

Punyashlok Ahilyadevi Holkar Solapur University, Solapur

**NAAC Accredited-2022
'B++' Grade (CGPA 2.96)**

Name of the Faculty: Science & Technology

CHOICE BASED CREDIT SYSTEM

Syllabus: CHEMISTRY

Name of the Course: M.Sc. I (Sem.– I & II)

(Syllabus to be Implemented from w.e.f. June 2026)

Punyashlok Ahilyadevi Holkar Solapur University, Solapur
Revised Syllabus for the Master of Science in Chemistry
(As per NEP - 2020)
Applicable from the Academic Year 2026 –2027

1. **Title:** M.Sc. Chemistry
2. **Faculty:** Faculty of Science and Technology.
3. **Year of Implementation:** For M. Sc. I (Semester I and Semester II): From June 2026 and for M. Sc. II (Semester III and Semester IV): From June 2027.
4. **Program Outcomes (POs):**
 - a) To demonstrate, solve, and have an understanding of major concepts in all disciplines of Chemistry.
 - b) To solve problems, think methodically, and independently and draw logical conclusions.
 - c) To employ critical thinking and scientific knowledge to design, carry out, record, and analyze the results of chemical reactions.
 - d) To create an awareness of the impact of Chemistry on the environment, society, and development among the scientific community.
 - e) To find the green routes for the chemical reaction for sustainable development.
 - f) To inculcate scientific temperament in the students.
 - g) To use modern techniques, sophisticated equipment, and various Chemistry softwares
5. **Program-Specific Outcomes (PSOs):**
 - a) Students will develop critical thinking and the Analytical mind by taking knowledge in advanced-level Chemistry
 - b) Analytical or experimental skills make the students capable of doing higher-level research work in the emerging fields of Chemistry
 - c) Students will gain a thorough Knowledge of the subject to work on projects at different research and academic institutions.
 - d) Students will become familiar with the different branches of Chemistry like Analytical, Organic, Inorganic, Physical, Environmental, Polymer, and Biochemistry. They will also learn to apply appropriate techniques for the qualitative and quantitative analysis of chemicals in laboratories and industries.
 - e) Employability Skills shall enable the students to find jobs in core Chemistry and other related fields.
 - f) Entrepreneurial Skills shall empower the students to start their industries/businesses in core Chemistry fields.

6. The entire course of M. Sc. (Chemistry) will be of **four Semesters** spread over two years.
7. Pattern of Examination: The Examinations will be conducted **semester wise for theory and practical.**
8. **Fee structure:** As per Punyashlok Ahilyadevi Holkar Solapur University, Solapur guidelines.
9. **Eligibility criteria for Admission:** B.Sc. in Chemistry.
10. **Medium of Instruction:** English
11. Structure of course: Given in Framework Chart

The University department and University affiliated college centers offers following programs at

M. Sc. II (Semester III and IV):

School of Chemical Sciences

- i. **M.Sc. (Polymer Chemistry)**
- ii. **M.Sc. (Industrial Chemistry)**
- iii. **M.Sc. (Organic Chemistry)**
- iv. **M.Sc. (Medicinal Chemistry)**

University affiliated college centers

- v. **M.Sc. (Physical Chemistry)**
- vi. **M.Sc. (Pharmaceutical Chemistry)**
- vii. **M.Sc. (Organic Chemistry)**
- viii. **M.Sc. (Analytical Chemistry)**

12. Scheme of Teaching and Examination:

(Applicable to University Department and University affiliated college centers)

- a. Each unit in theory course shall comprise 15 lectures, each of 60 minutes duration and there shall be four lectures per theory course per week.
- b. Entire program of M. Sc. Chemistry will be of **2200** marks (550 Marks per semester)
- c. Examination of each **theory course** shall be of **100 marks** (60 university examination + 40 internal assessment). University examination of 60 marks (3 hours' duration) will be conducted at the end of each Semester. Internal assessment of 40 marks will be done before the semester examination during each semester.
- d. Examination of practical course shall be of 150 marks per semester.
- e. Research Project is compulsory at second year. (10 Credits)
- f. On-the Job training is mandatory at second semester (4 Credits)
- g. Question papers will be set in the view of the entire syllabus and preferably covering each unit of the syllabus. Equal weightage should be provided to each unit.

13. Standard of Passing:

There will be separate passing for theory courses and practical courses. Minimum 40% marks will be required for passing separately for theory and practical courses.

14. Nature of Question paper and scheme of marking:

- Theory question paper: Maximum marks -60
- Total No. of questions – 5
- All questions are of equal marks and compulsory. Question No.1 is of MCQ and fill in blanks or write true/false. Total number of bits is 8+4 with one mark each. Total marks – 12 (which cover multiple choices, fill in the blanks, definition, true or false).
- Question No. 2 has 8 sub questions having 2 Marks each. Student has to attempt any 6.
- Question No. 3 has 4 sub questions having 4 Marks each. Student has to attempt any 3.
- Question No. 4 and 5 have 3 sub questions each having 6 Marks each. Student has to attempt any 2.
- The answers of all 5 questions are to be written in the same answer book.

M. Sc. I Chemistry Syllabus (w.e.f. academic year 2026-27)
Credit Frameworks for M.Sc. Programs as per NEP to be implemented in 2026-27

Semester	Paper Code	Title of the Paper	Semester exam			L	T	P	Credits
			Theory	IA	Total				
I		Mandatory							
	DSC-1	Physical Chemistry -I	60	40	100	4		-	4
	DSC-2	Organic Chemistry -I	60	40	100	4		-	4
		Elective (any one)							
	DSE-1	A. Inorganic Chemistry -I	60	40	100	4		-	4
		B. Chemistry in Life Sciences	60	40	100	4		-	
		C. Medicinal Chemistry	60	40	100	4		-	
		RM							
	RM	Research Methodology	60	40	100	4	-	-	4
		Practicals							
	DSC-1P	Practical I	30	20	50	-	-	4	6
	DSC-2P	Practical II	30	20	50	-	-	4	
DSE-1P	Practical III	30	20	50	-	-	4		
	Total for Semester-I	330	220	550				22	
II		Mandatory							
	DSC-3	Physical Chemistry -II	60	40	100	4		-	4
	DSC-4	Organic Chemistry -II	60	40	100	4		-	4
		Elective (any one)							
	DSE-2	A. Inorganic Chemistry -II	60	40	100	4		-	4
		B. Green Chemistry	60	40	100	4		-	
		C. Industrial Chemicals and Environment	60	40	100	4		-	
	OJT	OJT/In-house Project/ Internship/Apprenticeship	60	40	100	4		-	4
		Practicals							
	DSC-3P	Practical IV	30	20	50	-	-	4	6
	DSC-4P	Practical V	30	20	50	-	-	4	
	DSE-2P	Practical VI	30	20	50	-	-	4	
	Total for Semester-II	330	220	550				22	
	Total M.Sc. I	660	440	1100				44	

L = Lecture T = Tutorials P = Practical

4 Credits of Theory = 4 Hours of teaching per week

2 Credit of Practical = 4 hours per week

DSC- Discipline Specific Course

DSE- Discipline Specific Elective Course

RM- Research Methodology

OJT- On Job Training

M. Sc.-I (Semester-I)

Paper DSC-1: Physical Chemistry-I

Unit-I: Quantum Chemistry

15L Weightage: 20 Marks

Origin of quantum theory, black body radiation, atomic spectra, photoelectric effect, matter waves, wave nature of the electron, Heisenberg's uncertainty principle, Schrodinger wave equation, particle in one dimensional box, the particle in three dimensional box, the hydrogen atom, transformations of coordinates, separation of variables and their significance, the Φ equation, the Θ equation and the Radial equation.

Unit-II: Chemical Thermodynamics

15L Weightage: 20 Marks

Review of Thermodynamics laws, Derivations of Maxwell's Relations, Thermodynamic equation of state, Entropy and Third law of thermodynamics, residual entropy. Concept of fugacity and determination of fugacity, Activity and activity coefficients of solute and solvent, their determination by freezing point depression and vapour pressure measurement, criteria for equilibrium between phases, Derivation of phase rule, application of phase rule to three component system.

Unit-III: Thermodynamics of Solutions

15L Weightage: 20 Marks

Thermodynamics of ideal solutions, Raoult's and Henry's law, Deviations, partial molar quantities, Gibbs-Duhem equation, Duhem-Margules equation, Excess and mixing thermodynamic properties of Non-ideal solutions and their determination.

Unit-IV: Statistical Thermodynamics:

15L Weightage: 20 Marks

Weights and configurations, the most probable configuration, thermodynamic probability and entropy: Boltzmann – Planck equation. Ensembles, ensemble average and time average of property. Maxwell-Boltzmann (MB) distribution law and its application to viscosity and diffusion of gases. Physical significance of distribution Law.

RECOMMENDED BOOKS

1. Quantum Chemistry- R. K. Prasad
2. Quantum Chemistry – Donald A. MacQuarrie
3. Physical Chemistry- P.W. Atkins
4. Text book of Physical Chemistry- S.Glasstone
5. Principles of Physical Chemistry – Marron and Prutton
6. Physical Chemistry- G.M.Barrow
7. Thermodynamics for Chemists – S.Glasstone
8. Thermodynamics – Lewis and Randall, revised by Pitzer
9. An introduction to Chemical Thermodynamics- R. R. Mishra and R. P. Rastogi
10. Kinetics and Mechanism – Frost and Pearson
11. Chemical and Kinetics by K. J. Laidler
12. An Introduction to Statistical Thermodynamics – T.L. Hill, Addison-Wesley. 1960.
13. Statistical Mechanics – Donald A. McQuarrie, 2000.
14. Elements of statistical thermodynamics - L. K. Nash, 2nd Ed. Addison Wesley. 1974.

Paper DSC-2: Organic Chemistry-I

Unit I: Nature of Bonding in Organic Molecules

15L Weightage: 20 Marks

Delocalized chemical bonding, conjugation, cross conjugation, Resonance, Hyperconjugation, Tautomerism, Bonding in Fullerenes. Acidity and Basicity, Aromaticity in benzenoid and non-benzenoid compounds, Alternant and non-alternant compounds, Huckel rule, Aromaticity, Annulenes, Azulenes, Antiaromaticity, homo-aromaticity, Crown ethers complexes and cryptands, Inclusion compounds.

Unit II A: Structure, Stability and Reactions of Reactive Intermediates 05L Weightage: 7 Marks

Generation, structure, stability and reactivity of Carbocation, Carbanion, Free Radical, Carbenes and Nitrenes. Effect of structure on reactivity, Resonance and field effect, Steric effect, Quantitative treatment, The Hammett equation, Linear free energy relationship, Substituents and reaction constants, Taft equation.

Unit II B: Rearrangements

10L Weightage: 20 Marks

Curtius, Schmidt, Lossen, Wolff, Bayer-villiger, Sommelet-Hauser, Favorskii, Pinacol-pinacolone, Benzil-benzilic acid, Fries migration, Tiffeneau Demjanov, Wittig.

Unit III: Aliphatic Nucleophilic & Electrophilic Substitution reactions 15L Weightage: 20 Marks

The S_N2 , S_N1 , mixed S_N1 and S_N2 and SET mechanism. The neighbouring group mechanism, The Neighbouring group participation by π & σ bonds, anchimeric assistance, classical and non-classical carbocations, phenonium ions, norbornyl system, carbocation rearrangements in neighbouring group participation. The S_Ni mechanism. Nucleophile Substitution at an allylic, aliphatic trigonal and vinylic carbon. Reactivity effects of structure, attacking Nucleophile, leaving group and reaction medium. ambident nucleophile and regioselectivity. Bimolecular mechanisms – SE^1 , SE^2 and SE^i mechanisms. Electrophilic substitution accompanied by double bond shifts.

Unit IV: Stereochemistry

15L Weightage: 20 Marks

Elements of symmetry, Chirality, Enantiomeric and diastereomeric Relationships, R and S, E and Z nomenclature, Molecules with more than one chiral center, Threo and Erythro isomers, Prochiral relationships, groups and faces, stereospecific and stereoselective reactions. Optical activity in the absence of Chiral carbon (Biphenyls, allenes and Spiranes), Chirality due to helical shape, Methods of resolution, optical purity, stereochemistry of the compounds containing Nitrogen, Sulphur and phosphorous, Conformations analysis of cycloalkanes, Mono and disubstituted cyclohexanes, decalins, Effect of conformation on reactivity.

RECOMMENDED BOOKS

1. Advanced Organic Chemistry, IV Edn –J. March
2. Stereochemistry of carbon Compounds: E. L. Eliel
3. Advanced organic chemistry: F. A. Carey and R. J. Sundberg
4. A guide book to mechanism in organic chemistry: Peter Sykes.
5. Mechanism and Structure in organic Chemisry, E.S.Gould
6. Principle of Organic Synthesis: R.O.C. Norman.
7. Modern Methods of Organic Synthesis: W. Carruthers
8. Organic Chemistry: Clayden, Greeves, Warren and Wothers
9. Stereochemistry of Organic Compounds: D. Nasipuri
10. Stereochemistry: P. S. Kalsi
11. Basic Stereochemistry of Organic Molecules: Subrata Sen Gupta

Paper DSE 1 A: Inorganic Chemistry– I

Unit I: Chemistry of Transition Elements

15L Weightage: 20 Marks

General characteristic properties of transition elements, co-ordination chemistry of transition metal ions, ligand field theory, ligand field energy parameters (Racah parameters B and C, Slater Condon Parameters, Slater Condon Shortly Parameters), splitting of d orbitals in low symmetry environment, Jahn-Teller effect, interpretation of electronic spectra including charge transfer spectra, spectrochemical series, nephelauxetic effect and nephelauxetic series. Diapara-ferro and antiferromagnetism, quenching of orbital angular moments, spin orbit coupling.

Unit-II: A) Stereochemistry and Bonding

08L Weightage: 11 Marks

VSEPR theory, Walsh diagrams (tri and penta-atomic molecules) $d\pi - p\pi$ bonds, Bent's rule and energetics of hybridization, some simple reactions of covalently bonded molecules.

Unit-II: B) Inorganic Materials

07L Weightage: 9 Marks

Insulators and semiconductors, electronic structure of solids, band theory, intrinsic and extrinsic semiconductors, doping of semiconductors and conduction mechanism, semiconductor devices, rectifiers, transistors, photoconductors, photovoltaic cell.

Unit-III: Nuclear Chemistry

15L Weightage: 20 Marks

Radioactive decay and equilibrium, Nuclear reactions, Q values, cross sections, types of reactions. Chemical effects of nuclear transformations, fission and fusion, fission products and fission yields. Radioactive techniques, tracer techniques, neutron activation analysis, counting techniques such as G.M., ionization and proportional counters, fissile and fertile isotopes, nuclear reactors, application of radio isotopes.

Unit- IV Metal Cluster and Metal Carbonyls

15L Weightage: 20 Marks

Metal Cluster: Introduction, Classification of metal clusters, Structures of Carbonyl Clusters (LNCC and HNCC), Structural aspects of Halide type Clusters (Di, tri, tetra & hexa nuclear clusters)

Metal Carbonyls: Introduction, Classification of carbonyl complexes, Formation of CO molecule, Coulson's modification and explanation of strong field effect of Co ligand, Bonding in metal carbonyl complexes (mono, di & tri nuclear carbonyl complexes, synergic relationship between metal and CO ligands), Preparation, properties & structures of mono, di & tri nuclear carbonyl complexes [$V(CO)_6$, $Cr(CO)_6$, $Ni(CO)_4$, $Fe(CO)_5$, $Mn_2(CO)_{10}$, $Co_2(CO)_8$, $Fe_2(CO)_9$, $Fe_3(CO)_{12}$], EAN rules for metal carbonyls and problems based on EAN, 18 electron rule for metal carbonyls and problems based on 18 electron rule.

RECOMMENDED BOOKS

1. A. F. Wells, Structural Inorganic Chemistry – 5th Edition (1984), Oxford Science Publication
2. James H. Huheey, Inorganic Chemistry- Principle, Structure and Reactivity,
3. J. D. Lee, Concise Inorganic Chemistry, ELBS with Chapman and Hall, London
4. A.R. West, Solid State Chemistry and its applications, Plenum-John Wiley and Sons
5. N.B. Hannay, Solid State Physics
6. H.V. Keer, Solid State Chemistry
7. S.O. Pillai, Solid State Physics, New Age International Publication
8. W.D. Callister, Material Science and Engineering: An Introduction, John Wiley and Sons
9. R. Raghwan, First Course in Material Science
10. R.W. Cahan, The coming of Material Science
11. A.R. West, Basic Solid State Chemistry, 2nd Edition, John Wiley and Sons
12. U. Schubert and H. Husing, Synthesis of Inorganic Materials, Wiley VCH (2000)
13. M.C. Day and Selbin, Theoretical Inorganic Chemistry, Reinhold, EWAP
14. A.H. Hannay, Solid State Chemistry, A.H. Publication
15. John Wulff, The Structure and Properties of Materials, Vol. 4, Electronic properties, Wiley Eastern
16. L.V. Azoroff and J.J. Brophy, Electronic Processes in Materials, McGraw Hill –I
17. Prakash G. More, Comprehensive Industrial Chemistry, PragatiPrakashan, Meerut
18. F.A. Cotton and R.G. Wilkinson, Advanced Inorganic Chemistry, Wiley Students Edition
19. Williams and L. Jolly, Modern Inorganic Chemistry, McGraw-Hill International Edition
20. ManasChanda, Atomic Structure and Bonding, TMH Publication
21. N.N. Greenwood and A. Earnshaw, Chemistry of Elements, Pergamon
22. Chakrabarty, Solid State Chemistry, New Age International Publication
23. J.J. Lipard, Progress in Inorganic Chemistry, Vol 18 and 38, Wiley
24. E. Konig, Structure and Bonding, Vol 9, 1971, 175
25. H.J. Arnikar, Essentials of Nuclear Chemistry, New Age International Publication
26. Friendlander, Kennedy and Miller, Nuclear and Radiochemistry, Wiley and Sons

Paper DSE 1 B: Chemistry in Life Sciences

Unit I: Introduction to cell biology and Structure of different cell organelles **15L Weightage: 20 Marks**

Prokaryotic (archaea and eubacteria) and eukaryotic cell (animal and plant cells), cells as experimental models. Structure of nuclear envelope, nuclear pore complex. ER structure. Organization of Golgi. Lysosome. Structure and functions of mitochondria, chloroplasts and peroxisomes. Zellweger syndrome.

Unit II: Amino acids and Nucleic acids **15L Weightage: 20 Marks**

Structure and classification, physical, chemical and optical properties of amino acids
Nucleotides - structure and properties. Nucleic acid structure – Watson-Crick model of DNA. Structure of major species of RNA - mRNA, tRNA and rRNA.

Nucleic acid chemistry - UV absorption, effect of acid and alkali on DNA. Other functions of nucleotides - source of energy, component of coenzymes, second messengers

Unit : III: Protein Chemistry **15L Weightage: 20 Marks**

Polypeptide backbone, covalent and non-covalent interactions, end-group analysis by chemical and enzymatic methods, Conformation, Configuration, Details of primary, secondary, tertiary and quaternary structures, problems based on determination of primary structure, Ramchandran Plot, structure- function relation of protein (Ex. Haemoglobin)
Chemical modification and cross-linking in proteins, dynamic properties and mechanisms of protein folding

Unit IV: Introduction to bioenergetics **15L Weightage: 20 Marks**

Laws of thermodynamics, state functions, equilibrium constant, coupled reactions, energy charge, ATP cycle, phosphorylation potential, phosphoryl group transfers. Chemical basis of high standard energy of hydrolysis of ATP, other phosphorylated compounds and thioesters. Redox reactions, standard redox potentials and Nernst equation. Universal electron carriers.

RECOMMENDED BOOKS

1. Principles of Biochemistry, Lehninger C Rs. Publ. (1982).
2. Biochemistry, L. Stryer, W.H. Freeman, San Francisco.
3. Schaum's Outline Series of Theory and Problems of Biochemistry, Philip W. Kucheland G.B. Ralston. Int. Ed., McGraw-Hill Book Co.
4. Molecular Biology of the cell – Bruce Alberts – J.D. Watson et al
Garlandpublishing Inc., N.Y. (1983).
5. Cell and Molecular Biology – DeRobertis and Saunders (1980).
6. The cell – C.P. Swanson, Prentice Hall (1989)
7. Cell Biology – C.J. Avers, Addison Wesley Co. (1986).
8. Metabolic Pathways - Greenberg.
9. Biochemistry – G. Zubay, Addison Wesley Publ. (1983).
10. Biochemistry – Stryer (1988) 3rd Edition W.H. Freeman and Co.

Paper DSE 1 C: Medicinal Chemistry

Unit –I

15L Weightage: 20 Marks

- a) **Drugs:** Essential Drugs, Nomenclature of Drugs, Routes of Drug Administration, Adverse effects of Drugs, IUPAC Naming of Drugs.
- b) **Drug Design:** Development of New Drugs, Factors Affecting Development of New Drugs. Sources of lead compounds, Concept of prodrugs and soft drugs, Drug Receptors, Theories of Drug Action.

Unit –II

15L Weightage: 20 Marks

- a) **Pharmacokinetics:** Introductions, Drug Absorption, Distribution and Disposition of Drugs, Excretion and Elimination, Pharmacokinetics of Elimination.
- b) **Pharmacodynamics:** Introduction, Enzyme Stimulation, Enzyme Inhibition, Membrane Active Drugs, Drugs Metabolism, Biotransformation, Toxicology, Types of Interactions.

Unit-III

15L Weightage: 20 Marks

- a) **Cardiovascular Drugs:** Introductions, Classification, Cardiovascular Diseases, Synthesis of Diltiazem, Verapamil, Methyldopa, Atenolol.
- b) **Non Steroidal Anti-inflammatory Drugs (NSAIDs):** Introductions, Classification, Synthesis, Mechanism of action of Indomethacin, Ibuprofen, Dichlorophenac, Naproxen, Allorpurinol.

Unit –IV

15L Weightage: 20 Marks

- a) **Antibiotics:** Introductions, Classification, β -Lactam antibiotics, Cephalosporins, Anticancer Antibiotics. Synthesis of Penicillin-G, Penicillin-V, Ampicillin, Amoxycillin, Chloramphenicol, Cephalophalosporin, Tetracyclin and Streptomycin.
- b) **General anaesthetics and local anaesthetics:** Introduction, Classification, Mode of Action and mechanism of action of general and local anaesthetics.

Reference books:

1. Medicinal Chemistry by Ashutosh Kar, New Age International Publishers.
2. Medicinal Chemistry by Alka L. Gupta.

Paper RM: Research Methodology

Unit I: Foundations of Research:

15L Weightage: 20 Marks

Meaning of research, objectives of research, criteria of good research, types of research, meaning of research problem, selection of research problem, review of related literature: meaning, necessity and sources, hypothesis meaning, function and types of hypothesis, Null/alternative hypothesis, research design: types-exploratory, descriptive, diagnostic and experimental, Execution of the research- Sampling: types, steps involved in sampling, sample size, advantages and limitations, Measurement: Concept of measurement, Problem in measurement in research, Validity and Reliability.

Unit II: Data Interpretation and Paper Writing:

15L Weightage: 20 Marks

Observation and Collection of data, Methods of data collection, Data processing, data analysis. Layout of a Research Paper: Introduction, experimental, results and discussion, Referring style MLA style, APA style, Review writing, Journals in chemical sciences, citation, h-index, Impact factor of Journals, Ethical issues related to publishing, Plagiarism and Self-Plagiarism, Use of e-tools for Research: Google scholar, Scopus, Sci-Finder, Reference Management Software: Mendeley, Software for paper formatting: LaTeX/ MS Office, Software for detection of Plagiarism: iThenticate, drawing software: chemdraw, data plotting softwares: origin and MS excel.

Unit III A: Electroanalytical Techniques

10L Weightage: 13 Marks

Polarography: - Introduction, Instrumentation, Ilkovic equation and its application in quantitative analysis. Half wave potential. Derivation of wave equation, Determination of half wave potential, qualitative and quantitative applications Amperometry: - Principles, instrumentation, nature of titration curves, analytical applications.

Unit-III B: Thermal method of analysis:

5L Weightage: 7 Marks

Thermogravimetry [TG]: Principle, instrumentation, applications to inorganic compounds
Differential thermal analysis [DTA]: Principle, instrumentation, applications to inorganic compounds (problems are expected)

Unit-IV A: X-ray diffraction & ICP:**5L Weightage: 7 Marks**

Theory of X-ray diffraction, diffraction of X-rays by crystals, Instrumentation, application of X-ray diffraction in determination of crystal structure.

Inductively coupled plasma spectroscopy (ICP): Introduction, instrumentation, Applications.

Unit IV B: ¹H-NMR Spectroscopy**10L Weightage: 13 Marks**

Basic principle of NMR, Chemical and Magnetic equivalence and nonequivalence, Homotopism, Enantiotopism, Diastereotopism, Chemical shifts and factors influencing chemical shift: electronegativity, NMR solvent polarity, temperature, anisotropic effect, chemical shifts of acidic protons, D₂O exchange, Multiplicity patterns and Coupling Constants: Pascal's triangle, tree diagram, complex splitting patterns in aromatic, vinylic, and saturated monocyclic compounds, Nuclear Overhauser effect (NOE), Problems based on spectral data of ¹H-NMR.

M. Sc.-I (Semester-II)

Paper DSC 3: Physical Chemistry-II

Unit-I: Photochemistry

[15] Weightage: 20 Marks

Introduction, Franck–Condon principle, electronic excitation, photo-dissociation and Pre-dissociation, photo-reduction, photo-oxidation, role of photochemistry in environment (Green house effect, ozone depletion).

Photophysical phenomenon. Jablonski diagram. Kasha's rule, fluorescence, phosphorescence, delayed fluorescence, differences between phosphorescence and delayed fluorescence. Inter & intra molecular excitation energy transfer (EET) processes. Quenching of fluorescence and kinetics of biomolecular quenching processes, Stern-Volmer equation, formation of photodimer, (with suitable examples) excimer and exciplex.

Unit-III: Electrochemistry

[15] Weightage: 20 Marks

Electrical double layer and its significance (Helmholtz, Gouy-Chapmann and Stern model), evaluation of mean activity coefficients of ions from e.m.f. data, determination of dissociation constant of monobasic acid by e.m.f. method. Debye Huckel theory (without derivation) and limiting law. Storage batteries: acid and alkali storage cells.

Unit-IV: Chemical Kinetics

[15] Weightage: 20 Marks

Rate determining step, steady state approximation. fractional order kinetics, Higher order kinetics and their examples.

Reaction mechanism: Thermal decomposition of acetaldehyde, ethane, reaction between hydrogen and halogens, reaction between NO_2 and F_2 , Decomposition of Ozone. Ionic reactions: Primary and secondary salt effect, Effect of ionic strength and dielectric constant of medium on the rate of ionic reactions in solution.

UNIT-IV Macromolecules

[15] Weightage: 20 Marks

Introduction, molecular weight of a polymer (Number and mass average) viscosity average molecular weight.. Degree of polymerization and molecular weight, practical significance of polymer molecular weight, methods of determining molecular weights (Osmometry, viscometry, light scattering, diffusion and ultra centrifugation)

Chemistry of polymerization: Free radical polymerization (Initiation, propagation and termination), kinetics of free radical polymerization, step growth polymerization (Polycondensation), molecular weight distribution, kinetics of step polymerization, cationic and anionic polymerization. Electronically conducting polymers, Glass transition temperature and molecular weight, factors influencing Glass transition temperature, determination of glass transition temperature, Numerical Problems

RECOMMENDED BOOKS

1. Photo chemistry- J.G.Calverts & J.N.Pits
2. Fundamentals of Photochemistry- K.K.Rohatgi, Mukharji
3. Photochemistry of Solutions – C. A. Parker
4. Chemical Kinetics – K.J.Laidler
5. Kinetics and Mechanism - R. A. Frost and R. G. Pearson
6. Electrochemistry – S. Glasstone
7. Modern electrochemistry – Bockris & Reddy
8. Physical Chemistry – P. W. Atkins
9. Physical Chemistry – G. M. Barrow
10. Physical Chemistry: A molecular Approach – Donald A. McQuarrie and John D. Simon, Viva Books, New Delhi, 1998.
11. Introduction to Photochemistry-Wells
12. Electrolytic Solutions by R. A. Robinson and R. H. Strokes, 1959
13. Basic chemical Kinetics- G. L. Agarwal, Tata-McGraw Hill
14. Physical Chemistry of macromolecules- D. D. Deshpande, Vishal Publications.
15. Polymer Chemistry- F. W. Billmeyer Jr, John-Wiley&Sons, 1971.

Paper DSC 4: Organic Chemistry-II

Unit I: Aromatic Electrophilic & Nucleophilic Substitution reactions (15) Weightage: 20 Marks

The arenium ion mechanism, orientation and reactivity, energy profile diagram, ortho/para ratio, ipso substitution, orientation in other ring system, recapitulation of halogenations, nitration, sulphonation and Friedel craft's reactions, Diazonium coupling.

The S_N^{Ar} , S_N^1 , S_N^2 and benzyne mechanism, Effect of substrate structure, leaving group and attacking nucleophilic on reactivity

Unit IIA: Addition to Carbon–Carbon and Carbon –Hetero multiple bond

(10) Weightage: 13 Marks

Mechanism and stereochemical aspects of addition reaction involving electrophile, nucleophile and free radical, Regio-selectivity and chemo selectivity, orientation and reactivity, Michael addition, Robinson annulation.

Addition of Grignard reagent, Organo zinc, Organo copper and Organo lithium reagent to carbonyl and unsaturated carbonyl compounds, Detailed mechanism and applications of Simon-Smith, Mc-Murry, Hunsdiecker, Nef reaction, Pummerer, Mitsunobu and Wittig reaction.

Unit II B: Elimination Reactions

(05) Weightage: 7 Marks

The E1, E2 and E1cb mechanism. Orientation of double bond, reactivity: Effect of substrate substance, attacking base, the leaving group and the medium, pyrolytic elimination (Xanthate ester, Sulphoxides).

Unit III: Oxidation reactions

(15) Weightage: 20 Marks

Introduction, different oxidative process, CrO_3 (Jones reagent), PDC, PCC, $KMnO_4$, MnO_2 , Swern, $Pb(OAc)_4$, Pd-C, RuO_4 , m-CPBA, Per acids, O_3 , H_2O_2 , $NaIO_4$, HIO_4 , TEMPO (2,2,6,6-tetramethylpiperidine 1-oxyl radical), IBX (O-Iodoxybenzoic acid), CAN (*Ceric Ammonium Nitrate*), Dess-Martin Periodate (DMP), Iodobenzene diacetate and Thallium (III) nitrate.

Unit IV: Reduction reactions

(15) Weightage: 20 Marks

Introduction, different reductive process, Catalytic hydrogenation using Pt, Pd, Ni, Wilkinson's catalyst and Wolff-Kishner reduction, Birch reduction, Clemmenson reduction, Rosenmund, Lindlars catalyst, Bu_3SnH (TBTH), Reduction using $NaBH_4$, LAH and DIBAL-H, $NaCNBH_3$, Triphenyl phosphine.

RECOMMENDED BOOKS

1. Advanced Organic Chemistry: IV Edn. J. March
2. Stereochemistry of carbon Compounds: E. L. Eliel
3. Advanced organic chemistry: F. A. Carey and R. J. Sundberg
4. A guide book to mechanism in organic chemistry: Peter Sykes.
5. Mechanism and Structure in organic Chemisry: E. S.Gould
6. Principle of Organic Synthesis: R.O.C. Norman.
7. Modern Methods of Organic Synthesis: W. Carruthers
8. Organic Chemistry: Clayden, Greeves, Warren and Wothers
9. Stereochemistry of Organic Compounds: D. Nasipuri
10. Stereochemistry: P. S. Kalsi
11. Basic Stereochemistry of Organic Molecules: Subrata Sen Gupta
12. Synthetic Organic Chemistry: H.O. House
13. Organic Chemistry: J. Clayden, N. Greeves

Paper DSE 2A: Inorganic Chemistry – II

Unit-I: Chemistry of Non- transition Elements

(15) Weightage: 20 Marks

General discussion of the properties of non- transition elements, special features of the individual elements, synthesis, properties and structure of their halides and oxides, polymorphism of carbon, phosphorous, sulphur. Synthesis, structure and properties of boranes, carboranes, borazines, silicates, carbides, silicones, phosphazenes, sulphur nitrogen compounds, oxyacids of nitrogen, phosphorous, sulphur and halogen, interhalogens, pseudohalides and noble gas compounds.

Unit-II: Organometallic Chemistry of Transition Elements

(15) Weightage: 20 Marks

Synthesis, structure and bonding, organometallic reagents in organic synthesis and in homogenous catalytic reactions (hydrogenation, hydroformylation, isomerization, Monsanto acetic acid process, synthesis gas, Wacker Process), Ziegler and Natta catalysis, pi-metal complexes, activation of small molecules by coordination.

Unit-III: A) Metal- Ligand Equilibria in Solution

(07) Weightage: 9 Marks

Stepwise and overall formation constants and their interaction, trends in stepwise constants, factors affecting the stability of metal complexes with reference to the metal ion and ligand, chelate effect and its thermodynamic origin, determination of formation constants by pH-metry and spectrophotometry.

Unit-III: B) Chemistry of Lanthanides and Actinides

(08) Weightage: 11 Marks

Lanthanides: Introduction, spectral and magnetic properties. Classical methods of separation of lanthanides: (i) precipitation (ii) thermal reaction, (iii) fractional crystallization, (iv) complex formation, (v) solvent extraction and (vi) ion exchange, Applications of lanthanides.

Actinides: Introduction, spectral and magnetic properties. Methods of separation of actinides from lanthanide, Preparation of trans-uranic elements. Applications of actinides.

Unit-IV: A) Metallurgy

(08) Weightage: 11 Marks

Occurance, extraction, properties and applications of silver, gold, tin and lead.

Unit-IV: B) Bioinorganic Chemistry

(07) Weightage: 9 Marks

Role of metals in medicines, Role of metal ions in biological processes, molecular mechanism of ion transport across membranes, ionophores, photosynthesis PS I and PS II, nitrogen fixation, oxygen uptake proteins: Hemocyanin, Hemerythrin, cytochromes, rubredoxin and ferredoxins, Calcium biochemistry, coenzyme B12.

RECOMMENDED BOOKS

1. A. F. Wells, Structural Inorganic Chemistry – 5th Edition (1984), Oxford Science Edition
2. James H. Huheey, Inorganic Chemistry- Principle, Structure and Reactivity, Harper and Row Publisher Inc., New York
3. J. D. Lee, Concise Inorganic Chemistry, ELBS with Chapman and Hall, London
4. M.C. Day and Selbin, Theoretical Inorganic Chemistry, Reinhold, EWAP
5. Jones, Elementary Coordination Chemistry
6. Morttel, Coordination Chemistry
7. T.S. Swain and D.S.T. Black, Organometallic Chemistry
8. Prakash G. More, Comprehensive Industrial Chemistry, PragatiPrakashan, Meerut
9. John Wullf, The Structure and Properties of Materials, Vol. 4, Electronic properties, Willey Eastern
10. L.V. Azoroff and J.J. Brophy, Elecronic Processes in Materials, McGraw Hill –I
11. F.A. Cotton and R.G. Wilkinson, Advanced Inorganic Chemistry, Wiley Student Edition
12. Williams and L. Jooly, Modern Inorganic Chemistry, McGraw Hill International Edition
13. ManasChanda, Atomic Structure and Bonding, TMH Publication
14. P.L. Pausan, Organometallic Chemistry
15. Cullen, Dolphin and James, Biological Aspects of Inorganic Chemistry
16. Williams, An Introduction to Bioinorganic Chemistry
17. M.N. Hughes, Inorganic Chemistry of Biological Processes
18. Ochi, Bioinorganic Chemistry
19. O.A. Phiops, Metals and Metabolism
20. S.J. Lipard and J.M. Berg, Principles of Bioinorganic Chemistry, U niversity Science Books
21. G.L. Eichhron, Inorganic Bichemistry, Vol I and II, Elsevier

Paper DSE 2B : Green Chemistry

UNIT I: Green chemistry:

(15) Weightage: 20 Marks

History, need, and goals. Green chemistry and Sustainability. Dimensions of sustainability, Limitations/Obstacles in pursuit of the goals of Green Chemistry. Opportunities for the next generation of materials designers to create a safer future. Hazard assessment and mitigation in chemical industry

UNIT II: Basic principles of Green Chemistry and their illustrations with examples.

**(15)
Weightage: 20
Marks**

Prevention of waste/byproducts, Maximum Incorporation of the materials used in the process into the final product (Atom Economy): Green metrics, Prevention/Minimization of hazardous/toxic products, Designing safer chemicals - different basic approaches, Selection of appropriate auxiliary substances (solvents, separation agents etc), Energy requirements for reactions—use of microwave, ultrasonic energy, Selection of starting materials—use of renewable starting materials, avoidance of unnecessary derivatization—careful use of blocking/protection groups, Use of catalytic reagents (wherever possible) in preference to stoichiometric reagents, Designing biodegradable products, Prevention of chemical accidents.

UNIT III: Examples of green synthesis/reaction and development of analytical techniques

**(15) Weightage:
20 Marks**

Green starting materials, 2 Green reagents, Green solvents and reaction conditions, Green catalysis, Green synthesis- Real world cases (Traditional processes and green ones) Synthesis of Ibuprofen, Adipic acid.

Strengthening/development of analytical techniques to prevent and minimize the generation of hazardous substances in chemical processes. Development of accurate and reliable sensors and monitors for real time in process monitoring.

UNIT IV: Future Trends in Green Chemistry:**(15) Weightage: 20
Marks**

Oxidation-reduction reagents and catalysts; Biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solventless reactions; Non covalent derivatization. Biomass conversion, emission control. Biocatalysis.

RECOMMENDED BOOKS

1. Green Chemistry: Theory and Practice. P.T. Anastas and J.C. Warner. Oxford University Press.
2. Green Chemistry: Introductory Text. M. Lancaster Royal Society of Chemistry (London).
3. Introduction to Green Chemistry. M.A. Ryan and M. Tinnesand, American Chemical Society (Washington).
4. Real world cases in Green Chemistry, M.C. Cann and M.E. Connelly. American Chemical Society (Washington).
5. Real world cases in Green Chemistry (Vol 2) M.C. Cann and T.P. Umile. American Chemical Society (Washington)

Paper DSE 2C : Industrial Chemicals and Environment

Unit I: Industrial Gases and Inorganic Chemicals

15L Weightage: 20 Marks

Industrial Gases: Large scale production, uses, storage and hazards in handling of the following gases: oxygen, nitrogen, argon, neon, helium, hydrogen, acetylene, carbon monoxide, chlorine, fluorine, sulphur dioxide and phosgene. Inorganic Chemicals: Manufacture, application, analysis and hazards in handling the following chemicals: hydrochloric acid, nitric acid, sulphuric acid, caustic soda, common salt, borax, bleaching powder, sodium thiosulphate, hydrogen peroxide, potash alum, chrome alum, potassium dichromate and potassium permanganate.

Unit II Industrial Metallurgy

15L Weightage: 20 Marks

General Principles of Metallurgy Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon as reducing agent. Hydrometallurgy, Methods of purification of metals (Al, Pb, Ti, Fe, Cu, Ni, Zn): electrolytic, oxidative refining, Kroll process, Parting process, van Arkel-de Boer process and Mond's process. Preparation of metals (ferrous and nonferrous) and ultrapure metals for semiconductor technology.

Unit III: Environment and its segments

15L Weightage: 20 Marks

Ecosystems. Biogeochemical cycles of carbon, nitrogen and sulphur. Industrial effluents from the following industries and their treatment: electroplating, textile, tannery, dairy, petroleum and petrochemicals, agro, fertilizer, etc. Sludge disposal. Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion exchange).

Unit IV: Energy & Environment Sources of energy:

15L Weightage: 20 Marks

Coal, petrol and natural gas. Nuclear Fusion / Fission, Solar energy, Hydrogen, geothermal, Tidal and Hydel, etc. Nuclear Pollution: Disposal of nuclear waste, nuclear disaster and its management.

Practical Lab: DSC-1P

NON-INSTRUMENTAL

Kinetics (any two)

1. To investigate the auto-catalytic reaction between potassium permanganate and oxalic acid.
2. Iodination of acetone
3. Determination of energy of activation of acid catalyzed hydrolysis of an ester.

Viscosity

1. Determine the molecular weight of PVA by viscosity measurements.

Adsorption

1. Acetic acid on activated animal charcoal

Phase Equilibria :- (any one)

1. Three component system: Acetic acid, chloroform, water
2. To determine the CST of phenol-water system in presence of 1% NaCl

Surface Tension:

1. To determine the surface tension of a liquid by stalagmometer (drop number method)

INSTRUMENTAL

Refractometry

1. To determine the structure of given Organic Liquids

2. pHmetry: (any one)

1. Determination of pKa of dibasic acid (Oxalic acid)
2. Determination of hydrolysis constant of aniline hydrochloride

Conductometry (any one)

1. Titration of $ZnSO_4$ / $MgSO_4$ against $BaCl_2$ and $Ba(CH_3COO)_2$ and calculation of amount of Sulphate Present .
2. Conductometric estimation of NH_4Cl with NaOH solution.

Potentiometry (Any one)

1. To determine the basicity and pKa value of organic acids by potentiometric method. (Orthophosphoric acid)
2. Determine the solubility and solubility product of sparingly soluble salts.

RECOMMENDED BOOKS

1. Findlay's Practical Physical Chemistry by J.A. Kitchnar
2. Text-book of Quantitative Inorganic Analysis including elementary Instrumental Analysis- A.I.Vogel, Revised by J.Bassott, R.C.Banney
3. Experimental Physical Chemistry – F.Daniels&J.Williams
4. Experimental Physical Chemistry – R.C.Das&B.Behra
5. Systematic experimental Physical Chemistry by- Rajbhoj and Chondhekar.
6. Experimental physical Chemistry- V.D. Athawale and P. Mathur
7. Advanced practical physical Chemistry- J. B. Yadav
8. Advanced physical Chemistry Experiments- Gurtu and Gurtu

Practical Lab: DSC-2P

Qualitative analysis:

1. Separation and identification of the two component mixtures using Chemical and physical methods. (**Minimum Five Mixtures**)

Demonstrative Experiments:

1. Thin layer chromatography (TLC).
2. Vacuum and steam distillation techniques.
- 3 Extraction by Soxhlet Method

RECOMMENDED BOOKS

1. A text book of practical Organic Chemistry- A. I. Vogel.
2. Practical organic Chemistry- Mann and Saunders.
3. A handbook of quantitative and qualitative analysis- H. T. Clarke.
4. Organic Synthesis Collective Volumes by Blat.
5. Systematic Lab Experiments in Organic Chemistry by ArunSethi
6. Advanced practical chemistry by Jagdamba Singh

Practical Lab: DSE-1P

Ore Analysis:

1. Iron Ore
2. Dolomite Ore

Alloy Analysis: (any one)

1. Brass alloy
2. Bronze alloy

Preparation and determination of purity: (any two)

1. Potassium trioxalatochromate(III)
2. Nitritopentacyano ferrate (III) monohydrate
3. Copper acetate
4. Manganese acetate
5. Hexathioureaplumbus nitrate

Note: Any other relevant experiment shall be added

RECOMMENDED BOOKS

1. Vogel's Text Book of Quantitative Inorganic Analysis.
2. W. G. Palmer, Experimental Inorganic Chemistry, Cambridge at the University Press, 1965.
3. M. A. Malati, Experimental Inorganic/Physical Chemistry, Harwood publishing.
4. A.J.E.Welch, Inorganic Preparations, George Allen & Unwin Ltd.

Practical Lab: DSC-3P

NON-INSTRUMENTAL

Kinetics (any one)

1. Determination of order of reaction by differential method
2. Comparison of acid strength by hydrolysis of ester

Viscosity

1. To determine the radius of molecule by viscosity measurements. (glycerol / sucrose)

Adsorption

1. Oxalic acid on activated animal charcoal

Phase Equilibria :-

1. Three component system: Benzene, ethyl alcohol and water
2. To determine the CST of phenol-water system in presence of 0.5% naphthalene (or 1% succinic acid)

Surface Tension:

1. To determine the atomic parachor of C, H and Cl by surface tension measurements.

INSTRUMENTAL

Refractometry

1. To determine the electron polarization and electron polarizability of a liquid.

2. pHmetry: (any one)

1. Determination of pKa of acid (Succinic acid)
2. Determination of hydrolysis constant of aniline hydrochloride

Conductometry

1. Solubility and solubility product of sparingly soluble salts.
2. Titration of a mixture of HCl, CH₃COOH and CuSO₄ against alkali.

Potentiometer: (any one)

1. Estimate the amount of halides present in the given mixture by titrating with AgNO₃ solution.
2. Titration of mixture of acids with base.

Polarimetry

1. To determine the percentage of two optically active substances (d-sucrose and d-tartaric acid) in a given solution.

Note: Any other relevant experiments may be added

RECOMMENDED BOOKS

1. Findlay's Practical Physical Chemistry by J.A. Kitchnar
2. Text-book of Quantitative Inorganic Analysis including elementary Instrumental Analysis- A.I.Vogel, Revised by J.Bassott, R.C.Banney
3. Experimental Physical Chemistry – F.Daniels&J.Williams
4. Experimental Physical Chemistry – R.C.Das & B.Behra
5. Systematic experimental Physical Chemistry by- Rajbhoj and Chondhekar.
6. Experimental physical Chemistry- V.D. Athawale and P. Mathur
7. Advanced practical physical Chemistry- J. B. Yadav
8. Advanced physical Chemistry Experiments- Gurtu and Gurtu

Practical Lab: DSC-4P

Preparations:

One stage preparation involving various types of reactions (Minimum Two)

1. Aldol condensation: Dibenzal acetone from benzaldehyde.
2. Sandmeyer reaction: p- Chlorotoulene from p-toluidine.
3. Cannizzaro reaction: 4-Chlorobenzaldehyde as a substrate.

2) Two stage preparations involving various types of reactions (Minimum Four)

1. Aceotophenone- Oxime- Acetanilide
2. Phthalic anhydride- o-Benzoyl benzoic acid- anthraquinone
3. Chloroenzene-2,4-dintrochlorobenzene-2,4-dinitrophenol
4. Benzoin-benzil-benzilic acid
5. Acetanilide-p-bromoacetanilide-p-bromoaniline
6. Acetanilide-p-nitroacetanilide-p-nitroaniline

3) Estimations: (minimum Two)

- 1) Estimation of amine by acetylation method.
- 2) Estimation of hydroxyl group by acetylation method
- 3) Estimation of an iodine value of an oil or fat.
- 4) Determination of percentage of Keto-enol form.

(Any other relevant experiments may be added).

RECOMMENDED BOOKS

1. A text book of practical Organic Chemistry- A. I. Vogel.
2. Practical organic Chemistry- Mann and Saunders.
3. A handbook of quantitative and qualitative analysis- H. T. Clarke.
4. Organic Synthesis Collective Volumes by Blat.
5. Systematic Lab Experiments in Organic Chemistry by ArunSethi
6. Advanced practical chemistry by Jagdamba Singh

Practical Lab: DSE-2P

Ore analysis: (any one)

1. Pyrolusite ore
2. Bauxite ore

Alloy analysis: (any two)

1. Type metal alloy
2. Solder alloy
3. Cupro-nickel alloy

Preparation and determination of purity: (any two)

1. Potassium hexathiocyanatochromate (III)
2. Hexamine cobalt nitrate
3. Manganous ammonium phosphate
4. Prussian blue

Note: Any other relevant experiments may be added

RECOMMENDED BOOKS

1. Vogel's Text Book of Quantitative Inorganic Analysis.
2. W. G. Palmer, Experimental Inorganic Chemistry, Cambridge University Press, 1965.
3. M. A. Malati, Experimental Inorganic/Physical Chemistry, Harwood publishing Chichester.
4. A.J.E. Welch, Inorganic Preparations, George Allen & Unwin Ltd.

UA
Punyashlok Ahilyadevi Holkar Solapur University, Solapur
Faculty of Science & Technology
Nature of Question Paper for CBCS Pattern
M. Sc. (Part- I & II) w.e.f. AY 2026

Time:

Total Marks: 60

Instructions

- 1) All Questions are compulsory
- 2) Figure to right indicate full marks.

Q.1 A) Choose correct alternative. (MCQ) 08 Marks

B) Fill in the blanks OR Write true/false 04 Marks

Q.2. Answer the following. (Any Six) 12 (2+2+2+2+2+2)

- A)
- B)
- C)
- D)
- E)
- F)
- G)
- H)

Q.3. Answer the following (Any three). 12 (4+4+4)

- A)
- B)
- C)
- D)

Q.4. Answer the following (Any two). 12 (6+6)

- A)
- B)
- C)

Q.5. Answer the following (Any two). 12 (6+6)

- A)
- B)
- C)
