

◊Scope of the Workshop◊

Latex is used for the communication and publications of scientific documents in many fields including Mathematics, Physics, Computer Science, Statistics, Economics and Political Science. It also has a prominent role in the preparation and publication of books and articles that contain complex multilingual materials.

One of the main advantages of the LATEX over other traditional systems (e.g. Word or open office), is the high typographical quality of the documents. This is particularly true for the documents that are heavy on the Mathematics but documents for any other area could also take advantages of these qualities.
