidents

**Q.8 Compare.**

- a) Tunnel formwork with Mivan formwork
- b) Tower Crane with Mobile Crane

**Q.9 Explain.**

- a) Explain use of Dredging Equipment.
- b) Stepwise procedure for construction of Diaphragm wall.

-------

**Fourth. Y. (B.Tech.) (Sem- I) (New) (CBCS) Examination: Oct/Nov-2022  
CIVIL ENGINEERING**

**Construction Engineering, Management & Construction Practices**

Day & Date: Tuesday, 31-01-2023  
Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
3) Figures to the right indicates full marks.  
4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) According to Heinrich \_\_\_\_\_ % are unsafe conditions and \_\_\_\_\_ % are unsafe acts which are preventable.
 

a) 10, 88 respectively	b) 2, 98 respectively
c) 98, 2 respectively	d) 88, 10 respectively
- 2) The very first thing you should do if you are the first to witness or discover an accident on the job site is to \_\_\_\_\_.
 

a) Go find at least one co-worker to help you so you can work as a team
b) Go to the scene and help the person(s) injured
c) Find and fill out the necessary forms to document the incident
d) Activate the emergency response system
- 3) The highway accidents occur mostly at \_\_\_\_\_.
 

a) Both day and night	b) Early morning hours
c) Night time	d) Day time
- 4) Which of these causes the most construction site fatalities?
 

a) Electrocution	b) Trench collapses
c) Falls	d) Contact with chemicals
- 5) Which of the following earth moving machines has the shortest cycle time?
 

a) Dragline	b) Hoe
c) Clamshell	d) Power Shovel
- 6) A \_\_\_\_\_ is very useful equipment and it can be used for construction work like to clear the site of work, to make the land level, etc.
 

a) Scraper	b) Grader
c) Excavator	d) Bulldozer
- 7) In the production of prefabricated structures how does the material used in construction affect the element?
 

a) material quality and economic design
b) smaller members
c) disuniting of members
d) Joints

- 8) Crashing is \_\_\_\_\_.  
a) Abandoning the project  
b) Completing the project with all possible haste  
c) Reduction in duration for few of the activities  
d) Reducing cost of the project with all possible modifications
- 9) CPM method of network analysis is \_\_\_\_\_.  
i) ideally suited for linearly extending works  
ii) Meant essentially for R and D activities  
iii) Activity Oriented  
iv) Used for planning, scheduling and controlling purposes  
a) i and ii  
b) ii and iii  
c) iii and iv  
d) i and iv
- 10) Which one of the following is captured in the Work Breakdown Structure (WBS)?  
a) The life cycle phases  
b) The logical order of tasks  
c) The scope of the project  
d) Project costs
- 11) The critical path \_\_\_\_\_.  
a) Is a path that operates from the starting node to the end node  
b) Is a mixture of all paths  
c) Is the longest path  
d) Is the shortest path
- 12) Free float for any activity is defined as the difference between \_\_\_\_\_.  
a) its earliest finish time and earliest start time for its successor activity  
b) its latest start time and earliest start time  
c) its latest finish time and earliest start time for its successor activity  
d) its earliest finish time and latest start time for its successor activity
- 13) The time with which direct cost does not reduce with the increase in time is known as \_\_\_\_\_.  
a) crash time  
b) normal time  
c) optimistic time  
d) standard time
- 14) Independent float is the amount of time by which:  
a) Start of the activity can be delayed without affecting EST of subsequent activity  
b) reduces the float of subsequent activities  
c) completion of an activity can be delayed beyond EFT without affecting EST  
d) completion of an activity can be delayed beyond earliest possible finishing time

Day & Date: Friday, 17-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book).  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Write the correct option for each question.  
 4) While solving MCQ IS 456-2000, IS 1343 are not allowed.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

- Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**
- 1) In design of a footing, the depth considering bending moment is checked at \_\_\_\_\_. **01**
    - a) The free end of footing
    - b) Face of the column
    - c) A distance  $d/2$  (half of the effective depth) from the face of the column
    - d) None of these
  - 2) For the design of vertical wall of height H for a circular tank the cantilever action considered for a height 'h' is \_\_\_\_\_ from the bottom of tank. **01**
    - a)  $H/3$
    - b) 1 m
    - c) Both a and b
    - d)  $H/3$  or 1 m whichever is more
  - 3) The horizontal portion of a step in a stairs case, is known as \_\_\_\_\_. **01**
    - a) Rise
    - b) Tread
    - c) Winder
    - d) Flight
  - 4) In a counter fort retaining wall, the main reinforcement in the stem at mid span is provided on \_\_\_\_\_. **01**
    - a) Front face only
    - b) Inner face only
    - c) Both front face and inner face
    - d) None of the above
  - 5) The minimum width of stem slab at bottom is \_\_\_\_\_. **01**
    - a)  $H/15$
    - b)  $H/12$
    - c)  $H/18$
    - d)  $H/20$
  - 6) Line along which the total resultant prestressing force acts is called as \_\_\_\_\_. **01**
    - a) Kern point
    - b) Cable profile
    - c) Cable line
    - d) Cable
  - 7) A pre-stressed concrete member is preferred because \_\_\_\_\_. **01**
    - a) Its dimensions are not decided from the diagonal tensile stress
    - b) Large size of long beams carrying large shear force need not be adopted
    - c) Removal of cracks in the members due to shrinkage
    - d) All the above

- 8) The algebraic sum of bending moments due to prestress and external loads is called as \_\_\_\_\_. **01**  
a) Primary prestressing moment      b) Secondary prestressing moment  
c) Resulting moment                      d) All of above
- 9) A square isolated footing for a square column of size 300mm x 300mm is made to transfer the characteristic load,  $P = 800\text{kN}$  to the ground. Consider weight of footing as 10% of the characteristic axial load. The safe bearing capacity of soil is  $155\text{ kN/m}^2$ . The dimension of the square footing should not be less than \_\_\_\_\_. **02**  
a) 956mm                                      b) 1434mm  
c) 1912mm                                      d) 2390mm
- 10) A rectangular pretensioned prestressed concrete beam has straight concentric force with a prestressing force of 1000 kN. The beam is 300 mm X 500 mm in section. M20 grade concrete is used. The loss of prestress due to elastic shortening is \_\_\_\_\_. **02**  
a) 22.37 MPa                                      b) 32.47 MPa  
c) 48.33 MPa                                      d) 52.33 MPa
- 11) The floor to floor height of a building is 3.0m. The tread depth of a step is 250mm and the rise height of a step is 150mm. The total number of steps to be provided for accessing next floor is equal to \_\_\_\_\_. **02**  
a) 18    b) 19  
c) 20    d) 21

**Design of Concrete Structures- II**

Day & Date: Friday, 17-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Draw neat sketch's where required and Assume suitable data if required and slate it clearly.  
 2) Figures to the right indicates full marks  
 3) Q. No. 2 and Q. No. 6 are compulsory.  
 4) Solve any two from Q. No. 3 to Q. No. 5 and Q. No. 7 to Q. No. 9 from each section.  
 5) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.

**Section – I**

- Q.2** The dog-legged staircase for building in which the vertical distance between floors is 3.2 m. The live load is taken as 4 kN/m<sup>2</sup> including floor finish. Assume 150 mm riser and 250 mm tread and width of stair is 1.20 m. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. Stair is supported by beams of width 230 mm at the end of landing slab. **08**
- Q.3** Design the stem slab of a cantilever retaining wall to retain an earth embankment with a horizontal top 3.6 m above ground level. SBC of soil is 220 kN/m<sup>2</sup>, angle of friction  $\phi = 30^\circ$  and density of earth 17 kN/m<sup>3</sup>. coefficient of friction between concrete and ground 0.5. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**
- Q.4** A square column 420 mm X 420 mm carries an axial load of 1400 kN. Design square footing to support the column. The SBC of soil is 200 kN/m<sup>2</sup>. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. **10**
- Q.5** Design a water tank having capacity 52200 liters, resting on firm ground is free at top, bottom as well as vertical edges are fixed, the depth of water is 3.2 m, Assume free board of 300 mm and solve by IS code method. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**

**Section – II**

- Q.6** A prestressed concrete beam 400 mm x 600 mm in section has a span 6 m and is subjected to a uniformly distributed load of 6 kN/m and a concentrated load of 150 kN at mid span. The prestressing tendons are located at 150 mm from bottom of the section. If prestressing force is 1200 kN, calculate the extreme stresses in concrete for the mid span section. Solve by following methods: stress concept method, strain concept method, load balancing concept. **08**
- Q.7** A rectangular prestressed concrete beam has span of 10 m and has to carry a live load of 16 kN/m excluding the self weight of beam. Given  $f_c = 15 \text{ N/mm}^2$  and  $f_s = 1000 \text{ N/mm}^2$ . Design the beam using 6 mm tendons. Weight of concrete is 24 kN/m<sup>3</sup> **10**

- Q.8** A prestressed concrete beam 250 wide and 650 mm deep is subjected to an effective prestressing force of 1345 kN along the longitudinal centroidal axis. The cable may be assumed to be symmetrically placed over mild steel anchor plate in an area 150 mm X 350 mm. Design the end block by IS code method. **10**
- Q.9** A pretensioned beam 250 mm wide and 360 mm deep is prestressed by 10 wires of 8 mm diameter initially stressed to 1050 N/mm<sup>2</sup>. The centroid of the steel wires is located at 100 mm from the soffit. Determine the maximum stress in the concrete immediately after transfer allowing elastic shortening of concrete only at the level of the centroid of steel. If, however the concrete is subject to additional shortening due to creep and shrinkage and the steel is subject to a relaxation of stress of 5 percent, find the final percentage loss of stress in the steel wires. Take  $E_s = 210 \text{ N/mm}^2$ ,  $E_c = 36.85 \text{ N/mm}^2$ , creep coefficient  $\phi = 1.60$ , total residual shrinkage strain =  $3 \times 10^{-4}$ . **10**

**Seat  
No.**

## Design of Concrete Structures - II

Max. Marks: 70

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book).
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Write the correct option for each question.
- 4) While solving MCQ IS 456-2000, IS 1343 are not allowed.

### MCQ/Objective Type Questions

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The minimum width of stem slab at bottom is \_\_\_\_\_. **01**

a)  $H/15$                                   b)  $H/12$   
c)  $H/18$                                   d)  $H/20$
- 2) Line along which the total resultant prestressing force acts is called as \_\_\_\_\_. **01**

a) Kern point                              b) Cable profile  
c) Cable line                                d) Cable
- 3) A pre-stressed concrete member is preferred because \_\_\_\_\_. **01**

a) Its dimensions are not decided from the diagonal tensile stress  
b) Large size of long beams carrying large shear force need not be adopted  
c) Removal of cracks in the members due to shrinkage  
d) All the above
- 4) The algebraic sum of bending moments due to prestress and external loads is called as \_\_\_\_\_. **01**

a) Primary prestressing moment      b) Secondary prestressing moment  
c) Resulting moment                    d) All of above
- 5) In design of a footing, the depth considering bending moment is checked at \_\_\_\_\_. **01**

a) The free end of footing  
b) Face of the column  
c) A distance  $d/2$  (half of the effective depth) from the face of the column  
d) None of these
- 6) For the design of vertical wall of height H for a circular tank the cantilever action considered for a height 'h' is \_\_\_\_\_ from the bottom of tank. **01**

a)  $H/3$                                         b) 1 m  
c) Both a and b                            d)  $H/3$  or 1 m whichever is more
- 7) The horizontal portion of a step in a stairs case, is known as \_\_\_\_\_. **01**

a) Rise                                        b) Tread  
c) Winder                                    d) Flight

- 8) In a counter fort retaining wall, the main reinforcement in the stem at mid span is provided on \_\_\_\_\_. **01**  
a) Front face only                      b) Inner face only  
c) Both front face and inner face    d) None of the above
- 9) A rectangular pretensioned prestressed concrete beam has straight concentric force with a prestressing force of 1000 kN. The beam is 300 mm X 500 mm in section. M20 grade concrete is used. The loss of prestress due to elastic shortening is \_\_\_\_\_. **02**  
a) 22.37 MPa                              b) 32.47 MPa  
c) 48.33 MPa                              d) 52.33 MPa
- 10) The floor to floor height of a building is 3.0m. The tread depth of a step is 250mm and the rise height of a step is 150mm. The total number of steps to be provided for accessing next floor is equal to \_\_\_\_\_. **02**  
a) 18    b) 19  
c) 20    d) 21
- 11) A square isolated footing for a square column of size 300mm x 300mm is made to transfer the characteristic load,  $P = 800\text{kN}$  to the ground. Consider weight of footing as 10% of the characteristic axial load. The safe bearing capacity of soil is  $155\text{ kN/m}^2$ . The dimension of the square footing should not be less than \_\_\_\_\_. **02**  
a) 956mm                                    b) 1434mm  
c) 1912mm                                   d) 2390mm

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) A pre-stressed concrete member is preferred because \_\_\_\_\_. **01**
  - a) Its dimensions are not decided from the diagonal tensile stress
  - b) Large size of long beams carrying large shear force need not be adopted
  - c) Removal of cracks in the members due to shrinkage
  - d) All the above
- 2) The algebraic sum of bending moments due to prestress and external loads is called as \_\_\_\_\_. **01**
  - a) Primary prestressing moment
  - b) Secondary prestressing moment
  - c) Resulting moment
  - d) All of above
- 3) In design of a footing, the depth considering bending moment is checked at \_\_\_\_\_. **01**
  - a) The free end of footing
  - b) Face of the column
  - c) A distance  $d/2$  (half of the effective depth) from the face of the column
  - d) None of these
- 4) For the design of vertical wall of height H for a circular tank the cantilever action considered for a height 'h' is \_\_\_\_\_ from the bottom of tank. **01**
  - a)  $H/3$
  - b) 1 m
  - c) Both a and b
  - d)  $H/3$  or 1 m whichever is more
- 5) The horizontal portion of a step in a stairs case, is known as \_\_\_\_\_. **01**
  - a) Rise
  - b) Tread
  - c) Winder
  - d) Flight
- 6) In a counter fort retaining wall, the main reinforcement in the stem at mid span is provided on \_\_\_\_\_. **01**
  - a) Front face only
  - b) Inner face only
  - c) Both front face and inner face
  - d) None of the above
- 7) The minimum width of stem slab at bottom is \_\_\_\_\_. **01**
  - a)  $H/15$
  - b)  $H/12$
  - c)  $H/18$
  - d)  $H/20$

- 8)** Line along which the total resultant prestressing force acts is called as \_\_\_\_\_. **01**

a) Kern point                                      b) Cable profile  
c) Cable line                                        d) Cable

**9)** A square isolated footing for a square column of size 300mm x 300mm is made to transfer the characteristic load,  $P = 800\text{kN}$  to the ground. Consider weight of footing as 10% of the characteristic axial load. The safe bearing capacity of soil is  $155 \text{ kN/m}^2$ . The dimension of the square footing should not be less than \_\_\_\_\_. **02**

a) 956mm    b) 1434mm  
c) 1912mm                                        d) 2390mm

**10)** A rectangular pretensioned prestressed concrete beam has straight concentric force with a prestressing force of 1000 kN. The beam is 300 mm X 500 mm in section. M20 grade concrete is used. The loss of prestress due to elastic shortening is \_\_\_\_\_. **02**

a) 22.37 MPa                                      b) 32.47 MPa  
c) 48.33 MPa                                      d) 52.33 MPa

**11)** The floor to floor height of a building is 3.0m. The tread depth of a step is 250mm and the rise height of a step is 150mm. The total number of steps to be provided for accessing next floor is equal to \_\_\_\_\_. **02**

a) 18    b) 19  
c) 20    d) 21

Day & Date: Friday, 17-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Draw neat sketch's where required and Assume suitable data if required and slate it clearly.  
 2) Figures to the right indicates full marks  
 3) Q. No. 2 and Q. No. 6 are compulsory.  
 4) Solve any two from Q. No. 3 to Q. No. 5 and Q. No. 7 to Q. No. 9 from each section.  
 5) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.

**Section – I**

- Q.2** The dog-legged staircase for building in which the vertical distance between floors is 3.2 m. The live load is taken as 4 kN/m<sup>2</sup> including floor finish. Assume 150 mm riser and 250 mm tread and width of stair is 1.20 m. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. Stair is supported by beams of width 230 mm at the end of landing slab. **08**
- Q.3** Design the stem slab of a cantilever retaining wall to retain an earth embankment with a horizontal top 3.6 m above ground level. SBC of soil is 220 kN/m<sup>2</sup>, angle of friction  $\phi = 30^\circ$  and density of earth 17 kN/m<sup>3</sup>. coefficient of friction between concrete and ground 0.5. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**
- Q.4** A square column 420 mm X 420 mm carries an axial load of 1400 kN. Design square footing to support the column. The SBC of soil is 200 kN/m<sup>2</sup>. Use M<sub>20</sub> concrete and Fe<sub>415</sub> steel. **10**
- Q.5** Design a water tank having capacity 52200 liters, resting on firm ground is free at top, bottom as well as vertical edges are fixed, the depth of water is 3.2 m, Assume free board of 300 mm and solve by IS code method. Use M<sub>25</sub> concrete and Fe<sub>500</sub> steel. **10**

**Section – II**

- Q.6** A prestressed concrete beam 400 mm x 600 mm in section has a span 6 m and is subjected to a uniformly distributed load of 6 kN/m and a concentrated load of 150 kN at mid span. The prestressing tendons are located at 150 mm from bottom of the section. If prestressing force is 1200 kN, calculate the extreme stresses in concrete for the mid span section. Solve by following methods: stress concept method, strain concept method, load balancing concept. **08**
- Q.7** A rectangular prestressed concrete beam has span of 10 m and has to carry a live load of 16 kN/m excluding the self weight of beam. Given  $f_c = 15 \text{ N/mm}^2$  and  $f_s = 1000 \text{ N/mm}^2$ . Design the beam using 6 mm tendons. Weight of concrete is 24 kN/m<sup>3</sup> **10**

- Q.8** A prestressed concrete beam 250 wide and 650 mm deep is subjected to an effective prestressing force of 1345 kN along the longitudinal centroidal axis. The cable may be assumed to be symmetrically placed over mild steel anchor plate in an area 150 mm X 350 mm. Design the end block by IS code method. **10**
- Q.9** A pretensioned beam 250 mm wide and 360 mm deep is prestressed by 10 wires of 8 mm diameter initially stressed to 1050 N/mm<sup>2</sup>. The centroid of the steel wires is located at 100 mm from the soffit. Determine the maximum stress in the concrete immediately after transfer allowing elastic shortening of concrete only at the level of the centroid of steel. If, however the concrete is subject to additional shortening due to creep and shrinkage and the steel is subject to a relaxation of stress of 5 percent, find the final percentage loss of stress in the steel wires. Take  $E_s = 210 \text{ N/mm}^2$ ,  $E_c = 36.85 \text{ N/mm}^2$ , creep coefficient  $\phi = 1.60$ , total residual shrinkage strain =  $3 \times 10^{-4}$ . **10**

Day & Date: Tuesday, 07-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book).  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Each MCQ carries two marks each.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The transmissibility is zero at the frequency ratio ( $\omega / \omega_n$ ) equal to
  - a) 0.5
  - b) 1.0
  - c)  $\sqrt{2}$
  - d)  $2^2$
- 2) The response is greatly affected by damping in the region
  - a)  $\omega / \omega_n < 0.5$
  - b)  $\omega / \omega_n > 1.5$
  - c)  $\omega / \omega_n = 0$
  - d)  $\omega / \omega_n = 1$
- 3) The increase in damping in a dynamic system, the transmissibility when the frequency ratio is equal to  $\sqrt{2}$ .
  - a) Decreases
  - b) Increases
  - c) Has no effect
  - d) None of above
- 4) A building structure suffers torsion under seismic action when
  - a) The centre of gravity does not coincide with the centre of rigidity
  - b) The centre of gravity does not coincide with the centre of stiffness
  - c) The centre of rigidity does not coincide with the centre of stiffness
  - d) The centre of gravity coincides with the centre of stiffness
- 5) \_\_\_\_\_ is the building structure which has least lateral force resistance.
  - a) Ordinary moment-resisting RCC frame
  - b) Special moment-resisting RCC frame
  - c) Shear wall structure
  - d) Masonry structure
- 6) The slenderness ratio of masonry is the ratio of
  - a) Length of wall to height of wall
  - b) Length of wall to thickness
  - c) Height of wall to area of cross-section
  - d) None of above
- 7) Special confining reinforcement is provided in the form of
  - a) Longitudinal reinforcement
  - b) Temperature reinforcement
  - c) Lateral reinforcement
  - d) Shrinkage reinforcement

Day & Date: Tuesday, 07-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Q. 1 & Q. 5 are compulsory.  
 2) Attempt any two questions from the remaining of each section.  
 3) Use of only IS 1893:2016 is allowed.  
 4) Assume suitable data if necessary and mention it clearly.

**Section – I**

- Q.1** Write detailed note on internal structure of Earth. **10**
- Q.2** From first principle derive the governing differential equation for forced vibration of a Undamped SDOF system. Obtain the general solution of this differential equation. **09**
- Q.3** What do you understand by force transmissibility? Derive an expression for force transmissibility to the foundation of a SDOF system subjected to harmonic force. **09**
- Q.4** a) Explain the step by step procedure of construction of response spectrum. **05**  
 b) What is combined spectrum? What are its characteristics? **04**

**Section – II**

- Q.5** It is proposed to construct a R.C.C. three storied residential building having plan dimensions as shown in fig.1 in zone III with following data. Determine the lateral forces and base shear. The all column sizes are 300 × 550 mm & beams sizes are 300 × 450 mm. The slab thickness is 120mm & thk. of walls is 230mm. The ht. of floor is 3.0 m & Live load is 3.5 kN/m<sup>2</sup>. IS 13920 provisions are incorporated in the structure. The strata is Medium. **10**

- Q.6** What do you understand by a response reduction factor? Why it is incorporated in the expression for evaluating seismic forces? **09**
- Q.7** Explain how rational ductility of singly reinforced and doubly reinforced RCC section is evaluated? **09**
- Q.8** Explain the strengthening arrangements for masonry construction. **09**

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Select the correct statement,
  - a) Traffic volume should always be more than traffic capacity
  - b) Traffic capacity should be always be more than traffic volume
  - c) Spot seed is the average speed of a vehicle at a specified section
  - d) 85<sup>th</sup> percentile speed is more than 98<sup>th</sup> percentile speed
- 2) The diagram which shows the approximate path of vehicles and pedestrians involved in accident is known as,
  - a) Spot maps
  - b) Pie charts
  - c) Condition diagram
  - d) Collision diagram
- 3) If the space headway is 7m, then the jam density in vehicle/km is \_\_\_\_\_.
  - a) 142
  - b) 144
  - c) 145
  - d) 146
- 4) If the jam density is 145vehicles/km, and velocity is 60kph then the capacity flow is \_\_\_\_\_.
  - a) 2175
  - b) 2200
  - c) 2375
  - d) 2500
- 5) Level of Service A and F represents \_\_\_\_\_.
  - a) Forced Flow and Free Flow respectively
  - b) Free Flow and Forced Flow respectively
  - c) Both are free flow
  - d) Both are Forced flow
- 6) With increase in speed of the traffic stream, the maximum capacity of the lane \_\_\_\_\_.
  - a) Increase
  - b) Decreases
  - c) first increases and then decreases after reaching a maximum value at optimum speed
  - d) first decreases and then increases after reaching a maximum value at optimum speed

 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

**Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Answer any two questions (each carry 7 marks)**

**14**

- a) What are the objects and scope of traffic engineering? Explain briefly.  
 b) From an in-out survey conducted for a parking area consisting of 40 bays, the initial count was found to be 25. **Table-1** gives the result of the survey. The number of vehicles coming in and out of the parking lot for a time interval of 5 minutes is as shown in the **Table-1** below. Find the accumulation, total parking load, average occupancy and efficiency of the parking lot.

**Table-1-In-Out Survey data**

In-out survey data			In-out survey data		
Time	In	Out	Time	In	Out
5	3	2	35	2	7
10	2	4	40	4	2
15	4	2	45	6	4
20	5	4	50	4	1
25	7	3	55	3	3
30	8	2	60	2	5

- c) Explain Spot speed, running speed, Space-mean speed, time mean speed and average speed.  
 d) Write a short note on any two.  
 1) Level of Service  
 2) Passenger Car Unit  
 3) Collision and Condition Diagram  
 4) O-D survey

**Q.3 Answer any TWO questions (each carry 7 marks)**

**14**

- a) Explain the relationship between speed, travel time, volume, density and capacity?  
 b) Discuss the various types of on street parking with their advantages and disadvantages.  
 c) Define the term capacity. Explain terms basic capacity, possible capacity and practical capacity.  
 d) A vehicle skids through a distance equal to 40m before colliding with another parked vehicle, the weight of which is 60% of the former. After collision both the vehicles skid through 12m before stopping. Compute the initial speed of moving vehicle, assuming average friction coefficient,  $f=0.6$ .

## Section – II

**Q.4 Answer any two questions (each carry 7 marks)****14**

- a) Explain general principles governing application of speed limits in Rural and Urban area.
- b) With neat sketches show some of the important types of warning signs and mention the functions of each.
- c) Write a short note on ITS applications in urban transport system.
- d) A fixed type 2 - phase signal is to be provided at an intersection having a North - South and an East - West Road, where only straight-ahead traffic is permitted. The design hour flows from the various arms and the saturation flows for these arms are given in the following table.

Design hour	North	South	East	West
flow(q) in PCU s/hour	800	400	750	600
Saturation flow (s) in PCU s /hour	2400	2000	3000	3000

Calculate the optimum cycle time and green times for the minimum overall delay. Use Webster's method. Assume time lost per phase due to starting delays as 2 seconds and value of amber period is 2 seconds. Sketch the timing diagram for each phase.

**Q.5 Answer any TWO questions (each carry 7 marks)****14**

- a) What are the objects of highway lighting? Explain various design factors to be considered in road lighting.
- b) Marks the different signs for below locations as per IRC-67-2001.
- 1) Three arm priority junction
  - 2) Four arm priority junction
  - 3) Flyover approach in rural section
  - 4) Curve delineation in divided highway
- c) Explain with neat sketch.
- 1) Roadway Delineators
  - 2) Hazard Markers
  - 3) Safety Barriers

### MCQ/Objective Type Questions

Marks: 14

## 14

- Page 5 of 16

- 8) Select the correct statement,  
a) Traffic volume should always be more than traffic capacity  
b) Traffic capacity should be always be more than traffic volume  
c) Spot seed is the average speed of a vehicle at a specified section  
d) 85<sup>th</sup> percentile speed is more than 98<sup>th</sup> percentile speed
- 9) The diagram which shows the approximate path of vehicles and pedestrians involved in accident is known as,  
a) Spot maps  
b) Pie charts  
c) Condition diagram  
d) Collision diagram
- 10) If the space headway is 7m, then the jam density in vehicle/km is \_\_\_\_\_.  
a) 142  
b) 144  
c) 145  
d) 146
- 11) If the jam density is 145vehicles/km, and velocity is 60kph then the capacity flow is \_\_\_\_\_.  
a) 2175  
b) 2200  
c) 2375  
d) 2500
- 12) Level of Service A and F represents \_\_\_\_\_.  
a) Forced Flow and Free Flow respectively  
b) Free Flow and Forced Flow respectively  
c) Both are free flow  
d) Both are Forced flow
- 13) With increase in speed of the traffic stream, the maximum capacity of the lane \_\_\_\_\_.  
a) Increase  
b) Decreases  
c) first increases and then decreases after reaching a maximum value at optimum speed  
d) first decreases and then increases after reaching a maximum value at optimum speed
- 14) In signal design as per Indian Roads Congress specifications, if the sum of the ratios of normal flows to saturation flow of two directional traffic flows is 0.50 and the total lost time per cycle is 10 seconds, the optimum cycle length in seconds is \_\_\_\_\_.  
a) 100  
b) 80  
c) 60  
d) 40

**Table-1-In-Out Survey data**

In-out survey data			In-out survey data		
Time	In	Out	Time	In	Out
5	3	2	35	2	7
10	2	4	40	4	2
15	4	2	45	6	4
20	5	4	50	4	1
25	7	3	55	3	3
30	8	2	60	2	5

- c) Explain Spot speed, running speed, Space-mean speed, time mean speed and average speed.  
 d) Write a short note on any two.  
 1) Level of Service  
 2) Passenger Car Unit  
 3) Collision and Condition Diagram  
 4) O-D survey

**Q.3 Answer any TWO questions (each carry 7 marks)**

**14**

- a) Explain the relationship between speed, travel time, volume, density and capacity?  
 b) Discuss the various types of on street parking with their advantages and disadvantages.  
 c) Define the term capacity. Explain terms basic capacity, possible capacity and practical capacity.  
 d) A vehicle skids through a distance equal to 40m before colliding with another parked vehicle, the weight of which is 60% of the former. After collision both the vehicles skid through 12m before stopping. Compute the initial speed of moving vehicle, assuming average friction coefficient,  $f=0.6$ .

## Section – II

**Q.4 Answer any two questions (each carry 7 marks)****14**

- a) Explain general principles governing application of speed limits in Rural and Urban area.
- b) With neat sketches show some of the important types of warning signs and mention the functions of each.
- c) Write a short note on ITS applications in urban transport system.
- d) A fixed type 2 - phase signal is to be provided at an intersection having a North - South and an East - West Road, where only straight-ahead traffic is permitted. The design hour flows from the various arms and the saturation flows for these arms are given in the following table.

Design hour flow(q) in PCU s/hour	North	South	East	West
	800	400	750	600
Saturation flow (s) in PCU s /hour	2400	2000	3000	3000

Calculate the optimum cycle time and green times for the minimum overall delay. Use Webster's method. Assume time lost per phase due to starting delays as 2 seconds and value of amber period is 2 seconds. Sketch the timing diagram for each phase.

**Q.5 Answer any TWO questions (each carry 7 marks)****14**

- a) What are the objects of highway lighting? Explain various design factors to be considered in road lighting.
- b) Marks the different signs for below locations as per IRC-67-2001.
  - 1) Three arm priority junction
  - 2) Four arm priority junction
  - 3) Flyover approach in rural section
  - 4) Curve delineation in divided highway
- c) Explain with neat sketch.
  - 1) Roadway Delineators
  - 2) Hazard Markers
  - 3) Safety Barriers

**Fourth. Year (B. Tech) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**Civil ENGINEERING**

**Traffic Engineering and Management**

Day & Date: Thursday, 09-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options. 14**

- 1) Speed regulations on roads is decided on the basis of \_\_\_\_\_.  
 a) 60<sup>th</sup> percentile cumulative frequency  
 b) 85<sup>th</sup> percentile cumulative frequency  
 c) 55<sup>th</sup> percentile cumulative frequency  
 d) 98<sup>th</sup> percentile cumulative frequency
- 2) On a road the free speed was 65 kmph and the space headway at jam density was 6.25m. What is the maximum flow which could be expected on this road?  
 a) 2600 vph  
 b) 1625 vph  
 c) 1300 vph  
 d) 406 vph
- 3) If present ADT is 5000 vehicles and annual increase is 10%, the average future flow after 5 years will be \_\_\_\_\_.  
 a) 6050 vehicles  
 b) 7050 vehicles  
 c) 8050 vehicles  
 d) 9050 vehicles
- 4) A traffic stream in a particular direction of a two-lane road is moving with a constant speed of 50 kmph, with an average headway of 2.52 seconds. The longitudinal distance between two consecutive vehicles is \_\_\_\_\_.  
 a) 30m  
 b) 35m  
 c) 38m  
 d) 42m
- 5) Select the correct statement,  
 a) Traffic volume should always be more than traffic capacity  
 b) Traffic capacity should be always be more than traffic volume  
 c) Spot seed is the average speed of a vehicle at a specified section  
 d) 85<sup>th</sup> percentile speed is more than 98<sup>th</sup> percentile speed
- 6) The diagram which shows the approximate path of vehicles and pedestrians involved in accident is known as,  
 a) Spot maps  
 b) Pie charts  
 c) Condition diagram  
 d) Collision diagram
- 7) If the space headway is 7m, then the jam density in vehicle/km is \_\_\_\_\_.  
 a) 142  
 b) 144  
 c) 145  
 d) 146

**Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Answer any two questions (each carry 7 marks)**

**14**

- a) What are the objects and scope of traffic engineering? Explain briefly.  
 b) From an in-out survey conducted for a parking area consisting of 40 bays, the initial count was found to be 25. **Table-1** gives the result of the survey. The number of vehicles coming in and out of the parking lot for a time interval of 5 minutes is as shown in the **Table-1** below. Find the accumulation, total parking load, average occupancy and efficiency of the parking lot.

**Table-1-In-Out Survey data**

In-out survey data			In-out survey data		
Time	In	Out	Time	In	Out
5	3	2	35	2	7
10	2	4	40	4	2
15	4	2	45	6	4
20	5	4	50	4	1
25	7	3	55	3	3
30	8	2	60	2	5

- c) Explain Spot speed, running speed, Space-mean speed, time mean speed and average speed.  
 d) Write a short note on any two.  
 1) Level of Service  
 2) Passenger Car Unit  
 3) Collision and Condition Diagram  
 4) O-D survey

**Q.3 Answer any TWO questions (each carry 7 marks)**

**14**

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) With increase in speed of the traffic stream, the maximum capacity of the lane \_\_\_\_\_.  
 a) Increase  
 b) Decreases  
 c) first increases and then decreases after reaching a maximum value at optimum speed  
 d) first decreases and then increases after reaching a maximum value at optimum speed
- 2) In signal design as per Indian Roads Congress specifications, if the sum of the ratios of normal flows to saturation flow of two directional traffic flows is 0.50 and the total lost time per cycle is 10 seconds, the optimum cycle length in seconds is \_\_\_\_\_.  
 a) 100  
 b) 80  
 c) 60  
 d) 40
- 3) Two broken yellow line marking at center of road indicates \_\_\_\_\_.  
 a) No passing allowed on both side  
 b) Passing allowed on one side  
 c) Passing allowed on both side  
 d) Passing allowed only for left side vehicle
- 4) Maximum number of vehicles can be parked with \_\_\_\_\_.  
 a) Parallel parking  
 b) 30° angle parking  
 c) 45° angle parking  
 d) 90° angle parking
- 5) When volume of the road reaches maximum flow or the capacity, the volume capacity ratio approaches to a value of \_\_\_\_\_.  
 a) 1.0  
 b) 1.5  
 c) 0.0  
 d) 0.5
- 6) Speed regulations on roads is decided on the basis of \_\_\_\_\_.  
 a) 60<sup>th</sup> percentile cumulative frequency  
 b) 85<sup>th</sup> percentile cumulative frequency  
 c) 55<sup>th</sup> percentile cumulative frequency  
 d) 98<sup>th</sup> percentile cumulative frequency

- 7) On a road the free speed was 65 kmph and the space headway at jam density was 6.25m. What is the maximum flow which could be expected on this road?  
a) 2600 vph  
b) 1625 vph  
c) 1300 vph  
d) 406 vph
- 8) If present ADT is 5000 vehicles and annual increase is 10%, the average future flow after 5 years will be \_\_\_\_\_.  
a) 6050 vehicles  
b) 7050 vehicles  
c) 8050 vehicles  
d) 9050 vehicles
- 9) A traffic stream in a particular direction of a two-lane road is moving with a constant speed of 50 kmph, with an average headway of 2.52 seconds. The longitudinal distance between two consecutive vehicles is \_\_\_\_\_.  
a) 30m  
b) 35m  
c) 38m  
d) 42m
- 10) Select the correct statement,  
a) Traffic volume should always be more than traffic capacity  
b) Traffic capacity should be always be more than traffic volume  
c) Spot seed is the average speed of a vehicle at a specified section  
d) 85<sup>th</sup> percentile speed is more than 98<sup>th</sup> percentile speed
- 11) The diagram which shows the approximate path of vehicles and pedestrians involved in accident is known as,  
a) Spot maps  
b) Pie charts  
c) Condition diagram  
d) Collision diagram
- 12) If the space headway is 7m, then the jam density in vehicle/km is \_\_\_\_\_.  
a) 142  
b) 144  
c) 145  
d) 146
- 13) If the jam density is 145vehicles/km, and velocity is 60kph then the capacity flow is \_\_\_\_\_.  
a) 2175  
b) 2200  
c) 2375  
d) 2500
- 14) Level of Service A and F represents \_\_\_\_\_.  
a) Forced Flow and Free Flow respectively  
b) Free Flow and Forced Flow respectively  
c) Both are free flow  
d) Both are Forced flow

- 8) In an unmanned Level crossing, stop board should be provided at a distance of from the centre of nearest track \_\_\_\_\_.  
a) 5 m  
b) 10 m  
c) 7.5 m  
d) None of these
- 9) Replacement of swing gates by lifting barrier existing manned Level Crossings shall be carried out where TVU is more than \_\_\_\_\_.  
a) 4000  
b) 50,000  
c) 40,000  
d) 60,000
- 10) TSR is recommended when the %age of unserviceable sleeper become more than \_\_\_\_\_.  
a) 20%  
b) 40%  
c) 30%  
d) None of these
- 11) Through renewal of rubber pads shall be planned after \_\_\_\_\_ years.  
a) 7  
b) 6  
c) 5  
d) 4
- 12) Minimum shoulder ballast in tangential track of LWR: \_\_\_\_\_.  
a) 300mm  
b) 350mm  
c) 600mm  
d) 500m
- 13) LWR/CWR can be laid on vertical curve where algebraic difference between two grades is: \_\_\_\_\_.  
a) 2mm/m  
b) 4mm/m  
c) 3mm/m  
d) 5mm/m
- 14) SEJ must not fall on curves having radius \_\_\_\_\_.  
a) > 3500m  
b) <3500m  
c) 440m  
d) >440m

-----------------	--

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Advanced Railway Track**

Day & Date: Thursday, 09-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

**Instructions:** 1) Question No. 2 is compulsory and attempt any two from the remaining.  
 2) Question No. 8 is compulsory and attempt any two from the remaining.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> Explain the following:  | <b>06</b> |
|            | 1) On- Track Maintenance  |           |
|            | 2) Mobile Maintenance Unit  |           |
|            | 3) Sectional Gangs  |           |
|            | <b>b)</b> With the help of diagram, illustrate the tamping procedure  | <b>04</b> |
| <b>Q.3</b> | <b>a)</b> Explain Preliminary Works for Track Renewal.  | <b>04</b> |
|            | <b>b)</b> Explain the renewal of Sleepers.  | <b>05</b> |
| <b>Q.4</b> | <b>a)</b> Elaborate the inspection of Level crossing.   | <b>04</b> |
|            | <b>b)</b> Explain signs of Destressing in Group-I and Group-II Bridges.   | <b>05</b> |
| <b>Q.5</b> | <b>a)</b> Describe the chemical and mechanical composition of all types of steel used in Indian Railway tracks. | <b>05</b> |
|            | <b>b)</b> Explain the handling process of rails.  | <b>04</b> |

**Section – II**

- |            |  |           |
|------------|--|-----------|
| <b>Q.6</b> | <b>a)</b> Illustrate the reasons behind defects found in Rails.  | <b>04</b> |
|            | <b>b)</b> Elaborate with the help of a diagram details of LWR.   | <b>05</b> |
| <b>Q.7</b> | <b>a)</b> With the help of diagram explain Alumina Thermite process.   | <b>04</b> |
|            | <b>b)</b> Identify the various types of derailments and mention the aspects of derailments.  | <b>05</b> |
| <b>Q.8</b> | <b>a)</b> Explain diamond crossing with help of diagram.   | <b>05</b> |
|            | <b>b)</b> A main line track on BG is having LWR of 52 kgs Laid at 40°C. The maximum rail temperature is 60°C and the minimum rail temperature is 0°C. Calculate the following: | <b>05</b> |
|            | 1) Tension in rail   |           |
|            | 2) compression in rail   |           |
|            | 3) tensile stress and  |           |
|            | 4) compressive stress  |           |
| <b>Q.9</b> | <b>a)</b> Illustrate the requirement of Railway station, (at least six points).  | <b>04</b> |
|            | <b>b)</b> Discuss Nadal's Formula and its application.   | <b>05</b> |

 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Productivity measurement is complicated by
  - a) the competition's output
  - b) the fact that precise units of measure are often unavailable
  - c) stable quality
  - d) the workforce size
- 2) Production improvement spending will be mostly on
 

a) Direct Labour	b) Indirect labour
c) Material	d) Overhead
- 3) The single-factor productivity measures
 

a) Output per labor hour	b) Output per machine
c) Output per ton of material	d) Any one of these
- 4) Total work content =
  - a) Basic work content + Excess time
  - b) Basic work content - Excess time
  - c) Basic work content + Ineffective time
  - d) Basic work content – Ineffective time
- 5) Which of the following adds idle time due to short runs?
 

a) Excessive product variety	b) Lack of Standardization
c) Both (A) and (B)	d) Design changes
- 6) Preventive maintenance improves
 

a) Material productivity	b) Labour productivity
c) Machine productivity	d) Capital productivity
- 7) Productivity =
 

a) Input / Output	b) Output / Input
c) Output – Input	d) Input – Output
- 8) The elimination of which of the following will improve industrial productivity
 

a) Excess time	b) Ineffective time
c) Both (A) and (B)	d) None of the above

- 9) The time for which the worker or machine or both remain idle due to the shortcomings of the management or workers is known as
- a) Excess time
  - b) Idle time
  - c) Ineffective time
  - d) Work content
- 10) Productivity can be increased by
- a) By increasing the output from the same input
  - b) By reducing the input for the same output
  - c) Both (A) and (B)
  - d) None of the above
- 11) Raw material productivity can be increased by
- a) Proper choice of design
  - b) Reuse of material
  - c) Scrap control
  - d) All of the above
- 12) Productivity can be measured in which of the following input resource(s)
- a) Material input
  - b) Capital and Land Input
  - c) All of the above
  - d) None of these
- 13) The resources utilized for production are
- a) Materials, Machines, Manpower
  - b) Materials, Methods, Machines
  - c) Machines, Manpower, Methods
  - d) Methods, Machine, Manpower
- 14) Productivity is the \_\_\_\_ of production system.
- a) Measurement
  - b) Efficiency
  - c) Both (A) and (B)
  - d) None of the above

  - c) Machines, Manpower, Methods
  - d) Methods, Machine, Manpower

- 9) Productivity is the \_\_\_\_\_ of production system.

a) Measurement	b) Efficiency
c) Both (A) and (B)	d) None of the above
- 10) Productivity measurement is complicated by

a) the competition's output
b) the fact that precise units of measure are often unavailable
c) stable quality
d) the workforce size
- 11) Production improvement spending will be mostly on

a) Direct Labour	b) Indirect labour
c) Material	d) Overhead
- 12) The single-factor productivity measures

a) Output per labor hour	b) Output per machine
c) Output per ton of material	d) Any one of these
- 13) Total work content =

a) Basic work content + Excess time
b) Basic work content - Excess time
c) Basic work content + Ineffective time
d) Basic work content – Ineffective time
- 14) Which of the following adds idle time due to short runs?

a) Excessive product variety	b) Lack of Standardization
c) Both (A) and (B)	d) Design changes

Seat No.

Set **S**

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Construction Productivity**

Day & Date: Thursday, 09-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

**Instructions:** 1) In Section – I, all questions are compulsory.  
 2) In Section – II, Question No. 5 is compulsory and Solve any two of remaining questions.  
 3) Figures to right indicate full marks.

**Section – I**

**Q.2 Solve the following.** **12**

- a) 1200 Sqm of construction of Solid block masonry without finishing is proposed to be done by 4 crews each of 1 mason and 1 helper. The standard productivity is 20 Sqm/day/crew. Working time is 8Hr/day. How much duration will be required for completing the work?
- b) Compare the following two categories of productivity loss
  - 1) losses that result from a reduction in an organization's ability to execute on its primary value proposition
  - 2) losses that result from personnel being paid but unable to perform their duties

**Q.3 Answer the following.** **08**

- a) What are the factors influencing employee performance?
- b) How to measure productivity?

**Q.4 Write Notes On** **08**

- a) Labour Productivity improvement with new Technologies
- b) Advantages due to increased labour productivity

**Section – II**

**Q.5 Explain the following.** **12**

- a) Factors influencing Productivity
- b) Sources of Lost time
- c) Tools to identify Productivity loss

**Q.6 Write Notes on** **08**

- a) Influence of Human Factors on productivity
- b) Methods of Motivating for improved productivity

**Q.7 Explain the following** **08**

- a) Work sampling
- b) Compare Tour approach with Crew Approach

**Q.8 Write Notes on** **08**

- a) Crew Balance Chart
- b) Flow Diagrams

Seat No.

Set	P
-----	---

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Environmental Systems**

Day & Date: Thursday, 09-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly .

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) System approach provides the \_\_\_\_\_ scheme that makes involvement accessible.
 

a) Life cycle planning	b) Life cycle integration
c) Decision making	d) Integrated Training
- 2) \_\_\_\_\_ is an art of obtaining the best results in design, construction and planning of any engineering system.
 

a) Optimization	b) Simulation methods
c) CPM or PERT	d) Optimal design
- 3) \_\_\_\_\_ is a mathematical technique suitable for optimization of multistage decision problems
 

a) Dynamic programming	b) Queuing theory
c) Design of Experiments	d) Game Theory
- 4) \_\_\_\_\_ is a method for numerical procedure solving differential equations associated with field problems.
 

a) Mathematic Programming	
b) Finite elements	
c) Stochastic process	
d) Statistical methods	
- 5) \_\_\_\_\_ is an organizational level or layer of nature which consist lowest level of all biotic and abiotic elements.
 

a) Environment	b) Ecology
c) Ecosystem	d) Biology
- 6) \_\_\_\_\_ includes testing and experimentation models as a iterative process.
 

a) System approach	b) System Programming
c) Statistical analysis	d) System analysis
- 7) The \_\_\_\_\_ is used to convey changes in the numbers, age class distribution, sex ratio and behavior of population through time and space.
 

a) Population density	b) Population dynamics
c) Population dispersion	d) Population Chemistry

- 8) The \_\_\_\_\_ model provides easy access to data for the formation and implementation to effective solid waste management.
- a) Integrated waste model
  - b) Municipal waste management
  - c) Sustainable waste management
  - d) Environmental waste management
- 9) Internal flow like recirculation released with pumps fulfill the requirements in \_\_\_\_\_ models.
- a) Flow variable
  - b) Statistical Flow
  - c) Laminar flow
  - d) Gravitational How
- 10) For a model modification the transformation factor between total suspended solids and COD is \_\_\_\_\_.
- a) 0.5
  - b) 0.75
  - c) 1.5
  - d) 2.5
- 11) \_\_\_\_\_ are the interfaces between inflow and outflow.
- a) Venturimetr
  - b) Orifice
  - c) Connectors
  - d) Junction box
- 12) The \_\_\_\_\_ examines the extreme points in a systematic manner, repeating the algorithm until optimal solution is reached.
- a) Graphical method
  - b) Optimal method
  - c) Statistical method
  - d) Simplex method
- 13) \_\_\_\_\_ is a combined meteorology and diffusion model.
- a) Meteorological model
  - b) Gaussian plume model
  - c) Dispersion Model
  - d) Atmospheric dispersion model
- 14) \_\_\_\_\_ estimates temporal and spatial emission based on per unit of activity and meteorology.
- a) Emission model
  - b) Receptor model
  - c) Source dispersion model
  - d) Plume Behavior

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) \_\_\_\_\_ includes testing and experimentation models as a iterative process.
 

a) System approach	b) System Programming
c) Statistical analysis	d) System analysis
- 2) The \_\_\_\_\_ is used to convey changes in the numbers, age class distribution, sex ratio and behavior of population through time and space.
 

a) Population density	b) Population dynamics
c) Population dispersion	d) Population Chemistry
- 3) The \_\_\_\_\_ model provides easy access to data for the formation and implementation to effective solid waste management.
 

a) Integrated waste model
b) Municipal waste management
c) Sustainable waste management
d) Environmental waste management
- 4) Internal flow like recirculation released with pumps fulfill the requirements in \_\_\_\_\_ models.
 

a) Flow variable	b) Statistical Flow
c) Laminar flow	d) Gravitational How
- 5) For a model modification the transformation factor between total suspended solids and COD is \_\_\_\_\_.
 

a) 0.5	b) 0.75
c) 1.5	d) 2.5
- 6) \_\_\_\_\_ are the interfaces between inflow and outflow.
 

a) Venturimetr	b) Orifice
c) Connectors	d) Junction box
- 7) The \_\_\_\_\_ examines the extreme points in a systematic manner, repeating the algorithm until optimal solution is reached.
 

a) Graphical method	b) Optimal method
c) Statistical method	d) Simplex method

- 8) \_\_\_\_\_ is a combined meteorology and diffusion model.
- a) Meteorological model
  - b) Gaussian plume model
  - c) Dispersion Model
  - d) Atmospheric dispersion model
- 9) \_\_\_\_\_ estimates temporal and spatial emission based on per unit of activity and meteorology.
- a) Emission model
  - b) Receptor model
  - c) Source dispersion model
  - d) Plume Behavior
- 10) System approach provides the \_\_\_\_\_ scheme that makes involvement accessible.
- a) Life cycle planning
  - b) Life cycle integration
  - c) Decision making
  - d) Integrated Training
- 11) \_\_\_\_\_ is an art of obtaining the best results in design, construction and planning of any engineering system.
- a) Optimization
  - b) Simulation methods
  - c) CPM or PERT
  - d) Optimal design
- 12) \_\_\_\_\_ is a mathematical technique suitable for optimization of multistage decision problems
- a) Dynamic programming
  - b) Queuing theory
  - c) Design of Experiments
  - d) Game Theory
- 13) \_\_\_\_\_ is a method for numerical procedure solving differential equations associated with field problems.
- a) Mathematic Programming
  - b) Finite elements
  - c) Stochastic process
  - d) Statistical methods
- 14) \_\_\_\_\_ is an organizational level or layer of nature which consist lowest level of all biotic and abiotic elements.
- a) Environment
  - b) Ecology
  - c) Ecosystem
  - d) Biology

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Environmental Systems**

Day & Date: Thursday, 09-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Question no. 6 is compulsory in section II, and solve any two questions from the remaining.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data wherever necessary and mention it dearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> Explain with neat sketch the scope of system approach.          | <b>05</b> |
|            | <b>b)</b> Explain the characteristics of Integrated Waste Management.     | <b>05</b> |
| <b>Q.3</b> | <b>a)</b> Explain three basic models which are used in system approach.   | <b>05</b> |
|            | <b>b)</b> Explain what is building modeling.                              | <b>04</b> |
| <b>Q.4</b> | <b>a)</b> Explain ecological modeling of an ecosystem.                    | <b>04</b> |
|            | <b>b)</b> Explain the research methodology of Effective Waste Management. | <b>05</b> |
| <b>Q.5</b> | <b>Write Short Notes</b>  |           |
|            | <b>a)</b> Characteristics of Population Ecology                           | <b>05</b> |
|            | <b>b)</b> Reuse and Recovery of Paper                                     | <b>04</b> |

**Section – II**

- |            |   |           |
|------------|---|-----------|
| <b>Q.6</b> | <b>a)</b> What is Linear Programming and discuss the application of LP in civil Engineering | <b>05</b> |
|            | <b>b)</b> Explain the basic concept of Wastewater model.                                    | <b>05</b> |
| <b>Q.7</b> | <b>a)</b> Explain the pollutant standard index criteria.                                    | <b>04</b> |
|            | <b>b)</b> Explain the point source Gaussian plume model.                                    | <b>05</b> |
| <b>Q.8</b> | <b>a)</b> Explain the wastewater treatment process (Aerobic Process).                       | <b>05</b> |
|            | <b>b)</b> Explain the salient features of Optimization.                                     | <b>04</b> |
| <b>Q.9</b> | <b>Write Short Notes</b>  |           |
|            | <b>a)</b> Motor Vehicle Emission  | <b>05</b> |
|            | <b>b)</b> Inflow Model  | <b>04</b> |

**Water Power Engineering**

Day & Date: Thursday, 09-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.** **14**

- 1) Annual depreciation of the plant is proportional to the earning capacity of the plant void \_\_\_\_\_.  
 a) sinking fund depreciation      b) straight line depreciation  
 c) reducing balance depreciation      d) none of above
- 2) A nuclear power plant is variably used as a \_\_\_\_\_.  
 a) base load plant      b) peak load plant  
 c) stand by plant      d) none
- 3) The load factor for the peak day of the year determines the required \_\_\_\_\_.  
 a) Water storage      b) Pondage  
 c) Generating capacity      d) None
- 4) Water hammer process in penstock result in \_\_\_\_\_.  
 a) pressure decreases  
 b) noise decreases  
 c) noise increases, pressure increases, velocity decreases  
 d) None
- 5) Minimum pressure occurs in fall flowing power tunnel at the time of \_\_\_\_\_.  
 a) load rejection      b) load acceptance  
 c) head race      d) fail race
- 6) Unit power in a turbine is \_\_\_\_\_.  
 a)  $p/H^{1/2}$       b)  $P/H$   
 c)  $P/H^{3/2}$       d)  $P/H^{3/4}$
- 7) On what factors does the selection of a water turbine depends?  
 a) Speed      b) Nature of load  
 c) Working head      d) All

- 8) Pump storage scheme are used to improve the \_\_\_\_\_.  
a) load factor  
b) power factor  
c) delivery factor  
d) plant capacity factor as well as load factor of the power system
- 9) A turbine is called reaction turbine if at the inlet of turbine, the total energy is \_\_\_\_\_.  
a) kinetic  
b) pressure  
c) kinetic and pressure  
d) none
- 10) When a gate valve, installed in a pressure pipe is suddenly closed, water hammer pressure is caused on the pipe shell, in the portion \_\_\_\_\_.  
a) Downstream of the valve  
b) upstream of the valve  
c) both a & b  
d) none
- 11) In hydro electric power station what is an enlarge body of water just above the intake and used as a regulating reservoir called \_\_\_\_\_.  
a) penstock  
b) spillways  
c) reservoir  
d) fore bay
- 12) Jet ratio 'm' is defined as the ratio of \_\_\_\_\_.  
a) Diameter of jet of water to diameter of pelton wheel  
b) Velocity of vane to velocity of jet of water  
c) Velocity of flow to velocity of jet of water  
d) Diameter of pelton wheel to diameter of jet
- 13) The draft tube is provided to \_\_\_\_\_.  
a) reduce the effect of water hammer  
b) raise the water surface of the stream to create an artificial head  
c) increase the acting head on the water wheel  
d) None of the above
- 14) Surge tank is necessarily provided \_\_\_\_\_.  
a) long penstocks  
b) short length penstocks  
c) surface penstocks  
d) embedded penstocks

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Water Power Engineering**

Day & Date: Thursday, 09-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Assume suitable data wherever needed and mention it clearly.  
 3) Use only non-programmable calculator is allowed.  
 4) Draw neat labelled diagrams whenever necessary.

**Section – I**

**Q.2 Solve any four. 16**

- a) What do you understand by non-conventional sources of power generation? What is the scope of these sources in India?
- b) Discuss the merits and demerits of Hydropower as compared to other power plants.
- c) When runoff river plant operates as peak load station with weekly factor of 25% what will be the minimum flow in the river so that the station serve as peak load station? With installed capacity 12000 KN, operating head 15 M and plant efficiency as 85%.
- d) Common load shared by two stations base load plant with 50 MW capacity and other being standby plant with 55 MW capacity. The yearly output for base load station is  $200 \times 10^6$  KWh, and for standby station is  $20 \times 10^6$  KWh. The peak load taken by standby station is 18 MW which works for 2400 hrs during the year. The base load station takes peak load as 30 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.
- e) What do you understand by base load and peak load power plants?

**Q.3 Solve any two. 12**

- a) What do you understand by Run of river plants? What are the parts and arrangement of such plants? Draw a neat sketch.
- b) A penstock, with an internal diameter 1.20 m, supplies water at a head equivalent to  $17.0 \text{ kg/cm}^2$ . There is a possibility of 20% in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be  $1000 \text{ kg/cm}^2$  and 85% resp. Find the wall thickness of penstock.
- c) The 95% dependable discharge of river is  $20 \text{ m}^3/\text{sec}$ . if the head utilized is 25m, calculate.
  - 1) Theoretical HP, and Kw
  - 2) Approximate amount of power outputs
  - 3) Total yearly developable energy
  - 4) Actual capacity that may be installed to utilize all average flow and energy

**Section – II****Q.4 Solve any four.****16**

- a) What are the advantages of reaction turbine over the Pelton wheel turbine in respect of efficiency, size, cost and maintenance?
- b) Explain the function of Anchor block and enlist the forces acting on it.
- c) A power canal, bed width 15m, may be assumed to be rectangular in shape with a steady state of flow of 3m. The canal supplies water to a power house with three turbines, each turbine rated at a discharge of 30 m<sup>3</sup>/s. If the in the power house is suddenly thrown off so that two of the turbines have to be shut down, what would be the height of the surge in the canal.
- d) Power house is equipped with 4 units of vertical shaft Pelton turbines to be coupled with 70000kVA, 3 phase. 50 hertz generation. The generation are provided with 10 pairs of poles. The gross design head is 505m and transmission efficiency of head race tunnel and penstocks together is to be 94percent. The four units together will provide for a power of 348000hp at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98.  
Find:
  - 1) the design discharge for the turbine
  - 2) jet dia. and no. of jets
  - 3) the nozzle tip diameter
  - 4) the pitch circle dia. of the wheel
  - 5) the specific speed and
  - 6) number of buckets on the wheel
- e) Enlist the different types of Draft tubes. Sketch any two and write the advantages of them.

**Q.5 Solve any two.****12**

- a) What topographical features are in favour of adopting underground power plant? What are its types? Draw neat layout.
- b) A Closed cycle power plant with gross head 400 m has head race tunnel of 4.5 m dia. and 800 m long. Flow velocity is 8.5m/s and coefficient of friction 0.02 overall efficiency of pumping and generation at 85% and 90% respectively. Calculate plant efficiency.
- c) Describe how ocean tides one generated? also state the limitations of tidal power generation.

a) long penstocks                      b) short length penstocks  
c) surface penstocks                  d) embedded penstocks
- 10) Annual depreciation of the plant is proportional to the earning capacity of the plant void \_\_\_\_\_.  
a) sinking fund depreciation              b) straight line depreciation  
c) reducing balance depreciation      d) none of above
- 11) A nuclear power plant is variably used as a \_\_\_\_\_.  
a) base load plant                      b) peak load plant  
c) stand by plant                      d) none
- 12) The load factor for the peak day of the year determines the required \_\_\_\_\_.  
a) Water storage                      b) Pondage  
c) Generating capacity                  d) None
- 13) Water hammer process in penstock result in \_\_\_\_\_.  
a) pressure decreases  
b) noise decreases  
c) noise increases, pressure increases, velocity decreases  
d) None
- 14) Minimum pressure occurs in fall flowing power tunnel at the time of \_\_\_\_\_.  
a) load rejection                      b) load acceptance  
c) head race                              d) fail race

<b>Seat No.</b>	
-----------------	--

**Set S**

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Water Power Engineering**

Day & Date: Thursday, 09-02-2023  
Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Assume suitable data wherever needed and mention it clearly.  
3) Use only non-programmable calculator is allowed.  
4) Draw neat labelled diagrams whenever necessary.

**Section – I**

**Q.2 Solve any four. 16**

- a) What do you understand by non-conventional sources of power generation? What is the scope of these sources in India?
- b) Discuss the merits and demerits of Hydropower as compared to other power plants.
- c) When runoff river plant operates as peak load station with weekly factor of 25% what will be the minimum flow in the river so that the station serve as peak load station? With installed capacity 12000 KN, operating head 15 M and plant efficiency as 85%.
- d) Common load shared by two stations base load plant with 50 MW capacity and other being standby plant with 55 MW capacity. The yearly output for base load station is  $200 \times 10^6$  KWh, and for standby station is  $20 \times 10^6$  KWh. The peak load taken by standby station is 18 MW which works for 2400 hrs during the year. The base load station takes peak load as 30 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.
- e) What do you understand by base load and peak load power plants?

**Q.3 Solve any two. 12**

- a) What do you understand by Run of river plants? What are the parts and arrangement of such plants? Draw a neat sketch.
- b) A penstock, with an internal diameter 1.20 m, supplies water at a head equivalent to  $17.0 \text{ kg/cm}^2$ . There is a possibility of 20% in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be  $1000 \text{ kg/cm}^2$  and 85% resp. Find the wall thickness of penstock.
- c) The 95% dependable discharge of river is  $20 \text{ m}^3/\text{sec}$ . if the head utilized is 25m, calculate.
  - 1) Theoretical HP, and Kw
  - 2) Approximate amount of power outputs
  - 3) Total yearly developable energy
  - 4) Actual capacity that may be installed to utilize all average flow and energy

**Section – II****Q.4 Solve any four.****16**

- a) What are the advantages of reaction turbine over the Pelton wheel turbine in respect of efficiency, size, cost and maintenance?
- b) Explain the function of Anchor block and enlist the forces acting on it.
- c) A power canal, bed width 15m, may be assumed to be rectangular in shape with a steady state of flow of 3m. The canal supplies water to a power house with three turbines, each turbine rated at a discharge of 30 m<sup>3</sup>/s. If the in the power house is suddenly thrown off so that two of the turbines have to be shut down, what would be the height of the surge in the canal.
- d) Power house is equipped with 4 units of vertical shaft Pelton turbines to be coupled with 70000kVA, 3 phase. 50 hertz generation. The generation are provided with 10 pairs of poles. The gross design head is 505m and transmission efficiency of head race tunnel and penstocks together is to be 94percent. The four units together will provide for a power of 348000hp at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98.  
Find:
  - 1) the design discharge for the turbine
  - 2) jet dia. and no. of jets
  - 3) the nozzle tip diameter
  - 4) the pitch circle dia. of the wheel
  - 5) the specific speed and
  - 6) number of buckets on the wheel
- e) Enlist the different types of Draft tubes. Sketch any two and write the advantages of them.

**Q.5 Solve any two.****12**

- a) What topographical features are in favour of adopting underground power plant? What are its types? Draw neat layout.
- b) A Closed cycle power plant with gross head 400 m has head race tunnel of 4.5 m dia. and 800 m long. Flow velocity is 8.5m/s and coefficient of friction 0.02 overall efficiency of pumping and generation at 85% and 90% respectively. Calculate plant efficiency.
- c) Describe how ocean tides one generated? also state the limitations of tidal power generation.

**Repairs and Rehabilitation of Structures**

Day & Date: Tuesday, 14-02-2023  
Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:**
- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
  - 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
  - 3) Figure on right indicates full marks.
  - 4) Assume suitable data wherever needed & mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given option.**

**14**

- 1) Who is responsible for the combination of the polymer particles?
  - a) monomer
  - b) nanomer
  - c) tetramer
  - d) crystal
- 2) Which metal is used for making a foamed concrete?
  - a) Aluminum
  - b) Zinc
  - c) a & b both
  - d) none of the above
- 3) Process of maintaining different components of building so that it can provide proper service throughout its working life is known as \_\_\_\_\_.
  - a) Building Maintenance
  - b) Building Management
  - c) Building Service
  - d) All of the above
- 4) \_\_\_\_\_ type of plaster defect generates a series of hair cracks inside the plaster.
  - a) Crazing
  - b) Blistering
  - c) Flaking
  - d) Popping
- 5) Honey combing in concrete is caused due to \_\_\_\_\_.
  - a) Inadequate compaction
  - b) Chemical reaction
  - c) Shock waves
  - d) Lack of curing
- 6) Bacterial concrete is a \_\_\_\_\_ concrete.
  - a) Porous
  - b) Self-healing
  - c) foamed
  - d) vacuum
- 7) Epoxy resins have \_\_\_\_\_.
  - a) poor mechanical strength
  - b) poor thermal strength
  - c) low tensile strength
  - d) none of the above
- 8) One of the testing equipment used for inspection is \_\_\_\_\_.
  - a) Strain Gauge
  - b) Measuring Jar
  - c) Test Tubes
  - d) None of these

- 9) Which NDT test work on the principle of rebound of the elastic mass?
- a) Hammer test
  - b) Ultrasonic test
  - c) Chloride test
  - d) None of the above
- 10) In case of damaged prestressed concrete I girders, \_\_\_\_\_ are used for restoring strength.
- a) Pre-tensioning
  - b) Post-tensioning
  - c) Chemicals
  - d) Dies
- 11) The corrosion of reinforcement due to extreme exposure is common for structure located in \_\_\_\_\_.
- a) Dry conditions
  - b) Costal zones
  - c) Regional zones
  - d) Hot condition
- 12) The structural concrete slab panels can be repaired by \_\_\_\_\_.
- a) Internal Bonding
  - b) External Bonding
  - c) Stress Bonding
  - d) Layered bonding
- 13) A fire detector cannot detect \_\_\_\_\_.
- a) Radiation
  - b) Heat
  - c) Light
  - d) Smoke
- 14) In case of dormant cracks, wider than about 1 mm, it is more economical to use \_\_\_\_\_ technique.
- a) Epoxy resin
  - b) Grouting and sealing
  - c) Tensioning
  - d) Ranging

- 1) Seasonal Changes affect the thickness of \_\_\_\_\_ of atmosphere.
  - a) Stratosphere
  - b) Troposphere
  - c) Mesosphere
  - d) Hydrosphere
- 2) The change of air temperature with height influence the upward lift of air pollutant discharge into atmosphere is also known as \_\_\_\_\_.
  - a) Subsidence inversion
  - b) Sub adiabatic lapse rate
  - c) Temperature gradient
  - d) Adiabatic lapse rate
- 3) Instruments used for wind speed record is \_\_\_\_\_.
  - a) Thermometer
  - b) Barometer
  - c) Anemometers
  - d) Solariometer
- 4) The Photochemical smog formation at Los Angeles is a typical example of \_\_\_\_\_ on air pollution.
  - a) Humidity
  - b) Solar Radiation
  - c) Precipitation
  - d) Mixing Height
- 5) \_\_\_\_\_ type of plume is emitted under extreme inversion condition.
  - a) Fanning
  - b) Coning
  - c) Looping
  - d) Lofting
- 6) \_\_\_\_\_ diagram shows the prevailing direction of wind.
  - a) Stack effluent Theories
  - b) Dispersion Model
  - c) Wind Rose
  - d) Stack Height
- 7) The prime factors in order to minimize air pollution problems by site selection are \_\_\_\_\_.
  - a) Potential effects of surrounding area
  - b) Meteorological factors and climate
  - c) Clean air available
  - d) Topographical features
- 8) \_\_\_\_\_ diseases like bronchitis and asthma are aggravated by high concentration of particulate matter, SO<sub>2</sub>, NO<sub>2</sub> and Photochemical Smog.
  - a) Chronic Pulmonary
  - b) Eye Irritation
  - c) Nose and Throat Irritation
  - d) Cancer

- 9) Cyclone Separator works on the principle of \_\_\_\_\_.
  - a) Gravity Force
  - b) Inertia Force
  - c) Centrifugal Force
  - d) None of these
- 10) \_\_\_\_\_ removes both gaseous and Particulate Contaminants.
  - a) Venturi Scrubber
  - b) Gravitational settling Chamber
  - c) Electrostatic Precipitator
  - d) Wet Scrubber
- 11) The Ringelmann scale is a scale for measuring the apparent density of \_\_\_\_\_.
  - a) odour
  - b) noise
  - c) gas
  - d) smoke
- 12) When did Central Pollution Control board establish?
  - a) 1954
  - b) 1964
  - c) 1974
  - d) 1994
- 13) The Unit used for measuring noise pollution is \_\_\_\_\_.
  - a) Joule
  - b) Decibel
  - c) Newton
  - d) Nano Unit
- 14) According to Noise Pollution Rule 2000, the night time noise standard for the educational institute is \_\_\_\_\_.
  - a) 55 dB
  - b) 45 dB
  - c) 50 dB
  - d) 40 dB

Set

P

**Fourth Y. (B.Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Air & Noise Pollution and Control**

Day &amp; Date: Tuesday, 14-02-2023

Max. Marks: 56

Time: 02:00 PM To 05:00 PM

- Instructions:**
- 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
  - 2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
  - 3) Use of non-programmable calculator is allowed.
  - 4) Assume suitable data wherever needed and mention it clearly.

**Section – I**

- |            |  |           |
|------------|--|-----------|
| <b>Q.2</b> | <b>a)</b> Explain Global effects of Air Pollution and its Climate Change.  | <b>05</b> |
|            | <b>b)</b> Explain meteorological factors influencing air pollution.  | <b>05</b> |
| <b>Q.3</b> | <b>a)</b> Explain scope of Air Pollution and its sources of Air Pollution.   | <b>05</b> |
|            | <b>b)</b> Explain with neat sketch "Plume Behavior".   | <b>04</b> |
| <b>Q.4</b> | <b>a)</b> What is photochemical smog and explain the theory of formation of smog with respect to nitrogen dioxide? | <b>05</b> |
|            | <b>b)</b> Explain the Mechanism action of air pollutants on Human Health.  | <b>04</b> |
| <b>Q.5</b> | <b>a)</b> Explain in 'Emission Standards' in detail.   | <b>05</b> |
|            | <b>b)</b> Write a short note on 'Acid Rain'.   | <b>04</b> |

**Section – II**

- |            |  |           |
|------------|--|-----------|
| <b>Q.6</b> | <b>a)</b> Explain the advantages and disadvantages of Electrostatic Precipitator.  | <b>05</b> |
|            | <b>b)</b> Describe the sources and control of Noise Pollution.   | <b>05</b> |
| <b>Q.7</b> | <b>a)</b> A fabric filter is to be constructed using bags having 30 cm diameter and 5.5 m height. The bag having is to receive 12.7 m <sup>3</sup> /sec air and filtering velocity is restricted to 2.3 m/min. Determine the number of bags required for continuously cleaned operation. | <b>05</b> |
|            | <b>b)</b> Explain with neat sketch and working operation of Settling Chamber.  | <b>04</b> |
| <b>Q.8</b> | <b>a)</b> Explain the causes and effects of Noise Pollution.   | <b>05</b> |
|            | <b>b)</b> Explain the basic concepts of Noise Pollution Standards.   | <b>04</b> |
| <b>Q.9</b> | <b>a)</b> Explain 'Sound Pressure' in detail.  | <b>05</b> |
|            | <b>b)</b> Write a short note on 'Packed Towers' with the help of neat diagram.   | <b>04</b> |

Set Q
-------

**Fourth Y. (B.Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**

**Air & Noise Pollution and Control**

Day & Date: Tuesday, 14-02-2023

Max. Marks: 70

Time: 02:00 PM To 05:00 PM

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given option.**

**14**

- 1) \_\_\_\_\_ diseases like bronchitis and asthma are aggravated by high concentration of particulate matter, SO<sub>2</sub>, NO<sub>2</sub> and Photochemical Smog.
 

a) Chronic Pulmonary	b) Eye Irritation
c) Nose and Throat Irritation	d) Cancer
- 2) Cyclone Separator works on the principle of \_\_\_\_\_.
 

a) Gravity Force	b) Inertia Force
c) Centrifugal Force	d) None of these
- 3) \_\_\_\_\_ removes both gaseous and Particulate Contaminants.
 

a) Venturi Scrubber	b) Gravitational settling Chamber
c) Electrostatic Precipitator	d) Wet Scrubber
- 4) The Ringelmann scale is a scale for measuring the apparent density of \_\_\_\_\_.
 

a) odour	b) noise
c) gas	d) smoke
- 5) When did Central Pollution Control board establish?
 

a) 1954	b) 1964
c) 1974	d) 1994
- 6) The Unit used for measuring noise pollution is \_\_\_\_\_.
 

a) Joule	b) Decibel
c) Newton	d) Nano Unit
- 7) According to Noise Pollution Rule 2000, the night time noise standard for the educational institute is \_\_\_\_\_.
 

a) 55 dB	b) 45 dB
c) 50 dB	d) 40 dB
- 8) Seasonal Changes affect the thickness of \_\_\_\_\_ of atmosphere.
 

a) Stratosphere	b) Troposphere
c) Mesosphere	d) Hydrosphere

- 9) The change of air temperature with height influence the upward lift of air pollutant discharge into atmosphere is also known as \_\_\_\_\_.  
a) Subsidence inversion                      b) Sub adiabatic lapse rate  
c) Temperature gradient                      d) Adiabatic lapse rate
- 10) Instruments used for wind speed record is \_\_\_\_\_.  
a) Thermometer                                  b) Barometer  
c) Anemometers                                  d) Solariometer
- 11) The Photochemical smog formation at Los Angeles is a typical example of \_\_\_\_\_ on air pollution.  
a) Humidity    b) Solar Radiation  
c) Precipitation                                      d) Mixing Height
- 12) \_\_\_\_\_ type of plume is emitted under extreme inversion condition.  
a) Fanning    b) Coning  
c) Looping    d) Lofting
- 13) \_\_\_\_\_ diagram shows the prevailing direction of wind.  
a) Stack effluent Theories                      b) Dispersion Model  
c) Wind Rose    d) Stack Height
- 14) The prime factors in order to minimize air pollution problems by site selection are \_\_\_\_\_.  
a) Potential effects of surrounding area  
b) Meteorological factors and climate  
c) Clean air available  
d) Topographical features

Day & Date: Tuesday, 14-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given option. 14**

- 1) The monthly rainfall at a place A during September 1996 was recorded as 55 mm above normal. Here, the term normal means \_\_\_\_\_.
  - a) The rainfall in the same month in the previous year
  - b) The rainfall was normally expected based on previous month's data
  - c) The average rainfall computed from past 12 months' record
  - d) The average monthly rainfall for September computed from a specific 30 years of the past record
- 2) The following recording rain-gauges does not produce the mass curve of precipitation as record:
  - a) Symons' rain-gauge
  - b) Tipping bucket type rain-gauge
  - c) Weighing bucket type rain-gauge
  - d) Natural syphon type rain-gauge
- 3) Depth-area-duration curves of precipitation are drawn as \_\_\_\_\_.
  - a) Minimising envelopes through the appropriate data points
  - b) Maximising envelopes through the appropriate data points
  - c) Best-fit mean curves through the appropriate data points
  - d) Best-fit straight through the appropriate data points
- 4) What is the area under a conditional Cumulative density function?
  - a) Zero
  - b) Infinity
  - c) One
  - d) Changes with CDF
- 5) Larger values of  $r^2(R^2)$  imply that the observations are more closely grouped about the \_\_\_\_\_.
  - a) Average value of the independent variables
  - b) Average value of the dependent variable
  - c) Least squares line
  - d) Origin
- 6) In regression analysis, the variable that is used to explain the change in the outcome of an experiment, or some natural process, is called \_\_\_\_\_.
  - a) the independent variable
  - b) the predictor variable
  - c) the explanatory variable
  - d) All of the above

Set **P**

**Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Surface Hydrology**

Day & Date: Tuesday, 14-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Figures to the right indicate full marks  
 2) Assume suitable data wherever needed and mention it clearly.  
 3) Q. No. 2 and Q. No. 6 are compulsory. Attempt any two questions from the remaining of each section.

**Section – I**

- Q.2 a)** A catchment area has a seven rain-gauge stations. In a year the annual rainfall recorded by the gauges are as follows: **05**

Station	P	Q	R	S	T	U	V
Rainfall (cm)	130.0	142.1	118.2	108.5	165.2	102.1	146.9

For a 5% error in the estimation of the mean rainfall, calculate the minimum number of additional stations required to be established in the catchment.

- b)** Describe the salient characteristics of precipitation on India. **05**

- Q.3 a)** Define Correlation and its types along with graphical representation. **04**

- b)** Analysis of data on maximum one-day rainfall depth at Madras indicated that a depth of 280 mm had a return period of 50 years. Determine the probability of a one-day rainfall depth equal to or greater than 280 mm at Madras occurring (a) Once in 20 successive years, (b) Two times in 15 successive years, and (c) At least once in 20 successive years. **05**

- Q.4 a)** List the factors affecting the seasonal and annual runoff of a catchment. Describe each in detail. **04**

- b)** A small watershed is 250 ha in size has group C soil. The land cover can be classified as 30% open forest and 70% poor quality pasture. Assuming AMC at average condition and the soil to be black cotton soil, estimate the direct runoff volume due to rainfall of 75 mm in one day. Take CN for open forest and Pasture as 60 and 86 respectively. **05**

- Q.5 a)** What is sequent peak algorithm? Discuss the procedure involved in the analysis of sequent peak along with suitable sketches. **04**

- b)** A storm with 10 cm of precipitation produced a direct runoff of 5.8 cm. The duration of the rainfall was 16 hours and its distribution is given as below. Estimate the  $\phi$ -index of the storm. **05**

Time from start (h)	0	2	4	6	8	10	12	14	16
Cumulative rainfall (cm)	0	0.4	1.3	2.8	5.1	6.9	8.5	9.5	10.0

**Section – II**

**Q.6** Given the ordinates of a 4-h unit hydrograph as below: **10**

Time (h)	0	4	8	12	16	20	24	28	32	36	40	44
Ordinate of 4-h UH ( $\text{m}^3/\text{s}$ )	0	20	80	130	150	130	90	52	27	15	5	0

Derive the ordinates of 12-h for the same catchment.

**Q.7 a)** Explain the term Rainfall Excess (ER). How is ERH of a storm obtained? **04**  
**b)** What is an Instantaneous unit-hydrograph? What are the characteristics of IUH? **05**

**Q.8 a)** Distinguish between Storage routing and Channel routing. **04**  
**b)** Route the following flood hydrograph through a river reach for which  $K = 12.0$  h and  $x = 0.15$ . At the start of the inflow flood, the outflow discharge is  $10 \text{ m}^3/\text{s}$ . **05**

Time (h)	0	6	12	18	24	30	36	42	48	54
Inflow ( $\text{m}^3/\text{s}$ )	10	20	50	60	55	45	35	27	20	15

**Q.9 a)** Enlist the major causes of urban flooding. **05**  
**b)** Discuss any two the following in detail: **04**

- 1) Water Sensitive Urban Design (WSUD)
- 2) Low Impact Development (LID)
- 3) Sustainable Urban Drainage System (SUDS)
- 4) Best Management Practices (BMPs)

**Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Surface Hydrology**

Day & Date: Tuesday, 14-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given option.**

**14**

- 1) An IUH is a direct runoff hydrograph of \_\_\_\_\_.
  - a) 1 cm magnitude due to rainfall excess of 1-h duration
  - b) That occurs instantaneously due to rainfall excess of 1-h duration
  - c) Unit rainfall excess precipitating instantaneously over the catchment
  - d) Occurring at any instant in long duration
- 2) The probable maximum flood is \_\_\_\_\_.
  - a) The standard project flood of an extremely large river
  - b) A flood adopted in the design of all kind of spillways
  - c) An extremely large, but physically possible flood in the region
  - d) The maximum possible flood that can occur anywhere in the country
- 3) A bridge is designed for a 50-year flood. The probability that only one flood of the design capacity or higher will occur in the 75 years life of the bridge is \_\_\_\_\_.
 

a) 0.020	b) 0.220
c) 0.786	d) 0.336
- 4) The hydrologic flood routing methods use \_\_\_\_\_.
  - a) Equation of continuity only
  - b) Momentum and Continuity equations both
  - c) Energy equation only
  - d) Equation of motion only
- 5) The Muskingum method of flood routing assumes the storage  $S$  is related to inflow rate  $I$  and outflow rate  $Q$  of a reach as, \_\_\_\_\_.
 

a) $S = K[xI - (1 - x)Q]$	b) $S = K[xQ + (1 - x)I]$
c) $S = K[xI + (1 - x)Q]$	d) $S = Kx[I - (1 - x)Q]$
- 6) Which of the following is not a negative effect of storm water?
 

a) Volume	b) Runoff
c) Potential contaminants	d) Evaporation
- 7) Which of these is a single event?
 

a) Monsoon rain	b) Flash flood
c) Flood	d) Volcanic eruption

- 8) The monthly rainfall at a place A during September 1996 was recorded as 55 mm above normal. Here, the term normal means \_\_\_\_\_.  
a) The rainfall in the same month in the previous year  
b) The rainfall was normally expected based on previous month's data  
c) The average rainfall computed from past 12 months' record  
d) The average monthly rainfall for September computed from a specific 30 years of the past record
- 9) The following recording rain-gauges does not produce the mass curve of precipitation as record:  
a) Symons' rain-gauge  
b) Tipping bucket type rain-gauge  
c) Weighing bucket type rain-gauge  
d) Natural syphon type rain-gauge
- 10) Depth-area-duration curves of precipitation are drawn as \_\_\_\_\_.  
a) Minimising envelopes through the appropriate data points  
b) Maximising envelopes through the appropriate data points  
c) Best-fit mean curves through the appropriate data points  
d) Best-fit straight through the appropriate data points
- 11) What is the area under a conditional Cumulative density function?  
a) Zero  
b) Infinity  
c) One  
d) Changes with CDF
- 12) Larger values of  $r^2(R^2)$  imply that the observations are more closely grouped about the \_\_\_\_\_.  
a) Average value of the independent variables  
b) Average value of the dependent variable  
c) Least squares line  
d) Origin
- 13) In regression analysis, the variable that is used to explain the change in the outcome of an experiment, or some natural process, is called \_\_\_\_\_.  
a) the independent variable  
b) the predictor variable  
c) the explanatory variable  
d) All of the above
- 14) The basic assumptions of the unit-hydrograph theory are \_\_\_\_\_.  
a) Nonlinear response and time invariance  
b) Time invariance and linear response  
c) Linear response and linear time variance  
d) Nonlinear time variance and linear response

**Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Surface Hydrology**

Day & Date: Tuesday, 14-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Figures to the right indicate full marks  
 2) Assume suitable data wherever needed and mention it clearly.  
 3) Q. No. 2 and Q. No. 6 are compulsory. Attempt any two questions from the remaining of each section.

**Section – I**

- Q.2 a)** A catchment area has a seven rain-gauge stations. In a year the annual rainfall recorded by the gauges are as follows: **05**

Station	P	Q	R	S	T	U	V
Rainfall (cm)	130.0	142.1	118.2	108.5	165.2	102.1	146.9

For a 5% error in the estimation of the mean rainfall, calculate the minimum number of additional stations required to be established in the catchment.

- b)** Describe the salient characteristics of precipitation on India. **05**

- Q.3 a)** Define Correlation and its types along with graphical representation. **04**

- b)** Analysis of data on maximum one-day rainfall depth at Madras indicated that a depth of 280 mm had a return period of 50 years. Determine the probability of a one-day rainfall depth equal to or greater than 280 mm at Madras occurring (a) Once in 20 successive years, (b) Two times in 15 successive years, and (c) At least once in 20 successive years. **05**

- Q.4 a)** List the factors affecting the seasonal and annual runoff of a catchment. Describe each in detail. **04**

- b)** A small watershed is 250 ha in size has group C soil. The land cover can be classified as 30% open forest and 70% poor quality pasture. Assuming AMC at average condition and the soil to be black cotton soil, estimate the direct runoff volume due to rainfall of 75 mm in one day. Take CN for open forest and Pasture as 60 and 86 respectively. **05**

- Q.5 a)** What is sequent peak algorithm? Discuss the procedure involved in the analysis of sequent peak along with suitable sketches. **04**

- b)** A storm with 10 cm of precipitation produced a direct runoff of 5.8 cm. The duration of the rainfall was 16 hours and its distribution is given as below. Estimate the  $\phi$ -index of the storm. **05**

Time from start (h)	0	2	4	6	8	10	12	14	16
Cumulative rainfall (cm)	0	0.4	1.3	2.8	5.1	6.9	8.5	9.5	10.0

**Section – II**

**Q.6** Given the ordinates of a 4-h unit hydrograph as below: **10**

Time (h)	0	4	8	12	16	20	24	28	32	36	40	44
Ordinate of 4-h UH ( $\text{m}^3/\text{s}$ )	0	20	80	130	150	130	90	52	27	15	5	0

Derive the ordinates of 12-h for the same catchment.

**Q.7 a)** Explain the term Rainfall Excess (ER). How is ERH of a storm obtained? **04**  
**b)** What is an Instantaneous unit-hydrograph? What are the characteristics of IUH? **05**

**Q.8 a)** Distinguish between Storage routing and Channel routing. **04**  
**b)** Route the following flood hydrograph through a river reach for which  $K = 12.0$  h and  $x = 0.15$ . At the start of the inflow flood, the outflow discharge is  $10 \text{ m}^3/\text{s}$ . **05**

Time (h)	0	6	12	18	24	30	36	42	48	54
Inflow ( $\text{m}^3/\text{s}$ )	10	20	50	60	55	45	35	27	20	15

**Q.9 a)** Enlist the major causes of urban flooding. **05**  
**b)** Discuss any two the following in detail: **04**  
 1) Water Sensitive Urban Design (WSUD)

**Q.6** Given the ordinates of a 4-h unit hydrograph as below: **10**

Time (h)	0	4	8	12	16	20	24	28	32	36	40	44
Ordinate of 4-h UH ( $\text{m}^3/\text{s}$ )	0	20	80	130	150	130	90	52	27	15	5	0

Derive the ordinates of 12-h for the same catchment.

**Q.7 a)** Explain the term Rainfall Excess (ER). How is ERH of a storm obtained? **04**  
**b)** What is an Instantaneous unit-hydrograph? What are the characteristics of IUH? **05**

**Q.8 a)** Distinguish between Storage routing and Channel routing. **04**  
**b)** Route the following flood hydrograph through a river reach for which  $K = 12.0$  h and  $x = 0.15$ . At the start of the inflow flood, the outflow discharge is  $10 \text{ m}^3/\text{s}$ . **05**

Time (h)	0	6	12	18	24	30	36	42	48	54
Inflow ( $\text{m}^3/\text{s}$ )	10	20	50	60	55	45	35	27	20	15

**Q.9 a)** Enlist the major causes of urban flooding. **05**  
**b)** Discuss any two the following in detail: **04**

- 1) Water Sensitive Urban Design (WSUD)
- 2) Low Impact Development (LID)
- 3) Sustainable Urban Drainage System (SUDS)
- 4) Best Management Practices (BMPs)

**Fourth Y. (B. Tech) (Sem – II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Advanced Concrete Technology**

Day & Date: Thursday, 16-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) In Section – I Q. No. 2 is compulsory and solve any two questions from remaining questions. (Q. No. 3, 4 and 5)  
 2) In Section – II Q. No. 6 is compulsory and solve any two questions from remaining questions. (Q. No. 7, 8 and 9)  
 3) Figures to the right indicates full marks.  
 4) Use of non-programmable calculator is allowed.  
 5) Assume suitable data if necessary and mention it clearly.

**Section – I**

- |            |  |           |
|------------|--|-----------|
| <b>Q.2</b> | Classify the various concrete chemicals based on their use.  | <b>10</b> |
| <b>Q.3</b> | Compare the relative merits and demerits of various workability tests.   | <b>09</b> |
| <b>Q.4</b> | Discuss the maturity of concrete. How is it measured? What are its uses in concrete industry?  | <b>09</b> |
| <b>Q.5</b> | How can aggregate cause efflorescence in concrete? How does the maximum size of aggregate affect the workability of concrete with given water content? | <b>09</b> |

**Section – II**

- |            |   |           |
|------------|---|-----------|
| <b>Q.6</b> | Describe the methods of manufacturing of ferro-cement.  | <b>10</b> |
| <b>Q.7</b> | What are the particular requirements for pumpability of a concrete mix?   | <b>09</b> |
| <b>Q.8</b> | What are the special precautions to be adopted on the site for efficiently using ready mixed concrete? Explain in detail. | <b>09</b> |
| <b>Q.9</b> | What are the particular problems in pumping lightweight aggregate concrete?   | <b>09</b> |

**Advanced Concrete Technology**

Day & Date: Thursday, 16-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries two marks.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options. (2 marks each)**

**14**

- 1) The strength of light-weight concrete depends upon \_\_\_\_\_.  
 a) Density of concrete                      b) Size of aggregates  
 c) Type of cement                              d) Mix proportion
- 2) The temporary joints left between the subsequent concreting operation is \_\_\_\_\_.  
 a) Contraction joints                              b) Construction joints  
 c) Isolation joints                                  d) Expansion joints
- 3) If the slump of the concrete mix is 75mm, its workability is considered to be \_\_\_\_\_.  
 a) Very high    b) High  
 c) Medium    d) Low
- 4) Fineness of cement is done by the sieve \_\_\_\_\_.  
 a) 600 $\mu$     b) 300 $\mu$   
 c) 150 $\mu$     d) 90 $\mu$
- 5) Which of the following statement(s) is incorrect?  
 a) The use of larger size and/or rounded aggregate gives higher workability.  
 b) For the same water content, use of finer sand increases the workability  
 c) The grading of fine aggregate is more critical than the grading of coarse aggregate for workability  
 d) For high-strength concrete a coarser grading is preferred
- 6) Modulus of elasticity of concrete can be assumed as \_\_\_\_\_.  
 a)  $5000\sqrt{f_{ck}}$     b)  $0.7\sqrt{f_{ck}}$   
 c)  $200\text{ KN/mm}^2$                                       d)  $0.27\sqrt{f_{ck}}$
- 7) To calculate tensile strength of concrete from the compressive strength, the following formula may be used \_\_\_\_\_.  
 a)  $5000\sqrt{f_{ck}}$     b)  $0.7\sqrt{f_{ck}}$   
 c)  $200\text{ KN/mm}^2$                                       d)  $0.27\sqrt{f_{ck}}$

Day & Date: Thursday, 16-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Culvert is the type of bridge whose span is \_\_\_\_\_.  
 a) Between 6m-60m                      b) Above 60m  
 c) Less than 6m                          d) None of these
- 2) For small bridges, with open foundations, the economical span is approximately equal to \_\_\_\_\_ times height of Pier.  
 a) 2.0    b) 1.2  
 c) 1.0    d) 1.5
- 3) Total load in case of IRC 70R tracked loading is \_\_\_\_\_.  
 a) 700kN                                      b) 710kN  
 c) 1000kN                                    d) 554kN
- 4) For spans greater than 9m, impact factor for wheeled vehicle is \_\_\_\_\_.  
 a) 10%                                        b) 20%  
 c) 25%                                        d) 15%
- 5) The ground contact length of the track of IRC class AA loading is \_\_\_\_\_.  
 a) 3.6m                                        b) 4.57m  
 c) 3.5m                                        d) None of these
- 6) Impact force for IRC class A & B is given by \_\_\_\_\_.  
 a)  $I_f = \frac{AB}{B + L}$                                       b)  $I_f = \frac{B + L}{A}$   
 c)  $I_f = \frac{A}{B + L}$                                       d) None of these
- 7) Total load of class AA wheeled is \_\_\_\_\_.  
 a) 700kN                                      b) 400kN  
 c) 554kN                                      d) 332kN
- 8) Braking force is assumed to act along the line parallel to roadway & \_\_\_\_\_ above it.  
 a) 1.2m                                        b) 1.5m  
 c) 1.8m                                        d) 2.0m

- 9) Solid deck slab is adopted for spans \_\_\_\_\_.  
a) More than 8m                      b) More than 20m  
c) Less than 8m                      d) Between 10-25m
- 10) The pier cap or abutment cap should be of minimum \_\_\_\_\_ concrete.  
a) M20 grade                      b) M25 grade  
c) M30 grade                      d) Any one of these
- 11) Following is not the function of the pier cap or abutment cap \_\_\_\_\_.  
a) Provides immediate bearing surface for the support of the super structure at pier and abutment location  
b) Disperses the strip load from bearing to the substructure evenly.  
c) Prevent rain water from dripping down the sides and ends of the pier.  
d) Resist all horizontal forces acting on bridges.
- 12) In case of urban site, suitable pier is \_\_\_\_\_.  
a) Cellular pier                      b) Trestle pier  
c) Inboard pier                      d) Hammerhead pier
- 13) Fixed bearing allow \_\_\_\_\_.  
a) Rotation only  
b) Translation only  
c) Both rotational as well as translation  
d) Restrict rotation as well as translation
- 14) Two span girder requires \_\_\_\_\_.  
a) Fixed bearing at central support & expansion bearing at the two abutments  
b) Fixed bearing at all supports  
c) Expansion bearing on all supports  
d) Expansion bearing at central support & Fixed bearing at the two abutments

<b>Seat No.</b>

<b>Set</b>	<b>P</b>
------------	----------

**Fourth Y. (B. Tech) (Sem – II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Design of Bridges**

Day & Date: Thursday, 16-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Question no. 4 is compulsory in section I, and solve any two questions from the remaining.  
 2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data wherever necessary and mention it clearly.

**Section – I**

**Q.2 Answer any four questions.**

- a) What are the basic components of bridge structure? Explain with the help of Sketch with their functions. **05**  
 b) What is economical span? Derive the equation for the same. **04**

**Q.3 Find the design bending moment of Two-lane bridge solid deck slab for following data: **09****

- a) Effective span- 7 m  
 b) Carriage way width -9 m  
 c) Kerb- 600 x 275 on both side  
 d) Live load- IRC Class A (Two lane)  
 e) Wearing coat - 100 mm thick  
 f) Use M-25 concrete and Fe-415 steel  
 g) Use  $\alpha = 2.82$

**Q.4 A RCC T beam type bridge having deck slab of 225 mm thick, wearing coat of 90 mm thick, three longitudinal girders and five cross girders. Determine the Design bending moment for all the longitudinal girders. Use following additional data **10****

- a) Carriage way width-7.5 m  
 b) Span of bridge -14m  
 c) Live Load - IRC class AA Tracked  
 d) Kerb- 600 mm wide, 400 mm deep  
 e) Web thickness for Longitudinal and cross girder- 300 mm  
 f) Longitudinal Girder spacing - 280 mm  
 g) Use M-30 concrete and Fe -415 steel

**Q.5 Design a slab panel having size of 3 m x 3.5 m. Consider IRC class AA tracked loading. Use Pigeaud's chart. Consider thickness of slab as 200 mm and wearing coat thickness as 80 mm. Use M- 25 concrete and Fe- 415 steel. Refer Fig 1 and 2 for Pigeuad's coefficient. **09****

## Section – II

- Q.6** Verify the adequacy of pier for the following data: **10**  
 Top width of pier- 1.8 m, Height of pier upto springing level -14 m, C/C distance of bearing-1.2 m, Side batter 1:14, HFL-1.2 m below the bearing level. Span of bridge- 14 m, Self weight of the superstructure =200 kN/m, Live load- IRC class AA tracked. Material of pier = M20 concrete.
- Q.7** Verify the suitability of abutment as shown in the fig 7.1 Use following data **09**  
 Density of soil -  $19 \text{ kN/m}^3$ , Friction angle of soil ( $\phi$ )  $31^\circ$   
 Coefficient of friction - 0.6, Live load IRC class AA tracked.

Fig no 7.1

- Q.8 a)** Design a elastomeric unreinforced bearing pad for following data **05**  
 Vertical load (sustained) = 195 kN,  
 Vertical load (dynamic) = 100 kN,  
 Horizontal force = 95 kN  
 Modulus of rigidity of elastomer-1 N/mm<sup>2</sup>  
 coefficient of friction = 0.35
- b)** Write a note on types of expansion joints. **04**
- Q.9 Write a note on following (Any three).** **09**
- Cantilever method of construction
  - Functions of bearing
  - Approach slab
  - Reinforced earth retaining wall
  - Types of bridge inspection

<b>Seat No.</b>

Day & Date: Thursday, 16-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Braking force is assumed to act along the line parallel to roadway & \_\_\_\_\_ above it.
 

a) 1.2m	b) 1.5m
c) 1.8m	d) 2.0m
- 2) Solid deck slab is adopted for spans \_\_\_\_\_.
 

a) More than 8m	b) More than 20m
c) Less than 8m	d) Between 10-25m
- 3) The pier cap or abutment cap should be of minimum \_\_\_\_\_ concrete.
 

a) M20 grade	b) M25 grade
c) M30 grade	d) Any one of these
- 4) Following is not the function of the pier cap or abutment cap \_\_\_\_\_.
 

a) Provides immediate bearing surface for the support of the super structure at pier and abutment location
b) Disperses the strip load from bearing to the substructure evenly.
c) Prevent rain water from dripping down the sides and ends of the pier.
d) Resist all horizontal forces acting on bridges.
- 5) In case of urban site, suitable pier is \_\_\_\_\_.
 

a) Cellular pier	b) Trestle pier
c) Inboard pier	d) Hammerhead pier
- 6) Fixed bearing allow \_\_\_\_\_.
 

a) Rotation only
b) Translation only
c) Both rotational as well as translation
d) Restrict rotation as well as translation

- 7) Two span girder requires \_\_\_\_\_.  
 a) Fixed bearing at central support & expansion bearing at the two abutments  
 b) Fixed bearing at all supports  
 c) Expansion bearing on all supports  
 d) Expansion bearing at central support & Fixed bearing at the two abutments
- 8) Culvert is the type of bridge whose span is \_\_\_\_\_.  
 a) Between 6m-60m                      b) Above 60m  
 c) Less than 6m                          d) None of these
- 9) For small bridges, with open foundations, the economical span is approximately equal to \_\_\_\_\_ times height of Pier.  
 a) 2.0    b) 1.2  
 c) 1.0    d) 1.5
- 10) Total load in case of IRC 70R tracked loading is \_\_\_\_\_.  
 a) 700kN                                      b) 710kN  
 c) 1000kN                                    d) 554kN
- 11) For spans greater than 9m, impact factor for wheeled vehicle is \_\_\_\_\_.  
 a) 10%                                        b) 20%  
 c) 25%                                        d) 15%
- 12) The ground contact length of the track of IRC class AA loading is \_\_\_\_\_.  
 a) 3.6m                                        b) 4.57m  
 c) 3.5m                                        d) None of these
- 13) Impact force for IRC class A & B is given by \_\_\_\_\_.  
 a)  $I_f = \frac{AB}{B + L}$                                       b)  $I_f = \frac{B + L}{A}$   
 c)  $I_f = \frac{A}{B + L}$                                       d) None of these
- 14) Total load of class AA wheeled is \_\_\_\_\_.  
 a) 700kN                                      b) 400kN  
 c) 554kN                                      d) 332kN

<b>Set</b>	<b>Q</b>
------------	----------

**Fourth Y. (B. Tech) (Sem – II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Design of Bridges**

Day & Date: Thursday, 16-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Question no. 4 is compulsory in section I, and solve any two questions from the remaining.  
 2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data wherever necessary and mention it clearly.

**Section – I**

**Q.2 Answer any four questions.**

- a) What are the basic components of bridge structure? Explain with the help of Sketch with their functions. **05**  
 b) What is economical span? Derive the equation for the same. **04**

**Q.3 Find the design bending moment of Two-lane bridge solid deck slab for following data: **09****

- a) Effective span- 7 m  
 b) Carriage way width -9 m  
 c) Kerb- 600 x 275 on both side  
 d) Live load- IRC Class A (Two lane)  
 e) Wearing coat - 100 mm thick  
 f) Use M-25 concrete and Fe-415 steel  
 g) Use  $\alpha = 2.82$

**Q.4 A RCC T beam type bridge having deck slab of 225 mm thick, wearing coat of 90 mm thick, three longitudinal girders and five cross girders. Determine the Design bending moment for all the longitudinal girders. Use following additional data **10****

- a) Carriage way width-7.5 m  
 b) Span of bridge -14m  
 c) Live Load - IRC class AA Tracked  
 d) Kerb- 600 mm wide, 400 mm deep  
 e) Web thickness for Longitudinal and cross girder- 300 mm  
 f) Longitudinal Girder spacing - 280 mm  
 g) Use M-30 concrete and Fe -415 steel

**Q.5 Design a slab panel having size of 3 m x 3.5 m. Consider IRC class AA tracked loading. Use Pigeaud's chart. Consider thickness of slab as 200 mm and wearing coat thickness as 80 mm. Use M- 25 concrete and Fe- 415 steel. Refer Fig 1 and 2 for Pigeuad's coefficient. **09****

## Section – II

- Q.6** Verify the adequacy of pier for the following data: **10**  
 Top width of pier- 1.8 m, Height of pier upto springing level -14 m, C/C distance of bearing-1.2 m, Side batter 1:14, HFL-1.2 m below the bearing level. Span of bridge- 14 m, Self weight of the superstructure =200 kN/m, Live load- IRC class AA tracked. Material of pier = M20 concrete.
- Q.7** Verify the suitability of abutment as shown in the fig 7.1 Use following data **09**  
 Density of soil -  $19 \text{ kN/m}^3$ , Friction angle of soil ( $\phi$ )  $31^\circ$   
 Coefficient of friction - 0.6, Live load IRC class AA tracked.

Fig no 7.1

- Q.8** a) Design a elastomeric unreinforced bearing pad for following data **05**  
 Vertical load (sustained) = 195 kN,  
 Vertical load (dynamic) = 100 kN,  
 Horizontal force = 95 kN  
 Modulus of rigidity of elastomer-1 N/mm<sup>2</sup>  
 coefficient of friction = 0.35
- b) Write a note on types of expansion joints. **04**
- Q.9** Write a note on following (Any three). **09**  
 a) Cantilever method of construction  
 b) Functions of bearing  
 c) Approach slab  
 d) Reinforced earth retaining wall  
 e) Types of bridge inspection

<b>Seat No.</b>

Day & Date: Thursday, 16-02-2023  
Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
3) Figures to the right indicates full marks.  
4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Following is not the function of the pier cap or abutment cap \_\_\_\_\_.
  - a) Provides immediate bearing surface for the support of the super structure at pier and abutment location
  - b) Disperses the strip load from bearing to the substructure evenly.
  - c) Prevent rain water from dripping down the sides and ends of the pier.
  - d) Resist all horizontal forces acting on bridges.
- 2) In case of urban site, suitable pier is \_\_\_\_\_.
  - a) Cellular pier
  - b) Trestle pier
  - c) Inboard pier
  - d) Hammerhead pier
- 3) Fixed bearing allow \_\_\_\_\_.
  - a) Rotation only
  - b) Translation only
  - c) Both rotational as well as translation
  - d) Restrict rotation as well as translation
- 4) Two span girder requires \_\_\_\_\_.
  - a) Fixed bearing at central support & expansion bearing at the two abutments
  - b) Fixed bearing at all supports
  - c) Expansion bearing on all supports
  - d) Expansion bearing at central support & Fixed bearing at the two abutments
- 5) Culvert is the type of bridge whose span is \_\_\_\_\_.
  - a) Between 6m-60m
  - b) Above 60m
  - c) Less than 6m
  - d) None of these
- 6) For small bridges, with open foundations, the economical span is approximately equal to \_\_\_\_\_ times height of Pier.
  - a) 2.0
  - b) 1.2
  - c) 1.0
  - d) 1.5

 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Impact force for IRC class A & B is given by \_\_\_\_\_.
  - a)  $I_f = \frac{AB}{B + L}$
  - b)  $I_f = \frac{B + L}{A}$
  - c)  $I_f = \frac{A}{B + L}$
  - d) None of these
- 2) Total load of class AA wheeled is \_\_\_\_\_.
  - a) 700kN
  - b) 400kN
  - c) 554kN
  - d) 332kN
- 3) Braking force is assumed to act along the line parallel to roadway & \_\_\_\_\_ above it.
  - a) 1.2m
  - b) 1.5m
  - c) 1.8m
  - d) 2.0m
- 4) Solid deck slab is adopted for spans \_\_\_\_\_.
  - a) More than 8m
  - b) More than 20m
  - c) Less than 8m
  - d) Between 10-25m
- 5) The pier cap or abutment cap should be of minimum \_\_\_\_\_ concrete.
  - a) M20 grade
  - b) M25 grade
  - c) M30 grade
  - d) Any one of these
- 6) Following is not the function of the pier cap or abutment cap \_\_\_\_\_.
  - a) Provides immediate bearing surface for the support of the super structure at pier and abutment location
  - b) Disperses the strip load from bearing to the substructure evenly.
  - c) Prevent rain water from dripping down the sides and ends of the pier.
  - d) Resist all horizontal forces acting on bridges.
- 7) In case of urban site, suitable pier is \_\_\_\_\_.
  - a) Cellular pier
  - b) Trestle pier

Day & Date: Monday, 20-02-2023  
Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks  
4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Once the head wore out during service, the rail could be inverted and reused. In which type of the rail this facility is available?
  - a) Double headed rail
  - b) Bull Headed rail
  - c) Flat footed rail
  - d) Both Bull headed and Double headed rails
- 2) For a sleeper density of  $(n+6)$ , number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is: \_\_\_\_\_.
  - a) 975
  - b) 918
  - c) 950
  - d) 980
- 3) Bearing plates are used to fix \_\_\_\_\_.
  - a) Flat footed rails to the wooden sleepers
  - b) Double headed rails to the wooden sleepers
  - c) Bull headed rails to the wooden sleepers
  - d) Flat footed rails to the cast iron sleepers
- 4) The standard length of rail for Broad Gauge and Meter Gauge are respectively, \_\_\_\_\_.
  - a) 12m and 12m
  - b) 13m and 12m
  - c) 12m and 13m
  - d) 13m and 13m
- 5) Longitudinal movement of rails with respect to sleepers is called?
  - a) Coning of wheels
  - b) Creep of rails
  - c) Wear of rails
  - d) Tilting of rails
- 6) The angle between the gauge faces of the stock rail and tongue rail is called?
  - a) Switch angle
  - b) Angle of crossing
  - c) Angle of turnout
  - d) None of these

**Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Railway & Harbour Engineering**

Day & Date: Monday, 20-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Figures to the right indicates full marks.  
 2) Assume suitable data wherever needed and mention it clearly.  
 3) In Section-I, Q. No. 2 is compulsory and solve any ONE full question from remaining questions Q. No. 3 and 4.  
 4) In Section-II, Q. No. 5 is compulsory and solve any full ONE full question from remaining questions Q. No. 6 and 7.

**Section – I**

**Q.2 Answer any two questions** **10**

- a) What do you understand by gauge? Mention the different gauges used on Indian Railways and its suitability.
- b) Discuss the necessity and effects of coning of wheels and tilting of rails.
- c) Draw a neat sketch of a left-hand-turn out and name its various components. Describe any one method of designing a turnout.

**Q.3 Answer any three questions** **18**

- a) Calculate the superelevation and the maximum permissible speed for a  $2^\circ$  BG transitioned curve on a high-speed route with a maximum sanctioned speed of 110 km/h. The speed for calculating the equilibrium superelevation as decided by the chief engineer is 80 km/h and the booked speed of goods trains is 50 km/h. Assume  $G=1750\text{mm}$  and  $\text{Radius}=875\text{m}$ .
- b) Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22tonne each can pull on a straight level track at a speed of 80 km/h. Also calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. Assume the coefficient of friction to be 0.2.
- c) If a  $8^\circ$  curve track diverges from a main curve of  $5^\circ$  in an opposite direction in the layout of B. G. Yard, calculate the super elevation and the speed on the branch line, if the maximum speed permitted on the main line is 45 kmph. Assume any data required suitably. Use 30m arc length.
- d) What is superelevation? Why is it necessary to provide superelevation on the curves of a railway track?

**Q.4 Answer any three questions** **18**

- a) What is meant by a crossing number and a crossing angle? How is crossing angle determined? Explain methods for the same.
- b) Differentiate between the following:
  - 1) Reception signals and departure signals
  - 2) Semaphore signal and warner signal
  - 3) Repeating signal and co-acting signal

- c) Illustrate the working principle of key interlocking and mechanical interlocking with merits and de-merits.
- d) Compare the various characteristics of steam, diesel and electric traction.

### Section – II

#### Q.5 Answer any two questions

10

- a) What are the imaginary surfaces? Explain any two imaginary surfaces with neat sketch.
- b) What is a wind rose diagram? What are its types and explain any one with neat sketch?
- c) What are the fenders? Why are they used? Describe various types of fenders with sketches.

#### Q.6 Answer any three questions

18

- a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle of turn is  $35^\circ$  and the maximum turn-off speed is 80 kmph. Assume radius of entrance curve = 731m, runway width = 45m, taxiway width = 22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m
- b) Define breakwater and list the different types of breakwaters. Explain any one with neat sketch.
- c) What are dolphins? Describe their types.
- d) Explain with neat sketches the limiting heights of objects in the approach and turning zone of an instrumental runway.

#### Q.7 Answer any three questions

18

- a) Explain how the basic runway length is determined on the basis of the performance characteristics of jet and conventional engine aircrafts.
- b) The length of a runway under standard conditions is 2100m. The airport is to be provided at elevation of 410m above the mean sea level. The airport reference temperature is  $32^\circ\text{C}$ . Determine the length of runway. Apply corrections for elevation and temperature as per ICAO and for gradient as per FAA specifications. The construction plan provides following data:

End to end of runway (m) 0-320	0 to 320	300 to 900	900 to 1500	1500 to 1800	1800 to 2100	2100 to 2700	2700 to 3000
Grade (%)	+1.00	-0.50	+0.50	+ 1.00	-0.50	-0.40	-0.10

- c) Draw a neat sketch of dry dock (plan and section) and label all components, and explain the working principle of dry dock.
- d) Determine the turning radius of the taxiway for a supersonic transport aircraft with a wheel base of 30m and tread of main landing gear as 7.2 m for a design turning speed of 60kmph. Assume co-efficient of friction between tyre and pavement surface as 0.13 and width of taxiway pavement as 22.50m.

-----	---

**Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Railway & Harbour Engineering**

Day & Date: Monday, 20-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Match List-I (Signals) with List-II (Function) and select the correct answer using the code given below:

List-I		List-II	
A	Outer signal	1	Departure signal
B	Starter Signal	2	Reception signal
C	Repeater signal	3	Shunting signal
D	Disc signal	4	Co-acting signal

Codes:

- |    |   |   |   |   |
|----|---|---|---|---|
|    | A | B | C | D |
| a) | 3 | 4 | 1 | 2 |
| b) | 2 | 1 | 4 | 3 |
| c) | 3 | 1 | 4 | 2 |
| d) | 2 | 4 | 1 | 3 |
- 2) In type-II Windrose Diagram covers \_\_\_\_\_.  
 a) Direction and duration of Wind  
 b) Only Duration of Wind  
 c) Only Direction of Wind  
 d) Direction, duration and intensity of wind
- 3) Which one of the following instance of performance of aircraft is not considered for determining basic runway length?  
 a) Normal Landing Case                      b) Normal take-off case  
 c) Engine failure case                      d) Emergency landing case
- 4) The runway length after correcting for elevation and temperature is 2845m. If the effective gradient on runway is 0.5%, then the revised runway length will be: \_\_\_\_\_.  
 a) 2845m    b) 2910m  
 c) 3030m    d) 3130m
- 5) The phenomenon of movement and deposition of sand in a zig-zag style due to drifting of sand in the vicinity of coast is called:  
 a) Littoral drift                                  b) Sedimentation  
 c) Beach drift                                    d) Trough action

- 6) \_\_\_\_\_ is a structure constructed at the tip of a breakwater near the harbour entrance.
- a) Dolphin
  - b) Wharf
  - c) Pier heads
  - d) Jetties
- 7) Slip is the space of water area between two \_\_\_\_\_.
- a) Adjacent fenders
  - b) Adjacent piers
  - c) Adjacent jetties
  - d) Adjacent dolphins
- 8) Once the head wore out during service, the rail could be inverted and reused. In which type of the rail this facility is available?
- a) Double headed rail
  - b) Bull Headed rail
  - c) Flat footed rail
  - d) Both Bull headed and Double headed rails
- 9) For a sleeper density of  $(n+6)$ , number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is: \_\_\_\_\_.
- a) 975
  - b) 918
  - c) 950
  - d) 980
- 10) Bearing plates are used to fix \_\_\_\_\_.
- a) Flat footed rails to the wooden sleepers
  - b) Double headed rails to the wooden sleepers
  - c) Bull headed rails to the wooden sleepers
  - d) Flat footed rails to the cast iron sleepers
- 11) The standard length of rail for Broad Gauge and Meter Gauge are respectively, \_\_\_\_\_.
- a) 12m and 12m
  - b) 13m and 12m
  - c) 12m and 13m
  - d) 13m and 13m
- 12) Longitudinal movement of rails with respect to sleepers is called?
- a) Coning of wheels
  - b) Creep of rails
  - c) Wear of rails
  - d) Tilting of rails
- 13) The angle between the gauge faces of the stock rail and tongue rail is called?
- a) Switch angle
  - b) Angle of crossing
  - c) Angle of turnout
  - d) None of these
- 14) Which one of the following types of steel is used in the manufacturing of metro and mono rails?
- a) Mild Steel
  - b) Cast steel
  - c) Manganese Steel
  - d) Bessemer Steel

**Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Railway & Harbour Engineering**

Day & Date: Monday, 20-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Figures to the right indicates full marks.  
 2) Assume suitable data wherever needed and mention it clearly.  
 3) In Section-I, Q. No. 2 is compulsory and solve any ONE full question from remaining questions Q. No. 3 and 4.  
 4) In Section-II, Q. No. 5 is compulsory and solve any full ONE full question from remaining questions Q. No. 6 and 7.

**Section – I**

**Q.2 Answer any two questions** **10**

- What do you understand by gauge? Mention the different gauges used on Indian Railways and its suitability.
- Discuss the necessity and effects of coning of wheels and tilting of rails.
- Draw a neat sketch of a left-hand-turn out and name its various components. Describe any one method of designing a turnout.

**Q.3 Answer any three questions** **18**

- Calculate the superelevation and the maximum permissible speed for a  $2^\circ$  BG transitioned curve on a high-speed route with a maximum sanctioned speed of 110 km/h. The speed for calculating the equilibrium superelevation as decided by the chief engineer is 80 km/h and the booked speed of goods trains is 50 km/h. Assume  $G=1750\text{mm}$  and  $\text{Radius}=875\text{m}$ .
- Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22tonne each can pull on a straight level track at a speed of 80 km/h. Also calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. Assume the coefficient of friction to be 0.2.
- If a  $8^\circ$  curve track diverges from a main curve of  $5^\circ$  in an opposite direction in the layout of B. G. Yard, calculate the super elevation and the speed on the branch line, if the maximum speed permitted on the main line is 45 kmph. Assume any data required suitably. Use 30m arc length.
- What is superelevation? Why is it necessary to provide superelevation on the curves of a railway track?

**Q.4 Answer any three questions** **18**

- What is meant by a crossing number and a crossing angle? How is crossing angle determined? Explain methods for the same.
- Differentiate between the following:
  - Reception signals and departure signals
  - Semaphore signal and warner signal
  - Repeating signal and co-acting signal

- c) Illustrate the working principle of key interlocking and mechanical interlocking with merits and de-merits.
- d) Compare the various characteristics of steam, diesel and electric traction.

### Section – II

#### Q.5 Answer any two questions

10

- a) What are the imaginary surfaces? Explain any two imaginary surfaces with neat sketch.
- b) What is a wind rose diagram? What are its types and explain any one with neat sketch?
- c) What are the fenders? Why are they used? Describe various types of fenders with sketches.

#### Q.6 Answer any three questions

18

- a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle of turn is  $35^\circ$  and the maximum turn-off speed is 80 kmph. Assume radius of entrance curve = 731m, runway width = 45m, taxiway width = 22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m
- b) Define breakwater and list the different types of breakwaters. Explain any one with neat sketch.
- c) What are dolphins? Describe their types.
- d) Explain with neat sketches the limiting heights of objects in the approach and turning zone of an instrumental runway.

#### Q.7 Answer any three questions

18

- a) Explain how the basic runway length is determined on the basis of the performance characteristics of jet and conventional engine aircrafts.
- b) The length of a runway under standard conditions is 2100m. The airport is to be provided at elevation of 410m above the mean sea level. The airport reference temperature is  $32^\circ\text{C}$ . Determine the length of runway. Apply corrections for elevation and temperature as per ICAO and for gradient as per FAA specifications. The construction plan provides following data:

End to end of runway (m) 0-320	0 to 320	300 to 900	900 to 1500	1500 to 1800	1800 to 2100	2100 to 2700	2700 to 3000
Grade (%)	+1.00	-0.50	+0.50	+ 1.00	-0.50	-0.40	-0.10

- c) Draw a neat sketch of dry dock (plan and section) and label all components, and explain the working principle of dry dock.
- d) Determine the turning radius of the taxiway for a supersonic transport aircraft with a wheel base of 30m and tread of main landing gear as 7.2 m for a design turning speed of 60kmph. Assume co-efficient of friction between tyre and pavement surface as 0.13 and width of taxiway pavement as 22.50m.

#### Q.6 Answer any three questions

18

- a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle of turn is  $35^\circ$  and the maximum turn-off speed is 80 kmph. Assume radius of entrance curve = 731m, runway width = 45m, taxiway width = 22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m
- b) Define breakwater and list the different types of breakwaters. Explain any one with neat sketch.
- c) What are dolphins? Describe their types.
- d) Explain with neat sketches the limiting heights of objects in the approach and turning zone of an instrumental runway.

#### Q.7 Answer any three questions

18

- a) Explain how the basic runway length is determined on the basis of the performance characteristics of jet and conventional engine aircrafts.
- b) The length of a runway under standard conditions is 2100m. The airport is to be provided at elevation of 410m above the mean sea level. The airport reference temperature is  $32^\circ\text{C}$ . Determine the length of runway. Apply corrections for elevation and temperature as per ICAO and for gradient as per FAA specifications. The construction plan provides following data:

End to end of runway (m) 0-320	0 to 320	300 to 900	900 to 1500	1500 to 1800	1800 to 2100	2100 to 2700	2700 to 3000
Grade (%)	+1.00	-0.50	+0.50	+ 1.00	-0.50	-0.40	-0.10

- c) Draw a neat sketch of dry dock (plan and section) and label all components, and explain the working principle of dry dock.
- d) Determine the turning radius of the taxiway for a supersonic transport aircraft with a wheel base of 30m and tread of main landing gear as 7.2 m for a design turning speed of 60kmph. Assume co-efficient of friction between tyre and pavement surface as 0.13 and width of taxiway pavement as 22.50m.

## Open Elective-III: Economic policies in India

Max. Marks: 70

Time: 02:00 PM To 05:00 PM

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks

### MCQ/Objective Type Questions

Marks: 14

14

- 1) LPG model of Deployment was introduced in \_\_\_\_\_.  
a) 1990                                      b) 1962  
c) 1991                                      d) none of these
- 2) Water seed fertilizer technology popularly known as \_\_\_\_\_.  
a) Growth development                  b) Green revolution  
c) Peasant reforms                        d) None of these
- 3) Consider the following statements:  
I) Bulk of employment is in rural areas.  
II) The disguised unemployment in agricultural sector is perennial  
III) Industrialisation rendered several people jobless in India  
Which of the statement given below is/are correct?  
a) I and II                                      b) I and III  
c) I, II and III                                d) None of these
- 4) The price level is the \_\_\_\_\_.  
a) weighted average price of all goods  
b) weighted average price of all goods and services  
c) weighted average price of all services  
d) weighted average price of exported goods and services
- 5) Which of the following is the best measure of how inflation affects consumers?  
a) The increase in the price of gold  
b) The increase in the consumer price index  
c) The increase in the price of a single product  
d) The decrease in the consumer price index
- 6) When rational consumers expect inflation to occur, they are more likely to \_\_\_\_\_.  
a) Buy expensive goods sooner  
b) Postpone the purchase of expensive goods.  
c) Hoard dollars  
d) Invest in newly issued fixed rate bonds that have not accounted for the expected inflation

- 7) Green Revolution resulted in significant increase of agricultural productivity due to \_\_\_\_\_.  
a) High yielding variety of grains  
b) Use of pesticides  
c) Improved management techniques  
d) All the three
- 8) The choice between high markups and high volume is part of which of the following retailer marketing decisions?  
a) Target market decisions  
b) Product assortment and services decisions  
c) Pricing decisions  
d) Promotion decisions
- 9) Technological advances, shifts in consumer tastes, and increased competition, all of which reduce demand for a product are typical of which stage in the PLC?  
a) decline stage  
b) introduction stage  
c) growth stage  
d) maturity stage
- 10) What particular market failure does the “market failure argument” against free trade refer to?  
a) Knowledge and technology spill-overs  
b) Unemployment  
c) Environmental externalities  
d) Any market failure that occurs in the tradable sector
- 11) Selling of state owned assets \_\_\_\_\_.  
a) Deregulation  
b) Privatisation  
c) Integration  
d) Nationalisation
- 12) The Keynesian theory of employment provides the solution of?  
a) Frictional unemployment  
b) Disguised unemployment  
c) Cyclical unemployment  
d) Seasonal unemployment
- 13) A nation's balance of trade is equal to its exports less its imports of \_\_\_\_\_.  
a) goods  
b) goods and services  
c) financial assets  
d) official reserves
- 14) If exchange rates float freely, the exchange rate for any currency is determined by the \_\_\_\_\_.  
a) demand for it  
b) supply of it  
c) demand for and the supply of it  
d) official reserves that back it

- 2) Which among the following form a type on intellectual property?
 

i) Trade secret	
ii) Digital signature	
iii) Trademarks	
iv) Copyrights	
a) 1,2,3 and 4	b) 1,3 and 4
c) 3 and 4	d) 2,3 and 4
  
- 3) What does a trademark protect?
 

a) Invention	b) Work of art
c) Logo	d) Secret formula
  
- 4) Which among following is not a provision in Indian Factory act
 

a) Health	b) Welfare
c) Minimum Wages	d) Safety
  
- 5) Which is similarity in Mediation and Conciliation?
 

a) They should be same	b) They both use a messenger
c) They are same	d) There isn't any similarity
  
- 6) Lok Adalat means
 

a) Women's court	b) Men's court
c) people's court	d) Children court
  
- 7) The first and farthest professional ethics is
 

a) To strive for excellence
b) To take care to environment
c) To serve the needy and poor of the society
d) None of these

- 8) A contract consist of
- a) Mutual promises or agreement enforceable by law
  - b) Agreement not enforceable by law
  - c) Involuntary obligations
  - d) None of these
- 9) The correct sequence in the formation of a contract is
- a) Offer, acceptance, agreement, consideration
  - b) Agreement, consideration, Offer, acceptance,
  - c) Offer, consideration, acceptance, agreement
  - d) Offer, acceptance, consideration, agreement
- 10) Profession Means
- a) Any paid occupation, job and career
  - b) Specialized person in his job area
  - c) Any way of serving livelihood
  - d) None of these
- 11) Which of the following matter are not referred to arbitration?
- a) Civil matters
  - b) Matrimonial matters
  - c) Banking matters
  - d) Property matters
- 12) Industrial acts are useful for
- a) guarantee of employee welfare
  - b) provision of legal platform
  - c) removes extortion of workers
  - d) All of these
- 13) Workmans compensation act consist of which of following provisions of act
- a) Partial disablement
  - b) Total disablement
  - c) Amount of compensation
  - d) All of these
- 14) Safety provisions in Indian Factory Act does not cover
- a) Fencing of machinery
  - b) Precaution against fire
  - c) Lunch rooms
  - d) Protection eyes

**Set Q**

**Fourth. Y. (B.Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**CIVIL ENGINEERING**  
**Professional Practice, Law and Ethics**

Day & Date: Friday, 24-02-2023  
 Time: 02:00 PM To 5:00 PM

Max. Marks: 56

**Instructions:** 1) Q.2 is compulsory. Solve any two out of Q.3 to Q.5.  
 2) Q.6 is compulsory. Solve any two out of Q.6 to Q.9.

**Section – I**

- Q.2 Answer the following:** **12**  
 a) Compare Professional Ethics and Business Ethics  
 b) What is Code of Conduct for Professionals?  
 c) Explain conflict of interest with suitable example.
- Q.3 Explain** **08**  
 a) Role governed by RERA for Builders and Developers.  
 b) Role of Institution of Engineers (India) as stakeholder.
- Q.4 Explain** **08**  
 a) Offer and acceptance as per Indian Contract act  
 b) Essentials of Valid contract
- Q.5 Explain** **08**  
 a) Whistleblowing  
 b) Gift and Bribe

**Section – II**

- Q.6 Write detailed notes on:** **12**  
 a) Arbitration  
 b) Conciliation  
 c) Basic types of Dispute Resolution
- Q.7 Explain:** **08**  
 a) Features of 'LOK ADALAT'  
 b) Contract labour
- Q.8 Explain:** **08**  
 a) Industrial Dispute Act  
 b) Workmen's Compensation Act
- Q.9 Answer following questions.** **08**  
 a) Compare Patent. Trademark and Copyright  
 b) Write note on 'RERA Act 2017'

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MACHANICAL ENGINEERING**  
**Design of Machine Elements**

Day & Date: Wednesday 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Answer cannot be changed once it is marked.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) The first step in machine design procedure is \_\_\_\_\_.  
 a) Mechanism selection                      b) layout preparation  
 c) market survey                              d) Design of various parts
- 2) In case of repeated load which of the following is correct?  
 a)  $\sigma_m = 0$                                       b)  $\sigma_{min} = 0$   
 c)  $\sigma_{max} = 0$                                       d)  $\sigma_a = 0$
- 3) Factor of Safety is the ratio of \_\_\_\_\_.  
 a) working stress to failure stress  
 b) working load to failure load  
 c) impact load to static load  
 d) failure stress to working stress
- 4) Rankine's theory is preferred to design for \_\_\_\_\_.  
 a) ductile materials                              b) composite materials  
 c) brittle materials                                d) any material
- 5) Maximum shear stress in a shaft subjected to torsional and bending moments is given by \_\_\_\_\_.  
 a)  $16/\pi d^3 [(M_b)^2 + (M_t)^2]^{1/2}$   
 b)  $16/\pi d^3 [M_b + \{(M_b)^2 + (M_t)^2\}^{1/2}]$   
 c)  $16/\pi d^3 [M_t + \{(M_b)^2 + (M_t)^2\}^{1/2}]$   
 d)  $32/\pi d^3 [(M_b)^2 + (M_t)^2]^{1/2}$
- 6) The width & height of a square key are usually taken as \_\_\_\_\_.  
 a) d    b) d/6  
 c) d/8     d) d/4
- 7) The simplest type of couplings is \_\_\_\_\_.  
 a) clamp coupling                                b) muff coupling  
 c) flanged coupling                               d) flexible coupling

- 8) Wahl factor in spring design is given by \_\_\_\_\_.  
 a)  $4C - 4 / (4C - 1) + 0.615 / C$   
 b)  $4C - 1 / (4C - 4) + 0.615 / C$   
 c)  $3C - 4 / (3C - 1) + 0.615 / C$   
 d)  $3C - 1 / (3C - 4) + 0.615 / C$
- 9) For two springs connected in parallel, the combined stiffness is given by \_\_\_\_\_.  
 a)  $k_1 + k_2$   
 b)  $k_1 k_2$   
 c)  $k_1 k_2 / (k_1 + k_2)$   
 d)  $(k_1 + k_2) / k_1 k_2$
- 10) Stress concentration factor  $K_t$  with usual notations is given by,  
 a)  $\sigma_{max} / \sigma_{min}$   
 b)  $\sigma_o / \sigma_{max}$   
 c)  $\sigma_{min} / \sigma_{max}$   
 d)  $\sigma_{max} / \sigma_o$
- 11) Notch sensitivity  $q$  in terms of fatigue stress concentration factor  $K_f$  and theoretical stress stress concentration factor  $K_t$  is given by \_\_\_\_\_.  
 a)  $(K_f - 1) / (K_t - 1)$   
 b)  $(K_t - 1) / (K_f - 1)$   
 c)  $K_f / K_t$   
 d)  $K_t / K_f$
- 12) The optimum velocity for Dunlop flat belts is approximately \_\_\_\_\_.  
 a) 5 m/s  
 b) 18 m/s  
 c) 50 m/s  
 d) 30 m/s
- 13) Throat of a weld  $t$  in terms of the leg length  $h$  is given by \_\_\_\_\_.  
 a)  $1.414h$   
 b)  $0.5h$   
 c)  $2h$   
 d)  $0.707h$
- 14) If the bolts are subjected to an eccentric load with the bolt axes perpendicular to the plane of line of application of load, every bolt will be subjected to \_\_\_\_\_.  
 a) primary & secondary shear forces  
 b) primary shear force & tensile force  
 c) primary shear force & compressive force  
 d) tensile force & secondary shear force

Seat No.

Set **P**

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MACHANICAL ENGINEERING**  
**Design of Machine Elements**

Day & Date: Wednesday 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from each Section.  
 2) Use of scientific calculator is allowed.  
 3) Figures to right indicate full marks.  
 4) Assume additional suitable data if necessary and state it clearly.  
 5) Draw the neat diagrams wherever required.

**Section – I**

- Q.2 a)** A cantilever beam made of cold drawn steel 20C8 ( $S_{ut} = 540 \text{ N/mm}^2$ ) is subjected to a completely reversed load of 1 kN as shown in fig. (2 - a). The notch sensitivity factor  $q$  at the fillet can be taken as 0.85. Take,  $K_a$  = surface finish factor = 0.78,  $K_b$  = size factor = 0.85,  $K_c$  = reliability factor = 0.897,  $K_t$  = stress concentration factor = 1.35. Determine the diameter of the beam for a life of 10000 cycles. **08**

- b)** Explain with a block diagram the basic procedure of design of a machine element. **06**

- Q.3 a)** Two rods, required to withstand a tensile force of 30 kN, are connected by a knuckle joint. The rods and the pin are made of plain carbon steel 40C8 ( $S_{yt} = 380 \text{ N/mm}^2$ ). The factor of safety is 6. Calculate, **08**  
 i) The diameter of rods  
 ii) The diameter of the knuckle pin on the basis of bending failure.  
 Assume thickness of fork as 75 % of the rod diameter and thickness of eye as 125 % of the rod diameter.
- b)** What do you mean by stress concentration? Explain the causes of stress concentration in a component. **06**

- Q.4 a)** It is required to select a flat belt drive for a compressor running at 720 rpm driven by a 25 kW, 1440 rpm motor. The space is available for a centre distance of 3 m. The belt is open type. Assume a belt velocity of 18 m/s. The reference belt velocity may be taken as 5.08 m/s. Refer the data provided for flat belts. **08**
- b)** Discuss distortion energy theory of failure. State the important equations. **06**

### Section – II

- Q.5 a)** A transmission shaft is supported on two bearings 1m apart. Power is supplied by a coupling located to the left of left hand bearing. Power is transmitted from the shaft by means of a belt pulley, 250 mm diameter, located at 300 mm from the left hand bearing. The mass of the pulley is 20 kg and the ratio of belt tensions on slack & tight sides is 2:1. The belt tensions act vertically downward. The shaft is made of steel F<sub>e</sub>E300 ( $S_{yt} = 300 \text{ N/mm}^2$ ) and the factor of safety is 3. Determine the shaft diameter if it transmits 10 kW power at 360 rpm. **08**
- b)** An ISA (200 x 100 x 10) mm angle is welded to a steel plate by fillet welds as shown in fig. (5-b). The angle is subjected to a static force of 150 kN and the permissible shear stress for the weld is 70 N/mm<sup>2</sup>. Determine the lengths of weld at the top and bottom. **06**

- Q.6 a)** A helical compression spring made of a circular wire is subjected to an axial force varying from 1000 N to 2000 N. Over this range of force, the deflection should be approximately 5 mm. The spring index is 5. The spring is made of steel wire of Grade 1 ( $G = 81370 \text{ N/mm}^2$ ). The constants A & m are 1753 and 0.182 respectively. The permissible shear stress for the spring wire is 50% of the ultimate tensile strength. Design for this spring the following. **08**
- wire diameter
  - mean coil diameter
  - number of active coils
- b)** The standard cross section for a flat key fitted on a 50 mm diameter shaft is (16 x 10) mm. The key is transmitting 475 N-m torque from the shaft to the hub. The key is made of steel ( $S_{yt} = S_{yc} = 230 \text{ N/mm}^2$ ). Determine the length of the key if the factor of safety is 3. **06**

- Q.7 a)** A wall bracket is attached to a wall by means of four identical bolts, two at A and two at B as shown in fig. (7-a). Assuming that the bracket is held against the wall and prevented from tipping about point C by all four bolts and using an allowable tensile stress in the bolts as  $35 \text{ N/mm}^2$ , determine the size of the bolts on the basis of maximum principal stress theory. **08**

- b)** Determine the expression to calculate the combined stiffness for the two helical springs connected in **06**
- series and
  - parallel

### Data for selection of Flat Belts

- Preferred diameters (in mm) of cast iron and mild steel pulleys are as below.  
100, 112, 125, 140, 160, 180, 200, 224, 250, 280, 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1100
- Table for Load Correction Factor ( $F_a$ ):

Type of load	$F_a$
i) Normal load	1.0
ii) Steady load e.g. centrifugal pumps, fans light machine tools, conveyors	1.2
iii) International load e.g. heavy duty fans, blowers, compressors, reciprocating pumps, line shaft, heavy duty machines	1.3
iv) Shock load e.g. vacuum pumps, rolling mills, hammers, grinders	1.5

- Table for Arc of Contact Factor ( $F_d$ ):

$\alpha_s$ (Degrees)	120	130	140	150	160	170	180	190	200
$F_d$	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

- Power transmitting capacities of belts:  
HI-SPEED: 0.0118 kW per mm width per ply  
FORT: 0.0147 kW per mm width per ply

**5) Table for standard widths of belts (in mm):**

3-Ply	25	40	50	63	76					
4-Ply	40	44	50	63	76	90	100	112	125	152
5-Ply	76	100	112	125	152					
6-Ply	112	125	152	180	200

Day & Date: Wednesday 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Answer cannot be changed once it is marked.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) Wahl factor in spring design is given by \_\_\_\_\_.  
 a)  $4C - 4 / (4C - 1) + 0.615 / C$   
 b)  $4C - 1 / (4C - 4) + 0.615 / C$   
 c)  $3C - 4 / (3C - 1) + 0.615 / C$   
 d)  $3C - 1 / (3C - 4) + 0.615 / C$
- 2) For two springs connected in parallel, the combined stiffness is given by \_\_\_\_\_.  
 a)  $k_1 + k_2$   
 b)  $k_1 k_2$   
 c)  $k_1 k_2 / (k_1 + k_2)$   
 d)  $(k_1 + k_2) / k_1 k_2$
- 3) Stress concentratin factor  $K_t$  with usual notations is given by,  
 a)  $\sigma_{max} / \sigma_{min}$   
 b)  $\sigma_o / \sigma_{max}$   
 c)  $\sigma_{min} / \sigma_{max}$   
 d)  $\sigma_{max} / \sigma_o$
- 4) Notch sensitivity q in terms of fatigue stress concentration factor  $K_f$  and theoretical stress stress concentration factor  $K_t$  is given by \_\_\_\_\_.  
 a)  $(K_f - 1) / (K_t - 1)$   
 b)  $(K_t - 1) / (K_f - 1)$   
 c)  $K_f / K_t$   
 d)  $K_t / K_f$
- 5) The optimum velocity for Dunlop flat belts is approximately \_\_\_\_\_.  
 a) 5 m/s  
 b) 18 m/s  
 c) 50 m/s  
 d) 30 m/s
- 6) Throat of a weld t in terms of the leg length h is given by \_\_\_\_\_.  
 a)  $1.414h$   
 b)  $0.5h$   
 c)  $2h$   
 d)  $0.707h$
- 7) If the bolts are subjected to an eccentric load with the bolt axes perpendicular to the plane of line of application of load, every bolt will be subjected to \_\_\_\_\_.  
 a) primary & secondary shear forces  
 b) primary shear force & tensile force  
 c) primary shear force & compressive force  
 d) tensile force & secondary shear force

- 8) The first step in machine design procedure is \_\_\_\_\_.  
a) Mechanism selection                      b) layout preparation  
c) market survey                              d) Design of various parts
- 9) In case of repeated load which of the following is correct?  
a)  $\sigma_m = 0$                                       b)  $\sigma_{\min} = 0$   
c)  $\sigma_{\max} = 0$                                       d)  $\sigma_a = 0$
- 10) Factor of Safety is the ratio of \_\_\_\_\_.  
a) working stress to failure stress  
b) working load to failure load  
c) impact load to static load  
d) failure stress to working stress
- 11) Rankine's theory is preferred to design for \_\_\_\_\_.  
a) ductile materials                              b) composite materials  
c) brittle materials                                d) any material
- 12) Maximum shear stress in a shaft subjected to torsional and bending moments is given by \_\_\_\_\_.  
a)  $16/\pi d^3 [(M_b)^2 + (M_t)^2]^{1/2}$   
b)  $16/\pi d^3 [M_b + \{(M_b)^2 + (M_t)^2\}^{1/2}]$   
c)  $16/\pi d^3 [M_t + \{(M_b)^2 + (M_t)^2\}^{1/2}]$   
d)  $32/\pi d^3 [(M_b)^2 + (M_t)^2]^{1/2}$
- 13) The width & height of a square key are usually taken as \_\_\_\_\_.  
a) d    b) d/6  
c) d/8     d) d/4
- 14) The simplest type of couplings is \_\_\_\_\_.  
a) clamp coupling                                b) muff coupling  
c) flanged coupling                               d) flexible coupling

Set **Q**

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MACHANICAL ENGINEERING**  
**Design of Machine Elements**

Day & Date: Wednesday 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from each Section.  
 2) Use of scientific calculator is allowed.  
 3) Figures to right indicate full marks.  
 4) Assume additional suitable data if necessary and state it clearly.  
 5) Draw the neat diagrams wherever required.

**Section – I**

- Q.2 a)** A cantilever beam made of cold drawn steel 20C8 ( $S_{ut} = 540 \text{ N/mm}^2$ ) is subjected to a completely reversed load of 1 kN as shown in fig. (2 - a). The notch sensitivity factor  $q$  at the fillet can be taken as 0.85. Take,  $K_a$  = surface finish factor = 0.78,  $K_b$  = size factor = 0.85,  $K_c$  = reliability factor = 0.897,  $K_t$  = stress concentration factor = 1.35. Determine the diameter of the beam for a life of 10000 cycles. **08**

- b)** Explain with a block diagram the basic procedure of design of a machine element. **06**

- Q.3 a)** Two rods, required to withstand a tensile force of 30 kN, are connected by a knuckle joint. The rods and the pin are made of plain carbon steel 40C8 ( $S_{yt} = 380 \text{ N/mm}^2$ ). The factor of safety is 6. Calculate, **08**  
 i) The diameter of rods  
 ii) The diameter of the knuckle pin on the basis of bending failure.  
 Assume thickness of fork as 75 % of the rod diameter and thickness of eye as 125 % of the rod diameter.
- b)** What do you mean by stress concentration? Explain the causes of stress concentration in a component. **06**

- Q.4 a)** It is required to select a flat belt drive for a compressor running at 720 rpm driven by a 25 kW, 1440 rpm motor. The space is available for a centre distance of 3 m. The belt is open type. Assume a belt velocity of 18 m/s. The reference belt velocity may be taken as 5.08 m/s. Refer the data provided for flat belts. **08**
- b)** Discuss distortion energy theory of failure. State the important equations. **06**

### Section – II

- Q.5 a)** A transmission shaft is supported on two bearings 1m apart. Power is supplied by a coupling located to the left of left hand bearing. Power is transmitted from the shaft by means of a belt pulley, 250 mm diameter, located at 300 mm from the left hand bearing. The mass of the pulley is 20 kg and the ratio of belt tensions on slack & tight sides is 2:1. The belt tensions act vertically downward. The shaft is made of steel F<sub>e</sub>E300 ( $S_{yt} = 300 \text{ N/mm}^2$ ) and the factor of safety is 3. Determine the shaft diameter if it transmits 10 kW power at 360 rpm. **08**
- b)** An ISA (200 x 100 x 10) mm angle is welded to a steel plate by fillet welds as shown in fig. (5-b). The angle is subjected to a static force of 150 kN and the permissible shear stress for the weld is 70 N/mm<sup>2</sup>. Determine the lengths of weld at the top and bottom. **06**

- Q.6 a)** A helical compression spring made of a circular wire is subjected to an axial force varying from 1000 N to 2000 N. Over this range of force, the deflection should be approximately 5 mm. The spring index is 5. The spring is made of steel wire of Grade 1 ( $G = 81370 \text{ N/mm}^2$ ). The constants A & m are 1753 and 0.182 respectively. The permissible shear stress for the spring wire is 50% of the ultimate tensile strength. Design for this spring the following. **08**
- wire diameter
  - mean coil diameter
  - number of active coils
- b)** The standard cross section for a flat key fitted on a 50 mm diameter shaft is (16 x 10) mm. The key is transmitting 475 N-m torque from the shaft to the hub. The key is made of steel ( $S_{yt} = S_{yc} = 230 \text{ N/mm}^2$ ). Determine the length of the key if the factor of safety is 3. **06**

- Q.7 a)** A wall bracket is attached to a wall by means of four identical bolts, two at A and two at B as shown in fig. (7-a). Assuming that the bracket is held against the wall and prevented from tipping about point C by all four bolts and using an allowable tensile stress in the bolts as  $35 \text{ N/mm}^2$ , determine the size of the bolts on the basis of maximum principal stress theory. **08**

- b)** Determine the expression to calculate the combined stiffness for the two helical springs connected in **06**
- series and
  - parallel

### Data for selection of Flat Belts

- Preferred diameters (in mm) of cast iron and mild steel pulleys are as below.  
100, 112, 125, 140, 160, 180, 200, 224, 250, 280, 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1100
- Table for Load Correction Factor ( $F_a$ ):

Type of load	$F_a$
i) Normal load	1.0
ii) Steady load e.g. centrifugal pumps, fans light machine tools, conveyors	1.2
iii) International load e.g. heavy duty fans, blowers, compressors, reciprocating pumps, line shaft, heavy duty machines	1.3
iv) Shock load e.g. vacuum pumps, rolling mills, hammers, grinders	1.5

- Table for Arc of Contact Factor ( $F_d$ ):

$\alpha_s$ (Degrees)	120	130	140	150	160	170	180	190	200
$F_d$	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

- Power transmitting capacities of belts:  
HI-SPEED: 0.0118 kW per mm width per ply  
FORT: 0.0147 kW per mm width per ply

**5)** Table for standard widths of belts (in mm):

3-Ply	25	40	50	63	76					
4-Ply	40	44	50	63	76	90	100	112	125	152
5-Ply	76	100	112	125	152					
6-Ply	112	125	152	180	200

**Design of Machine Elements**

Day & Date: Wednesday 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Answer cannot be changed once it is marked.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) Notch sensitivity  $q$  in terms of fatigue stress concentration factor  $K_f$  and theoretical stress stress concentration factor  $K_t$  is given by \_\_\_\_\_.  
 a)  $(K_f - 1) / (K_t - 1)$                       b)  $(K_t - 1) / (K_f - 1)$   
 c)  $K_f / K_t$                                       d)  $K_t / K_f$
- 2) The optimum velocity for Dunlop flat belts is approximately \_\_\_\_\_.  
 a) 5 m/s    b) 18 m/s  
 c) 50 m/s    d) 30 m/s
- 3) Throat of a weld  $t$  in terms of the leg length  $h$  is given by \_\_\_\_\_.  
 a)  $1.414h$     b)  $0.5h$   
 c)  $2h$     d)  $0.707h$
- 4) If the bolts are subjected to an eccentric load with the bolt axes perpendicular to the plane of line of application of load, every bolt will be subjected to \_\_\_\_\_.  
 a) primary & secondary shear forces  
 b) primary shear force & tensile force  
 c) primary shear force & compressive force  
 d) tensile force & secondary shear force
- 5) The first step in machine design procedure is \_\_\_\_\_.  
 a) Mechanism selection                      b) layout preparation  
 c) market survey                              d) Design of various parts
- 6) In case of repeated load which of the following is correct?  
 a)  $\sigma_m = 0$     b)  $\sigma_{min} = 0$   
 c)  $\sigma_{max} = 0$     d)  $\sigma_a = 0$
- 7) Factor of Safety is the ratio of \_\_\_\_\_.  
 a) working stress to failure stress  
 b) working load to failure load  
 c) impact load to static load  
 d) failure stress to working stress

- 8) Rankine's theory is preferred to design for \_\_\_\_\_.  
 a) ductile materials                      b) composite materials  
 c) brittle materials                      d) any material
- 9) Maximum shear stress in a shaft subjected to torsional and bending moments is given by \_\_\_\_\_.  
 a)  $16/\pi d^3 [(M_b)^2 + (M_t)^2]^{1/2}$   
 b)  $16/\pi d^3 [M_b + \{(M_b)^2 + (M_t)^2\}^{1/2}]$   
 c)  $16/\pi d^3 [M_t + \{(M_b)^2 + (M_t)^2\}^{1/2}]$   
 d)  $32/\pi d^3 [(M_b)^2 + (M_t)^2]^{1/2}$
- 10) The width & height of a square key are usually taken as \_\_\_\_\_.  
 a) d    b) d/6  
 c) d/8    d) d/4
- 11) The simplest type of couplings is \_\_\_\_\_.  
 a) clamp coupling                      b) muff coupling  
 c) flanged coupling                      d) flexible coupling
- 12) Wahl factor in spring design is given by \_\_\_\_\_.  
 a)  $4C - 4 / (4C - 1) + 0.615 / C$   
 b)  $4C - 1 / (4C - 4) + 0.615 / C$   
 c)  $3C - 4 / (3C - 1) + 0.615 / C$   
 d)  $3C - 1 / (3C - 4) + 0.615 / C$
- 13) For two springs connected in parallel, the combined stiffness is given by \_\_\_\_\_.  
 a)  $k_1 + k_2$                                   b)  $k_1 k_2$   
 c)  $k_1 k_2 / (k_1 + k_2)$                       d)  $(k_1 + k_2) / k_1 k_2$
- 14) Stress concentratin factor  $K_t$  with usual notations is given by,  
 a)  $\sigma_{max} / \sigma_{min}$                               b)  $\sigma_o / \sigma_{max}$   
 c)  $\sigma_{min} / \sigma_{max}$                               d)  $\sigma_{max} / \sigma_o$

The key is made of steel ( $S_{yt} = S_{yc} = 230 \text{ N/mm}^2$ ). Determine the length of the key if the factor of safety is 3. **06**

- Q.7 a)** A wall bracket is attached to a wall by means of four identical bolts, two at A and two at B as shown in fig. (7-a). Assuming that the bracket is held against the wall and prevented from tipping about point C by all four bolts and using an allowable tensile stress in the bolts as  $35 \text{ N/mm}^2$ , determine the size of the bolts on the basis of maximum principal stress theory. **08**

- b)** Determine the expression to calculate the combined stiffness for the two helical springs connected in **06**
- series and
  - Parallel

### Data for selection of Flat Belts

- 1)** Preferred diameters (in mm) of cast iron and mild steel pulleys are as below.  
100, 112, 125, 140, 160, 180, 200, 224, 250, 280, 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1100

- 2)** Table for Load Correction Factor ( $F_a$ ):

Type of load	$F_a$
i) Normal load	1.0
ii) Steady load e.g. centrifugal pumps, fans light machine tools, conveyors	1.2
iii) International load e.g. heavy duty fans, blowers, compressors, reciprocating pumps, line shaft, heavy duty machines	1.3
iv) Shock load e.g. vacuum pumps, rolling mills, hammers, grinders	1.5

- 3)** Table for Arc of Contact Factor ( $F_d$ ):

$\alpha_s$ (Degrees)	120	130	140	150	160	170	180	190	200
$F_d$	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

- 4)** Power transmitting capacities of belts:  
HI-SPEED: 0.0118 kW per mm width per ply  
FORT: 0.0147 kW per mm width per ply

**5) Table for standard widths of belts (in mm):**

3-Ply	25	40	50	63	76					
4-Ply	40	44	50	63	76	90	100	112	125	152
5-Ply	76	100	112	125	152					
6-Ply	112	125	152	180	200					

<b>Seat No.</b>	
-----------------	--

Day & Date: Tuesday, 31-01-2023  
Time: 10:00 PM To 01:00 PM

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Figures to the right indicates full marks.
- 4) Assume suitable data if required.
- 5) Use of scientific calculator is allowed.

Marks: 14

14

- 1) NC machines used for drilling, boring, reaming, tapping is \_\_\_\_\_.  
a) Contouring type                      b) Straight cut  
c) Point to point                        d) None of the above
- 2) Windowing transformation means \_\_\_\_\_.  
a) Window to viewport transformation  
b) Geometric transformation  
c) Vertices transformation  
d) None of these
- 3) Miscellaneous function used for Coolant off is \_\_\_\_\_.  
a) M 07                                      b) M 09  
c) M 08                                      d) M 10
- 4) Concatenations can be done using \_\_\_\_\_.  
a) Viewing coordinates                  b) Polar coordinate  
c) Cylindrical coordinate                d) Homogeneous coordinate
- 5) The preparatory function used for circular clockwise interpolation function is \_\_\_\_\_.  
a) G03                                        b) G02  
c) G04                                        d) G01
- 6) In the following geometric modeling which is not 3D modeling?  
a) Wireframe modeling                    b) Surface modeling  
c) Drafting                                    d) Solid Modeling
- 7) Retrieval type and generative type are the types of \_\_\_\_\_.  
a) F.M.S.                                     b) Group Technology  
c) C.A.P.P.                                   d) DNC
- 8) Which type of tool magazines are generally used to handle large number of tools?  
a) Drum type                                b) Chain type  
c) Turret type                                d) Both a & b

- 9)** The curve which is tangent at first and last segment of polygon is \_\_\_\_\_.  
a) Bezier Curve                                      b) Spline Curve  
c) Hermite Curve                                    d) None of the above
- 10)** In numerical control systems, DNC stands for \_\_\_\_\_.  
a) Dedicated Numerical Control      b) Direct Numerical Control  
c) Distributed Numerical Control      d) b & c
- 11)** Creation, analysis, modification and optimization is \_\_\_\_\_.  
a) CIM    b) CAD  
c) CAM     d) CAD/CAM
- 12)** The machine zero on lathe is generally set on the machine at \_\_\_\_\_.  
a) Top right side                                  b) Top left side  
c) At top mid position                          d) None of the above
- 13)** CSG is a \_\_\_\_\_.  
a) Wire frame modeling scheme      b) Solid modeling scheme  
c) Surface modeling scheme              d) All the above
- 14)** FANUC, CNUMERIC, SIEMENS are CNC \_\_\_\_\_.  
a) Programming language                  b) Controllers  
c) Machines                                         d) None

**T.Y (B.Tech.) (Sem- I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**CAD-CAM-CAE**

Day & Date: Tuesday, 31-01-2023  
 Time: 10:00 PM To 01:00 PM

Max. Marks: 56

- Instructions:**
- 1) Assume suitable data if required.
  - 2) Use of scientific calculator is allowed.
  - 3) Figure to the right indicates full marks.
  - 4) Solve any TWO questions from Q. No. 2 to Q.No.4.
  - 5) Question No 5 is Compulsory.
  - 6) Solve any ONE question from Q. No.6 and Q.No.7.

**Section – I**

- Q.2** a) Explain Product cycle with respect to CAD-CAM-CAE. **08**  
 b) Enlist the schemes of solid modeling? Explain any one. **06**
- Q.3** a) What is meant by Geometrical transformations? Explain types of Geometrical transformations with equation. **08**  
 b) Enlist the different types of FE analysis. Explain any 02 types in detail. **06**
- Q.4** a) Translate a triangle with coordinates A (1,1), B (3,3) and C (4,1) by 5 units in X-direction and 2 units in Y-direction. **08**  
 b) Discuss the concept of Flexible Manufacturing System (FMS) with industrial application and neat sketch. **06**

**Section – II**

- Q.5** a) For following component make a part program on CNC machine. **08**  
 Work material: Mild steel, Tool materials: HSS,  
 Work size: Diameter 100mm and Length 80 mm.

- |            |           |   |           |
|------------|-----------|---|-----------|
|            | <b>b)</b> | Enlist the different G and M codes with their meaning and explain any 01. | <b>06</b> |
| <b>Q.6</b> | <b>a)</b> | Describe Automatic Tool Changer with neat sketch.                         | <b>08</b> |

- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Figures to the right indicates full marks.
- 4) Assume suitable data if required.
- 5) Use of scientific calculator is allowed.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

14

- 1) Which type of tool magazines are generally used to handle large number of tools?

a) Drum type	b) Chain type
c) Turret type	d) Both a & b
- 2) The curve which is tangent at first and last segment of polygon is \_\_\_\_\_.

a) Bezier Curve	b) Spline Curve
c) Hermite Curve	d) None of the above
- 3) In numerical control systems, DNC stands for \_\_\_\_\_.

a) Dedicated Numerical Control	b) Direct Numerical Control
c) Distributed Numerical Control	d) b & c
- 4) Creation, analysis, modification and optimization is \_\_\_\_\_.

a) CIM	b) CAD
c) CAM	d) CAD/CAM
- 5) The machine zero on lathe is generally set on the machine at \_\_\_\_\_.

a) Top right side	b) Top left side
c) At top mid position	d) None of the above
- 6) CSG is a \_\_\_\_\_.

a) Wire frame modeling scheme	b) Solid modeling scheme
c) Surface modeling scheme	d) All the above
- 7) FANUC, CNUMERIC, SIEMENS are CNC \_\_\_\_\_.

a) Programming language	b) Controllers
c) Machines	d) None
- 8) NC machines used for drilling, boring, reaming, tapping is \_\_\_\_\_.

a) Contouring type	b) Straight cut
c) Point to point	d) None of the above

- 9) Windowing transformation means \_\_\_\_\_.  
a) Window to viewport transformation

Marks: 14

## 14

- 1) How is cooling of the material done is normalising process?

  - a) Furnace
  - b) Cooling tower
  - c) Still air
  - d) Liquid chamber
- 2) Phase transformation during hardening transforms \_\_\_\_\_.

  - a) BCC to FCC
  - b) FCC to BCT
  - c) BCT to HCP
  - d) FCC to HCP
- 3) \_\_\_\_\_ is a eutectic mixture of  $\alpha$  iron and Fe<sub>3</sub>C..

  - a) Pearlite
  - b) Martensite
  - c) Ledeburite
  - d) Sorbite
- 4) Which reaction does this equation denote?  
Liquid → Solid 2 + Solid 1

  - a) Eutectic
  - b) Peritectic
  - c) Eutectoid
  - d) Peritectoid
- 5) In which of the following test specimen is in the form of the simply supported beam?

  - a) Izod test
  - b) Rockwell hardness test
  - c) Charpy test
  - d) Brinell test
- 6) What is the crystal structure of  $\gamma$ -Gamma iron?

  - a) Face-centered cubic
  - b) Body-centered cubic
  - c) Hexagonal closely packed
  - d) Body-centered tetrahedral
- 7) Which of the following compound is used for fine polishing as Levigating Powder?

  - a) Iron oxide
  - b) Nitric oxide
  - c) Silicon carbide
  - d) Aluminum oxide
- 8) Permanent deformation of material with respect to time due to constant load and variable temperature is termed as \_\_\_\_\_.

  - a) Elasticity
  - b) Isotropy
  - c) Hardness
  - d) Creep

**MECHANICAL ENGINEERING**  
**Metallurgy**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Both Section are compulsory.  
 2) Answer any two questions from Section I and Section II.  
 3) Figures to the right indicates full marks.

**Section – I**

- Q.2** a) Draw Fe-Fe<sub>3</sub>C equilibrium diagram. Label all the constituents and temperatures correctly. **06**  
 b) Explain the following terms in brief: **04**  
 1) Eutectic transformations  
 2) Curie Temperature  
 3) Alfa-Ferrite  
 4) Hypo Eutectoid Steel  
 c) Draw the microstructure of 0.4% C and 1.4% C Steel. **04**
- Q.3** a) Give typical composition, properties and application of any 5 of the following. **10**  
 1) HSLA  
 2) Naval Brass  
 3) HSS  
 4) Invar  
 5) Babbitt  
 6) Tool Steel  
 7) OHNS  
 b) Compare between Brasses and Bronzes. **04**
- Q.4** Write a note on any three of the following. **14**  
 a) Gibbs Phase Rule  
 b) Grey Cast Iron  
 c) Classification of Metallic Materials  
 d) Critical Temperatures in Iron-iron Carbide diagram  
 e) Nano Materials

**Section – II**

- Q.5** a) Draw T-T-T Diagram for eutectoid steel. **05**  
 b) What are the characteristics Martensitic Transformation? **05**  
 c) Explain different quenching media used in Heat Treatment. **04**
- Q.6** a) Compare between Annealing and Normalizing. **04**  
 b) Explain with sketch the advantages and limitations of Eddy Current Test. **05**  
 c) Discuss the manufacturing process of powder metallurgy product. **05**

<b>Q.7</b>	<b>a)</b>	Draw Stress strain curve for mild steel and cast.	<b>04</b>
	<b>b)</b>	Draw flow chart for manufacture of self-lubricating bearings.	<b>04</b>
	<b>c)</b>	Explain the process of tempering in details.	<b>03</b>
	<b>d)</b>	Compare between Charpy & Izod Impact Test.	<b>03</b>

**Seat  
No.**

Max. Marks: 70

Marks: 14

14

- Page 5 of 16

- 9) Phase transformation during hardening transforms \_\_\_\_\_.
  - a) BCC to FCC
  - b) FCC to BCT
  - c) BCT to HCP
  - d) FCC to HCP
- 10) \_\_\_\_\_ is a eutectic mixture of  $\alpha$  iron and Fe<sub>3</sub>C..
  - a) Pearlite
  - b) Martensite
  - c) Ledeburite
  - d) Sorbite
- 11) Which reaction does this equation denote?  
Liquid  $\rightarrow$  Solid 2 + Solid 1
  - a) Eutectic
  - b) Peritectic
  - c) Eutectoid
  - d) Peritectoid
- 12) In which of the following test specimen is in the form of the simply supported beam?
  - a) Izod test
  - b) Rockwell hardness test
  - c) Charpy test
  - d) Brinell test
- 13) What is the crystal structure of  $\gamma$ -Gamma iron?
  - a) Face-centered cubic
  - b) Body-centered cubic
  - c) Hexagonal closely packed
  - d) Body-centered tetrahedral
- 14) Which of the following compound is used for fine polishing as Levigating Powder?
  - a) Iron oxide
  - b) Nitric oxide
  - c) Silicon carbide
  - d) Aluminum oxide

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The eutectic point in the iron-iron carbide phase diagram occurs at \_\_\_\_\_ weight % composition of carbon.
 

a) 0.022	b) 0.77
c) 2.11	d) 4.3
- 2) Which of the following properties are determined by impact test?
 

a) Relative Toughness	b) True Toughness
c) Elongation	d) Ductility
- 3) Which of the following NDT is fast method of testing?
 

a) DPT	b) MPT
c) Eddy Current	d) UT
- 4) Which of the following components are manufactured by Powder Metallurgy?
 

a) Carbide tool tip	b) Piston
c) Cermets	d) Ball Bearing Balls
- 5) How is cooling of the material done is normalising process?
 

a) Furnace	b) Cooling tower
c) Still air	d) Liquid chamber
- 6) Phase transformation during hardening transforms \_\_\_\_\_.
 

a) BCC to FCC	b) FCC to BCT
c) BCT to HCP	d) FCC to HCP
- 7) \_\_\_\_\_ is a eutectic mixture of  $\alpha$  iron and Fe<sub>3</sub>C..
 

a) Pearlite	b) Martensite
c) Ledeburite	d) Sorbite
- 8) Which reaction does this equation denote?  
 Liquid  $\rightarrow$  Solid 2 + Solid 1
 

a) Eutectic	b) Peritectic
c) Eutectoid	d) Peritectoid

- 9) In which of the following test specimen is in the form of the simply supported beam?
- |                |                           |
|----------------|---------------------------|
| a) Izod test   | b) Rockwell hardness test |
| c) Charpy test | d) Brinell test           |
- 10) What is the crystal structure of  $\gamma$ -Iron?
- |                             |                              |
|-----------------------------|------------------------------|
| a) Face-centered cubic      | b) Body-centered cubic       |
| c) Hexagonal closely packed | d) Body-centered tetrahedral |
- 11) Which of the following compound is used for fine polishing as Levigating Powder?
- |                    |                   |
|--------------------|-------------------|
| a) Iron oxide      | b) Nitric oxide   |
| c) Silicon carbide | d) Aluminum oxide |
- 12) Permanent deformation of material with respect to time due to constant load and variable temperature is termed as \_\_\_\_\_.
- |               |             |
|---------------|-------------|
| a) Elasticity | b) Isotropy |
| c) Hardness   | d) Creep    |
- 13) Magnetic Particle Test can be done on \_\_\_\_\_.
- |           |                       |
|-----------|-----------------------|
| a) Brass  | b) Plain Carbon Steel |
| c) Bronze | d) Invar              |
- 14) For Annealing of hypereutectoid steels, they are heated in a range above \_\_\_\_.
- |                               |                               |
|-------------------------------|-------------------------------|
| a) $910 \pm 50^\circ\text{C}$ | b) $273 + 50^\circ\text{C}$   |
| c) $551-770^\circ\text{C}$    | d) $723 \pm 50^\circ\text{C}$ |

**T.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Industrial Engineering**

Day & Date: Tuesday, 07-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from each Section.  
 2) Use of scientific calculator is allowed.  
 3) Figures to right indicate full marks.  
 4) Assume additional suitable data if necessary and state it clearly.

**Section – I**

- Q.2** a) What is productivity? Discuss the factors affecting productivity. **07**  
 b) Explain multiple activity chart. **07**
- Q.3** a) Define method study and explain the steps involved in method study. **07**  
 b) Describe ergonomic consideration at workplace. **07**
- Q.4** a) Explain two handed process chart. **06**  
 b) **Write short notes** **08**  
 1) Anthropometry  
 2) Flow diagram and string diagram

**Section – II**

- Q.5** a) Explain various types of layout. **07**  
 b) Explain various types of allowances. How to calculate the standard time? **07**
- Q.6** a) What is merit rating? List merit rating methods and explain any one in detail. **07**  
 b) Discuss the factors affecting plant location. **07**
- Q.7** a) Discuss work sampling method its need and procedure. **06**  
 b) **Write short note on (Any Two)** **08**  
 1) Principles and objectives of plant layout  
 2) Performance rating  
 3) Objectives of job evaluation and its procedure

- Q.5** a) Explain various types of layout. **07**  
 b) Explain various types of allowances. How to calculate the standard time? **07**
- Q.6** a) What is merit rating? List merit rating methods and explain any one in detail. **07**  
 b) Discuss the factors affecting plant location. **07**
- Q.7** a) Discuss work sampling method its need and procedure. **06**  
 b) **Write short note on (Any Two)** **08**  
 1) Principles and objectives of plant layout  
 2) Performance rating  
 3) Objectives of job evaluation and its procedure

Seat No.

- 9) In method study, critical examination is done through \_\_\_\_\_.  
a) Work sampling technique                      b) Stop watch technique  
c) Questioning technique                      d) Multiple activity chart
- 10) Merit Rating is used for \_\_\_\_\_.  
a) Job analysis  
b) Performance appraisal of the employees  
c) Incentive scheme  
d) Standard time calculation
- 11) Paired comparison method is a technique of \_\_\_\_\_.  
a) Job evaluation                      b) Method study  
c) Merit Rating                      d) Work sampling
- 12) The most frequently used components are arranged in \_\_\_\_\_.  
a) Left side                      b) Right side  
c) Central location                      d) Anywhere
- 13) Method study symbol  indicate \_\_\_\_\_.  
a) Storage                      b) Transportation  
c) Inspection                      d) Delay
- 14) Only operation and inspection symbols are used in drawing \_\_\_\_\_.  
a) Operation process chart                      b) Flow process chart  
c) Multiple activity chart                      d) Travel chart

 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Merit Rating is used for \_\_\_\_\_.  
 a) Job analysis  
 b) Performance appraisal of the employees  
 c) Incentive scheme  
 d) Standard time calculation
- 2) Paired comparison method is a technique of \_\_\_\_\_.  
 a) Job evaluation  
 b) Method study  
 c) Merit Rating  
 d) Work sampling
- 3) The most frequently used components are arranged in \_\_\_\_\_.  
 a) Left side  
 b) Right side  
 c) Central location  
 d) Anywhere
- 4) Method study symbol  indicate \_\_\_\_\_.  
 a) Storage  
 b) Transportation  
 c) Inspection  
 d) Delay
- 5) Only operation and inspection symbols are used in drawing \_\_\_\_\_.  
 a) Operation process chart  
 b) Flow process chart  
 c) Multiple activity chart  
 d) Travel chart
- 6) The quantitative information is one which concerns the \_\_\_\_\_.  
 a) value of some variable  
 b) rate of change  
 c) condition or status of system  
 d) presence or absence of some specific object
- 7) Fixed type layout is suitable for \_\_\_\_\_.  
 a) Textile industry  
 b) Automobile industry  
 c) Sugar industry  
 d) Ship industry

- 8) Productivity can be increased by \_\_\_\_\_.  
a) Same production with increase in input  
b) Same production with decrease in output  
c) Increase in production without increase in input  
d) Increase in input as compared to output
- 9) If Observed time is 10 min and performance rating is 150 then Normal time is \_\_\_\_\_.  
a) 10 min  
b) 15 min  
c) 16.5 min  
d) 25 min
- 10) Which type of layout is used in automobile industry?  
a) Product  
b) Process  
c) Fixed  
d) Group
- 11) One TMU = \_\_\_\_\_ minutes.  
a) 0.001  
b) 0.006  
c) 0.0006  
d) 0.0001
- 12) Basic time + Allowances = \_\_\_\_\_.  
a) Normal time  
b) Standard time  
c) Observed time  
d) Watch time
- 13) Average rating of a worker during time study is \_\_\_\_\_.  
a) 50%  
b) 200%  
c) 110%  
d) 100%
- 14) In method study, critical examination is done through \_\_\_\_\_.  
a) Work sampling technique  
b) Stop watch technique  
c) Questioning technique  
d) Multiple activity chart

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) \_\_\_\_\_ is defined as the time interval between the two successive grinds.
  - a) Machinability
  - b) Tool Wear
  - c) Tool Life
  - d) Machinability Index
- 2) Flank wear occurs mainly on the \_\_\_\_\_.
  - a) nose part of the cutting tool
  - b) front relief face and side relief face of the cutting tool
  - c) face of cutting tool at a short distance from the cutting edge
  - d) both (a) and (b)
- 3) Angle between the rake face and plane perpendicular to rake face is known as: \_\_\_\_\_.
  - a) Side rake angle
  - b) Side relief angle
  - c) End relief angle
  - d) Back rake angle
- 4) Which of the following will give better chip flow?
  - a) Negative back rake angle tool
  - b) Zero back rake angle tool
  - c) Positive back rake angle tool
  - d) None of the mentioned
- 5) The function of stripper is \_\_\_\_\_.
  - a) To strip of the material from the punch
  - b) Remove material from the punch
  - c) fixed the strip and punch
  - d) None of the above
- 6) In press tool Cutting Force is calculated by \_\_\_\_\_ where,  $\sigma_{sh}$  =shear strength.
  - a)  $(P \times t) / \sigma_{sh}$
  - b)  $P \times t \times \sigma_{sh}$
  - c)  $P / (t \times \sigma_{sh})$
  - d)  $(P \times \sigma_{sh}) / t$
- 7) Which of the following forming processes is suitable for making utensils and cup shaped objects?
  - a) Forging
  - b) Deep drawing
  - c) Rolling
  - d) Wire drawing

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Tool Engineering**

Day & Date: Thursday 09-02-2023  
 Time: 10:00 AM To 02:00 PM

Max. Marks: 56

- Instructions:**
- 1) Q. 2 and Q. 6 are compulsory.
  - 2) Attempt any two question out of Q.No.3,4, and 5 from Section I
  - 3) Attempt any two question out of Q.No.7,8, and 9 from section II
  - 3) Figures to right indicate full marks.
  - 4) Make suitable assumptions, if required and state them clearly.

**Section – I**

- Q.2 a)** Design press tool for the component shown in Fig. No. I and calculate the following and draw one sectional view of press tool. **14**
- 1) Cutting force
  - 2) Total clearance
  - 3) Strip layout
  - 4) Die thickness

Thickness = 6mm  
 $\sigma_s = 55 \text{ kg/mm}^2$

**OR**

- b)** Design a draw tool for given component Fig-II also calculate the following (draw 2 one sectional view of assembly) **14**
- 1) Blank size
  - 2) No of draws
  - 3) draw ratio
  - 4) Drawing force
  - 5) Blank force
  - 6) Die and punch clearance

- Q.3** a) The tool life equation for HSS tool is  $VT^{0.14}f^{0.7}d^{0.4} = \text{Constant}$ . The tool life (T) of 30 min is obtained using the following cutting conditions:  $V=45\text{m/min}$ ,  $f=0.35\text{ mm}$ ,  $d=2.0\text{ mm}$ . If speed (V), feed (f) and depth of cut (d) are increased individually by 25% find the tool life (in min). **04**
- b) What do you mean by Machinability and its index? **03**
- Q.4** a) In orthogonal turning of a cylindrical tube of wall thickness 5 mm, the axial and the tangential cutting forces were measured as 1259 N and 1601 N, respectively. The measured chip thickness after machining was found to be 0.3 mm. The rake angle was  $10^\circ$  and the axial feed was 100 mm/min. the rotational speed of the spindle was 1000 rpm. Find the shear strength of the material. **04**
- b) Differentiate between orthogonal and oblique cutting. **03**
- Q.5** Write a short note (Any Two). **07**
- Cutting Fluids
  - Types of chips
  - Press operations
  - Tool life

### Section - II

- Q.6** a) Design and draw a drilling jig for component shown in Fig-I below. Hole size  $\phi 10\text{mm} \times 2$  holes draw one sectional view. **14**

Fig - I

OR

- b) Design and draw a milling fixture for component shown in above Fig-I for milling slot  $20 \times 10$  draw one sectional view.
- Q.7** a) Explain in brief about Economic order quantity for batch production. **04**
- b) Explain break even analysis for equipment selection. **03**
- Q.8** a) Describe the nomenclature and geometry of single point cutting tool as per ASA system. **04**
- b) Explain 3-2-1 Principle. **03**

**Q.9 Write short notes on following (any two):**

- a)** Box type Jig
- b)** Fool proofing
- c)** Effect on tool geometry on tool life

**Seat  
No.**

**Set Q**

- 8) \_\_\_\_\_ is defined as the time interval between the two successive grinds.
- a) Machinability
  - b) Tool Wear
  - c) Tool Life
  - d) Machinability Index
- 9) Flank wear occurs mainly on the \_\_\_\_\_.
- a) nose part of the cutting tool
  - b) front relief face and side relief face of the cutting tool
  - c) face of cutting tool at a short distance from the cutting edge
  - d) both (a) and (b)
- 10) Angle between the rake face and plane perpendicular to rake face is known as: \_\_\_\_\_.
- a) Side rake angle
  - b) Side relief angle
  - c) End relief angle
  - d) Back rake angle
- 11) Which of the following will give better chip flow?
- a) Negative back rake angle tool
  - b) Zero back rake angle tool
  - c) Positive back rake angle tool
  - d) None of the mentioned
- 12) The function of stripper is \_\_\_\_\_.
- a) To strip of the material from the punch
  - b) Remove material from the punch
  - c) fixed the strip and punch
  - d) None of the above
- 13) In press tool Cutting Force is calculated by \_\_\_\_\_ where,  $\sigma_{sh}$  =shear strength.
- a)  $(Pxt)/\sigma_{sh}$
  - b)  $P \times t \times \sigma_{sh}$
  - c)  $P/(t \times \sigma_{sh})$
  - d)  $(P \times \sigma_{sh})/t$
- 14) Which of the following forming processes is suitable for making utensils and cup shaped objects?
- a) Forging
  - b) Deep drawing
  - c) Rolling
  - d) Wire drawing

**Tool Engineering**

Day & Date: Thursday 09-02-2023  
 Time: 10:00 AM To 02:00 PM

Max. Marks: 56

- Instructions:** 1) Q. 2 and Q. 6 are compulsory.  
 2) Attempt any two question out of Q.No.3,4, and 5 from Section I  
 3) Attempt any two question out of Q.No.7,8, and 9 from section II  
 3) Figures to right indicate full marks.  
 4) Make suitable assumptions, if required and state them clearly.

**Section – I**

- Q.2 a)** Design press tool for the component shown in Fig. No. I and calculate the following and draw one sectional view of press tool. **14**
- 1) Cutting force
  - 2) Total clearance
  - 3) Strip layout
  - 4) Die thickness

Thickness = 6mm  
 $\sigma_s = 55 \text{ kg/mm}^2$

**OR**

- b)** Design a draw tool for given component Fig-II also calculate the following (draw 2 one sectional view of assembly) **14**
- 1) Blank size
  - 2) No of draws
  - 3) draw ratio
  - 4) Drawing force
  - 5) Blank force
  - 6) Die and punch clearance

- Q.3** a) The tool life equation for HSS tool is  $VT^{0.14}f^{0.7}d^{0.4} = \text{Constant}$ . The tool life (T) of 30 min is obtained using the following cutting conditions:  $V=45\text{m/min}$ ,  $f=0.35\text{ mm}$ ,  $d=2.0\text{ mm}$ . If speed (V), feed (f) and depth of cut (d) are increased individually by 25% find the tool life (in min). **04**
- b) What do you mean by Machinability and its index? **03**
- Q.4** a) In orthogonal turning of a cylindrical tube of wall thickness 5 mm, the axial and the tangential cutting forces were measured as 1259 N and 1601 N, respectively. The measured chip thickness after machining was found to be 0.3 mm. The rake angle was  $10^\circ$  and the axial feed was 100 mm/min. the rotational speed of the spindle was 1000 rpm. Find the shear strength of the material. **04**
- b) Differentiate between orthogonal and oblique cutting. **03**
- Q.5** Write a short note (Any Two). **07**
- Cutting Fluids
  - Types of chips
  - Press operations
  - Tool life

### Section - II

- Q.6** a) Design and draw a drilling jig for component shown in Fig-I below. Hole size  $\phi 10\text{mm} \times 2$  holes draw one sectional view. **14**

Fig - I

OR

- b) Design and draw a milling fixture for component shown in above Fig-I for milling slot  $20 \times 10$  draw one sectional view.
- Q.7** a) Explain in brief about Economic order quantity for batch production. **04**
- b) Explain break even analysis for equipment selection. **03**
- Q.8** a) Describe the nomenclature and geometry of single point cutting tool as per ASA system. **04**
- b) Explain 3-2-1 Principle. **03**

**Q.9 Write short notes on following (any two):**

- a)** Box type Jig
- b)** Fool proofing
- c)** Effect on tool geometry on tool life

 Time: 10:00 AM To 02:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The use of jigs and fixtures \_\_\_\_\_.  
 a) Facilitates deployment of less skilled labor for production  
 b) Eliminates pre-machining operations like marking, measuring, laying out etc.  
 c) reduced manual handling operations  
 d) All of the above
- 2) The relationship between tool life (T) and cutting speed (V) m/min is given as \_\_\_\_\_.  
 a)  $V^n T = C$   
 b)  $V T^n = C$   
 c)  $V^n / T = C$   
 d)  $T^n / V = C$
- 3) Instrument which is used for measurement of cutting force in metal cutting \_\_\_\_\_.  
 a) Dynamometers  
 b) Merchants circle  
 c) Lee & shaffers theory  
 d) Speedometer
- 4) Draw ratio/Limiting draw ratio is represented as \_\_\_\_\_.  
 a)  $(D - d)/d$   
 b)  $D/d$   
 c)  $(D^2 - d^2)/d^2$   
 d)  $H/d$
- 5) \_\_\_\_\_ is defined as the time interval between the two successive grinds.  
 a) Machinability  
 b) Tool Wear  
 c) Tool Life  
 d) Machinability Index
- 6) Flank wear occurs mainly on the \_\_\_\_\_.  
 a) nose part of the cutting tool  
 b) front relief face and side relief face of the cutting tool  
 c) face of cutting tool at a short distance from the cutting edge  
 d) both (a) and (b)
- 7) Angle between the rake face and plane perpendicular to rake face is known as: \_\_\_\_\_.  
 a) Side rake angle  
 b) Side relief angle  
 c) End relief angle  
 d) Back rake angle

- 8) Which of the following will give better chip flow?  
a) Negative back rake angle tool    b) Zero back rake angle tool  
c) Positive back rake angle tool    d) None of the mentioned
- 9) The function of stripper is \_\_\_\_\_.  
a) To strip of the material from the punch  
b) Remove material from the punch  
c) fixed the strip and punch  
d) None of the above
- 10) In press tool Cutting Force is calculated by \_\_\_\_\_ where,  $\sigma_{sh}$  =shear strength.  
a)  $(Pxt)/\sigma_{sh}$     b)  $P \times t \times \sigma_{sh}$   
c)  $P/(t \times \sigma_{sh})$     d)  $(P \times \sigma_{sh})/t$
- 11) Which of the following forming processes is suitable for making utensils and cup shaped objects?  
a) Forging    b) Deep drawing  
c) Rolling    d) Wire drawing
- 12) The most common material for multipoint cutting tool is \_\_\_\_\_.  
a) Mild steel    b) HSS  
c) Stainless Steel    d) None of these
- 13) Chip thickness ratio is the ratio of \_\_\_\_\_.  
a)  $(\text{chip thickness after cut} + \text{before cut})/100$   
b) chip thickness after cut to before cut  
c) chip thickness before cut after cut  
d)  $(\text{chip thickness after cut} - \text{before cut})/100$
- 14) In an ASA system its tool signature is 8-15-6-7-10-10-3, the tool relief angle is \_\_\_\_\_.  
a) 8    b) 15  
c) 6    d) 7

**MECHANICAL ENGINEERING**  
**Tool Engineering**

Day & Date: Thursday 09-02-2023  
 Time: 10:00 AM To 02:00 PM

Max. Marks: 56

- Instructions:**
- 1) Q. 2 and Q. 6 are compulsory.
  - 2) Attempt any two question out of Q.No.3,4, and 5 from Section I
  - 3) Attempt any two question out of Q.No.7,8, and 9 from section II
  - 3) Figures to right indicate full marks.
  - 4) Make suitable assumptions, if required and state them clearly.

**Section – I**

- Q.2 a)** Design press tool for the component shown in Fig. No. I and calculate the following and draw one sectional view of press tool. **14**
- 1) Cutting force
  - 2) Total clearance
  - 3) Strip layout
  - 4) Die thickness

**OR**

- b)** Design a draw tool for given component Fig-II also calculate the following (draw 2 one sectional view of assembly) **14**
- 1) Blank size
  - 2) No of draws
  - 3) draw ratio
  - 4) Drawing force
  - 5) Blank force
  - 6) Die and punch clearance

- Q.3** a) The tool life equation for HSS tool is  $VT^{0.14}f^{0.7}d^{0.4} = \text{Constant}$ . The tool life (T) of 30 min is obtained using the following cutting conditions:  $V=45\text{m/min}$ ,  $f=0.35\text{ mm}$ ,  $d=2.0\text{ mm}$ . If speed (V), feed (f) and depth of cut (d) are increased individually by 25% find the tool life (in min). **04**
- b) What do you mean by Machinability and its index? **03**
- Q.4** a) In orthogonal turning of a cylindrical tube of wall thickness 5 mm, the axial and the tangential cutting forces were measured as 1259 N and 1601 N, respectively. The measured chip thickness after machining was found to be 0.3 mm. The rake angle was  $10^\circ$  and the axial feed was 100 mm/min. the rotational speed of the spindle was 1000 rpm. Find the shear strength of the material. **04**
- b) Differentiate between orthogonal and oblique cutting. **03**
- Q.5** Write a short note (Any Two). **07**
- Cutting Fluids
  - Types of chips
  - Press operations
  - Tool life

### Section - II

- Q.6** a) Design and draw a drilling jig for component shown in Fig-I below. Hole size  $\phi 10\text{mm} \times 2$  holes draw one sectional view. **14**

Fig - I

OR

- b) Design and draw a milling fixture for component shown in above Fig-I for milling slot  $20 \times 10$  draw one sectional view.
- Q.7** a) Explain in brief about Economic order quantity for batch production. **04**
- b) Explain break even analysis for equipment selection. **03**
- Q.8** a) Describe the nomenclature and geometry of single point cutting tool as per ASA system. **04**
- b) Explain 3-2-1 Principle. **03**

**Q.9 Write short notes on following (any two):**

- a)** Box type Jig
- b)** Fool proofing
- c)** Effect on tool geometry on tool life

Seat No.

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Tool Engineering**

Day & Date: Thursday 09-02-2023  
 Time: 10:00 AM To 02:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options. 14**

- 1) In press tool Cutting Force is calculated by \_\_\_\_\_ where,  $\sigma_{sh}$  = shear strength.
 

a) $(Pxt)/\sigma_{sh}$	b) $P \times t \times \sigma_{sh}$
c) $P/(t \times \sigma_{sh})$	d) $(P \times \sigma_{sh})/t$
- 2) Which of the following forming processes is suitable for making utensils and cup shaped objects?
 

a) Forging	b) Deep drawing
c) Rolling	d) Wire drawing
- 3) The most common material for multipoint cutting tool is \_\_\_\_\_.
 

a) Mild steel	b) HSS
c) Stainless Steel	d) None of these
- 4) Chip thickness ratio is the ratio of \_\_\_\_\_.
 

a) $(\text{chip thickness after cut} + \text{before cut})/100$
b) $\text{chip thickness after cut to before cut}$
c) $\text{chip thickness before cut after cut}$
d) $(\text{chip thickness after cut} - \text{before cut})/100$
- 5) In an ASA system its tool signature is 8-15-6-7-10-10-3, the tool relief angle is \_\_\_\_\_.
 

a) 8	b) 15
c) 6	d) 7
- 6) The use of jigs and fixtures \_\_\_\_\_.
 

a) Facilitates deployment of less skilled labor for production
b) Eliminates pre-machining operations like marking, measuring, laying out etc.
c) reduced manual handling operations
d) All of the above
- 7) The relationship between tool life (T) and cutting speed (V) m/min is given as \_\_\_\_\_.
 

a) $V^n T = C$	b) $VT^n = C$
c) $V^n/T = C$	d) $T^n/V = C$

- 8) Instrument which is used for measurement of cutting force in metal cutting \_\_\_\_\_.
  - a) Dynamometers
  - b) Merchants circle
  - c) Lee & shaffers theory
  - d) Speedometer
- 9) Draw ratio/Limiting draw ratio is represented as \_\_\_\_\_.
  - a)  $(D - d)/d$
  - b)  $D/d$
  - c)  $(D^2 - d^2)/d^2$
  - d)  $H/d$
- 10) \_\_\_\_\_ is defined as the time interval between the two successive grinds.
  - a) Machinability
  - b) Tool Wear
  - c) Tool Life
  - d) Machinability Index
- 11) Flank wear occurs mainly on the \_\_\_\_\_.
  - a) nose part of the cutting tool
  - b) front relief face and side relief face of the cutting tool
  - c) face of cutting tool at a short distance from the cutting edge
  - d) both (a) and (b)
- 12) Angle between the rake face and plane perpendicular to rake face is known as: \_\_\_\_\_.
  - a) Side rake angle
  - b) Side relief angle
  - c) End relief angle
  - d) Back rake angle
- 13) Which of the following will give better chip flow?
  - a) Negative back rake angle tool
  - b) Zero back rake angle tool
  - c) Positive back rake angle tool
  - d) None of the mentioned
- 14) The function of stripper is \_\_\_\_\_.
  - a) To strip of the material from the punch
  - b) Remove material from the punch
  - c) fixed the strip and punch
  - d) None of the above

Seat No.

**Tool Engineering**

Day & Date: Thursday 09-02-2023  
 Time: 10:00 AM To 02:00 PM

Max. Marks: 56

- Instructions:** 1) Q. 2 and Q. 6 are compulsory.  
 2) Attempt any two question out of Q.No.3,4, and 5 from Section I  
 3) Attempt any two question out of Q.No.7,8, and 9 from section II  
 3) Figures to right indicate full marks.  
 4) Make suitable assumptions, if required and state them clearly.

**Section – I**

- Q.2 a)** Design press tool for the component shown in Fig. No. I and calculate the following and draw one sectional view of press tool. **14**
- 1) Cutting force
  - 2) Total clearance
  - 3) Strip layout
  - 4) Die thickness

**OR**

- b)** Design a draw tool for given component Fig-II also calculate the following (draw 2 one sectional view of assembly) **14**
- 1) Blank size
  - 2) No of draws
  - 3) draw ratio
  - 4) Drawing force
  - 5) Blank force
  - 6) Die and punch clearance

- Q.3 a)** The tool life equation for HSS tool is  $VT^{0.14}f^{0.7}d^{0.4} = \text{Constant}$ . The tool life (T) of 30 min is obtained using the following cutting conditions:  $V=45\text{m/min}$ ,  $f=0.35\text{ mm}$ ,  $d=2.0\text{ mm}$ . If speed (V), feed (f) and depth of cut (d) are increased individually by 25% find the tool life (in min). **04**
- b)** What do you mean by Machinability and its index? **03**
- Q.4 a)** In orthogonal turning of a cylindrical tube of wall thickness 5 mm, the axial and the tangential cutting forces were measured as 1259 N and 1601 N, respectively. The measured chip thickness after machining was found to be 0.3 mm. The rake angle was  $10^\circ$  and the axial feed was 100 mm/min. the rotational speed of the spindle was 1000 rpm. Find the shear strength of the material. **04**
- b)** Differentiate between orthogonal and oblique cutting. **03**

4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Telescopic cylinders have \_\_\_\_\_.
  - a) Only two stage units
  - b) Only three stage units
  - c) Multistage units
  - d) All of the above
- 2) Why are hydraulic cylinders cushioned?
  - a) Cushioning decelerates the piston of a cylinder
  - b) Stress and vibrations can be increased
  - c) Both a and b
  - d) None of the above
- 3) When the angle of swash plate decreases \_\_\_\_\_.
  - a) Flow rate increases
  - b) Flow rate decreases
  - c) Flow rate does not depend on swash plate angle
  - d) None of the above
- 4) Which stage in two stage direction control valve is solenoid operated?
  - a) Main stage direction control valve
  - b) Pilot stage direction control valve
  - c) Both stages in two stage direction control are solenoid operated
  - d) None of the above
- 5) Hydraulic accumulator is used for \_\_\_\_\_.
  - a) Accumulating oil
  - b) Supplying large quantities of oil for very short duration
  - c) Generally high pressures to operate hydraulic machines
  - d) Supplying energy when main supply fails
- 6) In Bleed-off circuit rate of flow of oil is controlled \_\_\_\_\_.
  - a) In the bypass line leading towards the tank
  - b) At inlet of the actuator
  - c) At outlet of the actuator
  - d) None of the above

- 7) In counter balancing circuit holding pressure is used to \_\_\_\_\_.  
a) To prevent falling of the load while descending  
b) To allow falling of the load while descending  
c) To prevent raising of the load while ascending  
d) All of the above
- 8) The regenerative circuit of a double - acting cylinder is used \_\_\_\_\_.  
a) To increase the out-stroke speed of piston  
b) To decrease the out-stroke speed of piston  
c) To increase the inward stroke speed of piston  
d) Both b & c
- 9) A pneumatic symbol is: \_\_\_\_\_.  
a) Different from a hydraulic part used for the same function  
b) The same as a hydraulic part used for the same function  
c) Not to be compared to a hydraulic part used for the same function  
d) All of above
- 10) How is reverse flow possible in pilot operated check valve?  
a) Spring force lifts the ball due to which reverse flow is possible  
b) Fluid pressure lifts the ball due to which reverse flow is possible  
c) Both a and b  
d) None of the above
- 11) Mostly Service unit (FRL) is \_\_\_\_\_.  
a) At outlet of compressor  
b) At inlet of the compressor  
c) Both a and b  
d) All of the above
- 12) A pressure relief valve can be \_\_\_\_\_.  
a) Direct operated  
b) Pilot operated  
c) Solenoid operated  
d) All the above
- 13) Time delay valve is \_\_\_\_\_.  
a) Pneumatic Pressure Control Valve  
b) Pneumatic Direction Control Valve  
c) Pneumatic Flow Control Valve  
d) Hydraulic Pressure Control Valve
- 14) Why the pilot operated check valve used in clamping operation?  
a) To reduce leakage in spool valve  
b) To avoid decrease in pressure during clamping  
c) Both a and b  
d) None of the above

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**

**MECHANICAL ENGINEERING**

**Industrial Hydraulics & Pneumatics**

Day & Date: Thursday 09-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:**
- 1) All questions are compulsory.
  - 2) Figures to the right indicates full marks.
  - 3) Assume suitable data wherever needed and mention it clearly.
  - 4) Use of non-programmable calculator is allowed.

**Section – I**

**Q.2 Solve any Four of the Followings. 16**

- a) Discuss the simple hydraulic system and write its applications.
- b) Explain with neat sketch construction and working of gear pump.
- c) State different types of accumulators. Explain gas loaded accumulator.
- d) Explain with neat sketch working of 4/2 direction control valve.
- e) Differentiate between meter in and meter out circuit.

**Q.3 Solve any two of the followings. 12**

- a) State different types of actuators. Explain in detail the telescopic cylinder.
- b) Explain construction and working of pilot operated pressure relief valve.
- c) Explain the hydraulic circuit for sequencing of two linear actuators.

**Section – II**

**Q.4 Solve any Four of the Followings. 16**

- a) State types of rotary actuators. Explain in detail vane motor.
- b) Write short note on air lubricator in FRL unit.
- c) How air compressor are classified. Discuss its selection criteria.
- d) Sketch and explain working of time delay valve with its symbol.
- e) Explain pneumatic braking system in automobiles.

**Q.5 Solve any two of the followings. 12**

- a) Discuss the working of quick exhaust valve with its application.
- b) Write short note on pneumatic power tools.
- c) Explain with neat sketch clamping circuit in pneumatics.

Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicates full marks.  
3) Assume suitable data wherever needed and mention it clearly.  
4) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2 Solve any Four of the Followings. 16**
- a) Discuss the simple hydraulic system and write its applications.
  - b) Explain with neat sketch construction and working of gear pump.
  - c) State different types of accumulators. Explain gas loaded accumulator.
  - d) Explain with neat sketch working of 4/2 direction control valve.
  - e) Differentiate between meter in and meter out circuit.
- Q.3 Solve any two of the followings. 12**
- a) State different types of actuators. Explain in detail the telescopic cylinder.
  - b) Explain construction and working of pilot operated pressure relief valve.
  - c) Explain the hydraulic circuit for sequencing of two linear actuators.

**Section – II**

- Q.4 Solve any Four of the Followings. 16**
- a) State types of rotary actuators. Explain in detail vane motor.
  - b) Write short note on air lubricator in FRL unit.
  - c) How air compressor are classified. Discuss its selection criteria.
  - d) Sketch and explain working of time delay valve with its symbol.
  - e) Explain pneumatic braking system in automobiles.
- Q.5 Solve any two of the followings. 12**
- a) Discuss the working of quick exhaust valve with its application.
  - b) Write short note on pneumatic power tools.
  - c) Explain with neat sketch clamping circuit in pneumatics.

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**

**MECHANICAL ENGINEERING**

**Industrial Hydraulics & Pneumatics**

Day & Date: Thursday 09-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:**
- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.
  - 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
  - 3) Figures to the right indicates full marks.
  - 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) In Bleed-off circuit rate of flow of oil is controlled \_\_\_\_\_.
  - a) In the bypass line leading towards the tank
  - b) At inlet of the actuator
  - c) At outlet of the actuator
  - d) None of the above
- 2) In counter balancing circuit holding pressure is used to \_\_\_\_\_.
  - a) To prevent falling of the load while descending
  - b) To allow falling of the load while descending
  - c) To prevent raising of the load while ascending
  - d) All of the above
- 3) The regenerative circuit of a double - acting cylinder is used \_\_\_\_\_.
  - a) To increase the out-stroke speed of piston
  - b) To decrease the out-stroke speed of piston
  - c) To increase the inward stroke speed of piston
  - d) Both b & c
- 4) A pneumatic symbol is: \_\_\_\_\_.
  - a) Different from a hydraulic part used for the same function
  - b) The same as a hydraulic part used for the same function
  - c) Not to be compared to a hydraulic part used for the same function
  - d) All of above
- 5) How is reverse flow possible in pilot operated check valve?
  - a) Spring force lifts the ball due to which reverse flow is possible
  - b) Fluid pressure lifts the ball due to which reverse flow is possible
  - c) Both a and b
  - d) None of the above
- 6) Mostly Service unit (FRL) is \_\_\_\_\_.
  - a) At outlet of compressor
  - b) At inlet of the compressor
  - c) Both a and b
  - d) All of the above

- 7) A pressure relief valve can be \_\_\_\_\_.
  - a) Direct operated
  - b) Pilot operated
  - c) Solenoid operated
  - d) All the above
- 8) Time delay valve is \_\_\_\_\_.
  - a) Pneumatic Pressure Control Valve
  - b) Pneumatic Direction Control Valve
  - c) Pneumatic Flow Control Valve
  - d) Hydraulic Pressure Control Valve
- 9) Why the pilot operated check valve used in clamping operation?
  - a) To reduce leakage in spool valve
  - b) To avoid decrease in pressure during clamping
  - c) Both a and b
  - d) None of the above
- 10) Telescopic cylinders have \_\_\_\_\_.
  - a) Only two stage units
  - b) Only three stage units
  - c) Multistage units
  - d) All of the above
- 11) Why are hydraulic cylinders cushioned?
  - a) Cushioning decelerates the piston of a cylinder
  - b) Stress and vibrations can be increased
  - c) Both a and b
  - d) None of the above
- 12) When the angle of swash plate decreases \_\_\_\_\_.
  - a) Flow rate increases
  - b) Flow rate decreases
  - c) Flow rate does not depend on swash plate angle
  - d) None of the above
- 13) Which stage in two stage direction control valve is solenoid operated?
  - a) Main stage direction control valve
  - b) Pilot stage direction control valve
  - c) Both stages in two stage direction control are solenoid operated
  - d) None of the above
- 14) Hydraulic accumulator is used for \_\_\_\_\_.
  - a) Accumulating oil
  - b) Supplying large quantities of oil for very short duration
  - c) Generally high pressures to operate hydraulic machines
  - d) Supplying energy when main supply fails

<b>Seat No.</b>

<b>Set</b>	<b>S</b>
------------	----------

**T.Y (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Industrial Hydraulics & Pneumatics**

Day & Date: Thursday 09-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicates full marks.  
3) Assume suitable data wherever needed and mention it clearly.  
4) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2 Solve any Four of the Followings. 16**
- a) Discuss the simple hydraulic system and write its applications.
  - b) Explain with neat sketch construction and working of gear pump.
  - c) State different types of accumulators. Explain gas loaded accumulator.
  - d) Explain with neat sketch working of 4/2 direction control valve.
  - e) Differentiate between meter in and meter out circuit.
- Q.3 Solve any two of the followings. 12**
- a) State different types of actuators. Explain in detail the telescopic cylinder.
  - b) Explain construction and working of pilot operated pressure relief valve.
  - c) Explain the hydraulic circuit for sequencing of two linear actuators.

**Section – II**

- Q.4 Solve any Four of the Followings. 16**
- a) State types of rotary actuators. Explain in detail vane motor.
  - b) Write short note on air lubricator in FRL unit.
  - c) How air compressor are classified. Discuss its selection criteria.
  - d) Sketch and explain working of time delay valve with its symbol.
  - e) Explain pneumatic braking system in automobiles.
- Q.5 Solve any two of the followings. 12**
- a) Discuss the working of quick exhaust valve with its application.
  - b) Write short note on pneumatic power tools.
  - c) Explain with neat sketch clamping circuit in pneumatics.

-----------------	--

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

## Marks:14

14

- Page 1 of 16

- 9) Charge to voltage converter for Individual pixel is employed in
  - a) CCD camera
  - b) CMOS camera
  - c) Vidicon Camera
  - d) None of the above
- 10) Bin picking application of robot involves
  - a) Identification and Servoing
  - b) Identification and inspection
  - c) Inspection and Servoing
  - d) None of the above
- 11) Seam tracking in continuous arc welding is an example of
  - a) Visual servoing and navigation
  - b) Inspection
  - c) Identification
  - d) Inspection and identification
- 12) The application in which the purpose of machine vision system is to recognize and classify an object is called
  - a) Inspection
  - b) Identification
  - c) Visual servoing and navigation
  - d) None of the above
- 13) The process of \_\_\_\_\_ is a technique which relates the location of pixels in the image array to the points in the scene.
  - a) Camera calibration
  - b) Camera orientation
  - c) Camera adaptation
  - d) Camera adjustment
- 14) The acronym AGV stands for
  - a) Automatic Guided Vehicle
  - b) Automated Guided Vehicle
  - c) Automated Gliding Vehicle
  - d) Automatic Gliding Vehicle

 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly.  
 4) Use of non-programmable scientific calculator is allowed.

**Section – I**

- Q.2** a) With block diagram of Machine Vision system, state the objective of machine vision system. **07**  
 b) Explain with neat sketch successive approximation type AD converter. **07**
- Q.3** a) Define an edge in an image and explain the process of edge detection. **07**  
 b) Discuss in detail image thresholding. **07**
- Q.4** a) Determine the area, minimum aspect ratio, the diameter, perimeter, centroid and thinness measures of the image. **10**

- b) Why do we need image processing? Explain **04**

**Section – II**

- Q.5** a) Explain the working of Moravec corner detector. **07**  
 b) Draw neat sketch of CCD image sensor and explain its working. **07**
- Q.6** a) Discuss in detail about split and merge technique and region growing approach of segmentation. **08**  
 b) Explain in brief manual leadthrough and powered leadthrough robot programming methods. **06**

**Q.7 Write a short note on (Any Three)**

**14**

- a)** Inspection application of machine vision in robotics.
- b)** Visual servoing and navigation application of machine vision in robotics.
- c)** Template matching
- d)** Sampling and quantization

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) In the context of camera, the term CMOS stands for
  - a) Camera Multiple Operating System
  - b) Complementary Metal Oxide Semiconductor
  - c) Closed Circuit Operating System
  - d) None of the above
- 2) Charge to voltage converter for Individual pixel is employed in
  - a) CCD camera
  - b) CMOS camera
  - c) Vidicon Camera
  - d) None of the above
- 3) Bin picking application of robot involves
  - a) Identification and Servoing
  - b) Identification and inspection
  - c) Inspection and Servoing
  - d) None of the above
- 4) Seam tracking in continuous arc welding is an example of
  - a) Visual servoing and navigation
  - b) Inspection
  - c) Identification
  - d) Inspection and identification
- 5) The application in which the purpose of machine vision system is to recognize and classify an object is called
  - a) Inspection
  - b) Identification
  - c) Visual servoing and navigation
  - d) None of the above
- 6) The process of \_\_\_\_\_ is a technique which relates the location of pixels in the image array to the points in the scene.
  - a) Camera calibration
  - b) Camera orientation
  - c) Camera adaptation
  - d) Camera adjustment
- 7) The acronym AGV stands for
  - a) Automatic Guided Vehicle
  - b) Automated Guided Vehicle
  - c) Automated Gliding Vehicle
  - d) Automatic Gliding Vehicle

- 8) An image which contains about 256 different intensity levels between black and white is a \_\_\_\_\_ image.
- a) Color
  - b) Binary
  - c) Grayscale
  - d) Monochrome
- 9) The two most commonly used image sensors in modern cameras are
- a) CCD and CDI
  - b) CCD and CMOS
  - c) CMOS and CDI
  - d) RGB and HSV
- 10) Zero crossing of gradient represents location of corner in an image.
- a) True
  - b) False
- 11) Silhouette is obtained with back light source.
- a) True
  - b) False
- 12) Which of the following operation involves plotting an image histogram?
- a) Corner detection
  - b) Thresholding
  - c) Region growing
  - d) None of the above
- 13) The process in which small part of image is compared with large image and located in large image, is called
- a) pattern recognition
  - b) template matching
  - c) region growing
  - d) split and merge technique
- 14) If path traced by end effector of robot arm is complex and continuous, then robot programming should be done by following approach
- a) manual leadthrouh
  - b) powered leadthrouh
  - c) textual programming method
  - d) None of the above

**3D Printing Material**

Max. Marks: 70

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Figures to the right indicates full marks.
- 4) Assume suitable data wherever needed and mention it clearly.
- 5) Use of scientific calculator is allowed.

Marks: 14

14

- 1) Which of the following is typically the most expensive type of 3D printer?  
a) SLA  
b) SLM  
c) FDM  
d) None of the above
- 2) What printer melts metal?  
a) SLS  
b) SLM  
c) SLA  
d) FDM
- 3) SLA printer's package material is in a \_\_\_\_\_.  
a) Chain  
b) Spool  
c) Cartridge  
d) None of the above
- 4) What material is not used in 3D printing?  
a) Nylon  
b) ABS  
c) PLA  
d) PVC
- 5) Which file type is most commonly exported from CAD software?  
a) SLDRT  
b) JPG  
c) STL  
d) X3G
- 6) Process of forming metal powder by directing molten metal through an orifice after which it is break into small particle using high pressure fluid is known as?  
a) Atomization  
b) Reduction  
c) Crushing  
d) Electrolysis
- 7) In Fused Deposition Modelling, the raw material is used in the form of \_\_\_\_\_.  
a) Wax  
b) Wire  
c) Powder  
d) All the above mentioned
- 8) In the process of Selective Laser Sintering, raw material used is in the form of \_\_\_\_\_.  
a) Machining Wax  
b) Foam Core  
c) Powder  
d) Rubber

- 9) What is the first step in the design process?
- a) Make a prototype
  - b) Identify the problem or the need
  - c) Market your idea
  - d) Test and retest
- 10) Choose the correct sequence to generate prototype.
- a) 3D CAD data - CAD solid model - STL file - RP prototype
  - b) CAD solid model - 3D CAD data - RP prototype - STL file
  - c) STL file - 3D CAD data - CAD solid model - RP prototype
  - d) 3D CAD data - STL file - CAD solid model - RP prototype
- 11) From following, the alternative name for Rapid Prototyping is \_\_\_\_\_.
- a) Additive Manufacturing
  - b) Layer Manufacturing
  - c) Direct CAD Manufacturing
  - d) All of the above
- 12) Process of converting STL file model in to layers is called \_\_\_\_\_ in RP.
- a) chopping
  - b) slicing
  - c) cutting
  - d) trimming
- 13) Full form of STL is \_\_\_\_\_.
- a) Straight-lithography
  - b) Streto-lithography
  - c) Stereo-lithography
  - d) Straight-lipsography
- 14) In the \_\_\_\_\_ process, one starts with a single block of solid material larger than the final size of the desired object and material is removed until the desired shape is reached.
- a) Subtractive process
  - b) Additive process
  - c) Formative process
  - d) All of the above

**Set****P**

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MECHANICAL ENGINEERING**  
**3D Printing Material**

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Question no. 1 is compulsory in section I, and solve any two questions from the remaining.  
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.  
2) Figures to the right indicate full marks.  
3) Assume suitable data wherever necessary and mention it clearly.  
4) Use of scientific calculator is allowed.

**Section – I**

- |            |  |           |
|------------|--|-----------|
| <b>Q.2</b> | Discuss in detail the steps in 3D Printing.  | <b>10</b> |
| <b>Q.3</b> | Enlist the different Composite materials used in 3D Printing? Illustrate in detail types of Composite materials with their characteristics and applications. | <b>09</b> |
| <b>Q.4</b> | Compare Conventional Manufacturing Vs Additive Manufacturing.  | <b>09</b> |
| <b>Q.5</b> | Enlist different metal and alloy materials used in 3D Printer. Explain in detail applications and characteristics of any 03 metal and alloy materials.       | <b>09</b> |

**Section – II**

- |            |  |           |
|------------|--|-----------|
| <b>Q.6</b> | Discuss various forms of raw material used in 3D Printing.   | <b>10</b> |
| <b>Q.7</b> | Enlist the different techniques to generate the powder. And explain with neat sketch Gas Atomization process.  | <b>09</b> |
| <b>Q.8</b> | Describe different application of 3D printing in the field of Medical, Aerospace and Automobile in detail.   | <b>09</b> |
| <b>Q.9</b> | What is meant by Performance Requirements in 3D printing? Discuss the significance of Performance Requirements to Material Requirements in 3D printing with example. | <b>09</b> |

Time: 10:00 AM To 01:00 PM

Max. Marks: 70

### MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

14

- 1) In the process of Selective Laser Sintering, raw material used is in the form of \_\_\_\_\_.  
a) Machining Wax                      b) Foam Core  
c) Powder                                d) Rubber
- 2) What is the first step in the design process?  
a) Make a prototype                      b) Identify the problem or the need  
c) Market your idea                      d) Test and retest
- 3) Choose the correct sequence to generate prototype.  
a) 3D CAD data - CAD solid model - STL file - RP prototype  
b) CAD solid model - 3D CAD data - RP prototype - STL file  
c) STL file - 3D CAD data - CAD solid model - RP prototype  
d) 3D CAD data - STL file - CAD solid model - RP prototype
- 4) From following, the alternative name for Rapid Prototyping is \_\_\_\_\_.  
a) Additive Manufacturing              b) Layer Manufacturing  
c) Direct CAD Manufacturing          d) All of the above
- 5) Process of converting STL file model in to layers is called \_\_\_\_\_ in RP.  
a) chopping                                b) slicing  
c) cutting                                  d) trimming
- 6) Full form of STL is \_\_\_\_\_.  
a) Straight-lithography                  b) Streto-lithography  
c) Stereo-lithography                  d) Straight-lipsography
- 7) In the \_\_\_\_\_ process, one starts with a single block of solid material larger than the final size of the desired object and material is removed until the desired shape is reached.  
a) Subtractive process                  b) Additive process  
c) Formative process                  d) All of the above

- 8) Which of the following is typically the most expensive type of 3D printer?  
a) SLA  
b) SLM  
c) FDM  
d) None of the above
- 9) What printer melts metal?  
a) SLS  
b) SLM  
c) SLA  
d) FDM
- 10) SLA printer's package material is in a \_\_\_\_\_.  
a) Chain  
b) Spool  
c) Cartridge  
d) None of the above
- 11) What material is not used in 3D printing?  
a) Nylon  
b) ABS  
c) PLA  
d) PVC
- 12) Which file type is most commonly exported from CAD software?  
a) SLDRT  
b) JPG  
c) STL  
d) X3G
- 13) Process of forming metal powder by directing molten metal through an orifice after which it is break into small particle using high pressure fluid is known as?  
a) Atomization  
b) Reduction  
c) Crushing  
d) Electrolysis
- 14) In Fused Deposition Modelling, the raw material is used in the form of \_\_\_\_\_.  
a) Wax  
b) Wire  
c) Powder  
d) All the above mentioned

## Energy Conservation, Audit and Management

Max. Marks: 70

Time: 10:00 AM To 01:00 PM

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 3) Figures to the right indicates full marks.
- 4) Assume suitable data wherever needed and mention it clearly.

### MCQ/Objective Type Questions

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

14

- 1) Transfer of heat without a conveying medium is possible with \_\_\_\_\_.  
a) Conduction  
b) Radiation  
c) Convection  
d) None of the above
- 2) Fossile fuels are \_\_\_\_\_.  
a) Non-renewable source of energy  
b) Renewable source of energy  
c) Both a) and b)  
d) Neither a) and b)
- 3) World oil reserves are estimated to last over \_\_\_\_\_.  
a) 45 years  
b) 60 years  
c) 200 years  
d) 75 years
- 4) Energy consumption per unit of GDP is called as \_\_\_\_\_.  
a) Energy Ratio  
b) Energy intensity  
c) Per capita consumption  
d) None of the above
- 5) What is energy Science?  
a) Study of Energy  
b) Study of energy conversion  
c) Study of energy and its conversion in other forms  
d) Study of energy generation
- 6) Acid rain is caused by the release of the following components from combustion of fuels.  
a) SO<sub>x</sub> and NO<sub>x</sub>  
b) Sox and CO<sub>2</sub>  
c) CO<sub>2</sub> and NO<sub>x</sub>  
d) H<sub>2</sub>O
- 7) Energy manager should be well versed with \_\_\_\_\_.  
a) Manufacturing and processing skills  
b) Managerial and technical skills  
c) Technical and marketing skills  
d) Managerial and commercial skills

- 8) Which of the following is a good medium for constant temperature heating?  
a) Water  
b) Steam  
c) Coolant  
d) Diesel
- 9) The effectiveness of a heat exchanger depends on \_\_\_\_\_.  
a) Specific heat of hot fluid  
b) Specific heat of cold fluid  
c) Inlet temperature of hot fluid  
d) LMTD
- 10) Energy management is a key component of \_\_\_\_\_.  
a) Environmental management  
b) Carbon management  
c) Nitrogen management  
d) Water management
- 11) The Act which has been enacted to provide for efficient use of energy and its conservation and for matters connected therewith is?  
a) Indian Electricity Act 2003  
b) Energy Conservation Act 2001  
c) Indian Electricity Act 2010  
d) Energy Conservation Act 2007
- 12) Which of the following energy has the greatest potential among all the sources of renewable energy?  
a) Solar energy  
b) Wind Energy  
c) Thermal energy  
d) Hydro-electrical energy
- 13) \_\_\_\_\_ is called as the bio gas.  
a) Bio ethanol  
b) Bio methane  
c) Bio diesel  
d) Bio butane
- 14) Energy recovery is typically via production of \_\_\_\_\_.  
a) Gas  
b) Heat  
c) Light  
d) Steam

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MECHANICAL ENGINEERING**

**Energy Conservation, Audit and Management**

Day &amp; Date: Thursday, 16-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Attempt any two questions from each Section.  
 2) Assume suitable data if required.  
 3) Use of scientific calculator is allowed.

**Section – I**

- Q.2** a) What are the various types of energies? Explain each type in brief. **07**  
 b) Explain Current energy scenario in India. **07**
- Q.3** a) Explain detailed Energy Audit with its steps. **07**  
 b) Explain different instruments and equipments used for energy audit. **07**
- Q.4 Answer the following questions. (Any four)** **14**  
 a) Merits and demerits of Energy Management  
 b) Describe Energy and Environment.  
 c) Importance Energy Audit in Indian Industry  
 d) Explain Energy Policy Planning.  
 e) Four Principles of Energy Management

**Section – II**

- Q.5** a) Describe energy conservation opportunity HVAC system. **07**  
 b) Explain Energy performance assessment and efficiency improvement of Furnace. **07**
- Q.6** a) Explain Different Financial Analysis Techniques. **07**  
 b) What are the direct and indirect benefits of waste heat recovery? **07**
- Q.7 Answer the following questions. (Any four)** **14**  
 a) Concept of Waste heat recovery  
 b) NPV (Net Present Value) with formula  
 c) Energy conservation opportunity in Cooling Tower  
 d) Energy performance assessment and efficiency improvement of Boiler  
 e) Simple Payback Period

  - c) Both a) and b)
  - d) Neither a) and b)
- 10) World oil reserves are estimated to last over \_\_\_\_\_.
  - a) 45 years
  - b) 60 years
  - c) 200 years
  - d) 75 years
- 11) Energy consumption per unit of GDP is called as \_\_\_\_\_.
  - a) Energy Ratio
  - b) Energy intensity
  - c) Per capita consumption
  - d) None of the above
- 12) What is energy Science?
  - a) Study of Energy
  - b) Study of energy conversion
  - c) Study of energy and its conversion in other forms
  - d) Study of energy generation
- 13) Acid rain is caused by the release of the following components from combustion of fuels.
  - a) SO<sub>x</sub> and NO<sub>x</sub>
  - b) SO<sub>x</sub> and CO<sub>2</sub>
  - c) CO<sub>2</sub> and NO<sub>x</sub>
  - d) H<sub>2</sub>O
- 14) Energy manager should be well versed with \_\_\_\_\_.
  - a) Manufacturing and processing skills
  - b) Managerial and technical skills
  - c) Technical and marketing skills
  - d) Managerial and commercial skills

Set Q
-------

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MECHANICAL ENGINEERING**

**Energy Conservation, Audit and Management**

Day & Date: Thursday, 16-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Attempt any two questions from each Section.  
 2) Assume suitable data if required.  
 3) Use of scientific calculator is allowed.

**Section – I**

- Q.2** a) What are the various types of energies? Explain each type in brief. **07**  
 b) Explain Current energy scenario in India. **07**
- Q.3** a) Explain detailed Energy Audit with its steps. **07**  
 b) Explain different instruments and equipments used for energy audit. **07**
- Q.4 Answer the following questions. (Any four)** **14**  
 a) Merits and demerits of Energy Management  
 b) Describe Energy and Environment.  
 c) Importance Energy Audit in Indian Industry  
 d) Explain Energy Policy Planning.  
 e) Four Principles of Energy Management

**Section – II**

- Q.5** a) Describe energy conservation opportunity HVAC system. **07**  
 b) Explain Energy performance assessment and efficiency improvement of Furnace. **07**
- Q.6** a) Explain Different Financial Analysis Techniques. **07**  
 b) What are the direct and indirect benefits of waste heat recovery? **07**
- Q.7 Answer the following questions. (Any four)** **14**  
 a) Concept of Waste heat recovery  
 b) NPV (Net Present Value) with formula  
 c) Energy conservation opportunity in Cooling Tower  
 d) Energy performance assessment and efficiency improvement of Boiler  
 e) Simple Payback Period

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MECHANICAL ENGINEERING**

**Energy Conservation, Audit and Management**

Day &amp; Date: Thursday, 16-02-2023

Max. Marks: 70

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The Act which has been enacted to provide for efficient use of energy and its conservation and for matters connected therewith is?
 

a) Indian Electricity Act 2003	b) Energy Conservation Act 2001
c) Indian Electricity Act 2010	d) Energy Conservation Act 2007
- 2) Which of the following energy has the greatest potential among all the sources of renewable energy?
 

a) Solar energy	b) Wind Energy
c) Thermal energy	d) Hydro-electrical energy
- 3) \_\_\_\_\_ is called as the bio gas.
 

a) Bio ethanol	b) Bio methane
c) Bio diesel	d) Bio butane
- 4) Energy recovery is typically via production of \_\_\_\_\_.
 

a) Gas	b) Heat
c) Light	d) Steam
- 5) Transfer of heat without a conveying medium is possible with \_\_\_\_\_.
 

a) Conduction	b) Radiation
c) Convection	d) None of the above
- 6) Fossile fuels are \_\_\_\_\_.
 

a) Non-renewable source of energy
b) Renewable source of energy
c) Both a) and b)
d) Neither a) and b)
- 7) World oil reserves are estimated to last over \_\_\_\_\_.
 

a) 45 years	b) 60 years
c) 200 years	d) 75 years
- 8) Energy consumption per unit of GDP is called as \_\_\_\_\_.
 

a) Energy Ratio	b) Energy intensity
c) Per capita consumption	d) None of the above

- 9) What is energy Science?
- a) Study of Energy
  - b) Study of energy conversion
  - c) Study of energy and its conversion in other forms
  - d) Study of energy generation
- 10) Acid rain is caused by the release of the following components from combustion of fuels.
- a) SO<sub>x</sub> and NO<sub>x</sub>
  - b) SO<sub>x</sub> and CO<sub>2</sub>
  - c) CO<sub>2</sub> and NO<sub>x</sub>
  - d) H<sub>2</sub>O
- 11) Energy manager should be well versed with \_\_\_\_\_.
- a) Manufacturing and processing skills
  - b) Managerial and technical skills
  - c) Technical and marketing skills
  - d) Managerial and commercial skills
- 12) Which of the following is a good medium for constant temperature heating?
- a) Water
  - b) Steam
  - c) Coolant
  - d) Diesel
- 12) The effectiveness of a heat exchanger depends on \_\_\_\_\_.
- a) Specific heat of hot fluid
  - b) Specific heat of cold fluid
  - c) Inlet temperature of hot fluid
  - d) LMTD
- 14) Energy management is a key component of \_\_\_\_\_.
- a) Environmental management
  - b) Carbon management
  - c) Nitrogen management
  - d) Water management

# Introduction to Electric and Hybrid Vehicles

Day & Date: Thursday, 16-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

**Instructions:**

- 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
- 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
- 3) Figures to the right indicates full marks
- 4) Assume suitable data wherever needed and mention it clearly.

### MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

14

- 1) Full form of EV is \_\_\_\_\_.  
a) Energy voltage                      b) Electric vehicles  
c) Electric voltage                  d) Energy vehicles
- 2) Full form of ICV is \_\_\_\_\_.  
a) Internal combustion vehicles    b) Internet combustion vehicles  
c) Internally combined vehicles    d) Internet combined vehicles
- 3) What's the difference between a plug-in hybrid and a battery electric vehicle?  
a) There is no difference  
b) A plug-in hybrid only accepts AC power, while a battery electric vehicle accepts AC and DC power  
c) A plug-in hybrid can be powered by either the battery or the gasoline engine. A pure electric vehicle is powered only by the battery  
d) None of the above
- 4) The performance of a vehicle is usually described by \_\_\_\_\_.  
a) Its maximum cruising speed      b) Grade-ability  
c) Acceleration                        d) All of the above
- 5) Which of the following is NOT the type of Hybrid Vehicle?  
a) Plug-in Hybrid                      b) Parallel Hybrid  
c) Natural Gas for Vehicles          d) Series Hybrid
- 6) The transmission requirements of a vehicle depend on the characteristics of \_\_\_\_\_.  
a) The power plant  
b) The performance requirements of the vehicle  
c) The power plant and the performance requirements of the vehicle  
d) None of the above
- 7) Which type of motor is widely used for electric vehicle?  
a) Induction motor                      b) DC shunt motor  
c) BLDC                                    d) Series motor

- 8) Speed of D.C. shunt motors are controlled by \_\_\_\_\_.  
a) Flux control method                      b) Rheostatic control method  
c) Voltage control method                  d) All of these
- 9) In a series-switched hybrid \_\_\_\_\_.  
a) Is the weakest engine in series with the wheels  
b) The engines simultaneously drive the front and the rear axle  
c) Is the strongest engine in series with the wheels  
d) Goes the power through a succession of motors to the wheels
- 10) Electric Vehicles are generally powered by \_\_\_\_\_.  
a) Aluminum batteries                      b) Lead-acid batteries  
c) Sodium batteries                        d) Magnesium batteries
- 11) Full form of HVDC is \_\_\_\_\_.  
a) High Voltage Direct Current  
b) High Voltage Distribution Combination  
c) High Value Direct Current  
d) High Value Distribution Combination
- 12) Full form of EMU is \_\_\_\_\_.  
a) Electronics Multiple Unit              b) Electrical Multiple Unit  
c) Electrical Multiple Usage              d) Electrical Multiple User
- 13) The electric motor in a hybrid car can also act as: \_\_\_\_\_.  
a) Cooling fan                                b) Fuel pump  
c) Generator                                  d) None of these
- 14) The value of area under acceleration-time graph is \_\_\_\_\_.  
a) Velocity                                      b) Displacement  
c) Force                                         d) Impulse

-------

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MECHANICAL ENGINEERING**

**Introduction to Electric and Hybrid Vehicles**

Day & Date: Thursday, 16-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Full form of HVDC is \_\_\_\_\_.  
 a) High Voltage Direct Current  
 b) High Voltage Distribution Combination  
 c) High Value Direct Current  
 d) High Value Distribution Combination
- 2) Full form of EMU is \_\_\_\_\_.  
 a) Electronics Multiple Unit  
 b) Electrical Multiple Unit  
 c) Electrical Multiple Usage  
 d) Electrical Multiple User
- 3) The electric motor in a hybrid car can also act as: \_\_\_\_\_.  
 a) Cooling fan  
 b) Fuel pump  
 c) Generator  
 d) None of these
- 4) The value of area under acceleration-time graph is \_\_\_\_\_.  
 a) Velocity  
 b) Displacement  
 c) Force  
 d) Impulse
- 5) Full form of EV is \_\_\_\_\_.  
 a) Energy voltage  
 b) Electric vehicles  
 c) Electric voltage  
 d) Energy vehicles
- 6) Full form of ICV is \_\_\_\_\_.  
 a) Internal combustion vehicles  
 b) Internet combustion vehicles  
 c) Internally combined vehicles  
 d) Internet combined vehicles
- 7) What's the difference between a plug-in hybrid and a battery electric vehicle?  
 a) There is no difference  
 b) A plug-in hybrid only accepts AC power, while a battery electric vehicle accepts AC and DC power  
 c) A plug-in hybrid can be powered by either the battery or the gasoline engine. A pure electric vehicle is powered only by the battery  
 d) None of the above

- 8) The performance of a vehicle is usually described by \_\_\_\_\_.  
a) Its maximum cruising speed      b) Grade-ability  
c) Acceleration      d) All of the above
- 9) Which of the following is NOT the type of Hybrid Vehicle?  
a) Plug-in Hybrid      b) Parallel Hybrid  
c) Natural Gas for Vehicles      d) Series Hybrid
- 10) The transmission requirements of a vehicle depend on the characteristics of \_\_\_\_\_.  
a) The power plant  
b) The performance requirements of the vehicle  
c) The power plant and the performance requirements of the vehicle  
d) None of the above
- 11) Which type of motor is widely used for electric vehicle?  
a) Induction motor      b) DC shunt motor  
c) BLDC      d) Series motor
- 12) Speed of D.C. shunt motors are controlled by \_\_\_\_\_.  
a) Flux control method      b) Rheostatic control method  
c) Voltage control method      d) All of these
- 13) In a series-switched hybrid \_\_\_\_\_.  
a) Is the weakest engine in series with the wheels  
b) The engines simultaneously drive the front and the rear axle  
c) Is the strongest engine in series with the wheels  
d) Goes the power through a succession of motors to the wheels
- 14) Electric Vehicles are generally powered by \_\_\_\_\_.  
a) Aluminum batteries      b) Lead-acid batteries  
c) Sodium batteries      d) Magnesium batteries

**T.Y. (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MECHANICAL ENGINEERING**

**Introduction to Electric and Hybrid Vehicles**

Day & Date: Thursday, 16-02-2023

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) Attempt any two questions from each section.  
 2) Figures to the right indicates full marks  
 3) Assume suitable data wherever needed and mention it clearly.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> Discuss the concept of Range Extender Battery.                      | <b>07</b> |
|            | <b>b)</b> Explain in short History of Electric Vehicles.                      | <b>07</b> |
| <b>Q.3</b> | <b>a)</b> Describe Electric Motor characteristics.                            | <b>07</b> |
|            | <b>b)</b> Discuss in detail strategy for battery cost reduction.              | <b>07</b> |
| <b>Q.4</b> | <b>a)</b> Explain with neat sketch Series and Parallel hybrid electric drive. | <b>07</b> |
|            | <b>b)</b> Write a note on concept of hybrid electric drive.                   | <b>07</b> |

**Section – II**

- |            |   |           |
|------------|---|-----------|
| <b>Q.5</b> | <b>a)</b> Describe with neat sketch construction & working of AC Induction motor.         | <b>07</b> |
|            | <b>b)</b> What is SRM Motor? State advantages & disadvantages of SRM Motors.              | <b>07</b> |
| <b>Q.6</b> | <b>a)</b> What is Chopper? Discuss with neat sketch its working advantages & limitations. | <b>07</b> |
|            | <b>b)</b> What is VFD? Discuss each section of VFD with neat sketch in detail.            | <b>07</b> |
| <b>Q.7</b> | <b>a) Define the following terms.</b>   | <b>08</b> |
|            | 1) Energy efficiency  |           |
|            | 2) Idling   |           |
|            | 3) Deceleration   |           |
|            | 4) Regeneration Efficiency  |           |
|            | <b>b)</b> What is Drive Cycle? Discuss any one case of drive cycle in detail.             | <b>06</b> |

 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks:10

**Q.1 Choose the correct alternatives from the given options. 10**

- 1) Microeconomic theory deals with \_\_\_\_\_.
  - a) Economic behavior of individual economic decision-making units
  - b) Economy as whole
  - c) Trade relations
  - d) Economic growth of the society
- 2) In a mixed economy which sector (s) is / are found \_\_\_\_\_.
  - a) Private only
  - b) Public only
  - c) None
  - d) Both (a) public and (b) private
- 3) Who is known as father of economics?
  - a) Adam Smith
  - b) Prof. A. Samuelson
  - c) Alfred Marshall
  - d) J. R. Hicks
- 4) Which of these is an economic activity?
  - a) Father teaching his son at home instead of spending on coaching
  - b) A housewife making food for the family on her own
  - c) A hair dresser doing hair cut designing on payment
  - d) A singer giving a show on his son's wedding anniversary
- 5) Market system means: \_\_\_\_\_.
  - a) Socialism
  - b) Capitalism
  - c) A place where goods are traded
  - d) All of the above
- 6) Micro and Macro are not two independent approaches to economic analysis but they are complementary to each other.
  - a) False
  - b) True
  - c) Partly true
  - d) Partly False
- 7) Variable factor means those factors of production \_\_\_\_\_.
  - a) which can be only changed in the long run
  - b) which can be changed in the short run
  - c) which can be never be changed
  - d) All of the above

- 8)** Which one of the following is not the function of money?
- a) Medium of exchange
  - b) Measure of Happiness
  - c) Standard of deferred payment
  - d) Store of value
- 9)** Which one of the following is the objective of the RBI?
- a) To maintain term deposits of the households
  - b) To ensure price stability
  - c) To arrange loans for the businessmen
  - d) None of the above
- 10)** Which one of the following cost can never become zero?
- |                  |                  |
|------------------|------------------|
| a) Average cost  | b) Fixed cost    |

**T. Y. (B.Tech.) (Sem - I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Machine Design – I**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory it should be solved in first 30 minutes in answer Book. Page No.3 (starting page of the Answer Book) Each question carries on mark.  
 2) Don't forget to mention the question paper Set (P/Q/R/S) at the top of the Same page.  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data if necessary and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) Hooke's law holds good up to
  - a) breaking point
  - b) yield point
  - c) elastic limit
  - d) plastic limit
- 2) When a circular shaft is subjected to torque, the torsional shear stress is
  - a) directly proportional to the distance from the axis
  - b) inversely proportional to the distance from the axis
  - c) proportional to the square of the distance from the axis
  - d) constant throughout the cross-section
- 3) The neutral axis of a beam is
  - a) layer subjected to tensile stress
  - b) layer subjected to compressive stress
  - c) layer subjected to zero stress
  - d) none of the above
- 4) Stress concentration occurs due to
  - a) abrupt change in cross-section
  - b) discontinuities in components
  - c) internal cracks and flaws
  - d) any one of the above
- 5) Cold working
  - a) increases fatigue strength
  - b) decreases fatigue strength
  - c) has no influence on fatigue strength
  - d) none of the above
- 6) The designation M 36 x 2 means
  - a) metric fine threads of 36 mm outside diameter and 2 mm pitch
  - b) metric coarse threads of 36 mm outside diameter and 2 mm pitch
  - c) metric threads of 36 mm pitch diameter and 2 mm pitch
  - d) metric threads of 36 mm core diameter and 2 mm pitch

- 7) The weakest plane in a fillet weld is  
 a) the throat  
 b) side parallel to the force  
 c) smaller of two sides  
 d) side normal to the force
- 8) A rivet is specified by  
 a) shank diameter  
 b) length of rivet  
 c) type of head  
 d) material of rivet
- 9) A transmission shaft subjected to bending and torsional moments should be designed on the basis of  
 a) Rankine theory  
 b) Coulomb, Tresca and Guest theory  
 c) Huber von Mises theory  
 d) Goodman or Soderberg diagrams
- 10) In case of sunk key,  
 a) the keyway is cut in the shaft only  
 b) the keyway is cut in the hub only  
 c) the keyway is cut in both the shaft and the hub  
 d) none of the above
- 11) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is,  
 a) tensile stress  
 b) compressive stress  
 c) bending stress  
 d) torsional shear stress
- 12) Two springs of stiffness  $k_1$  and  $k_2$  are connected in series, the combined stiffness of the connection is given by  
 a)  $\frac{k_1 k_2}{k_1 + k_2}$   
 b)  $\frac{k_1 k_2}{k_1 - k_2}$   
 c)  $k_1 + K_2$   
 d)  $\frac{k_1 + k_2}{k_1 k_2}$
- 13) The stress is induced in the belt is,  
 a) tensile stress  
 b) compressive stress  
 c) direct shear stress  
 d) torsional shear stress
- 14) A V belt designated as B 4430 Lp has  
 a) 4430 mm as diameter of small pulley  
 b) 4430 mm as nominal pitch length  
 c) 4430 mm as diameter of large pulley  
 d) 4430 mm as center distance between pulleys

**T. Y. (B.Tech.) (Sem - I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Machine Design – I**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly.

**Section – I**

- Q.2** a) Explain Design Procedure for Cotter joint. **07**  
 b) Define Factor of safety. Explain factor affecting on selection of Factor of safety and its physical significance. **04**  
 c) Explain design procedure for machine element. **03**
- Q.3** a) A plate made of steel 20C8 ( $S_{ut} = 440 \text{ N/mm}^2$ ) in hot rolled and normalized condition is shown in Fig. It is subjected to a completely reversed axial load of 30 kN. The notch sensitivity factor  $q$  can be taken as 0.8 and the expected reliability is 90%. The size factor is 0.85. The factor of safety is 2. Determine the plate thickness for infinite life. Take  $K_a = 0.67$ ,  $K_b = 0.85$ , For 90% reliability,  $K_c = 0.897$ ,  $K_t = 2.51$  **08**

- c) Explain the Goodman and Soderberg diagram. **06**
- Q.4** a) A V-belt drive is required for a 15-k W, 1440 rpm electric motor, which drives a centrifugal pump running at 360 rpm for a service of 24 hours per day. From space considerations, the center distance should be approximately 1m. Take  $d=200\text{mm}$ ,  $F_a=1.2$ ,  $P_r=6.36$ . Determine  
 (i) belt specifications  
 (ii) number of belts  
 (iii) correct center distance  
 (iv) pulley diameters  
 (Refer the standard table given at the end of question paper) **08**
- b) Differentiate between Flat Belt Drive and V-Belt Drive. **06**

## Section – II

- Q.5** a) The standard cross-section for a flat key, which is fitted on a 50 mm diameter shaft, is 16 x 10 mm. The key is transmitting 475 N-m torque from the shaft to the hub. The key is made of commercial steel ( $S_{yt} = S_{yc} = 230$  N/mm<sup>2</sup>). Determine the length of the key, if the factor of safety is 3. **07**
- b) Differentiate between Rigid Coupling and Flexible Coupling. **04**
- c) Explain ASME code used for shaft design. **03**
- Q.6** a) Explain series and parallel springs for finding the Stiffness of Spring. **06**
- b) It is required to design a helical compression spring subjected to a maximum force of 1250 N. the deflection of the spring corresponding to the maximum force should be approximately 30 mm. The spring index can be taken as 6. The spring is made of patented and cold-drawn steel wire. The ultimate tensile strength and modulus of rigidity of the spring material are 1090 and 81370 N/mm<sup>2</sup> respectively. The permissible shear stress for the spring wire should be taken as 50% of the ultimate tensile strength. Consider the spring has square and ground end. Design the spring and calculate:
- Wire diameter
  - Mean coil diameter
  - Number of active coils
  - Total number of coils
  - Free length of the spring
  - Pitch of the coil
- 08**
- Q.7** a) Derive the equation for Strength of butt welds. **04**
- b) An electric motor weighing 10 kN is lifted by means of an eye bolt as shown in Fig. The eye bolt is screwed into the frame of the motor. The eye bolt has coarse threads. It is made of plain carbon steel 30C8 ( $S_{yt} = 400$  N/mm<sup>2</sup>) and the factor of safety is 6. Determine the size of the bolt. **04**

- c) A plate, 75mm wide and 10mm thick, is joined with another steel plate by mean of single transverse and double parallel fillet welds, as shown in Fig. the joint is subjected to a maximum tensile force of 55 kN. The permissible tensile and shear stresses in the weld material are 70 and 50 N/mm<sup>2</sup> respectively. Determine the required length of each parallel fillet weld. Consider 15 mm of length for starting and stopping of the weld run. **06**

**MECHANICAL ENGINEERING**  
**Machine Design – I**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory it should be solved in first 30 minutes in answer Book. Page No.3 (starting page of the Answer Book) Each question carries on mark.  
 2) Don't forget to mention the question paper Set (P/Q/R/S) at the top of the Same page.  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data if necessary and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) A rivet is specified by
 

a) shank diameter	b) length of rivet
c) type of head	d) material of rivet
- 2) A transmission shaft subjected to bending and torsional moments should be designed on the basis of
  - a) Rankine theory
  - b) Coulomb, Tresca and Guest theory
  - c) Huber von Mises theory
  - d) Goodman or Soderberg diagrams
- 3) In case of sunk key,
  - a) the keyway is cut in the shaft only
  - b) the keyway is cut in the hub only
  - c) the keyway is cut in both the shaft and the hub
  - d) none of the above
- 4) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is,
  - a) tensile stress
  - b) compressive stress
  - c) bending stress
  - d) torsional shear stress
- 5) Two springs of stiffness  $k_1$  and  $k_2$  are connected in series, the combined stiffness of the connection is given by
 

a) $\frac{k_1 k_2}{k_1 + k_2}$	b) $\frac{k_1 k_2}{k_1 - k_2}$
c) $k_1 + k_2$	d) $\frac{k_1 + k_2}{k_1 k_2}$
- 6) The stress is induced in the belt is,
 

a) tensile stress	b) compressive stress
c) direct shear stress	d) torsional shear stress

- 7) A V belt designated as B 4430 Lp has  
a) 4430 mm as diameter of small pulley  
b) 4430 mm as nominal pitch length  
c) 4430 mm as diameter of large pulley  
d) 4430 mm as center distance between pulleys
- 8) Hooke's law holds good up to  
a) breaking point                      b) yield point  
c) elastic limit                      d) plastic limit
- 9) When a circular shaft is subjected to torque, the torsional shear stress is  
a) directly proportional to the distance from the axis  
b) inversely proportional to the distance from the axis  
c) proportional to the square of the distance from the axis  
d) constant throughout the cross-section
- 10) The neutral axis of a beam is  
a) layer subjected to tensile stress  
b) layer subjected to compressive stress  
c) layer subjected to zero stress  
d) none of the above
- 11) Stress concentration occurs due to  
a) abrupt change in cross-section  
b) discontinuities in components  
c) internal cracks and flaws  
d) any one of the above
- 12) Cold working  
a) increases fatigue strength  
b) decreases fatigue strength  
c) has no influence on fatigue strength  
d) none of the above
- 13) The designation M 36 x 2 means  
a) metric fine threads of 36 mm outside diameter and 2 mm pitch  
b) metric coarse threads of 36 mm outside diameter and 2 mm pitch  
c) metric threads of 36 mm pitch diameter and 2 mm pitch  
d) metric threads of 36 mm core diameter and 2 mm pitch
- 14) The weakest plane in a fillet weld is  
a) the throat                      b) side parallel to the force  
c) smaller of two sides                      d) side normal to the force

-----	---

**T. Y. (B.Tech.) (Sem - I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Machine Design – I**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly.

**Section – I**

- Q.2** a) Explain Design Procedure for Cotter joint. **07**  
 b) Define Factor of safety. Explain factor affecting on selection of Factor of safety and its physical significance. **04**  
 c) Explain design procedure for machine element. **03**

- Q.3** a) A plate made of steel 20C8 ( $S_{ut} = 440 \text{ N/mm}^2$ ) in hot rolled and normalized condition is shown in Fig. It is subjected to a completely reversed axial load of 30 kN. The notch sensitivity factor  $q$  can be taken as 0.8 and the expected reliability is 90%. The size factor is 0.85. The factor of safety is 2. Determine the plate thickness for infinite life. Take  $K_a = 0.67$ ,  $K_b = 0.85$ , For 90% reliability,  $K_c = 0.897$ ,  $K_t = 2.51$  **08**

- c) Explain the Goodman and Soderberg diagram. **06**
- Q.4** a) A V-belt drive is required for a 15-k W, 1440 rpm electric motor, which drives acentrifugal pump running at 360 rpm for a service of 24 hours per day. From space considerations, the center distance should be approximately 1m. Take  $d=200\text{mm}$ ,  $F_a=1.2$ ,  $P_r=6.36$ . Determine  
 (i) belt specifications  
 (ii) number of belts  
 (iii) correct center distance  
 (iv) pulley diameters  
 (Refer the standard table given at the end of question paper) **08**
- b) Differentiate between Flat Belt Drive and V-Belt Drive. **06**

**Section – II**

- Q.5** a) The standard cross-section for a flat key, which is fitted on a 50 mm diameter shaft, is 16 x 10 mm. The key is transmitting 475 N-m torque from the shaft to the hub. The key is made of commercial steel ( $S_{yt} = S_{yc} = 230$  N/mm<sup>2</sup>). Determine the length of the key, if the factor of safety is 3. **07**
- b) Differentiate between Rigid Coupling and Flexible Coupling. **04**
- c) Explain ASME code used for shaft design. **03**
- Q.6** a) Explain series and parallel springs for finding the Stiffness of Spring. **06**
- b) It is required to design a helical compression spring subjected to a maximum force of 1250 N. the deflection of the spring corresponding to the maximum force should be approximately 30 mm. The spring index can be taken as 6. The spring is made of patented and cold-drawn steel wire. The ultimate tensile strength and modulus of rigidity of the spring material are 1090 and 81370 N/mm<sup>2</sup> respectively. The permissible shear stress for the spring wire should be taken as 50% of the ultimate tensile strength. Consider the spring has square and ground end. Design the spring and calculate:
- Wire diameter
  - Mean coil diameter
  - Number of active coils
  - Total number of coils
  - Free length of the spring
  - Pitch of the coil
- 08**
- Q.7** a) Derive the equation for Strength of butt welds. **04**
- b) An electric motor weighing 10 kN is lifted by means of an eye bolt as shown in Fig. The eye bolt is screwed into the frame of the motor. The eye bolt has coarse threads. It is made of plain carbon steel 30C8 ( $S_{yt} = 400$  N/mm<sup>2</sup>) and the factor of safety is 6. Determine the size of the bolt. **04**

- c) A plate, 75mm wide and 10mm thick, is joined with another steel plate by mean of single transverse and double parallel fillet welds, as shown in Fig. the joint is subjected to a maximum tensile force of 55 kN. The permissible tensile and shear stresses in the weld material are 70 and 50 N/mm<sup>2</sup> respectively. Determine the required length of each parallel fillet weld. Consider 15 mm of length for starting and stopping of the weld run. **06**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory it should be solved in first 30 minutes in answer Book. Page No.3 (starting page of the Answer Book) Each question carries on mark.  
 2) Don't forget to mention the question paper Set (P/Q/R/S) at the top of the Same page.  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data if necessary and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is,
  - a) tensile stress
  - b) compressive stress
  - c) bending stress
  - d) torsional shear stress
- 2) Two springs of stiffness  $k_1$  and  $k_2$  are connected in series, the combined stiffness of the connection is given by
 

a) $\frac{k_1 k_2}{k_1 + k_2}$	b) $\frac{k_1 k_2}{k_1 - k_2}$
c) $k_1 + k_2$	d) $\frac{k_1 + k_2}{k_1 k_2}$
- 3) The stress is induced in the belt is,
 

a) tensile stress	b) compressive stress
c) direct shear stress	d) torsional shear stress
- 4) A V belt designated as B 4430 Lp has
  - a) 4430 mm as diameter of small pulley
  - b) 4430 mm as nominal pitch length
  - c) 4430 mm as diameter of large pulley
  - d) 4430 mm as center distance between pulleys
- 5) Hooke's law holds good up to
 

a) breaking point	b) yield point
c) elastic limit	d) plastic limit
- 6) When a circular shaft is subjected to torque, the torsional shear stress is
  - a) directly proportional to the distance from the axis
  - b) inversely proportional to the distance from the axis
  - c) proportional to the square of the distance from the axis
  - d) constant throughout the cross-section

- 7) The neutral axis of a beam is  
a) layer subjected to tensile stress  
b) layer subjected to compressive stress  
c) layer subjected to zero stress  
d) none of the above
- 8) Stress concentration occurs due to  
a) abrupt change in cross-section  
b) discontinuities in components  
c) internal cracks and flaws  
d) any one of the above
- 9) Cold working  
a) increases fatigue strength  
b) decreases fatigue strength  
c) has no influence on fatigue strength  
d) none of the above
- 10) The designation M 36 x 2 means  
a) metric fine threads of 36 mm outside diameter and 2 mm pitch  
b) metric coarse threads of 36 mm outside diameter and 2 mm pitch  
c) metric threads of 36 mm pitch diameter and 2 mm pitch  
d) metric threads of 36 mm core diameter and 2 mm pitch
- 11) The weakest plane in a fillet weld is  
a) the throat  
b) side parallel to the force  
c) smaller of two sides  
d) side normal to the force
- 12) A rivet is specified by  
a) shank diameter  
b) length of rivet  
c) type of head  
d) material of rivet
- 13) A transmission shaft subjected to bending and torsional moments should be designed on the basis of  
a) Rankine theory  
b) Coulomb, Tresca and Guest theory  
c) Huber von Mises theory  
d) Goodman or Soderberg diagrams
- 14) In case of sunk key,  
a) the keyway is cut in the shaft only  
b) the keyway is cut in the hub only  
c) the keyway is cut in both the shaft and the hub  
d) none of the above

**T. Y. (B.Tech.) (Sem - I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Machine Design – I**

Day & Date: Wednesday, 25-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly.

**Section – I**

- Q.2** a) Explain Design Procedure for Cotter joint. **07**  
 b) Define Factor of safety. Explain factor affecting on selection of Factor of safety and its physical significance. **04**  
 c) Explain design procedure for machine element. **03**
- Q.3** a) A plate made of steel 20C8 ( $S_{ut} = 440 \text{ N/mm}^2$ ) in hot rolled and normalized condition is shown in Fig. It is subjected to a completely reversed axial load of 30 kN. The notch sensitivity factor  $q$  can be taken as 0.8 and the expected reliability is 90%. The size factor is 0.85. The factor of safety is 2. Determine the plate thickness for infinite life. Take  $K_a = 0.67$ ,  $K_b = 0.85$ , For 90% reliability,  $K_c = 0.897$ ,  $K_t = 2.51$  **08**

- c) Explain the Goodman and Soderberg diagram. **06**
- Q.4** a) A V-belt drive is required for a 15-k W, 1440 rpm electric motor, which drives a centrifugal pump running at 360 rpm for a service of 24 hours per day. From space considerations, the center distance should be approximately 1m. Take  $d=200\text{mm}$ ,  $F_a=1.2$ ,  $P_r=6.36$ . Determine  
 (i) belt specifications  
 (ii) number of belts  
 (iii) correct center distance  
 (iv) pulley diameters  
 (Refer the standard table given at the end of question paper) **08**
- b) Differentiate between Flat Belt Drive and V-Belt Drive. **06**

## Section – II

- Q.5** a) The standard cross-section for a flat key, which is fitted on a 50 mm diameter shaft, is 16 x 10 mm. The key is transmitting 475 N-m torque from the shaft to the hub. The key is made of commercial steel ( $S_{yt} = S_{yc} = 230$  N/mm<sup>2</sup>). Determine the length of the key, if the factor of safety is 3. **07**
- b) Differentiate between Rigid Coupling and Flexible Coupling. **04**
- c) Explain ASME code used for shaft design. **03**
- Q.6** a) Explain series and parallel springs for finding the Stiffness of Spring. **06**
- b) It is required to design a helical compression spring subjected to a maximum force of 1250 N. the deflection of the spring corresponding to the maximum force should be approximately 30 mm. The spring index can be taken as 6. The spring is made of patented and cold-drawn steel wire. The ultimate tensile strength and modulus of rigidity of the spring material are 1090 and 81370 N/mm<sup>2</sup> respectively. The permissible shear stress for the spring wire should be taken as 50% of the ultimate tensile strength. Consider the spring has square and ground end. Design the spring and calculate:
- Wire diameter
  - Mean coil diameter
  - Number of active coils
  - Total number of coils
  - Free length of the spring
  - Pitch of the coil
- 08**
- Q.7** a) Derive the equation for Strength of butt welds. **04**
- b) An electric motor weighing 10 kN is lifted by means of an eye bolt as shown in Fig. The eye bolt is screwed into the frame of the motor. The eye bolt has coarse threads. It is made of plain carbon steel 30C8 ( $S_{yt} = 400$  N/mm<sup>2</sup>) and the factor of safety is 6. Determine the size of the bolt. **04**

- c) A plate, 75mm wide and 10mm thick, is joined with another steel plate by mean of single transverse and double parallel fillet welds, as shown in Fig. the joint is subjected to a maximum tensile force of 55 kN. The permissible tensile and shear stresses in the weld material are 70 and 50 N/mm<sup>2</sup> respectively. Determine the required length of each parallel fillet weld. Consider 15 mm of length for starting and stopping of the weld run. **06**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) The designation M 36 x 2 means
  - a) metric fine threads of 36 mm outside diameter and 2 mm pitch
  - b) metric coarse threads of 36 mm outside diameter and 2 mm pitch
  - c) metric threads of 36 mm pitch diameter and 2 mm pitch
  - d) metric threads of 36 mm core diameter and 2 mm pitch
- 2) The weakest plane in a fillet weld is
  - a) the throat
  - b) side parallel to the force
  - c) smaller of two sides
  - d) side normal to the force
- 3) A rivet is specified by
  - a) shank diameter
  - b) length of rivet
  - c) type of head
  - d) material of rivet
- 4) A transmission shaft subjected to bending and torsional moments should be designed on the basis of
  - a) Rankine theory
  - b) Coulomb, Tresca and Guest theory
  - c) Huber von Mises theory
  - d) Goodman or Soderberg diagrams
- 5) In case of sunk key,
  - a) the keyway is cut in the shaft only
  - b) the keyway is cut in the hub only
  - c) the keyway is cut in both the shaft and the hub
  - d) none of the above
- 6) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is,
  - a) tensile stress
  - b) compressive stress
  - c) bending stress
  - d) torsional shear stress

- 7) Two springs of stiffness  $k_1$  and  $k_2$  are connected in series, the combined stiffness of the connection is given by
- a)  $\frac{k_1 k_2}{k_1 + k_2}$                       b)  $\frac{k_1 k_2}{k_1 - k_2}$   
c)  $k_1 + k_2$                       d)  $\frac{k_1 + k_2}{k_1 k_2}$
- 8) The stress is induced in the belt is,
- a) tensile stress                      b) compressive stress  
c) direct shear stress              d) torsional shear stress
- 9) A V belt designated as B 4430 Lp has
- a) 4430 mm as diameter of small pulley  
b) 4430 mm as nominal pitch length  
c) 4430 mm as diameter of large pulley  
d) 4430 mm as center distance between pulleys
- 10) Hooke's law holds good up to
- a) breaking point                      b) yield point  
c) elastic limit                      d) plastic limit
- 11) When a circular shaft is subjected to torque, the torsional shear stress is
- a) directly proportional to the distance from the axis  
b) inversely proportional to the distance from the axis  
c) proportional to the square of the distance from the axis  
d) constant throughout the cross-section
- 12) The neutral axis of a beam is
- a) layer subjected to tensile stress  
b) layer subjected to compressive stress  
c) layer subjected to zero stress  
d) none of the above
- 13) Stress concentration occurs due to
- a) abrupt change in cross-section  
b) discontinuities in components  
c) internal cracks and flaws  
d) any one of the above
- 14) Cold working

<b>Seat No.</b>	
-----------------	--

Day & Date: Tuesday, 31-01-2023  
Time: 10:00 AM To 01:00 PM

**Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.

Marks: 14

- 1) Which one of the following is an output device?  
a) Scanner  
b) Keyboard  
c) Drum plotter  
d) none of these
- 2) Which of the following is type of curve in geometric modeling?  
a) Bezier  
b) Benazir  
c) NURBS  
d) Both a) and c)
- 3) Reflection about X axis is  
a) Y flips  
b) X flips  
c) X-Y flips  
d) None of the above
- 4) If the no. of nodes increases,  
a) Accuracy decreases  
b) Accuracy increases  
c) Accuracy remains same  
d) None
- 5) In group technology, on part family is on collection of parts based on \_\_\_\_  
a) Shape  
b) Size  
c) Similar processing steps  
d) Any of these
- 6) ROBOT is example of  
a) Programmable automation  
b) Flexible automation  
c) Fixed automation  
d) All above
- 7) Stress analysis of spur gear can be conveniently done using software  
a) Ansys  
b) Pro-E  
c) Auto Cad  
d) Catia
- 8) The device used in NC machine tools to read a program on punched tape is called as  
a) Program scanner  
b) Program reader  
c) Punched tape reader  
d) None of these
- 9) Adaptive control system reduces  
a) Machining time  
b) Non-productive time  
c) Power output  
d) None of these

- 10)** The predefined sequence of movement of machine parts in CNC, stored in MCU is called as
- |                   |                     |
|-------------------|---------------------|
| a) Machine cycles | b) Operation cycles |
| c) Canned cycles  | d) None of these    |
- 11)** The part of CNC machine tool where multiple tools are stored is called as
- |                  |              |
|------------------|--------------|
| a) Tool magazine | b) Spindle   |
| c) Tool store    | d) Tool room |
- 12)** Miscellaneous command program stop in CNC is
- |        |        |
|--------|--------|
| a) M09 | b) M10 |
| c) M11 | d) M00 |
- 13)** G71 preparatory code is used for
- |                        |                                |
|------------------------|--------------------------------|
| a) Absolute presetting | b) Absolute coordinate setting |
| c) Metric unit setting | d) none of these               |
- 14)** G03 code in part programming is used for
- |                            |                                |
|----------------------------|--------------------------------|
| a) Linear movement         | b) Rapid movement              |
| c) Interpolation clockwise | d) Interpolation anticlockwise |

Set **P**

**T.Y. (B. Tech) (Sem - I) (Old) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**CAD-CAM & CAE**

Day & Date: Tuesday, 31-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

**Instructions:** 1) Attempt any two questions from each section i.e. Section I & Section II.  
 2) Figures to the right indicate full marks.

**Section – I**

- Q.2** a) Explain product cycle with CAD/CAM. **07**  
 b) What is automation? Discuss its nature in today's context in industry. **07**
- Q.3** a) Translate a triangle with coordinates A (3,5) B (3,8) and C (7,5) by 7 units in x direction and 2 units in Y direction and then to be rotate it by 90 degree at point A. Show and explain Graphical Representation clearly. **07**  
 b) General steps used in FEM and explain it in short. **07**
- Q.4** **Solve any four of the following questions.** **14**  
 a) Group Technology  
 b) CAD/CAM Data Exchange  
 c) FEM  
 d) Bezier curve  
 e) Integration of CAD and CAM

**Section – II**

- Q.5** a) Prepare a part program using G and M codes for stepped component given below. The various details are: **07**  
 Work material : Aluminum      Tool Material : HSS  
 Work piece size :  $\phi$  30 x 80      Spindle speed : 200 rpm  
 Feed rate: 200 mm/min      All dimensions are in mm

- b) Differentiate between NC and CNC machine tools. **07**

- Q.6**   **a)**   What is part programming? Explain the procedure associated with NC part programming.      **07**
- b)**   What is the concept of DNC? Discuss its advantages and limitations.      **07**
- Q.7**   **Answer the following questions. (Any Four)**      **14**
- a)**   FMS
- b)**   Pallets
- c)**   Adaptive control
- d)**   Enlist and explain any four M Codes
- e)**   ATS

Set Q
-------

**T.Y. (B. Tech) (Sem - I) (Old) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**CAD-CAM & CAE**

Day & Date: Tuesday, 31-01-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The device used in NC machine tools to read a program on punched tape is called as
 

a) Program scanner	b) Program reader
c) Punched tape reader	d) None of these
- 2) Adaptive control system reduces
 

a) Machining time	b) Non-productive time
c) Power output	d) None of these
- 3) The predefined sequence of movement of machine parts in CNC, stored in MCU is called as
 

a) Machine cycles	b) Operation cycles
c) Canned cycles	d) None of these
- 4) The part of CNC machine tool where multiple tools are stored is called as
 

a) Tool magazine	b) Spindle
c) Tool store	d) Tool room
- 5) Miscellaneous command program stop in CNC is
 

a) M09	b) M10
c) M11	d) M00
- 6) G71 preparatory code is used for
 

a) Absolute presetting	b) Absolute coordinate setting
c) Metric unit setting	d) none of these
- 7) G03 code in part programming is used for
 

a) Linear movement	b) Rapid movement
c) Interpolation clockwise	d) Interpolation anticlockwise
- 8) Which one of the following is an output device?
 

a) Scanner	b) Keyboard
c) Drum plotter	d) none of these
- 9) Which of the following is type of curve in geometric modeling?
 

a) Bezier	b) Benazir
c) NURBS	d) Both a) and c)

- 10)** Reflection about X axis is  
a) Y flips  
b) X flips  
c) X-Y flips  
d) None of the above
- 11)** If the no. of nodes increases,  
a) Accuracy decreases  
b) Accuracy increases  
c) Accuracy remains same  
d) None
- 12)** In group technology, on part family is on collection of parts based on \_\_\_\_  
a) Shape  
b) Size  
c) Similar processing steps  
d) Any of these
- 13)** ROBOT is example of  
a) Programmable automation  
b) Flexible automation  
c) Fixed automation  
d) All above
- 14)** Stress analysis of spur gear can be conveniently done using software  
a) Ansys  
b) Pro-E  
c) Auto Cad  
d) Catia

 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options. 14**

- 1) Which of the following methods of powder manufacture is regarded as mechanical method of powder manufacture?
  - a) Reduction
  - b) condensation
  - c) Milling
  - d) none of these
- 2) Which of the following component is manufactured by powder metallurgy?
  - a) Ball bearing
  - b) Clutch lever
  - c) Torch nozzle
  - d) Tungsten filament
- 3) Which of the following methods of powder manufacture is regarded as chemical process of powder manufacture?
  - a) Reduction
  - b) condensation
  - c) Milling
  - d) none of these
- 4) Annealing Heat Treatment is used to \_\_\_\_\_.
  - a) get fine pearlite
  - b) get coarse pearlite
  - c) get martensite
  - d) get bainite
- 5) Martensite is having \_\_\_\_\_ crystal structure.
  - a) BCC
  - b) FCC
  - c) BCT
  - d) HCP
- 6) Retained Austenite can be completely removed by \_\_\_\_\_.
  - a) Sub zero treatment
  - b) Annealing
  - c) Normalizing
  - d) Martempering
- 7) The medium used in gas nitriding is \_\_\_\_\_.
  - a) ammonia
  - b) butane
  - c) propane
  - d) none of these
- 8) Behavior of material under constant load with respect to time is determined in \_\_\_\_\_ test.
  - a) Tensile test
  - b) Fatigue test
  - c) creep test
  - d) Hardness test

- 9) True toughness of material can be measured by\_\_\_\_\_
- |                |                 |
|----------------|-----------------|
| a) Impact test | b) Tensile test |
| c) Creep test  | d) Fatigue test |
- 10) Al-Si alloys are given \_\_\_\_\_
- |                             |                            |
|-----------------------------|----------------------------|
| a) Modification treatment   | b) Precipitation treatment |
| c) Malleabilizing treatment | d) None                    |
- 11) Pearlite is product of \_\_\_\_\_ transformation.
- |               |               |
|---------------|---------------|
| a) Monotectic | b) Eutectoid  |
| c) Eutectic   | d) Peritectic |
- 12) Tin is having \_\_\_\_\_ structure.
- |        |        |
|--------|--------|
| a) BCC | b) BCT |
| c) HCP | d) FCC |
- 13) Which of the following phases present in Fe-Fe<sub>3</sub>C diagram have FCC structure?
- |                  |                  |
|------------------|------------------|
| a) Alpha ferrite | b) Delta ferrite |
| c) Cementite     | d) Austenite     |
- 14) Which of the following steel contains tungsten as alloying element?
- |                          |         |
|--------------------------|---------|
| a) HSLA steel            | b) HSS  |
| c) Water hardening steel | d) None |

P

**T. Y. (B.Tech.) (Semester - I) (Old) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**Metallurgy**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from each Section.  
 2) Figures to the right indicate full marks.  
 3) Use of scientific calculator is allowed.

**Section – I**

- Q.2** a) Draw Fe-Fe<sub>3</sub>C equilibrium diagram. Label all the temperatures & constituents. **06**  
 b) With the help of above diagram, explain the slow cooling of 0.2% carbon steel & draw the microstructure of this steel. **06**  
 c) Explain (i) A1 temperature (ii) A3 temperature. **02**
- Q.3** a) Give typical composition, properties & applications of Any 5 of the following. **10**  
 i) Hadfield Mn steel  
 ii) Ferritic Stainless steel  
 iii) HSS  
 iv) Naval Brass  
 v) Free cutting steel  
 vi) Muntz metal  
 vii) Spring steel  
 b) Explain the modification treatment given to Al-Si system. **04**
- Q.4** Answer the following (Any 4) **14**  
 a) Compare between Gray Cast Iron & White Cast Iron. **04**  
 b) Explain why Copper is an essential constituent of Babbitts. **03**  
 c) Draw neat sketch of Interstitial solid solution & Substitutional solid solution. **04**  
 d) What are composites? What are their applications? **03**  
 e) Explain the application of Lever arm principle. **03**

**Section – II**

- Q.5** a) Draw TTT diagram for eutectoid steel. **04**  
 b) Compare Annealing & Normalizing **04**  
 c) Explain the purposes of Tempering. **03**  
 d) Enlist various quenching media & their characteristics. **03**
- Q.6** a) Explain the significance of Hardenability? Which factors improve hardenability? **03**  
 b) Compare between Brinell & Rockwell hardness Tests **04**  
 c) Explain why OHNS steels are subjected to subzero treatment. **03**  
 d) Draw the typical flow chart for manufacturing of self-lubricated bearing by Powder metallurgy **04**

- Q.7**
- a)** Discuss various methods of Powder manufacturing.
  - b)** Explain X-ray radiography test with neat sketch.
  - c)** Explain Eddy current test with neat sketch.
  - d)** Write a note on Tensile testing

**03**

Set	P
-----	---

**T. Y. (B.Tech.) (Sem-I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**

**Industrial Engineering and Operation Research**

Day & Date: Tuesday, 07-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Attempt any Two Questions form Section I and II  
 2) Figures to right indicate full marks.  
 4) Make suitable assumptions if required.

**Section – I**

- Q.2** a) Define productivity and explain different factors affecting on productivity. **07**  
 b) Explain basic procedure and steps in work study. **07**
- Q.3** a) What is meant by micromotion study and explain SIMO chart? **07**  
 b) Explain with figure multiple activity chart. **07**
- Q.4** a) The observed time and performance rating of a time study is given below **07**
- | Element              | 1   | 2    | 3   | 4    | 5    |
|----------------------|-----|------|-----|------|------|
| Observed time (min.) | 0.2 | 0.08 | 0.6 | 0.12 | 0.10 |
| Performance rating   | 85  | 80   | 90  | 85   | 80   |
- Assume: Relax allowance 15%  
 Contingency allowance 2%  
 Calculate std. time/PC.
- b) List the various methods of job evaluation and explain any one. **07**

**Section – II**

- Q.5** a) Write in brief on types of OR models. **07**  
 b) Solve following LPP by Graphical Method. **07**
- Maximize  $Z = 8x_1 + 6x_2$
- s. t.  $4x_1 + 2x_2 \leq 60$   
 $2x_1 + 4x_2 \leq 48$   
 $x_1, x_2 \geq 0$
- Q.6** a) Solve the following assignment problem for minimizing the total cost of assigning workers to jobs. **07**

Jobs

	1	2	3	4	5
1	35	30	18	11	24
2	32	33	21	10	21
3	24	27	29	22	11
4	9	8	28	35	26
5	26	19	17	24	11

Workers

- b)** Solve the following transportation problem using LCM method to minimize total cost. **07**

		Destination				
		D <sub>1</sub>	D <sub>2</sub>	D <sub>3</sub>	D <sub>4</sub>	↓ Supply
S <sub>1</sub>		5	3	6	4	30
S <sub>2</sub>		3	4	7	8	15
S <sub>3</sub>		9	6	5	8	15
Demand →		10	25	18	7	

- Q.7 a)** A certain project has the following data: **07**

Activity	Time in months
1 - 2	2
1 - 3	2
1 - 4	1
2 - 5	4
3 - 6	8
3 - 7	5
4 - 6	3
5 - 8	1
6 - 9	5
7 - 8	4
8 - 9	3

- Construct the network
  - Determine critical path and its duration
  - Discuss the importance of float.
- b)** Compare PERT and CPM. **07**

Seat No.

Max. Marks: 70

- Instructions:**
- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
  - 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
  - 3) Figures to the right indicates full marks.
  - 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Operations Research cannot give perfect \_\_\_\_\_ to problems.
 

a) Answers	b) Solutions
c) Both A and B	d) Decisions
- 2) A feasible solution to LPP \_\_\_\_\_.
 

a) Must satisfy all constraints
b) Need not satisfy all constraints
c) Must be corner point of feasible region
d) Must optimize objective function
- 3) The northwest corner rule requires that we start allocating units to shipping routes in the:
 

a) Lower right corner of the table
b) Upper right corner of the table
c) Highest costly cell of the table
d) Upper left-hand corner of the table
- 4) Which of the following is used to come up with a solution to the assignment problem?
 

a) MODI method
b) Northwest corner method
c) Stepping-stone method
d) Hungarian method
- 5) An objective function is maximized when it is a \_\_\_\_\_ function.
 

a) Passive	b) Profit
c) Cost	d) None of the above
- 6) In a project network, the critical path \_\_\_\_\_.
 

a) May be the shortest path
b) Is the longest path
c) May be longest path
d) Is the shortest path

**Industrial Engineering and Operation Research**

Day & Date: Tuesday, 07-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Attempt any Two Questions form Section I and II  
 2) Figures to right indicate full marks.  
 4) Make suitable assumptions if required.

**Section – I**

- Q.2** a) Define productivity and explain different factors affecting on productivity. **07**  
 b) Explain basic procedure and steps in work study. **07**
- Q.3** a) What is meant by micromotion study and explain SIMO chart? **07**  
 b) Explain with figure multiple activity chart. **07**
- Q.4** a) The observed time and performance rating of a time study is given below **07**
- |                      |     |      |     |      |      |
|----------------------|-----|------|-----|------|------|
| Element              | 1   | 2    | 3   | 4    | 5    |
| Observed time (min.) | 0.2 | 0.08 | 0.6 | 0.12 | 0.10 |
| Performance rating   | 85  | 80   | 90  | 85   | 80   |
- Assume: Relax allowance 15%  
 Contingency allowance 2%  
 Calculate std. time/PC.
- b) List the various methods of job evaluation and explain any one. **07**

**Section – II**

- Q.5** a) Write in brief on types of OR models. **07**  
 b) Solve following LPP by Graphical Method. **07**
- Maximize  $Z = 8x_1 + 6x_2$   
 s. t.  $4x_1 + 2x_2 \leq 60$   
 $2x_1 + 4x_2 \leq 48$   
 $x_1, x_2 \geq 0$
- Q.6** a) Solve the following assignment problem for minimizing the total cost of assigning workers to jobs. **07**

Jobs

Workers		1	2	3	4	5
	1	35	30	18	11	24
	2	32	33	21	10	21
	3	24	27	29	22	11
	4	9	8	28	35	26
	5	26	19	17	24	11

- b)** Solve the following transportation problem using LCM method to minimize total cost. **07**

		Destination				
		D <sub>1</sub>	D <sub>2</sub>	D <sub>3</sub>	D <sub>4</sub>	↓ Supply
S <sub>1</sub>		5	3	6	4	30
S <sub>2</sub>		3	4	7	8	15
S <sub>3</sub>		9	6	5	8	15
Demand →		10	25	18	7	

- Q.7 a)** A certain project has the following data: **07**

Activity	Time in months
1 - 2	2
1 - 3	2
1 - 4	1
2 - 5	4
3 - 6	8
3 - 7	5
4 - 6	3
5 - 8	1
6 - 9	5
7 - 8	4
8 - 9	3

- i) Construct the network  
 ii) Determine critical path and its duration  
 iii) Discuss the importance of float.
- b)** Compare PERT and CPM. **07**

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.****14**

- 1) Which type of motion is transmitted by hydraulic actuators?
  - a) Linear motion
  - b) Rotary motion
  - c) Both a and b
  - d) None of the above
- 2) Metallic Seals are suitable for
  - a) Low pressure system
  - b) High pressure and temperature system
  - c) Extremely low temperature application
  - d) Dynamic application
- 3) When is a pressure reducing valve used?
  - a) It is used when higher pressure than system pressure is required
  - b) It is used when lower pressure than system pressure is required
  - c) When absolutely zero pressure is required
  - d) All the above
- 4) Which of the following gas is used in gas charged accumulator?
  - a) Oxygen
  - b) Carbon dioxide
  - c) Nitrogen
  - d) All the above
- 5) In Bleed-off circuit rate of flow of oil is controlled
  - a) In the bypass line leading towards the tank
  - b) At inlet of the actuator
  - c) At outlet of the actuator
  - d) None of the above
- 6) Why the pilot operated check valve used in clamping operation?
  - a) To reduce leakage in spool valve
  - b) To avoid decrease in pressure during clamping
  - c) Both a. and b
  - d) None of the above

- 7) In counter balancing circuit holding pressure is used to
- a) To prevent falling of the load while descending
  - b) To allow falling of the load while descending
  - c) To prevent raising of the load while ascending
  - d) All of the above
- 8) The \_\_\_\_\_ converts the compressed air energy into mechanical energy in the form of force and linear movement in one direction only.
- a) Double-acting cylinder
  - b) Piston cylinders
  - c) Single-acting cylinder
  - d) Short-stroke cylinders
- 9) Where is an intercooler connected in a two stage compressor?
- a) Intercooler is connected after the two stage compressor
  - b) Intercooler is connected between the two stages of the compressor
  - c) Intercooler is connected before the two stage compressor
  - d) None of the above
- 10) Which of the following is a component used in air generation system?
- a) Pressure switch
  - b) Pressure gauge
  - c) Intercooler
  - d) Drier
- 11) Check valve is a type of
- a) Pressure reducing valve
  - b) Pressure relief valve
  - c) Directional control valve
  - d) None of the above
- 12) A pressure relief valve can be
- a) Direct operated
  - b) Pilot operated
  - c) Solenoid operated
  - d) All the above
- 13) Meter out circuit can be used for
- a) Opposing load
  - b) Running away load
  - c) Both a & b
  - d) None of above
- 14) Time delay valve is
- a) Pneumatic Flow Control Valve
  - b) Hydraulic Flow Control Valve
  - c) Pneumatic Pressure Control Valve
  - d) Hydraulic Pressure Control Valve

Max. Marks: 56

- Instructions:** 1) All questions are compulsory  
2) Figures to the right indicates full marks.  
3) Assume suitable data if necessary.  
4) Use of nonprogrammable calculator is allowed.

**Section – I**

- Q.2 Solve any Four of the Followings. 16**
- a) Explain cylinder cushioning effect in hydraulic system.
  - b) Explain construction and working of vane type pump.
  - c) Explain with neat sketch hydraulic intensifier.
  - d) Explain with neat sketch working of 3/2 spool type direction control valve.
  - e) Explain hydraulic circuit for sequencing of two cylinder.
- Q.3 Solve any two of the followings. 12**
- a) Define actuator. Explain with neat sketch and symbol tandem cylinder.
  - b) Explain construction and working of pressure compensated flow control valve.
  - c) Explain in detail the regenerative circuit in hydraulic application.

**Section – II**

- Q.4 Solve any Four of the Followings. (4\*4 Marks= 16 Marks) 16**
- a) Explain with a sketch construction & working of the gear type motor.
  - b) Classify the air compressor. Explain selection criteria of compressor.
  - c) Write short note on quick exhaust valve.
  - d) Explain in detail 5/2 direction control valve in pneumatics with symbol.
  - e) Explain with neat sketch time delay circuit.
- Q.5 Solve any two of the followings. 12**
- a) What is FRL unit? Explain with a neat sketch construction & working of air lubricator.
  - b) Sketch and explain pilot operated pressure relief valve with symbol.
  - c) Explain with neat sketch pneumatic meter out circuit of speed control.

 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options. 14**

- 1) The \_\_\_\_\_ converts the compressed air energy into mechanical energy in the form of force and linear movement in one direction only.
 

a) Double-acting cylinder	b) Piston cylinders
c) Single-acting cylinder	d) Short-stroke cylinders
- 2) Where is an intercooler connected in a two stage compressor?
 

a) Intercooler is connected after the two stage compressor
b) Intercooler is connected between the two stages of the compressor
c) Intercooler is connected before the two stage compressor
d) None of the above
- 3) Which of the following is a component used in air generation system?
 

a) Pressure switch	b) Pressure gauge
c) Intercooler	d) Drier
- 4) Check valve is a type of
 

a) Pressure reducing valve	b) Pressure relief valve
c) Directional control valve	d) None of the above
- 5) A pressure relief valve can be
 

a) Direct operated	b) Pilot operated
c) Solenoid operated	d) All the above
- 6) Meter out circuit can be used for
 

a) Opposing load	b) Running away load
c) Both a & b	d) None of above
- 7) Time delay valve is
 

a) Pneumatic Flow Control Valve
b) Hydraulic Flow Control Valve
c) Pneumatic Pressure Control Valve
d) Hydraulic Pressure Control Valve
- 8) Which type of motion is transmitted by hydraulic actuators?
 

a) Linear motion	b) Rotary motion
c) Both a and b	d) None of the above

- 9) Metallic Seals are suitable for
- a) Low pressure system
  - b) High pressure and temperature system
  - c) Extremely low temperature application
  - d) Dynamic application
- 10) When is a pressure reducing valve used?
- a) It is used when higher pressure than system pressure is required
  - b) It is used when lower pressure than system pressure is required
  - c) When absolutely zero pressure is required
  - d) All the above
- 11) Which of the following gas is used in gas charged accumulator?
- a) Oxygen
  - b) Carbon dioxide
  - c) Nitrogen
  - d) All the above
- 12) In Bleed-off circuit rate of flow of oil is controlled
- a) In the bypass line leading towards the tank
  - b) At inlet of the actuator
  - c) At outlet of the actuator
  - d) None of the above
- 13) Why the pilot operated check valve used in clamping operation?
- a) To reduce leakage in spool valve
  - b) To avoid decrease in pressure during clamping
  - c) Both a. and b
  - d) None of the above
- 14) In counter balancing circuit holding pressure is used to
- a) To prevent falling of the load while descending
  - b) To allow falling of the load while descending
  - c) To prevent raising of the load while ascending
  - d) All of the above

Day & Date: Thursday, 09-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory  
2) Figures to the right indicates full marks.  
3) Assume suitable data if necessary.  
4) Use of nonprogrammable calculator is allowed.

**Section – I**

- Q.2 Solve any Four of the Followings. 16**
- a) Explain cylinder cushioning effect in hydraulic system.
  - b) Explain construction and working of vane type pump.
  - c) Explain with neat sketch hydraulic intensifier.
  - d) Explain with neat sketch working of 3/2 spool type direction control valve.
  - e) Explain hydraulic circuit for sequencing of two cylinder.
- Q.3 Solve any two of the followings. 12**
- a) Define actuator. Explain with neat sketch and symbol tandem cylinder.
  - b) Explain construction and working of pressure compensated flow control valve.
  - c) Explain in detail the regenerative circuit in hydraulic application.

**Section – II**

- Q.4 Solve any Four of the Followings. (4\*4 Marks= 16 Marks) 16**
- a) Explain with a sketch construction & working of the gear type motor.
  - b) Classify the air compressor. Explain selection criteria of compressor.
  - c) Write short note on quick exhaust valve.
  - d) Explain in detail 5/2 direction control valve in pneumatics with symbol.
  - e) Explain with neat sketch time delay circuit.
- Q.5 Solve any two of the followings. 12**
- a) What is FRL unit? Explain with a neat sketch construction & working of air lubricator.
  - b) Sketch and explain pilot operated pressure relief valve with symbol.
  - c) Explain with neat sketch pneumatic meter out circuit of speed control.

**T.Y. (B. Tech) (Sem-I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Industrial Hydraulics & Pneumatics**

Day & Date: Thursday, 09-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Check valve is a type of
  - a) Pressure reducing valve
  - b) Pressure relief valve
  - c) Directional control valve
  - d) None of the above
- 2) A pressure relief valve can be
  - a) Direct operated
  - b) Pilot operated
  - c) Solenoid operated
  - d) All the above
- 3) Meter out circuit can be used for
  - a) Opposing load
  - b) Running away load
  - c) Both a & b
  - d) None of above
- 4) Time delay valve is
  - a) Pneumatic Flow Control Valve
  - b) Hydraulic Flow Control Valve
  - c) Pneumatic Pressure Control Valve
  - d) Hydraulic Pressure Control Valve
- 5) Which type of motion is transmitted by hydraulic actuators?
  - a) Linear motion
  - b) Rotary motion
  - c) Both a and b
  - d) None of the above
- 6) Metallic Seals are suitable for
  - a) Low pressure system
  - b) High pressure and temperature system
  - c) Extremely low temperature application
  - d) Dynamic application
- 7) When is a pressure reducing valve used?
  - a) It is used when higher pressure than system pressure is required
  - b) It is used when lower pressure than system pressure is required
  - c) When absolutely zero pressure is required
  - d) All the above
- 8) Which of the following gas is used in gas charged accumulator?
  - a) Oxygen
  - b) Carbon dioxide
  - c) Nitrogen
  - d) All the above

- 9) In Bleed-off circuit rate of flow of oil is controlled
- a) In the bypass line leading towards the tank
  - b) At inlet of the actuator
  - c) At outlet of the actuator
  - d) None of the above
- 10) Why the pilot operated check valve used in clamping operation?
- a) To reduce leakage in spool valve
  - b) To avoid decrease in pressure during clamping
  - c) Both a. and b
  - d) None of the above
- 11) In counter balancing circuit holding pressure is used to
- a) To prevent falling of the load while descending
  - b) To allow falling of the load while descending
  - c) To prevent raising of the load while ascending
  - d) All of the above
- 12) The \_\_\_\_\_ converts the compressed air energy into mechanical energy in the form of force and linear movement in one direction only.
- a) Double-acting cylinder
  - b) Piston cylinders
  - c) Single-acting cylinder
  - d) Short-stroke cylinders
- 13) Where is an intercooler connected in a two stage compressor?
- a) Intercooler is connected after the two stage compressor
  - b) Intercooler is connected between the two stages of the compressor
  - c) Intercooler is connected before the two stage compressor
  - d) None of the above
- 14) Which of the following is a component used in air generation system?
- a) Pressure switch
  - b) Pressure gauge
  - c) Intercooler
  - d) Drier

Day & Date: Thursday, 09-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory  
2) Figures to the right indicates full marks.  
3) Assume suitable data if necessary.  
4) Use of nonprogrammable calculator is allowed.

**Section – I**

**Q.2 Solve any Four of the Followings. 16**

- a) Explain cylinder cushioning effect in hydraulic system.
- b) Explain construction and working of vane type pump.
- c) Explain with neat sketch hydraulic intensifier.
- d) Explain with neat sketch working of 3/2 spool type direction control valve.
- e) Explain hydraulic circuit for sequencing of two cylinder.

**Q.3 Solve any two of the followings. 12**

- a) Define actuator. Explain with neat sketch and symbol tandem cylinder.
- b) Explain construction and working of pressure compensated flow control valve.
- c) Explain in detail the regenerative circuit in hydraulic application.

**Section – II**

**Q.4 Solve any Four of the Followings. (4\*4 Marks= 16 Marks) 16**

- a) Explain with a sketch construction & working of the gear type motor.
- b) Classify the air compressor. Explain selection criteria of compressor.
- c) Write short note on quick exhaust valve.
- d) Explain in detail 5/2 direction control valve in pneumatics with symbol.
- e) Explain with neat sketch time delay circuit.

**Q.5 Solve any two of the followings. 12**

- a) What is FRL unit? Explain with a neat sketch construction & working of air lubricator.
- b) Sketch and explain pilot operated pressure relief valve with symbol.
- c) Explain with neat sketch pneumatic meter out circuit of speed control.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Objective types of questions**

**14**

- 1) Non-Traditional machining is recommended when we need the following features?
  - a) Complex shapes
  - b) High surface quality
  - c) Low-rigidity structures
  - d) All of the mentioned
- 2) In mechanical machining, the material is removed by \_\_\_\_\_.
  - a) Erosion
  - b) Corrosion
  - c) Abrasion
  - d) Vaporization
- 3) Which of the following process has the lowest rate of metal removal?
  - a) Electro discharge machining
  - b) Electro-chemical machining
  - c) Abrasive jet machining
  - d) Electron beam machining
- 4) Abrasive carrying liquid for the abrasive slurry in USM is
  - a) Water
  - b) Heavy paraffin oil
  - c) Silicone oil
  - d) Any oil
- 5) In Ultrasonic machining, the material is removed by
  - a) anodic dissolution
  - b) thermal melting
  - c) abrasive action
  - d) electrochemical oxidation
- 6) In EDM the metal removal is carried out by
  - a) fracture of work material due to impact of grains
  - b) electrolysis
  - c) melting and vaporization
  - d) none of the above
- 7) In electrochemical machining, the metal is removed by
  - a) Dissolution in the electrolyte solution
  - b) Molecular transfer
  - c) Ionic bombardment
  - d) Ultraviolet rays
- 8) Chemical machining provides
  - a) Good surface finish
  - b) High material removal rate
  - c) Uniform material removal
  - d) None of them

- 9) The main requirement of the property of the tool material in ECM is
- a) High Thermal conductivity
  - b) Low thermal conductivity
  - c) Moderate electrical conductivity
  - d) Low electrical conductivity
- 10) Electrolyte's electrical conductivity value increases due to
- a) Temperature
  - b) Pressure
  - c) Distribution of hydrogen gas bubbles
  - d) All of the above
- 11) During electrochemical grinding, the material is removed by
- a) Mechanical abrasive action
  - b) Electrochemical dissolution
  - c) Both of them
  - d) None of them
- 12) The surface finish produced by Electro-chemical machining shows
- a) Low corrosion resistance
  - b) Low wear resistance
  - c) Low friction resistance
  - d) Low fatigue strength
- 13) Which of the following is not a type of protective coating?
- a) Metallic
  - b) Non-metallic
  - c) Organic
  - d) Inorganic
- 14) Electrochemically machined surfaces have
- a) High residual stresses and improved fatigue strength
  - b) High residual stresses and reduced fatigue strength
  - c) Insignificant residual stresses and reduced fatigue strength
  - d) Insignificant residual stresses and improved fatigue strength

c) Low friction resistance	d) Low fatigue strength
- 3) Which of the following is not a type of protective coating?
 

a) Metallic	b) Non-metallic
c) Organic	d) Inorganic
- 4) Electrochemically machined surfaces have
  - a) High residual stresses and improved fatigue strength
  - b) High residual stresses and reduced fatigue strength
  - c) Insignificant residual stresses and reduced fatigue strength
  - d) Insignificant residual stresses and improved fatigue strength
- 5) Non-Traditional machining is recommended when we need the following features?
 

a) Complex shapes	b) High surface quality
c) Low-rigidity structures	d) All of the mentioned
- 6) In mechanical machining, the material is removed by \_\_\_\_\_.
 

a) Erosion	b) Corrosion
c) Abrasion	d) Vaporization
- 7) Which of the following process has the lowest rate of metal removal?
 

a) Electro discharge machining	b) Electro-chemical machining
c) Abrasive jet machining	d) Electron beam machining
- 8) Abrasive carrying liquid for the abrasive slurry in USM is
 

a) Water	b) Heavy paraffin oil
c) Silicone oil	d) Any oil

- 9) In Ultrasonic machining, the material is removed by  
a) anodic dissolution                      b) thermal melting  
c) abrasive action                         d) electrochemical oxidation
- 10) In EDM the metal removal is carried out by  
a) fracture of work material due to impact of grains  
b) electrolysis  
c) melting and vaporization  
d) none of the above
- 11) In electrochemical machining, the metal is removed by  
a) Dissolution in the electrolyte solution  
b) Molecular transfer  
c) Ionic bombardment  
d) Ultraviolet rays
- 12) Chemical machining provides  
a) Good surface finish                      b) High material removal rate  
c) Uniform material removal              d) None of them
- 13) The main requirement of the property of the tool material in ECM is  
a) High Thermal conductivity  
b) Low thermal conductivity  
c) Moderate electrical conductivity  
d) Low electrical conductivity
- 14) Electrolyte's electrical conductivity value increases due to  
a) Temperature  
b) Pressure  
c) Distribution of hydrogen gas bubbles  
d) All of the above

**Set R**

**T.Y (B. Tech) (Sem-I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Non-Conventional Machining**

Day & Date: Thursday, 09-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from each Section.  
 2) Neat sketches must be drawn wherever necessary.  
 3) Assume additional suitable data wherever necessary and mention it clearly.  
 4) Figure to the right indicates full marks.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> Give classification of Non-Conventional Machining Processes                       | <b>04</b> |
|            | <b>b)</b> Compare Conventional machining processes and Non-Conventional Machining Processes | <b>05</b> |
|            | <b>c)</b> Explain Abrasive Water Jet Machining.   | <b>05</b> |
| <b>Q.3</b> | <b>a)</b> Explain the need for Non-Conventional Machining Processes.                        | <b>05</b> |
|            | <b>b)</b> Explain Abrasive Jet Machining.   | <b>05</b> |
|            | <b>c)</b> Give applications of EDM  | <b>04</b> |
| <b>Q.4</b> | <b>a)</b> Explain Electric Discharge Machining (EDM).                                       | <b>05</b> |
|            | <b>b)</b> What is flushing? Explain different types with their advantages.                  | <b>04</b> |
|            | <b>c)</b> Compare Abrasive Water Jet Machining & Water Jet Machining                        | <b>05</b> |

**Section – II**

- |            |   |           |
|------------|---|-----------|
| <b>Q.5</b> | <b>a)</b> Explain Chemical Machining.   | <b>05</b> |
|            | <b>b)</b> Explain Photochemical Machining.                                      | <b>05</b> |
|            | <b>c)</b> Explain Laser Beam machining (LBM).                                   | <b>04</b> |
| <b>Q.6</b> | <b>a)</b> Explain Electro-Chemical Machining Processes.                         | <b>05</b> |
|            | <b>b)</b> Explain Plasma Arc machining (PAM).                                   | <b>05</b> |
|            | <b>c)</b> Explain the Chemical and Physical vapor deposition process.           | <b>04</b> |
| <b>Q.7</b> | <b>a)</b> Explain Ion Beam machining (IBM).                                     | <b>04</b> |
|            | <b>b)</b> Give the applications of the coating process                          | <b>05</b> |
|            | <b>c)</b> Explain the Metallic coating process with advantages and limitations. | <b>05</b> |

**T.Y (B. Tech) (Sem-I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Non-Conventional Machining**

Day & Date: Thursday, 09-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each questions carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Objective types of questions**

**14**

- 1) In EDM the metal removal is carried out by
  - a) fracture of work material due to impact of grains
  - b) electrolysis
  - c) melting and vaporization
  - d) none of the above
- 2) In electrochemical machining, the metal is removed by
  - a) Dissolution in the electrolyte solution
  - b) Molecular transfer
  - c) Ionic bombardment
  - d) Ultraviolet rays
- 3) Chemical machining provides
 

a) Good surface finish	b) High material removal rate
c) Uniform material removal	d) None of them
- 4) The main requirement of the property of the tool material in ECM is
  - a) High Thermal conductivity
  - b) Low thermal conductivity
  - c) Moderate electrical conductivity
  - d) Low electrical conductivity
- 5) Electrolyte's electrical conductivity value increases due to
  - a) Temperature
  - b) Pressure
  - c) Distribution of hydrogen gas bubbles
  - d) All of the above
- 6) During electrochemical grinding, the material is removed by
  - a) Mechanical abrasive action
  - b) Electrochemical dissolution
  - c) Both of them
  - d) None of them
- 7) The surface finish produced by Electro-chemical machining shows
 

a) Low corrosion resistance	b) Low wear resistance
c) Low friction resistance	d) Low fatigue strength

- 8) Which of the following is not a type of protective coating?
- a) Metallic
  - b) Non-metallic
  - c) Organic
  - d) Inorganic
- 9) Electrochemically machined surfaces have
- a) High residual stresses and improved fatigue strength
  - b) High residual stresses and reduced fatigue strength
  - c) Insignificant residual stresses and reduced fatigue strength
  - d) Insignificant residual stresses and improved fatigue strength
- 10) Non-Traditional machining is recommended when we need the following features?
- a) Complex shapes
  - b) High surface quality
  - c) Low-rigidity structures
  - d) All of the mentioned
- 11) In mechanical machining, the material is removed by \_\_\_\_\_
- a) Erosion
  - b) Corrosion
  - c) Abrasion
  - d) Vaporization
- 12) Which of the following process has the lowest rate of metal removal?
- a) Electro discharge machining
  - b) Electro-chemical machining
  - c) Abrasive jet machining
  - d) Electron beam machining
- 13) Abrasive carrying liquid for the abrasive slurry in USM is
- a) Water
  - b) Heavy paraffin oil
  - c) Silicone oil
  - d) Any oil
- 14) In Ultrasonic machining, the material is removed by
- a) anodic dissolution
  - b) thermal melting
  - c) abrasive action
  - d) electrochemical oxidation

## Max. Marks: 70

Marks: 14

a) EOQ  
b) Break even point  
c) EOP  
d) None of Above

- 7) For locating and clamping round job \_\_\_\_\_.
  - a) Box jig
  - b) Only jig
  - c) Only fixture
  - d) Indexing jig
- 8) In metal cutting while drawing merchant circle number of assumption follows \_\_\_\_\_.
  - a) The cutting velocity remains constant
  - b) Continuous chip without built up edge
  - c) No constant cutting velocity
  - d) Continuous chip with built up edge
- 9) In Jig or fixture diamond pin locator is used when \_\_\_\_\_.
  - a) There is two already machined parallel holes in work piece
  - b) Two or more than two parallel holes in work piece
  - c) One hole is already machined in work piece
  - d) No hole is exist in the work piece
- 10) In press tool the main purpose of spring loaded stripper \_\_\_\_\_.
  - a) To hold the strip
  - b) To guide the punch
  - c) Strip out the material
  - d) Two cut the material

Set **P**

**T.Y. (B. Tech) (Sem-I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Tool Engineering**

Day & Date: Thursday, 09-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 2 and Q. No. 6 are compulsory.  
 2) Solve any two questions from section - I (from Q. 3, 4 and 5) and section - II (from Q. 7, 8 and 9).

**Section - I**

- Q.2 a)** Design a press tool for the component shown in fig-I giving following details. **14**
- 1) Cutting force
  - 2) Clearance between punch and die
  - 3) Stripping force and no of bolts and bolt size need for die clamping

Material: - C40  
 Thickness = 4mm  
 Shear strength = 42 kg/mm<sup>2</sup>

Also draw one sectional view of assembly of press tool and part name.

**OR**

- Q.2 b)** Design a draw tool for given component Fig-II also calculate the following (draw one sectional view of assembly).
- 1) Blank size
  - 2) No of draws
  - 3) Draw ratio
  - 4) Drawing force
  - 5) Blank force
  - 6) Die and punch clearance

Material: - CRCA  
 Material Thickness: - 0.7  
 Yield strength = 42 kg/mm<sup>2</sup>

- Q.3 a)** The following observations were made during on orthogonal cutting operation. **04**
- 1) rake angle -  $20^\circ$
  - 2) shear angle -  $29.54^\circ$
  - 3) cutting force - 300N
  - 4) feed force - 120N
  - 5) cutting velocity = 102 m/min
- Determine
- 1) shear strain
  - 2) work done in shear
- b)** Sketch and explain in brief about velocity relation in orthogonal cutting. **03**
- Q.4 a)** Explain in brief about tool dynamometer. **03**
- b)** List types of tool materials and explain in brief any two materials. **04**
- Q.5 Writes a short note on (any two)** **07**
- a) Types of stripper in press tool
  - b) Types of chips
  - c) Type of coolant

### Section – II

- Q.6 a)** Design drill jig for drilling die 25mm hole draw one view of sectional assembly with parts name. **14**

**OR**

- b)** Design milling fixture for milling 110 x 10 face draw one view of sectional assembly with parts name. **14**
- Q.7 a)** Explain in brief about breakeven point. **04**
- b)** Explain in brief about geometry of twist drill. **03**
- Q.8 a)** With neat sketch explain in brief about any two indexing devices used in jig or fixture. **04**
- b)** List type of bush (drill bush) used in jig and explain in brief used of each drill brush. **03**
- Q.9 Writes short notes on (any two)** **07**
- a) 3-2-1 principle for jig & fixture
  - b) Effect of tool geometry on tool life
  - c) Locating and clamping devices used in fixture

Seat No.

 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

- Q.1 A) Choose the correct alternatives from the options. (Each question carries one mark) 06**
- 1) Fixture is normally used for \_\_\_\_\_.  
 a) Drilling and reaming                      b) Turning  
 c) Milling    d) None of Above
  - 2) No profit no loss occur at point \_\_\_\_\_.  
 a) EOQ    b) Break even point  
 c) EOP    d) None of Above
  - 3) In an ASA system if tool signature is  $8^\circ-14^\circ-5^\circ-6^\circ-10^\circ-16^\circ-3^\circ$  mm the Back Rack angle is \_\_\_\_\_.  
 a)  $16^\circ$     b)  $3^\circ$   
 c)  $5^\circ$     d)  $8^\circ$
  - 4) In metal cutting if the shear angle is Shorter the plane of shear will be larger hence the required force will be \_\_\_\_\_.  
 a) Less    b) More  
 c) Fixed    d) Not predict
  - 5) In press tool combination die is used for \_\_\_\_\_.  
 a) Two cutting operation  
 b) Two bending operation  
 c) One cutting and one forming operation  
 d) Both forming operation
  - 6) In deep draw, drawing force is equal to \_\_\_\_\_.  
 a)  $dt \cdot 6_y (D/d-C)$                       b)  $d \cdot 6_y (D/d-C)$   
 c)  $dt (D/d-C)$                       d) None of these  
 where  $d$  = shell dia,  $t$  = thickness,  $D$  = blank dia,  $6_y$  = yield strength,  
 $c$  = constant

- a) There is two already machined parallel holes in work piece
- b) Two or more than two parallel holes in work piece
- c) One hole is already machined in work piece
- d) No hole is exist in the work piece

 c) EOP  
 d) None of Above
- 5) In an ASA system if tool signature is  $8^\circ-14^\circ-5^\circ-6^\circ-10^\circ-16^\circ-3^\circ$  mm the Back Rack angle is \_\_\_\_\_.  
 a)  $16^\circ$   
 b)  $3^\circ$   
 c)  $5^\circ$   
 d)  $8^\circ$
- 6) In metal cutting if the shear angle is Shorter the plane of shear will be larger hence the required force will be \_\_\_\_\_.  
 a) Less  
 b) More  
 c) Fixed  
 d) Not predict

- B) Attempt the following multiple choice correct answer type questions. (Each question carry two marks)**
- 7)** In Jig or fixture diamond pin locator is used when \_\_\_\_\_.  
a) There is two already machined parallel holes in work piece  
b) Two or more than two parallel holes in work piece  
c) One hole is already machined in work piece  
d) No hole is exist in the work piece
- 8)** In press tool the main purpose of spring loaded stripper \_\_\_\_\_.  
a) To hold the strip  
b) To guide the punch  
c) Strip out the material  
d) Two cut the material
- 9)** For locating and clamping round job \_\_\_\_\_.  
a) Box jig  
b) Only jig  
c) Only fixture  
d) Indexing jig
- 10)** In metal cutting while drawing merchant circle number of assumptions as follows \_\_\_\_\_.  
a) The cutting velocity remains constant  
b) Continuous chip without built up edge  
c) No constant cutting velocity  
d) Continuous chip with built up edge

Seat No.

Set **R**

**T.Y. (B. Tech) (Sem-I) (Old) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Tool Engineering**

Day & Date: Thursday, 09-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 2 and Q. No. 6 are compulsory.  
 2) Solve any two questions from section - I (from Q. 3, 4 and 5) and section - II (from Q. 7, 8 and 9).

**Section - I**

- Q.2 a)** Design a press tool for the component shown in fig-I giving following details. **14**
- 1) Cutting force
  - 2) Clearance between punch and die
  - 3) Stripping force and no of bolts and bolt size need for die clamping

Material: - C40  
 Thickness = 4mm  
 Shear strength = 42 kg/mm<sup>2</sup>

Also draw one sectional view of assembly of press tool and part name.

**OR**

- Q.2 b)** Design a draw tool for given component Fig-II also calculate the following (draw one sectional view of assembly).
- 1) Blank size
  - 2) No of draws
  - 3) Draw ratio
  - 4) Drawing force
  - 5) Blank force
  - 6) Die and punch clearance

Material: - CRCA  
 Material Thickness: - 0.7  
 Yield strength = 42 kg/mm<sup>2</sup>

- Q.3 a)** The following observations were made during on orthogonal cutting operation. **04**
- 1) rake angle -  $20^\circ$
  - 2) shear angle -  $29.54^\circ$
  - 3) cutting force - 300N
  - 4) feed force - 120N
  - 5) cutting velocity = 102 m/min
- Determine
- 1) shear strain
  - 2) work done in shear
- b)** Sketch and explain in brief about velocity relation in orthogonal cutting. **03**
- Q.4 a)** Explain in brief about tool dynamometer. **03**
- b)** List types of tool materials and explain in brief any two materials. **04**
- Q.5 Writes a short note on (any two)** **07**
- a) Types of stripper in press tool
  - b) Types of chips
  - c) Type of coolant

### Section – II

- Q.6 a)** Design drill jig for drilling die 25mm hole draw one view of sectional assembly with parts name. **14**

**OR**

- b)** Design milling fixture for milling 110 x 10 face draw one view of sectional assembly with parts name. **14**
- Q.7 a)** Explain in brief about breakeven point. **04**
- b)** Explain in brief about geometry of twist drill. **03**
- Q.8 a)** With neat sketch explain in brief about any two indexing devices used in jig or fixture. **04**
- b)** List type of bush (drill bush) used in jig and explain in brief used of each drill brush. **03**
- Q.9 Writes short notes on (any two)** **07**
- a) 3-2-1 principle for jig & fixture
  - b) Effect of tool geometry on tool life
  - c) Locating and clamping devices used in fixture

**Seat  
No.**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks:10

**Q.1 Choose the correct alternatives from the given options. 10**

- 1) Microeconomic theory deals with \_\_\_\_\_.
  - a) Economic behavior of individual economic decision-making units
  - b) Economy as whole
  - c) Trade relations
  - d) Economic growth of the society
- 2) In a mixed economy which sector (s) is / are found \_\_\_\_\_.
  - a) Private only
  - b) Public only
  - c) None
  - d) Both (a) public and (b) private
- 3) Who is known as father of economics?
  - a) Adam Smith
  - b) Prof. A. Samuelson
  - c) Alfred Marshall
  - d) J. R. Hicks
- 4) Which of these is an economic activity?
  - a) Father teaching his son at home instead of spending on coaching
  - b) A housewife making food for the family on her own
  - c) A hair dresser doing hair cut designing on payment
  - d) A singer giving a show on his son's wedding anniversary
- 5) Market system means: \_\_\_\_\_.
  - a) Socialism
  - b) Capitalism
  - c) A place where goods are traded
  - d) All of the above
- 6) Micro and Macro are not two independent approaches to economic analysis but they are complementary to each other.
  - a) False
  - b) True
  - c) Partly true
  - d) Partly False
- 7) Variable factor means those factors of production \_\_\_\_\_.
  - a) which can be only changed in the long run
  - b) which can be changed in the short run
  - c) which can be never be changed
  - d) All of the above

- 8)** Which one of the following is not the function of money?
- a) Medium of exchange
  - b) Measure of Happiness
  - c) Standard of deferred payment
  - d) Store of value
- 9)** Which one of the following is the objective of the RBI?
- a) To maintain term deposits of the households
  - b) To ensure price stability
  - c) To arrange loans for the businessmen
  - d) None of the above
- 10)** Which one of the following cost can never become zero?
- |                  |                  |
|------------------|------------------|
| a) Average cost  | b) Fixed cost    |

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options.**

**10**

- 1) A good way to prevent stress is \_\_\_\_\_.  
 a) Drinking beverages high in caffeine  
 b) Sitting ideal doing nothing  
 c) Overeating  
 d) Taking time out for relaxation
- 2) \_\_\_\_\_ is referred as a stressful event.  
 a) Birthday  
 b) Studying  
 c) Spouse death  
 d) Vacation
- 3) Anxiety can cause the following moods \_\_\_\_\_.  
 a) Irritable  
 b) Nervous  
 c) Anxious  
 d) All of the above
- 4) \_\_\_\_\_ is the confusion about the expectation of the role one occupies.  
 a) Role stagnation  
 b) Role Isolation  
 c) Role erosion  
 d) Role ambiguity
- 5) Stress is \_\_\_\_\_ related to performance.  
 a) Positively  
 b) Negatively  
 c) Proportionately  
 d) None of these
- 6) Which one is not considered as Environmental stressors?  
 a) Weather  
 b) Traffic  
 c) Financial problems  
 d) Substandard housing
- 7) The following are the characteristics of Positive Stress.  
 a) It improves performance  
 b) It feels exciting  
 c) It motivates  
 d) All of the above
- 8) The word Stress is derived from Latin word 'Stringere' which means \_\_\_\_\_.  
 a) Draw tight  
 b) Stimulus  
 c) Force  
 d) Attitude
- 9) Absenteeism, turnover and less productivity are \_\_\_\_\_ symptoms of stress.  
 a) Medical  
 b) Psychological  
 c) Behavioral  
 d) None of these

- 10)** When a task appears overwhelming, it is best to \_\_\_\_.
- a) Put it aside till later
  - b) Drink alcohol to relax
  - c) Break it down into smaller task
  - d) Avoid the task

Day & Date: Tuesday, 14-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) When the axes of two shafts are parallel, use \_\_\_\_\_.  
 a) crossed helical gears                      b) bevel  
 c) worm gears                                      d) spur or helical gears
- 2) Which of the following type of gears are free from axial thrust?  
 a) Herringbone gears                      b) Bevel gears  
 c) Worm gears                                      d) Helical gears
- 3) The initial contact in helical gears is \_\_\_\_\_.  
 a) point    b) line  
 c) surface    d) unpredictable
- 4) When two bevel gears having equal teeth and equal pitch angle are used to transmit power between shafts that are intersecting at right angle, they are called,  
 a) spiral bevel gears                      b) Miter gears  
 c) straight bevel gears                      d) hypoid gears
- 5) When bevel gears are used to transmit power between shafts that are intersecting at an angle greater than  $90^\circ$ , and if the pitch angle of one of the gears is  $90^\circ$ , they are called,  
 a) spiral bevel gears                      b) crown gears  
 c) straight bevel gears                      d) hypoid gears
- 6) Worm gears are widely used when  
 a) velocity ratio is high  
 b) space is limited  
 c) axes of shafts are non-intersecting  
 d) all the three
- 7) The axial component of resultant force on worm wheel is equal to  
 a) tangential component on worm  
 b) radial component on worm  
 c) axial component on worm  
 d) none of the above

- 8) A cylinder is considered as thin cylinder when the ratio of inner diameter to the wall thickness is,
- a) more than 15
  - b) less than 15
  - c) equal to 15
  - d) none of these criteria
- 9) The thickness of thin cylinder is determined on the basis of,
- a) radial stress
  - b) longitudinal stress
  - c) circumferential stress
  - d) principal shear stress
- 10) The thickness of thick cylinder shell with open ends and made of ductile material is determined by \_\_\_\_\_.  
a) Lamé's equation      b) Clavarino's equation  
c) Birnie's equation      d) Barlow's equation
- 11) Autofrettage is,
- a) a surface coating process of cylinders for corrosion resistance
  - b) a heat treatment process for cylinders to relieve residual stresses
  - c) a process of pre-stressing the cylinder to develop residual compressive stress at the inner surface
  - d) a surface hardening process of cylinder to improve wear resistance
- 12) In radial bearings, the load acts
- a) along the axis of rotation
  - b) perpendicular to the axis of rotation
  - c) parallel to the axis of rotation
  - d) a and c
- 13) Rolling contact bearings as compared to sliding contact bearings have
- a) lower starting torque
  - b) require considerable axial space
  - c) generate less noise
  - d) costly
- 14) In case of full journal bearing, the angle of contact of the bushing with the journal is
- a)  $60^\circ$
  - b)  $90^\circ$
  - c)  $180^\circ$
  - d)  $360^\circ$

Set

P

**T. Y. (B.Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**Machine Design - II**

Day & Date: Tuesday, 14-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly.

**Section – I**

- Q.2** a) What are the various types of gear tooth failures? State their causes and Remedies. **06**
- b) A pair of spur gears with  $20^\circ$  full-depth involute teeth consists of a 20 teeth pinion meshing with a 41 teeth gear. The module is 3 mm while the face width is 40 mm. The material for pinion as well as gear is steel with an ultimate tensile strength of  $600 \text{ N/mm}^2$ . The gears are heat treated to a surface hardness of 400 BHN. The pinion rotates at 1450 rpm and the service factor for the application is 1.75. Assume that velocity factor accounts for the dynamic load and the factor of safety is 1.5. Determine the rated power that the gears can transmit. (Lewis form factor is 0.32 for 20 teeth) **08**
- Q.3** a) Derive the expression for virtual number of teeth for helical gears. **06**
- b) A pair of parallel helical gears consists of a 20 teeth pinion meshing with a 100 teeth gear. The pinion rotates at 720 rpm. The normal pressure angle is  $20^\circ$ , while the helix angle is  $25^\circ$ . The face width is 40 mm and the normal module is 4 mm. The pinion as well as the gear is made of steel 40C8 ( $S_{ut} = 600 \text{ N/mm}^2$ ) and heat treated to a surface hardness of 300 BHN. The service factor and the factor of safety are 1.5 and 2 respectively. Assume that the velocity factor accounts for the dynamic load and calculate the power transmitting capacity of gears. ( $Y = 0.3475$ ) **08**
- Q.4** a) Explain the following terms **06**  
 i. Frequency distribution  
 ii. Probability distribution  
 iii. Normal curve
- b) What is autofrettage? What are the methods of pre-stressing the cylinder? **04**
- c) The inner diameter of a cylindrical tank for liquefied gas is 250 mm. The gas pressure is limited to 15 MPa. The tank is made of plain carbon steel 10C4 ( $S_{ut} = 340 \text{ N/mm}^2$  and  $m = 0.27$ ) and the factor of safety is 5. Calculate the cylinder wall thickness. **04**

## Section – II

- Q.5** a) Draw neat sketch of bevel gear indicating its terminology **06**  
 b) A pair of bevel gears, with  $20^\circ$  pressure angle, consists of a 20 teeth pinion meshing with a 30 teeth gear. The module is 4 mm, while the face width is 20 mm. The material for the pinion and gear is steel 50C4 ( $S_{ut} = 750 \text{ N/mm}^2$ ). The gear teeth are lapped and ground (Class-3) and the surface hardness is 400 BHN. The pinion rotates at 500 rpm and receives 2.5 kW power from the electric motor. The starting torque of the motor is 150% of the rated torque. Determine the factor of safety against bending failure and against pitting failure. ( $Y = 0.33712$ ) **08**
- Q.6** a) Explain power transmitting capacity of worm gears based on thermal consideration. **06**  
 b) 1 kW power at 720 rpm is supplied to the worm shaft. The number of starts for threads of the worm is four with a 50 mm pitch-circle diameter. The worm wheel has 30 teeth with 5 mm module. The normal pressure angle is  $20^\circ$ . Calculate the efficiency of the worm gear drive and the power lost in friction. **08**
- Q.7** a) A single-row deep groove ball bearing is subjected to a radial force of 8 kN and a thrust force of 3 kN. The values of X and Y factors are 0.56 and 1.5 respectively. The shaft rotates at 1200 rpm. The diameter of the shaft is 75 mm and Bearing No. 6315 ( $C = 112\,000 \text{ N}$ ) is selected for this application. **06**  
 i) Estimate the life of this bearing, with 90% reliability.  
 ii) Estimate the reliability for 20 000 h life.
- b) The following data is given for a  $360^\circ$  hydrodynamic bearing: **08**  
 radial load = 3.2 kN, journal speed = 1490 rpm, Journal diameter = 50 mm, bearing length = 50 mm, radial clearance = 0.05 mm, viscosity of lubricant = 25 cP  
 Assuming that the total heat generated in the bearing is carried by the total oil flow in the bearing, calculate  
 i) coefficient of friction;  
 ii) power lost in friction;  
 iii) minimum oil film thickness;  
 iv) flow requirement in liters/min; and  
 v) temperature rise.  
 For  $S = 0.121$ ,  $1/d = 1$   

$$\left(\frac{r}{c}\right) f = 3.22 \left(\frac{h_0}{c}\right) = 0.4 \frac{Q}{rcn_1 l} = 4.33$$

Day & Date: Tuesday, 14-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) A cylinder is considered as thin cylinder when the ratio of inner diameter to the wall thickness is,
 

a) more than 15	b) less than 15
c) equal to 15	d) none of these criteria
- 2) The thickness of thin cylinder is determined on the basis of,
 

a) radial stress	b) longitudinal stress
c) circumferential stress	d) principal shear stress
- 3) The thickness of thick cylinder shell with open ends and made of ductile material is determined by \_\_\_\_\_.
 

a) Lamé's equation	b) Clavarino's equation
c) Birnie's equation	d) Barlow's equation
- 4) Autofrettage is,
 

a) a surface coating process of cylinders for corrosion resistance
b) a heat treatment process for cylinders to relieve residual stresses
c) a process of pre-stressing the cylinder to develop residual compressive stress at the inner surface
d) a surface hardening process of cylinder to improve wear resistance
- 5) In radial bearings, the load acts
 

a) along the axis of rotation
b) perpendicular to the axis of rotation
c) parallel to the axis of rotation
d) a and c
- 6) Rolling contact bearings as compared to sliding contact bearings have
 

a) lower starting torque
b) require considerable axial space
c) generate less noise
d) costly
- 7) In case of full journal bearing, the angle of contact of the bushing with the journal is
 

a) 60°	b) 90°
c) 180°	d) 360°

- 8) When the axes of two shafts are parallel, use \_\_\_\_\_.  
a) crossed helical gears                      b) bevel  
c) worm gears                                  d) spur or helical gears
- 9) Which of the following type of gears are free from axial thrust?  
a) Herringbone gears                      b) Bevel gears  
c) Worm gears                                  d) Helical gears
- 10) The initial contact in helical gears is \_\_\_\_\_.  
a) point    b) line  
c) surface                                      d) unpredictable
- 11) When two bevel gears having equal teeth and equal pitch angle are used to transmit power between shafts that are intersecting at right angle, they are called,  
a) spiral bevel gears                      b) Miter gears  
c) straight bevel gears                      d) hypoid gears
- 12) When bevel gears are used to transmit power between shafts that are intersecting at an angle greater than  $90^\circ$ , and if the pitch angle of one of the gears is  $90^\circ$ , they are called,  
a) spiral bevel gears                      b) crown gears  
c) straight bevel gears                      d) hypoid gears
- 13) Worm gears are widely used when  
a) velocity ratio is high  
b) space is limited  
c) axes of shafts are non-intersecting  
d) all the three
- 14) The axial component of resultant force on worm wheel is equal to  
a) tangential component on worm  
b) radial component on worm  
c) axial component on worm  
d) none of the above

**T. Y. (B.Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**Machine Design - II**

Day & Date: Tuesday, 14-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly.

**Section – I**

- Q.2** a) What are the various types of gear tooth failures? State their causes and Remedies. **06**
- b) A pair of spur gears with  $20^\circ$  full-depth involute teeth consists of a 20 teeth pinion meshing with a 41 teeth gear. The module is 3 mm while the face width is 40 mm. The material for pinion as well as gear is steel with an ultimate tensile strength of  $600 \text{ N/mm}^2$ . The gears are heat treated to a surface hardness of 400 BHN. The pinion rotates at 1450 rpm and the service factor for the application is 1.75. Assume that velocity factor accounts for the dynamic load and the factor of safety is 1.5. Determine the rated power that the gears can transmit. (Lewis form factor is 0.32 for 20 teeth) **08**
- Q.3** a) Derive the expression for virtual number of teeth for helical gears. **06**
- b) A pair of parallel helical gears consists of a 20 teeth pinion meshing with a 100 teeth gear. The pinion rotates at 720 rpm. The normal pressure angle is  $20^\circ$ , while the helix angle is  $25^\circ$ . The face width is 40 mm and the normal module is 4 mm. The pinion as well as the gear is made of steel 40C8 ( $S_{ut} = 600 \text{ N/mm}^2$ ) and heat treated to a surface hardness of 300 BHN. The service factor and the factor of safety are 1.5 and 2 respectively. Assume that the velocity factor accounts for the dynamic load and calculate the power transmitting capacity of gears. ( $Y = 0.3475$ ) **08**
- Q.4** a) Explain the following terms **06**  
 i. Frequency distribution  
 ii. Probability distribution  
 iii. Normal curve
- b) What is autofrettage? What are the methods of pre-stressing the cylinder? **04**
- c) The inner diameter of a cylindrical tank for liquefied gas is 250 mm. The gas pressure is limited to 15 MPa. The tank is made of plain carbon steel 10C4 ( $S_{ut} = 340 \text{ N/mm}^2$  and  $m = 0.27$ ) and the factor of safety is 5. Calculate the cylinder wall thickness. **04**

## Section – II

- Q.5** a) Draw neat sketch of bevel gear indicating its terminology **06**

- b) What is autofrettage? What are the methods of pre-stressing the cylinder? **04**
- c) The inner diameter of a cylindrical tank for liquefied gas is 250 mm. The gas pressure is limited to 15 MPa. The tank is made of plain carbon steel 10C4 ( $S_{ut} = 340 \text{ N/mm}^2$  and  $m = 0.27$ ) and the factor of safety is 5. Calculate the cylinder wall thickness. **04**

## Section – II

- Q.5** a) Draw neat sketch of bevel gear indicating its terminology **06**  
 b) A pair of bevel gears, with  $20^\circ$  pressure angle, consists of a 20 teeth pinion meshing with a 30 teeth gear. The module is 4 mm, while the face width is 20 mm. The material for the pinion and gear is steel 50C4 ( $S_{ut} = 750 \text{ N/mm}^2$ ). The gear teeth are lapped and ground (Class-3) and the surface hardness is 400 BHN. The pinion rotates at 500 rpm and receives 2.5 kW power from the electric motor. The starting torque of the motor is 150% of the rated torque. Determine the factor of safety against bending failure and against pitting failure. ( $Y = 0.33712$ ) **08**
- Q.6** a) Explain power transmitting capacity of worm gears based on thermal consideration. **06**  
 b) 1 kW power at 720 rpm is supplied to the worm shaft. The number of starts for threads of the worm is four with a 50 mm pitch-circle diameter. The worm wheel has 30 teeth with 5 mm module. The normal pressure angle is  $20^\circ$ . Calculate the efficiency of the worm gear drive and the power lost in friction. **08**
- Q.7** a) A single-row deep groove ball bearing is subjected to a radial force of 8 kN and a thrust force of 3 kN. The values of X and Y factors are 0.56 and 1.5 respectively. The shaft rotates at 1200 rpm. The diameter of the shaft is 75 mm and Bearing No. 6315 ( $C = 112\,000 \text{ N}$ ) is selected for this application. **06**  
 i) Estimate the life of this bearing, with 90% reliability.  
 ii) Estimate the reliability for 20 000 h life.
- b) The following data is given for a  $360^\circ$  hydrodynamic bearing: **08**  
 radial load = 3.2 kN, journal speed = 1490 rpm, Journal diameter = 50 mm, bearing length = 50 mm, radial clearance = 0.05 mm, viscosity of lubricant = 25 cP  
 Assuming that the total heat generated in the bearing is carried by the total oil flow in the bearing, calculate  
 i) coefficient of friction;  
 ii) power lost in friction;  
 iii) minimum oil film thickness;  
 iv) flow requirement in liters/min; and  
 v) temperature rise.  
 For  $S = 0.121$ ,  $1/d = 1$   

$$\left(\frac{r}{c}\right) f = 3.22 \left(\frac{h_0}{c}\right) = 0.4 \frac{Q}{rcn_1 l} = 4.33$$

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Intermediate stage of an instrument is used to \_\_\_\_\_.  
 a) sense primary signal                      b) condition & transmit the signal  
 c) give a record or indication              d) covert the signal form
- 2) A dead weight pressure gauge is used for \_\_\_\_\_.  
 a) producing high pressures  
 b) accurate load measurement  
 c) checking magnitude of given weight  
 d) calibrating mechanical pressure gauges
- 3) Unit of thermoelectric power is \_\_\_\_\_.  
 a)  $\text{mV}/^{\circ}\text{C}$                                       b)  $^{\circ}\text{C}/\text{mV}$   
 c)  $\text{mA}/^{\circ}\text{C}$                                       d)  $^{\circ}\text{C}/\text{mA}$
- 4) If we observe two stationary images of a mark on a rotating shaft, \_\_\_\_\_.  
 a)  $f_r = 2f_f$                                       b)  $f_f = f_r$   
 c)  $f_f = 2f_r$                                       d)  $f_f = 1/2 f_r$
- 5) Change in resistance of a wire by positioning of a slider is used in \_\_\_\_\_.  
 a) potentiometer                              b) electric tachometer  
 c) turbine meter                              d) LVDT
- 6) The Hydraulic load Cell is used to measure load up to \_\_\_\_\_.  
 a) 25 MN    b) 250 MN  
 c) 2.5 MN    d) 0.5 MN
- 7) The gauge factor of strain gauge defines \_\_\_\_\_.  
 a)  $K = \Delta R$                                       b)  $K = R/L$   
 c)  $K = \Delta R/\Delta L$                               d)  $K = (\Delta R/R)/(\Delta L/L)$
- 8) An air conditioner is an example of \_\_\_\_\_.  
 a) manual open loop system              b) manual closed loop system  
 c) automatic open loop system            d) automatic closed loop system
- 9) Derivative Time is given by \_\_\_\_\_.  
 a)  $K_d/K_p$     b)  $K_p/K_d$   
 c)  $K_d/K_i$     d)  $K_i/K_d$

**MECHANICAL ENGINEERING**  
**Instrumentation & Control**

Day & Date: Thursday, 16-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from each section  
 2) Use of scientific calculator is allowed.  
 3) Figures to right indicate full marks  
 4) Assume additional suitable data if necessary and state it clearly.  
 5) Use university graph paper & semi-long paper if required.

**Section – I**

- Q.2** a) Explain following system characteristics. **04**  
 i) precision  
 ii) fidelity  
 b) Explain with a neat sketch 'Rotameter'. **06**  
 c) Explain the basic principle of working of 'Thermistors'. **04**
- Q.3** a) Explain with a block diagram 'Generalised Measurement System'. **06**  
 b) Explain with a neat sketch 'Inductive Pickup Tachometer'. **04**  
 c) Explain with a neat sketch 'Prony Brake Dynamometer'. **04**
- Q.4** a) Derive the expression for Gauge Factor for an electrical strain gauge. **06**  
 b) Explain with a neat sketch working of 'L.V.D.T.'. **04**  
 c) Explain with a neat sketch working of 'Proving Ring' for force measurement. **04**

**Section – II**

- Q.5** a) Explain with a suitable example Automatic Control System. **05**  
 b) For the block diagram of a feedback control system as shown in fig. (5-b), obtain the closed loop transfer function  $C(S)/R(S)$ . **06**

- c) Explain the 'Angle Condition' in Root Locus and its importance. **03**
- Q.6** a) For a control system represented by, **09**

$$G(S)H(S) = \frac{K}{S(S^2 + 2S + 2)}$$

Sketch the complete Root Locus and comment on the system stability.

- b)** Explain with a graph, P + I control system. What do you mean by 'Integral Time'? **05**

- Q.7 a)** For a unity feedback system given by, **08**

$$G(S) = \frac{80(S + 2)}{S(S + 2)(S + 20)}$$

Sketch the Bode Plots and comment on the system stability.

- b)** State general predictions to identify break away points in root locus on the real axis. **03**
- c)** Explain nature of Bode Plots for the poles and zeros at the origin. **03**

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) Thermal conductivity of solid metals \_\_\_\_\_ with rise in temperature.
  - a) decreases
  - b) increases
  - c) remains same
  - d) unpredictable
- 2) Thermal diffusivity of a substance is \_\_\_\_\_.
  - a) directly proportional to the thermal conductivity
  - b) inversely proportional to the density of substance
  - c) inversely proportional to specific heat
  - d) all above
- 3) Which one of the dimensionless number has significant role in natural convection?
  - a) Stanton
  - b) Grashoff
  - c) Reynolds
  - d) Nusselt
- 4) The radiation shape factor between two parallel plates is \_\_\_\_\_.
  - a) 1
  - b) 0
  - c) 0.5
  - d) 0.33
- 5) Up to the critical radius of insulation \_\_\_\_\_.
  - a) Heat loss decreases with addition of insulation
  - b) Heat loss increases with addition of insulation
  - c) Heat loss remains constant
  - d) There occurs a decrease in heat flux
- 6) Which type of heat exchanger is used in automobile radiator?
  - a) Parallel flow
  - b) Counter flow
  - c) Cross flow
  - d) Regenerator
- 7) Dropwise condensation usually occurs in \_\_\_\_\_.
  - a) Oily surfaces
  - b) Glazed surface
  - c) Smooth surface
  - d) Coated surface
- 8) Compared to parallel flow heat exchanger, LMTD in the case of counter flow heat exchanger is \_\_\_\_\_.
  - a) lower
  - b) higher
  - c) same
  - d) unpredictable

- 9)** A \_\_\_\_\_ body reflects entire radiation incident on it.  
a) black                                      b) gray  
c) white                                        d) transparent
- 10)** The parameter NTU (Number of transfer units) used in the analysis of heat exchanger is specified as \_\_\_\_\_.  
a)  $UA/C_{\min}$                                   b)  $AUC_{\min}$   
c)  $U/AC_{\min}$                                  d)  $AC_{\min}/U$
- 11)** In fins parameter ‘m’ equals to \_\_\_\_\_.  
**a)**  $m = \sqrt{\frac{hp}{KA_{c/s}}}$   
**b)**  $m = \sqrt{\frac{KA_{c/s}}{hp}}$   
**c)**  $m = \sqrt{\frac{hp}{UA}}$   
d) None of these
- 12)** For a perfectly black body \_\_\_\_\_.  
a)  $\alpha = 1, \rho = 0, \tau = 0$                       b)  $\alpha = 0, \rho = 0, \tau = 1$   
c)  $\alpha + \tau = 1, \rho = 0$                          d)  $\alpha = 0, \rho = 1, \tau = 0$
- 13)** The overall heat transfer coefficient is used in case of \_\_\_\_\_.  
a) Conduction                                 b) Convection  
c) Radiation                                      d) Conduction and Convection
- 14)** An increase in convective coefficient over a fin \_\_\_\_\_ effectiveness.  
a) decreases                                      b) increases  
c) does not influence                            d) none of above

**T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Heat Transfer**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Solve any two questions from each Section.  
 2) Assume suitable data wherever needed and mention it clearly.  
 3) Draw neat and labeled diagram wherever necessary.  
 4) Figures to the right indicates full marks.  
 5) Use of scientific calculator is allowed.

**Section – I**

**Q.2 Attempt the following questions.**

- |    |  |           |
|----|--|-----------|
| a) | Define thermal conductivity. Explain the effect of temperature on thermal conductivity of solid liquids and gases.   | <b>04</b> |
| b) | Derive an expression for critical radius of insulation for cylinder  | <b>05</b> |
| c) | The door of a cold storage plant is made from two 6 mm thick glass sheet separated by a uniform air gap of 2 mm. The temperature of air inside room is $-18^{\circ}\text{C}$ and the ambient air temperature is $35^{\circ}\text{C}$ assuming heat transfer coefficient between glass and air as $23.26 \text{ W/m}^2\text{K}$ determine rate of heat leakage into room per unit area of door. Neglect the convection effect in the air gap and take $K$ for glass as $0.75 \text{ W/mK}$ and $k$ for air as $0.02 \text{ W/mK}$ . | <b>05</b> |

**Q.3 Attempt the following questions.**

- |    |  |           |
|----|--|-----------|
| a) | Explain fin effectiveness and fin efficiency.  | <b>04</b> |
| b) | Derive an expression for steady state one dimensional heat flow through the hollow cylinder without heat generation?   | <b>05</b> |
| c) | A very long 25 mm diameter copper ( $K=380 \text{ W/mK}$ ) rod extends from a surface at $120^{\circ}\text{C}$ . The temperature of surrounding air is $25^{\circ}\text{C}$ and the heat transfer coefficient over the rod is $10 \text{ W/m}^2\text{K}$ . Calculate:<br>1) Heat loss from the rod.<br>2) How long the rod should be in order to be considered infinite? | <b>05</b> |

**Q.4 Attempt the following questions**

- |    |  |           |
|----|--|-----------|
| a) | Explain the following terms:<br>1) Absorptivity<br>2) Reflectivity<br>3) Transmissivity<br>4) Emissivity   | <b>04</b> |
| b) | Explain the concept of shape factor. State the properties of shape factor.   | <b>05</b> |
| c) | A solid steel ball of 5 cm in diameter and initially at $450^{\circ}\text{C}$ is quenched in controlled environment in which the temperature is maintained at $90^{\circ}\text{C}$ with convection coefficient of $115 \text{ W/m}^2\text{K}$ . Determine the time taken by the ball to attain a temperature of $150^{\circ}\text{C}$ .<br>Take following properties for steel<br>$C = 420 \text{ J/kgK}$ , $\rho = 8000 \text{ Kg/m}^3$ , $k = 46 \text{ W/mK}$ | <b>05</b> |

**Section – II**

- Q.5**
- a) Derive an expression for LMTD of counter flow heat exchanger. **05**
  - b) Explain film wise condensation and drop wise condensation. **04**
  - c) In a counter flow heat exchanger water is heated from 25°C to 65°C by an oil of specific heat 1.45KJ/Kg K and mass flow rate of 0.9 Kg/Sec. The oil is cooled from 230°C to 160°C. If the overall heat transfer coefficient is 420 W/m<sup>2</sup>K, Calculate - **05**
    - i) Rate of heat transfer
    - ii) Mass flow rate of water
    - iii) The surface area of heat exchanger
- Q.6**
- a) Using dimensional analysis show that  $Nu=f(Gr,Pr)$  for natural convection. **05**
  - b) A liquid mercury flows at a rate of 1.6 Kg/Sec through a copper tube of 20mm diameter. The mercury enters the tube at 15°C and leaves the at 35°C .Calculate the tube length for constant heat flux at the tube wall which is maintained at an average temperature of 50°C.Use the co-relation as  $Nu=7+0.025(Re.pr)^{0.8}$  **05**

The properties of mercury at 25°C are -  
Density ( $\rho$ )=13582kg/m<sup>3</sup>,  $C_p$ =140J/Kg°C,  
Kinematic viscosity ( $\nu$ )=1.5x10<sup>-7</sup>m<sup>2</sup>/Sec,  $Pr$ =0.0248
  - c) Explain the classification of heat exchanger **04**
- Q.7**
- a) Explain construction, working and Applications of heat pipe. **04**
  - b) Explain with neat sketch boiling curve and its different regimes. **04**
  - c) Derive an expression for effectiveness of a parallel flow heat exchanger. **06**

**Heat Transfer**

Day & Date: Monday, 20-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) In fins parameter 'm' equals to \_\_\_\_\_.

a) 
$$m = \sqrt{\frac{hp}{KA_{c/s}}}$$

b) 
$$m = \sqrt{\frac{KA_{c/s}}{hp}}$$

c) 
$$m = \sqrt{\frac{hp}{UA}}$$

d) None of these

- 2) For a perfectly black body \_\_\_\_\_.

a)  $\alpha = 1, \rho = 0, \tau = 0$

b)  $\alpha = 0, \rho = 0, \tau = 1$

c)  $\alpha + \tau = 1, \rho = 0$

d)  $\alpha = 0, \rho = 1, \tau = 0$

- 3) The overall heat transfer coefficient is used in case of \_\_\_\_\_.

a) Conduction

b) Convection

c) Radiation

d) Conduction and Convection

- 4) An increase in convective coefficient over a fin \_\_\_\_\_ effectiveness.

a) decreases

b) increases

c) does not influence

d) none of above

- 5) Thermal conductivity of solid metals \_\_\_\_\_ with rise in temperature.

a) decreases

b) increases

c) remains same

d) unpredictable

- 6) Thermal diffusivity of a substance is \_\_\_\_\_.

a) directly proportional to the thermal conductivity

b) inversely proportional to the density of substance

c) inversely proportional to specific heat

d) all above

- Q.7**
- a) Explain construction, working and Applications of heat pipe. **04**
  - b) Explain with neat sketch boiling curve and its different regimes. **04**
  - c) Derive an expression for effectiveness of a parallel flow heat exchanger. **06**

- 7) For a perfectly black body \_\_\_\_\_.  
a)  $\alpha = 1, \rho = 0, \tau = 0$                       b)  $\alpha = 0, \rho = 0, \tau = 1$   
c)  $\alpha + \tau = 1, \rho = 0$                       d)  $\alpha = 0, \rho = 1, \tau = 0$
- 8) The overall heat transfer coefficient is used in case of \_\_\_\_\_.  
a) Conduction                                      b) Convection  
c) Radiation                                        d) Conduction and Convection
- 9) An increase in convective coefficient over a fin \_\_\_\_\_ effectiveness.  
a) decreases                                        b) increases  
c) does not influence                            d) none of above
- 10) Thermal conductivity of solid metals \_\_\_\_\_ with rise in temperature.  
a) decreases                                        b) increases  
c) remains same                                  d) unpredictable
- 11) Thermal diffusivity of a substance is \_\_\_\_\_.  
a) directly proportional to the thermal conductivity  
b) inversely proportional to the density of substance  
c) inversely proportional to specific heat  
d) all above
- 12) Which one of the dimensionless number has significant role in natural convection?  
a) Stanton    b) Grashoff  
c) Reynolds                                         d) Nusselt
- 13) The radiation shape factor between two parallel plates is \_\_\_\_\_.  
a) 1    b) 0  
c) 0.5    d) 0.33
- 14) Up to the critical radius of insulation \_\_\_\_\_.  
a) Heat loss decreases with addition of insulation  
b) Heat loss increases with addition of insulation  
c) Heat loss remains constant  
d) There occurs a decrease in heat flux

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicates full marks.

Marks: 14

1) \_\_\_\_\_ is defined as “the discipline dealing with what is good and bad & with moral duty & obligation”.

- Page 1 of 16

- 9) Cost associated with defective products being shipped to the customers are called as \_\_\_\_\_.  
a) Cost of internal failure                      b) Cost of external failure  
c) Rejection cost                                  d) Total cost of failure
- 10) The quality of design is concerned with the \_\_\_\_\_ for the manufacture of the product.  
a) exactness of specification                  b) fitness of specification  
c) correctness of specification              d) tightness of specification
- 11) In double sampling plan 'C2' is the acceptance number for the \_\_\_\_\_.  
a) First and last combined  
b) First and second sample combined  
c) Last two combined  
d) First three combined
- 12) The producers risk is denoted by \_\_\_\_\_.  
a)  $\rho$     b)  $\beta$   
c)  $\alpha$     d)  $\delta$
- 13) AOQ is given by the relation \_\_\_\_\_.  
a)  $P' \cdot Pa (N - n / N)$                               b)  $Pa \cdot P' (N - n / n)$   
c)  $Pa \cdot P' (n - N / n)$                               d)  $Pa \cdot P' (N + n / N)$
- 14) LTPD stands for  
a) Lot Tolerance Perfect Defective  
b) Lot Tolerance Percent Defective  
c) Lot Tolerable Percent Defective  
d) Lot Tolerance Piece Defective

|------------|--|-----------|
| <b>Q.2</b> | <b>a)</b> What is system approach to the management?                                 | <b>05</b> |
|            | <b>b)</b> Write difference between narrow span and wide span.                        | <b>05</b> |
|            | <b>c)</b> Explain Maslow's motivational theory.                                      | <b>04</b> |
| <b>Q.3</b> | <b>a)</b> Describe steps in planning process.  | <b>05</b> |
|            | <b>b)</b> Discuss selection process in detail.                                       | <b>05</b> |
|            | <b>c)</b> What are channels of distribution of Industrial goods and consumers goods? | <b>04</b> |
| <b>Q.4</b> | <b>a)</b> Explain leadership behavior in detail.                                     | <b>05</b> |
|            | <b>b)</b> Elaborate types of finance and sources of finance.                         | <b>05</b> |
|            | <b>c)</b> What are reasons for weak delegation of authority?                         | <b>04</b> |

**Section – II**

- |            |   |           |
|------------|---|-----------|
| <b>Q.5</b> | <b>a)</b> Explain Pareto analysis & cause effect diagram.   | <b>05</b> |
|            | <b>b)</b> Write note on supplier partnership.   | <b>05</b> |
|            | <b>c)</b> What is quality of design? Explain factors affecting it.  | <b>04</b> |
| <b>Q.6</b> | <b>a)</b> Write note on benchmarking.   | <b>04</b> |
|            | <b>b)</b> A manufacturer purchases small bolts in cartons that usually contains several thousands of bolts. Each shipment consists of a number of cartons. As a part of acceptance procedure for these bolts, 400 bolts are selected at random from each carton & are subjected to visual inspection for certain defect. In shipment of 10 cartons the respective percentage of defectives in the samples from each carton are 0, 0, 0.5, 0.75, 0, 2.0, 0.25, 0, 0.25 & 1.25. Does this shipment of bolts appear to exhibit statistical control with respect to the quality characteristics examined in the inspection? | <b>06</b> |
|            | <b>c)</b> Write note on any two Quality gurus.  | <b>04</b> |

- Q.7**
- a)** Write short note on six sigma. **04**
  - b)** A double sampling plan is as follows: **06**
    - 1) Select a sample of 2 from a lot of 20. If both article inspected bare good, accept the lot, if both are defective, reject the lot. If 1 is good & 1 defective, take the second sample of one article.
    - 2) If the article in the second sample is good, accept the lot. If it is defective reject the lot. If a lot of 25% defective is submitted, what is the probability of acceptance? Compute this by the method i.e. theoretically correct rather than an approximate method
  - c)** Explain cost of internal failures and cost of external failures. **04**

Set Q
-------

**T. Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Industrial & Quality Management**

Day & Date: Wednesday, 22-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) \_\_\_\_\_ is the routes taken by the product/goods as they move from the organization/producer to the ultimate consumer or user.
  - a) Routing
  - b) Channel of distribution
  - c) Path
  - d) Delivery
- 2) Cost associated with defective products being shipped to the customers are called as \_\_\_\_\_.
  - a) Cost of internal failure
  - b) Cost of external failure
  - c) Rejection cost
  - d) Total cost of failure
- 3) The quality of design is concerned with the \_\_\_\_\_ for the manufacture of the product.
  - a) exactness of specification
  - b) fitness of specification
  - c) correctness of specification
  - d) tightness of specification
- 4) In double sampling plan 'C2' is the acceptance number for the \_\_\_\_\_.
  - a) First and last combined
  - b) First and second sample combined
  - c) Last two combined
  - d) First three combined
- 5) The producers risk is denoted by \_\_\_\_\_.
  - a)  $\rho$
  - b)  $\beta$
  - c)  $\alpha$
  - d)  $\delta$
- 6) AOQ is given by the relation \_\_\_\_\_.
  - a)  $P' \cdot Pa (N - n / N)$
  - b)  $Pa \cdot P' (N - n / n)$
  - c)  $Pa \cdot P' (n - N / n)$
  - d)  $Pa \cdot P' (N + n / N)$
- 7) LTPD stands for
  - a) Lot Tolerance Perfect Defective
  - b) Lot Tolerance Percent Defective
  - c) Lot Tolerable Percent Defective
  - d) Lot Tolerance Piece Defective

- 8) \_\_\_\_\_ is defined as “the discipline dealing with what is good and bad & with moral duty & obligation”.
- a) Rule
  - b) Organisation culture
  - c) Protocol
  - d) Ethics
- 9) \_\_\_\_\_ are the ends towards which the activity is aimed.
- a) purpose
  - b) mission
  - c) objectives
  - d) programs
- 10) Close control, close supervision is advantage of \_\_\_\_\_.
- a) Narrow Span
  - b) Wide Span
  - c) Close Span
  - d) Open Span
- 11) If \_\_\_\_\_ then this could results in frustration of subordinates.
- a) Power > Responsibility
  - b) Power < Responsibility
  - c) Power = Responsibility
  - d) Power > Authority
- 12) \_\_\_\_\_ leader's uses his or her power very little, if at all, giving subordinates a high degree of independence in their operations.
- a) Autocratic
  - b) Democratic
  - c) The free rein
  - d) Ideal
- 13) Theory \_\_\_\_\_ is optimistic, dynamic, flexible.
- a) X
  - b) Z
  - c) Y
  - d) Positive
- 14) The financial needs which required up to \_\_\_\_\_ are treated as short term funds.
- a) Seven months
  - b) One year
  - c) Two years
  - d) three years

|            | <b>b)</b> A manufacturer purchases small bolts in cartons that usually contains several thousands of bolts. Each shipment consists of a number of cartons. As a part of acceptance procedure for these bolts, 400 bolts are selected at random from each carton & are subjected to visual inspection for certain defect. In shipment of 10 cartons the respective percentage of defectives in the samples from each carton are 0, 0, 0.5, 0.75, 0, 2.0, 0.25, 0, 0.25 & 1.25. Does this shipment of bolts appear to exhibit statistical control with respect to the quality characteristics examined in the inspection? | <b>06</b> |
|            | <b>c)</b> Write note on any two Quality gurus.  | <b>04</b> |

- Q.7**
- a)** Write short note on six sigma. **04**
  - b)** A double sampling plan is as follows: **06**
    - 1) Select a sample of 2 from a lot of 20. If both article inspected bare good, accept the lot, if both are defective, reject the lot. If 1 is good & 1 defective, take the second sample of one article.
    - 2) If the article in the second sample is good, accept the lot. If it is defective reject the lot. If a lot of 25% defective is submitted, what is the probability of acceptance? Compute this by the method i.e. theoretically correct rather than an approximate method
  - c)** Explain cost of internal failures and cost of external failures. **04**

**T. Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Project Management**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternative**

**14**

- 1) Which of the following is not needed to generate a schedule performance index (SPI)?
 

a) Earned value	b) Actual cost
c) Planned value	d) Basis of estimate
- 2) Cost variance is computed by \_\_\_\_\_.
 

a) Subtracting planned value from actual cost
b) Subtracting actual cost from earned value
c) Subtracting budget at completion from earned value
d) Subtracting BAC from ETC
- 3) Critical path is \_\_\_\_\_.
 

a) Minimum time required to complete the project
b) ETC
c) normal path on the project
d) None of the above
- 4) Project is a \_\_\_\_\_ endeavour.
 

a) Perpetual	b) Permanent
c) Temporary	d) None of the above
- 5) Your project is experiencing resource constraints at certain times in the project timeline, requiring you to adjust start and finish dates on the schedule. What tool is best to use in this situation?
 

a) Resource levelling	b) Feeding buffer
c) Critical Path method	d) Resource smoothing
- 6) You are three months into a six month project. Assume the budget burn rate is constant. The budget at completion (BAC) is \$120,000. AC = \$65,000. The SPT = 1.2. What is the CPI of this project? (Round to 2 decimal places)?
 

a) 1.25
b) 1.25
c) 1.11
d) It cannot be determined from the information given

- 7) Criterion weights to rank the projects within each category is a part of \_\_\_\_\_.  
a) Prioritise the Projects  
b) Reduce the Criteria Set  
c) Projects held in Reserve  
d) Assembling
- 8) Project Management, the end users and developers require to know the \_\_\_\_\_.  
a) cost of the project  
b) duration  
c) Length  
d) All the above
- 9) The methods and regulation used to define goals, plan and monitor tasks and resources, identify and resolve issues, and control costs and budgets for specific project is known as \_\_\_\_\_.  
a) Project management  
b) Process Management  
c) Process  
d) Activities
- 10) Which of the following is not considered as a risk in project management?  
a) Specification delays  
b) Product competition  
c) Testing  
d) Staff turnover
- 11) From the following calculate critical Path Duration in days  
Activity: 1-2 2-3 2-4 3-5 4-6 5-6  
Duration: 3 4 3 3 2 2  
a) 13 days  
b) 8 days  
c) 11 days  
d) 12 days
- 12) The three phases involved in the management of large projects are  
a) scheduling, operating, evaluating.  
b) scheduling, designing, operating.  
c) planning, scheduling, evaluating.  
d) planning, scheduling, controlling.
- 13) There is a need of dummy activity when  
a) network contains two or more activities having identical starting and ending events.  
b) the network contains two or more activities that have the same starting events.  
c) the network contains two or more activities that have different ending events.  
d) the network contains two or more activities that have the same ending events.
- 14) The probability of completing the project can be estimated based upon the \_\_\_\_\_.  
a) Uniform distribution curve  
b) Exponential distribution curve  
c) U-shaped distribution curve  
d) Normal distribution curve

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options** **14**

- 1) The following aspect of product is concerned with the ease and efficiency of the product performance
 

a) Functional aspect	b) Operational aspect
c) Durability aspect	d) Aesthetic aspect
- 2) The appearance of a product is the total visual effect produced by structure, form, material, dimensions and colour.
 

a) True	b) False
---------	----------
- 3) Tactile and visual are the types of \_\_\_\_\_.
 

a) Texture	b) Form
c) Shape	d) Colour
- 4) Cost estimation, and thereby profitability, also is necessary for determining the economic advantage of the business.
 

a) True	b) False
---------	----------
- 5) One of the most difficult aspects of product development is recognizing, understanding, and managing \_\_\_\_\_.
 

a) Trade-offs	b) Dynamics
c) Details	d) Economics
- 6) The \_\_\_\_\_ function plays the lead role in defining the physical form of the product to best meet customer needs.
 

a) Design	b) Manufacturing
c) Marketing	d) None of the above
- 7) The collection of individuals developing a product forms the \_\_\_\_\_.
 

a) Supply team	b) Project team
c) Marketing team	d) None of the above
- 8) The necessity to know the environment in which the product will be used is termed as \_\_\_\_\_.
 

a) Design Situation	b) Design Analysis
c) Aesthetics	d) Ergonomics

- 9) In six hats techniques, Red hat stands for \_\_\_\_\_.
  - a) Emotions
  - b) Optimism
  - c) New Ideas
  - d) Information
- 10) The design for environment is essentially due to \_\_\_\_\_.
  - a) Customer Demand
  - b) Government Laws
  - c) ISO Requirement
  - d) All of the above
- 11) \_\_\_\_\_ is more detailed and physical.
  - a) Lateral thinking
  - b) Vertical thinking
  - c) Creative thinking
  - d) None of the above
- 12) Fear of \_\_\_\_\_ blocks creativity.
  - a) Making Mistakes
  - b) Being Criticized
  - c) Being Alone
  - d) All of the above
- 13) \_\_\_\_\_ helps in establishing the interchangeability of products.
  - a) Standardization
  - b) Simplification
  - c) Diversification
  - d) Specialization
- 14) \_\_\_\_\_ is a three-dimensional area enclosed by a surface.

a) Trade-offs                                    b) Dynamics  
c) Details                                         d) Economics
- 13)** The \_\_\_\_\_ function plays the lead role in defining the physical form of the product to best meet customer needs.  
a) Design                                         b) Manufacturing  
c) Marketing                                     d) None of the above
- 14)** The collection of individuals developing a product forms the \_\_\_\_\_.  
a) Supply team                                   b) Project team  
c) Marketing team                              d) None of the above

Set	Q
-----	---

**T. Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Industrial Product Design**

Day & Date: Friday, 24-02-2023  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

**Instructions:** 1) Answer any two questions from each Section.  
2) Figures to the right indicates full marks.  
3) Make suitable assumption if necessary and state it clearly.

## Section – I

- |            |                                   |  |           |
|------------|-----------------------------------|--|-----------|
| <b>Q.2</b> | <b>a)</b>                         | Compare requirements of industrial products with consumer products. In what way they differ from each other? | <b>07</b> |
|            | <b>b)</b>                         | Discuss the visual effect of line and form for cars and sport vehicles.                                      | <b>07</b> |
| <b>Q.3</b> | <b>a)</b>                         | Discuss the aspect of ergonomic design of radial drilling machine.   | <b>07</b> |
|            | <b>b)</b>                         | Explain the statement "Form Follows Function".   | <b>07</b> |
| <b>Q.4</b> | <b>Write short note (any two)</b> |  | <b>14</b> |
|            | <b>a)</b>                         | Concept of ergonomics and aesthetics with examples   |           |
|            | <b>b)</b>                         | Mechanics of seeing with suitable examples   |           |
|            | <b>c)</b>                         | Concept of Unit and Concept of order with suitable examples  |           |

## Section – II

- |            |  |           |
|------------|--|-----------|
| <b>Q.5</b> | <b>a)</b> How the creative ideas are generated with the help of brain storming session? How it is effectively conducted? | <b>07</b> |
|            | <b>b)</b> Explain role of setting specification and market requirements in product design.                               | <b>07</b> |
| <b>Q.6</b> | <b>a)</b> Explain in detail the process of concept development.  | <b>07</b> |
|            | <b>b)</b> Explain the challenges in successful product development.  | <b>07</b> |
| <b>Q.7</b> | <b>Write short note (any two)</b>  | <b>14</b> |
|            | <b>a)</b> Creativity   |           |
|            | <b>b)</b> Cost estimation  |           |
|            | <b>c)</b> Six hats techniques  |           |

**T. Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Industrial Product Design**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options**

**14**

- 1) \_\_\_\_\_ is more detailed and physical.
 

a) Lateral thinking	b) Vertical thinking
c) Creative thinking	d) None of the above
- 2) Fear of \_\_\_\_\_ blocks creativity.
 

a) Making Mistakes	b) Being Criticized
c) Being Alone	d) All of the above
- 3) \_\_\_\_\_ helps in establishing the interchangeability of products.
 

a) Standardization	b) Simplification
c) Diversification	d) Specialization
- 4) \_\_\_\_\_ is a three-dimensional area enclosed by a surface.
 

a) Form	b) Shape
c) Line	d) None of the above
- 5) The following aspect of product is concerned with the ease and efficiency of the product performance
 

a) Functional aspect	b) Operational aspect
c) Durability aspect	d) Aesthetic aspect
- 6) The appearance of a product is the total visual effect produced by structure, form, material, dimensions and colour.
 

a) True	b) False
---------	----------
- 7) Tactile and visual are the types of \_\_\_\_\_.
 

a) Texture	b) Form
c) Shape	d) Colour
- 8) Cost estimation, and thereby profitability, also is necessary for determining the economic advantage of the business.
 

a) True	b) False
---------	----------
- 9) One of the most difficult aspects of product development is recognizing, understanding, and managing \_\_\_\_\_.
 

a) Trade-offs	b) Dynamics
c) Details	d) Economics

- 10)** The \_\_\_\_\_ function plays the lead role in defining the physical form of the product to best meet customer needs.
- |              |                      |
|--------------|----------------------|
| a) Design    | b) Manufacturing     |
| c) Marketing | d) None of the above |
- 11)** The collection of individuals developing a product forms the \_\_\_\_\_.
- |                   |                      |
|-------------------|----------------------|
| a) Supply team    | b) Project team      |
| c) Marketing team | d) None of the above |
- 12)** The necessity to know the environment in which the product will be used is termed as \_\_\_\_\_.
- |                     |                    |
|---------------------|--------------------|
| a) Design Situation | b) Design Analysis |
| c) Aesthetics       | d) Ergonomics      |
- 13)** In six hats techniques, Red hat stands for \_\_\_\_\_.
- |              |                |
|--------------|----------------|
| a) Emotions  | b) Optimism    |
| c) New Ideas | d) Information |
- 14)** The design for environment is essentially due to \_\_\_\_\_.
- |                    |                     |
|--------------------|---------------------|
| a) Customer Demand | b) Government Laws  |
| c) ISO Requirement | d) All of the above |

**MCQ/Objective Type Questions**

Duration: 30 Minutes

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) In addition polymerization reaction the polymer is formed in a \_\_\_\_\_ step
  - a) single
  - b) three
  - c) double
  - d) None
- 2) Epoxy resin is example of \_\_\_\_\_ plastic
  - a) Thermoplastics
  - b) Thermosetting
  - c) elastomers
  - d) None
- 3) Which of the following is an additive used for saving base plastic material?
  - a) Fillers
  - b) Plasticizers
  - c) Pigments
  - d) None of these
- 4) \_\_\_\_\_ is the most of commonly used manufacturing process for the plastic component.
  - a) Injection molding
  - b) Blow Molding
  - c) Transfer Molding
  - d) Rotational Molding
- 5) The Rotational Molding is \_\_\_\_\_ plastic forming process
  - a) High Temperature
  - b) Low Temperature, High Pressure
  - c) Low Pressure
  - d) High Temperature, Low Pressure
- 6) For the more precise dimensional stability of Thermosets, \_\_\_\_\_ is used.
  - a) Transfer moulding
  - b) Compression moulding
  - c) Any moulding process
  - d) Calendering
- 7) In \_\_\_\_\_ welding method, the workpieces to be joined are irradiated with a stream of neutron
  - a) Infrared
  - b) Hot gas
  - c) Nuclear
  - d) Heated tool
- 8) Materials having a \_\_\_\_\_ shrinkage allowance can be molded with close tolerance.
  - a) Low
  - b) Medium
  - c) High
  - d) None

**MECHANICAL ENGINEERING**  
**Plastic Engineering**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1 Solve any two questions from Section I and any two questions from Section II.  
 2) Assume suitable data wherever necessary and state it clearly.  
 3) Draw neat sketches wherever necessary

**Section – I**

- Q.2** a) Explain the process of Injection moulding with a neat diagram. **05**  
 b) Differentiate between addition and condensation polymerization. **04**  
 c) Explain the different tests carried out on plastic material explain any one. **05**
- Q.3** a) Explain the additives used in the plastics. **04**  
 b) Explain design rules related to Ribs for plastic parts. **05**  
 c) Explain with neat sketch hot gas welding. **05**
- Q.4** a) A product has to be designed for an assembly of body of spray bottle. The body of spray bottle has the dimensions as shown in the figure below. The plastic body of spray bottle cap has to be designed to fit on the top of the bottle. The top end of the bottle is having diameter of 50 mm and its nozzle 20 mm. **07**

- b) Explain various tolerances and allowances considered for plastics parts design. **03**  
 c) Explain rotational moulding process with neat sketch. **04**

## Section – II

- Q.5** a) Explain main parts of compression mould with neat sketch. **04**  
 b) Design a compression mold for the component shown in figure below **07**  
 which is made up of melamine material. Take  $K=2$ ; compression pressure= $90 \text{ kg/cm}^2$ ; density= $1.7 \text{ gm./cm}^3$ .

- c) What are different types of injection moulds? Explain one of them with neat sketch. **03**
- Q.6** a) Explain types transfer moulds and their main parts with neat sketch. **05**  
 b) Explain cooling system for injection mould with neat sketch. **05**  
 c) Write short note on- **04**  
 i) Design of loading chamber  
 ii) Design of punch
- Q.7** a) Find out the cooling time required for a mould with heaviest wall thickness 40 mm, for polypropylene material with following properties- **05**  
 Thermal conductivity =  $0.22 \text{ w/m K}$   
 Density =  $0.545 \text{ gm/cm}^3$   
 Specific heat =  $1.68 \text{ kJ/kg K}$   
 b) Explain Ejection System for Injection mould with neat sketch. **05**  
 c) What are the applications of plastic in agriculture sector? **04**

Duration: 30 Minutes

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) Materials having a \_\_\_\_\_ shrinkage allowance can be molded with close tolerance.
 

a) Low	b) Medium
c) High	d) None
- 2) The ratio of volume of loose plastic powder to the volume of moulding is known as \_\_\_\_\_.
 

a) Clamping force	b) Density factor
c) Bulk factor	d) None
- 3) The depth of loading chamber is
 

a) Inversely proportional to projected area
b) Inversely proportional to change in volume of plastic material
c) Directly proportional to projected area
d) None of the above
- 4) The heat to be removed by cooling circuits depend on
 

a) Specific heat of material
b) Injection temperature of material
c) Latent heat of material
d) All of the above
- 5) The properties of the polymer will also depend on the \_\_\_\_\_ available for cooling.
 

a) time	b) area
c) peed	d) momentum
- 6) It is the \_\_\_\_\_ operation that sets the shape of thermoplastics.
 

a) heating	b) Grinding
c) cutting	d) Cooling speed

- 7) \_\_\_\_\_ are mixed with plastics to improve their flow characteristics & decrease their brittleness.
- a) Stabilizers
  - b) Plasticizers
  - c) Colorants
  - d) Fillers

  - a) Stabilizers
  - b) Plasticizers
  - c) Colorants
  - d) Fillers
- 5) In addition polymerization reaction the polymer is formed in a \_\_\_\_\_ step
  - a) single
  - b) three
  - c) double
  - d) None
- 6) Epoxy resin is example of \_\_\_\_\_ plastic
  - a) Thermoplastics
  - b) Thermosetting
  - c) elastomers
  - d) None
- 7) Which of the following is an additive used for saving base plastic material?
  - a) Fillers
  - b) Plasticizers
  - c) Pigments
  - d) None of these

- 8) \_\_\_\_\_ is the most of commonly used manufacturing process for the plastic component.
- a) Injection molding
  - b) Blow Molding
  - c) Transfer Molding
  - d) Rotational Molding
- 9) The Rotational Molding is \_\_\_\_\_ plastic forming process
- a) High Temperature
  - b) Low Temperature, High Pressure
  - c) Low Pressure
  - d) High Temperature, Low Pressure
- 10) For the more precise dimensional stability of Thermosets, \_\_\_\_\_ is used.
- a) Transfer moulding
  - b) Compression moulding
  - c) Any moulding process
  - d) Calendering
- 11) In \_\_\_\_\_ welding method, the workpieces to be joined are irradiated with a steam of neutron
- a) Infrared
  - b) Hot gas
  - c) Nuclear
  - d) Heated tool
- 12) Materials having a \_\_\_\_\_ shrinkage allowance can be molded with close tolerance.
- a) Low
  - b) Medium
  - c) High
  - d) None
- 13) The ratio of volume of loose plastic powder to the volume of moulding is known as \_\_\_\_\_.
- a) Clamping force
  - b) Density factor
  - c) Bulk factor
  - d) None
- 14) The depth of loading chamber is
- a) Inversely proportional to projected area
  - b) Inversely proportional to change in volume of plastic material
  - c) Directly proportional to projected area
  - d) None of the above

Set **R**

**T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Plastic Engineering**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1 Solve any two questions from Section I and any two questions from Section II.  
 2) Assume suitable data wherever necessary and state it clearly.  
 3) Draw neat sketches wherever necessary

**Section – I**

- Q.2** a) Explain the process of Injection moulding with a neat diagram. **05**  
 b) Differentiate between addition and condensation polymerization. **04**  
 c) Explain the different tests carried out on plastic material explain any one. **05**
- Q.3** a) Explain the additives used in the plastics. **04**  
 b) Explain design rules related to Ribs for plastic parts. **05**  
 c) Explain with neat sketch hot gas welding. **05**
- Q.4** a) A product has to be designed for an assembly of body of spray bottle. The body of spray bottle has the dimensions as shown in the figure below. The plastic body of spray bottle cap has to be designed to fit on the top of the bottle. The top end of the bottle is having diameter of 50 mm and its nozzle 20 mm. **07**

- b) Explain various tolerances and allowances considered for plastics parts design. **03**  
 c) Explain rotational moulding process with neat sketch. **04**

## Section – II

- Q.5** a) Explain main parts of compression mould with neat sketch. **04**  
 b) Design a compression mold for the component shown in figure below **07**  
 which is made up of melamine material. Take  $K=2$ ; compression pressure= $90 \text{ kg/cm}^2$ ; density= $1.7 \text{ gm./cm}^3$ .

- c) What are different types of injection moulds? Explain one of them with neat sketch. **03**
- Q.6** a) Explain types transfer moulds and their main parts with neat sketch. **05**  
 b) Explain cooling system for injection mould with neat sketch. **05**  
 c) Write short note on- **04**  
 i) Design of loading chamber  
 ii) Design of punch
- Q.7** a) Find out the cooling time required for a mould with heaviest wall thickness 40 mm, for polypropylene material with following properties- **05**  
 Thermal conductivity =  $0.22 \text{ w/m K}$   
 Density =  $0.545 \text{ gm/cm}^3$   
 Specific heat =  $1.68 \text{ kJ/kg K}$   
 b) Explain Ejection System for Injection mould with neat sketch. **05**  
 c) What are the applications of plastic in agriculture sector? **04**

**T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Plastic Engineering**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

**Q.1 Choose the correct alternatives from the given options.** **14**

- 1) For the more precise dimensional stability of Thermosets, \_\_\_\_\_ is used.
 

a) Transfer moulding	b) Compression moulding
c) Any moulding process	d) Calendering
- 2) In \_\_\_\_\_ welding method, the workpieces to be joined are irradiated with a stream of neutron
 

a) Infrared	b) Hot gas
c) Nuclear	d) Heated tool
- 3) Materials having a \_\_\_\_\_ shrinkage allowance can be molded with close tolerance.
 

a) Low	b) Medium
c) High	d) None
- 4) The ratio of volume of loose plastic powder to the volume of moulding is known as \_\_\_\_\_.
 

a) Clamping force	b) Density factor
c) Bulk factor	d) None
- 5) The depth of loading chamber is
 

a) Inversely proportional to projected area
b) Inversely proportional to change in volume of plastic material
c) Directly proportional to projected area
d) None of the above
- 6) The heat to be removed by cooling circuits depend on
 

a) Specific heat of material
b) Injection temperature of material
c) Latent heat of material
d) All of the above

- 7) The properties of the polymer will also depend on the \_\_\_\_\_ available for cooling.
- a) time
  - b) area
  - c) peed
  - d) momentum
- 8) It is the \_\_\_\_\_ operation that sets the shape of thermoplastics.
- a) heating
  - b) Grinding
  - c) cutting
  - d) Cooling speed
- 9) \_\_\_\_\_ are mixed with plastics to improve their flow characteristics & decrease their brittleness.
- a) Stabilizers
  - b) Plasticizers
  - c) Colorants
  - d) Fillers
- 10) In addition polymerization reaction the polymer is formed in a \_\_\_\_\_ step
- a) single
  - b) three
  - c) double
  - d) None
- 11) Epoxy resin is example of \_\_\_\_\_ plastic
- a) Thermoplastics
  - b) Thermosetting
  - c) elastomers
  - d) None
- 12) Which of the following is an additive used for saving base plastic material?
- a) Fillers
  - b) Plasticizers
  - c) Pigments
  - d) None of these
- 13) \_\_\_\_\_ is the most of commonly used manufacturing process for the plastic component.
- a) Injection molding
  - b) Blow Molding
  - c) Transfer Molding
  - d) Rotational Molding
- 14) The Rotational Molding is \_\_\_\_\_ plastic forming process
- a) High Temperature
  - b) Low Temperature, High Pressure
  - c) Low Pressure
  - d) High Temperature, Low Pressure

**Section – I**

**Q.2 Solve:**

- |    |   |           |
|----|---|-----------|
| a) | Explain difference between Monorail Metrorail.  | <b>04</b> |
| b) | Explain Push-Pull train operation.              | <b>04</b> |
| c) | What are the types of Passenger carrier trains? | <b>06</b> |

**Q.3 Solve:**

- |    |   |           |
|----|---|-----------|
| a) | What are the capabilities of the railway system? Explain any one in detail.     | <b>06</b> |
| b) | What are the advantages and disadvantages of the railway transportation?        | <b>04</b> |
| c) | Explain behavior of a single railway wheel set and behavior of a whole vehicle. | <b>04</b> |

**Q.4 Solve:**

- |    |  |           |
|----|--|-----------|
| a) | What are the types of causes of Derailment? Explain in brief.        | <b>06</b> |
| b) | Write a short note on Derailment as a result of vehicle overturning. | <b>04</b> |
| c) | Write a classification of Freight carrier trains.                    | <b>04</b> |

**Section – II**

**Q.5 Solve:**

- |    |   |           |
|----|---|-----------|
| a) | What are the types of 'Vertical loads' on rail? Explain any One in detail.  | <b>04</b> |
| b) | What are the types of 'Design loads of bridges'? Draw loading model for Model 71 and Model SW.  | <b>04</b> |
| c) | A train with 20 wagons, each weighing 18 t, is supposed to run at a speed of 50 km/h. The tractive effort of a 2-8-2 locomotive with a 22.5 t load on each driving axle is 15t. The weight of the locomotive is 120t. The rolling resistance of the wagons and locomotive are 2.5 kg/t and 3.5 kg/t, respectively. The resistance, which depends upon the speed, is computed to be 2.65 t. Find out the steepest gradient for these conditions. | <b>06</b> |

**Q.6 Solve:**

- a)** Explain Wave motion theory for the Development of Creep. **04**
- b)** What are the types of 'Longitudinal loads' on rail? Explain any One in detail. **04**
- c)** Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22t each can pull on a straight level track at a speed of 80 km/h. Also calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. What would be the further reduction in speed if the train has to negotiate a 4° curve on the rising gradient? Assume the coefficient of friction to be 0.2. **06**

**Q.7 Solve:**

- a)** What are the types of 'Transverse loads' on rail? Explain any one in detail. **04**
- b)** What are the types Bogies? Explain any one in details. **04**
- c)** List and explain the various resistances that a locomotive in motion has to overcome. **06**

|----|---|-----------|
| a) | Explain difference between Monorail Metrorail.  | <b>04</b> |
| b) | Explain Push-Pull train operation.              | <b>04</b> |
| c) | What are the types of Passenger carrier trains? | <b>06</b> |

**Q.3 Solve:**

- |    |   |           |
|----|---|-----------|
| a) | What are the capabilities of the railway system? Explain any one in detail.     | <b>06</b> |
| b) | What are the advantages and disadvantages of the railway transportation?        | <b>04</b> |
| c) | Explain behavior of a single railway wheel set and behavior of a whole vehicle. | <b>04</b> |

**Q.4 Solve:**

- |    |  |           |
|----|--|-----------|
| a) | What are the types of causes of Derailment? Explain in brief.        | <b>06</b> |
| b) | Write a short note on Derailment as a result of vehicle overturning. | <b>04</b> |
| c) | Write a classification of Freight carrier trains.                    | <b>04</b> |

**Section – II**

**Q.5 Solve:**

- |    |   |           |
|----|---|-----------|
| a) | What are the types of 'Vertical loads' on rail? Explain any One in detail.  | <b>04</b> |
| b) | What are the types of 'Design loads of bridges'? Draw loading model for Model 71 and Model SW.  | <b>04</b> |
| c) | A train with 20 wagons, each weighing 18 t, is supposed to run at a speed of 50 km/h. The tractive effort of a 2-8-2 locomotive with a 22.5 t load on each driving axle is 15t. The weight of the locomotive is 120t. The rolling resistance of the wagons and locomotive are 2.5 kg/t and 3.5 kg/t, respectively. The resistance, which depends upon the speed, is computed to be 2.65 t. Find out the steepest gradient for these conditions. | <b>06</b> |

**Q.6 Solve:**

- a)** Explain Wave motion theory for the Development of Creep. **04**
- b)** What are the types of 'Longitudinal loads' on rail? Explain any One in detail. **04**
- c)** Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22t each can pull on a straight level track at a speed of 80 km/h. Also calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. What would be the further reduction in speed if the train has to negotiate a  $4^\circ$  curve on the rising gradient? Assume the coefficient of friction to be 0.2. **06**

**Q.7 Solve:**

- a)** What are the types of 'Transverse loads' on rail? Explain any one in detail. **04**
- b)** What are the types Bogies? Explain any one in details. **04**
- c)** List and explain the various resistances that a locomotive in motion has to overcome. **06**

**T. Y (B. Tech) (Sem-II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Railway Transportation**

Day & Date: Friday, 24-02-2023  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Objective types of questions**

**14**

- 1) Railway Operations includes \_\_\_\_\_
  - a) Technical
  - b) Commercial
  - c) Maintenance
  - d) All of the above
- 2) Which of the following is not a part of Track Panel?
  - a) Rails
  - b) Sleepers
  - c) Ballast
  - d) Elastic Pads
- 3) The Static vertical load includes \_\_\_\_\_
  - a) Axle load
  - b) Wheel weight
  - c) Daily Traffic load
  - d) All of the above
- 4) Adhesion force is a part of \_\_\_\_\_
  - a) Braking Force
  - b) Longitudinal force
  - c) Traction force
  - d) All of the above
- 5) Rail creep force is a part of \_\_\_\_\_
  - a) Braking Force
  - b) Longitudinal force
  - c) Traction force
  - d) All of the above
- 6) The internal reason of derailment includes \_\_\_\_\_
  - a) Excessive speed
  - b) Poor condition and design of rolling stock
  - c) Poor quality and track layout
  - d) All of the above
- 7) This of the following is not a part of Railway maintenance operations \_\_\_\_\_.
  - a) Railway Infrastructure
  - b) Marketing
  - c) Rolling stocks
  - d) Equipment used for Railway Operations

- 8) This of the following is not a part of Railway systems and premises \_\_\_\_\_  
a) Railway Stations                      b) Railway Depots  
c) Bridges                                  d) Staff Quarters
- 9) The characteristics of curve resistance is  
a) Curve resistance increases with the speed of the train  
b) Curve resistance depends upon the central angle of the curve  
c) Curve resistance is less with new rails compared to that with old rails  
d) All of the above
- 10) Which of the following is not a type of Urban Trains?  
a) Monorail Train                      b) Metro train  
c) Tram Train                          d) Bullet Train
- 11) Which of the following is not a type of Freight Trains?  
a) Shunting Trains                      b) Pilots Trains  
c) Funicular Train                      d) Merry Go Round (MGR) Train
- 12) Power Locomotives includes \_\_\_\_\_  
a) Steam Locomotive  
b) Diesel Locomotive  
c) Electric Locomotive  
d) All of the above
- 13) Single rail Car includes \_\_\_\_\_  
a) Diesel                                  b) Electric  
c) Gas Turbine                          d) All of the above
- 14) Types of Freight Train includes \_\_\_\_\_  
a) Conventional Load                      b) Hazardous Goods  
c) Transport Small parcels                      d) All of the above

Day & Date: Monday, 27-02-2023  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 20 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 3) Figures to the right indicate full marks.  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) \_\_\_\_\_ is golden band between Researcher based design & creative design.
 

a) why not	b) where to do
c) why to do	d) how to do
- 2) \_\_\_\_\_ is example of tangible product.
 

a) cycle	b) hotel
c) airline	d) services of doctors
- 3) Generally, Rockwell and Brinell test are used for \_\_\_\_\_ testing.
 

a) brittleness	b) ductility
c) hardness	d) toughness
- 4) At the very beginning involving everybody together to emerge the engineering design is called \_\_\_\_\_.
 

a) social work in design	b) smart work in design
c) reliable concept in engineering	d) concurrent concept of engineering design
- 5) FMEA Means \_\_\_\_\_.
 

a) failure mode effect analysis	b) failure mode efficiency analysis
c) failure mode end analysis	d) failure mode energy analysis
- 6) \_\_\_\_\_ is a set of graphical pasteurization of operation and various movements, so that it from using this you can make a graphical representation of any process or operation.
 

a) Therblig	b) Bar chart study
c) Flow chart	d) System
- 7) Brain storming may be \_\_\_\_\_.
 

a) group creativity technique	b) individual creative technique
c) silent technique	d) very difficult technique to learn
- 8) \_\_\_\_\_ is depends upon availability of material.
 

a) true design	b) rational design
c) optimum design	d) configuration design

- 9) \_\_\_\_\_ is first step in material selection.
- |                |              |
|----------------|--------------|
| a) Translation | b) Screening |
| c) Detaching   | d) Attaching |
- 10) Screening by applying attribute limits, that is known as \_\_\_\_\_.
- |                    |                    |
|--------------------|--------------------|
| a) Delphy's method | b) Crachy's method |
| c) Ashby's method  | d) Raighter method |

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 20 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
3) Figures to the right indicate full marks.  
4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options.**

**10**

- 1) Which of the following defects occur when the deposited metal is not focused on the root of weld?
 

a) Inclusion of slag	b) inadequate penetration
c) Incomplete fusion	d) Porosity
- 2) Following gases are used in tungsten inert gas welding
 

a) hydrogen and oxygen	b) CO <sub>2</sub> and H <sub>2</sub>
c) argon and neon	d) helium and neon
- 3) Which of the following welding process uses non-consumable electrodes
 

a) LASER welding	b) MIG welding
c) TIG welding	d) ion beam welding
- 4) The metal is solidified in the joint is called
 

a) Base metal	
b) Weld metal	
c) Creator	
d) Cold face	
- 5) TIG welding is best suited for welding
 

a) Mild steel	b) Stainless steel
c) Carbon steel	d) Aluminium
- 6) Welding process which generally not preferred for the joining of austenitic stainless steel is
 

a) Submerged arc welding	b) Shielded metal arc welding
c) Tungsten inert gas welding	d) Metal inert gas welding
- 7) Which of the following factor does not promote the solidification cracking?
 

a) metal under compression	
b) Lack of ferrite in austenitic stainless steel	
c) Incorrect filler in aluminum alloys	
d) none	
- 8) Preheating a low alloy steel prior to welding to minimize the risk of \_\_\_\_\_.
 

a) excessive distortion	b) porosity
c) weld cracking	d) Lack of fusion

- 9)** The temperature of a carburising flame in gas welding is \_\_\_\_\_ that of a neutral or Oxidizing flame.
- |               |                 |
|---------------|-----------------|
| a) lower than | b) higher than  |
| c) equal to   | d) unrelated to |
- 10)** In arc welding is created between the electrode and work by
- |                             |                       |
|-----------------------------|-----------------------|
| a) Flow of current          | b) Voltage            |
| c) Material characteristics | d) Contact resistance |

Time: 10:00 AM To 12:00 PM

**Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
3) Figures to the right indicate full marks.

Marks: 10

10

- 1) A power cycle continuously converts \_\_\_\_\_ into \_\_\_\_\_.  
a) heat, heat                                      b) work, heat  
c) heat, work                                      d) work, work
- 2) The path followed in a vapour power cycle is \_\_\_\_\_.  
a) boiler-condenser-turbine-pump  
b) boiler-turbine-condenser-pump  
c) boiler-turbine-pump-condenser  
d) boiler-pump-turbine-condenser
- 3) Work output of turbine is \_\_\_\_\_ the work input to the pump.  
a) much larger                                      b) much smaller  
c) equal to    d) none of the mentioned
- 4) What is the use of reheat cycle in steam turbines?  
a) To remove the moisture from the steam  
b) To increase the steam temperature  
c) To increase steam pressure  
d) None of the mentioned
- 5) When boiler pressure is increased efficiency is \_\_\_\_\_.  
a) decreased                                        b) increased  
c) remains constant                                d) none of the mentioned
- 6) What does thermodynamic efficiency of steam turbine mean?  
a) Ratio of power developed to the power that can be developed by ideal turbine  
b) Ratio of power that can be developed by ideal turbine to the power developed by the actual turbine  
c) Ratio of inlet temperature to outlet temperature  
d) None of the mentioned
- 7) In a glass tube type water indicator for a boiler, one end of the tube is connected to water space and the other end is connected to \_\_\_\_\_.  
a) water space also                                b) chimney  
c) steam space                                      d) superheater

- 8) What is the function of a cooling tower in a power plant?
- a) It cools the hot water coming back from the condenser
  - b) It cools the hot water being supplied to the condenser
  - c) It heats the cold water coming back from the condenser
  - d) It heats the cold water being supplied to the condenser
- 9) Mechanical draft cooling tower size is \_\_\_\_\_ the size of the natural draft cooling tower.
- a) smaller than
  - b) larger than
  - c) equal to the
  - d) very much larger than
- 10) What is rotor steam turbine?
- a) Spinning component with wheels
  - b) Spinning component with wheels and blades disconnected
  - c) Spinning component with wheels and blades connected
  - d) Spinning component with blades

<b>Seat No.</b>

**T.Y (B.Tech.) (Sem-II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Steam Power Engineering**

Day & Date: Monday, 27-02-2023  
Time: 10:00 AM To 12:00 PM

Max. Marks: 40

**Instructions:** 1) Attempt any two questions from each section.  
2) Figures to the right indicate full marks.

**Section – I**

- Q.2** Explain Reheat & Regenerative Vapour Power Cycle. **10**
- Q.3** Explain different Steam Cycles for nuclear power plant and also brief about low temperature power cycles. **10**
- Q.4** Differentiate between Fire tube and Water tube boilers. Also mention different Mountings and Accessories of a boiler. **10**

**Section – II**

- Q.5** What is mean by Compounding of turbine? Explain Pressure & velocity compounding of a turbine. **10**
- Q.6** Draw Velocity triangle of an Impulse turbine and explain various efficiencies of steam turbine. **10**
- Q.7** Giving significance of Cooling tower, explain hygrometry chart in brief. **10**

**T.Y (B.Tech.) (Sem-II) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Steam Power Engineering**

Day & Date: Monday, 27-02-2023  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options. 10**

- 1) What does thermodynamic efficiency of steam turbine mean?
  - a) Ratio of power developed to the power that can be developed by ideal turbine
  - b) Ratio of power that can be developed by ideal turbine to the power developed by the actual turbine
  - c) Ratio of inlet temperature to outlet temperature
  - d) None of the mentioned
- 2) In a glass tube type water indicator for a boiler, one end of the tube is connected to water space and the other end is connected to \_\_\_\_\_.
  - a) water space also
  - b) chimney
  - c) steam space
  - d) superheater
- 3) What is the function of a cooling tower in a power plant?
  - a) It cools the hot water coming back from the condenser
  - b) It cools the hot water being supplied to the condenser
  - c) It heats the cold water coming back from the condenser
  - d) It heats the cold water being supplied to the condenser
- 4) Mechanical draft cooling tower size is \_\_\_\_\_ the size of the natural draft cooling tower.
  - a) smaller than
  - b) larger than
  - c) equal to the
  - d) very much larger than
- 5) What is rotor steam turbine?
  - a) Spinning component with wheels
  - b) Spinning component with wheels and blades disconnected
  - c) Spinning component with wheels and blades connected
  - d) Spinning component with blades
- 6) A power cycle continuously converts \_\_\_\_\_ into \_\_\_\_\_.
  - a) heat, heat
  - b) work, heat
  - c) heat, work
  - d) work, work

- 7) The path followed in a vapour power cycle is \_\_\_\_\_.
  - a) boiler-condenser-turbine-pump
  - b) boiler-turbine-condenser-pump
  - c) boiler-turbine-pump-condenser
  - d) boiler-pump-turbine-condenser
- 8) Work output of turbine is \_\_\_\_\_ the work input to the pump.
  - a) much larger
  - b) much smaller
  - c) equal to
  - d) none of the mentioned
- 9) What is the use of reheat cycle in steam turbines?
  - a) To remove the moisture from the steam
  - b) To increase the steam temperature
  - c) To increase steam pressure
  - d) None of the mentioned
- 10) When boiler pressure is increased efficiency is \_\_\_\_\_.
  - a) decreased
  - b) increased
  - c) remains constant
  - d) none of the mentioned

**Fourth Year (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Refrigeration and Air Conditioning**

Day & Date: Wednesday, 25-01-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Attempt any two questions from both sections.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data wherever needed and mention it clearly.

**Section – I**

- Q.2 a)** Draw the P-V & T-S diagram for Bell Coleman cycle & with the help of it show that for Bell Coleman cycle **05**
- $$\text{COP} = \frac{1}{R_p^{\left(\frac{\gamma-1}{\gamma}\right)} - 1}$$
- Where  $R_p$  = pressure ratio
- b)** With schematic diagram and T-s plot explain Linde system for liquefaction of air. **05**
- c)** Explain Effect of change in evaporator & condenser pressure on COP of VCC. **04**
- Q.3 a)** Explain the various thermodynamic properties of refrigerants. **05**
- b)** A Carnot refrigeration cycle absorbs heat at 270K & rejects it at 300K. **05**
- 1) Calculate the COP of this refrigeration Cycle.
  - 2) If the cycle absorbing 1130 kJ/min at 270K, how many kJ of work is required per second?
  - 3) If the Carnot heat pump operates between the same temperatures as the above refrigeration cycle, what is the COP?
  - 4) How many kJ/min will heat pump deliver at 300K if it absorbs 1130 kJ/min at 270K?
- c)** Explain with the help of neat diagram Electrolux Refrigeration System. **04**
- Q.4 a)** The temperature limits of an ammonia refrigerating system are 25°C and -10°C. If the gas is dry at the end of compression, calculate the coefficient of performance of the cycle by assuming no under cooling of the liquid ammonia. Use the following table for the properties of ammonia. **05**

Temp. (°C)	Liquid Heat (kJ/kg)	Latent Heat (kJ/kg)	Liquid Entropy(kJ/kgK)
25	298.9	1166.94	1.1242
-10	135.37	1297.68	0.5443

- b)** Explain by flow diagram and on p-h diagram multiple evaporators at different temperature with individual compressor & individual expansion valve. **05**
- c)** Draw neat diagram of Regenerative air cooling system for air craft refrigeration and explain it with the help of its T-S diagram. **04**

**Section – II**

- Q.5 a)** A sample of moist air has DBT of 43°C & WBT of 29°C. Calculate the following without making use of psychrometric Chart. **05**
- 1) Partial Pressure of water vapour
  - 2) Specific Humidity
  - 3) Relative Humidity
  - 4) Dew Point Temperature
  - 5) Enthalpy
- b)** What are the different factors (load components) are considered in load estimation sheet for comfort application? **05**
- c)** Write down general rules in designing the duct. **04**
- Q.6 a)** Define GSHF, RSHF & ERSHF and show those lines on layout of psychrometric chart. **05**
- b)** Write a short note on types of fan used in air conditioning applications. **05**
- c)** Define the following. **04**
- 1) DPT
  - 2) Sp. Humidity
  - 3) Degree of Saturation
  - 4) Relative Humidity
- Q.7 a)** Develop an equation for equivalent diameter of circular duct for a rectangular duct when quantity of air passing through both the duct is same. **05**
- b)** An air conditioning system is to be designed for small office for winter conditions with following data: **05**
- Outdoor condition: 10°C DBT and 8°C WBT  
Required indoor condition: 20°C DBT and 60% RH  
Amount of air circulated: 0.3 m<sup>3</sup>/min/person  
Seating capacity of the office: 50 persons  
The required condition is achieved first by heating and then by adiabatic humidifying. Find the following:
- 1) Heating capacity of coil in kW and surface temperature if bypass factor is 0.32.
  - 2) Capacity of humidifier
- c)** Explain the factors affecting on Human Comfort. **04**

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given options. 14**

- 1) The conditioned air supplied to a room must have capacity to take \_\_\_\_\_.  
 a) Sensible Heat Load  
 b) Both Sensible & Latent Heat Load  
 c) Latent Heat Load  
 d) None of Above
- 2) The Duct is made of \_\_\_\_\_.  
 a) Galvanized Iron  
 b) Fibre Glass  
 c) Aluminum  
 d) Any one of these
- 3) Equivalent length ( $L_e$ ) for calculation of dynamic pressure loss is given by equation \_\_\_\_\_.  
 a)  $\frac{f}{cm}$   
 b)  $\frac{fc}{m}$   
 c)  $\frac{fm}{c}$   
 d)  $\frac{cm}{f}$
- 4) The degree of warmth or cold felt by a human body depends mainly on \_\_\_\_\_.  
 a) dry bulb temperature  
 b) air velocity  
 c) relative humidity  
 d) all of Above
- 5) Below is the main component of refrigeration system EXCEPT: \_\_\_\_\_.  
 a) Compressor  
 b) Condenser  
 c) Evaporator  
 d) Pump
- 6) Which type of air cooling system is used for transportation?  
 a) Regenerative air cooling system  
 b) Boot strap air cooling system  
 c) Reduced ambient air cooling system  
 d) None of above
- 7) Inorganic compounds are \_\_\_\_\_.  
 a) 500 series  
 b) 700 series  
 c) 200 series  
 d) 1000 series

  - 3)   Degree of Saturation
  - 4)   Relative Humidity
- Q.7**   **a)**   Develop an equation for equivalent diameter of circular duct for a rectangular duct when quantity of air passing through both the duct is same. **05**
- b)**   An air conditioning system is to be designed for small office for winter conditions with following data: **05**
- Outdoor condition: 10°C DBT and 8°C WBT  
Required indoor condition: 20°C DBT and 60% RH  
Amount of air circulated: 0.3 m<sup>3</sup>/min/person  
Seating capacity of the office: 50 persons  
The required condition is achieved first by heating and then by adiabatic humidifying. Find the following:
- 1)   Heating capacity of coil in kW and surface temperature if bypass factor is 0.32.
  - 2)   Capacity of humidifier
- c)**   Explain the factors affecting on Human Comfort. **04**

Seat No.

Set **S**

**Fourth Year (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Refrigeration and Air Conditioning**

Day & Date: Wednesday, 25-01-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory it should be solved in first 30 minutes in answer Book. Page No.3 (starting page of the Answer Book) Each question carries one mark.  
 2) Don't forget to mention the question paper Set (P/Q/R/S) at the top of the Same page.  
 3) Assume suitable data wherever necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) In aqua-ammonia and Lithium-bromide vapour absorption refrigeration systems, the refrigerants are respectively \_\_\_\_\_.  
 a) Water and Water  
 b) Ammonia and Water  
 c) Water and Lithium bromide  
 d) Ammonia and Lithium bromide
- 2) In a compound compression refrigeration system, the compression of refrigerant is carried out in \_\_\_\_\_ compressor.  
 a) Single  
 b) Zero  
 c) Multiple  
 d) All of above
- 3) When BPF of the cooling coil is 0.3, then its efficiency will be \_\_\_\_\_.  
 a) 0.5  
 b) 1  
 c) 0.7  
 d) 0.3
- 4) The humidification process on the psychrometric chart is shown by \_\_\_\_\_.  
 a) Horizontal line  
 b) Vertical line  
 c) Inclined line  
 d) Curved line
- 5) For the air  $DBT = WBT = 20^{\circ}C$ , Then effective temperature will be \_\_\_\_\_.  
 a) Equal to  $20^{\circ}C$   
 b) Less than  $20^{\circ}C$   
 c) Greater than  $20^{\circ}C$   
 d) Unpredictable
- 6) The conditioned air supplied to a room must have capacity to take \_\_\_\_\_.  
 a) Sensible Heat Load  
 b) Both Sensible & Latent Heat Load  
 c) Latent Heat Load  
 d) None of Above
- 7) The Duct is made of \_\_\_\_\_.  
 a) Galvanized Iron  
 b) Fibre Glass  
 c) Aluminum  
 d) Any one of these

- 8) Equivalent length ( $L_e$ ) for calculation of dynamic pressure loss is given by equation \_\_\_\_\_.  
a)  $\frac{f}{cm}$  b)  $\frac{fc}{m}$   
c)  $\frac{fm}{c}$  d)  $\frac{cm}{f}$
- 9) The degree of warmth or cold felt by a human body depends mainly on \_\_\_\_\_.  
a) dry bulb temperature b) air velocity  
c) relative humidity d) all of Above
- 10) Below is the main component of refrigeration system EXCEPT: \_\_\_\_\_.  
a) Compressor b) Condenser  
c) Evaporator d) Pump
- 11) Which type of air cooling system is used for transportation?  
a) Regenerative air cooling system  
b) Boot strap air cooling system  
c) Reduced ambient air cooling system  
d) None of above
- 12) Inorganic compounds are \_\_\_\_\_.  
a) 500 series b) 700 series  
c) 200 series d) 1000 series
- 13) For the refrigerant R134a, 'a' stands for: \_\_\_\_\_.  
a) Isomers b) Isotopes  
c) Epimers d) Polymers
- 14) When the lower temperature of a refrigerating machine is fixed, then the coefficient of performance of reversed Carnot cycle can be improved by \_\_\_\_\_.  
a) Operating the machine at higher speeds  
b) Operating the machine at lower speeds  
c) Raising the higher temperature  
d) Lowering the higher temperature

Seat No.

Set **S**

**Fourth Year (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Refrigeration and Air Conditioning**

Day & Date: Wednesday, 25-01-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Attempt any two questions from both sections.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data wherever needed and mention it clearly.

**Section – I**

- Q.2 a)** Draw the P-V & T-S diagram for Bell Coleman cycle & with the help of it show that for Bell Coleman cycle **05**
- $$\text{COP} = \frac{1}{R_p^{\left(\frac{\gamma-1}{\gamma}\right)} - 1}$$
- Where  $R_p$  = pressure ratio
- b)** With schematic diagram and T-s plot explain Linde system for liquefaction of air. **05**
- c)** Explain Effect of change in evaporator & condenser pressure on COP of VCC. **04**
- Q.3 a)** Explain the various thermodynamic properties of refrigerants. **05**
- b)** A Carnot refrigeration cycle absorbs heat at 270K & rejects it at 300K. **05**
- 1) Calculate the COP of this refrigeration Cycle.
  - 2) If the cycle absorbing 1130 kJ/min at 270K, how many kJ of work is required per second?
  - 3) If the Carnot heat pump operates between the same temperatures as the above refrigeration cycle, what is the COP?
  - 4) How many kJ/min will heat pump deliver at 300K if it absorbs 1130 kJ/min at 270K?
- c)** Explain with the help of neat diagram Electrolux Refrigeration System. **04**
- Q.4 a)** The temperature limits of an ammonia refrigerating system are 25°C and -10°C. If the gas is dry at the end of compression, calculate the coefficient of performance of the cycle by assuming no under cooling of the liquid ammonia. Use the following table for the properties of ammonia. **05**

Temp. (°C)	Liquid Heat (kJ/kg)	Latent Heat (kJ/kg)	Liquid Entropy(kJ/kgK)
25	298.9	1166.94	1.1242
-10	135.37	1297.68	0.5443

- b)** Explain by flow diagram and on p-h diagram multiple evaporators at different temperature with individual compressor & individual expansion valve. **05**
- c)** Draw neat diagram of Regenerative air cooling system for air craft refrigeration and explain it with the help of its T-S diagram. **04**

**Section – II**

- Q.5 a)** A sample of moist air has DBT of 43°C & WBT of 29°C. Calculate the following without making use of psychrometric Chart. **05**
- 1) Partial Pressure of water vapour
  - 2) Specific Humidity
  - 3) Relative Humidity
  - 4) Dew Point Temperature
  - 5) Enthalpy
- b)** What are the different factors (load components) are considered in load estimation sheet for comfort application? **05**
- c)** Write down general rules in designing the duct. **04**
- Q.6 a)** Define GSHF, RSHF & ERSHF and show those lines on layout of psychrometric chart. **05**
- b)** Write a short note on types of fan used in air conditioning applications. **05**
- c)** Define the following. **04**
- 1) DPT
  - 2) Sp. Humidity
  - 3) Degree of Saturation
  - 4) Relative Humidity
- Q.7 a)** Develop an equation for equivalent diameter of circular duct for a rectangular duct when quantity of air passing through both the duct is same. **05**
- b)** An air conditioning system is to be designed for small office for winter conditions with following data: **05**
- Outdoor condition: 10°C DBT and 8°C WBT  
Required indoor condition: 20°C DBT and 60% RH  
Amount of air circulated: 0.3 m<sup>3</sup>/min/person  
Seating capacity of the office: 50 persons  
The required condition is achieved first by heating and then by adiabatic humidifying. Find the following:
- 1) Heating capacity of coil in kW and surface temperature if bypass factor is 0.32.
  - 2) Capacity of humidifier
- c)** Explain the factors affecting on Human Comfort. **04**

 5) Use of non-programmable calculator is allowed.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.** **14**

- 1) Which of the following statements regarding four-wheel drive is correct?
  - a) All the four wheels are powered
  - b) All the four wheels can be steered
  - c) Vehicle has four wheels
  - d) None of the above
- 2) The number of points at which the engine - clutch-gear box unit is supported on the chassis frame is \_\_\_\_\_.
  - a) one
  - b) two
  - c) three
  - d) four
- 3) \_\_\_\_\_ is the resistance offered by air to the movement of a vehicle.
  - a) air resistance
  - b) grade resistance
  - c) rolling resistance
  - d) total resistance
- 4) The ability of the rear wheels to transmit tractive effort without slipping is known as \_\_\_\_\_.
  - a) pull
  - b) push
  - c) torque
  - d) traction
- 5) The inertia of the rotating parts of the clutch should be \_\_\_\_\_.
  - a) zero
  - b) minimum
  - c) maximum
  - d) none of these
- 6) The component of the torque converter that allows multiplication of torque is the \_\_\_\_\_.
  - a) turbine
  - b) impeller
  - c) pump
  - d) stator
- 7) By using synchronizing device, the two involved adjacent gears have their speeds \_\_\_\_\_.
  - a) increased
  - b) reduced
  - c) equalized
  - d) un-equalized
- 8) Most popular manual steering gear for cars today is \_\_\_\_\_.
  - a) worm and wheel type
  - b) rack and pinion type
  - c) cam and roller type
  - d) worm and nut type

- 9) One purpose of a recirculating ball type steering gear is to reduce the \_\_\_\_\_.  
a) operating friction                      b) operating cost  
c) toe-out during- turns                d) number of parts
- 10) The function of master cylinder is \_\_\_\_\_.  
a) to decrease pressure unequally in all cylinders  
b) to increase pressure unequally in all cylinders  
c) to increase pressure equally in all cylinders  
d) to decrease power equally in all cylinders
- 11) Air brakes are mostly used in case of \_\_\_\_\_.  
a) cars    b) trucks  
c) jeeps                                        d) three-wheelers
- 12) The MacPherson system consists of a \_\_\_\_\_.  
a) diagonal stay                            b) a single arm  
c) telescopic strut                         d) all above
- 13) The components suspension systems are: \_\_\_\_\_.  
a) springs  
b) dampers or shock absorbers  
c) stabilizer and a linkage system  
d) all of these
- 14) A Fuel Cell is an electrochemical device that combines \_\_\_\_\_ and \_\_\_\_\_ to produce electricity, with water and heat as its by-product.  
a) Hydrogen and Water                      b) Hydrogen and Oxygen  
c) a and b                                        d) none of these

 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from each section.  
 2) Figures to the right indicates full marks  
 3) Assume suitable data if necessary.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2 a)** Explain in detail the front engine front wheel drive arrangement with a neat sketch and write its advantages and disadvantages. **06**
- b) Define the following.** **04**
- 1) Chassis
  - 2) Draw bar pull
  - 3) Gradient resistance
  - 4) Tractive effort
- c)** Explain single plate clutch with neat sketch. **04**
- Q.3 a)** The coefficient of rolling resistance weighing 62293.5 N is 0.018 and coefficient of air resistance is 0.0276 in the formula  $R = KW + KaAV^2$  in N. Where, A is  $m^2$  of the frontal area and V is the speed in km/h. The transmission efficiency in top gear of 6.2: 1 is 90 % and in the second gear of 15:1 is 80 %. The frontal area is 5.574  $m^2$ . If the truck has to have a maximum speed of 88 km/h in the top gear, calculate **10**
- (i) The engine brake power required
  - (ii) The engine speed if the driving wheels have an effective diameter of 0.8125 m
  - (iii) The maximum grade the truck can negotiate at the above engine speed in second gear and
  - (iv) The maximum drawbar pull available on the level at the above engine speed in second gear.
- b)** Describe fluid clutch with neat sketch. **04**
- Q.4 a)** Explain synchromesh gear box with neat sketch of synchronizer unit and also describe its advantages over other type of gear boxes. **06**
- b) Write short note on the following.** **08**
- 1) Electric fuel gauge
  - 2) Electric horn

## Section – II

- Q.5**
- a) What are the functions of a steering system? Explain worm and worm wheel steering gear box. **06**
  - b) **Define the following.** **04**
    - 1) Camber
    - 2) Caster
    - 3) King pin inclination
    - 4) Included angle
  - c) **Write short note. (Any One)** **04**
    - 1) Disc brake
    - 2) Anti-lock Braking System (ABS)
- Q.6**
- a) A vehicle has its wheel base equal to 3 times the height of its C.G. above ground. If the vehicle is braked on all four wheels over a road adhesion factor of 0.6, determine the weight transfer from the rear to the front wheels. **06**
  - b) Explain airbrake system. **04**
  - c) **Write short note (Any One)** **04**
    - 1) Power steering
    - 2) Under steer & over steer
- Q.7**
- a) What are the functions and purpose of the suspension system? Differentiate independent and conventional suspension systems. **06**
  - b) Explain with neat sketch shock absorber. **04**
  - c) **Write short note (Any One)** **04**
    - 1) Hotch-kiss and Torque tube drive
    - 2) Electronic Control Unit

Time: 02:00 PM To 05:00 PM

**Instructions:**

- 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
- 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
- 4) Assume suitable data wherever needed and mention it clearly.
- 5) Use of non-programmable calculator is allowed.

Marks: 14

14

- Page 13 of 16

- 9) A Fuel Cell is an electrochemical device that combines \_\_\_\_\_ and \_\_\_\_\_ to produce electricity, with water and heat as its by-product.
- a) Hydrogen and Water
  - b) Hydrogen and Oxygen
  - c) a and b
  - d) none of these
- 10) Which of the following statements regarding four-wheel drive is correct?
- a) All the four wheels are powered
  - b) All the four wheels can be steered
  - c) Vehicle has four wheels
  - d) None of the above
- 11) The number of points at which the engine - clutch-gear box unit is supported on the chassis frame is \_\_\_\_\_.
- a) one
  - b) two
  - c) three
  - d) four
- 12) \_\_\_\_\_ is the resistance offered by air to the movement of a vehicle.
- a) air resistance
  - b) grade resistance
  - c) rolling resistance
  - d) total resistance
- 13) The ability of the rear wheels to transmit tractive effort without slipping is known as \_\_\_\_\_.
- a) pull
  - b) push
  - c) torque
  - d) traction
- 14) The inertia of the rotating parts of the clutch should be \_\_\_\_\_.
- a) zero
  - b) minimum
  - c) maximum
  - d) none of these

**Fourth Y. (B.Tech.) (Sem – I) (New) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**Automobile Engineering**

Day & Date: Tuesday, 31-01-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from each section.  
 2) Figures to the right indicates full marks  
 3) Assume suitable data if necessary.  
 4) Use of non-programmable calculator is allowed.

**Section – I**

- Q.2 a)** Explain in detail the front engine front wheel drive arrangement with a neat sketch and write its advantages and disadvantages. **06**
- b) Define the following.** **04**
- 1) Chassis
  - 2) Draw bar pull
  - 3) Gradient resistance
  - 4) Tractive effort
- c)** Explain single plate clutch with neat sketch. **04**
- Q.3 a)** The coefficient of rolling resistance weighing 62293.5 N is 0.018 and coefficient of air resistance is 0.0276 in the formula  $R = KW + KaAV^2$  in N. Where, A is  $m^2$  of the frontal area and V is the speed in km/h. The transmission efficiency in top gear of 6.2: 1 is 90 % and in the second gear of 15:1 is 80 %. The frontal area is 5.574  $m^2$ . If the truck has to have a maximum speed of 88 km/h in the top gear, calculate **10**
- (i) The engine brake power required
  - (ii) The engine speed if the driving wheels have an effective diameter of 0.8125 m
  - (iii) The maximum grade the truck can negotiate at the above engine speed in second gear and
  - (iv) The maximum drawbar pull available on the level at the above engine speed in second gear.
- b)** Describe fluid clutch with neat sketch. **04**
- Q.4 a)** Explain synchromesh gear box with neat sketch of synchronizer unit and also describe its advantages over other type of gear boxes. **06**
- b) Write short note on the following.** **08**
- 1) Electric fuel gauge
  - 2) Electric horn

## Section – II

- Q.5**
- a) What are the functions of a steering system? Explain worm and worm wheel steering gear box. **06**
  - b) **Define the following.** **04**
    - 1) Camber
    - 2) Caster
    - 3) King pin inclination
    - 4) Included angle
  - c) **Write short note. (Any One)** **04**
    - 1) Disc brake
    - 2) Anti-lock Braking System (ABS)
- Q.6**
- a) A vehicle has its wheel base equal to 3 times the height of its C.G. above ground. If the vehicle is braked on all four wheels over a road adhesion factor of 0.6, determine the weight transfer from the rear to the front wheels. **06**
  - b) Explain airbrake system. **04**
  - c) **Write short note (Any One)** **04**
    - 1) Power steering
    - 2) Under steer & over steer
- Q.7**
- a) What are the functions and purpose of the suspension system? Differentiate independent and conventional suspension systems. **06**
  - b) Explain with neat sketch shock absorber. **04**
  - c) **Write short note (Any One)** **04**
    - 1) Hotch-kiss and Torque tube drive
    - 2) Electronic Control Unit

**Fourth Year (B.Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**Robotics and Artificial Intelligence**

Max. Marks: 70

**Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page

Marks: 14

- 1) The main function of the robot is \_\_\_\_\_.
  - a) Sensing the environment by external sensor
  - b) Decision making
  - c) Performing
  - d) all
- 2) A 3D object in 3D space has got \_\_\_\_\_ degree/s of freedom.
  - a) 1
  - b) 5
  - c) 6
  - d) 4
- 3) Which of the following is a robot specification?
  - a) Control wrist
  - b) payload
  - c) robot energy
  - d) None of this
- 4) DC motors that are used in closed loop position control are called \_\_\_\_\_ motors.
  - a) Synchronous
  - b) Steeper
  - c) Brushless
  - d) Servo motors
- 5) A smart sensor can do which of the following?
  - a) Compensate for random errors
  - b) Automatic calibration of accuracy
  - c) Adjust for non linearities
  - d) all of the above
- 6) The most widely used technique of control for industrial robots is \_\_\_\_\_ control.
  - a) PI
  - b) PD
  - c) PID
  - d) ID
- 7) The process of finding the position of the end effector when the joint variable are know is called \_\_\_\_\_.
  - a) Forward Kinematics
  - b) Inverse Kinematics
  - c) Forward Dynamics
  - d) Inverse Dynamics

- 8) Artificial Intelligence is a technique which enables machines to \_\_\_\_\_ human behaviour.

a) Mimic	b) Ignore
c) Forget	d) None of the above
- 9) The \_\_\_\_\_ search generates all nodes at a particular level before proceeding to the next level of the tree.

a) Breadth First	b) Depth First
c) Hill Climbing	d) Production Systems
- 10) \_\_\_\_\_ are viewed as 'rules of thumb' that domain experts could use to generate good solutions without exhaustive search (rule-based expert systems).

a) Heuristics	b) Nodes
c) Production Systems	d) Exhaustive Search
- 11) Who is called the father of fuzzy logic?

a) Lotfi Zadeh	b) Plato
c) George Boole	d) Aristotle
- 12) The simplest form of neural networks where input data travels in one direction only, passing through artificial neural nodes and exiting through output nodes is called \_\_\_\_\_.

a) Feed Forward ANN	b) Recurrent ANN
c) Gated Recurrent ANN	d) None of the above
- 13) The two most commonly used technologies for imaging sensors are \_\_\_\_\_.

a) RGB and HSV	b) CDD and CMOS
c) RGB and CIE	d) CCD and CMOS
- 14) Imaging sensors in \_\_\_\_\_ cameras have both length and breadth.

a) Volume scan	b) Area Scan
c) Line Scan	d) Perimeter

 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Who is called the father of fuzzy logic?
 

a) Lotfi Zadeh	b) Plato
c) George Boole	d) Aristotle
- 2) The simplest form of neural networks where input data travels in one direction only, passing through artificial neural nodes and exiting through output nodes is called \_\_\_\_\_.
 

a) Feed Forward ANN	b) Recurrent ANN
c) Gated Recurrent ANN	d) None of the above
- 3) The two most commonly used technologies for imaging sensors are \_\_\_\_\_.
 

a) RGB and HSV	b) CDD and CMOS
c) RGB and CIE	d) CCD and CMOS
- 4) Imaging sensors in \_\_\_\_\_ cameras have both length and breadth.
 

a) Volume scan	b) Area Scan
c) Line Scan	d) Perimeter
- 5) The main function of the robot is \_\_\_\_\_.
 

a) Sensing the environment by external sensor
b) Decision making
c) Performing
d) all
- 6) A 3D object in 3D space has got \_\_\_\_\_ degree/s of freedom.
 

a) 1	b) 5
c) 6	d) 4
- 7) Which of the following is a robot specification?
 

a) Control wrist	b) payload
c) robot energy	d) None of this
- 8) DC motors that are used in closed loop position control are called \_\_\_\_\_ motors.
 

a) Synchronous	b) Steeper

  - b) Decision making
  - c) Performing
  - d) all
- 11) A 3D object in 3D space has got \_\_\_\_\_ degree/s of freedom.
  - a) 1
  - b) 5
  - c) 6
  - d) 4
- 12) Which of the following is a robot specification?
  - a) Control wrist
  - b) payload
  - c) robot energy
  - d) None of this
- 13) DC motors that are used in closed loop position control are called \_\_\_\_\_ motors.
  - a) Synchronous
  - b) Steeper
  - c) Brushless
  - d) Servo motors
- 14) A smart sensor can do which of the following?
  - a) Compensate for random errors
  - b) Automatic calibration of accuracy
  - c) Adjust for non linearities
  - d) all of the above

**Fourth Year (B.Tech) (Sem- I) (New) (CBCS) Examination: Oct/Nov - 2022**  
**MECHANICAL ENGINEERING**  
**Robotics and Artificial Intelligence**

Day & Date: Friday, 17-02-2023  
Time: 02:00 PM To 05:00 PM

Max. Marks: 56

**Instructions:** 1) Attempt any two questions from each Section.  
2) Figures to the right indicates full marks.

**Section – I**

- |            |   |           |
|------------|---|-----------|
| <b>Q.2</b> | <b>a)</b> Explain major components of an industrial robot.                                  | <b>07</b> |
|            | <b>b)</b> Give classification of industrial robots.   | <b>07</b> |
| <b>Q.3</b> | <b>a)</b> Explain inductive and capacitive type of proximity sensors used in robots.        | <b>07</b> |
|            | <b>b)</b> Explain hydraulic actuators used in robots with their advantages and limitations. | <b>07</b> |
| <b>Q.4</b> | <b>a)</b> Explain various end effectors used in industrial robots.                          | <b>07</b> |
|            | <b>b)</b> Explain forward kinematics for 2 DOF Planar Manipulator with suitable diagram.    | <b>07</b> |

**Section – II**

- |            |   |           |
|------------|---|-----------|
| <b>Q.5</b> | <b>a)</b> Explain depth first and breadth first search techniques used in AI with example.                              | <b>07</b> |
|            | <b>b)</b> Explain Hill Climbing Method used in AI with diagrams.  | <b>07</b> |
| <b>Q.6</b> | <b>a)</b> Explain Components of Fuzzy Logic Systems Architecture.   | <b>07</b> |
|            | <b>b)</b> Explain Artificial Neural Network with example.   | <b>07</b> |
| <b>Q.7</b> | <b>a)</b> Explain various applications of Machine Vision Systems. What are advantages of using a Machine Vision System? | <b>07</b> |
|            | <b>b)</b> Explain CCD and CMOS sensors used in Machine Vision Systems.  | <b>07</b> |

### MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) KAIZEN is Japanese word in which "KAI" means and "ZEN" means \_\_\_\_\_.  
a) Plan, do                                      b) Muda, muri  
c) change, better                                d) None of above
- 2) "ABC" analysis is done by arranging items in decreasing order of \_\_\_\_\_.  
a) Total Inventory costs                      b) Item value  
c) Annual usage valued                        d) Item demand
- 3) "\_\_\_\_\_" is one of benefits of six sigma.  
a) Top-down approach                          b) Down-Top approach  
c) Left-right approach                          d) None of above
- 4) If two variables,  $x$  and  $y$ , have a very strong linear relationship, then \_\_\_\_\_.  
a) there is evidence that  $x$  causes a change in  $y$   
b) there is evidence that  $y$  causes a change in  $x$   
c) there might not be any causal relationship between  $x$  and  $y$   
d) None of these alternatives is correct
- 5) The correct sequence of operations in production planning and control is \_\_\_\_\_.  
a) Dispatching-Routing-Scheduling- Follow up  
b) Routing-Scheduling-Dispatching-Follow up  
c) Scheduling-Routing- Dispatching-Follow up  
d) Routing-Scheduling-Follow up-Dispatching
- 6) "MAD" in relation with forecasting error stands for \_\_\_\_\_.  
a) Main absolute data                            b) Mean analysis data  
c) Mean absolute deviation                     d) None of these
- 7) In regression analysis, the variable that is being predicted is the \_\_\_\_\_.  
a) response, or dependent, variable  
b) independent variable  
c) intervening variable  
d) is usually  $x$

- 8) If the actual demand for a period is 100 units but forecast demand was 90 units. The forecast error is \_\_\_\_\_.
  - a) -10
  - b) +10
  - c) -5
  - d) +5
- 9) Forecast used for New product planning, capital expenditure, facility location are \_\_\_\_\_.
  - a) Long range time horizon
  - b) short range time horizon
  - c) medium range time horizon
  - d) None of above
- 10) Which of the following is not primary function for plant maintenance?
  - a) maintenance of existing plant and equipment
  - b) alterations to existing equipment and buildings
  - c) selling of old machineries
  - d) equipment inspection and lubrication
- 11) Which of the following is a production planning technique?
  - a) Dispatching
  - b) Loading
  - c) Inspection
  - d) expediting
- 12) Productivity can be improved by \_\_\_\_\_.
  - a) increasing inputs while holding outputs steady
  - b) decreasing outputs while holding inputs steady
  - c) increasing inputs and outputs in the same proportion
  - d) decreasing inputs while holding outputs steady
- 13) The full form of " ERP " stands for \_\_\_\_\_.
  - a) Enterprise Revenue Planning
  - b) Enterprise Recovery Planning
  - c) Enterprise Resource Planning
  - d) Enterprise Report Planning
- 14) Which of the following means 'visual cards'?
  - a) Poka-Yoke
  - b) Kanban
  - c) Both of above
  - d) None of above

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Production and Operations Management**

Day &amp; Date: Tuesday, 07-02-2023

Max. Marks: 70

Time: 02:00 PM To 05:00 PM

**Instructions:** 1) Section I and Section II are compulsory.  
 2) Solve any two questions from Section I and Section II.

**Section – I**

- Q.2** a) Explain objectives and scope of Production Management in detail. **07**  
 b) Explain with example different types of manufacturing systems. **07**
- Q.3** a) Explain Exponential smoothening method of Forecasting with example. **07**  
 b) A dealer for LCD television forecasts the demand for televisions at the rate of 500 per month for next three months. The actual demand turned out to be 400, 560 and 700. Calculate forecast error and bias and also comment on same. **07**
- Q.4** **Write short Note on following.**  
 a) Functions of Production Planning and control **04**  
 b) Line Balancing **05**  
 c) Aggregate Planning **05**

**Section – II**

- Q.5** a) What are different types of Inventory? Explain various costs associated with Inventory. **07**  
 b) Write short note on Inventory control techniques? Explain "ABC analysis" technique in detail. **07**
- Q.6** a) Write difference between Preventive Vs Breakdown maintenance. **07**  
 b) Define value engineering and value analysis. Explain value analysis procedure. **07**
- Q.7** **Write short Note on following.**  
 a) Just in time (JIT) **05**  
 b) Six Sigma **05**  
 c) Supply chain management (SCM) **04**

Day & Date: Tuesday, 07-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book).  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) \_\_\_\_\_ of the following product is not continuous/process mfg. system.
 

a) Steel	b) Petrochemical
c) Cement	d) Ball pen
- 2) A milk powder tin is being weighed as it is filled is an example of \_\_\_\_\_.
 

a) Operation cum transportation
b) Operation cum inspection
c) Transportation cum inspection
d) None of the above
- 3) \_\_\_\_\_ is the input for process planning.
 

a) Design drawing	b) Jigs and fixtures
c) Tools	d) Machine
- 4) \_\_\_\_\_ of following is most important skill which is not required by a process engineer.
 

a) Knowledge of jigs and fixtures
b) Knowledge of manufacturing process
c) Design of product
d) Interpret engg. drawings
- 5) In process picture sheet, locator is considered as \_\_\_\_\_.
 

a) Square	b) Circle
c) Triangle	d) Arrow
- 6) Scrap and rework factor is considered as \_\_\_\_\_ in equipment selection.
 

a) Operational	b) Economic
c) Technical	d) Management
- 7) ISO 13399 is an international \_\_\_\_\_ information standard.
 

a) Cutting tool	b) General purpose machine
c) Special purpose machine	d) Gauge
- 8) Organisation establishes relationship between \_\_\_\_\_.
 

a) People, work & management	b) Customer, work & resource
c) People, work & resource	d) None of the above

- 9)  symbol used in drawing to interpret \_\_\_\_\_.  
a) Perpendicularity                      b) Position  
c) Symmetry                              d) Concentricity
- 10) The process assesses the practicality of the proposed plan for the project is called \_\_\_\_\_ study.  
a) Technical                              b) Managerial  
c) Feasibility                              d) Economical
- 11) Which of the following can be categorized as specific tooling \_\_\_\_\_?  
a) SPM                                      b) Gages  
c) Jigs and fixture                      d) Micro – base tool
- 12) Symbol used for inspection in method study is \_\_\_\_\_.  
a) Circle                                      b) Square  
c) Pyramid                                      d) Triangle
- 13) Type-II  
Match the pairs:  
a) SPM                                      b) Job Production  
c) Standard M/C                      d) Mass production

Set **Q**

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Process Engineering**

Day & Date: Tuesday, 07-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 56

- Instructions:** 1) Q. 2 and Q. 6 are compulsory.  
 2) Answer any one full question from the remaining in each Section.  
 3) Figures to right indicate full marks.  
 4) Make suitable assumptions, if required and state them clearly.

**Section – I**

- Q.2** Prepare a process plan for manufacturing the component in figure 1 w.r.t. data supplied there in along following lines. **14**
- Route sheet
  - Operations list indicating sequence of operation indicating machine selected, holding methods, tool specifications and machining parameters per set up.
  - Gauges and or inspection methods and instruments.

Figure 1

- Q.3** a) Write a note on Part Print Analysis with suitable example. **07**  
 b) What is feasibility study? Explain. **07**
- Q.4** a) What are the functions of process and product engineer in an organization? **07**  
 b) Explain types of production in detail. **07**
- Q.5** a) What is tolerance stack? Discuss methods to control the tolerance stack. **07**  
 b) Explain manufacturing system, input and output of process engineering. **07**

**Section – II**

- |            |  |           |
|------------|--|-----------|
| <b>Q.6</b> | Draw the process picture sheet for any four operations for manufacturing the component in Figure I w.r.t. sequence. Use standard symbols for locating whenever required. | <b>14</b> |
| <b>Q.7</b> | <b>a)</b> What are the factors in tool selection and explain it with suitable example?   | <b>07</b> |
|            | <b>b)</b> Explain feasibility with its aspects.  | <b>07</b> |
| <b>Q.8</b> | <b>a)</b> Write a note on selection criteria for GPM and SPM.  | <b>07</b> |
|            | <b>b)</b> What are the various sources of information to select machine and equipment?   | <b>07</b> |
| <b>Q.9</b> | <b>a)</b> How do you classify the operations? Explain any three operations with neat sketch.   | <b>07</b> |
|            | <b>b)</b> Write a short note various sources of information.   | <b>07</b> |

**Fourth Year (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2022**  
**MECHANICAL ENGINEERING**  
**Process Engineering**

Day & Date: Tuesday, 07-02-2023  
 Time: 02:00 PM To 05:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book).  
 2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.  
 3) Figures to the right indicates full marks  
 4) Assume suitable data wherever needed and mention it clearly.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) \_\_\_\_\_ of following is most important skill which is not required by a process engineer.
  - a) Knowledge of jigs and fixtures
  - b) Knowledge of manufacturing process
  - c) Design of product
  - d) Interpret engg. drawings
- 2) In process picture sheet, locator is considered as \_\_\_\_\_.
  - a) Square
  - b) Circle
  - c) Triangle
  - d) Arrow
- 3) Scrap and rework factor is considered as \_\_\_\_\_ in equipment selection.
  - a) Operational
  - b) Economic
  - c) Technical
  - d) Management
- 4) ISO 13399 is an international \_\_\_\_\_ information standard.
  - a) Cutting tool
  - b) General purpose machine
  - c) Special purpose machine
  - d) Gauge
- 5) Organisation establishes relationship between \_\_\_\_\_.
  - a) People, work & management
  - b) Customer, work & resource
  - c) People, work & resource
  - d) None of the above
- 6)  symbol used in drawing to interpret \_\_\_\_\_.
  - a) Perpendicularity
  - b) Position
  - c) Symmetry
  - d) Concentricity
- 7) The process assesses the practicality of the proposed plan for the project is called \_\_\_\_\_ study.
  - a) Technical
  - b) Managerial
  - c) Feasibility
  - d) Economical
- 8) Which of the following can be categorized as specific tooling \_\_\_\_\_?
  - a) SPM
  - b) Gages
  - c) Jigs and fixture
  - d) Micro – base tool

**Fourth Year (B. Tech) (Sem- I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MACHANICAL ENGINEERING**  
**Finite Element Method**

Day & Date: Tuesday, 07-02-2023  
 Time: 02:00 PM To 5:00 PM

Max. Marks: 56

- Instructions:** 1) Answer any two questions from Section I and Section II.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary and mention it clearly.  
 4) Use of non-programmable scientific calculator is allowed.

**Section – I**

- Q.2 a)** Obtain solution of differential equation by using Galerkin's method. **07**

$$3 \frac{\partial^2 u}{\partial x^2} + x + 2 = 0, \quad 0 \leq x \leq 1$$

Take boundary conditions as  $u(0) = u(1) = 0$

- b)** Explain Simplex, Complex and Multiplex elements. **07**

- Q.3 a)** Find nodal displacement in stepped bar as shown in figure 1. **07**

Take  $A_1 = 20\text{mm}^2, A_2 = 10\text{mm}^2$

$L_1 = L_2 = 100\text{mm}, E = 200 \times 10^3 \text{MPa}$

**Figure 1:**

- b)** Explain steps in finite element method with examples. **07**

**Q.4 Attempt the following.**

- a)** Using Lagrange polynomials write down the shapes functions for a 1-D cubic truss element. **04**  
**b)** What are the properties of Stiffness matrix? Explain. **06**  
**c)** Write a note on principle of minimum potential energy. **04**

**Section – II**

- Q.5 a)** Solve the following problem for all unknowns. Impose the boundary conditions using the penalty method. Refer figure 2. **12**

$A_1 = 900\text{mm}^2, A_2 = 400\text{mm}^2, A_3 = 200\text{mm}^2$

$L_1 = 80\text{mm}, L_2 = 80\text{mm}, L_3 = 70\text{mm}$

$E_1 = 70 \text{GPa}, E_2 = 105 \text{GPa}, E_3 = 200 \text{GPa}$

Figure 2:

b) What are superparametric elements? 02

Q.6 a) Calculate the value of field variable at the point A(2.0, 1.5), which is located inside the triangle as shown in figure 3. 07

The nodal values for field variable are  $U_i = 3.5$ ,  $U_j = 2.2$  and  $U_k = 4.4$

Figure 3:

b) What is convergence study? Why is it necessary to do a convergence study in FEA? 07

Q.7 Write short note on (Any Three) 14

- a) Geometric non-linearity
- b) Mesh refinement
- c) Harmonic analysis
- d) Transient analysis

 4) Assume the suitable data wherever necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) In finite element method the term finite stands for
  - a) Finite number of element
  - b) Finite number of nodes
  - c) Finite number of equations
  - d) Finite number of degrees of freedom
- 2) Interpolation function for a 2 noded simplex 1-D element is \_\_\_\_\_.
  - a)  $a_1 + a_2x$
  - b)  $a_1 + a_2x + a_3x^2$
  - c)  $a_1 + a_2x + a_3y$
  - d) None the above
- 3) Model analysis means finding
  - a) Mode shapes
  - b) Natural frequencies
  - c) Both (a) and (b)
  - d) None of the above
- 4) Improvement in the accuracy of finite element mesh by increasing the order of interpolation function used in the elements is
  - a) h-refinement
  - b) p-refinement
  - c) mesh refinement
  - d) p-h refinement
- 5) If the order of displacement interpolation function and geometry interpolation function is the same, then the element is called \_\_\_\_\_.
  - a) Subparametric
  - b) Superparametric
  - c) Isoparametric
  - d) Parametric
- 6) Post processing means
  - a) Meshing
  - b) Solving
  - c) Result analysis
  - d) Discretization
- 7) In \_\_\_\_\_ element the value of field variable remains unchanged in the circumferential direction.
  - a) 1D and 2D
  - b) Beam
  - c) Truss
  - d) Axisymmetric
- 8) Size of shape function matrix of 2D element having 3 nodes is \_\_\_\_\_.
  - a)  $2 \times 6$
  - b)  $3 \times 3$
  - c)  $4 \times 6$
  - d)  $2 \times 5$

- 9) The displacement at any point for 1D simplex element is obtained by \_\_\_\_\_.  
 a)  $u = N_i u_i + N_j u_j$       b)  $u = \frac{(x_j - x)}{L} u_i + \frac{(x - x_i)}{L} u_j$   
 c)  $u = a + bx$       d) All of these
- 10) Formula for Galerkin method is \_\_\_\_\_.  
 a)  $\int f(x) R(x) dx = 0$       b)  $\int R(x) dx = 0$   
 c)  $R(x) = 0$       d)  $\int R^2(x) dx = 0$
- 11) Summation of all shape functions within one element is equal to  
 a) 0      b) 1  
 c) 0.5      d) 1.5
- 12) The potential energy in a spring is given by the equation  
 a)  $\pi = \frac{1}{2} K U^2 - F U$       b)  $\pi = M g$   
 c)  $\pi = M c^2$       d)  $\pi = M k^2$
- 13) A measure of distortion of an element is  
 a) Bandwidth      b) Damping ratio  
 c) Aspect ratio      d) Shape function
- 14) A problem which is not a function of time  
 a) Eigenvalue problem      b) Steady state problem  
 c) Transient problem      d) Propagation problem

**Section – I**

- Q.2 a)** Obtain solution of differential equation by using Galerkin's method. **07**

$$3 \frac{\partial^2 u}{\partial x^2} + x + 2 = 0, \quad 0 \leq x \leq 1$$

Take boundary conditions as  $u(0) = u(1) = 0$

- b)** Explain Simplex, Complex and Multiplex elements. **07**

- Q.3 a)** Find nodal displacement in stepped bar as shown in figure 1. **07**

Take  $A_1 = 20\text{mm}^2, A_2 = 10\text{mm}^2$

$L_1 = L_2 = 100\text{mm}, E = 200 \times 10^3 \text{MPa}$

**Figure 1:**

- b)** Explain steps in finite element method with examples. **07**

**Q.4 Attempt the following.**

- a)** Using Lagrange polynomials write down the shapes functions for a 1-D cubic truss element. **04**  
**b)** What are the properties of Stiffness matrix? Explain. **06**  
**c)** Write a note on principle of minimum potential energy. **04**

**Section – II**

- Q.5 a)** Solve the following problem for all unknowns. Impose the boundary conditions using the penalty method. Refer figure 2. **12**

$A_1 = 900\text{mm}^2, A_2 = 400\text{mm}^2, A_3 = 200\text{mm}^2$

$L_1 = 80\text{mm}, L_2 = 80\text{mm}, L_3 = 70\text{mm}$

$E_1 = 70 \text{GPa}, E_2 = 105 \text{GPa}, E_3 = 200 \text{GPa}$

Figure 2:

b) What are superparametric elements? 02

Q.6 a) Calculate the value of field variable at the point A(2.0, 1.5), which is located inside the triangle as shown in figure 3. 07

The nodal values for field variable are  $U_i = 3.5$ ,  $U_j = 2.2$  and  $U_k = 4.4$

Figure 3:

b) What is convergence study? Why is it necessary to do a convergence study in FEA? 07

Q.7 Write short note on (Any Three) 14

- a) Geometric non-linearity
- b) Mesh refinement
- c) Harmonic analysis
- d) Transient analysis

**Fourth Year (B. Tech) (Sem- I) (New) (CBCS) Examination: Oct/Nov- 2022**  
**MACHANICAL ENGINEERING**  
**Finite Element Method**

Day & Date: Tuesday, 07-02-2023  
 Time: 02:00 PM To 5:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.  
 2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.  
 4) Assume the suitable data wherever necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks:14

**Q.1 Choose the correct alternatives from the given options.**

**14**

- 1) A measure of distortion of a element is
  - a) Bandwidth
  - b) Damping ratio
  - c) Aspect ratio
  - d) Shape function
- 2) A problem which is not a function of a time
  - a) Eigenvalue problem
  - b) Steady state problem
  - c) Transient problem
  - d) Propagation problem
- 3) In finite element method the term finite stands for
  - a) Finite number of element
  - b) Finite number of nodes
  - c) Finite number of equations
  - d) Finite number of degrees of freedom
- 4) Interpolation function for a 2 noded simplex 1-D element is \_\_\_\_\_.
  - a)  $a_1 + a_2x$
  - b)  $a_1 + a_2x + a_3x^2$
  - c)  $a_1 + a_2x + a_3y$
  - d) None the above
- 5) Model analysis means finding
  - a) Mode shapes
  - b) Natural frequencies
  - c) Both (a) and (b)
  - d) None of the above
- 6) Improvement in the accuracy of finite element mesh by increasing the order of interpolation function used in the elements is
  - a) h-refinement
  - b) p-refinement
  - c) mesh refinement
  - d) p-h refinement
- 7) If the order of displacement interpolation function and geometry interpolation function is the same, then the element is called \_\_\_\_\_.
  - a) Subparametric
  - b) Superparametric
  - c) Isoparametric
  - d) Parametric
- 8) Post processing means
  - a) Meshing
  - b) Solving
  - c) Result analysis
  - d) Discretization

Duration: 30 Minutes

Marks: 70

**Q.1 Choose the correct alternatives from the given options.**

14

- 1) weight of the engine is categorized in \_\_\_\_\_.  
a) Sprung Mass                                      b) Unsprung Mass  
c) Non-Sprung Mass                                d) Dummy Mass
- 2) weight of the wheels is categorized in \_\_\_\_\_.  
a) Sprung Mass                                      b) Unsprung Mass  
c) Non-Sprung Mass                                d) Dummy Mass
- 3) weight of the break is categorized in \_\_\_\_\_.  
a) Sprung Mass                                      b) Unsprung Mass  
c) Non-Sprung Mass                                d) Dummy Mass
- 4) \_\_\_\_\_ dampers are used to allow full fresh air into the car under normal operating conditions.  
a) Fresh Air    b) Existing Air  
c) Exist Air    d) None of Above
- 5) \_\_\_\_\_ is not a coupling used in Railway Coaches.  
a) Screw Coupling                                 b) Side Buffer Coupling  
c) Central Buffer Coupling                        d) Tie Coupling
- 6) In \_\_\_\_\_ coupling accident & life damage chances are more.  
a) Screw Coupling                                 b) Side Buffer Coupling  
c) Central Buffer Coupling                        d) None of these
- 7) \_\_\_\_\_ is not a method of defrosting in A.C.  
a) Manual    b) Pressure Control  
c) Temperature Control                          d) Allied Method
- 8) Which is the following components of a semaphore signals?  
a) Movable Arm                                    b) Crank Rod  
c) Spectacle Frame                                d) All of These
- 9) The following is not a classification of maintenance  
a) Corrective maintenance                      b) Timely maintenance  
c) Scheduled maintenance                      d) Preventive maintenance

- 10)** Belt of an electric motor is broken, it needs \_\_\_\_\_.  
a) Corrective Maintenance      b) Scheduled Maintenance  
c) Preventive Maintenance      d) Timely Maintenance
- 11)** \_\_\_\_\_ is not a part of fire triangle  
a) Fuel      b) Heat  
c) Oxygen      d) Water
- 12)** \_\_\_\_\_ is not a stage for fire.  
a) Propagation.      b) Period of Decline  
c) Flash Over      d) Fully Developed
- 13)** Railway Meets around \_\_\_\_\_ % of freight Transportation.  
a) 45      b) 70  
c) 90      d) 60
- 14)** Maintenance consist of the following action(s)  
a) Replace of component      b) Repair of component  
c) Service of component      d) All of the above

- 6) \_\_\_\_\_ is not a part of fire triangle
  - a) Fuel
  - b) Heat
  - c) Oxygen
  - d) Water
- 7) \_\_\_\_\_ is not a stage for fire.
  - a) Propagation.
  - b) Period of Decline
  - c) Flash Over
  - d) Fully Developed
- 8) Railway Meets around \_\_\_\_\_ % of freight Transportation.
  - a) 45
  - b) 70
  - c) 90
  - d) 60
- 9) Maintenance consist of the following action(s)
  - a) Replace of component
  - b) Repair of component
  - c) Service of component
  - d) All of the above

- 10) weight of the engine is categorized in \_\_\_\_\_.
  - a) Sprung Mass
  - b) Unsprung Mass
  - c) Non-Sprung Mass
  - d) Dummy Mass
- 11) weight of the wheels is categorized in \_\_\_\_\_.
  - a) Sprung Mass
  - b) Unsprung Mass
  - c) Non-Sprung Mass
  - d) Dummy Mass
- 12) weight of the break is categorized in \_\_\_\_\_.
  - a) Sprung Mass
  - b) Unsprung Mass
  - c) Non-Sprung Mass
  - d) Dummy Mass
- 13) \_\_\_\_\_ dampers are used to allow full fresh air into the car under normal operating conditions.
  - a) Fresh Air
  - b) Existing Air
  - c) Exist Air
  - d) None of Above
- 14) \_\_\_\_\_ is not a coupling used in Railway Coaches.
  - a) Screw Coupling
  - b) Side Buffer Coupling
  - c) Central Buffer Coupling
  - d) Tie Coupling
