| Question | Stress concentration in a machine component of ductile material is not so harmful as it is in brittle material because |
| A | In ductile material local yielding may distribute stress concentration |
| B | Ductile material has larger Young's modulus |
| C | Poisson's ratio is larger in ductile material |
| D | Modulus of rigidity is larger in ductile material |
| Answer | A |

| | |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Id | 2 |
| Question | For the fluid flowing over a flat plate with Prandtl number greater than unity, the thermal boundary layer for laminar force convection |
| A | Is thinner than the hydrodynamic boundary layer |
| B | Has thickness equal to zero |
| C | Is of same thickness as hydrodynamic boundary layer |
| D | Is thicker than the hydrodynamic boundary layer |
| Answer | A |

| | |
|-----------|-------------------------------------------------------------------------------|
| Id | 3 |
| Question | Biot number signifies |
| A | The ratio of heat conducted to heat convected |
| B | The ratio of heat convected to heat conducted |
| C | The ratio of external convective resistance to internal conductive resistance |
| D | The ratio of internal conductive resistance to external convective resistance |
| Answer | D |

| | |
|-----------|------------------------------------------------------------------------------------------------------------|
| Id | 4 |
| Question | With an increase in the thickness of insulation around a circular pipe heat loss to the surrounding due to |
| A | Convection increases while that due to conduction decreases |
| B | Convection decreases while that due to conduction increases |
| C | Conduction and convection decreases |
| D | Conduction and convection increases |
| Answer | A |

| | |
|-----------|------------------------------------------------------------------------------------------------------------------------------------|
| Id | 5 |
| Question | When an ideal gas with constant specific heat is throttled adiabatically with negligible changes in kinetic and potential energies |
| A | $\Delta H=0, \Delta T=0$ |
| B | $\Delta H>0, \Delta T=0$ |
| C | $\Delta H>0, \Delta S>0$ |
| D | $\Delta H=0, \Delta S=0$ |
| Answer | A |

| | |
|-----------|------------------------------------------------------------------------------------------------|
| Id | 6 |
| Question | The bolts in a rigid flange coupling connecting two shafts transmitting power are subjected to |
| A | Shear force and bending moment |
| B | Axial force |
| C | Torsion |
| D | Torsion and bending moment |
| Answer | A |

| | |
|-----------|------------------------------------------------------------------------------------|
| Id | 7 |
| Question | If a closed system is undergoing an irreversible process the entropy of the system |
| A | Must increase |
| B | Always remain constant |
| C | Must decrease |
| D | Can increase, decrease or remain constant |
| Answer | D |

| | |
|-----------|----------------------------------------------------------------------------------------------|
| Id | 8 |
| Question | Torque to weight ratio for circular shaft transmitting power is directly proportional to the |
| A | Square root of the diameter |
| B | Diameter |
| C | Square of the diameter |
| D | Cube of the diameter |
| Answer | B |

| | |
|-----------|--------------------------------------------------------|
| Id | 9 |
| Question | Knocking tendency in SI engine reduces with increasing |
| A | Compression ratio |
| B | Valve temperature |
| C | Supercharging |
| D | Engine speed |
| Answer | D |

| | |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Id | 10 |
| Question | A steel ball of mass 1 kg and specific heat 1.4 kJ/ kg is at a temperature of $60^{\circ}C$. it is dropped into 1 kg water at $20^{\circ}C$. the final steady state temperature of water is |
| A | $23.5^{\circ}C$ |
| B | $30^{\circ}C$ |
| C | $35^{\circ}C$ |
| D | $40^{\circ}C$ |
| Answer | A |

| | |
|-----------|--------------------------------------------------------------|
| Id | 11 |
| Question | For a Newtonian fluid |
| A | Shear stress is proportional to shear strain |
| B | Rate of shear stress is proportional to shear strain |
| C | Shear stress is proportional to rate of shear strain |
| D | Rate of shear stress is proportional to rate of shear strain |
| Answer | C |

| | |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Id | 12 |
| Question | A circular solid disc of uniform thickness 20mm radius 200mm and mass 20kg is used as a flywheel, if it rotates at 600 rpm the kinetic energy of the flywheel in joules is |
| A | 395 |
| B | 790 |
| C | 1580 |
| D | 3160 |
| Answer | B |

| | |
|-----------|---------------------------------------------|
| Id | 13 |
| Question | Hot chamber die casting is not suitable for |
| A | Lead and its alloy |
| B | Zinc and its alloy |
| C | Tin and its alloy |
| D | Aluminum and its alloy |
| Answer | D |

| | |
|-----------|--------------------------------------------------------------------------------|
| Id | 14 |
| Question | If moist air is cooled by sensible heat removal which of the following is true |
| A | Neither relative humidity nor specific humidity changes |
| B | Specific humidity changes but not relative humidity |
| C | Both relative and specific humidity changes |
| D | None of these |
| Answer | D |

| | |
|-----------|------------------------------------------------|
| Id | 15 |
| Question | The specific heat of an ideal gas depends upon |
| A | Temperature |
| B | Pressure |
| C | Volume |
| D | Molecular weight and structure |
| Answer | D |

| | |
|-----------|-----------------------------------------------------------------------------------------|
| Id | 16 |
| Question | Which one of the following is criterion in the design of hydrodynamic journal bearings. |
| A | Sommerfeld number |
| B | Rating life |
| C | Specific dynamic capacity |
| D | Rotation factor |
| Answer | A |

| | |
|-----------|-------------------------------------------------------------|
| Id | 17 |
| Question | In shell and tube heat exchanger baffles are mainly used to |
| A | Increasing the mixing of fluid |
| B | Increase the heat transfer area |
| C | Deflect the flow in desired direction |
| D | Reduced fouling of the tube surface |
| Answer | C |

| | |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------|
| Id | 18 |
| Question | For a glass plate, transmissivity and reflectivity are specified as 0.86 and 0.08 respectively, the absorptivity of the glass plate is |
| A | 0.86 |
| B | 0.08 |
| C | 1 |
| D | 0.06 |
| Answer | D |

| | |
|-----------|-----------------------------------------------------------------------------------------------------------|
| Id | 19 |
| Question | In vibration isolation which one of the following statement is not correct regarding transmissibility (T) |
| A | T is nearly unity at small excitation frequencies |
| B | T can be always reduced by using higher damping at any excitation frequency |
| C | T is unity at the frequency ratio of $\sqrt{2}$ |
| D | T is infinity at resonance for undamped systems |
| Answer | B |

| | |
|-----------|----------------------------------------------------------------|
| Id | 20 |
| Question | During the chemical dehumidification process of air |
| A | Dry bulb temperature and specific humidity decreases |
| B | Dry bulb temperature increases and specific humidity decreases |
| C | Dry bulb temperature decreases and specific humidity increases |
| D | Dry bulb temperature and specific humidity increases |
| Answer | B |

| | |
|-----------|------------------------------------------------------|
| Id | 21 |
| Question | In the Rankine cycle, when superheated steam is used |
| A | Thermal efficiency increases |
| B | Steam consumption increases |
| C | Steam dryness after expansion increases |
| D | All of the above |
| Answer | D |

| | |
|-----------|-----------------------------------------|
| Id | 22 |
| Question | Hardness of steel greatly improves with |
| A | Annealing |
| B | Cyaniding |
| C | Normalizing |
| D | Tempering |
| Answer | B |

| | |
|-----------|------------------------------------------------------------------------------|
| Id | 23 |
| Question | In order to have maximum power for a pelton turbine the bucket speed must be |
| A | Equal to jet speed |
| B | Equal to half of the jet speed |
| C | Equal to twice the jet speed |
| D | Independent of the jet speed |
| Answer | B |

| | |
|-----------|----------------------------------------------------------------------------------------------------|
| Id | 24 |
| Question | For a given set of operating pressure limits of a Rankine cycle, the highest efficiency occurs for |
| A | Saturated cycle |
| B | Superheated cycle |
| C | Reheat cycle |
| D | Regenerative cycle |
| Answer | D |

| | |
|-----------|---------------------------------------------|
| Id | 25 |
| Question | Wood flour is added to core sand to improve |
| A | Collapsibility of core |
| B | Dry strength of core |
| C | Shear strength of core |
| D | Tolerance in casting |
| Answer | A |

| | |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Id | 26 |
| Question | Air enters a counter flow heat exchanger at $70^{\circ}C$ and leaves at $40^{\circ}C$. Water enters at $30^{\circ}C$ and leaves at $50^{\circ}C$. the LMTD in degree centigrade is |
| A | 5.65 |
| B | 14.43 |
| C | 19.52 |
| D | 20.17 |
| Answer | B |

| | |
|-----------|-----------------------------------------------------------------------------|
| Id | 27 |
| Question | Tooth interference in an external involute spur gear pair can be reduced by |
| A | Decreasing center distance between gear pair |
| B | Decreasing module |
| C | Decreasing pressure angle |
| D | Increasing number of gear teeth |
| Answer | D |

| | |
|-----------|-----------------------------------------------------------|
| Id | 28 |
| Question | Wet bulb depression under saturated ambient air condition |
| A | Is always positive |
| B | Is always negative |
| C | Is always zero |
| D | May have a value depending upon the dew point temperature |
| Answer | C |

| | |
|-----------|------------------------------------------------------------------------|
| Id | 29 |
| Question | The maximum possible draft in cold rolling of sheet increases with the |
| A | Increasing in coefficient of friction |
| B | Decrease in coefficient of friction |
| C | Decrease in roll radius |
| D | Increases roll velocity |
| Answer | A |

| | |
|-----------|-------------------------------------------------------------------------------------|
| Id | 30 |
| Question | Constant pressure lines in the surperheated region of the Mollier diagram will have |
| A | A positive slope |
| B | A negative slope |
| C | Zero slope |
| D | Both positive and negative slope |
| Answer | A |

| | |
|-----------|---------------------------------------------------|
| Id | 31 |
| Question | In PERT the distribution of time is assumed to be |
| A | Normal |
| B | Gamma |
| C | Beta |
| D | Exponential |
| Answer | C |

| | |
|-----------|----------------------------------------------------------|
| Id | 32 |
| Question | The number of inversions for a slider crank mechanism is |
| A | 6 |
| B | 5 |
| C | 4 |
| D | 3 |
| Answer | C |

| | |
|-----------|-------------------------------------------------|
| Id | 33 |
| Question | For a floating body buoyant force acts at the |
| A | Centriod of the floating body |
| B | Center of gravity of the body |
| C | Centriod of the fluid vertically below the body |
| D | Centriod of the displaced fluid |
| Answer | D |

| | |
|-----------|--------------------------------------------------------------|
| Id | 34 |
| Question | Little's law is a relationship between |
| A | Stock level and lead time in a inventory system |
| B | Waiting time and length of a queue in a queuing system |
| C | Number of machines and job due dates in a scheduling problem |
| D | Uncertainly in the activity time and project completion time |
| Answer | B |

| | |
|-----------|--------------------------------------------|
| Id | 35 |
| Question | In pool boiling, the highest HTC occurs in |
| A | Subcooled boiling zone |
| B | Nucleate boiling zone |
| C | Partial film boiling zone |
| D | Film boiling zone |
| Answer | B |

| | |
|-----------|--------------------------------------------|
| Id | 36 |
| Question | During a phase change of a pure substance, |
| A | $dG = 0$ |
| B | $dP > 0$ |
| C | $DH = 0$ |
| D | $dU = 0$ |
| Answer | A |

| | |
|-----------|---------------------------------------------------------------------|
| Id | 37 |
| Question | Availability of a system at any given state is |
| A | A property of a system |
| B | The maximum work obtainable as the system goes to dead state |
| C | The total energy of a system |
| D | The maximum useful work obtainable as the system goes to dead state |
| Answer | D |

| | |
|-----------|---------------------------------------------------------------------------------|
| Id | 38 |
| Question | For a four bar linkage in toggle position the value of mechanical advantages is |
| A | 0 |
| B | 0.5 |
| C | 1 |
| D | Infinity |
| Answer | D |

| | |
|-----------|-------------------------------------------------------|
| Id | 39 |
| Question | Which of the following is a technique for forecasting |
| A | Exponential smoothing |
| B | PERT/CPM |
| C | Gantt chart technique |
| D | Control charts |
| Answer | A |

| | |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Id | 40 |
| Question | For a current carrying wire of 20 mm diameter exposed to air $h=20 W/m^2 K$, maximum heat dissipation occurs when thickness of insulation $(0.5W/mK)$. |
| A | 30mm |
| B | 25mm |
| C | 20mm |
| D | 15mm |
| Answer | D |

| | |
|-----------|-----------------------------------|
| Id | 41 |
| Question | Set up cost do not include |
| A | Labour cost of setting up machine |
| B | Ordering cost or raw material |
| C | Maintenance cost of machines |
| D | Cost of processing the workpiece |
| Answer | D |

| | |
|-----------|---------------------------------------------------------------------------------------|
| Id | 42 |
| Question | Production flow analysis is a method of identifying part families that uses data from |
| A | Engineering drawings |
| B | Production schedule |
| C | Bill of materials |
| D | Route sheets |
| Answer | D |

| | |
|-----------|----------------------|
| Id | 43 |
| Question | Heat and work are |
| A | Intensive properties |
| B | Extensive properties |
| C | Point functions |
| D | Path functions |
| Answer | D |

| | |
|-----------|----------------------------------------------------------|
| Id | 44 |
| Question | In a flow field the stream lines and equipotential lines |
| A | Are parallel |
| B | Cut at any angle |
| C | Are orthogonal everywhere in the field |
| D | Cut orthogonal except at the stagnation points |
| Answer | D |

| | |
|-----------|---------------------------------------|
| Id | 45 |
| Question | Wrinkling is a common defect found in |
| A | Bent component |
| B | Deep drawn component |
| C | Embossed component |
| D | Blanked component |
| Answer | B |

| | |
|-----------|-----------------------------------|
| Id | 46 |
| Question | Thermal conductivity is lower for |
| A | Wood |
| B | Air |
| C | Water at $100^{\circ}C$ |
| D | Steam at 1 bar |
| Answer | B |

| | |
|-----------|---------------------------------------------------------------------------------------------------------------|
| Id | 47 |
| Question | For full depth of involute spur gear the minimum number of teeth of pinion to avoid interference depends upon |
| A | Pressure angle |
| B | Speed ratio |
| C | Circular pitch |
| D | Pitch diameter |
| Answer | A |

| | |
|-----------|----------------------------------------------------------------|
| Id | 48 |
| Question | For air with a relative humidity of 80% , |
| A | The dry bulb temperature is less than the wet bulb temperature |
| B | The dew point temperature is less than wet bulb temperature |
| C | The dew point and wet bulb temperatures are equal |
| D | The dry bulb and dew point temperatures are equal |
| Answer | B |

| | |
|-----------|--------------------------------------------------------------|
| Id | 49 |
| Question | A diffuse radiation surface has |
| A | Radiation intensity independent of angle |
| B | Emissive power independent of angle |
| C | Emissive power independent of wavelength |
| D | Radiation intensity independent of both angle and wavelength |
| Answer | A |

| | |
|-----------|-------------------------------------------------------------------------------------------|
| Id | 50 |
| Question | The parameters which determine the friction factor for turbulent flow in a rough pipe are |
| A | Froude number and relative roughness |
| B | Froude number and Mach number |
| C | Reynolds number and relative roughness |
| D | Mach number and relative roughness |
| Answer | C |
