## ABOUT THE WORKSHOP

Nuclear energy is considered as one of the most environmentally friendly source of energy as it produces fewer greenhouse gas emissions during the production of electricity as compared to traditional sources like coal power plants. Further, in the last decade, due to increased industrialization there is impetus pushing in the increasing demand of energy. Thus, nuclear promises to supply increased electricity demand. While being environmentally friendly is the big plus of nuclear energy, disposal of radioactive waste and protecting people and environment from its radiation is a big concern for nuclear energy. The present Workshop will therefore discuss the need of nuclear energy for the benefit of the society and its misconceptions. It will also highlight various concerns and challenges related to the use of the nuclear energy. The invited talks and posters presented in the workshop will highlight the importance and challenges in nuclear energy. The sharing of knowledge and dissemination of state of art is the need and key to efficient and optimal advancement in these areas.

The history of US is not known to many people in the world. The development of US has started with the vision of European emperors. Now the nation is known as most developed one. However, the imperial system and its policies towards world and nuclear energy has given different vision to the world. The people from our county will need to know the policies, programs of development of US and its relationship with Emerging Economics. The development process is also related to peace. The issues of Hiroshima and Nagasaki were still a major concern. The world should know the untold History of US, as part of understanding of all growth activities and its impact upon the day to day life of human being. Defining the new concepts about the History of US is necessary as we are staying now in era of global world.
