T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2025
Design of Steel Structures (BTN01501)

Day & Date: Saturday 17-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Use of IS 800-2007 and Steel Book are allowed, but not allowed for MCQs (Q. No. 1) for first 30 minutes.
5) Assume suitable data if necessary and mention state it clearly before the solution.
6) Draw the appropriate sketches whenever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Furniture is an example of _____.
a) dead load b) live load
c) dynamic load d) environmental load

2) Which of the following sections has minimum value of shape factor?
a) Diamond Section b) I-section
c) Rectangular section d) Circular section

3) The max. slenderness ratio of the component member C/ry of the column between the consecutive lacing connections.
a) should not be greater than 0.7 times the most unfavorable slenderness ratio of the member as a whole
b) should not be greater than 50
c) Both a) & b)
d) None of the above

4) The thickness of the flat lacing bars between inner end bolts in case of single lacing should not be less than _____ of its effective length of single lacing.
a) 1/40 b) 1/45
c) 1/60 d) 1/50

5) Minimum edge distance of bolted joint for machine cut edge is not less than _____.
a) 2.5 times diameter of bolt b) 1.7 times diameter of bolt
c) 1.5 times diameter of bolt d) 1.5 times diameter of hole

6) High Strength Friction Grip bolts (HSFG) are designed for _____.
a) Tension b) Friction
c) Compression d) Shear

7) Which of the following is not a limit state of serviceability?
a) Deflection b) Vibration
c) Brittle failure d) Fire

8) The square root of the ratio of moment of inertia of cross section to its cross sectional area is called _____.
a) Second moment of area b) Section modulus
c) Radius of gyration d) Slenderness ratio

9) Design tensile strength of tension member is given by _____.
a) Rupture at critical section b) Yielding of gross section
c) Block shear of end region d) Lesser of above three

10) The effective length of member which is restrained against translation at both ends & free against rotation at both ends is _____.
a) 1.0L b) 0.65L
c) 0.85L d) 0.80L

11) The design shear strength of a fillet weld is _____.
a) $\mathrm{f_y}/\sqrt{3}\,\gamma\mathrm{mw}$ b) $\mathrm{f_y}/\sqrt{3}$
c) $\mathrm{f_y}/\sqrt{3}\,\gamma\mathrm{m0}$ d) $\mathrm{f_y}/\sqrt{3}\,\gamma\mathrm{mb}$

12) The thickness of base plate in slab base is given by _____.
a) $ts = \frac{\sqrt{2.5w(a2 - 0.3b2)\gamma m0}}{\sqrt{fy}}$ b) $ts = \frac{\sqrt{2.5w2(a2 - 0.3b2)\gamma m0}}{\sqrt{fy}}$
c) $ts = \frac{\sqrt{2.5w2(a2 - 0.3b2)m0}}{\sqrt{fy}}$ d) $ts = \frac{\sqrt{2.5w2(a - 0.3b)m0}}{fy}$

13) The deflection of steel beams in buildings other than industrial building is limited to a span divided by _____.
a) 180 b) 250
c) 300 d) 325

14) A beam section is selected and provided on the basis of _____.
a) section modulus b) deflection
c) shear d) all the above

Set P

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS) Examination: March/April - 2025
Design of Steel Structures (BTN01501)

Day & Date: Saturday 17-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.5 and Q.7 are compulsory and solve any 2 questions from the remaining questions of each Section.
2) Figures to the right indicates full marks.
3) Use of IS 800-2007 and Steel Book are allowed, but not allowed for MCQs (Q. No. 1) for first 30 minutes.
4) Assume suitable data if necessary and mention state it clearly before the solution.
5) Draw the appropriate sketches whenever necessary.

Section – I

Q.2 **a)** Differentiate Bolted Connection over Welded Connection. **03**
b) Calculate the Strength of 18 mm diameter bolt of grade 4.8 for the lap joint. The main plate to be jointed are 10 mm thick. Use Fe 410 steel. **06**

Q.3 Design a Double angle tie member to carry a factored load of 540kN. Use 16 mm diameter bolts of grade 4.6 for the connection. Length of the member is 2.6 m. Use Fe 410 steel. **09**

Q.4 Calculate the strength of a single angle discontinuous strut of length 3.0 m. The strut consists of two unequal angle lSA 90 x 60 x 8 mm with long legs connected by two bolts with hinged fixity. Use steel of grade Fe 410, fy = 250 N/mm^2. **09**

Q.5 **Attempt the Following.**
a) Differentiate PEBs and Conventional steel building. **03**
b) What is shape Factor? Find the shape factor for Circular Section. **04**
c) Explain Philosophy of limit state of Design for a steel structures. **03**

Section – II

Q.6 A simply supported beam 4.5 m span carries UDL of 45 kN/m. The beam is laterally supported. Design the section for shear and deflection. Use Fe410 steel. **09**

Q.7 Design a built up column consisting of two rolled Channel sections placed back to back to resist an axial load of 1100kN. The length of the column is 4.5 m. It is restrained against rotation and translation at bottom and restrained against rotation and free at top. Take fy=250MPa. Also design the single lacing system. **10**

Q.8 A column ISHB 400 @77.4 kg/m carries an axial compressive factored load of 1300 KN. Design a suitable welded slab base. The base rests on M20 grade concrete pedestal. **09**

Q.9 A Continuous Beam ABCD, fixed at A and simply supported at other supports. Span AB Carries a central point load of 50KN of 4m span, Span BC of 5m subjected to point load of magnitude 75 KN at a distance 1.5 m from B. Span CD of 3.5 m carries a UDL of 35 KN/m. Find the Collapse Moment and draw the bending moment diagram. **09**

Q.1 Choose the correct Answer. **14**

1) If solid portion is half that of void portion in each mass of soil, then porosity of this soil is _____.
a) 0.33 b) 0.66
c) 0.50 d) 0.25

2) Which of following factor does not affect the permeability of soil?
a) Shape of soil particle b) Size of soil particle
c) Specific gravity d) None of these

3) In soil classification soil group has dual symbol when plasticity index is in between _____.
a) 4 to 7 b) 3 to 7
c) 2 to 7 d) 5 to 7

4) In flow net equipotential lines and flow lines intersect each other at an angle of _____.
a) 45-degrees b) 90-degrees
c) 30-degrees d) 60-degrees

5) Which test is suitable to find permeability of black cotton soil?
a) Constant head b) Falling head
c) Both d) None

6) The vertical pressure at every point on the surface of pressure bulb is _____.
a) Same
b) Different
c) More just below of load applied
d) None of these

7) Height of fall of rammer in standard compaction test is _____.
a) 250mm b) 310mm
c) 400mm d) 450mm

8) Optimum moisture content is the moisture content when _____.
a) settlement is maximum b) permeability is maximum
c) shear strength is maximum d) dry density is maximum

9) For a standard compaction test, the mass of the hammer and drop of hammer are as follows _____.
a) 2.6 kg and 450mm b) 2.6 kg and 310mm
c) 4.8 kg and 310mm d) 4.89 kg and 450mm

10) With an increase in the liquid limit, compression index _____.
a) decreases b) increases
c) remains constant d) may increase or decreases

11) Slope of e-log p curve for a soil mass gives _____.
a) Coefficient of permeability b) Coefficient of consolidation
c) Compression index d) None of these

12) The maximum depth of excavation that can be made in a saturated clay having $C = 40\text{kN/m}^2, \Phi = 00, \gamma = 20\ \text{kN/m}^3$ without any lateral support _____.
a) 5m b) 8m
c) 9m d) 10m

13) As per Rankin's theory, the wall friction is _____.
a) Equal to Φ b) greater then Φ
c) less then Φ d) zero

14) The constant head permeability test is suitable for _____.
a) coarse-grained soils b) fine-grained soils
c) both these soil d) neither of these soils

Set P

T. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Geotechnical Engineering (BTN01502)

Day & Date: Monday 19-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 and Q.6 are compulsory.
2) Solve any two questions out of Q.no. 3, 4 and 5.
3) Solve any two questions out of Q.no. 7, 8 and 9.
4) Figures to the right indicate full marks.
5) Assume additional data if required and mention it clearly.

Section – I

Q.2 Answer any four questions. **08**

a) Define air content and degree of saturation.
b) What are the different drainage conditions used in shear test on soil? Which drainage condition is called as quick test?
c) Draw particle size distribution curve for soil showing well graded, poorly graded and gap graded soil.
d) Write any two applications of flow net.
e) What is the difference between discharge velocity and seepage velocity of flow of water through soil?

Q.3 **a)** Derive the relation between G.w, e and S with usual notations. **05**

b) A soil specimen has water content 12% and bulk unit weight 22 KN/m^3. If specific gravity is 2.70 find dry unit weight, voids ratio, degree of saturation, porosity, air content. **05**

Q.4 **a)** What is permeability of soil? Derive equation to calculate coefficient of permeability by falling head method. **05**

b) Calculate the coefficient of permeability of a soil sample 8 cm in height and 50 cm^2 in cross sectional area, if a quantity of water equals to 440 ml passed down in 12 minutes under an effective constant head of 40 cm. On oven drying the test specimen has mass of 498 gm, calculate seepage velocity. Take G = 2.70. **05**

Q.5 **a)** Explain triaxial compression test to determine shear strength parameter of soil. **05**

b) Following results were obtained in direct box shear test on sandy clay. **05**

Normal Load	180 N	380 N	780 N
Shear Force at Failure	200 N	250 N	350 N

The size of box is 60 mm x 60 mm. Determine shear strength parameter of soil. If the same sample is tested in tri axial compression test with a cell pressure of 75 kN/m^2. Find the deviation stress at which the failure is expected.

Section – II

Q.6 **Answer any four questions.** **08**

a) Define zero air void line.

b) Draw a typical e-p curve and label its various parts.

c) Enlist the assumptions made in Rankine's theory.

d) Define Passive earth pressure.

e) Define compression Index.

Q.7 **a)** Explain the various types of rollers used for compaction with their suitability. **05**

b) The following results were obtained from a standard compaction test on a sample of soil. **05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

Q.8 **a)** Derive Terzaghi's equation governing 1-D consolidation. State assumptions associated with the equations. **05**

b) The laboratory consolidation data for an undisturbed clay sample are as follows **05**

$\mathrm{e1} = 1.00, \sigma 1 = 85\ \mathrm{kN/m^2}$ and $\mathrm{e2} = 0.80, \sigma 2 = 465 \mathrm{kN/m^2}$.

Find the compression index.

Q.9 **a)** Derive the earth pressure coefficient for active case. **05**

b) A retaining wall 10 m height with a smooth vertical back retains a backfill with $\mathrm{C} = 0\ \mathrm{kN/m^2}, \Phi = 25°$ and $\mathrm{Y} = 17\ \mathrm{kN/m^3}$. What is the total Rankine's active thrust on the wall. **05**

Day & Date: Monday 19-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Optimum moisture content is the moisture content when _____.
a) settlement is maximum b) permeability is maximum
c) shear strength is maximum d) dry density is maximum

2) For a standard compaction test, the mass of the hammer and drop of hammer are as follows _____.
a) 2.6 kg and 450mm b) 2.6 kg and 310mm
c) 4.8 kg and 310mm d) 4.89 kg and 450mm

3) With an increase in the liquid limit, compression index _____.
a) decreases b) increases
c) remains constant d) may increase or decreases

4) Slope of e-log p curve for a soil mass gives _____.
a) Coefficient of permeability b) Coefficient of consolidation
c) Compression index d) None of these

5) The maximum depth of excavation that can be made in a saturated clay having $C = 40\text{kN/m}^2, \Phi = 00, \gamma = 20\ \text{kN/m}^3$ without any lateral support _____.
a) 5m b) 8m
c) 9m d) 10m

6) As per Rankin's theory, the wall friction is _____.
a) Equal to Φ b) greater then Φ
c) less then Φ d) zero

7) The constant head permeability test is suitable for _____.
a) coarse-grained soils b) fine-grained soils
c) both these soil d) neither of these soils

8) If solid portion is half that of void portion in each mass of soil, then porosity of this soil is _____.
a) 0.33 b) 0.66
c) 0.50 d) 0.25

9) Which of following factor does not affect the permeability of soil?
a) Shape of soil particle b) Size of soil particle
c) Specific gravity d) None of these

10) In soil classification soil group has dual symbol when plasticity index is in between _____.
a) 4 to 7 b) 3 to 7

Highway and Tunnel Engineering (BTN01503)

Day & Date: Tuesday 20-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The maximum utility system is based on the concept of _____.
a) Maximum utility per cost of the road
b) Maximum utility per unit length of the road
c) Maximum Utility per unit population
d) None of the above

2) Third Road developed plan was prepared for the period of _____.
a) 1921-1941 b) 1941-1961
c) 1961-1981 d) 1981-2001

3) Which one of the following factors control the highway alignment?
a) Obligatory point b) Traffic and economic
c) Geometric Design d) All of the above

4) Width of the shoulder carriage way is generally kept _____.
a) 100cm b) 125cm
c) 150cm d) 250cm

5) Which one of the following equipment is used to assure the pavement unevenness index?
a) Bump Integrator b) Odometer
c) Network survey vehicles d) None of the above

6) For the calculation of stopping sight distance the reaction time of the driver may be taken as _____.
a) 2.5 second b) 5 second
c) 7.5 second d) 10 second

7) In CBR test the value of CBR is calculated at _____.
a) 2.5 mm penetration
b) 5.0 mm penetration
c) 7.5 mm penetration
d) Both 2.5 mm and 5.0 mm penetration

8) The study on weathering action on road aggregate, which one of the following tests is carried out _____.
a) Abrasion test b) Crushing Test
c) Impact Test d) Soundness Test

9) The thickness of road surface depends upon the _____.
a) type of traffic b) type of the material
c) intensity of traffic d) all of the above

10) Failure in flexible pavement are due to failure of
I) Sub grade
II) Base course
III) Wearing course
a) (I) and (II) b) (I) and (III)
c) (II) and (III) d) (I), (II) and (III)

11) The maximum spacing of contraction joint in rigid pavement is _____.
a) 2.5 m b) 3.5 m
c) 4.5 m d) 5.5 m

12) In which one of the following joint, dowel bars are provided in cement concrete pavement?
a) Expansion joint b) Longitudinal joint
c) Construction Joint d) None of the above

13) In order to maintain desired shape of the tunnel the cross section of the tunnel must be checked at a regular interval of _____.
a) 2 m to 3 m b) 4 m to 6 m
c) 5 m to 7 m d) 8 m to 15 m

14) The process of removal rock protrusions by hammering immediately after the blasting is known as _____.
a) Mucking b) Skimming
c) Trimming d) Scaling

Seat No.	

Set P

T. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Highway and Tunnel Engineering (BTN01503)

Day & Date: Tuesday 20-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Solve Any Two. **14**

a) The Highway is designed for a design speed of 80 kmph. There is a horizontal curve of radius 200 m on a certain locality. Safe limit of transverse coefficient of friction is 0.15.
i) calculate the super elevation required to maintain this speed,
ii) If the maximum super elevation of 0.07 is not to be exceeded, calculate the maximum allowable speed on this horizontal curve as it is not possible to increase the radius.

b) What is highway alignment? Discuss different factors affecting the highway alignment.

c) What is SSD? Explain PIVE theory in SSD.

Q.3 Solve Any Two. **14**

a) Write a Detailed note on “Significance of CBR & plate load test on subgrade soil”.

b) Define camber. State its importance. Explain different type of camber.

c) Write a short note on.
i) Geosynthetic material in highway construction
ii) Softening point and ductility test on bitumen

Section – II

Q.4 Solve Any Two. **14**

a) What are the factors to be consider in the design of the flexible pavement? Discuss significance of each.

b) Determine the warping stresses at interior, edge and corner of a 25 cm thick cement concrete pavement with transverse joints at 5.0 m interval and longitudinal joints at 3.6 m intervals. The modulus of subgrade reaction K is 6.9 kg/cm^3 and radius of loaded area is 15 cm. Assume temperature differential during day to be 0.6°C per cm slab thickness (for warping stress at interior and edge) and maximum temperature differential of 0.4°C per cm slab thickness during the night (for warping stress at the corner). Assume e = 10 x 10^{-6} per °C, E = 3 x 10^5 kg/cm^2, $\mu = 0.15$. Use Bradbury chart given in Figure-1.

c) Define Radius of Relative stiffness. Find out radius of relative stiffness of 15cm thickness cement concrete slab from following data

E = 210000 Kg/cm^2, poisons ratio = 013, K = 3 Kg/cm^2

Q.5 Solve Any Two. **14**

a) What is highway drainage? How it is achieved? State its effects.

b) State method of tunnel in soft rock. Explain with sketch any one method in details.

c) What is tunnel lining? How and why, it is done?

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) When annual precipitation of index stations have a difference or variation less than 10% of the annual precipitation of given station then for estimation of missing precipitation of given station following method is used _____.

a) Arithmetic mean b) Weighted mean
c) both a and b d) None of these

2) Pinpoint the incorrect statement.

a) evaporation is a cooling process
b) other factors remaining the same, an increase in atmospheric vapour pressure over a water surface, decreases evaporation.
c) when a solute is dissolved in water, there is an increase in the rate of Evaporation
d) seasonal evaporation rates depend upon the size of the water bodies

3) The lag time of a basin is the time interval between _____.

a) the beginning and end of the direct runoff
b) the centroid of the rainfall excess and the peak of the runoff hydrograph
c) the beginning of rainfall and the peak of runoff hydrograph
d) the end of rainfall and end of runoff.

4) The inflection point on the recession side of the hydrograph indicates the end of _____.

a) The base flow b) The direct rainfall
c) The overland flow d) Rainfall

5) Slope area method of stream gauging is _____.
a) indirect method b) direct method
c) both a and b d) can't say

6) A flood with a return period of 100 years which occurs _____.
a) every hundredth year
b) the maximum observed flood in the past hundred years
c) once in every hundred years on the average
d) only after hundred years in the immediate future

7) In the case of a flowing well, the piezometric surface is always: _____.
a) below the ground level b) above the ground level
c) all the ground level d) none of the above

8) The surface obtained by joining the water levels in several observation wells penetrating confined aquifer represents _____
a) piezometric surface b) water table surface
c) capillary fringe d) cone of depression

9) The interlinking of river can help in _____.
a) Increase in irrigation area b) Control of flood
c) both a and b d) None of these

10) The highest efficiency of water use is achieved in _____method.
a) drip b) sprinkler
c) furrow d) border strip

11) Minor irrigation scheme is limited up to _____.
a) 150 hectare b) 200 hectare
c) 5000 hectare d) 2000 hectare

12) The role of intake well is to _____.
a) accommodating pumping unit
b) to collect water form river
c) both a and b
d) none of these

13) The relationship between the duty D in ha/cumecs, the water depth Δ in cm, and base period B in days, is given by _____.
a) $\mathrm{D} = 864\mathrm{B}/\Delta$ b) $\mathrm{D} = 8.64\mathrm{B}/\Delta$
c) $\mathrm{D} = 864\Delta/\mathrm{B}$ d) $\mathrm{D} = 8.64\Delta/\mathrm{B}$

14) Cooperative water users organizations help in _____.
a) soil management b) water management
c) soil conservation d) none of these

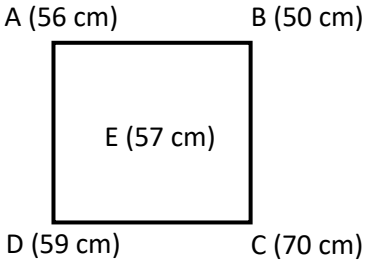
Q.2 **a)** Enlist different methods of measurement of rainfall and explain any one with neat sketch with its advantages and disadvantages. **04**

b) The following data were collected during stream gauging operations in a river. Compute the discharge. **06**

Distance from left water edge (m)	0	1.5	3.0	4.5	6.0	7.5	9.0	0
Depth (m)	0	1.3	2.5	1.7	1.0	0.4	0.0	0
Velocity at 0.2 d (m/s)	0	0.6	0.9	0.7	0.6	0.4	0.0	0
Velocity at 0.8 d (m/s)	0	0.4	0.6	0.5	0.4	0.3	0.0	0

Q.3 **a)** Define term design flood. List the methods of estimation of flood. Explain any one in detail. **04**

b) The area as shown below is a square of sides 10 km. the annual precipitation at those stations is as shown in figure. Determine the average precipitation by the Thiessen polygon method. Stations A, B, C and D are at corners and E is at centre. **05**



Q.4 **a)** Enlist the assumptions made in the steady flow condition to a well penetrating in confined aquifers and derive expression of it. **04**

b) Given the ordinates of runoff hydrograph from a catchment area of 100 km^2 having constant base flow of 2 cumec. Derive the ordinates of UH. **05**

Duration (h)	2	4	6	8	10	12	14
Ordinate of runoff hydrograph (m^3/s)	2	3	4	6	5	3	2

Q.5 **a)** What is mean by runoff? Enlist and explain different methods of estimation of runoff. **04**

b) In an artesian aquifer of 8 m thick, a 10 cm diameter well is pumped at a constant rate of 100 1pm. The steady state drawdown observed in two wells located at 10 m and 50 m distance from the centre of the well are 3 m and 0.05 m respectively. Compute the transmissivity and the hydraulic conductivity of the aquifer. **05**

Section – II

Q.6 **a)** Explain the problems in water resources developments in country and Maharashtra state. **05**

b) Enlist the main features of a lift irrigation scheme located at the bank of river with neat sketch. Discuss the economic feasibility of lift irrigation. **05**

Q.7 **a)** Define irrigation and explain its necessity. **03**

b) Table below gives a necessary data about the crops, their duty and area under each crop, commanded by a canal, taking off from a storage reservoir. Taking a time factor for a canal to be 13/20, calculate the discharge required at the head of the canal. Also, determine design discharge, if capacity factor of a canal is 0.8. **06**

Crop	**Base period**	**Area (hectares)**	**Duty at the head of canal (ha/cumec)**
Wheat	320	850	580
Sugarcane	90	120	580
Cotton	120	600	1600
Rice	120	500	2000
Vegetables	120	260	600

Q.8 **a)** Define the terms field capacity, wilting point and optimum water content. **03**

b) Write a short note on: **06**

i) Percolation Tank

ii) Warabahdi System

Q.9 **a)** What it is mean by water shed management? Why it is essential. **03**

b) After how many days will you supply water to soil in order to ensure irrigation of given crop if, field capacity of soil is 26%, permanent wilting-point 14%, dry density of soil 1.3 g/cc. assume daily consumptive use of water for the given crop 10 mm and effective root zone depth 70cm and readily available moisture to crop is 80% of available moisture. **06**

T. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Wednesday 21-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The surface obtained by joining the water levels in several observation wells penetrating confined aquifer represents _____
a) piezometric surface b) water table surface
c) capillary fringe d) cone of depression

2) The interlinking of river can help in _____.
a) Increase in irrigation area b) Control of flood
c) both a and b d) None of these

3) The highest efficiency of water use is achieved in _____method.
a) drip b) sprinkler
c) furrow d) border strip

4) Minor irrigation scheme is limited up to _____.
a) 150 hectare b) 200 hectare
c) 5000 hectare d) 2000 hectare

5) The role of intake well is to _____.
a) accommodating pumping unit
b) to collect water form river
c) both a and b
d) none of these

6) The relationship between the duty D in ha/cumecs, the water depth Δ in cm, and base period B in days, is given by _____.
a) $D = 864B/\Delta$ b) $D = 8.64B/\Delta$
c) $D = 864\Delta/B$ d) $D = 8.64\Delta/B$

7) Cooperative water users organizations help in _____.
a) soil management b) water management
c) soil conservation d) none of these

8) When annual precipitation of index stations have a difference or variation less than 10% of the annual precipitation of given station then for estimation of missing precipitation of given station following method is used _____.

a) Arithmetic mean
b) Weighted mean
c) both a and b
d) None of these

9) Pinpoint the incorrect statement.

a) evaporation is a cooling process
b) other factors remaining the same, an increase in atmospheric vapour pressure over a water surface, decreases evaporation.
c) when a solute is dissolved in water, there is an increase in the rate of Evaporation
d) seasonal evaporation rates depend upon the size of the water bodies

10) The lag time of a basin is the time interval between _____.

a) the beginning and end of the direct runoff
b) the centroid of the rainfall excess and the peak of the runoff hydrograph
c) the beginning of rainfall and the peak of runoff hydrograph
d) the end of rainfall and end of runoff.

11) The inflection point on the recession side of the hydrograph indicates the end of _____.

a) The base flow
b) The direct rainfall
c) The overland flow
d) Rainfall

12) Slope area method of stream gauging is _____.

a) indirect method
b) direct method
c) both a and b
d) can't say

13) A flood with a return period of 100 years which occurs _____.

a) every hundredth year
b) the maximum observed flood in the past hundred years
c) once in every hundred years on the average
d) only after hundred years in the immediate future

14) In the case of a flowing well, the piezometric surface is always: _____.

a) below the ground level
b) above the ground level
c) all the ground level
d) none of the above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) In two way restrained slab torsion steel is provided at _____. **01**
a) Top b) Bottom
c) Top & Bottom d) None of the above

2) Spacing of stirrups in a rectangular beam, is _____. **01**
a) Kept constant throughout the length
b) Decreased towards the center of the beam
c) Increased at the ends
d) Increased at the center of the beam

3) A rectangular slab 4m X 6m supported on two opposite shorter edge should be designed as _____. **01**
a) One way slab spanning along longer edge
b) Two way slab
c) One way slab spanning along shorter edge
d) None of above

4) The effective cover of beam depends o n _____. **01**
a) Diameter of main reinforcement
b) Grade of reinforcing steel
c) Width of beam
d) All of these

5) In a simply supported slab, alternate bars are curtailed at _____. **01**
a) $1/4^{th}$ of the span b) $1/5^{th}$ of the span
c) $1/6^{th}$ of the span d) $1/7^{th}$ of the span

6) A short column of size 250mmx350mm is provided with longitudinal reinforcement of diameter 20mm and the diameter of tie is 8mm. According to IS456:2000, the maximum spacing between two ties is _____. **01**

a) 200 mm b) 350 mm
c) 300 mm d) 250 mm

7) The length of torsion reinforcement in two way slab is provided as _____. **01**

a) Shorter span/4 b) Shorter span/5
c) Shorter span/8 d) Shorter span/10

8) If the diameter of the longitudinal bars of a square column is 16 mm, the diameter of the lateral ties should not be less than ____. **01**

a) 4 mm b) 5 mm
c) 6 mm d) 8 mm

9) The minimum tension reinforcement for 250 mm x 400 mm effective deep beam of Fe500 grade steel is _____. **02**

a) 150 mm^2 b) 170 mm^2
c) 180 N/mm^2 d) 220 N/mm^2

10) The factored load carrying capacity of column of 300mm x600mm size with minimum percentage of steel for M20 and Fe415 grade is _____. **02**

a) 1840 KN b) 1900 KN
c) 1829 KN d) 1800 KN

11) A axially loaded column is of 300 mm x 300 mm size. Effective length of column is 3 m. What is the minimum eccentricity of the axial load of the column. **02**

a) 0 b) 10 mm
c) 16 mm d) 20 mm

T. Y (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Design of Concrete Structures I (BTN01505)

Day & Date: Thursday 22-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section I, Q. No. 2 is compulsory and attempt any two questions from the remaining questions.
2) In Section II, Q. No. 6 is compulsory and attempt any two questions from the remaining questions.
3) Figures to the right indicate full marks.
4) Draw neat sketch's where required and assume suitable data if required and state it clearly.
5) Use of IS 456-2000 and non-programmable calculate are allowed.

Section – I

Q.2 A roof of clear dimensions 4m x 5m supported on walls of 230mm thickness, with corners are held down. All the four edges of the slab are discontinuous. Design the slab, if the beam is carrying a live load of 3 kN/m^2. Use M 20 & Fe 415 steel. **10**

Q.3 Design a simply supported beam of clear span of 5m has to carry a superimposed load of 45 kN/m at service. The beam has bearing of 400 mm of each end. Use M 20 & Fe 415 steel. **09**

Q.4 A doubly reinforced beam 250 mm x 450 mm deep to centre of tensile reinforcement is provided with 2 bars of 16 mm diameter as compression steel with an effective cover of 50 mm and 4 bars of 25 mm diameter as tensile steel. Determine flexural strength & safe UDL on the simply supported beam of span 6 m. if M20 and Fe 250 grade steel. **09**

Q.5 Calculate the limiting moment of resistance & reinforcement required for T beam section having following sectional properties: **09**
Width of flange=1400 mm
Flange thickness =100 mm
Width of rib=250 mm
Effective depth =500 mm
Materials: M20 ,Fe 250

Section – II

Q.6 Design a rectangular beam, continuous over four column supports with effective span 6m each. The beam is subjected to an imposed load of 10 kN/m and live load of 15 kN/m. Use M25 concrete and Fe500 steel. **10**

Q.7 Determine reinforcement required for a beam size 230 mm x 600 mm subjected to shear force of 60 kN, torsional moment of 35 kN.m and bending moment of 80 kN.m. Use M 20 concrete and Fe 500 steel. **09**

Q.8 A short column 420 mm x 420 mm is provided with 8-16 mm diameter. The length of column is 2.25 m. It is effectively held in position at both the ends & restrained against rotation at other end. Find ultimate load of the column. Use M20 & Fe 415. **09**

Q.9 Design a circular column of diameter 400 mm with helical reinforcement subjected to a load of 1400 kN. Use M25 concrete and Fe415 steel. The column has unsupported length of 3 m and is effectively held in position at both ends but not restrained against rotation. **09**

Day & Date: Thursday 22-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) While solving MCQ IS 456-2000 is not allowed.
4) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) In a simply supported slab, alternate bars are curtailed at _____. **01**
a) $1/4^{th}$ of the span b) $1/5^{th}$ of the span
c) $1/6^{th}$ of the span d) $1/7^{th}$ of the span

2) A short column of size 250mmx350mm is provided with longitudinal reinforcement of diameter 20mm and the diameter of tie is 8mm. According to IS456:2000, the maximum spacing between two ties is _____. **01**
a) 200 mm b) 350 mm
c) 300 mm d) 250 mm

3) The length of torsion reinforcement in two way slab is provided as _____. **01**
a) Shorter span/4 b) Shorter span/5
c) Shorter span/8 d) Shorter span/10

4) If the diameter of the longitudinal bars of a square column is 16 mm, the diameter of the lateral ties should not be less than ____. **01**
a) 4 mm b) 5 mm
c) 6 mm d) 8 mm

5) In two way restrained slab torsion steel is provided at _____. **01**
a) Top b) Bottom
c) Top & Bottom d) None of the above

6) Spacing of stirrups in a rectangular beam, is _____. **01**

a) Kept constant throughout the length
b) Decreased towards the center of the beam
c) Increased at the ends
d) Increased at the center of the beam

7) A rectangular slab 4m X 6m supported on two opposite shorter edge should be designed as _____. **01**

a) One way slab spanning along longer edge
b) Two way slab
c) One way slab spanning along shorter edge
d) None of above

8) The effective cover of beam depends o n _____. **01**

a) Diameter of main reinforcement
b) Grade of reinforcing steel
c) Width of beam
d) All of these

9) The minimum tension reinforcement for 250 mm x 400 mm effective deep beam of Fe500 grade steel is _____. **02**

a) 150 mm^2 b) 170 mm^2
c) 180 N/mm^2 d) 220 N/mm^2

10) The factored load carrying capacity of column of 300mm x600mm size with minimum percentage of steel for M20 and Fe415 grade is _____. **02**

a) 1840 KN b) 1900 KN
c) 1829 KN d) 1800 KN

11) A axially loaded column is of 300 mm x 300 mm size. Effective length of column is 3 m. What is the minimum eccentricity of the axial load of the column. **02**

a) 0 b) 10 mm
c) 16 mm d) 20 mm

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions **14**

1) What is the quantity of wastewater required if water supply is 200 lpcd?
a) 160 lpcd b) 140 lpcd
c) 135 lpcd d) 150 lpcd

2) Which of the following is correct sequence?
a) Screening > Distribution > Aeration > Landfill
b) Screening > Sedimentation > Aeration > Landfill
c) Sedimentation > Aeration > Screening > Landfill
d) Aeration > Sedimentation > Landfill > Distribution

3) Which of the following is/are not source of wastewater?
a) Chimney b) Kitchen
c) Bathroom d) All of the above

4) In composting method of trenching, trenches of _____ m length are excavated.
a) 4 – 10 b) 7 – 12
c) 10 – 20 d) Above 20

5) Controlled tipping method of disposal of refuse requires an area of _____ m^2/capita/yr.
a) 0.1 – 0.3 b) 0.3 – 0.5
c) 0.5 – 1.0 d) 1.0 – 1.2

6) Which type of pollutant does Ozone belong to?
a) Primary b) Secondary
c) Natural d) None of the above

7) The coning plume from the stacks is observed in _____ type of atmosphere.

a) Stable b) Unstable
c) Inversion d) Neutral

8) As per CPCB, the COD limit is _____

a) 1000 mg/lt b) 800 mg/lt
c) 250 mg/lt d) 300 mg/lt

9) Which of the standards govern the discharge of wastewater into streams?

a) IS 10500:2016
b) Schedule IV of Environmental (Protection) Rules,1986
c) Schedule I of IUCN
d) Schedule II of WHO

10) Which of the following is/are the source/s of Air pollution?

a) Burning of wood for cooking
b) Vehicular Emission
c) Chimney Smoke from Industries
d) All of the above

11) _____ sewer collects sewage directly from house.

a) Trunk b) Lateral
c) Submain d) None of the above

12) The wastewater from bathrooms, kitchens places & wash basins is known as _____

a) Sullage b) Sewage
c) Red water d) None of the above

13) What is the sequence for Solid waste treatment & Disposal?

a) Segregation > Collection > Waste to energy > Landfill
b) Waste of energy > Landfill > Segregation > Collection
c) Landfill > Segregation > Collection > Waste to energy
d) None of the above

14) Which of the following is correct regarding BOD?

a) It is used to analyse the inorganic content of wastewater.
b) It is used to analyse the organic content of wastewater.
c) It is measure of [OH^-] ions.
d) None of the above

Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section I, Q. No. 2 is compulsory and attempt any two questions remaining of the questions.
2) In Section II, Q. No. 6 is compulsory and attempt any two questions remaining of the questions.
3) Figures to the right indicate full marks.
4) Use of non-programmable calculator is allowed.
5) Assume suitable data wherever necessary and mention it clearly.

Section – I

Q.2 Attempt the following

a) Draw complete and neat sketch of wastewater treatment plant and discuss each part. **07**

b) Define the following with equations **03**
1) HRT
2) F/M ratio

Q.3 Attempt the following

a) Design a completely mixed Asp for following data: **06**
1) Wastewater flow = 20MLd
2) Influent BOD = 200 mg/Lit
3) Effluent BOD = 25 mg/Lit
4) MLSS = 2000 mg/Lit
5) F/M = 0.2
6) SVI = 80 ml/gm
7) Sludge age = 10 days

Assume any missing data appropriately.

b) What is Biochemical Oxygen Demand. Differentiate between Biochemical Oxygen Demand and Chemical Oxygen Demand. **03**

Q.4 Attempt the following

a) Determine Ultimate BOD & BOD_3. If the BOD_5 is 200mg/lt at 20^0C assuming the deoxygenation constant as 0.25/day. **06**

b) Explain Sequential Batch Reactor with a neat diagram. **03**

Q.5 Attempt the following

a) Explain Trickling filter with help of a diagram. **06**

b) Differentiate between Aerobic and Anaerobic treatment **03**

Section – II

Q.6 Attempt the following

a) Discuss the oxygen sag analysis with the help of a diagram. **04**

b) A stream, saturated with DO has flow of 1.3 m^3/s, BOD of 4 mg/L and rate constant of 0.25 per day. It receives an effluent discharge of 0.35 m^3/s. Having BOD 20 mg/L, DO 5 mg/L and rate constant 0.13 per day. The average velocity of flow of the stream is 0.15 m/s. Calculate the DO deficit at point 20 km & 40 km downstream. Assume that the temperature is 20^0C throughout and BOD is measured at 5 days. Take saturation Do at 20^0 C as 9.17 mg/L. **06**

Q.7 Attempt the following

a) Illustrate the functioning of Indore method of composting with the help of a diagram. **05**

b) Explain the conveyance system of solid waste. **04**

Q.8 Attempt the following

a) With the help of a diagram, explain Cyclonic Precipitator. **05**

b) Discuss the source of Air pollution. With the help of a diagram. **04**

Q.9 Discuss the following **09**

a) Electrostatic Precipitator

b) Sludge drying Bed

c) MBBR

Seat No.	

Set **Q**

T.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Environmental Engineering - II (BTN01506)

Day & Date: Friday 23-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions **14**

1) As per CPCB, the COD limit is _____
a) 1000 mg/lt b) 800 mg/lt
c) 250 mg/lt d) 300 mg/lt

2) Which of the standards govern the discharge of wastewater into streams?
a) IS 10500:2016
b) Schedule IV of Environmental (Protection) Rules,1986
c) Schedule I of IUCN
d) Schedule II of WHO

3) Which of the following is/are the source/s of Air pollution?
a) Burning of wood for cooking
b) Vehicular Emission
c) Chimney Smoke from Industries
d) All of the above

4) _____ sewer collects sewage directly from house.
a) Trunk b) Lateral
c) Submain d) None of the above

5) The wastewater from bathrooms, kitchens places & wash basins is known as _____
a) Sullage b) Sewage
c) Red water d) None of the above

6) What is the sequence for Solid waste treatment & Disposal?
a) Segregation > Collection > Waste to energy > Landfill
b) Waste of energy > Landfill > Segregation > Collection
c) Landfill > Segregation > Collection > Waste to energy
d) None of the above

7) Which of the following is correct regarding BOD?
a) It is used to analyse the inorganic content of wastewater.
b) It is used to analyse the organic content of wastewater.
c) It is measure of [OH^-] ions.
d) None of the above

8) What is the quantity of wastewater required if water supply is 200 lpcd?
a) 160 lpcd b) 140 lpcd
c) 135 lpcd d) 150 lpcd

9) Which of the following is correct sequence?
a) Screening > Distribution > Aeration > Landfill
b) Screening > Sedimentation > Aeration > Landfill
c) Sedimentation > Aeration > Screening > Landfill
d) Aeration > Sedimentation > Landfill > Distribution

10) Which of the following is/are not source of wastewater?
a) Chimney b) Kitchen
c) Bathroom d) All of the above

11) In composting method of trenching, trenches of _____ m length are excavated.
a) 4 – 10 b) 7 – 12
c) 10 – 20 d) Above 20

12) Controlled tipping method of disposal of refuse requires an area of _____ m^2/capita/yr.
a) 0.1 – 0.3 b) 0.3 – 0.5
c) 0.5 – 1.0 d) 1.0 – 1.2

13) Which type of pollutant does Ozone belong to?
a) Primary b) Secondary
c) Natural d) None of the above

14) The coning plume from the stacks is observed in _____ type of atmosphere.
a) Stable b) Unstable
c) Inversion d) Neutral

Seat No.

Risk Assessment and Vulnerability Analysis (BTN01514)

Day & Date: Saturday 24-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the primary purpose of risk assessment?
a) To eliminate all risks
b) To identify, assess, and prioritize risks
c) To transfer all risks to third parties
d) To ignore risks until they become issues

2) Which of the following is NOT a step in the risk assessment process?
a) Risk identification b) Risk elimination
c) Risk analysis d) Risk evaluation

3) Vulnerability analysis primarily focuses on: _____.
a) Identifying potential threats
b) Assessing the likelihood of risks
c) Identifying weaknesses in systems or processes
d) Quantifying potential impacts

4) Which of the following is an example of a vulnerability?
a) Lack of insurance coverage
b) Regular system backups
c) Strong encryption protocols
d) Employee training programs

5) What does the term "likelihood" refer to in risk assessment?
a) The potential impact of a risk
b) The probability of a risk occurring
c) The timeframe within which a risk may occur
d) The severity of consequences

6) Which of the following is NOT a common risk assessment method?
a) SWOT analysis
b) Failure mode and effects analysis (FMEA)
c) Fault tree analysis (FTA)
d) Delphi technique

7) In risk management, what does the acronym “FMEA” stand for?
a) Failure Management and Evaluation Analysis
b) Fault mode and Effects Analysis
c) Failure Mode and Effects Analysis
d) Fault Management and Evaluation Assessment

8) What is the purpose of a risk matrix?
a) To visualize and prioritize risks based on their likelihood and impact
b) To eliminate all risks from consideration
c) To ignore risks until they manifest
d) To transfer all risks to third parties

9) Which of the following is NOT a component of risk assessment?
a) Risk identification
b) Risk acceptance
c) Risk control
d) Risk elimination

10) In vulnerability analysis, what does the term "exploit" refer to?
a) Taking advantage of identified weaknesses
b) Eliminating vulnerabilities entirely
c) Ignoring vulnerabilities
d) Transferring vulnerabilities to third parties

11) Which of the following is NOT a type of risk control measure?
a) Avoidance
b) Acceptance
c) Denial
d) Mitigation

12) What is the purpose of risk mitigation?
a) To eliminate all risks
b) To transfer all risks to third parties
c) To reduce the likelihood or impact of identified risks
d) To ignore risks until they manifest

13) What is the difference between qualitative and quantitative risk assessment?
a) Qualitative assesses likelihood, while quantitative assesses impact
b) Qualitative uses numerical data, while quantitative relies on subjective judgment
c) Qualitative assigns numeric values to risks, while quantitative uses descriptive scales
d) There is no difference between them

14) Which of the following is NOT a benefit of conducting risk assessment and vulnerability analysis?

a) Improved decision-making
b) Reduced uncertainty
c) Increased likelihood of risk occurrence
d) Better resource allocation

Risk Assessment and Vulnerability Analysis (BTN01514)

Day & Date: Saturday 24-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory; answer any one from remaining questions from Section - I.
2) Q.6 is compulsory; answer any one from remaining questions from Section - II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2	**a)**	Explain the difference between risk assessment and vulnerability analysis.	**07**
	b)	Explain different strategies used for risk reduction.	**07**
Q.3	**a)**	What role does data analysis play in risk assessment and vulnerability analysis?	**07**
	b)	Explain participatory risk assessment methods.	**07**
Q.4	**a)**	Explain vulnerability identification process.	**07**
	b)	Explain the different issues involved in urban planning.	**07**

Section – II

Q.5	**a)**	What are common methods or approaches used in risk assessment and vulnerability analysis?	**07**
	b)	Write a note on systematic management and strategic planning for vulnerability reduction.	**07**
Q.6	**a)**	Explain the concept of disaster epidemiology with its necessity and constraints.	**07**
	b)	Explain the role of information and communication technology in health response	**07**
Q.7	**a)**	What are some challenges or limitations associated with conducting risk assessment and Vulnerability analysis?	**07**
	b)	Explain policies applied for disaster management and development plan for disaster mitigation.	**07**

c) Risk control d) Risk elimination

3) In vulnerability analysis, what does the term "exploit" refer to?
a) Taking advantage of identified weaknesses
b) Eliminating vulnerabilities entirely
c) Ignoring vulnerabilities
d) Transferring vulnerabilities to third parties

4) Which of the following is NOT a type of risk control measure?
a) Avoidance b) Acceptance
c) Denial d) Mitigation

5) What is the purpose of risk mitigation?
a) To eliminate all risks
b) To transfer all risks to third parties
c) To reduce the likelihood or impact of identified risks
d) To ignore risks until they manifest

6) What is the difference between qualitative and quantitative risk assessment?
   a) Qualitative assesses likelihood, while quantitative assesses impact
   b) Qualitative uses numerical data, while quantitative relies on subjective judgment
   c) Qualitative assigns numeric values to risks, while quantitative uses descriptive scales
   d) There is no difference between them

7) Which of the following is NOT a benefit of conducting risk assessment and vulnerability analysis?
   a) Improved decision-making
   b) Reduced uncertainty
   c) Increased likelihood of risk occurrence
   d) Better resource allocation

8) What is the primary purpose of risk assessment?
   a) To eliminate all risks
   b) To identify, assess, and prioritize risks
   c) To transfer all risks to third parties
   d) To ignore risks until they become issues

9) Which of the following is NOT a step in the risk assessment process?
   a) Risk identification
   b) Risk elimination
   c) Risk analysis
   d) Risk evaluation

10) Vulnerability analysis primarily focuses on: _____.
   a) Identifying potential threats
   b) Assessing the likelihood of risks
   c) Identifying weaknesses in systems or processes
   d) Quantifying potential impacts

11) Which of the following is an example of a vulnerability?
   a) Lack of insurance coverage
   b) Regular system backups
   c) Strong encryption protocols
   d) Employee training programs

12) What does the term "likelihood" refer to in risk assessment?
   a) The potential impact of a risk
   b) The probability of a risk occurring
   c) The timeframe within which a risk may occur
   d) The severity of consequences

13) Which of the following is NOT a common risk assessment method?
a) SWOT analysis
b) Failure mode and effects analysis (FMEA)
c) Fault tree analysis (FTA)
d) Delphi technique

14) In risk management, what does the acronym “FMEA” stand for?
a) Failure Management and Evaluation Analysis
b) Fault mode and Effects Analysis
c) Failure Mode and Effects Analysis
d) Fault Management and Evaluation Assessment

Set Q

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Risk Assessment and Vulnerability Analysis (BTN01514)

Day & Date: Saturday 24-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory; answer any one from remaining questions from Section - I.
2) Q.6 is compulsory; answer any one from remaining questions from Section - II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2	**a)**	Explain the difference between risk assessment and vulnerability analysis.	**07**
	b)	Explain different strategies used for risk reduction.	**07**
Q.3	**a)**	What role does data analysis play in risk assessment and vulnerability analysis?	**07**
	b)	Explain participatory risk assessment methods.	**07**
Q.4	**a)**	Explain vulnerability identification process.	**07**
	b)	Explain the different issues involved in urban planning.	**07**

Section – II

Q.5	**a)**	What are common methods or approaches used in risk assessment and vulnerability analysis?	**07**
	b)	Write a note on systematic management and strategic planning for vulnerability reduction.	**07**
Q.6	**a)**	Explain the concept of disaster epidemiology with its necessity and constraints.	**07**
	b)	Explain the role of information and communication technology in health response	**07**
Q.7	**a)**	What are some challenges or limitations associated with conducting risk assessment and Vulnerability analysis?	**07**
	b)	Explain policies applied for disaster management and development plan for disaster mitigation.	**07**

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Risk Assessment and Vulnerability Analysis (BTN01514)

Day & Date: Saturday 24-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following is NOT a type of risk control measure?
a) Avoidance b) Acceptance
c) Denial d) Mitigation

2) What is the purpose of risk mitigation?
a) To eliminate all risks
b) To transfer all risks to third parties
c) To reduce the likelihood or impact of identified risks
d) To ignore risks until they manifest

3) What is the difference between qualitative and quantitative risk assessment?
a) Qualitative assesses likelihood, while quantitative assesses impact
b) Qualitative uses numerical data, while quantitative relies on subjective judgment
c) Qualitative assigns numeric values to risks, while quantitative uses descriptive scales
d) There is no difference between them

4) Which of the following is NOT a benefit of conducting risk assessment and vulnerability analysis?
a) Improved decision-making
b) Reduced uncertainty
c) Increased likelihood of risk occurrence
d) Better resource allocation

5) What is the primary purpose of risk assessment?
a) To eliminate all risks
b) To identify, assess, and prioritize risks
c) To transfer all risks to third parties
d) To ignore risks until they become issues

6) Which of the following is NOT a step in the risk assessment process?
a) Risk identification
b) Risk elimination
c) Risk analysis
d) Risk evaluation

7) Vulnerability analysis primarily focuses on: _____.
a) Identifying potential threats
b) Assessing the likelihood of risks
c) Identifying weaknesses in systems or processes
d) Quantifying potential impacts

8) Which of the following is an example of a vulnerability?
a) Lack of insurance coverage
b) Regular system backups
c) Strong encryption protocols
d) Employee training programs

9) What does the term "likelihood" refer to in risk assessment?
a) The potential impact of a risk
b) The probability of a risk occurring
c) The timeframe within which a risk may occur
d) The severity of consequences

10) Which of the following is NOT a common risk assessment method?
a) SWOT analysis
b) Failure mode and effects analysis (FMEA)
c) Fault tree analysis (FTA)
d) Delphi technique

11) In risk management, what does the acronym “FMEA” stand for?
a) Failure Management and Evaluation Analysis
b) Fault mode and Effects Analysis
c) Failure Mode and Effects Analysis
d) Fault Management and Evaluation Assessment

12) What is the purpose of a risk matrix?
a) To visualize and prioritize risks based on their likelihood and impact
b) To eliminate all risks from consideration
c) To ignore risks until they manifest
d) To transfer all risks to third parties

13) Which of the following is NOT a component of risk assessment?
a) Risk identification
b) Risk acceptance
c) Risk control
d) Risk elimination

14) In vulnerability analysis, what does the term "exploit" refer to?

a) Taking advantage of identified weaknesses
b) Eliminating vulnerabilities entirely
c) Ignoring vulnerabilities
d) Transferring vulnerabilities to third parties

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Steps involves in planning database are _____.
a) Data Requirement b) Data Model
c) Data Security d) All of these

2) Network Planning for rural roads involves _____.
a) Road classification b) Network modelling
c) Trip Generation d) Modal Split

3) Key points related to the PMGSY road alignment _____.
a) Planning b) Surveying
c) Connectivity d) All of these

4) Factors affecting geometric design are _____.
a) Road user characteristics b) Vehicular characteristics
c) Safety Requirement d) All of these

5) Normal reaction time as per IRC code is given by for complex situation is _____.
a) 0.5-1 sec b) 1-2 sec
c) 3-4 sec d) 2.5-3 sec

6) Which of the following is not Urban roads?
a) Arterial roads b) Major district roads
c) Collector streets d) Local streets

7) For concrete and bituminous pavement value of camber is given by _____.
a) 0.5 % b) 2 %
c) 3 % d) 4 %

8) The design of horizontal and vertical alignments, super elevation, gradient is worst affected by _____.

a) Length of vehicle b) Width of vehicle
c) Speed of vehicle d) Height of vehicle

9) The Type of transition Curve that is generally provided on hill road is _____.

a) Circular b) Cubic parabola
c) Lemniscate spiral d) Spiral

10) The rate of rise or fall along the length of road is known as _____.

a) Cambe b) super elevation
c) side slope d) Gradient

11) The sight distance is measured along the middle of the _____.

a) Inner lane b) Outer lane
c) Middle lane d) None of these

12) Minimum thickness of the base of a flexible pavement is _____.

a) 15 cm b) 20 cm
c) 10 cm d) 5 cm

13) Which of the following it NOT a critical parameter to control cracking and rutting in a flexible pavement?

a) Tensile strain near the surface close to the edge of the wheel
b) Vertical sub-base strain
c) Vertical subgrade strain
d) Tensile strain at the bottom of bituminous layer

14) Which is bottom most portion of pavement in case of rural roads?

a) Sub-base b) Subgrade
c) Base course d) Surface course

Section – I

Q.2 Attempt the following (Any Two). **14**

a) Explain 'Governing Factors for Route Selection' in rural roads.

b) Explain the concept of 'Network Planning in Rural Roads'.

c) Enlist and explain various factors affecting geometric design of roads.

Q.3 Attempt the following (Any Two). **14**

a) Calculate length of Summit curve required to move the vehicle with design speed of 80 kmph and reaction time of 2.5 seconds. Vehicle is moving with acceding gradient of 3% and then descending gradient of 5%. Coefficient of longitudinal friction is 0.35. Calculate length of summit curve for cases:
1) L > SSD
2) L< SSD

b) Explain procedure for the design of flexible pavement in Rural Roads.

c) CBR test is performed on flexible pavement and load verses penetration table is shown below, an initial traffic of 30 CVPD, with a growth rate of 6 per cent per annum for a location having annual rainfall of 1200 mm. The design life is 10 years. Determine the pavement thickness.
VDF = 2.5 Design CBR value for subgrade = 5.0%

Penetration	0	0.5	1	1.5	2	2.5	3	4	5	7.5	10	12.5
Load (kg)	0	8	26	43	63	75	84	105	114	135	151	165

Section – II

Q.4 Attempt the following (Any Two). **14**

a) Explain Cross drains; types, requirements, choice of different types of cross drains.

b) Explain Standard design of small bridges.

c) Explain Construction of roller compacted concrete.

Q.5 Attempt the following (Any Two). **14**

a) Explain quality control in construction.

b) Explain maintenance of paved roads.

c) Explain the concept of ‘Rehabilitation’.

c) Enlist and explain various factors affecting geometric design of roads.

Q.3 Attempt the following (Any Two). **14**

a) Calculate length of Summit curve required to move the vehicle with design speed of 80 kmph and reaction time of 2.5 seconds. Vehicle is moving with acceding gradient of 3% and then descending gradient of 5%. Coefficient of longitudinal friction is 0.35. Calculate length of summit curve for cases:
1) L > SSD
2) L< SSD

b) Explain procedure for the design of flexible pavement in Rural Roads.

c) CBR test is performed on flexible pavement and load verses penetration table is shown below, an initial traffic of 30 CVPD, with a growth rate of 6 per cent per annum for a location having annual rainfall of 1200 mm. The design life is 10 years. Determine the pavement thickness.
VDF = 2.5 Design CBR value for subgrade = 5.0%

Penetration	0	0.5	1	1.5	2	2.5	3	4	5	7.5	10	12.5
Load (kg)	0	8	26	43	63	75	84	105	114	135	151	165

Section – II

Q.4 Attempt the following (Any Two). **14**

a) Explain Cross drains; types, requirements, choice of different types of cross drains.

b) Explain Standard design of small bridges.

c) Explain Construction of roller compacted concrete.

Q.5 Attempt the following (Any Two). **14**

a) Explain quality control in construction.

b) Explain maintenance of paved roads.

c) Explain the concept of ‘Rehabilitation’.

Set **S**

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Planning and Design of Rural Roads (BTN01515)

Day & Date: Saturday 24-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following is not Urban roads?
a) Arterial roads b) Major district roads
c) Collector streets d) Local streets

2) For concrete and bituminous pavement value of camber is given by _____.
a) 0.5 % b) 2 %
c) 3 % d) 4 %

3) The design of horizontal and vertical alignments, super elevation, gradient is worst affected by _____.
a) Length of vehicle b) Width of vehicle
c) Speed of vehicle d) Height of vehicle

4) The Type of transition Curve that is generally provided on hill road is _____.
a) Circular b) Cubic parabola
c) Lemniscate spiral d) Spiral

5) The rate of rise or fall along the length of road is known as _____.
a) Cambe b) super elevation
c) side slope d) Gradient

6) The sight distance is measured along the middle of the _____.
a) Inner lane b) Outer lane
c) Middle lane d) None of these

7) Minimum thickness of the base of a flexible pavement is _____.
a) 15 cm b) 20 cm
c) 10 cm d) 5 cm

8) Which of the following it NOT a critical parameter to control cracking and rutting in a flexible pavement?
a) Tensile strain near the surface close to the edge of the wheel
b) Vertical sub-base strain
c) Vertical subgrade strain
d) Tensile strain at the bottom of bituminous layer

9) Which is bottom most portion of pavement in case of rural roads?
a) Sub-base b) Subgrade
c) Base course d) Surface course

10) Steps involves in planning database are _____.
a) Data Requirement b) Data Model
c) Data Security d) All of these

11) Network Planning for rural roads involves _____.
a) Road classification b) Network modelling
c) Trip Generation d) Modal Split

12) Key points related to the PMGSY road alignment _____.
a) Planning b) Surveying
c) Connectivity d) All of these

13) Factors affecting geometric design are _____.
a) Road user characteristics b) Vehicular characteristics
c) Safety Requirement d) All of these

14) Normal reaction time as per IRC code is given by for complex situation is _____.
a) 0.5-1 sec b) 1-2 sec
c) 3-4 sec d) 2.5-3 sec

3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Factors affecting the performance of green material/product is/are _____.
a) Surrounding buildings b) Population
c) Vehicles d) All of the above

2) Centralized wastewater treatment plant (WWTP) can be converted to green infrastructure by _____.
a) Reusing sludge as fertilizer.
b) Reusing treated waste water in curing of roads
c) Providing imported solar panels in the WWTP
d) Construction of WTP using flyash bricks

3) Recycling of old glass uses _____ less energy than manufacturing for new glass.
a) 20% b) 30%
c) 40% d) 50%

4) SMB is a building material made primarily from _____ compressed at high pressure to form blocks.
a) Damp soil b) Cement
c) Lime d) None of the above

5) Which of the following is not the purpose of a green building?
a) To reduce use of water
b) To minimize damage of the environment
c) Re-use of waste materials
d) None of the above

6) Which of the following is not correct constituent in ideal CSEB?
a) Silt- 15% b) Gravel- 20%
c) Clay- 20% d) Sand- 50%

7) Embodied energy is the energy consumed by _____ associated with the production of a product.

a) Construction b) Transportation
c) Manufacturing d) All of the above

8) Which of the following is not the factor while selecting the car?

a) CO_2 rating b) Fuel type
c) Model d) None of the above

9) _____ undergo chemical change in their composition when heated.

a) Thermoplastics b) Thermoset plastics
c) Thermal plastics d) None of the above

10) Full form of GRIHA is _____.

a) Green Rating for Indian Habitat Assessment
b) Green Rating for Integrated Habitat Assessment
c) Green Rating for International Habitat Assessment
d) Green Rating for Information Habitat Assessment

11) _____ weight is applied for compressing in the process of preparing CSEB.

a) > 15 Tonnes b) < 15 Tonnes
c) > 12 Tonnes d) < 12 Tonnes

12) Which of the following is green product?

a) Wooden table b) Plastic bottle
c) Volatile paints d) All of the above

13) Resource efficiency can be achieved by utilizing materials to _____.

a) Recycled content b) Reusable content
c) Reusable packaging d) None of the above

14) The vast majority of DCCs end up in landfill, or _____.

a) Incineration b) Recycling industry
c) Composing d) All of the above

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the primary focus of a Red Ocean strategy?
a) Creating a new market space
b) Competing in an existing market space
c) Ignoring competitors entirely
d) Reducing production costs by outsourcing

2) What is the main characteristic of competition in a Red Ocean?
a) Non-existent b) Highly intense
c) Low d) None of the above

3) The first step of innovation management is _____.
a) Selection of ideas b) Collection of ideas
c) Experiments on ideas d) Developing business model

4) What is the primary goal of social entrepreneurship?
a) Maximizing profit for shareholders
b) Solving social problems through innovative business models
c) Expanding business into global markets
d) Increasing employee satisfaction

5) What is meant by the term 'scaling-up'?
a) The business can be franchised
b) The business can run on its own
c) Increasing the sales
d) None of the above

6) What does the term "Shifting Composition of the Economy" refer to in innovation?
a) The transition from agriculture to industrial and service-based economies
b) The focus on rural over urban economic activities
c) The diminishing role of technology in the economy
d) A stagnant economic structure

7) Which economic theory considers entrepreneurs as coordinators of scarce resources?
a) Innovation Theory
b) Classical Theory
c) Risk-Bearing Theory
d) Resource-Based Theory

8) Why is planning considered incompatible with innovation in entrepreneurship?
a) It discourages flexibility and risk-taking
b) It prioritizes creativity over execution
c) It lacks a financial focus.
d) It only applies to large enterprises

9) What is the primary role of continuous learning for entrepreneurs?
a) To achieve financial stability
b) To stay relevant in dynamic environments and adopt new technologies
c) To do incremental development rather than radical development
d) To specialize in a dual-skill areas

10) Future market and innovation should be looked upon with a perspective of _____.
a) Needs
b) Available resources
c) Multi-dimensionality
d) All of the above

Economics (BTN01508)

Day & Date: Sunday, 25-05-2025 Max. Marks: 50
Time: 10:00 AM To 12:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required and state it clearly.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks: 10

Q.1 Choose the correct alternatives from the options. 10

1) Which one of the following is not the function of money?
a) Medium of exchange
b) Measure of Happiness
c) Standard of deferred payment
d) Store of value

2) Which one of the following cost can never become zero?
a) Average cost b) Fixed cost
c) Marginal cost d) Variable cost

3) Which of the following market structures has a predominant feature of price leadership?
a) Perfectly competitive b) Monopoly
c) Oligopoly d) Monopolistic

4) Average revenue is _____
a) Total revenue divided by the number of units sold
b) Revenue earned by all the units of the output
c) Revenue earned by the average sized firm in the industry
d) Net addition made to the total revenue by selling one more unit of a commodity

5) Which of these is an economic activity?
a) Father teaching his son at home instead of spending on coaching
b) A housewife making food for the family on her own
c) A hair dresser doing hair cut designing on payment
d) A singer giving a show on his son's wedding anniversary

6) Which of the following is NOT an account in the Balance of Payments?

a) Current Account b) Capital Account
c) Financial Account d) Future Account

7) Which of the following is not a regulatory institution in Indian financial system?

a) RBI b) CIBIL
c) SEBI d) IRDA

8) In a mixed economy which sector (s) is 1 are found _____

a) Private only b) Public only
c) None d) Both (a) Private and (b)Public

9) Who is known as father of economics?

a) Adam Smith b) Prof. A. Samulson
c) Alfred Marshall d) J. R. Hicks

10) Micro and Macro are not two independent approaches to economic analysis but they are complementary to each other.

a) False b) True
c) Partly true d) Partly False

Professional Ethics and Human Value (BTN01512)

Day & Date: Sunday, 25-05-2025 Max. Marks: 40
Time: 10:00 AM To 12:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume additional data, if required and state it clearly.

Q.2 List the human values. Explain any two in detail. **10**

OR

Write a detailed note on assessment of safety and risk.

Q.3 Explain the role of Engineers as manager. **10**

OR

List and explain the skills required to handle moral problems in Engineering Ethics.

Q.4 **Write short notes: (Any Four)** **20**

a) Honesty
b) Self-Confidence
c) The Three Mile Island Theory
d) Character
e) Trade secret
f) Cooperation

T. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April – 2025
CIVIL ENGINEERING
Professional Ethics and Human Value (BTN01512)

Day & Date: Sunday, 25-05-2025 Max. Marks: 50
Time: 10:00 AM To 12:00 PM

Instructions:1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer bookPage no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose amongst the alternatives. **10**

1) _____ is defined as the duty, obligation or even authority.
a) Work b) Responsibility
c) Democracy d) Authority

2) The study on ethics helps to know the people's _____.
a) Learn good or bad things
b) Copyright
c) Morality
d) Beliefs, values, and morals

3) The objectives of professional ethics in engineering are _____.
a) To understand the moral values that ought to guide the Engineering profession
b) To resolve the moral issues in the profession, and
c) To justify the moral judgment concerning the profession
d) All the above

4) The main core human values are _____.
a) Right conduct b) Peace
c) Both a & b d) None of these

5) Preconditioning is ____.
a) Assuming without knowing b) Knowing without assuming
c) Only assuming d) Only knowing

6) Value education deals with ____.
   a) What is universally valuable to all of us
   b) What is conductive to our individual and collective of us
   c) Enables to be in harmony with ourselves, other and rest of nature
   d) All of the above

7) Courage is the tendency to accept and face ____.
   a) Self-confidence
   b) Risks and difficult tasks in rational ways
   c) Physical courage
   d) Social courage

8) Human life is lived at four levels individuals, family, society and ____.
   a) Nature b) Nurture
   c) World d) Universe

9) Ethics is the word that refers to _____.
   a) Human tendency b) Morals, values, and beliefs
   c) Only Values d) Psychology

10) Word ethichs is definded as a _____
   a) Motivation
   b) Set of attitudes concerned with the value of work
   c) Attitude
   d) Values

Day & Date: Tuesday 27-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) RQD is the ratio of ____.
a) Sum of lengths of rock core pieces greater than 15 cm to the total length of core run
b) Sum of lengths of rock core pieces greater than 10 cm to the total length of core run
c) Sum of lengths of rock core pieces to the total length of core run
d) Sum of lengths of unbroken rock core pieces to the total length of core run

2) One of the purposes of Soil exploration is ____.
a) To understand the behaviour of the structure
b) To estimate the load coming on the soil
c) To find the quantity and quality of water
d) To determine basic properties of soil

3) Which one of the following is not the assumption made in Terzaghi's bearing capacity analysis?
a) The strip footing has rough base
b) Failure zone does not extend above the horizontal plane through the base of the footing
c) Plastic zone is not fully developed
d) The elastic zone has straight boundaries

4) According to IS: 1904 - 1966, maximum safe bearing capacity for coarse sand, medium sand and fine sand are respectively (in kg/cm^2)
a) 4.5, 2.5, 1.5 b) 33, 16.5, 9
c) 16.5, 9.0, 4.5 d) None of these

5) Which one of the following is the correct Terzaghi general bearing capacity equation?

a) $q_u = C N_c + \gamma D N_q + 0.5 B \gamma N \gamma$

b) $q_u = C N_c - \gamma D N_q + 0.5 B \gamma N \gamma$

c) $q_u = C N_c + 0.5 \gamma D N_q + B \gamma N \gamma$

d) None of above

6) In case of sandy soil, which settlement is predominant?

a) Immediate settlement
b) Consolidation settlement
c) Secondary consolidation settlement
d) None

7) In a plate-load test, the load is applied in one of the following increments of load:

a) 1/3th b) 1/20th
c) 1/10th d) 1/5th

8) Swedish circle method of slope stability analysis is used in case of ____.

a) Silty soil b) Sandy soil
c) Clayey soil d) None

9) These types of soil deposits are often found near the mouths of rivers, along the perimeters of bays and beneath swamps or lagoons ____

a) Weak/compressible soil b) Collapsible soil
c) Expansive soil d) Corrosive soil

10) The negative skin friction on a pile develops when____ .

a) The soil in which it is driven is sandy soil
b) The soil surrounding it settles more than the pile
c) The ground water table rises
d) The soil near the tip is clay

11) Pile driven at some inclination with vertical is called ____.

a) Batter pile b) Raker pile
c) both a and b d) neither a nor b

12) In stability analysis, the term mobilized shear strength is referred to as ___.

a) Shear strength b) Maximum shear stress
c) Applied shear stress d) None

13) A soil sample has external diameter as 8 cm and wall thickness of 2 mm. The area ratio in percentage will be ____.

a) 12.88 b) 18.22
c) 15.97 d) 10.80

14) Under reamed pile is most suitable to resist ____.

a) Compressive load b) Lateral load
c) Uplift d) None

CIVIL ENGINEERING
Foundation Engineering (BTN01601)

Day & Date: Tuesday 27-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory; answer any two from remaining question from Section - I.
2) Q.6 is compulsory; answer any two from remaining question from Section - II.
3) Figures to the right indicate full marks.
4) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2 **a)** With a neat sketch explain bore log chart. **04**

b) During exploration following pieces of rock cores were collected from a borehole the length of the cores was as follows 240 mm, 156 mm, 347 mm, 84 mm, 123 mm, 75 mm, 94 mm, 524 mm, what is the RQD for this rock and how is the quality of this rock? **06**

Q.3 **a)** Enlist the difference between general shear failure and Local shear failure with suitable sketch. **04**

b) Determine the allowable gross load and net allowable load of square footing of 2m side and with a depth of foundation 1.0 m. use Terzaghi's bearing capacity theory and assume local Shear failure, take factor of safety 3.0, the soil at the site has γ = 18 kN/m^3, c = 15 kN/m^2 and ϕ = 25°, Take Nc = 14.8, Nq = 5.6, and Nγ = 3.2. **05**

Q.4 **a)** Explain the test procedure for standard penetration test. Also mention the corrections to be done for the observed N. **04**

b) Immediate settlement of a square footing of dimensions 1.2 m x 1.2 m carrying a load intensity of 220 kN/m^2 is 30 mm. What would be the immediate settlement of a footing measuring 3 m x 3 m carrying a load intensity of 160 kN/m^2. The subsoil conditions are identical in both the footing. **05**

Q.5 **a)** What is expansive soil? What precautions need to be taken while designing foundation in expansive soil? **04**

b) Enlist the ground improvement techniques. Explain any one in detail with its suitability. **05**

Section – II

Q.6	**a)**	Write short note on Negative skin friction.	**04**
	b)	Design a strap footing for two columns using following data. Load carried by external column is 2800 kN and that by internal column is 4250 kN c/c Spacing between the columns is 6.8 m, size of each column is 450 mm x 450 mm and External column is at 280 mm from the boundary. Assume allowable soil pressure is 325 kN/m^2.	**06**
Q.7	**a)**	Calculate capacity of rectangular pile 0.3 m x 0.4 m of length 12 m embedded in clayey soil having $C = 45\ \text{kPa}, \phi = 0, \alpha = 0.64$ (Assume suitable data if required).	**05**
	b)	Write a short note on design and construction of under reamed pile with neat sketch.	**04**
Q.8	**a)**	Explain any 4 types of cofferdams with neat sketches.	**04**
	b)	Write a brief critical note on 'Taylor's Stability Number.'	**05**
Q.9	**a)**	Draw a neat labelled sketch of a slope and enlist causes of failure of slope.	**04**
	b)	What are different types of slopes failure? Explain briefly finite and infinite slopes.	**05**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) Swedish circle method of slope stability analysis is used in case of ____.
a) Silty soil b) Sandy soil
c) Clayey soil d) None

2) These types of soil deposits are often found near the mouths of rivers, along the perimeters of bays and beneath swamps or lagoons ____
a) Weak/compressible soil b) Collapsible soil
c) Expansive soil d) Corrosive soil

3) The negative skin friction on a pile develops when____ .
a) The soil in which it is driven is sandy soil
b) The soil surrounding it settles more than the pile
c) The ground water table rises
d) The soil near the tip is clay

4) Pile driven at some inclination with vertical is called ____.
a) Batter pile b) Raker pile
c) both a and b d) neither a nor b

5) In stability analysis, the term mobilized shear strength is referred to as ___.
a) Shear strength b) Maximum shear stress
c) Applied shear stress d) None

6) A soil sample has external diameter as 8 cm and wall thickness of 2 mm. The area ratio in percentage will be ____.
a) 12.88 b) 18.22
c) 15.97 d) 10.80

7) Under reamed pile is most suitable to resist ____.
a) Compressive load b) Lateral load
c) Uplift d) None

8) RQD is the ratio of ____.
   a) Sum of lengths of rock core pieces greater than 15 cm to the total length of core run
   b) Sum of lengths of rock core pieces greater than 10 cm to the total length of core run
   c) Sum of lengths of rock core pieces to the total length of core run
   d) Sum of lengths of unbroken rock core pieces to the total length of core run

9) One of the purposes of Soil exploration is ____.
   a) To understand the behaviour of the structure
   b) To estimate the load coming on the soil
   c) To find the quantity and quality of water
   d) To determine basic properties of soil

10) Which one of the following is not the assumption made in Terzaghi's bearing capacity analysis?
   a) The strip footing has rough base
   b) Failure zone does not extend above the horizontal plane through the base of the footing
   c) Plastic zone is not fully developed
   d) The elastic zone has straight boundaries

11) According to IS: 1904 - 1966, maximum safe bearing capacity for coarse sand, medium sand and fine sand are respectively (in kg/cm^2)
   a) 4.5, 2.5, 1.5
   b) 33, 16.5, 9
   c) 16.5, 9.0, 4.5
   d) None of these

12) Which one of the following is the correct Terzaghi general bearing capacity equation?
   a) $q_u = C N_c + \gamma D N_q + 0.5 B \gamma N \gamma$
   b) $q_u = C N_c - \gamma D N_q + 0.5 B \gamma N \gamma$
   c) $q_u = C N_c + 0.5 \gamma D N_q + B \gamma N \gamma$
   d) None of above

13) In case of sandy soil, which settlement is predominant?
   a) Immediate settlement
   b) Consolidation settlement
   c) Secondary consolidation settlement
   d) None

14) In a plate-load test, the load is applied in one of the following increments of load:

6) Pile driven at some inclination with vertical is called ____.
a) Batter pile b) Raker pile
c) both a and b d) neither a nor b

7) In stability analysis, the term mobilized shear strength is referred to as ___.
a) Shear strength
b) Maximum shear stress
c) Applied shear stress
d) None

8) A soil sample has external diameter as 8 cm and wall thickness of 2 mm. The area ratio in percentage will be ____.
a) 12.88
b) 18.22
c) 15.97
d) 10.80

9) Under reamed pile is most suitable to resist ____.
a) Compressive load
b) Lateral load
c) Uplift
d) None

10) RQD is the ratio of ____.
a) Sum of lengths of rock core pieces greater than 15 cm to the total length of core run
b) Sum of lengths of rock core pieces greater than 10 cm to the total length of core run
c) Sum of lengths of rock core pieces to the total length of core run
d) Sum of lengths of unbroken rock core pieces to the total length of core run

11) One of the purposes of Soil exploration is ____.
a) To understand the behaviour of the structure
b) To estimate the load coming on the soil
c) To find the quantity and quality of water
d) To determine basic properties of soil

12) Which one of the following is not the assumption made in Terzaghi's bearing capacity analysis?
a) The strip footing has rough base
b) Failure zone does not extend above the horizontal plane through the base of the footing
c) Plastic zone is not fully developed
d) The elastic zone has straight boundaries

13) According to IS: 1904 - 1966, maximum safe bearing capacity for coarse sand, medium sand and fine sand are respectively (in kg/cm^2)
a) 4.5, 2.5, 1.5
b) 33, 16.5, 9
c) 16.5, 9.0, 4.5
d) None of these

14) Which one of the following is the correct Terzaghi general bearing capacity equation?
a) $q_u = C N_c + \gamma D N_q + 0.5 B \gamma N \gamma$
b) $q_u = C N_c - \gamma D N_q + 0.5 B \gamma N \gamma$
c) $q_u = C N_c + 0.5 \gamma D N_q + B \gamma N \gamma$
d) None of above

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Foundation Engineering (BTN01601)

Day & Date: Tuesday 27-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory; answer any two from remaining question from Section - I.
2) Q.6 is compulsory; answer any two from remaining question from Section - II.
3) Figures to the right indicate full marks.
4) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2 **a)** With a neat sketch explain bore log chart. **04**

b) During exploration following pieces of rock cores were collected from a borehole the length of the cores was as follows 240 mm, 156 mm, 347 mm, 84 mm, 123 mm, 75 mm, 94 mm, 524 mm, what is the RQD for this rock and how is the quality of this rock? **06**

Q.3 **a)** Enlist the difference between general shear failure and Local shear failure with suitable sketch. **04**

b) Determine the allowable gross load and net allowable load of square footing of 2m side and with a depth of foundation 1.0 m. use Terzaghi's bearing capacity theory and assume local Shear failure, take factor of safety 3.0, the soil at the site has γ = 18 kN/m^3, c = 15 kN/m^2 and ϕ = 25°, Take Nc = 14.8, Nq = 5.6, and Nγ = 3.2. **05**

Q.4 **a)** Explain the test procedure for standard penetration test. Also mention the corrections to be done for the observed N. **04**

b) Immediate settlement of a square footing of dimensions 1.2 m x 1.2 m carrying a load intensity of 220 kN/m^2 is 30 mm. What would be the immediate settlement of a footing measuring 3 m x 3 m carrying a load intensity of 160 kN/m^2. The subsoil conditions are identical in both the footing. **05**

Q.5 **a)** What is expansive soil? What precautions need to be taken while designing foundation in expansive soil? **04**

b) Enlist the ground improvement techniques. Explain any one in detail with its suitability. **05**

Section – II

Q.6 **a)** Write short note on Negative skin friction. **04**

b) Design a strap footing for two columns using following data. Load carried by external column is 2800 kN and that by internal column is 4250 kN c/c Spacing between the columns is 6.8 m, size of each column is 450 mm x 450 mm and External column is at 280 mm from the boundary. Assume allowable soil pressure is 325 kN/m^2. **06**

Q.7 **a)** Calculate capacity of rectangular pile 0.3 m x 0.4 m of length 12 m embedded in clayey soil having **05**
$C = 45\ \text{kPa}, \phi = 0, \alpha = 0.64$ (Assume suitable data if required).

b) Write a short note on design and construction of under reamed pile with neat sketch. **04**

Q.8 **a)** Explain any 4 types of cofferdams with neat sketches. **04**

b) Write a brief critical note on 'Taylor's Stability Number.' **05**

Q.9 **a)** Draw a neat labelled sketch of a slope and enlist causes of failure of slope. **04**

b) What are different types of slopes failure? Explain briefly finite and infinite slopes. **05**

Set **P**

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Hydraulic Structures & Water Power Engineering (BTN01602)

Day & Date: Thursday, 29-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable data if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The yield of a given reservoir is dependent upon _____.
a) the catchment yield b) the reservoir evaporation
c) the reservoir leakage d) all of the above

2) Capacity inflow ratio for a storage reservoir is defined as _____.
a) reservoir capacity / average annual flood inflow
b) reservoir capacity / average annual sediment inflow
c) dead storage capacity of the reservoir / average annual sediment deposited
d) none of the above

3) The maximum permissible eccentricity for no tension at the base of a gravity dam is _____.
a) B/2 b) B/3
c) B/4 d) B/6

4) The horizontal destabilizing force caused by the formation of waves in a storage reservoir having a fetch of 40 km, due to high wind of 160 km/h, is about _____
a) 30 kN b) 60 kN
c) 90 kN d) 130 kN

5) The most economical type of arch dam in general is of _____
a) constant radius type b) variable radius type
c) constant angle type d) none of these

6) The highest concrete gravity dam of the world is Grand Dixence dam is Switzerland, whose height is _____
a) 325 m b) 317 m
c) 285 m d) 272 m

7) A shaft spillway is located _____
a) inside the body of a gravity dam
b) inside the upstream reservoir
c) Inside the downstream reservoir
d) on side flanks of the main dam

8) The value of Khosla's safe exit gradient for usually met alluvial river soils of our country, is _____.
a) 0 b) 1
c) ∞ d) ¼ to $1/6$

9) The channel constructed to bypass the excess water entering a canal, is called a _____.
a) canal module b) canal siphon
c) canal escape d) canal regulator

10) Which among the following is not true about Asphaltic concrete lining?
a) it is fairly cheap
b) it is flexible and readily confirms to subgrade
c) it permits certain type of weed growth
d) it decreases the rugosity coefficient to increase channel efficiency.

11) Permeable spurs are best suitable for rivers, which _____.
a) carry heavy suspended load
b) carry large bed load, but light suspended load
c) need permanent protection to dikes
d) need attracting the river current, for providing deeper channel
e) flow in upper hilly reaches.

12) For a meandering alluvial river in flood plain, the meander length is about _____
a) 6 W b) 18 W
c) 17W d) W
where W is the normal river width

13) The main function of a surge tank is to _____
a) produce surge in the pipeline
b) relieve water hammer pressure in the penstock
c) supply water at constant pressure
d) none of above

14) Gross head of a hydroelectric power station is _____
a) the height of water level in the river where the storage is provided
b) the difference of water level between the level in storage and tail race
c) the height of water level in the river where the tail race is provided
d) all of above

Instructions: 1) In Section – I, Q. No. 3 is compulsory and attempt any two questions from the remaining questions.
2) In Section – II, Q. No. 9 is compulsory and attempt any two questions from the remaining questions.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Enlist the factors governing choice of dam with respect to dam site **04**

b) What is the necessity of dam instrumentation? Briefly explain the function seismograph. **05**

Q.3 **a)** Write a short note on galleries in gravity dam with respect to location, size, shape and function **04**

b) Determine the maximum and minimum vertical stresses on the base of the foundation of a concrete gravity dam assuming that there is no tail water. Also calculate the major principle stress at the toe of the dam. Use the following data, **06**

i) Base width of dam = 60 m
ii) Slope of D/S face = 0.8H: 1V
iii) Total vertical force on the base = 60000 kN
iv) Total overturning moment about toe = 1.5×10^6 kN.m
v) Total restoring moment about toe = 3×10^6kN.m

Q.4 **a)** Draw a labelled section of zoned type earthen dam. **04**

b) Determine the phreatic line for an earthen dam, homogeneous in section from the following data: **05**

i) Height of dam = 20m
ii) Free board = 2m
iii) Coefficient of permeability of material of the dam = 4×10^{-4} cm/sec
iv) Top width = 4m
v) U/S slope = 3:1
v) D/S slope = 3:1

Q.5 **a)** What is meant by ‘hydraulic jump’ and how does it helps in designing irrigation structures? **04**

b) What is meant by spillways? State its purposes. Explain any one spillway with sketch. **05**

Section – II

Q.6	**a)**	Discuss briefly the causes of failure of hydraulic structures, founded on previous foundations.	**04**
	b)	Explain and discuss different type of alignments of irrigation canals suitable for particular topography & the command area.	**05**
Q.7	**a)**	What are the different cross drainage works? Explain aqueduct with neat sketch by mentioning its suitability for the proper condition.	**04**
	b)	Write short note on high water, low water and mean water river training.	**05**
Q.8	**a)**	Give the detailed classification of hydroelectric power plants	**04**
	b)	What are the two principal types of drainage systems necessary for draining irrigated tracts to avoid their water logging? Explain them with neat sketches	**05**
Q.9	**a)**	Explain the term weir and enlist the criterions of site selection for K.T Weir.	**04**
	b)	Three generators each of capacity 15000 kW have been installed at a power station. During a certain period of load, the load on the plant varies from 17000 kW to 27000 kW. Determine: i) Total installed capacity ii) Load factor iii) Plant factor iv) Utilization factor	**06**

c) supply water at constant pressure
d) none of above

9) Gross head of a hydroelectric power station is _____
a) the height of water level in the river where the storage is provided
b) the difference of water level between the level in storage and tail race
c) the height of water level in the river where the tail race is provided
d) all of above

10) The yield of a given reservoir is dependent upon _____.
a) the catchment yield b) the reservoir evaporation
c) the reservoir leakage d) all of the above

11) Capacity inflow ratio for a storage reservoir is defined as _____.
a) reservoir capacity / average annual flood inflow
b) reservoir capacity / average annual sediment inflow
c) dead storage capacity of the reservoir / average annual sediment deposited
d) none of the above

12) The maximum permissible eccentricity for no tension at the base of a gravity dam is _____.
a) B/2 b) B/3
c) B/4 d) B/6

13) The horizontal destabilizing force caused by the formation of waves in a storage reservoir having a fetch of 40 km, due to high wind of 160 km/h, is about _____
a) 30 kN b) 60 kN
c) 90 kN d) 130 kN

14) The most economical type of arch dam in general is of _____

a) constant radius type
b) variable radius type
c) constant angle type
d) none of these

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Hydraulic Structures & Water Power Engineering (BTN01602)

Day & Date: Thursday, 29-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section – I, Q. No. 3 is compulsory and attempt any two questions from the remaining questions.
2) In Section – II, Q. No. 9 is compulsory and attempt any two questions from the remaining questions.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Enlist the factors governing choice of dam with respect to dam site **04**
b) What is the necessity of dam instrumentation? Briefly explain the function seismograph. **05**

Q.3 **a)** Write a short note on galleries in gravity dam with respect to location, size, shape and function **04**
b) Determine the maximum and minimum vertical stresses on the base of the foundation of a concrete gravity dam assuming that there is no tail water. Also calculate the major principle stress at the toe of the dam. Use the following data, **06**
i) Base width of dam = 60 m
ii) Slope of D/S face = 0.8H: 1V
iii) Total vertical force on the base = 60000 kN
iv) Total overturning moment about toe = 1.5×10^6 kN.m
v) Total restoring moment about toe = 3×10^6kN.m

Q.4 **a)** Draw a labelled section of zoned type earthen dam. **04**
b) Determine the phreatic line for an earthen dam, homogeneous in section from the following data: **05**
i) Height of dam = 20m
ii) Free board = 2m
iii) Coefficient of permeability of material of the dam = 4×10^{-4} cm/sec
iv) Top width = 4m
v) U/S slope = 3:1
v) D/S slope = 3:1

Q.5 **a)** What is meant by ‘hydraulic jump’ and how does it helps in designing irrigation structures? **04**
b) What is meant by spillways? State its purposes. Explain any one spillway with sketch. **05**

Section – II

Q.6	**a)**	Discuss briefly the causes of failure of hydraulic structures, founded on previous foundations.	**04**
	b)	Explain and discuss different type of alignments of irrigation canals suitable for particular topography & the command area.	**05**
Q.7	**a)**	What are the different cross drainage works? Explain aqueduct with neat sketch by mentioning its suitability for the proper condition.	**04**
	b)	Write short note on high water, low water and mean water river training.	**05**
Q.8	**a)**	Give the detailed classification of hydroelectric power plants	**04**
	b)	What are the two principal types of drainage systems necessary for draining irrigated tracts to avoid their water logging? Explain them with neat sketches	**05**
Q.9	**a)**	Explain the term weir and enlist the criterions of site selection for K.T Weir.	**04**
	b)	Three generators each of capacity 15000 kW have been installed at a power station. During a certain period of load, the load on the plant varies from 17000 kW to 27000 kW. Determine: i) Total installed capacity ii) Load factor iii) Plant factor iv) Utilization factor	**06**

CIVIL ENGINEERING
Design of Bridges (BTN01610)

Day & Date: Monday 02-06-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Give the correct option for the following questions. 14

1) Culvert is the type of bridge whose span is _____.
a) Between 6m-60m b) Above 60m
c) Less than 6m d) None of these

2) The ground contact length of the track of IRC class AA loading is _____.
a) 3.6m b) 4.57m
c) 3.5m d) None of these

3) Impact force for IRC class A & B is given by _____.
a) $I_f = \frac{AB}{B+L}$ b) $I_f = \frac{B+L}{A}$
c) $I_f = \frac{A}{B+L}$ d) None of these

4) For spans below 5m, impact factor for tracked vehicle is _____.
a) 10% b) 20%
c) 25% d) 15%

5) Total load of class AA tracked is _____.
a) 700kN b) 400kN
c) 554kN d) 332kN

6) Total load in case of IRC 70R tracked loading is _____.
a) 700kN b) 710kN
c) 1000kN d) 554kN

7) Solid deck slab is adopted for spans _____.
a) More than 8m b) More than 20m
c) Less than 8m d) Between 10-25m

8) Braking force is assumed to act along the line parallel to roadway & above it _____.

a) 1.2m b) 1.5m
c) 1.8m d) 2.0m

9) As per IRC-21, minimum clear cover to any reinforcement bar is _____.

a) 40mm b) 25mm
c) 50mm d) 30mm

10) The pier cap or abutment cap should be of minimum _____ concrete.

a) M20 grade b) M25 grade
c) M30 grade d) Any one of these

11) Following is not the function of the pier cap or abutment cap _____.

a) Provides immediate bearing surface for the support of the super structure at pier and abutment location.
b) Disperses the strip load from bearing to the substructure evenly.
c) Prevent rain water from dripping down the sides and ends of the pier.
d) Resist all horizontal forces acting on bridges.

12) In case of urban site, suitable pier is _____.

a) Cellular pier b) Trestle pier
c) Inboard pier d) Hammerhead pier

13) Fixed bearing allow _____.

a) Rotation only
b) Translation only
c) Both rotational as well as translation
d) Restrict rotation as well as translation

14) In case of curved bridges, suitable bearing is _____.

a) Fixed bearing b) Expansion bearing
c) Rocker bearing d) Steel hinge

T. Y (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Design of Bridges (BTN01610)

Day & Date: Monday 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
Question no. 6 is compulsory in section II, and solve any two questions from the remaining
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Design the solid deck slab of Two lane bridge for following data: **10**
a) Effective span - 6 m
b) Carriage way width - 7.5 m
c) Kerb - 600 x 275 on both side
d) Live load - IRC Class A (Two lane)
e) Wearing coat - 100 mm thick
f) Use M-25 concrete and Fe-415 steel
g) Use α = 2.82

Q.3 Answer the following.
a) What is impact factor? How it is calculated? **05**
b) What is economical span? Derive the equation for the same. **04**

Q.4 A RCC T beam type bridge having deck slab of 225 mm thick, wearing coat of 90 mm thick, three longitudinal girders and five cross girders. Determine the Design bending moment for all the longitudinal girders. Use following additional data, **09**
a) Carriage way width - 7.5 m
b) Span of bridge - 12 m
c) Live Load - IRC class AA Tracked
d) Kerb - 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder - 300 mm
f) Longitudinal Girder spacing - 2.5 m
g) Use M-30 concrete and Fe-415 steel

Q.5 Design a slab panel having size of 3 m x 4 m. Consider IRC class AA tracked loading. Use Pigeaud's chart. Consider thickness of slab as 220 mm and wearing coat thickness as 80 mm. Use M-25 concrete and Fe-415 steel. Pigeaud's coefficient for DL are, m_1 = 0.040, m_2 = 0.016 and for Pigeaud's coefficient for LL are, m_1 = 0.095, m_2 = 0.024 **09**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.6 m, Height of pier up to springing level - 5 m, C/C distance of bearing - 1.2 m, Side batter 1:12, HFL - 1.5 m below the bearing level, Span of bridge - 12 m, carriage way width - 7.5 m, Reaction due to D.L. from each span = 2800 kN, Reaction due to L.L. from each span = 700 kN, Braking force - 140 kN, wind pressure on pier - 2.0 kN/m^2. Material of pier = M20 concrete. Estimate the maximum and minimum stress developed at the base of the pier due to critical combination of various loads for dry condition and Flood condition.

Q.7 Verify the suitability of abutment as shown in the fig 7.1 Use following data. **09**
Density of soil - 18 kN/m^3, Friction angle of soil (∅) = 30°, Coefficient of friction - 0.6, Live load reaction at bearing - 350 kN., DL reaction from super structure - 2500 kN

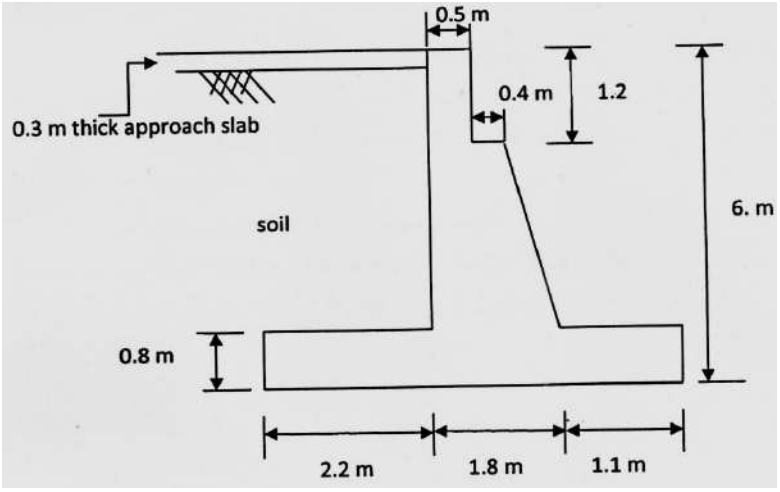

Fig. 7.1

Q.8 **a)** Design a elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 225 kN,
Vertical load (dynamic) = 160 kN,
Horizontal force = 85 kN
Modulus of rigidity of elastomer - 1 N/mm^2
coefficient of friction = 0.35

b) Write a note on types of expansion joints. **04**

Q.9 **Write a note on following. (Any three)** **09**

a) Types of bridge inspection
b) Stability requirement of Abutment
c) Functions of bearing
d) Reinforced earth retaining wall

a) M20 grade b) M25 grade
c) M30 grade d) Any one of these

6) Following is not the function of the pier cap or abutment cap _____.
a) Provides immediate bearing surface for the support of the super structure at pier and abutment location.
b) Disperses the strip load from bearing to the substructure evenly.
c) Prevent rain water from dripping down the sides and ends of the pier.
d) Resist all horizontal forces acting on bridges.

7) In case of urban site, suitable pier is _____.
a) Cellular pier
b) Trestle pier
c) Inboard pier
d) Hammerhead pier

8) Fixed bearing allow _____.
a) Rotation only
b) Translation only
c) Both rotational as well as translation
d) Restrict rotation as well as translation

9) In case of curved bridges, suitable bearing is _____.
a) Fixed bearing
b) Expansion bearing
c) Rocker bearing
d) Steel hinge

10) Culvert is the type of bridge whose span is _____.
a) Between 6m-60m
b) Above 60m
c) Less than 6m
d) None of these

11) The ground contact length of the track of IRC class AA loading is _____.
a) 3.6m
b) 4.57m
c) 3.5m
d) None of these

12) Impact force for IRC class A & B is given by _____.
a) $I_f = \frac{AB}{B+L}$
b) $I_f = \frac{B+L}{A}$
c) $I_f = \frac{A}{B+L}$
d) None of these

13) For spans below 5m, impact factor for tracked vehicle is _____.
a) 10%
b) 20%
c) 25%
d) 15%

14) Total load of class AA tracked is _____.
a) 700kN
b) 400kN
c) 554kN
d) 332kN

Seat No.		Set	S

T. Y (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Design of Bridges (BTN01610)

Day & Date: Monday 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
Question no. 6 is compulsory in section II, and solve any two questions from the remaining
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Design the solid deck slab of Two lane bridge for following data: **10**
a) Effective span - 6 m
b) Carriage way width - 7.5 m
c) Kerb - 600 x 275 on both side
d) Live load - IRC Class A (Two lane)
e) Wearing coat - 100 mm thick
f) Use M-25 concrete and Fe-415 steel
g) Use α = 2.82

Q.3 Answer the following.
a) What is impact factor? How it is calculated? **05**
b) What is economical span? Derive the equation for the same. **04**

Q.4 A RCC T beam type bridge having deck slab of 225 mm thick, wearing coat of 90 mm thick, three longitudinal girders and five cross girders. Determine the Design bending moment for all the longitudinal girders. Use following additional data, **09**
a) Carriage way width - 7.5 m
b) Span of bridge - 12 m
c) Live Load - IRC class AA Tracked
d) Kerb - 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder - 300 mm
f) Longitudinal Girder spacing - 2.5 m
g) Use M-30 concrete and Fe-415 steel

Q.5 Design a slab panel having size of 3 m x 4 m. Consider IRC class AA tracked loading. Use Pigeaud's chart. Consider thickness of slab as 220 mm and wearing coat thickness as 80 mm. Use M-25 concrete and Fe-415 steel. Pigeaud's coefficient for DL are, m_1 = 0.040, m_2 = 0.016 and for Pigeaud's coefficient for LL are, m_1 = 0.095, m_2 = 0.024 **09**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.6 m, Height of pier up to springing level - 5 m, C/C distance of bearing - 1.2 m, Side batter 1:12, HFL - 1.5 m below the bearing level, Span of bridge - 12 m, carriage way width - 7.5 m, Reaction due to D.L. from each span = 2800 kN, Reaction due to L.L. from each span = 700 kN, Braking force - 140 kN, wind pressure on pier - 2.0 kN/m^2. Material of pier = M20 concrete. Estimate the maximum and minimum stress developed at the base of the pier due to critical combination of various loads for dry condition and Flood condition.

Q.7 Verify the suitability of abutment as shown in the fig 7.1 Use following data. **09**
Density of soil - 18 kN/m^3, Friction angle of soil (∅) = 30°, Coefficient of friction - 0.6, Live load reaction at bearing - 350 kN., DL reaction from super structure - 2500 kN

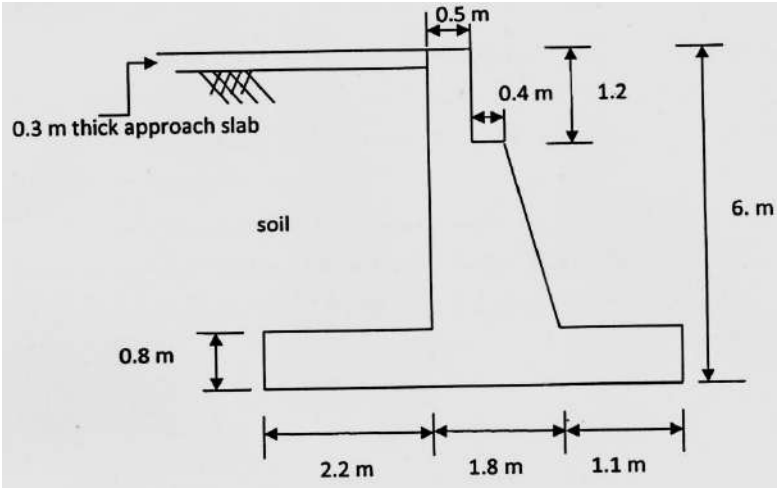

Fig. 7.1

Q.8 **a)** Design a elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 225 kN,
Vertical load (dynamic) = 160 kN,
Horizontal force = 85 kN
Modulus of rigidity of elastomer - 1 N/mm^2
coefficient of friction = 0.35

b) Write a note on types of expansion joints. **04**

Q.9 **Write a note on following. (Any three)** **09**

a) Types of bridge inspection
b) Stability requirement of Abutment
c) Functions of bearing
d) Reinforced earth retaining wall

T.Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Airport Planning and Design (BTN01612)

Day & Date: Monday 02-06-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data whenever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) As per ICAO recommendation, minimum width of safety area for instrumental runway should be _____.
a) 78 m b) 150 m
c) 300 m d) 450 m

2) As per ICAO, for A, B, and C type of airports, maximum effective, transverse and longitudinal grades in percentage respectively are _____.
a) 1.0, 1.5 and 1.5 b) 1.0, 1.5 and 2.0
c) 1.5, 1.5 and 2.0 d) 2.0, 2.0 and 2.0

3) As per ICAO recommendation, the rate of change of longitudinal gradient per 30 m length of vertical curve for A and B type of airports is limited to a maximum of _____.
a) 0.1% b) 0.2%
c) 0.3% d) 0.4%

4) Assertion A: The ratio of arriving and departing aircrafts influences the airport capacity:
Reason R: Landing operation is generally given priority over the taking off operation.
Select your answer based on the coding system given below _____.
a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true and R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

5) An airport has 4 gates. If the weighted average gate occupancy time is 30 minutes and gate utilization factor is 0.5, then the capacity of the gate will be _____.

a) 1 aircraft per hour
b) 2 aircrafts per hour
c) 4 aircrafts per hour
d) 16 aircrafts per hour

6) The capacity of parallel runway pattern depends upon _____.

a) weather conditions and navigational aids available
b) lateral spacing between two runways and weather conditions
c) lateral spacing between two runways and navigational aids available
d) lateral spacing between two runways, weather conditions and navigational aids available.

7) The engine failure case for determining the basic runway length may require _____.

a) only clearway
b) only stop way
c) either a clearway or a stopway
d) either a clearway or a stopway or both

8) The minimum width of clearway is _____.

a) 50 m
b) 100 m
c) 150m
d) 250 m

9) If the monthly mean of average daily temperature for the hottest month of the year is 25° C and the monthly mean of Design of Mas the maximum daily temperature of the same month of the year is 46° C, the airport reference temperature is _____.

a) 32°C
b) 35.5°C
c) 48°C
d) 25°C

10) Consider the following statements regarding ICAO recommendation for correction to basic runway length.

I) The basic runway length should be increased at the rate of 7 percent per 300 m rise in elevation above the mean sea level.
II) The basic runway length after having been corrected for elevation should be further increased at the rate of 1 percent for every 1°C rise in airport reference temperature above the standard atmospheric temperature at that elevation.
III) The runway length after having been corrected for elevation and temperature should be further increased at the rate of 20% for every 1 percent of effective gradient. Of these statements _____.

a) I and II are correct
d) II and III are correct
c) I and III are correct
d) I, II and III are correct

11) The total length of a runway is 1000 m. The elevation at distance 0,200 m, 400 m, 600 m, 800 m and 1000 m are 100.0 m, 99.2 m, 101.0 m, 101.8 m, 101.4 m and 101.0 m respectively. The effective gradient of runway will be _____.

a) 0.10% b) 0.26%
c) 0.43% d) 0.65%

12) The length of runway under standard conditions is 2000 m. The elevation of airport site is 300 m. Its reference temperature is 33.05°C. If the runway is to be constructed with an effective gradient of 0.25 percent, the corrected runway length will be _____.

a) 2500 m b) 2600 m
c) 2700 m d) 2800 m

13) As per ICAO, the minimum basic runway length for A and E type of airport will be _____.

a) 1500 m and 600 m b) 2100 m and 750 m
c) 1500 m and 750 m d) 2100 m and 600 m

14) Zero fuel weight of an aircraft is _____.

a) Equal to empty operating weight
b) Equal to maximum landing weight
c) Less than empty operating weight
d) Equal to sum of empty operating weight and the maximum pay load

Set P

T.Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Airport Planning and Design (BTN01612)

Day & Date: Monday 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figure on fight indicates full marks.
3) Assume suitable data whenever needed & mention it clearly.

Section – I

Q.2 Solve any two questions. **08**

a) Discuss the role of International Airport Authority of India for functioning of airports in India.
b) Discuss design requirements of present day aircraft types.
c) Explain in brief the growth of domestic air traffic in India.

Q.3 Solve any one questions. **10**

a) Explain the various surveys to be conducted and the data to be collected for airport site selection.
b) Explain with neat sketches the limiting heights of objects in the approach and turning zone of an instrumental runway.

Q.4 Solve any two questions. **10**

a) What do you understand by the term basic runway length? Explain the procedure of determining the actual runway length required at a particular site.
b) Explain the necessity of airport classification. Give different systems of classification of airports.
c) What do you understand by the term airport capacity? What are the factors which affect the airport capacity?

Section – II

Q.5 Solve any two questions. **08**

a) A taxiway is to be designed for operating an aircraft which has following characteristics. Determine turning radius of taxiway.
- i) Wheel base - 17.70 m
- ii) Tread of main loading gear - 6.62 m
- iii) Turning speed - 40 kmph
- iv) Coefficient of friction between tyre and pavement surface - 0.13 and width of taxiway - 22.5m.

b) Explain briefly the various factors which affect the layout of taxiway.

c) Discuss the principles of the design of runway intersection area. Draw a typical sketch showing the gradation of the intersection area.

Q.6 Solve any two questions. **10**

a) Calculate the actual length of the runway from the following data Airport elevation: R.L. 100 Airport reference temperature : 28°C, Basic length of runway 600 m, Highest point along the length: R.L. 98.2 Lowest point along the length R.L. 95.2. Check the total correction for elevation plus temperature as per ICAO.

b) Draw cross-section of Airport showing all component parts and explain it in detail.

c) Name and discuss in brief the various methods used for designing flexible airport pavements.

Q.7 Solve any two questions. **10**

a) Discuss the importance for maintenance and rehabilitation of airfield pavements.

b) Discuss the importance of evolution of airfield pavement.

c) What is the requirement of a good hanger site? Draw a neat sketch showing shape and size of hanger suitable for servicing of small aircrafts.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) The minimum width of clearway is _____.
a) 50 m b) 100 m
c) 150m d) 250 m

2) If the monthly mean of average daily temperature for the hottest month of the year is 25° C and the monthly mean of Design of Mas the maximum daily temperature of the same month of the year is 46° C, the airport reference temperature is _____.
a) 32°C b) 35.5°C
c) 48°C d) 25°C

3) Consider the following statements regarding ICAO recommendation for correction to basic runway length.
I) The basic runway length should be increased at the rate of 7 percent per 300 m rise in elevation above the mean sea level.
II) The basic runway length after having been corrected for elevation should be further increased at the rate of 1 percent for every 1°C rise in airport reference temperature above the standard atmospheric temperature at that elevation.
III) The runway length after having been corrected for elevation and temperature should be further increased at the rate of 20% for every 1 percent of effective gradient. Of these statements _____.
a) I and II are correct d) II and III are correct
c) I and III are correct d) I, II and III are correct

4) The total length of a runway is 1000 m. The elevation at distance 0,200 m, 400 m, 600 m, 800 m and 1000 m are 100.0 m, 99.2 m, 101.0 m, 101.8 m, 101.4 m and 101.0 m respectively. The effective gradient of runway will be _____.

a) 0.10% b) 0.26%
c) 0.43% d) 0.65%

5) The length of runway under standard conditions is 2000 m. The elevation of airport site is 300 m. Its reference temperature is 33.05°C. If the runway is to be constructed with an effective gradient of 0.25 percent, the corrected runway length will be _____.

a) 2500 m b) 2600 m
c) 2700 m d) 2800 m

6) As per ICAO, the minimum basic runway length for A and E type of airport will be _____.

a) 1500 m and 600 m b) 2100 m and 750 m
c) 1500 m and 750 m d) 2100 m and 600 m

7) Zero fuel weight of an aircraft is _____.

a) Equal to empty operating weight
b) Equal to maximum landing weight
c) Less than empty operating weight
d) Equal to sum of empty operating weight and the maximum pay load

8) As per ICAO recommendation, minimum width of safety area for instrumental runway should be _____.

a) 78 m b) 150 m
c) 300 m d) 450 m

9) As per ICAO, for A, B, and C type of airports, maximum effective, transverse and longitudinal grades in percentage respectively are _____.

a) 1.0, 1.5 and 1.5 b) 1.0, 1.5 and 2.0
c) 1.5, 1.5 and 2.0 d) 2.0, 2.0 and 2.0

10) As per ICAO recommendation, the rate of change of longitudinal gradient per 30 m length of vertical curve for A and B type of airports is limited to a maximum of _____.

a) 0.1% b) 0.2%
c) 0.3% d) 0.4%

11) Assertion A: The ratio of arriving and departing aircrafts influences the airport capacity:
Reason R: Landing operation is generally given priority over the taking off operation.
Select your answer based on the coding system given below _____.
a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true and R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

12) An airport has 4 gates. If the weighted average gate occupancy time is 30 minutes and gate utilization factor is 0.5, then the capacity of the gate will be _____.
a) 1 aircraft per hour
b) 2 aircrafts per hour
c) 4 aircrafts per hour
d) 16 aircrafts per hour

13) The capacity of parallel runway pattern depends upon _____.
a) weather conditions and navigational aids available
b) lateral spacing between two runways and weather conditions
c) lateral spacing between two runways and navigational aids available
d) lateral spacing between two runways, weather conditions and navigational aids available.

14) The engine failure case for determining the basic runway length may require _____.
a) only clearway
b) only stop way
c) either a clearway or a stopway
d) either a clearway or a stopway or both

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) The total length of a runway is 1000 m. The elevation at distance 0,200 m, 400 m, 600 m, 800 m and 1000 m are 100.0 m, 99.2 m, 101.0 m, 101.8 m, 101.4 m and 101.0 m respectively. The effective gradient of runway will be _____.
a) 0.10% b) 0.26%
c) 0.43% d) 0.65%

2) The length of runway under standard conditions is 2000 m. The elevation of airport site is 300 m. Its reference temperature is 33.05°C. If the runway is to be constructed with an effective gradient of 0.25 percent, the corrected runway length will be _____.
a) 2500 m b) 2600 m
c) 2700 m d) 2800 m

3) As per ICAO, the minimum basic runway length for A and E type of airport will be _____.
a) 1500 m and 600 m b) 2100 m and 750 m
c) 1500 m and 750 m d) 2100 m and 600 m

4) Zero fuel weight of an aircraft is _____.
a) Equal to empty operating weight
b) Equal to maximum landing weight
c) Less than empty operating weight
d) Equal to sum of empty operating weight and the maximum pay load

5) As per ICAO recommendation, minimum width of safety area for instrumental runway should be _____.
a) 78 m b) 150 m
c) 300 m d) 450 m

6) As per ICAO, for A, B, and C type of airports, maximum effective, transverse and longitudinal grades in percentage respectively are _____.

a) 1.0, 1.5 and 1.5 b) 1.0, 1.5 and 2.0
c) 1.5, 1.5 and 2.0 d) 2.0, 2.0 and 2.0

7) As per ICAO recommendation, the rate of change of longitudinal gradient per 30 m length of vertical curve for A and B type of airports is limited to a maximum of _____.

a) 0.1% b) 0.2%
c) 0.3% d) 0.4%

8) Assertion A: The ratio of arriving and departing aircrafts influences the airport capacity:
Reason R: Landing operation is generally given priority over the taking off operation.
Select your answer based on the coding system given below _____.

a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true and R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

9) An airport has 4 gates. If the weighted average gate occupancy time is 30 minutes and gate utilization factor is 0.5, then the capacity of the gate will be _____.

a) 1 aircraft per hour b) 2 aircrafts per hour
c) 4 aircrafts per hour d) 16 aircrafts per hour

10) The capacity of parallel runway pattern depends upon _____.

a) weather conditions and navigational aids available
b) lateral spacing between two runways and weather conditions
c) lateral spacing between two runways and navigational aids available
d) lateral spacing between two runways, weather conditions and navigational aids available.

11) The engine failure case for determining the basic runway length may require _____.

a) only clearway
b) only stop way
c) either a clearway or a stopway
d) either a clearway or a stopway or both

12) The minimum width of clearway is _____.

a) 50 m b) 100 m
c) 150m d) 250 m

13) If the monthly mean of average daily temperature for the hottest month of the year is 25° C and the monthly mean of Design of Mas the maximum daily temperature of the same month of the year is 46° C, the airport reference temperature is _____.

a) 32°C
b) 35.5°C
c) 48°C
d) 25°C

14) Consider the following statements regarding ICAO recommendation for correction to basic runway length.

I) The basic runway length should be increased at the rate of 7 percent per 300 m rise in elevation above the mean sea level.
II) The basic runway length after having been corrected for elevation should be further increased at the rate of 1 percent for every 1°C rise in airport reference temperature above the standard atmospheric temperature at that elevation.
III) The runway length after having been corrected for elevation and temperature should be further increased at the rate of 20% for every 1 percent of effective gradient. Of these statements _____.

a) I and II are correct
d) II and III are correct
c) I and III are correct
d) I, II and III are correct

Section – II

Q.5 Solve any two questions. **08**

a) A taxiway is to be designed for operating an aircraft which has following characteristics. Determine turning radius of taxiway.
- i) Wheel base - 17.70 m
- ii) Tread of main loading gear - 6.62 m
- iii) Turning speed - 40 kmph
- iv) Coefficient of friction between tyre and pavement surface - 0.13 and width of taxiway - 22.5m.

b) Explain briefly the various factors which affect the layout of taxiway.

c) Discuss the principles of the design of runway intersection area. Draw a typical sketch showing the gradation of the intersection area.

Q.6 Solve any two questions. **10**

a) Calculate the actual length of the runway from the following data Airport elevation: R.L. 100 Airport reference temperature : 28°C, Basic length of runway 600 m, Highest point along the length: R.L. 98.2 Lowest point along the length R.L. 95.2. Check the total correction for elevation plus temperature as per ICAO.

b) Draw cross-section of Airport showing all component parts and explain it in detail.

c) Name and discuss in brief the various methods used for designing flexible airport pavements.

Q.7 Solve any two questions. **10**

a) Discuss the importance for maintenance and rehabilitation of airfield pavements.

b) Discuss the importance of evolution of airfield pavement.

c) What is the requirement of a good hanger site? Draw a neat sketch showing shape and size of hanger suitable for servicing of small aircrafts.

T.Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Airport Planning and Design (BTN01612)

Day & Date: Monday 02-06-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data whenever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) The capacity of parallel runway pattern depends upon _____.
a) weather conditions and navigational aids available
b) lateral spacing between two runways and weather conditions
c) lateral spacing between two runways and navigational aids available
d) lateral spacing between two runways, weather conditions and navigational aids available.

2) The engine failure case for determining the basic runway length may require _____.
a) only clearway
b) only stop way
c) either a clearway or a stopway
d) either a clearway or a stopway or both

3) The minimum width of clearway is _____.
a) 50 m b) 100 m
c) 150m d) 250 m

4) If the monthly mean of average daily temperature for the hottest month of the year is 25° C and the monthly mean of Design of Mas the maximum daily temperature of the same month of the year is 46° C, the airport reference temperature is _____.
a) 32°C b) 35.5°C
c) 48°C d) 25°C

5) Consider the following statements regarding ICAO recommendation for correction to basic runway length.

I) The basic runway length should be increased at the rate of 7 percent per 300 m rise in elevation above the mean sea level.

II) The basic runway length after having been corrected for elevation should be further increased at the rate of 1 percent for every 1°C rise in airport reference temperature above the standard atmospheric temperature at that elevation.

III) The runway length after having been corrected for elevation and temperature should be further increased at the rate of 20% for every 1 percent of effective gradient. Of these statements _____.

a) I and II are correct
d) II and III are correct
c) I and III are correct
d) I, II and III are correct

6) The total length of a runway is 1000 m. The elevation at distance 0,200 m, 400 m, 600 m, 800 m and 1000 m are 100.0 m, 99.2 m, 101.0 m, 101.8 m, 101.4 m and 101.0 m respectively. The effective gradient of runway will be _____.

a) 0.10%
b) 0.26%
c) 0.43%
d) 0.65%

7) The length of runway under standard conditions is 2000 m. The elevation of airport site is 300 m. Its reference temperature is 33.05°C. If the runway is to be constructed with an effective gradient of 0.25 percent, the corrected runway length will be _____.

a) 2500 m
b) 2600 m
c) 2700 m
d) 2800 m

8) As per ICAO, the minimum basic runway length for A and E type of airport will be _____.

a) 1500 m and 600 m
b) 2100 m and 750 m
c) 1500 m and 750 m
d) 2100 m and 600 m

9) Zero fuel weight of an aircraft is _____.

a) Equal to empty operating weight
b) Equal to maximum landing weight
c) Less than empty operating weight
d) Equal to sum of empty operating weight and the maximum pay load

10) As per ICAO recommendation, minimum width of safety area for instrumental runway should be _____.

a) 78 m
b) 150 m
c) 300 m
d) 450 m

11) As per ICAO, for A, B, and C type of airports, maximum effective, transverse and longitudinal grades in percentage respectively are _____.

a) 1.0, 1.5 and 1.5
b) 1.0, 1.5 and 2.0
c) 1.5, 1.5 and 2.0
d) 2.0, 2.0 and 2.0

12) As per ICAO recommendation, the rate of change of longitudinal gradient per 30 m length of vertical curve for A and B type of airports is limited to a maximum of _____.

a) 0.1%
b) 0.2%
c) 0.3%
d) 0.4%

13) Assertion A: The ratio of arriving and departing aircrafts influences the airport capacity:
Reason R: Landing operation is generally given priority over the taking off operation.
Select your answer based on the coding system given below _____.

a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true and R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

14) An airport has 4 gates. If the weighted average gate occupancy time is 30 minutes and gate utilization factor is 0.5, then the capacity of the gate will be _____.

a) 1 aircraft per hour
b) 2 aircrafts per hour
c) 4 aircrafts per hour
d) 16 aircrafts per hour

T.Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Airport Planning and Design (BTN01612)

Day & Date: Monday 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figure on fight indicates full marks.
3) Assume suitable data whenever needed & mention it clearly.

Section – I

Q.2 Solve any two questions. **08**

a) Discuss the role of International Airport Authority of India for functioning of airports in India.
b) Discuss design requirements of present day aircraft types.
c) Explain in brief the growth of domestic air traffic in India.

Q.3 Solve any one questions. **10**

a) Explain the various surveys to be conducted and the data to be collected for airport site selection.
b) Explain with neat sketches the limiting heights of objects in the approach and turning zone of an instrumental runway.

Q.4 Solve any two questions. **10**

a) What do you understand by the term basic runway length? Explain the procedure of determining the actual runway length required at a particular site.
b) Explain the necessity of airport classification. Give different systems of classification of airports.
c) What do you understand by the term airport capacity? What are the factors which affect the airport capacity?

Section – II

Q.5 Solve any two questions. **08**

a) A taxiway is to be designed for operating an aircraft which has following characteristics. Determine turning radius of taxiway.
- i) Wheel base - 17.70 m
- ii) Tread of main loading gear - 6.62 m
- iii) Turning speed - 40 kmph
- iv) Coefficient of friction between tyre and pavement surface - 0.13 and width of taxiway - 22.5m.

b) Explain briefly the various factors which affect the layout of taxiway.

c) Discuss the principles of the design of runway intersection area. Draw a typical sketch showing the gradation of the intersection area.

Q.6 Solve any two questions. **10**

a) Calculate the actual length of the runway from the following data Airport elevation: R.L. 100 Airport reference temperature : 28°C, Basic length of runway 600 m, Highest point along the length: R.L. 98.2 Lowest point along the length R.L. 95.2. Check the total correction for elevation plus temperature as per ICAO.

b) Draw cross-section of Airport showing all component parts and explain it in detail.

c) Name and discuss in brief the various methods used for designing flexible airport pavements.

Q.7 Solve any two questions. **10**

a) Discuss the importance for maintenance and rehabilitation of airfield pavements.

b) Discuss the importance of evolution of airfield pavement.

c) What is the requirement of a good hanger site? Draw a neat sketch showing shape and size of hanger suitable for servicing of small aircrafts.

4) Make suitable data wherever needed and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) Blended cements are commonly made by mixing Ordinary Portland Cement (OPC) with which of the following materials?
a) Lime b) Fly ash
c) Gypsum d) Silica fume

2) Coarse aggregates are typically defined as particles that are larger than _____.
a) 2 mm b) 4.75 mm
c) 5 mm d) 10 mm

3) Pulverized Fuel Ash (PFA) is a by product of which industry?
a) Steel industry b) Cement industry
c) Power generation industry d) Paper industry

4) What is the primary factor that determines the workability of fresh concrete?
a) Compressive strength b) Water-cement ratio
c) Aggregate type d) Curing time

5) Which of the following factors can contribute to the segregation of fresh concrete?
a) High water-cement ratio b) Proper mixing
c) Low water-cement ratio d) Adequate compaction

6) The main ingredient that is often added to High-Strength Concrete (HSC) to reduce its water-cement ratio is _____.
a) Super plasticizer b) Fly ash
c) Silica fume d) Air-entraining agent

7) What is the primary advantage of using steel fibers in concrete?
a) Improved ductility and control of cracking
b) Lower cost of concrete
c) Reduced workability
d) Increased permeability

8) Self-Compacting Concrete (SCC) is characterized by _____.
a) High strength and low workability
b) High workability and ability to flow without vibration
c) Low water-cement ratio
d) Reduced permeability due to excess water

9) One of the main challenges of using Recycled Concrete Aggregate (RCA) in new concrete is _____.
a) Increased workability
b) Increased porosity and reduced strength
c) Improved durability
d) Decreased water absorption

10) Mass concrete is defined as concrete with a large volume, typically used in _____.
a) Thin structural elements like beams and slabs
b) Large structural elements like dams and foundations
c) Decorative concrete elements
d) High-rise building facades

11) Which of the following is NOT an advantage of sprayed concrete?
a) Ability to apply to complex shapes
b) Faster application than traditional casting
c) Lower cost of materials
d) Can be applied in thin layers with high strength

12) The primary types of sprayed concrete are _____.
a) Wet mix and dry mix
b) Low strength and high strength
c) Cement-based and polymer-based
d) Precast and cast-in-situ

13) In ferro-cement, the reinforcement is usually made of _____.
a) Large steel bars
b) Wire mesh or small diameter bars
c) Concrete fibers
d) Stainless steel plates

14) Which type of pump is typically used for pumping concrete?
a) Hydraulic piston pump
b) Centrifugal pump
c) Gear pump
d) Concrete pump with twin cylinders or a peristaltic pump

Time: 10:00 AM To 01:00 PM

Instructions:1) In section- I Q. no. 2 is compulsory and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) In section- II Q. no. 6 is compulsory and solve any two questions from the remaining (Q. No. 7, 8, & 9)
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

Section – I

Q.2 Solve any two. **08**
- **a)** What are plasticizers, and how do they improve the workability of concrete?
- **b)** Write history of cement in detail.
- **c)** Explain in detail blended cement.

Q.3 Solve any two questions. **10**
- **a)** Explain in detail fly ash, rise husk ash, silica fume.
- **b)** Define Admixture and explain the different types of admixture in detail.
- **c)** Explain the effect using admixture in the concrete.

Q.4 Solve any two questions. **10**
- **a)** Define workability and factors affecting workability.
- **b)** Explain the term segregation, bleeding, cohesion of concrete, hardness of concrete.
- **c)** Explain the effect of impermeability and particle size on concrete.

Q.5 Solve any one questions. **10**
- **a)** Write a short note on special concrete explain each in details.
  - i) High performance concrete
  - ii) High strength concrete
  - iii) Fibre reinforced concrete
  - iv) Light weight concrete
- **b)** Write a short note on:
  - i) High volume fly ash concrete
  - ii) Self-compacting concrete
  - iii) Recycled concrete
  - iv) High density concrete
  - v) Radiation shielding concrete

Section – II

Q.6 Solve any two. **08**

a) Short note on Ferro cement Concrete.
b) Short note on Sprayed Concrete.
c) Explain in detail Mass Concrete.

Q.7 Solve any two questions. **10**

a) Draw a neat schematic diagram of RMC Plant.
b) Short note on Ready Mix Concrete and its applications to the construction industries.
c) Explain in details different type of RMC Plants.

Q.8 Solve any two questions. **10**

a) Short note on Quality assurance.
b) Write short note on a repair technique of concrete.
c) Why and when NDT Test are performed, explain with its application.

Q.9 Solve any one question. **10**

a) Explain types of concrete vibrators. Also state the advantages and disadvantages of revibration of Concrete.
b) What is mix design? Write down design steps of concrete mix design using IS 10262:2009 methods.

c) Low water-cement ratio
d) Reduced permeability due to excess water

4) One of the main challenges of using Recycled Concrete Aggregate (RCA) in new concrete is _____.
a) Increased workability
b) Increased porosity and reduced strength
c) Improved durability
d) Decreased water absorption

5) Mass concrete is defined as concrete with a large volume, typically used in _____.
a) Thin structural elements like beams and slabs
b) Large structural elements like dams and foundations
c) Decorative concrete elements
d) High-rise building facades

6) Which of the following is NOT an advantage of sprayed concrete?
a) Ability to apply to complex shapes
b) Faster application than traditional casting
c) Lower cost of materials
d) Can be applied in thin layers with high strength

7) The primary types of sprayed concrete are _____.
a) Wet mix and dry mix
b) Low strength and high strength
c) Cement-based and polymer-based
d) Precast and cast-in-situ

8) In ferro-cement, the reinforcement is usually made of _____.
a) Large steel bars
b) Wire mesh or small diameter bars
c) Concrete fibers
d) Stainless steel plates

9) Which type of pump is typically used for pumping concrete?
a) Hydraulic piston pump
b) Centrifugal pump
c) Gear pump
d) Concrete pump with twin cylinders or a peristaltic pump

10) Blended cements are commonly made by mixing Ordinary Portland Cement (OPC) with which of the following materials?
a) Lime b) Fly ash
c) Gypsum d) Silica fume

11) Coarse aggregates are typically defined as particles that are larger than _____.
a) 2 mm b) 4.75 mm
c) 5 mm d) 10 mm

12) Pulverized Fuel Ash (PFA) is a by product of which industry?
a) Steel industry b) Cement industry
c) Power generation industry d) Paper industry

13) What is the primary factor that determines the workability of fresh concrete?
a) Compressive strength b) Water-cement ratio
c) Aggregate type d) Curing time

14) Which of the following factors can contribute to the segregation of fresh concrete?
a) High water-cement ratio b) Proper mixing
c) Low water-cement ratio d) Adequate compaction

T.Y (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Advanced Concrete Technology (BTN01616)

Day & Date: Monday 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In section- I Q. no. 2 is compulsory and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) In section- II Q. no. 6 is compulsory and solve any two questions from the remaining (Q. No. 7, 8, & 9)
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

Section – I

Q.2 Solve any two. **08**
- **a)** What are plasticizers, and how do they improve the workability of concrete?
- **b)** Write history of cement in detail.
- **c)** Explain in detail blended cement.

Q.3 Solve any two questions. **10**
- **a)** Explain in detail fly ash, rise husk ash, silica fume.
- **b)** Define Admixture and explain the different types of admixture in detail.
- **c)** Explain the effect using admixture in the concrete.

Q.4 Solve any two questions. **10**
- **a)** Define workability and factors affecting workability.
- **b)** Explain the term segregation, bleeding, cohesion of concrete, hardness of concrete.
- **c)** Explain the effect of impermeability and particle size on concrete.

Q.5 Solve any one questions. **10**
- **a)** Write a short note on special concrete explain each in details.
  - i) High performance concrete
  - ii) High strength concrete
  - iii) Fibre reinforced concrete
  - iv) Light weight concrete
- **b)** Write a short note on:
  - i) High volume fly ash concrete
  - ii) Self-compacting concrete
  - iii) Recycled concrete
  - iv) High density concrete
  - v) Radiation shielding concrete

Section – II

Q.6 Solve any two. **08**

a) Short note on Ferro cement Concrete.
b) Short note on Sprayed Concrete.
c) Explain in detail Mass Concrete.

Q.7 Solve any two questions. **10**

a) Draw a neat schematic diagram of RMC Plant.
b) Short note on Ready Mix Concrete and its applications to the construction industries.
c) Explain in details different type of RMC Plants.

Q.8 Solve any two questions. **10**

a) Short note on Quality assurance.
b) Write short note on a repair technique of concrete.
c) Why and when NDT Test are performed, explain with its application.

Q.9 Solve any one question. **10**

a) Explain types of concrete vibrators. Also state the advantages and disadvantages of revibration of Concrete.
b) What is mix design? Write down design steps of concrete mix design using IS 10262:2009 methods.

T. Y (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Open Channel Flow & River Hydraulics (BTN01617)

Day & Date: Monday 02-06-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Uniform flow in open channel exists when the flow is steady and the channel is _____.
a) Friction less
b) Non prismatic
c) Prismatic
d) Prismatic and depth of flow is constant along the channel

2) Specific force represents the sum of pressure force and _____.
a) Datum head
b) Momentum flux per unit weight
c) Momentum flux and datum head
d) None

3) If the Froude's number is 8.2 then the jump is known as _____.
a) Steady b) Oscillating
c) Undular d) None

4) Hydraulic jump is observed in _____.
a) Closed channel flow b) Open channel flow
c) Flow changes d) Volumetric change

5) The Reynolds number for a flow in a channel is 1000. What type of flow is it?
a) Laminar b) Turbulent
c) Transition d) Steady

6) The flow in open channel may be characterized as laminar when _____.
a) Re < 500 b) Re > 2000
c) Re > 4000 d) 500 < Re > 2000

7) Which of the following assumptions about a GVF is false?
a) Channel is prismatic
b) Pressure distribution is hydrostatic
c) Flow characteristics change with time
d) Roughness co efficient is constant

8) The dimension of Kinematic viscosity is _____.
a) LT-2 b) L2T-1
c) L3T-1 d) LT-1

9) Hydraulic jump is an example of _____.
a) Gradually varied flow b) Rapidly varied flow
c) Spatially varied flow d) None

10) Shield's diagram is a plot of non-dimensional shear stress (τc) against _____.
a) Relative depth b) Shear Reynold's number
c) Hydraulic radius d) Reynold's number

11) Extreme condition of meanders is called as _____.
a) Leavee b) Spurs
c) Cut-off d) Island

12) Distorted models are required to be prepared for _____.
a) Rivers b) Commercial buildings
c) Railway Tracks d) None

13) In an open channel flow, shooting flow _____.
a) Occur just after a hydraulic jump
b) Be a gradually varied flow
c) Follow a tranquil flow
d) Both b and c

14) What is the wetted area for a triangular channel having depth y and the side slope being Z?
a) Zy2 b) 2Zy
c) Zy d) Z2y

T. Y (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Open Channel Flow & River Hydraulics (BTN01617)

Day & Date: Monday 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary.

Section – I

Q.2 Attempt any FOUR. **16**

a) Derive the Gradually Varied Flow (GVF) equation. State the assumptions made for it.

b) Define momentum energy correction factor (β) and derive its equation.

c) The velocity distribution in rectangular channel of width 'B' and depth 'Yo' was approximated as $V = k1\sqrt{y}$
where $k1$ = constant; calculate the average velocity for the cross-section and correction coefficient 'α' and 'β'.

d) Find the rate of and conveyance for a rectangular channel 7.4 m wide for uniform flow at depth of 3.0 m. The channel is having bed slope as 1/1000. Take n=0.015.

e) What do you understand by most economical channel section? Derive most economical rectangular channel section.

Q.3 Attempt any TWO. **12**

a) Define Hydraulic jump and classify it on the basis of Froude's number.

b) A very wide rectangular channel carries a discharge of 3.5 $m^3/s/m$ width at a 2.2 m due to obstruction the water level rises by 2.0 m Locate the point up stream of the weir where the depth is 3.2 m. Assume bed slope as 0.0002 and 'c' = 50. Use step method and classify water surface profile.

c) What is specific energy curve? Draw a neat sketch and show all details.

Section – II

Q.4 Attempt any FOUR. **16**

a) What do you understand by river training works? Explain its types with examples.

b) From the following data find scale ratio of model:
For model - Velocity of water 1.0 m/s through circular pipe and
For prototype - Velocity of oil 0.12 m/sec through 50 mm diameter pipe.
Assume kinematic viscosity of water as 0.01 cm^2/sec. and for oil 0.006 cm^2/sec. Also find diameter of pipe used for model.

c) Derive 'Reynold's model law'. Where it can be used?

d) Write short notes on
i) Cut-off
ii) Spurs

e) Draw a neat sketch of current meter and explain its working in details.

Q.5 Attempt any TWO. **12**

a) Explain 'Similitude' and what are its types? and derive the equation for Froude's number.

b) Design a regime channel by using 'Lacey's theory' from the data discharge.

c) A spillway 7.0 m high and 150 m long discharges 2100 m^3/sec, under a head of 4.0 m. If 1:16 model of spill way is to be constructed, find the dimensions of model, head over the model and discharge through the model.

a) Explain 'Similitude' and what are its types? and derive the equation for Froude's number.

b) Design a regime channel by using 'Lacey's theory' from the data discharge.

c) A spillway 7.0 m high and 150 m long discharges 2100 m^3/sec, under a head of 4.0 m. If 1:16 model of spill way is to be constructed, find the dimensions of model, head over the model and discharge through the model.

T. Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Solid and Hazardous Waste Management (BTN01618)

Day & Date: Monday, 02-06-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answers from the given options. 14

1) The final functional element in solid waste management system is _____.
a) Transfer & transportation b) Collection
c) Processing & Recovery d) Disposal

2) Household hazardous waste includes batteries and _____.
a) Radioactive waste b) Food waste
c) Nail polish d) Leachate

3) Composting process is affected due to _____.
a) Temperature b) Moisture Content
c) C/N Ratio d) All of above

4) Mechanical size reduction operation includes _____.
a) Shredding b) Grinding
c) Milling d) All of above

5) Recovery of energy in the form of heat is obtained from _____.
a) Combustion process b) Sanitary landfilling
c) Anaerobic process d) None of these

6) Separation, processing of solid waste are used to reduce _____.
a) Volume of S.W. b) Weight of S.W.
c) Both a & b d) None of these _____

7) M R F's term in SWM is used for _____.
a) Material Recovery facilities b) Major Relief funds
c) Minimum Raw Food d) Most Reliable facilities

8) The pyrolysis process of SWM is _____.
a) Endothermic b) Exothermic
c) Heterothermic d) Exhaust

9) The anaerobic method of mechanical composting is _____.
a) Indore Method b) Mangalore Method
c) Bangalore method d) Trench Method

10) Characteristics of hazardous waste includes _____.
a) Ignitibility & Corrosivity b) Reactivity & Toxicity
c) Both a & b d) None of above

11) The biomedical waste management act were enacted in _____.
a) 1976 b) 1980
c) 1988 d) 1998

12) Hazardous biomedical wastes are generated in _____.
a) Hospitals
b) Biological research facilities
c) Industrial biological conversion process
d) All of above

13) The _____ process determines whether exposure to a chemical can increase the incidence of adverse health effect.
a) Exposure identification b) Hazardous assessment
c) Toxicity assessment d) Risk characterization

14) The advantage of waste to energy is to _____.
a) Is economical
b) Recover useful energy
c) High degree of sophistication is required
d) Save energy

Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
Question no. 6 is compulsory in section II, and solve any two questions from the remaining
2) Figures to the right indicates full marks.
3) Assume suitable data if required.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 a) Write advantages and disadvantages of Incineration treatment. **05**
b) Explain theory of composting in brief. **05**

Q.3 a) Explain the functional elements of municipal solid waste management with flow diagram. **05**
b) Distinguish between Indore method and Bangalore method of composting. **04**

Q.4 a) Estimate the Moisture Content of solid waste sample of 100kg using the following data. **06**

Sr. No.	Component	% by mass	% by MC (Moisture Content)
1	Food waste	16	65
2	Paper	36	08
3	Cardboards	05	05
4	Plastics	10	02
5	Grass	12	55
6	Wood	08	04
7	Metals	13	03

b) Write the use of different industrial waste. **03**

Q.5 Write Short Notes on.
a) Municipal solid waste collection method **05**
b) Pyrolysis and benefits of end products **04**

Section – II

Q.6	**a)**	Give importance of SW, also what are steps including before composting process.	**05**
	b)	Write main 5 risk assessment stages and explain objective of risk assessment.	**05**
Q.7	**a)**	Write selection criteria for site where sanitary land filling to be done w.r. to no nuisance to public.	**05**
	b)	Write a note on risk assessment w.r. to operation and control measures.	**04**
Q.8	**a)**	Explain main purpose of performing qualitative and quantitative analysis for risk management and also enlist the steps in. risk quantification.	**05**
	b)	Explain Steps to control for groundwater contamination.	**04**
Q.9	**Write Short Notes on:**		
	a)	Waste minimization	**05**

5) While solving MCQ IS 456-2000, IS 3370 and IS 1343 are not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) The minimum head room over a stair must be _____ **01**

a) 2000 mm b) 2100 mm
c) 2050 mm d) 2300 mm

2) For footing the minimum cover for the reinforcement shall be _____ **01**

a) 30 mm b) 50 mm
c) 25 mm d) 40 mm

3) A column footing supports a load of 1200 kN with a soil SBC of 150 kN/m^2. The minimum area of footing required is _____ **01**

a) 6 m^2 b) 8 m^2
c) 10 m^2 d) 12 m^2

4) In design of footing, the depth considering bending moment is checked at _____ **01**

a) the free end of footing
b) face of the column
c) a distance d/2 (half of the effective depth) from the face of the column
d) a distance d (effective depth) from the face of the column

5) The stability of retaining wall is checked for which of the following condition _____ **01**

a) Overturning about toe b) Overturning about heal
c) Both of above d) None of these

6) The minimum width of stem slab at bottom is for cantilever retaining wall _____ **01**

a) H/15 b) H/12
c) H/18 d) H/20

7) Which IS code governs the design of water tanks? **01**

a) IS 456 b) IS 3370
c) IS 1893 d) IS 1343

8) As per IS 1343 the minimum grade of concrete to be used for post-tensioned and pre-tensioned structure elements are respectively. **01**

a) M20 for both b) M40 and M30
c) M15 and M20 d) M30 and M40

9) If C is creep coefficient, f is original prestress in concrete, m is modular ratio, E is Young's modulus of steel and e is shrinkage strain, the combined effect of creep and shrinkage is _____ **01**

a) $(1-C)mf-eE$ b) $(C-1)mf+eE$
c) $(C-1)mf-eE$ d) $(1-C)mf+eE$

10) A symmetrical prestressed concrete section has an eccentricity of 50 mm and prestress force of 500 kN. The bending moment due to prestressing is _____ **01**

a) 20 kNm b) 25 kNm
c) 30 kNm d) 35 kNm

11) In staircase design find weight of waist slab per meter run if thickness of slab is 280 mm, Riser of 150 mm and tread of 300 mm and unit weight of concrete is 2500 kg/m^3 **02**

a) 7.83 kN/m b) 15.65 kN/m
c) 8.57 kN/m d) 8.73 kN/m

12) A pressed concrete rectangular beam size 300 mm x 900 mm is prestressed with an initial 350 mm at midspan. Stress at top beam section due to prestress alone in N/mm^2 _____ **02**

a) -3.46(tension) b) 2.59(compression)
c) zero d) 864(compression)

Set | P

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Design of Concrete Structures II (BTN01603)

Day & Date: Wednesday, 04-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section I, Q. No. 2 is compulsory and attempt any two questions remaining of the questions.
2) In Section II, Q. No. 6 is compulsory and attempt any two questions remaining of the questions.
3) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.
4) Draw neat Sketch's where required and Assume suitable data if required and state it clearly.

Section – I

Q.2 Design the dog-legged type staircase for a residential building using following data floor to floor height = 3.3 m, No. of flight per floor = 2, size of steps = 150 mm riser and 280 mm tread, live load is 3 kN/m^2 and assume width of stair is 1.0 m. Use M20 concrete and Fe415 steel. The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. **08**

Q.3 Design a rectangular footing for column axially loaded of size 230 mm x 500 mm carrying 1300kN load. The SBC of soil is 190 kN/m^2. Use M20 concrete and Fe415 steel. Sketch the details of reinforcement. **10**

Q.4 Design the stem slab of a cantilever retaining wall, if the overall height is 4.5m. SBC of soil is 180 kN/m^2, angle of repose of the soil is 30° and unit weight of soil 20 kN/m^3, width of the slab base is 3.2 m, toe projection is 0.6 m. Use M25 concrete and Fe500 steel. **10**

Q.5 Design a circular water tank having capacity 50000 liters, resting on firm ground is free at top and bottom is fixed. Depth of water 3.3 m, assume free board of 200 mm and solve by IS code method. Use M20 concrete and Fe415 steel. **10**

Section – II

Q.6 A prestressed concrete beam 230 mm x 750 mm is prestressed by a parabolic cable located at an eccentricity of 120mm at mid span and zero at the supports. If the beam has a span of 10 m and carries a uniformly distributed load of 5 kN/m, find the effective prestressing force necessary in the cable for zero shear stress in the beam. For this condition find the stress at mid span section. Concrete weighs at 25 kN/m^3 **08**

Q.7 A Pretensioned concrete beam 230 mm x 500 mm has a span of 12m. The beam is prestressed by steel wires of area 350mm^2 provided at a uniform eccentricity of 60 mm with an initial prestress of 1200 N/mm^2. Determine the percentage loss of stress in the wires. Take Es = 210 kN/mm^2, Ec = 35 kN/mm^2, Relaxation of steel stress = 5% of the initial stress. Ultimate creep strain = 45×10^{-6} mm/mm per N/mm^2, shrinkage of concrete = 300×10^{-6}. **10**

Q.8 Design PSC I section beam for the following span = 15m, superimposed load of 36 kN/m, cube strength of concrete at 28 days is 35kN/m^2, safe stress in concrete at transfer = 0.5 fck, allowable tensile stress in concrete is 0.129√(fck), safe stress in steel is 60 % of ultimate stress, total loss of stress 18%, ultimate stress in steel 1450 MPa. **10**

Q.9 A prestressed concrete beam 400 mm wide and 800 mm deep. Determine the horizontal, vertical and shear stresses at the point Q(600,600), with bottom of the end block is origin. Find also the principal stresses at Q, the tendons are placed at an eccentricity of 90 mm. The anchor plate is 300 mm wide and 200 mm deep. The prestressing force is 1150 kN. **10**

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Design of Concrete Structures II (BTN01603)

Day & Date: Wednesday, 04-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book).
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.
5) While solving MCQ IS 456-2000, IS 3370 and IS 1343 are not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) The minimum width of stem slab at bottom is for cantilever retaining wall _____ **01**
a) H/15 b) H/12
c) H/18 d) H/20

2) Which IS code governs the design of water tanks? **01**
a) IS 456 b) IS 3370
c) IS 1893 d) IS 1343

3) As per IS 1343 the minimum grade of concrete to be used for post-tensioned and pre-tensioned structure elements are respectively. **01**
a) M20 for both b) M40 and M30
c) M15 and M20 d) M30 and M40

4) If C is creep coefficient, f is original prestress in concrete, m is modular ratio, E is Young's modulus of steel and e is shrinkage strain, the combined effect of creep and shrinkage is _____ **01**
a) $(1-C)mf-eE$ b) $(C-1)mf+eE$
c) $(C-1)mf-eE$ d) $(1-C)mf+eE$

5) A symmetrical prestressed concrete section has an eccentricity of 50 mm and prestress force of 500 kN. The bending moment due to prestressing is _____ **01**
a) 20 kNm b) 25 kNm
c) 30 kNm d) 35 kNm

6) The minimum head room over a stair must be _____ **01**

a) 2000 mm b) 2100 mm
c) 2050 mm d) 2300 mm

7) For footing the minimum cover for the reinforcement shall be _____ **01**

a) 30 mm b) 50 mm
c) 25 mm d) 40 mm

8) A column footing supports a load of 1200 kN with a soil SBC of 150 kN/m^2. The minimum area of footing required is _____ **01**

a) 6 m^2 b) 8 m^2
c) 10 m^2 d) 12 m^2

9) In design of footing, the depth considering bending moment is checked at _____ **01**

a) the free end of footing
b) face of the column
c) a distance d/2 (half of the effective depth) from the face of the column
d) a distance d (effective depth) from the face of the column

10) The stability of retaining wall is checked for which of the following condition _____ **01**

a) Overturning about toe b) Overturning about heal
c) Both of above d) None of these

11) In staircase design find weight of waist slab per meter run if thickness of slab is 280 mm, Riser of 150 mm and tread of 300 mm and unit weight of concrete is 2500 kg/m^3 **02**

a) 7.83 kN/m b) 15.65 kN/m
c) 8.57 kN/m d) 8.73 kN/m

12) A pressed concrete rectangular beam size 300 mm x 900 mm is prestressed with an initial 350 mm at midspan. Stress at top beam section due to prestress alone in N/mm^2 _____ **02**

a) -3.46(tension) b) 2.59(compression)
c) zero d) 864(compression)

Seat No.	

Set **Q**

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Design of Concrete Structures II (BTN01603)

Day & Date: Wednesday, 04-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section I, Q. No. 2 is compulsory and attempt any two questions remaining of the questions.
2) In Section II, Q. No. 6 is compulsory and attempt any two questions remaining of the questions.
3) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.
4) Draw neat Sketch's where required and Assume suitable data if required and state it clearly.

Section – I

Q.2 Design the dog-legged type staircase for a residential building using following data floor to floor height = 3.3 m, No. of flight per floor = 2, size of steps = 150 mm riser and 280 mm tread, live load is 3 kN/m^2 and assume width of stair is 1.0 m. Use M20 concrete and Fe415 steel. The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. **08**

Q.3 Design a rectangular footing for column axially loaded of size 230 mm x 500 mm carrying 1300kN load. The SBC of soil is 190 kN/m^2. Use M20 concrete and Fe415 steel. Sketch the details of reinforcement. **10**

Q.4 Design the stem slab of a cantilever retaining wall, if the overall height is 4.5m. SBC of soil is 180 kN/m^2, angle of repose of the soil is 30° and unit weight of soil 20 kN/m^3, width of the slab base is 3.2 m, toe projection is 0.6 m. Use M25 concrete and Fe500 steel. **10**

Q.5 Design a circular water tank having capacity 50000 liters, resting on firm ground is free at top and bottom is fixed. Depth of water 3.3 m, assume free board of 200 mm and solve by IS code method. Use M20 concrete and Fe415 steel. **10**

Section – II

Q.6 A prestressed concrete beam 230 mm x 750 mm is prestressed by a parabolic cable located at an eccentricity of 120mm at mid span and zero at the supports. If the beam has a span of 10 m and carries a uniformly distributed load of 5 kN/m, find the effective prestressing force necessary in the cable for zero shear stress in the beam. For this condition find the stress at mid span section. Concrete weighs at 25 kN/m^3 **08**

Q.7 A Pretensioned concrete beam 230 mm x 500 mm has a span of 12m. The beam is prestressed by steel wires of area 350mm^2 provided at a uniform eccentricity of 60 mm with an initial prestress of 1200 N/mm^2. Determine the percentage loss of stress in the wires. Take Es = 210 kN/mm^2, Ec = 35 kN/mm^2, Relaxation of steel stress = 5% of the initial stress. Ultimate creep strain = 45×10^{-6} mm/mm per N/mm^2, shrinkage of concrete = 300×10^{-6}. **10**

Q.8 Design PSC I section beam for the following span = 15m, superimposed load of 36 kN/m, cube strength of concrete at 28 days is 35kN/m^2, safe stress in concrete at transfer = 0.5 fck, allowable tensile stress in concrete is 0.129√(fck), safe stress in steel is 60 % of ultimate stress, total loss of stress 18%, ultimate stress in steel 1450 MPa. **10**

Q.9 A prestressed concrete beam 400 mm wide and 800 mm deep. Determine the horizontal, vertical and shear stresses at the point Q(600,600), with bottom of the end block is origin. Find also the principal stresses at Q, the tendons are placed at an eccentricity of 90 mm. The anchor plate is 300 mm wide and 200 mm deep. The prestressing force is 1150 kN. **10**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) If C is creep coefficient, f is original prestress in concrete, m is modular ratio, E is Young's modulus of steel and e is shrinkage strain, the combined effect of creep and shrinkage is _____ **01**

a) $(1-C)mf-eE$ b) $(C-1)mf+eE$
c) $(C-1)mf-eE$ d) $(1-C)mf+eE$

2) A symmetrical prestressed concrete section has an eccentricity of 50 mm and prestress force of 500 kN. The bending moment due to prestressing is _____ **01**

a) 20 kNm b) 25 kNm
c) 30 kNm d) 35 kNm

3) The minimum head room over a stair must be _____ **01**

a) 2000 mm b) 2100 mm
c) 2050 mm d) 2300 mm

4) For footing the minimum cover for the reinforcement shall be _____ **01**

a) 30 mm b) 50 mm
c) 25 mm d) 40 mm

5) A column footing supports a load of 1200 kN with a soil SBC of 150 kN/m^2. The minimum area of footing required is _____ **01**

a) 6 m^2 b) 8 m^2
c) 10 m^2 d) 12 m^2

6) In design of footing, the depth considering bending moment is checked at _____ **01**

a) the free end of footing
b) face of the column
c) a distance d/2 (half of the effective depth) from the face of the column
d) a distance d (effective depth) from the face of the column

7) The stability of retaining wall is checked for which of the following condition _____ **01**

a) Overturning about toe
b) Overturning about heal
c) Both of above
d) None of these

8) The minimum width of stem slab at bottom is for cantilever retaining wall _____ **01**

a) H/15
b) H/12
c) H/18
d) H/20

9) Which IS code governs the design of water tanks? **01**

a) IS 456
b) IS 3370
c) IS 1893
d) IS 1343

10) As per IS 1343 the minimum grade of concrete to be used for post-tensioned and pre-tensioned structure elements are respectively. **01**

a) M20 for both
b) M40 and M30
c) M15 and M20
d) M30 and M40

11) In staircase design find weight of waist slab per meter run if thickness of slab is 280 mm, Riser of 150 mm and tread of 300 mm and unit weight of concrete is 2500 kg/m^3 **02**

a) 7.83 kN/m
b) 15.65 kN/m
c) 8.57 kN/m
d) 8.73 kN/m

12) A pressed concrete rectangular beam size 300 mm x 900 mm is prestressed with an initial 350 mm at midspan. Stress at top beam section due to prestress alone in N/mm^2 _____ **02**

a) -3.46(tension)
b) 2.59(compression)
c) zero
d) 864(compression)

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) A column footing supports a load of 1200 kN with a soil SBC of 150 kN/m^2. The minimum area of footing required is _____ **01**

a) $6\ m^2$ b) $8\ m^2$
c) $10\ m^2$ d) $12\ m^2$

2) In design of footing, the depth considering bending moment is checked at _____ **01**

a) the free end of footing
b) face of the column
c) a distance d/2 (half of the effective depth) from the face of the column
d) a distance d (effective depth) from the face of the column

3) The stability of retaining wall is checked for which of the following condition _____ **01**

a) Overturning about toe b) Overturning about heal
c) Both of above d) None of these

4) The minimum width of stem slab at bottom is for cantilever retaining wall _____ **01**

a) H/15 b) H/12
c) H/18 d) H/20

5) Which IS code governs the design of water tanks? **01**

a) IS 456 b) IS 3370
c) IS 1893 d) IS 1343

6) As per IS 1343 the minimum grade of concrete to be used for post-tensioned and pre-tensioned structure elements are respectively. **01**

a) M20 for both
b) M40 and M30
c) M15 and M20
d) M30 and M40

7) If C is creep coefficient, f is original prestress in concrete, m is modular ratio, E is Young's modulus of steel and e is shrinkage strain, the combined effect of creep and shrinkage is _____ **01**

a) $(1 - C)mf - eE$
b) $(C - 1)mf + eE$
c) $(C - 1)mf - eE$
d) $(1 - C)mf + eE$

8) A symmetrical prestressed concrete section has an eccentricity of 50 mm and prestress force of 500 kN. The bending moment due to prestressing is _____ **01**

a) 20 kNm
b) 25 kNm
c) 30 kNm
d) 35 kNm

9) The minimum head room over a stair must be _____ **01**

a) 2000 mm
b) 2100 mm
c) 2050 mm
d) 2300 mm

10) For footing the minimum cover for the reinforcement shall be _____ **01**

a) 30 mm
b) 50 mm
c) 25 mm
d) 40 mm

11) In staircase design find weight of waist slab per meter run if thickness of slab is 280 mm, Riser of 150 mm and tread of 300 mm and unit weight of concrete is 2500 kg/m^3 **02**

a) 7.83 kN/m
b) 15.65 kN/m
c) 8.57 kN/m
d) 8.73 kN/m

12) A pressed concrete rectangular beam size 300 mm x 900 mm is prestressed with an initial 350 mm at midspan. Stress at top beam section due to prestress alone in N/mm^2 _____ **02**

a) -3.46(tension)
b) 2.59(compression)
c) zero
d) 864(compression)

Principles of Management and Quantitative Techniques (BTN01604)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) _____ is the process of taking the necessary preventive and corrective action to ensure that organizational objectives are achieved as effectively as possible.
a) Planning b) Staffing
c) Controlling d) Directing

2) Planning is _____.
a) Setting goal b) SWOT analysis
c) Selection of best alternative d) All of these

3) In case of infeasible solution to linear programming, the infeasibility depends on _____.
a) Objective function b) Constraints
c) Both a) and b) d) None of these

4) Graphical method to solve linear programming problem is commonly used if _____.
a) no. of decision variables is two
b) no. of decision variables is three
c) no. of decision variables is four
d) no. of decision variables is one

5) A game where in the gain of one player equals to loss of other is called _____ game.
a) Zero sum b) Three persons
c) 2 x n game d) M x 2 game

6) Games without a saddle point require players to play _____.
a) Pure strategy b) Mixed strategy
c) Market strategy d) None

7) Benefits of lean production may include: _____.
a) It enables a company to deliver on demand,
b) Minimize inventory, maximize the use of multi-skilled employees
c) Flatten the management structure and focus resources where they are most effective
d) All of the above

8) Lean construction includes _____.
a) adding value added things b) removing non value added things
c) minimizing the waste d) all of the above

9) _____ stock is the lower limit of stock below which the stock should not be allowed to fall.
a) Maximum b) Average
c) Safety d) Standard

10) The penalty costs that are incurred as a result of running out of stocks are known as _____cost.
a) Procurement b) Stock out
c) Carrying d) Holding

11) Average chart & range chart are for _____.
a) Attributes b) Variables
c) Both d) None

12) Sampling is the process of determining the quality of a _____.
a) Large group from a small part
b) Small part from a large group
c) Small group from a small part
d) Small group at random

13) An enterprise is a group of people with _____.
a) common goal
b) separate goal for each department
c) multiple goals
d) two or more goals

14) Which of the following describes an ERP system?
a) ERP systems provide a foundation for collaboration between departments
b) ERP systems enable people in different business areas to communicate
c) ERP systems have been widely adopted in large organisations to store critical knowledge used to make the decisions that drive the organisation's performance

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Principles of Management and Quantitative Techniques (BTN01604)

Day & Date: Friday, 06-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 Attempt any three. **24**

a) Write a short note on.
i) Explain difference between Formal organization and Informal organization
ii) Communication in management

b) Obtain the initial basic feasible solution of a transportation problem whose cost and requirement table is as below, solve by the North West corner Method.

Origin/ Destination	D1	D2	D3	Supply
O1	2	7	4	5
O2	3	3	1	8
O3	5	4	7	7
O4	1	6	2	14
Demand	**7**	**9**	**18**	

c) Solve by,
i) Hurwicz criterion Assume A=0.7
ii) Laplace Criterion

ALTERNATIVES	STATE OF NATURE (PRODUCT DEMAND)			
	HIGH	MODERATE	LOW	NIL
EXPAND	4000	-100	6000	18000
CONSTRUCT	20000	5000	400	0
SUBCONTRACT	20000	15000	-2000	1000

d) Write the answers below.
i) What is the meaning of lean Construction?
ii) Why is there a need for Productivity measurement and Improvement?

e) Solve the Assignment problem by using Assignment (Hungarian Method), Assign the jobs for different machines so as to minimize the total cost.

Job	Machine			
	A	**B**	**C**	**D**
1	8	26	17	11
2	13	28	4	26
3	38	19	18	15
4	19	26	24	10

Q.3 Attempt the following (Any One). **04**

a) Explain functions of Management that make the management process.

b) Consider payoff matrix with respect to player A & solve it optimally, Find the value of Game & strategies of player A and Player B

		Player B	
		1	2
Player A	1	6	9
	2	8	4

Section – II

Q.4 Attempt the following (Any Three) **24**

a) Write a short Note on
- i) EOQ
- ii) Safety Stock required on construction site.

b) Write a short note on Control charts $(\bar{x}, R, p, c)$ in statistical quality control.

c) Find the A Class, B Class and C Class Material, for following and draw the Graph.

Item Number	Annual Consumption in unit	Unit Price in Rs
1	700	50
2	2400	30
3	150	100
4	60	220
5	3800	15
6	4000	5
7	6000	2
8	300	35
9	30	80
10	2900	4

d) Write a short note on Construction ERP and safety measures in ERP.

e) A company manufactures screws to a nominal diameter 0.500 ± 0.030cm. Five samples were taken randomly from a manufactured lot and three measurements were taken for each sample at different lengths. The reading table is as below
Calculate the control limits on $\bar{x}$ chart and Draw $\bar{x}$ chart.
Assume n = 3, A2 = 1.02, D4 = 2.57, D3 = 0

Sample no	Measurements per sample cm (x)		
	1	2	3
1	0.488	0.489	0.505
2	0.494	0.495	0.499
3	0.498	0.515	0.487
4	0.492	0.509	0.514
5	0.490	0.508	0.499

Q.5 Write a short note on any one of following. **04**

a) Break even analysis

b) What are the advantages and disadvantages of ERP?

Seat No.

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Lean construction includes _____.
a) adding value added things b) removing non value added things
c) minimizing the waste d) all of the above

2) _____ stock is the lower limit of stock below which the stock should not be allowed to fall.
a) Maximum b) Average
c) Safety d) Standard

3) The penalty costs that are incurred as a result of running out of stocks are known as _____cost.
a) Procurement b) Stock out
c) Carrying d) Holding

4) Average chart & range chart are for _____.
a) Attributes b) Variables
c) Both d) None

5) Sampling is the process of determining the quality of a _____.
a) Large group from a small part
b) Small part from a large group
c) Small group from a small part
d) Small group at random

6) An enterprise is a group of people with _____.
a) common goal
b) separate goal for each department
c) multiple goals
d) two or more goals

7) Which of the following describes an ERP system?
a) ERP systems provide a foundation for collaboration between departments
b) ERP systems enable people in different business areas to communicate
c) ERP systems have been widely adopted in large organisations to store critical knowledge used to make the decisions that drive the organisation's performance
d) All of the above

8) _____ is the process of taking the necessary preventive and corrective action to ensure that organizational objectives are achieved as effectively as possible.
a) Planning b) Staffing
c) Controlling d) Directing

9) Planning is _____.
a) Setting goal b) SWOT analysis
c) Selection of best alternative d) All of these

10) In case of infeasible solution to linear programming, the infeasibility depends on _____.
a) Objective function b) Constraints
c) Both a) and b) d) None of these

11) Graphical method to solve linear programming problem is commonly used if _____.
a) no. of decision variables is two
b) no. of decision variables is three
c) no. of decision variables is four
d) no. of decision variables is one

12) A game where in the gain of one player equals to loss of other is called _____ game.
a) Zero sum b) Three persons
c) 2 x n game d) M x 2 game

13) Games without a saddle point require players to play _____.
a) Pure strategy b) Mixed strategy
c) Market strategy d) None

14) Benefits of lean production may include: _____.
a) It enables a company to deliver on demand,
b) Minimize inventory, maximize the use of multi-skilled employees
c) Flatten the management structure and focus resources where they are most effective
d) All of the above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct option. 14

1) Pandrol clips or Elastic Clips are used for _____.
a) Holding the rails to the concrete sleepers
b) Fixing the Double-headed rails to the wooden sleepers
c) Fixing the Bull-headed rails to the wooden sleepers
d) Fixing the Flat-footed rails to the cast iron sleepers

2) For a sleeper density of (n+5), number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is _____.
a) 975 b) 918
c) 900 d) 980

3) The gauge is the distance between _____.
a) Running faces of rails
b) Outer faces of the rails
c) Center to center of rails
d) Half of center to center distance of rails

4) What is the gauge of the BG (Broad Gauge) railway track considered?
a) 0.72m b) 1.676m
c) 1.0m d) 1.50m

5) Longitudinal movement of rails with respect to sleepers is called?
a) Coning of wheels b) Creep of rails
c) Wear of rails d) Tilting of rails

6) The angle between the gauge faces of the stock rail and tongue rail is called?
a) Switch angle b) Angle of crossing
c) Angle of turnout d) None of these

7) Which one of the following types of steel is used in the manufacturing of metro and mono rails?

a) Mild Steel b) Cast steel
c) Manganese Steel d) Bessemer Steel

8) The sleepers in the form of two bowls placed under each rail and connected together bar, are known as?

a) Plate sleepers b) Duplex sleepers
c) Pot sleepers d) Box Sleepers

9) The magnetic azimuth of one end of a runway is 80^0 measured clockwise from the magnetic north. The other end of the runway will be numbered as _____.

a) 16 b) 24
c) 26 d) 8

10) Total correction for elevation and temperature for a runway should not be more than?

a) 15% b) 20%
c) 25% d) 35%

11) Which of the following is used for servicing and repairs of the aircraft?

a) Apron b) Hanger
c) Terminal Building d) Holding Apron

12) The phenomenon of movement and deposition of sand in a zig-zag style due to drifting of sand in the vicinity of coast is called _____.

a) Littoral drift b) Sedimentation
c) Beach drift d) Trough action

13) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.

a) Dolphin b) Wharf
c) Pier heads d) Jetties

14) Slip is the space of water area between two _____.

a) Adjacent fenders b) Adjacent piers
c) Adjacent jetties d) Adjacent dolphins

Set | P

T. Y (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Railway, Airport & Harbour Engineering (BTN01605)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).

Section – I

Q.2 Answer any two questions. (each carry 7 marks) **14**

a) List out the various gauges prevailing in India with their gauge widths. What factors govern the selection of a suitable gauge? Discuss.

b) Discuss the necessity and effects of the coning of wheels and tilting of rails.

c) What do you understand by a. railway track or a permanent way? Mention the requirements of an ideal permanent way.

d) What are the functions of rails? Name the various types of rails in use. Which one is widely used now? How is the weight of a rail section usually determined?

Q.3 Answer any two questions. (each carry 7 marks) **14**

a) If the ruling gradient is 1 in 150 on a particular section of Broad Gauge and at the same a curve of. 4 degrees is situated on this ruling gradient, what should be the allowable ruling gradient?

b) Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22 tonnes each can pull on a straight level track at a speed of 80 km/h. Also, calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. Assume the coefficient of friction to be 0.2.

c) Differentiate between the following:
i) Reception signals and departure signals
ii) Semaphore signal and warner signal
iii) Repeating signal and co-acting signal

d) Illustrate the working principle of key interlocking and mechanical interlocking with merits and de-merits.

Section – II

Q.4 Answer any two questions. (each carry 7 marks) **14**

a) What are the factors which influence the location of an airport?

b) Explain the importance of Airport Planning.

c) Calculate the actual length of the runway from the following data:
Airport Elevation: R.L-100
Airport Reference Temperature-28^0C
Basic Runway Length-600m
Highest Point along the length-R. L-98.2
Lowest Point along the length. R.L-95.2

d) The longitudinal section of the runway provides the following data:

End to end of runway (m)	Gradient (%)
0 to 200	+ 1
200 to 600	-1
600 to 1200	+0.8
1200 to 1600	+0.2

Calculate the effective gradient of the runway.

Q.5 Answer any two questions. (each carry 7 marks) **14**

a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle, of turn is 35^0 and the maximum turn-off speed is 80 kmph. Assume the radius of entrance curve =731m, runway width=45m, and taxiway width=22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m.

b) Draw a neat sketch of the dry dock (plan and section) label all components, and explain the working principle of the dry dock.

c) What are the fenders? Why are they used? Describe various types of fenders with sketches.

d) Draw a typical layout of an artificial harbour and explain briefly, the function of the Jetty, Quay walls, and turning basin.

CIVIL ENGINEERING
Railway, Airport & Harbour Engineering (BTN01605)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct option. **14**

1) The sleepers in the form of two bowls placed under each rail and connected together bar, are known as?
a) Plate sleepers b) Duplex sleepers
c) Pot sleepers d) Box Sleepers

2) The magnetic azimuth of one end of a runway is 80^0 measured clockwise from the magnetic north. The other end of the runway will be numbered as _____.
a) 16 b) 24
c) 26 d) 8

3) Total correction for elevation and temperature for a runway should not be more than?
a) 15% b) 20%
c) 25% d) 35%

4) Which of the following is used for servicing and repairs of the aircraft?
a) Apron b) Hanger
c) Terminal Building d) Holding Apron

5) The phenomenon of movement and deposition of sand in a zig-zag style due to drifting of sand in the vicinity of coast is called _____.
a) Littoral drift b) Sedimentation
c) Beach drift d) Trough action

6) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.
a) Dolphin b) Wharf
c) Pier heads d) Jetties

7) Slip is the space of water area between two _____.
a) Adjacent fenders b) Adjacent piers
c) Adjacent jetties d) Adjacent dolphins

8) Pandrol clips or Elastic Clips are used for _____.
a) Holding the rails to the concrete sleepers
b) Fixing the Double-headed rails to the wooden sleepers
c) Fixing the Bull-headed rails to the wooden sleepers
d) Fixing the Flat-footed rails to the cast iron sleepers

9) For a sleeper density of (n+5), number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is _____.
a) 975 b) 918
c) 900 d) 980

10) The gauge is the distance between _____.
a) Running faces of rails
b) Outer faces of the rails
c) Center to center of rails
d) Half of center to center distance of rails

11) What is the gauge of the BG (Broad Gauge) railway track considered?
a) 0.72m b) 1.676m
c) 1.0m d) 1.50m

12) Longitudinal movement of rails with respect to sleepers is called?
a) Coning of wheels b) Creep of rails
c) Wear of rails d) Tilting of rails

13) The angle between the gauge faces of the stock rail and tongue rail is called?
a) Switch angle b) Angle of crossing
c) Angle of turnout d) None of these

14) Which one of the following types of steel is used in the manufacturing of metro and mono rails?
a) Mild Steel b) Cast steel
c) Manganese Steel d) Bessemer Steel

Disaster Preparedness and Response (BTN01620)

Day & Date: Thursday 12-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) What does the "P" in "PPE" stand for in disaster management?
a) Protective b) Preparedness
c) Precautionary d) Planning

2) Which of the following is NOT a recommended item for an emergency supply kit?
a) Bottled water b) Non-perishable food items
c) Candles d) Portable radio

3) What does the "R" stand for in the "DRR" framework?
a) Recovery b) Reduction
c) Relief d) Readiness

4) Which disaster is typically associated with a sudden and violent shaking of the ground?
a) Hurricane b) Tsunami
c) Earthquake d) Tornado

5) What is the recommended method for communication during a disaster when mobile networks are down?
a) Text messaging b) Social media
c) Using landline phones d) Sending emails

6) What does the "E" stand for in the "FEMA" agency?
a) Emergency b) Evacuation
c) Environmental d) Efficiency

7) What is the primary purpose of conducting disaster drills?
   a) To evaluate the effectiveness of emergency responders
   b) To ensure that individuals know what to do in an emergency
   c) To simulate a disaster scenario for entertainment
   d) To provide an opportunity for first responders to practice

8) Which of the following is NOT a recommended action during a flood?
   a) Evacuating to higher ground
   b) Driving through flooded areas
   c) Turning off utilities if instructed
   d) Avoiding contact with floodwater

9) What is the purpose of a "safe room" in disaster preparedness?
   a) To store emergency supplies
   b) To provide shelter during a disaster
   c) To act as a communication center
   d) To serve as a meeting point for family members

10) Which organization is responsible for coordinating federal disaster response efforts in the United States?
   a) FEMA
   b) WHO
   c) Red Cross
   d) CDC

11) What should you do if you are indoors during an earthquake?
   a) Run outside immediately
   b) Stand in a doorway
   c) Take cover under a sturdy piece of furniture
   d) Hide in the bathroom

12) What is the primary purpose of a "go bag" in disaster preparedness?
   a) To carry essential items during evacuation
   b) To store emergency supplies at home
   c) To provide shelter during a disaster
   d) To communicate with emergency services

13) Which of the following is a key component of community resilience in disaster management?
   a) Isolation
   b) Dependency
   c) Preparedness
   d) Panic

14) What is the "golden hour" in disaster response?
   a) The first hour following a disaster, when emergency response is critical
   b) The hour of peak disaster impact
   c) The time when disaster recovery efforts begin
   d) The hour when most fatalities occur

T.Y. (B. Tech.) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Disaster Preparedness and Response (BTN01620)

Day & Date: Thursday 12-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from Q. No. 2,3 and 4
2) Solve any two questions from Q. No. 5,6 and 7
3) Figures to the right indicate full marks.

Section – I

Q.2	**a)**	What are the key elements of an effective disaster preparedness plan?	**07**
	b)	Write a short note on disaster preparedness with special needs.	**07**
Q.3	**a)**	Explain concept and significance of disaster preparedness plan.	**07**
	b)	What role does early warning systems play in disaster preparedness and response?	**07**
Q.4	**a)**	Explain the role of government in disaster preparedness.	**07**
	b)	Explain the role of education and communication in disaster preparedness.	**07**

Section – II

Q.5	**a)**	Explain identification, propositioning and deployment function in disaster response.	**07**
	b)	What are some best practices for coordinating and collaborating with local, national, and international agencies during disaster response efforts?	**07**
Q.6	**a)**	Explain disaster response plan.	**07**
	b)	How can government agencies and NGOs collaborate more effectively in disaster management and relief efforts?	**07**
Q,7	**a)**	Explain impact of media coverage and public communication on disaster preparedness.	**07**
	b)	Explain role of media in disaster mitigation.	**07**

Seat No.		Set	Q

T.Y. (B. Tech.) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Disaster Preparedness and Response (BTN01620)

Day & Date: Thursday 12-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Which of the following is NOT a recommended action during a flood?
a) Evacuating to higher ground
b) Driving through flooded areas
c) Turning off utilities if instructed
d) Avoiding contact with floodwater

2) What is the purpose of a "safe room" in disaster preparedness?
a) To store emergency supplies
b) To provide shelter during a disaster
c) To act as a communication center
d) To serve as a meeting point for family members

3) Which organization is responsible for coordinating federal disaster response efforts in the United States?
a) FEMA b) WHO
c) Red Cross d) CDC

4) What should you do if you are indoors during an earthquake?
a) Run outside immediately
b) Stand in a doorway
c) Take cover under a sturdy piece of furniture
d) Hide in the bathroom

5) What is the primary purpose of a "go bag" in disaster preparedness?
a) To carry essential items during evacuation
b) To store emergency supplies at home
c) To provide shelter during a disaster
d) To communicate with emergency services

6) Which of the following is a key component of community resilience in disaster management?
a) Isolation
b) Dependency
c) Preparedness
d) Panic

7) What is the "golden hour" in disaster response?
a) The first hour following a disaster, when emergency response is critical
b) The hour of peak disaster impact
c) The time when disaster recovery efforts begin
d) The hour when most fatalities occur

8) What does the "P" in "PPE" stand for in disaster management?
a) Protective
b) Preparedness
c) Precautionary
d) Planning

9) Which of the following is NOT a recommended item for an emergency supply kit?
a) Bottled water
b) Non-perishable food items
c) Candles
d) Portable radio

10) What does the "R" stand for in the "DRR" framework?
a) Recovery
b) Reduction
c) Relief
d) Readiness

11) Which disaster is typically associated with a sudden and violent shaking of the ground?
a) Hurricane
b) Tsunami
c) Earthquake
d) Tornado

12) What is the recommended method for communication during a disaster when mobile networks are down?
a) Text messaging
b) Social media
c) Using landline phones
d) Sending emails

13) What does the "E" stand for in the "FEMA" agency?
a) Emergency
b) Evacuation
c) Environmental
d) Efficiency

14) What is the primary purpose of conducting disaster drills?
a) To evaluate the effectiveness of emergency responders
b) To ensure that individuals know what to do in an emergency
c) To simulate a disaster scenario for entertainment
d) To provide an opportunity for first responders to practice

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) The most important factor that is required for road geometrics is _____.
a) Speed of Vehicle b) Weight of Vehicle
c) Economy of construction d) Aesthetics of Road

2) Raising the outer edge of pavement with respect to inner edge on horizontal curve is known as _____.
a) Kerb b) Camber
c) Superelevation d) SSD

3) The report that includes all the works including soil, bridges, topography, material studies and drainage studies is called as ____.
a) Feasibility report b) Detailed project report
c) Survey report d) Primary report

4) Highway should be planned for _____
a) Present requirements b) Traffic developments
c) Traffic studies d) Present and future development

5) Which of the following will come under the manual method of road survey?
a) GIS b) Windshield survey
c) Walking Survey d) Floating Car Survey

6) Which of the following is included in the road project survey report?
a) Location b) Terrain
c) Windspeed d) Slope

7) The most raised portion of the pavement is called _____.
a) Angle of Banking b) Widening
c) Crown d) Shoulder

8) The extra width of pavement is provided on _____.
a) Horizontal Curve b) Summit Curve
c) Vertical Curve d) Valley Curve

9) The main purpose of providing camber is _____.
a) To drain off rain water b) Skid resistance
c) To maintain Equilibrium d) Geometric design purpose

10) For small projects which type of method is used for the calculation of project time?
a) Milestone chart b) PERT
c) Bar chart d) CPM

11) EIA is study of probable change in socio economic and _____.
a) biophysical b) geological
c) hydrological d) potential

12) EIA is _____ and _____ environmental impacts assessment.
a) social and benefit b) social and adverse
c) beneficial and adverse d) None of above

13) In India, the type of traffic assumed to design pavements is _____.
a) Low Traffic Flow b) Heavy Traffic Flow
c) Mixed Traffic Flow d) Very Low Traffic Flow

14) Los Angeles testing machine is used to conduct _____.
a) Abrasion test b) Impact test
c) Attrition test d) Crushing strength test

2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary.

Section – I

Q.2 Answer any three **24**

a) How the GIS is used for Highway Projects from planning stage to construction stage?
b) Write in detail about 'Maharashtra Samruddhi Mahamarg' with its Concept, Project Benefits & Project Details.
c) Design the rate of superelevation for a horizontal highway curve of radius 500 meter and design speed 100 kmph.
d) How the traffic surveys & Traffic forecasting are required for assessing roadway requirements?
e) What is importance of 'Highway Drainage'? Elaborate its different types.

Q.3 Write short note (Any One) **04**

a) Street Lighting
b) Origin- destination characteristics and studies

Section – II

Q.4 Answer any three. **24**

a) Write a Tender evaluation process in detail regarding Highway Projects.
b) What is EIA? Explain stepwise procedure for its assessment?
c) Explain stepwise procedure for construction of flexible pavement road.
d) Elaborate 'implementation of environment management plan'.
e) Distinguish between Flexible Pavement & Rigid Pavement.

Q.5 Write short note (Any One) **04**

a) BOQ
b) Preparation of tender documents

Q.2 Answer any three **24**

a) How the GIS is used for Highway Projects from planning stage to construction stage?
b) Write in detail about 'Maharashtra Samruddhi Mahamarg' with its Concept, Project Benefits & Project Details.
c) Design the rate of superelevation for a horizontal highway curve of radius 500 meter and design speed 100 kmph.
d) How the traffic surveys & Traffic forecasting are required for assessing roadway requirements?
e) What is importance of 'Highway Drainage'? Elaborate its different types.

Q.3 Write short note (Any One) **04**

a) Street Lighting
b) Origin- destination characteristics and studies

Section – II

Q.4 Answer any three. **24**

a) Write a Tender evaluation process in detail regarding Highway Projects.
b) What is EIA? Explain stepwise procedure for its assessment?
c) Explain stepwise procedure for construction of flexible pavement road.
d) Elaborate 'implementation of environment management plan'.
e) Distinguish between Flexible Pavement & Rigid Pavement.

Q.5 Write short note (Any One) **04**

a) BOQ
b) Preparation of tender documents

T.Y. (B. Tech.) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Roads and Highway Project Development (BTN01621)

Day & Date: Thursday, 12-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Which of the following is included in the road project survey report?
a) Location b) Terrain
c) Windspeed d) Slope

2) The most raised portion of the pavement is called _____.
a) Angle of Banking b) Widening
c) Crown d) Shoulder

3) The extra width of pavement is provided on _____.
a) Horizontal Curve b) Summit Curve
c) Vertical Curve d) Valley Curve

4) The main purpose of providing camber is _____.
a) To drain off rain water b) Skid resistance
c) To maintain Equilibrium d) Geometric design purpose

5) For small projects which type of method is used for the calculation of project time?
a) Milestone chart b) PERT
c) Bar chart d) CPM

6) EIA is study of probable change in socio economic and _____.
a) biophysical b) geological
c) hydrological d) potential

7) EIA is _____ and _____ environmental impacts assessment.
a) social and benefit b) social and adverse
c) beneficial and adverse d) None of above

8) In India, the type of traffic assumed to design pavements is _____.
a) Low Traffic Flow b) Heavy Traffic Flow
c) Mixed Traffic Flow d) Very Low Traffic Flow

9) Los Angeles testing machine is used to conduct _____.
a) Abrasion test b) Impact test
c) Attrition test d) Crushing strength test

10) The most important factor that is required for road geometrics is _____.
a) Speed of Vehicle b) Weight of Vehicle
c) Economy of construction d) Aesthetics of Road

11) Raising the outer edge of pavement with respect to inner edge on horizontal curve is known as _____.
a) Kerb b) Camber
c) Superelevation d) SSD

12) The report that includes all the works including soil, bridges, topography, material studies and drainage studies is called as ____.
a) Feasibility report b) Detailed project report
c) Survey report d) Primary report

13) Highway should be planned for _____
a) Present requirements b) Traffic developments
c) Traffic studies d) Present and future development

14) Which of the following will come under the manual method of road survey?
a) GIS b) Windshield survey
c) Walking Survey d) Floating Car Survey

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Which of the following is not the pillar of sustainability.
a) Economy b) Environment
c) Ecology d) Society

2) Which of the following elements should be used optimum to make a green building?
a) Agni b) Jal
c) Prithvi d) All of the above

3) Principles of sustainability doesn't include _____.
a) Balance & equity b) System thinking
c) Spiritual values d) None of these

4) Which of the following is not an economic benefit for a green building?
a) 20-30 % energy used b) 20-30 % less water used
c) Enhance asset value d) None of these

5) Sustainability can't be achieved if _____.
a) Different societies work with unique mindset
b) Different societies work with different mindsets
c) Similar societies work with singular mindset
d) Similar societies work with different mindsets

6) Which of the following is not the purpose of a green building?
a) To reduce use of water
b) To minimize damage of the environment
c) Re-use of waste materials
d) None of the above

7) How can sustainable engineering contribute to a circular economy?
a) By promoting linear production and consumption practices
b) By designing products for reuse, recycling and resource recovery
c) By disregarding environmental considerations in engineering decisions
d) By prioritizing short term economic gains

8) Which of the following is not considered in an LCA?
a) Energy consumption
b) Water usage
c) Greenhouse gas emissions
d) Aesthetics

9) Which of the following green rating systems are currently working in India?
a) LEED
b) GRIHA
c) Both a) and b)
d) None of the above

10) GRIHA has been prepared by _____.
a) USGBC
b) TERI
c) LEED
d) By own self

11) LEED gives rating in form of _____.
a) 1 star, 2 star, 3 star, 4 star, 5 star
b) Platinum, Gold, Silver
c) Both a) and b)
d) None of the above

12) The principle of radiator of an engine cooling system is to _____.
a) Increase the air speed as it flows over the hot surface
b) Spread out the hot water over a large area
c) Acts as a reservoir for the water
d) Causes a heat flow by convection currents

13) Which of the following accounts for T in the IPAT equation?
a) Time
b) Threshold population
c) Technology
d) None of the above

14) Which of the following is the least energy efficient system?
a) Internal combustion engine
b) Fuel cell
c) Incandescent light
d) Human body

Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and Slove any two questions from the remaining
Question no. 6 is compulsory in section II, and Slove any two questions from the remaining.
2) Use of non-programmable calculator is allowed.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary.

Section – I

Q.2	**a)**	Discuss reuse of any five construction materials in detail.	**05**
	b)	Explain principles of Sustainability while planning the city of 1 lakh population.	**05**
Q.3	**a)**	Explain AAC blocks along with merits and demerits in detail.	**05**
	b)	Elucidate applications of cement fibre board in green building.	**04**
Q.4	**a)**	What is sustainability? Explain pillars of sustainability with a neat diagram. Discuss interaction between pillars in the sustainability.	**05**
	b)	Define self-weight concrete? Provide minimum three advantages of self-weight concrete in construction of green building.	**04**
Q.5	**a)**	Explain benefits of Nano technology in cement concrete used in conventional RCC building.	**05**
	b)	Define ferrocement Technology? Provide minimum three applications of ferrocement technology in Civil Engineering.	**04**

Section – II

Q.6	**a)**	What is GRIHA? Explain various sections allocated in the GRIHA in detail.	**05**
	b)	Explain effects of changing seasons on functioning of green buildings.	**05**
Q.7	**a)**	Explain certification procedure of LEED in detail.	**05**
	b)	Discuss numerous applications of sustainable technology in 'Building Stock Management'	**04**

Q.8 **a)** Explain various methods of effective cooling and heating systems in Green Buildings. **05**

b) Provide minimum four decentralized water conservation systems in green building. **04**

Q.9 **Discuss the following:** **09**

a) 5R's of Green Building

b) Low energy materials

c) Structure of green building

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) While solving a linear problem graphically, the area bounded by the constraints is called _____.
a) The feasible region b) The unfeasible region
c) The unbounded solution d) The basic variables

2) The Iterative formula for Newton Raphson Method is given by _____.
a) $x_1 = x_0 - \frac{f(x_0)}{f'(x_0)}$ b) $x_1 = x_0 - \frac{f(x_0)}{f"(x_0)}$
c) $x_1 = x_0 + \frac{f(x_0)}{f'(x_0)}$ d) $x_1 = x_0 + \frac{f(x_0)}{f"(x_0)}$

3) The Newton Raphson Method fails if _____.
a) $f'(x_0) = 0$ b) $f''(x_0) = 0$
c) $f(x_0) = 0$ d) $f'''(x_0) = 0$

4) Which of the following is not a Fibonacci number?
a) 4 b) 21
c) 55 d) 14

5) The value of $\nabla^2 f(x, y)$ at $x = 7\ y = 0$ is _____
a) $\begin{bmatrix} 1 & 0 \\ 0 & 4 \end{bmatrix}$ b) $\begin{bmatrix} 1 & 1 \\ 1 & 4 \end{bmatrix}$
c) $\begin{bmatrix} 1 & 1 \\ 1 & 7 \end{bmatrix}$ d) $\begin{bmatrix} 1 & 1 \\ 1 & 5 \end{bmatrix}$

6) Gradient based methods are _____.
a) Newton Raphson Method b) Bisection Method
c) Both 'a' and 'b' d) None of these

7) Which of the following is specialized method for optimization?
a) Integer Programming b) Geometric Programming
c) Simulated Annealing d) All of these

8) Which of the following is not involved in the single variable optimization?
a) Fibonacci Search Method b) Newton Raphson Method
c) Bisection Method d) Unidirectional Search Method

9) Bracketing Methods are _____.
a) Extensive Search Method b) Bound Phase Method
c) Both ‘a’ and ‘b’ d) None of these

10) Which of the following field in which optimization is used?
a) Finance b) Demand and Supply
c) Airline d) All of these

11) Unidirectional search is _____.
a) Converting multivariable problem to single variable problem
b) Finding optimized solution
c) Both ‘a’ and ‘b’
d) None of these

12) Genetic algorithm involves which of the following phenomena?
a) Mutation b) Cross over
c) Selection d) All of the above

13) The primary search operations in Genetic Algorithms are _____.
a) Crossover and Mutation b) Crossover and Selection
c) Selection and Mutation d) Selection and Elitism

14) Linear Programming problem is a technique of finding the _____.
a) Optimal value b) Approximate value
c) Initial value d) infeasible value

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Engineering System Design Optimization (BTN01623)

Day & Date: Thursday 12-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Solve any two of the following. **12**

a) Write a detailed note on Application of optimization.
b) Explain different types of optimization methods.
c) Explain step by step, how the optimization problem is formulated?

Q.3 Solve any two of the followings. **08**

a) Minimize the given function $f(x) = x^2 + \frac{16}{x}$ with $(0.1, 5.1)$ and 10 equal division by Exhaustive Search Method.
b) Minimize the function $f(x) = x^2 + \frac{54}{x}$ $x^{(k)} = 1$ and $\in = 10^{-3}$ by Newton Raphson Method.
c) Solve an optimization problem using Fibonacci Search Method with the function $f(x) = x^2 + \frac{20}{x}, n = 3, k = 2, a = 0.4, b = 6.5$ by Fibonacci Search Method.

Q.4 Solve any two of the following. **08**

a) Optimize the function $f(x) = x_1^2 - 2x_1x_2 - x_2^2$ where $x^{(0)} = (2,1)$ $s = (1,1)$ and $\in = 10^{-3}$ by Unidirectional Search Method.
b) Optimize the given function using Powel's Conjugate direction method where $f(x) = x_1^2 - 2x_2^2 + 2$
$x^{(0)} = (2,1)\ s_1 = (1,0)\ s_2 = (0,1)\ \in = 10^{-3}$
c) Perform an optimization search using Steepest Descent Method for the function $f(x) = x_1^2 + x_2^2 - x_1x_2$ $x^{(0)} = (1,0) \in = 10^{-3}$

Section – II

Q.5 Solve any two of the following. **12**

a) Explain
- i) Feasible solution
- ii) Optimum solution
- iii) Unbounded solution

b) Solve

$$Z = 5x_1 + 7x_2$$

subject to $3x_1 + 2x_2 \leq 12$

$2x_1 + 3x_2 \leq 13$

$x_1, x_2 \geq 0$ by graphical method.

c) Optimize the given function $f(x) = x_1 - x_1x_2 + x_2^2$ using Geometric Programming.

Q.6 Solve any two of the followings. **08**

a) What is Genetic Algorithm? Write its advantages & applications.

b) Explain the concepts of Genetic algorithm.

c) Write the differences between Genetic Algorithm and Traditional techniques.

Q.7 Solve any two of the followings. **08**

a) Write a computer programme for Simulated Annealing Method.

b) Explain various approaches of reduction by size of optimization problem.

c) Explain limitations of Linear Programming.

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Engineering System Design Optimization (BTN01623)

Day & Date: Thursday 12-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following is not involved in the single variable optimization?
a) Fibonacci Search Method b) Newton Raphson Method
c) Bisection Method d) Unidirectional Search Method

2) Bracketing Methods are _____.
a) Extensive Search Method b) Bound Phase Method
c) Both 'a' and 'b' d) None of these

3) Which of the following field in which optimization is used?
a) Finance b) Demand and Supply
c) Airline d) All of these

4) Unidirectional search is _____.
a) Converting multivariable problem to single variable problem
b) Finding optimized solution
c) Both 'a' and 'b'
d) None of these

5) Genetic algorithm involves which of the following phenomena?
a) Mutation b) Cross over
c) Selection d) All of the above

6) The primary search operations in Genetic Algorithms are _____.
a) Crossover and Mutation b) Crossover and Selection
c) Selection and Mutation d) Selection and Elitism

7) Linear Programming problem is a technique of finding the _____.
a) Optimal value b) Approximate value
c) Initial value d) infeasible value

8) While solving a linear problem graphically, the area bounded by the constraints is called _____.

a) The feasible region
b) The unfeasible region
c) The unbounded solution
d) The basic variables

9) The Iterative formula for Newton Raphson Method is given by _____.

a) $x_1 = x_0 - \frac{f(x_0)}{f'(x_0)}$
b) $x_1 = x_0 - \frac{f(x_0)}{f"(x_0)}$
c) $x_1 = x_0 + \frac{f(x_0)}{f'(x_0)}$
d) $x_1 = x_0 + \frac{f(x_0)}{f"(x_0)}$

10) The Newton Raphson Method fails if _____.

a) $f'(x_0) = 0$
b) $f''(x_0) = 0$
c) $f(x_0) = 0$
d) $f'''(x_0) = 0$

11) Which of the following is not a Fibonacci number?

a) 4
b) 21
c) 55
d) 14

12) The value of $\nabla^2 f(x, y)$ at $x = 7\ y = 0$ is _____

a) $\begin{bmatrix} 1 & 0 \\ 0 & 4 \end{bmatrix}$
b) $\begin{bmatrix} 1 & 1 \\ 1 & 4 \end{bmatrix}$
c) $\begin{bmatrix} 1 & 1 \\ 1 & 7 \end{bmatrix}$
d) $\begin{bmatrix} 1 & 1 \\ 1 & 5 \end{bmatrix}$

13) Gradient based methods are _____.

a) Newton Raphson Method
b) Bisection Method
c) Both ‘a’ and ‘b’
d) None of these

14) Which of the following is specialized method for optimization?

a) Integer Programming
b) Geometric Programming
c) Simulated Annealing
d) All of these

Estimating, Costing and Valuation (BTN01701)

Day & Date: Monday, 02-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book Page no. 03 (Starting page of the Answer Book). Each question carries one mark.
2) Do not forget to Mention question paper Set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) If rise and tread of a step is 0.15m and 0.25m respectively, then the volume (in cubic meter) of 9 number of steps of 1 m length be recorded in measurement sheet shall be _____.
a) 0.3375 b) 0.337
c) 0.34 d) 0.33

2) If thickness of concreting is less than 100mm, the concreting in RCC slab is measured in _____.
a) Running m b) Sq.m
c) Cu.m d) None of the above

3) In long and short wall method of estimation, length of short wall is centre to centre distance between extreme opposite walls in shorter directions of ground floor plan _____.
a) Minus one breadth of item on each side
b) Plus one breadth of item on each side
c) Minus half breadth of item on each side
d) Plus half breadth of item on each side

4) The Damp Proof Course (D.P.C.) is measured in _____.
a) Cub.m. b) Sq.m.
c) Meters d) None of these

5) The excavation exceeding 1.5 m in width and 10 sq.m., in plan area with a depth not exceeding 30 cm, is termed as _____.
a) Excavation b) Surface dressing
c) Cutting d) Surface excavation

6) 'Money received today is more worth than money received in future' is based on which of the following term _____.

a) Time Value of money
b) Storage Value of Money
c) Time Machine
d) Cash Value of Machine

7) While submitting a tender, the contractor is required to deposit some amount with the department as a guarantee of the tender known as _____.

a) Earnest money
b) Bank Guarantee
c) Security Deposit
d) Caution money

8) The quantity of aggregates required for RCC (1:2:4) for 15 cubic metres of work is _____.

a) 4.76 m3
b) 10.32 m3
c) 8.57 m3
d) 6.51 m3

9) The value at the end of utility of property but without dismantling is known as _____.

a) Scrap Value
b) Salvage value
c) Market value
d) Book value

10) We prepare revised estimate against the original estimate due to change in _____.

a) the rate of material or change in specification of materials
b) structural drawing
c) additional items
d) all the above

11) In first class brick masonry, the number of bricks required per Cubic Meter area _____.

a) 650
b) 6500
c) 500
d) 5000

12) Which method considers the loss of value of an asset is directly proportional to its life period?

a) Straight line method
b) Diminishing balance method
c) Sinking fund method
d) Machine hour basis method

13) Decrease or loss in property value due to its wear and tear is called _____.

a) Depreciation
b) Capital Value
c) Annuity
d) Outgoings

14) While taking the measurements of RCC the volume of reinforcement is _____.

a) Deducted from the concrete volume
b) Added to the concrete volume
c) No deduction no addition
d) None of these

Fourth Y. (B. Tech) (Sem-I) (New) (CBCS) Examination:
March/April - 2025
CIVIL ENGINEERING
Estimating, Costing and Valuation (BTN01701)

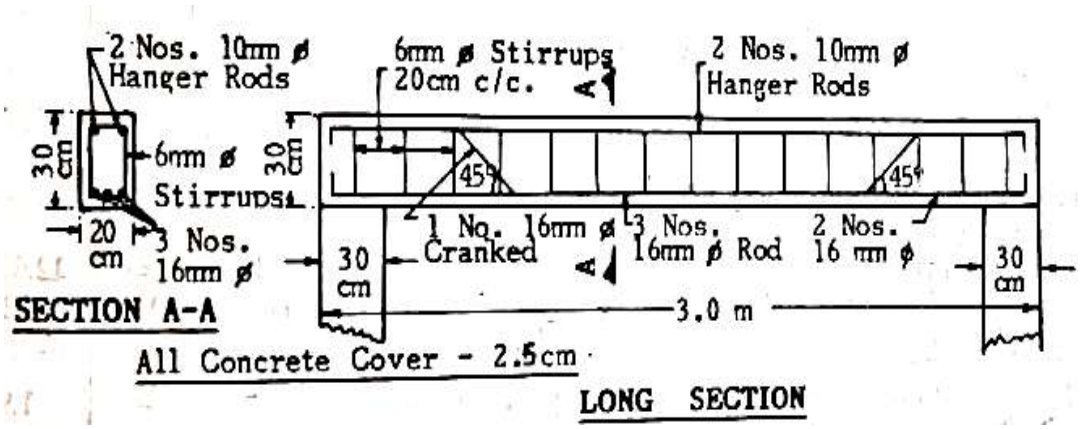
Day & Date: Monday, 02-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 2 is compulsory; answer any two from remaining questions from Sec – I.
2) Q. 6 is compulsory; answer any two from remaining questions from Sec – II.
3) Figures to the right indicate full marks.
4) Assume suitable data if required and mention it clearly.

SECTION – I

Q.2 **a)** Calculate the quantity of reinforcement required in R.C.C. Beam as shown in attached drawing. **08**

b) Also prepare an Abstract sheet for these items by assuming suitable market rates. **04**



Q.3 **a)** Explain General and Detailed Specification. **04**

b) Write the detailed specifications for 1st class brickwork in 1:4 cement mortar. **04**

Q.4 **Carry out the rate analysis for following items.** **08**

a) Cement concrete 1:1.5:3 for RCC Column and footing.

b) 12 mm thick external plaster in 1:6.

Q.5 **a)** Explain administrative approval and technical sanction to estimates. **04**

b) Write a thumb rule for **04**

i) Number of cement bags required for construction of building.

ii) Steel reinforcement required for RCC in cement concrete.

SECTION – II

Q.6 **a)** Prepare a tender notice for the work of construction of a hospital of 150 beds capacity RCC structure of 12.000 Sq. ft built up area. Make suitable assumptions for required data. **08**

b) Write a short note on Item Rate contract and Percentage rate contract. **04**

Q.7 **Explain following Acts.** **08**

a) Minimum Wages Act

b) Workers Compensation Act

Q.8 **a)** **Define:** **04**

i) Book Value

ii) Speculation value

iii) Scrap value

iv) Potential value.

b) What is Earnest Money Deposit and Security Deposit? **04**

Q.9 What is the valuation of a property in 2024, with following details of a building? Assume 10% scrap value at the end of useful life. **08**

Sr. No	Description	Area (Sq.M)	Rate Rs/SqM	Total life (year)	Built in
1	Main Factory Building RCC skeleton used as dyeing unit and old office G+1	700.92	11000	75	1984
2	Mezzanine floor in main building	449.04	4500	75	2002

Set Q

Fourth Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Estimating, Costing and Valuation (BTN01701)

Day & Date: Monday, 02-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book Page no. 03 (Starting page of the Answer Book). Each question carries one mark.
2) Do not forget to Mention question paper Set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) The quantity of aggregates required for RCC (1:2:4) for 15 cubic metres of work is _____.
a) 4.76 m3 b) 10.32 m3
c) 8.57 m3 d) 6.51 m3

2) The value at the end of utility of property but without dismantling is known as _____.
a) Scrap Value b) Salvage value
c) Market value d) Book value

3) We prepare revised estimate against the original estimate due to change in _____.
a) the rate of material or change in specification of materials
b) structural drawing
c) additional items
d) all the above

4) In first class brick masonry, the number of bricks required per Cubic Meter area _____.
a) 650 b) 6500
c) 500 d) 5000

5) Which method considers the loss of value of an asset is directly proportional to its life period?
a) Straight line method b) Diminishing balance method
c) Sinking fund method d) Machine hour basis method

6) Decrease or loss in property value due to its wear and tear is called _____.

a) Depreciation b) Capital Value
c) Annuity d) Outgoings

7) While taking the measurements of RCC the volume of reinforcement is _____.

a) Deducted from the concrete volume
b) Added to the concrete volume
c) No deduction no addition
d) None of these

8) If rise and tread of a step is 0.15m and 0.25m respectively, then the volume (in cubic meter) of 9 number of steps of 1 m length be recorded in measurement sheet shall be _____.

a) 0.3375 b) 0.337
c) 0.34 d) 0.33

9) If thickness of concreting is less than 100mm, the concreting in RCC slab is measured in _____.

a) Running m b) Sq.m
c) Cu.m d) None of the above

10) In long and short wall method of estimation, length of short wall is centre to centre distance between extreme opposite walls in shorter directions of ground floor plan _____.

a) Minus one breadth of item on each side
b) Plus one breadth of item on each side
c) Minus half breadth of item on each side
d) Plus half breadth of item on each side

11) The Damp Proof Course (D.P.C.) is measured in _____.

a) Cub.m. b) Sq.m.
c) Meters d) None of these

12) The excavation exceeding 1.5 m in width and 10 sq.m., in plan area with a depth not exceeding 30 cm, is termed as _____.

a) Excavation b) Surface dressing
c) Cutting d) Surface excavation

13) 'Money received today is more worth than money received in future' is based on which of the following term _____.

a) Time Value of money b) Storage Value of Money
c) Time Machine d) Cash Value of Machine

14) While submitting a tender, the contractor is required to deposit some amount with the department as a guarantee of the tender known as _____.

a) Earnest money b) Bank Guarantee
c) Security Deposit d) Caution money

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: (Two marks each) **14**

1) Which of the following describes the build up and release of stress during an earthquake?
a) Modified Mercalli Scale b) Elastic rebound theory
c) Principle of superposition d) Travel time difference

2) Approximately what percentage of earthquakes occur at plate boundaries?
a) 25% b) 50%
c) 75% d) 90%

3) Storey shear is _____
a) Product of storey stiffness and floor displacement
b) Product of mass and floor displacement
c) Floor displacement
d) Storey stiffness

4) The transmissibility is zero at the frequency ratio $(\omega/\omega n)$ equal to _____
a) 0.5 b) 1.0
c) $\sqrt{2}$ d) 2^2

5) The response reduction factor with the increase in redundancy _____
a) Decreases b) Increases
c) Remains unaffected d) Remains constant

6) The response is maximum when _____
a) Damping ratio = 1 b) Mass ratio = 1
c) Stiffness ratio = 1 d) Frequency ratio = 1

7) IS 1893-2016 (Part-2) with earthquake resistant design of structures.

a) Liquid Retaining tanks

Time: 03:00 PM To 06:00 PM

Instructions: 1) In Section I, Q. No. 3 is compulsory and attempt any two questions remaining of the questions.
2) In Section II, Q. No. 6 is compulsory and attempt any two questions remaining of the questions.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of IS 1893:2016 is permitted.

Section – I

Q.2 Explain in detail soil liquefaction. What are the factors affecting liquefaction? **09**

Q.3 A SDOF system consists of a man with weight 1750 N and spring of stiffness 15 KN/mm. By testing the system it was found that a force of 470N produces relative velocity of 0.3 m/s. Find: **10**
1) Damping ratio
2) Damped frequency of vibration (ω_D)
3) Logarithmic decrement (δ)
4) The ratio of two successive amplitudes

Q.4 Describe the force transmissibility? Derive an expression for force transmissibility to the foundation of a SDOF system subjected to harmonic force. **09**

Q.5 Explain the concept of Duhamel's integral for damped systems. Derive its expression. **09**

Section – II

Q.6 It is proposed to construct a R.C.C. three storied commercial building having plan dimensions as shown in fig. 1 in zone III with following data. Determine the lateral forces and base shear. The all-column sizes are 300 x 450 mm & beams sizes are 230 x 450 mm. The slab thickness is 120mm & thk. of walls is 230mm. The ht. of floor is 3.2m & Live load is 4.0 kN/m^2 IS 13920 provisions will not be used. The strata are Medium. **10**

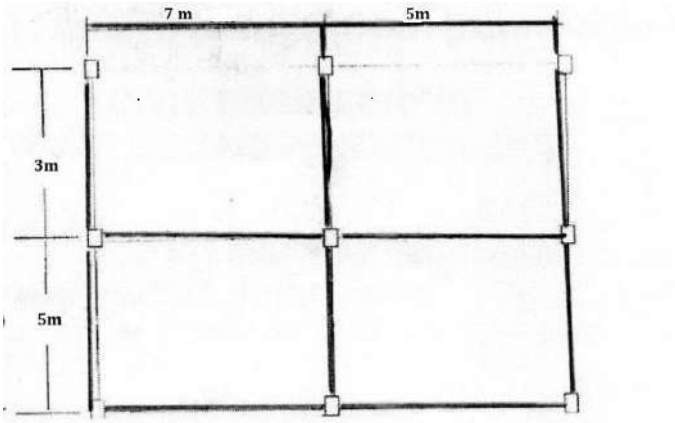

Figure 1 Q.6

Q.7 Explain the planning aspects for earthquake resistant design of building. **09**

Q.8 Describe the response reduction factor? How it is related to ductility? Explain in detail. **09**

Day & Date: Tuesday 03-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) In Section I, Q. No. 3 is compulsory and attempt any two questions remaining of the questions.
2) In Section II, Q. No. 6 is compulsory and attempt any two questions remaining of the questions.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of IS 1893:2016 is permitted.

Section – I

Q.2 Explain in detail soil liquefaction. What are the factors affecting liquefaction? **09**

Q.3 A SDOF system consists of a man with weight 1750 N and spring of stiffness 15 KN/mm. By testing the system it was found that a force of 470N produces relative velocity of 0.3 m/s. Find: **10**
1) Damping ratio
2) Damped frequency of vibration (ω_D)
3) Logarithmic decrement (δ)
4) The ratio of two successive amplitudes

Q.4 Describe the force transmissibility? Derive an expression for force transmissibility to the foundation of a SDOF system subjected to harmonic force. **09**

Q.5 Explain the concept of Duhamel's integral for damped systems. Derive its expression. **09**

Section – II

Q.6 It is proposed to construct a R.C.C. three storied commercial building having plan dimensions as shown in fig. 1 in zone III with following data. Determine the lateral forces and base shear. The all-column sizes are 300 x 450 mm & beams sizes are 230 x 450 mm. The slab thickness is 120mm & thk. of walls is 230mm. The ht. of floor is 3.2m & Live load is 4.0 kN/m^2 IS 13920 provisions will not be used. The strata are Medium. **10**

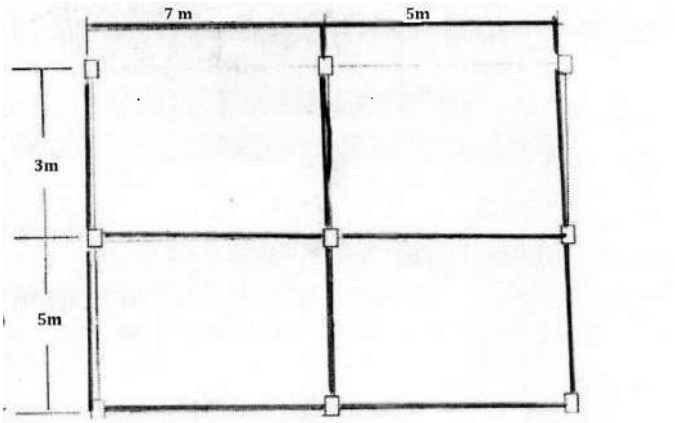

Figure 1 Q.6

Q.7 Explain the planning aspects for earthquake resistant design of building. **09**

Q.8 Describe the response reduction factor? How it is related to ductility? Explain in detail. **09**

Q.9 Describe the various earthquake resistant features that can be introduced in masonry building to make it earthquake resistant. **09**

Seat No.		Set	R

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Earthquake Engineering (BTN01702)

Day & Date: Tuesday 03-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book).
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Each MCQ carries two marks each.
5) Assume suitable data wherever needed and mention it clearly.
6) Use of IS 1893:2016 is permitted.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: (Two marks each) **14**

1) Storey shear is _____
a) Product of storey stiffness and floor displacement
b) Product of mass and floor displacement
c) Floor displacement
d) Storey stiffness

2) The transmissibility is zero at the frequency ratio $(\omega/\omega n)$ equal to _____
a) 0.5 b) 1.0
c) $\sqrt{2}$ d) 2^2

3) The response reduction factor with the increase in redundancy _____
a) Decreases b) Increases
c) Remains unaffected d) Remains constant

4) The response is maximum when _____
a) Damping ratio = 1 b) Mass ratio = 1
c) Stiffness ratio = 1 d) Frequency ratio = 1

5) IS 1893-2016 (Part-2) with earthquake resistant design of structures.
a) Liquid Retaining tanks b) Bridges & Retaining walls
c) Industrial structures d) General Provisions & Buildings

6) Which of the following describes the build up and release of stress during an earthquake?
a) Modified Mercalli Scale b) Elastic rebound theory
c) Principle of superposition d) Travel time difference

7) Approximately what percentage of earthquakes occur at plate boundaries?

a) 25%
b) 50%
c) 75%
d) 90%

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) _____ cranes are used for handling loads over a large rectangular area in factories, power stations, shipyards and workshops.
a) Mobile b) Derrick
c) Gantry d) Hydraulic

2) _____ is used for removing materials from cofferdams.
a) Dragline b) Back hoe
c) Clamshell d) Crane

3) _____ are used to excavate below the ground on which the machine stands.
a) Hoes b) Power Shovel
c) Trenchers d) Rippers

4) _____ slack is an indication of 'on schedule' project.
a) Positive b) Negative
c) Zero d) Greater

5) In PERT, the distribution should have a _____ probability of reaching the optimistic time.
a) Big b) Average
c) Small d) Medium

6) In a CPM network, if earliest start time of an activity is 8 days and activity duration is 7 days, the value of earliest finish time of that activity will be _____ days.
a) 1 b) 15
c) 56 d) 23

7) If for an activity optimistic time is 7 days, pessimistic time is 13 days and most likely time is 10 days, its standard deviation will be ____

a) 10 b) 3.28
c) 10.77 d) 1

8) If the scheduled completion time of a project is 40 days and earliest expected completion time is 35 days, what will be the value of probability factor if the standard deviation is 2.87 days?

a) 1.74 b) 3.00
c) 2.74 d) 0.74

9) The area under the Beta distribution curve is divided into two equal parts by _____.

a) Most likely time b) Optimistic time
c) Pessimistic time d) Expected time

10) What is the process of incorporating changes and rescheduling or re planning called?

a) Resource Allocation b) Resource smoothing
c) Resource levelling d) Updating

11) The key functions of safety management system are, (1) Planning for safety, (2) Organizing for safety, (3) Scheduling for safety, (4) Controlling for safety.

a) 1, 3 and 4 are correct b) 2, 3 and 4 are correct
c) 1, 2 and 3 are correct d) 1, 2 and 4 are correct

12) Pick up the correct statement from the following _____.

a) Programme Evaluation and Review Technique is event oriented
b) Programme Evaluation and Review Technique is not event oriented
c) Critical Path Method is event oriented
d) Critical Path Method is not event oriented

13) In the given figure, the network of a project represents _____

a) Activity of an excavation of a footing
b) Activity of an excavation which starts at event No. 1 and ends at even No. 2
c) Activity of excavation which takes 8 units of time
d) None of these

14) If D is the duration, ES and EF are the earliest start and finish, LS and LF are latest start and latest finish time, then the following relation holds good _____

a) EF = ES + D b) D = EF – ES
c) LF = LS + D d) All of the above

Section – I

Q.2 Consider a project shown in the table. **12**
i) Draw PERT Network.
ii) Find expected critical path.
iii) Find duration and variance of the project.

Activity i – j	Duration in Days		
	Optimistic	Most Likely	Pessimistic
1-2	5	7	9
2-3	11	14	17
2-4	13	15	17
2-5	4	6	8
3-7	9	10	11
4-5	0	0	0
5-6	3	3	3
6-8	5	12	17
7-8	2	4	8

Q.3 Answer the following questions **08**
a) What is WBS? Explain its importance in project management.
b) Following activities pertains to a project. Determine critical path and Duration

Activity	1-2	2-3	2-4	3-4	3-5	4-6	5-6
Duration(Days)	15	13	16	15	18	23	15

Q.4 Answer the following question **08**
a) Differentiate between PERT and CPM
b) What is process and different steps followed in network updating?

Q.5 Answer the following question **08**
a) Write a short note an application of software in construction industry.
b) What is BIM? Also explain the output of BIM.

SECTION II

Q.6 Write short notes on. **12**

a) Bulldozers
b) Power shovel
c) Hot mix plant

Q.7 Explain in detail **08**

a) safety equipment's used on construction site
b) Causes of accidents on construction site.

Q.8 Explain in detail. **08**

a) Write a short note on Mivan formwork.
b) Explain different components and elements used in prefabricated construction.

Q.9 Explain in detail. **08**

a) Write note on Dredging equipment and their types.
b) Explain the types and uses of diaphragm walls.

b) What is process and different steps followed in network updating?

Q.5 Answer the following question **08**
a) Write a short note an application of software in construction industry.
b) What is BIM? Also explain the output of BIM.

SECTION II

Q.6 Write short notes on. **12**

a) Bulldozers
b) Power shovel
c) Hot mix plant

Q.7 Explain in detail **08**

a) safety equipment's used on construction site
b) Causes of accidents on construction site.

Q.8 Explain in detail. **08**

a) Write a short note on Mivan formwork.
b) Explain different components and elements used in prefabricated construction.

Q.9 Explain in detail. **08**

a) Write note on Dredging equipment and their types.
b) Explain the types and uses of diaphragm walls.

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Construction Management and Practices (BTN01703)

Day & Date: Wednesday, 04-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) In a CPM network, if earliest start time of an activity is 8 days and activity duration is 7 days, the value of earliest finish time of that activity will be _____ days.
a) 1 b) 15
c) 56 d) 23

2) If for an activity optimistic time is 7 days, pessimistic time is 13 days and most likely time is 10 days, its standard deviation will be ____
a) 10 b) 3.28
c) 10.77 d) 1

3) If the scheduled completion time of a project is 40 days and earliest expected completion time is 35 days, what will be the value of probability factor if the standard deviation is 2.87 days?
a) 1.74 b) 3.00
c) 2.74 d) 0.74

4) The area under the Beta distribution curve is divided into two equal parts by _____.
a) Most likely time b) Optimistic time
c) Pessimistic time d) Expected time

5) What is the process of incorporating changes and rescheduling or re planning called?
a) Resource Allocation b) Resource smoothing
c) Resource levelling d) Updating

6) The key functions of safety management system are, (1) Planning for safety, (2) Organizing for safety, (3) Scheduling for safety, (4) Controlling for safety.

a) 1, 3 and 4 are correct
b) 2, 3 and 4 are correct
c) 1, 2 and 3 are correct
d) 1, 2 and 4 are correct

7) Pick up the correct statement from the following _____.

a) Programme Evaluation and Review Technique is event oriented
b) Programme Evaluation and Review Technique is not event oriented
c) Critical Path Method is event oriented
d) Critical Path Method is not event oriented

8) In the given figure, the network of a project represents _____

a) Activity of an excavation of a footing
b) Activity of an excavation which starts at event No. 1 and ends at even No. 2
c) Activity of excavation which takes 8 units of time
d) None of these

9) If D is the duration, ES and EF are the earliest start and finish, LS and LF are latest start and latest finish time, then the following relation holds good _____

a) EF = ES + D
b) D = EF – ES
c) LF = LS + D
d) All of the above

10) _____ cranes are used for handling loads over a large rectangular area in factories, power stations, shipyards and workshops.

a) Mobile
b) Derrick
c) Gantry
d) Hydraulic

11) _____ is used for removing materials from cofferdams.

a) Dragline
b) Back hoe
c) Clamshell
d) Crane

12) _____ are used to excavate below the ground on which the machine stands.

a) Hoes
b) Power Shovel
c) Trenchers
d) Rippers

13) _____ slack is an indication of 'on schedule' project.

a) Positive
b) Negative
c) Zero
d) Greater

14) In PERT, the distribution should have a _____ probability of reaching the optimistic time.

a) Big
b) Average
c) Small
d) Medium

Seat No.		Set	S

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Construction Management and Practices (BTN01703)

Day & Date: Wednesday, 04-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) In Section I, Q. No. 2 is compulsory and attempt any two questions remaining of the questions.
2) In Section II, Q. No. 6 is compulsory and attempt any two questions remaining of the questions.
3) Figure to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 Consider a project shown in the table. **12**
i) Draw PERT Network.
ii) Find expected critical path.
iii) Find duration and variance of the project.

Activity i – j	Duration in Days		
	Optimistic	Most Likely	Pessimistic
1-2	5	7	9
2-3	11	14	17
2-4	13	15	17
2-5	4	6	8
3-7	9	10	11
4-5	0	0	0
5-6	3	3	3
6-8	5	12	17
7-8	2	4	8

Q.3 Answer the following questions **08**
a) What is WBS? Explain its importance in project management.
b) Following activities pertains to a project. Determine critical path and Duration

Activity	1-2	2-3	2-4	3-4	3-5	4-6	5-6
Duration(Days)	15	13	16	15	18	23	15

Q.4 Answer the following question **08**
a) Differentiate between PERT and CPM
b) What is process and different steps followed in network updating?

Q.5 Answer the following question **08**
a) Write a short note an application of software in construction industry.
b) What is BIM? Also explain the output of BIM.

SECTION II

Q.6 Write short notes on. **12**

a) Bulldozers
b) Power shovel
c) Hot mix plant

Q.7 Explain in detail **08**

a) safety equipment's used on construction site
b) Causes of accidents on construction site.

Q.8 Explain in detail. **08**

a) Write a short note on Mivan formwork.
b) Explain different components and elements used in prefabricated construction.

Q.9 Explain in detail. **08**

a) Write note on Dredging equipment and their types.
b) Explain the types and uses of diaphragm walls.

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Question. **14**

1) If the space headway is 9m, then the jam density in vehicle/km is _____
a) 115 b) 111
c) 120 d) 100

2) Maximum number of vehicles can be parked with _____
a) Parallel parking b) 45° angle parking
c) 90° angle parking d) 30° angle parking

3) In the context of parking studies, what is the term "parking load" defined as?
a) The total area of land allocated for parking spaces
b) The number of vehicles occupying a parking space at any given moment
c) The total number of parking spaces available for use
d) The demand for parking spaces based on the type of vehicles using them

4) The time interval measured between the passage of successive vehicles from head-to-head is known as _____
a) Headway distance b) Space headway
c) Time headway d) All of these

5) Cumulative speed distribution curve is usually adopted for geometric design of highway. The percentile speed adopted for geometric design is _____
a) 85th percentile b) 90th percentile
c) 98th percentile d) 99.9th percentile

6) Which of the following is NOT a key objective of traffic engineering?
   a) To reduce the number of road accidents
   b) To improve the travel time for all vehicles
   c) To increase the road network's capacity without considering safety
   d) To design roads that ensure the safe interaction between road users

7) As per IRC:67-2001, a traffic sign indicating the speed limit on a road should be of _____
   a) Circular shape with White Background and Red Border
   b) Triangular shape with White Background and Red Border
   c) Triangular shape with Red Background and White Border
   d) Circular shape with Red Background and White Border

8) When volume of the road reaches maximum flow or the capacity, the volume capacity ratio approaches to a value of _____
   a) 1.0 b) 1.5
   c) 0.0 d) 0.5

9) Traffic flow can be defined as _____
   a) The number of vehicles at an intersection
   b) The movement of vehicles along a road over time
   c) The distance between two vehicles on a road
   d) The speed of a vehicle at a given moment

10) What is the purpose of driver licensing?
   a) To ensure that drivers are qualified to operate a vehicle safely
   b) To increase government revenue
   c) To ensure that vehicles are parked legally
   d) To control the number of drivers on the road

11) In a traffic lane at rotary, the traffic moving extreme left is 250 PCU, and in extreme right, it is 200 PCU, the sum of the weaving traffic crossing left and right is 500 PCU, so find the proportion of weaving traffic.
   a) 0.5 b) 1.71
   c) 2.11 d) 1.11

12) Automated toll collection in ITS helps by ____
   a) Reducing human involvement in toll collection
   b) Increasing Road toll rates
   c) Monitoring vehicles for emissions
   d) Providing entertainment to drivers

13) The one-way street system helps in _____
   a) Reducing traffic congestion
   b) Increasing the number of accidents
   c) Allowing both directions of traffic
   d) Making roads wider

14) Level of Service A and F represents _____
   a) Free Flow and Forced Flow respectively
   b) Both are free-flow
   c) Both are Forced flow
   d) Forced Flow and Free Flow respectively

Instructions: 1) All questions are compulsory.
2) Figure to the right indicate full marks.
3) Assume any missing data suitably and mention it clearly.

Section – I

Q.2 Answer the following questions (Any Two) **14**

a) Discuss briefly the various factors which affect the road user characteristics and their effects in traffic performance.

b) From an in-out survey conducted for a parking area consisting of 40 bays, the initial count was found to be 25. Table-1 gives the result of the survey. The number of vehicles coming in and out of the parking lot for a time interval of 5 minutes is as shown in the Table-1 below. Find the accumulation, total parking load, average occupancy and efficiency of the parking lot.

Table-1-In-Out Survey data

In-Out survey data		
Time	In	Out
5	3	2
10	2	4
15	4	2
20	5	4
25	7	3
30	8	2

In-Out survey data		
Time	In	Out
35	2	7
40	4	2
45	6	4
50	4	1
55	3	3
60	2	5

c) List and explain the factors which affect the vehicle characteristics.

d) Write a short note on a) O-D Study b) Spot Speed Study.

Q.3 Answer the following questions (Any Two) **14**

a) Explain factors affecting capacity and level of service.

b) Explain the relationship between speed, travel time, volume, density and capacity.

c) Discuss various types of parking, their advantages and disadvantages.

d) Write a short note - i) Passenger Car Unit ii) Parallel and angle parking.

Section – II

Q.4 Answer the following questions (Any Two) **14**

a) Write a short note on i) Regulation on driver ii) Regulation on speed

b) Discuss the advantages and disadvantages of one way street.

c) Explain general principles governing application of speed limits in Rural and Urban area.

d) Explain the various types of traffic signals and their functions.

Q.5 Answer the following questions (Any Two) **14**

a) Explain with a neat sketch.

i) STOP and GIVE WAY sign
ii) Hazard Markers
iii) Roadway Delineators

b) Define, cycle, Interval and Phase. The average normal flow of traffic on cross roads 1 and 2 during design period are 440 and 280 PCU per hour, the saturation flow values on these roads are estimated as 1300 and 1100 PCU per hour respectively. The all-red time required for pedestrian crossing is 12 sec. Design two phase traffic signal with pedestrian crossing by Webster's method. Sketch the phase diagram.

c) Explain in detail various types of traffic control devices

d) Write a short note on ITS applications in the urban transport system.

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Question. **14**

1) Which of the following is NOT a key objective of traffic engineering?
a) To reduce the number of road accidents
b) To improve the travel time for all vehicles
c) To increase the road network's capacity without considering safety
d) To design roads that ensure the safe interaction between road users

2) As per IRC:67-2001, a traffic sign indicating the speed limit on a road should be of _____
a) Circular shape with White Background and Red Border
b) Triangular shape with White Background and Red Border
c) Triangular shape with Red Background and White Border
d) Circular shape with Red Background and White Border

3) When volume of the road reaches maximum flow or the capacity, the volume capacity ratio approaches to a value of _____
a) 1.0 b) 1.5
c) 0.0 d) 0.5

4) Traffic flow can be defined as _____
a) The number of vehicles at an intersection
b) The movement of vehicles along a road over time
c) The distance between two vehicles on a road
d) The speed of a vehicle at a given moment

5) What is the purpose of driver licensing?
a) To ensure that drivers are qualified to operate a vehicle safely
b) To increase government revenue
c) To ensure that vehicles are parked legally
d) To control the number of drivers on the road

6) In a traffic lane at rotary, the traffic moving extreme left is 250 PCU, and in extreme right, it is 200 PCU, the sum of the weaving traffic crossing left and right is 500 PCU, so find the proportion of weaving traffic.

a) 0.5 b) 1.71
c) 2.11 d) 1.11

7) Automated toll collection in ITS helps by ____

a) Reducing human involvement in toll collection
b) Increasing Road toll rates
c) Monitoring vehicles for emissions
d) Providing entertainment to drivers

8) The one-way street system helps in _____

a) Reducing traffic congestion
b) Increasing the number of accidents
c) Allowing both directions of traffic
d) Making roads wider

9) Level of Service A and F represents _____

a) Free Flow and Forced Flow respectively
b) Both are free-flow
c) Both are Forced flow
d) Forced Flow and Free Flow respectively

10) If the space headway is 9m, then the jam density in vehicle/km is _____

a) 115 b) 111
c) 120 d) 100

11) Maximum number of vehicles can be parked with _____

a) Parallel parking b) 45° angle parking
c) 90° angle parking d) 30° angle parking

12) In the context of parking studies, what is the term "parking load" defined as?

a) The total area of land allocated for parking spaces
b) The number of vehicles occupying a parking space at any given moment
c) The total number of parking spaces available for use
d) The demand for parking spaces based on the type of vehicles using them

13) The time interval measured between the passage of successive vehicles from head-to-head is known as _____

a) Headway distance b) Space headway
c) Time headway d) All of these

14) Cumulative speed distribution curve is usually adopted for geometric design of highway. The percentile speed adopted for geometric design is _____

a) 85th percentile
b) 90th percentile
c) 98th percentile
d) 99.9th percentile

Seat No.		Set	S

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Traffic Engineering and Management (BTN01710)

Day & Date: Thursday, 05-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figure to the right indicate full marks.
3) Assume any missing data suitably and mention it clearly.

Section – I

Q.2 Answer the following questions (Any Two) **14**

a) Discuss briefly the various factors which affect the road user characteristics and their effects in traffic performance.

b) From an in-out survey conducted for a parking area consisting of 40 bays, the initial count was found to be 25. Table-1 gives the result of the survey. The number of vehicles coming in and out of the parking lot for a time interval of 5 minutes is as shown in the Table-1 below. Find the accumulation, total parking load, average occupancy and efficiency of the parking lot.

Table-1-In-Out Survey data

In-Out survey data		
Time	In	Out
5	3	2
10	2	4
15	4	2
20	5	4
25	7	3
30	8	2

In-Out survey data		
Time	In	Out
35	2	7
40	4	2
45	6	4
50	4	1
55	3	3
60	2	5

c) List and explain the factors which affect the vehicle characteristics.

d) Write a short note on a) O-D Study b) Spot Speed Study.

Q.3 Answer the following questions (Any Two) **14**

a) Explain factors affecting capacity and level of service.

b) Explain the relationship between speed, travel time, volume, density and capacity.

c) Discuss various types of parking, their advantages and disadvantages.

d) Write a short note - i) Passenger Car Unit ii) Parallel and angle parking.

Section – II

Q.4 Answer the following questions (Any Two) **14**

a) Write a short note on i) Regulation on driver ii) Regulation on speed

b) Discuss the advantages and disadvantages of one way street.

c) Explain general principles governing application of speed limits in Rural and Urban area.

d) Explain the various types of traffic signals and their functions.

Q.5 Answer the following questions (Any Two) **14**

a) Explain with a neat sketch.

i) STOP and GIVE WAY sign
ii) Hazard Markers
iii) Roadway Delineators

b) Define, cycle, Interval and Phase. The average normal flow of traffic on cross roads 1 and 2 during design period are 440 and 280 PCU per hour, the saturation flow values on these roads are estimated as 1300 and 1100 PCU per hour respectively. The all-red time required for pedestrian crossing is 12 sec. Design two phase traffic signal with pedestrian crossing by Webster's method. Sketch the phase diagram.

c) Explain in detail various types of traffic control devices

d) Write a short note on ITS applications in the urban transport system.

3) Figures to right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions **14**

1) Raw material productivity can be increased by _____
a) Proper choice of design b) Reuse of material
c) Scrap control d) All of the above

2) Total work content = _____
a) Basic work content + Excess time
b) Basic work content - Excess time
c) Basic work content + Ineffective time
d) Basic work content - Ineffective time

3) Which of the following adds idle time due to short runs?
a) Excessive product variety b) Lack of Standardization
c) Both a and b d) Design changes

4) Preventive maintenance improves _____
a) Material productivity b) Labour productivity
c) Machine productivity d) Capital productivity

5) The time for which the worker or machine or both remain idle due to the shortcomings of the management or workers is known as _____
a) Excess time b) Idle time
c) Ineffective time d) Work content

6) Productivity can be increased by _____
a) By increasing the output from the same input
b) By reducing the input for the same output
c) Both a and b
d) None of the above

7) An English word 'Motivation' is originated from a Greek word 'Movere'. Movere means _____

a) Tension b) Drive
c) Motion d) Profit

8) What is the purpose of a Crew Balance Chart?

a) To track individual worker performance
b) To optimize the allocation of labor resources
c) To monitor material consumption
d) To analyze project cash flow

9) A 'change order' in construction is typically issued due to _____

a) A change in the project manager
b) A change in weather conditions
c) A change in the project scope
d) A change in worker morale

10) Which of the following is NOT a method for improving productivity?

a) Implementing new technologies
b) Reducing worker training
c) Improving communication
d) Optimizing resource allocation

11) What is the 'Crew Approach' in work sampling?

a) Observing workers at predetermined time intervals
b) Focusing observations on a specific crew
c) Analyzing the flow of materials on site
d) Using drones to monitor construction progress

12) Which of the following is a tool for identifying productivity loss?

a) Productivity Index b) Foreman Delay Survey
c) Crew Balance Chart d) All of the above

13) What is a major benefit of pre-planning in construction?

a) Increased worker breaks b) Reduced project costs
c) Increased overtime hours d) Ignoring safety protocols

14) Which of the following is a human factor influencing productivity?

a) Skill level b) Weather conditions
c) Material quality d) Equipment availability

2) Figure to the right indicate full marks.

Section – I

Q.2 Attempt Any Two **14**

a) Define productivity in the context of construction. Explain the need for productivity measurement in construction projects.
b) Describe how performance factors are calculated and used for forecasting in construction productivity.
c) Explain the concept of 'Earned Value' and how it is used to assess project performance.

Q.3 Attempt Any Two **14**

a) What is a Productivity Index? Discuss the causes of low productivity in construction.
b) Explain how pre-planning and record keeping can contribute to improving construction productivity.
c) Discuss the impact of new technologies on labor productivity in construction. Give examples.

Section – II

Q.4 Attempt Any Two **14**

a) Discuss the various factors that influence productivity in construction projects.
b) Explain how 'Sources of Lost Time' can be identified and minimized.
c) Discuss the influence of human factors like motivation and teamwork on construction productivity.

Q.5 Attempt Any Two **14**

a) What is work sampling? Explain its applications in construction productivity measurement.
b) Describe the 'Tour Approach' and 'Foreman Delay Survey' in work sampling.
c) Explain the use of 'Crew Balance Charts' and 'Flow Diagrams' in improving construction productivity. Provide examples.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Question. **14**

1) Venture capital is concerned with: ____.
a) New project having potential for higher profit
b) New project of high technology
c) New project having high risk
d) All the above

2) Why should an entrepreneur do a feasibility study for starting a new venture _____.
a) To identify possible sources of funds
b) To see if there are possible barriers to success
c) To estimate the expected sales
d) To explore potential customers

3) What is the process by which individuals pursue opportunities without regard to resources they currently control?
a) Startup management b) Entrepreneurship
c) Financial analysis d) Feasibility planning

4) Which one of the following is the process of entrepreneurs developing new products that over time make current products obsolete?
a) New business model b) Anatomization
c) None of the given options d) Creative destruction

5) The term Entrepreneur is derived from the _____ word.
a) English b) Tamil
c) Hindi d) French

6) The person who creates an enterprise is called ____.
a) Entrepreneur b) Managers
c) Leaders d) Owners

7) An entrepreneur is someone who _____.
a) Organize a business
b) Manages a business
c) Takes risks
d) All of the above

8) Business plan is an important ____ for entrepreneurs.
a) Document
b) Tool
c) Vision
d) Mission

9) Who is an idea Champion?
a) The One who defeats elephant of ideas
b) The rider who shapes the path for elephant
c) The one who open new channels for idea to move forward
d) All the above

10) SIDBI stands for ____.
a) Small Institutions Development Bank of India
b) Small Industries Development Bank of India
c) Small Industries Derivatives Bank of India
d) Small Industries Development Bureau of India

11) Having less than 50 percent of equity share in an international venture is called ____.
a) Joint Venture
b) Majority interest
c) Minority interest
d) Exporting

12) To provide financial assistance to entrepreneurs the government has set up a number of ____.
a) Financial Advisors
b) Financial Intermediaries
c) Industrial Estates
d) Financial Institutions

13) The activity of setting up a business or businesses, taking on ____ in the hope of profit.
a) Financial risk
b) Loss
c) Profit
d) Technical risk

14) Which of the following is used by entrepreneurs to acquire experience in an international market before making a major commitment?
a) Merger
b) Minority Interest
c) Joint venture
d) Majority interest

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Entrepreneurship (BTN01713)

Day & Date: Thursday, 05-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Question. **14**

1) Business plan is an important ____ for entrepreneurs.
a) Document b) Tool
c) Vision d) Mission

2) Who is an idea Champion?
a) The One who defeats elephant of ideas
b) The rider who shapes the path for elephant
c) The one who open new channels for idea to move forward
d) All the above

3) SIDBI stands for ____.
a) Small Institutions Development Bank of India
b) Small Industries Development Bank of India
c) Small Industries Derivatives Bank of India
d) Small Industries Development Bureau of India

4) Having less than 50 percent of equity share in an international venture is called ____.
a) Joint Venture b) Majority interest
c) Minority interest d) Exporting

5) To provide financial assistance to entrepreneurs the government has set up a number of ____.
a) Financial Advisors b) Financial Intermediaries
c) Industrial Estates d) Financial Institutions

6) The activity of setting up a business or businesses, taking on ____ in the hope of profit.
a) Financial risk b) Loss
c) Profit d) Technical risk

7) Which of the following is used by entrepreneurs to acquire experience in an international market before making a major commitment?

a) Merger
b) Minority Interest
c) Joint venture
d) Majority interest

8) Venture capital is concerned with: ____.

a) New project having potential for higher profit
b) New project of high technology
c) New project having high risk
d) All the above

9) Why should an entrepreneur do a feasibility study for starting a new venture _____.

a) To identify possible sources of funds
b) To see if there are possible barriers to success
c) To estimate the expected sales
d) To explore potential customers

10) What is the process by which individuals pursue opportunities without regard to resources they currently control?

a) Startup management
b) Entrepreneurship
c) Financial analysis
d) Feasibility planning

11) Which one of the following is the process of entrepreneurs developing new products that over time make current products obsolete?

a) New business model
b) Anatomization
c) None of the given options
d) Creative destruction

12) The term Entrepreneur is derived from the _____ word.

a) English
b) Tamil
c) Hindi
d) French

13) The person who creates an enterprise is called ____.

a) Entrepreneur
b) Managers
c) Leaders
d) Owners

14) An entrepreneur is someone who _____.

a) Organize a business
b) Manages a business
c) Takes risks
d) All of the above

Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Answer the following: (Any Two) **14**

a) What are Different Types of Entrepreneurs? Also Compare Entrepreneur with Manager.
b) Differentiate Entrepreneur v/s Intrapreneur
c) Make a prescribed note on Women Entrepreneurship including Problems of Women Entrepreneurship in India.

Q.3 Answer the following: (Any Two) **14**

a) Elaborate 'Role of Government in promoting entrepreneurship'.
b) What is Financial Support System? Explain about Long Term & Short-Term Financial Support System.
c) Explain various characteristics and qualities of entrepreneurs

Section – II

Q.4 Answer the following: (Any Two) **14**

a) What is project report? Describe its elements and significance.
b) Explain Project implementation process.
c) What is Break Even Analysis? Explain with analytical & graphical Approach.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Allocation of units is not dependent on transport cost in _____.
a) LCM b) VAM
c) NWCM d) Penalty Method

2) Hungarian method is suitable for _____.
a) Graphical Problem b) Transportation Model
c) Simplex Problem d) Assignment Model

3) _____ means one employee getting orders and instructions from one supervisor.
a) Order b) Remuneration
c) Discipline d) Unity of command

4) If we take the example of Dustbin, _____ service is provided in Queuing theory.
a) FCFS b) LCFS
c) Priority Basis d) None of the above

5) Graphical method to solve the linear programming problem is commonly used if we have _____.
a) Number of decision variables are two
b) Number of decent variables are three
c) Number of decision variables are four
d) Number of decision variables is one

6) Dual of the Dual is _____.
a) Primal b) Dual
c) Zero d) Infinity

7) When total supply is not equals to total demand, the transportation problem is called _____.

a) Simple b) Balanced
c) Equated d) Unbalanced

8) Advantage of VAM of transportation is _____.

a) Illogical Approach b) Near to optimal solution
c) Faster solution d) Slower solution

9) 'Decision Tree' technique used to solve problems of 'Decision under _____.

a) Certainty b) Risk
c) Uncertainty d) Conflict

10) In a bank if customer arrival rate is 12 person per hour and service rate is 15 customer per hour then the average waiting time in queue is _____.

a) 16 min b) 48 min
c) 2 min d) 60 min

11) EOQ decreases when the Ordering cost of item _____.

a) Increases b) Decreases
c) Zero d) None of these

12) Moderate inventory control is sufficient for _____.

a) A class items b) B class items
c) C class items d) All of these

13) _____ problem is a special problem of LPP.

a) Queuing b) Transportation
c) Simulation d) Decision Tree

14) If primal is maximize $30X_1 + 40X_2$; subjected to $6X_1 + 12X_2 \leq 16$; and $8X_1 + 5X_2 \leq 12$; $X_1, X_2 \geq 0$, Then objective function of the dual as _____.

a) Minimize $6Y_1 + 8Y_2$ b) Maximize $6Y_1 - 8Y_2$
c) Minimize $16Y_1 + 12Y_2$ d) Minimize $12Y_1 + 5Y_2$

Section – I

Q.2 Attempt the three. **24**

a) Maximize $Z = 3X_1 + 4X_2$
Subject to $5X_1 + 4X_2 \leq 200;$
$3X_1 + 5X_2 \leq 150;$
$5X_1 + 4X_2 \geq 100;$
$8X_1 + 4X_2 \leq 80;$
$X_{1,}X_2 \geq 0;$

b) Determine IBFS of the following transportation Problem using LCM. And Calculate Transportation Cost.

		Destination				
		P	Q	R	S	Supply
Origin	A	1000	5000	2000	1200	7
	B	500	700	1900	2100	10
	C	2700	300	100	1300	5
Demand		3	9	4	6	

c) Determine the optimal strategy & value of game.

		Player B		
		I	II	III
Player A	I	6	5	2
	II	-1	1	-2
	III	4	9	6

d) Discuss 14 Principles of Management.
e) What are advantages of Simulation? Give its applications & Limitations. Elaborate stepwise procedure of 'Monte Carlo simulation'

Q.3 Write a note on (Any One) **04**

a) Decision Under Uncertainty
b) Waiting Line Theory

Section – II

Q.4 Attempt the following (Any Three) **24**

a) Write a detailed note on ABC analysis. Explain with a graph.

b) A manufacturing firm produce a single product whose selling price is 16 ₹/ Unit and variable cost per unit is 12₹. If the annual fixed cost of the firm is estimated as 1,20,000 ₹. Find the BEP in ₹, in Units and in % of capacity if the firm has estimated capacity of 50,000 units. What is the margin of Safety?

c) A cycle brand 'X' has demanded 9000 units per year. The cost of one procurement is Rs.100 and the holding cost per unit is Rs.2.4 per year. The replacement is instantaneous and no shortage are allowed. Determine

i) Economic lot size
ii) Number of orders per year
iii) Time between orders
iv) Total cost per year if the cost of one cycle is Rs.300

d) What are quality control charts? What are the different pattern indications in quality control charts?

e) Write a note on the ERP system.

Q.5 Write a note on (Any One) **04**

a) Needs & Characteristics of Dynamic Programming

b) ANN

Optimization Techniques (BTN01714)

Day & Date: Thursday 05-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Attempt the three. **24**

a) Maximize $Z = 3X_1 + 4X_2$
Subject to $5X_1 + 4X_2 \leq 200;$
$3X_1 + 5X_2 \leq 150;$
$5X_1 + 4X_2 \geq 100;$
$8X_1 + 4X_2 \leq 80;$
$X_{1,}X_2 \geq 0;$

b) Determine IBFS of the following transportation Problem using LCM. And Calculate Transportation Cost.

		Destination				
		P	Q	R	S	Supply
Origin	A	1000	5000	2000	1200	7
	B	500	700	1900	2100	10
	C	2700	300	100	1300	5
Demand		3	9	4	6	

c) Determine the optimal strategy & value of game.

		Player B		
		I	II	III
Player A	I	6	5	2
	II	-1	1	-2
	III	4	9	6

d) Discuss 14 Principles of Management.
e) What are advantages of Simulation? Give its applications & Limitations. Elaborate stepwise procedure of 'Monte Carlo simulation'

Q.3 Write a note on (Any One) **04**

a) Decision Under Uncertainty
b) Waiting Line Theory

Section – II

Q.4 Attempt the following (Any Three) **24**

a) Write a detailed note on ABC analysis. Explain with a graph.

b) A manufacturing firm produce a single product whose selling price is 16 ₹/ Unit and variable cost per unit is 12₹. If the annual fixed cost of the firm is estimated as 1,20,000 ₹. Find the BEP in ₹, in Units and in % of capacity if the firm has estimated capacity of 50,000 units. What is the margin of Safety?

c) A cycle brand 'X' has demanded 9000 units per year. The cost of one procurement is Rs.100 and the holding cost per unit is Rs.2.4 per year. The replacement is instantaneous and no shortage are allowed. Determine

i) Economic lot size
ii) Number of orders per year
iii) Time between orders
iv) Total cost per year if the cost of one cycle is Rs.300

d) What are quality control charts? What are the different pattern indications in quality control charts?

e) Write a note on the ERP system.

Q.5 Write a note on (Any One) **04**

a) Needs & Characteristics of Dynamic Programming

b) ANN

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Dual of the Dual is _____.
a) Primal b) Dual
c) Zero d) Infinity

2) When total supply is not equals to total demand, the transportation problem is called _____.
a) Simple b) Balanced
c) Equated d) Unbalanced

3) Advantage of VAM of transportation is _____.
a) Illogical Approach b) Near to optimal solution
c) Faster solution d) Slower solution

4) 'Decision Tree' technique used to solve problems of 'Decision under _____.
a) Certainty b) Risk
c) Uncertainty d) Conflict

5) In a bank if customer arrival rate is 12 person per hour and service rate is 15 customer per hour then the average waiting time in queue is _____.
a) 16 min b) 48 min
c) 2 min d) 60 min

6) EOQ decreases when the Ordering cost of item _____.
a) Increases b) Decreases
c) Zero d) None of these

7) Moderate inventory control is sufficient for _____.
a) A class items b) B class items
c) C class items d) All of these

8) _____ problem is a special problem of LPP.

a) Queuing b) Transportation
c) Simulation d) Decision Tree

9) If primal is maximize $30X_1 + 40X_2$; subjected to $6X_1 + 12X_2 \leq 16$; and $8X_1 + 5X_2 \leq 12$; $X_1, X_2 \geq 0$, Then objective function of the dual as _____.

a) Minimize $6Y_1 + 8Y_2$ b) Maximize $6Y_1 - 8Y_2$
c) Minimize $16Y_1 + 12Y_2$ d) Minimize $12Y_1 + 5Y_2$

10) Allocation of units is not dependent on transport cost in _____.

a) LCM b) VAM
c) NWCM d) Penalty Method

11) Hungarian method is suitable for _____.

a) Graphical Problem b) Transportation Model
c) Simplex Problem d) Assignment Model

12) _____ means one employee getting orders and instructions from one supervisor.

a) Order b) Remuneration
c) Discipline d) Unity of command

13) If we take the example of Dustbin, _____ service is provided in Queuing theory.

a) FCFS b) LCFS
c) Priority Basis d) None of the above

14) Graphical method to solve the linear programming problem is commonly used if we have _____.

a) Number of decision variables are two
b) Number of decent variables are three
c) Number of decision variables are four
d) Number of decision variables is one

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) In a pumped storage hydroelectric scheme, water is _____
a) Only used once
b) Stored in a reservoir and used to generate electricity when needed
c) Constantly flowing downriver
d) Used for irrigation only

2) What is the primary component of a hydro power project?
a) Solar Panels b) Turbine
c) Wind Turbine d) Geothermal Pump

3) Which of the following is a renewable source of energy?
a) Coal b) Natural Gas
c) Solar Energy d) Nuclear Energy

4) Which type of power station primarily uses fossil fuels?
a) Nuclear Power Station b) Hydro Power Station
c) Thermal Power Station d) Wind Power Station

5) What is the primary function of a trash rack in an intake structure?
a) To regulate water flow
b) To filter debris and prevent blockages
c) To control the water level in a reservoir
d) To measure water quality

6) What does the load factor indicate?
   a) The ratio of maximum demand to average demand
   b) The total energy produced in a year
   c) The efficiency of a power plant
   d) The proportion of time a plant operates at full capacity

7) What is the primary advantage of hydro power plants?
   a) High carbon emissions
   b) Low operating costs and renewable energy source
   c) Dependency on fossil fuels
   d) None of the Above

8) What is the basic equation used to estimate hydro power potential?
   a) $P = IV$
   b) $P = \eta \times \rho \times g \times Q \times H$
   c) $P = E/t$
   d) $P = mgh$

9) What is "firm power"?
   a) Power that can be guaranteed to be available at all times
   b) Power generated from renewable sources only
   c) The total capacity of a power plant
   d) Power that varies with demand

10) What is the primary purpose of a pumped storage plant?
   a) To provide constant power generation
   b) To store energy by moving water between two reservoirs
   c) To filter and purify water
   d) To generate electricity from wind

11) Which of the following is a disadvantage of tidal power stations?
   a) They are environmentally friendly.
   b) They can disrupt local ecosystems.
   c) They have predictable energy output.
   d) They are renewable energy sources

12) What is the primary principle of operation for tidal power stations?
   a) Solar energy conversion
   b) Kinetic and potential energy of tides
   c) Wind energy harnessing
   d) Geothermal energy extraction

13) What is a significant disadvantage of pumped storage plants?
   a) High initial capital costs
   b) Low efficiency compared to conventional plants
   c) Limited energy storage capability
   d) Dependency on weather conditions

14) What is the primary environmental concern associated with tidal power stations?

a) Air pollution
b) Noise pollution
c) Disruption of marine life and habitats
d) High water consumption

Set **P**

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Water Power Engineering (BTN01715)

Day & Date: Thursday 05-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Assume suitable data if necessary.
3) Use of non-programmable scientific calculator is allowed.
4) Draw neat labeled diagrams whenever necessary.
5) Figures to the right indicate full marks.

Section – I

Q.2 Attempt any four of the following questions. 16

a) What are the different classifications of sources?

b) What factors should be considered when estimating hydro power potential in India?

c) State the function of hydro power schemes and draw the general layout of various hydropower scheme.

d) Common load shared by two stations base load plant with 30 MW capacity and other being standby plant with 40 MW capacity. The yearly output for base load station is 120×10^6 KWh, and for standby station is 15.5×10^6 KWh'. The peak load taken by standby station is 20 MW which works for 2500 hrs during the year. The base load station takes peak load as 22.5 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) Calculate the power factor for a utility to supply a maximum 2000 kW of real power, when the reactive power at that time is 1250 kVAR.

Q.3 Attempt any two of the following questions. 12

a) A penstock pipe, 780 m long, takes off from a reservoir and feeds water to turbine, the level of which is 250 m below the reservoir water level. The first 300 m length of the penstock has a cross section area of 8 m^2 and the rest has an area of 4 m^2. The steady state discharge is $9m^3$/sec. If the turbine gates are closed completely in 4.5 seconds at a uniform rate, what would be the water hammer pressure developed? (from Allieri chart= $Z^2=1.32$)

b) Explain in brief with diagram the following:
i) Forebay
ii) Intake structure
iii) Tail Race

c) What is water hammer in a pipe line? Derive the expression for the water hammer pressure in case of rigid pipe.

d) A penstock, with an internal diameter of 1.40m, supplies water at a head equivalent to 19.6kg/cm^2. There is a possibility of 25% increase in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be 1200 kg/cm^2 and 80%, respectively. Calculate the approximate wall thickness of the penstock required.

Section – II

Q.4 Attempt any four of the following questions. **16**

a) Classify the different types of surge tank? Explain any one with sketch.

b) What do you understand by 'pumped storage' plant? What are the advantages and disadvantages of this power plant?

c) What are the advantages and disadvantages of different turbine types?

d) Power house is equipped with 4 units of vertical shaft Pelton turbines to be coupled with 72000 kVA, 3 phase. 50 hertz generators. The generation is provided with 10 pairs of poles. The gross design head is 505 m and transmission efficiency of head race tunnel and penstocks together is to be 94 percent.
The four units together will provide for a power of 256000 KW at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98. Find

i) the design discharge for the turbine,
ii) jet dia. and no. of jets,
iii) the nozzle tip diameter
iv) the pitch circle dia. of the wheel
v) the specific speed and
vi) number of buckets on the wheel

e) Can you compare the different types of intake structures and their applications?

Q.5 Attempt any two of the following questions. **12**

a) A Pelton wheel having a mean bucket diameter of 1.2m is running at 1000rpm. The net head on Pelton wheel is 840m. if the side clearance angle is 15° and discharge through nozzle is 0.12m^3/s. determine

i) Power available at the nozzle
ii) Hydraulic efficiency of turbine.

b) Describe the tidal cycle and explain how it affects the feasibility of tidal power generation, including its limitations.

c) At a hydroelectric power station Kaplan turbine is used which has following data, Operating head = 25.5m
output power at this head = 126 MW,
discharge = 615 m3/sec
speed = 68.4 rpm,
Runner tip to tip diameter = 9.3 m
Hub diameter = 4.5m
Number of blades = 6, calculate the speed ratio, flow ratio, and the overall efficiency.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) Which of the following is a disadvantage of tidal power stations?
a) They are environmentally friendly.
b) They can disrupt local ecosystems.
c) They have predictable energy output.
d) They are renewable energy sources

2) What is the primary principle of operation for tidal power stations?
a) Solar energy conversion
b) Kinetic and potential energy of tides
c) Wind energy harnessing
d) Geothermal energy extraction

3) What is a significant disadvantage of pumped storage plants?
a) High initial capital costs
b) Low efficiency compared to conventional plants
c) Limited energy storage capability
d) Dependency on weather conditions

4) What is the primary environmental concern associated with tidal power stations?
a) Air pollution
b) Noise pollution
c) Disruption of marine life and habitats
d) High water consumption

5) In a pumped storage hydroelectric scheme, water is _____
   a) Only used once
   b) Stored in a reservoir and used to generate electricity when needed
   c) Constantly flowing downriver
   d) Used for irrigation only

6) What is the primary component of a hydro power project?
   a) Solar Panels
   b) Turbine
   c) Wind Turbine
   d) Geothermal Pump

7) Which of the following is a renewable source of energy?
   a) Coal
   b) Natural Gas
   c) Solar Energy
   d) Nuclear Energy

8) Which type of power station primarily uses fossil fuels?

   c) Dependency on fossil fuels
   d) None of the Above

12) What is the basic equation used to estimate hydro power potential?
   a) $P = IV$
   b) $P = \eta \times \rho \times g \times Q \times H$
   c) $P = E/t$
   d) $P = mgh$

13) What is "firm power"?
   a) Power that can be guaranteed to be available at all times
   b) Power generated from renewable sources only
   c) The total capacity of a power plant
   d) Power that varies with demand

14) What is the primary purpose of a pumped storage plant?

a) To provide constant power generation
b) To store energy by moving water between two reservoirs
c) To filter and purify water
d) To generate electricity from wind

Seat No.	

Set **R**

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Water Power Engineering (BTN01715)

Day & Date: Thursday 05-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Assume suitable data if necessary.
3) Use of non-programmable scientific calculator is allowed.
4) Draw neat labeled diagrams whenever necessary.
5) Figures to the right indicate full marks.

Section – I

Q.2 Attempt any four of the following questions. **16**

a) What are the different classifications of sources?

b) What factors should be considered when estimating hydro power potential in India?

c) State the function of hydro power schemes and draw the general layout of various hydropower scheme.

d) Common load shared by two stations base load plant with 30 MW capacity and other being standby plant with 40 MW capacity. The yearly output for base load station is 120×10^6 KWh, and for standby station is 15.5×10^6 KWh'. The peak load taken by standby station is 20 MW which works for 2500 hrs during the year. The base load station takes peak load as 22.5 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) Calculate the power factor for a utility to supply a maximum 2000 kW of real power, when the reactive power at that time is 1250 kVAR.

Q.3 Attempt any two of the following questions. **12**

a) A penstock pipe, 780 m long, takes off from a reservoir and feeds water to turbine, the level of which is 250 m below the reservoir water level. The first 300 m length of the penstock has a cross section area of 8 m^2 and the rest has an area of 4 m^2. The steady state discharge is $9m^3$/sec. If the turbine gates are closed completely in 4.5 seconds at a uniform rate, what would be the water hammer pressure developed? (from Allieri chart= $Z^2=1.32$)

b) Explain in brief with diagram the following:
i) Forebay
ii) Intake structure
iii) Tail Race

c) What is water hammer in a pipe line? Derive the expression for the water hammer pressure in case of rigid pipe.

d) A penstock, with an internal diameter of 1.40m, supplies water at a head equivalent to 19.6kg/cm^2. There is a possibility of 25% increase in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be 1200 kg/cm^2 and 80%, respectively. Calculate the approximate wall thickness of the penstock required.

Section – II

Q.4 Attempt any four of the following questions. **16**

a) Classify the different types of surge tank? Explain any one with sketch.

b) What do you understand by 'pumped storage' plant? What are the advantages and disadvantages of this power plant?

c) What are the advantages and disadvantages of different turbine types?

d) Power house is equipped with 4 units of vertical shaft Pelton turbines to be coupled with 72000 kVA, 3 phase. 50 hertz generators. The generation is provided with 10 pairs of poles. The gross design head is 505 m and transmission efficiency of head race tunnel and penstocks together is to be 94 percent.
The four units together will provide for a power of 256000 KW at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98. Find

i) the design discharge for the turbine,
ii) jet dia. and no. of jets,
iii) the nozzle tip diameter
iv) the pitch circle dia. of the wheel
v) the specific speed and
vi) number of buckets on the wheel

e) Can you compare the different types of intake structures and their applications?

Q.5 Attempt any two of the following questions. **12**

a) A Pelton wheel having a mean bucket diameter of 1.2m is running at 1000rpm. The net head on Pelton wheel is 840m. if the side clearance angle is 15° and discharge through nozzle is 0.12m^3/s. determine

i) Power available at the nozzle
ii) Hydraulic efficiency of turbine.

b) Describe the tidal cycle and explain how it affects the feasibility of tidal power generation, including its limitations.

c) At a hydroelectric power station Kaplan turbine is used which has following data, Operating head = 25.5m
output power at this head = 126 MW,
discharge = 615 m3/sec
speed = 68.4 rpm,
Runner tip to tip diameter = 9.3 m
Hub diameter = 4.5m
Number of blades = 6, calculate the speed ratio, flow ratio, and the overall efficiency.

CIVIL ENGINEERING
Water Power Engineering (BTN01715)

Day & Date: Thursday 05-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.
5) Use of only non-programmable calculator is allowed.
6) Draw neat labeled diagrams wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) What does the load factor indicate?
a) The ratio of maximum demand to average demand
b) The total energy produced in a year
c) The efficiency of a power plant
d) The proportion of time a plant operates at full capacity

2) What is the primary advantage of hydro power plants?
a) High carbon emissions
b) Low operating costs and renewable energy source
c) Dependency on fossil fuels
d) None of the Above

3) What is the basic equation used to estimate hydro power potential?
a) $P = IV$ b) $P = \eta \times \rho \times g \times Q \times H$
c) $P = E/t$ d) $P = mgh$

4) What is "firm power"?
a) Power that can be guaranteed to be available at all times
b) Power generated from renewable sources only
c) The total capacity of a power plant
d) Power that varies with demand

5) What is the primary purpose of a pumped storage plant?
a) To provide constant power generation
b) To store energy by moving water between two reservoirs
c) To filter and purify water
d) To generate electricity from wind

6) Which of the following is a disadvantage of tidal power stations?
   a) They are environmentally friendly.
   b) They can disrupt local ecosystems.
   c) They have predictable energy output.
   d) They are renewable energy sources

7) What is the primary principle of operation for tidal power stations?
   a) Solar energy conversion
   b) Kinetic and potential energy of tides
   c) Wind energy harnessing
   d) Geothermal energy extraction

8) What is a significant disadvantage of pumped storage plants?
   a) High initial capital costs
   b) Low efficiency compared to conventional plants
   c) Limited energy storage capability
   d) Dependency on weather conditions

9) What is the primary environmental concern associated with tidal power stations?
   a) Air pollution
   b) Noise pollution
   c) Disruption of marine life and habitats
   d) High water consumption

10) In a pumped storage hydroelectric scheme, water is _____
   a) Only used once
   b) Stored in a reservoir and used to generate electricity when needed
   c) Constantly flowing downriver
   d) Used for irrigation only

11) What is the primary component of a hydro power project?
   a) Solar Panels
   b) Turbine
   c) Wind Turbine
   d) Geothermal Pump

12) Which of the following is a renewable source of energy?
   a) Coal
   b) Natural Gas
   c) Solar Energy
   d) Nuclear Energy

13) Which type of power station primarily uses fossil fuels?
   a) Nuclear Power Station
   b) Hydro Power Station
   c) Thermal Power Station
   d) Wind Power Station

14) What is the primary function of a trash rack in an intake structure?
   a) To regulate water flow
   b) To filter debris and prevent blockages
   c) To control the water level in a reservoir
   d) To measure water quality

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: 14

1) Concentration of SPM in ambient air can be determined by using _____.
a) Stack monitoring kit
b) Auto exhaust analyzer
c) High volume sampler or respirable dust sampler
d) All of above

2) _____ can remove _____.
a) Scrubers, Water soluble Gases
b) Gravity settler, Particulates
c) Adsorption tower, organic gases
d) All of above

3) Molecular mass of H_2S is _____ grams/ mole.
a) 44 b) 48
c) 34 d) 28

4) If stack is having cross sectional area of 4 sq. m, then number of traverse points shall be equal to _____
a) 4 b) 12
c) 20 d) 30

5) _____ are categorized under dry collectors.
a) Venturi scrubber b) Spray tower
c) Cyclonic scrubber d) Cyclone separator

6) Thickness of troposphere is approximately _____ km.
a) 35 b) 11
c) 39 d) 500

7) Bags in bag house filter are _____ mm in diameter.
a) 120-400 b) 10-20
c) 12-40 d) 1000-15000

8) Fugitive emissions consist of _____
a) Street dust
b) Dust from construction activities
c) Dust from farm cultivation
d) All of the above

9) According to EPA of USA, the following is not one of the six major pollutants?
a) Ozone b) Carbon monoxide
c) Nitrogen oxides d) Carbon di-oxide

10) Concentration of pollutants in stack emissions can be measured by _____
a) High volume sampler b) Stack monitoring kit
c) Thermometer d) Hygrometer

11) As per NAAQS (old), standard for PM_{10} for eco-sensitive area considering annual average is _____ micrograms/m^3.
a) 60 b) 100
c) 8 d) 80

12) Noise pollution is created if sound is in excess to _____
a) 70-75 dB b) 50-60 dB
c) 80-99 dB d) 40-65 dB

13) Day time noise standard prescribed for residential areas in India is _____
a) 75 dB b) 65 dB
c) 50 dB d) 55 dB

14) _____ is needed in stack monitoring in order to obtain true and representative samples from stack.
a) Over isokinetic sampling b) Under isokinetic sampling
c) Isokinetic sampling d) None of these

CIVIL ENGINEERING
Air and Noise Pollution and Control (BTN01716)

Day & Date: Thursday 05-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 3 & Q. No. 7 are compulsory and attempt any two questions from the remaining questions from each section.
2) Figure to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Attempt the following questions.

a) Explain with example: i) Personal air exposure ii) Occupational air exposure iii) Community air exposure. **06**

b) Define air pollution based on composition of clean air. **03**

Q.3 Attempt the following questions.

a) Determine the effective stack height given by the following data : **06**
1) Physical stack height = 203 m
2) Inside diameter of stack = 1.07m
3) Air temperature = 13°C
4) Barometric pressure = 1000 mbar
5) Stack gas velocity = 9.14 m/sec
6) Stack gas temperature = 149°C
7) Wind speed = 5m/sec.

b) Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

Q.4 Attempt the following.

a) Give detailed classification of sources of air pollution. **04**

b) A factory uses 1.5 million litres of fuel oil/month. The exhaust gases from factory contain the following quantities of pollutants/million litres/year. **05**
1) Particulate matter = 5 tonnes / year
2) Sulphur dioxide = 21 tonnes / year

Q.5 Attempt the following.

a) What is standard cyclone? Explain with the help of neat sketch. **04**

b) A conventional cyclone with diameter 1 m handles 3 m^3/sec of air carrying particles of density 2000 kg/m^3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.81 \times 10^{-5}$ kg/m.sec. (Note - treat it as a standard cyclone) **05**

Section – II

Q.6 Attempt the following.

a) Explain with neat sketch working of ESP. Also give advantages and disadvantages. **04**

b) It was decided to construct a fabric filter, using bags of 0.45 m diameter and 7.5 m long, for removing industrial stack gas containing particulates. The expected rate of airflow into the filter is 10 m^3/s. If the filtering velocity is 2.0 m/min, compute the minimum number of bags (rounded to nearest higher integer) required for continuous cleaning operation. **05**

Q.7 Attempt the following.

a) An ESP with overall spacing of 0.23 cm and mean gas velocity 1.5 m/s has collector plate area of 6000 m^2 gives efficiency of 97% in treating 200 m^3/s of gas. To achieve 98% and 99% efficiency. What should be plate area required? **05**

b) Explain the principle working of wet scrubber. **05**

Q.8 Attempt the following.

a) Discuss in brief the sources of noise. **04**

b) Explain decibel scale with sample sound level and frequency of sound waves. **05**

Q.9 Write short notes on the following: **09**

a) National ambient quality standards for noise

b) Effects of noise on health

c) Instrumentation Requirements in noise

a) 35 b) 11
c) 39 d) 500

11) Bags in bag house filter are _____ mm in diameter.

a) 120-400 b) 10-20
c) 12-40 d) 1000-15000

12) Fugitive emissions consist of _____

a) Street dust
b) Dust from construction activities
c) Dust from farm cultivation
d) All of the above

13) According to EPA of USA, the following is not one of the six major pollutants?

a) Ozone b) Carbon monoxide
c) Nitrogen oxides d) Carbon di-oxide

14) Concentration of pollutants in stack emissions can be measured by _____

a) High volume sampler b) Stack monitoring kit
c) Thermometer d) Hygrometer

SLR-BD-337

Seat No.		Set	R

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Air and Noise Pollution and Control (BTN01716)

Day & Date: Thursday 05-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 3 & Q. No. 7 are compulsory and attempt any two questions from the remaining questions from each section.
2) Figure to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Attempt the following questions.

a) Explain with example: i) Personal air exposure ii) Occupational air exposure iii) Community air exposure. **06**

b) Define air pollution based on composition of clean air. **03**

Q.3 Attempt the following questions.

a) Determine the effective stack height given by the following data : **06**
1) Physical stack height = 203 m
2) Inside diameter of stack = 1.07m
3) Air temperature = 13°C
4) Barometric pressure = 1000 mbar
5) Stack gas velocity = 9.14 m/sec
6) Stack gas temperature = 149°C
7) Wind speed = 5m/sec.

b) Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

Q.4 Attempt the following.

a) Give detailed classification of sources of air pollution. **04**

b) A factory uses 1.5 million litres of fuel oil/month. The exhaust gases from factory contain the following quantities of pollutants/million litres/year. **05**
1) Particulate matter = 5 tonnes / year
2) Sulphur dioxide = 21 tonnes / year

Q.5 Attempt the following.

a) What is standard cyclone? Explain with the help of neat sketch. **04**

b) A conventional cyclone with diameter 1 m handles 3 m^3/sec of air carrying particles of density 2000 kg/m^3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.81 \times 10^{-5}$ kg/m.sec. **05**
(Note - treat it as a standard cyclone)

Section – II

Q.6 Attempt the following.

a) Explain with neat sketch working of ESP. Also give advantages and disadvantages. **04**

b) It was decided to construct a fabric filter, using bags of 0.45 m diameter and 7.5 m long, for removing industrial stack gas containing particulates. The expected rate of airflow into the filter is 10 m^3/s. If the filtering velocity is 2.0 m/min, compute the minimum number of bags (rounded to nearest higher integer) required for continuous cleaning operation. **05**

Q.7 Attempt the following.

a) An ESP with overall spacing of 0.23 cm and mean gas velocity 1.5 m/s has collector plate area of 6000 m^2 gives efficiency of 97% in treating 200 m^3/s of gas. To achieve 98% and 99% efficiency. What should be plate area required? **05**

b) Explain the principle working of wet scrubber. **05**

Q.8 Attempt the following.

a) Discuss in brief the sources of noise. **04**

b) Explain decibel scale with sample sound level and frequency of sound waves. **05**

Q.9 Write short notes on the following: **09**

a) National ambient quality standards for noise

b) Effects of noise on health

c) Instrumentation Requirements in noise

Seat No.		Set	S

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Air and Noise Pollution and Control (BTN01716)

Day & Date: Thursday 05-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable whenever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: **14**

1) Thickness of troposphere is approximately _____ km.
a) 35 b) 11
c) 39 d) 500

2) Bags in bag house filter are _____ mm in diameter.
a) 120-400 b) 10-20
c) 12-40 d) 1000-15000

3) Fugitive emissions consist of _____
a) Street dust
b) Dust from construction activities
c) Dust from farm cultivation
d) All of the above

4) According to EPA of USA, the following is not one of the six major pollutants?
a) Ozone b) Carbon monoxide
c) Nitrogen oxides d) Carbon di-oxide

5) Concentration of pollutants in stack emissions can be measured by _____
a) High volume sampler b) Stack monitoring kit
c) Thermometer d) Hygrometer

6) As per NAAQS (old), standard for PM_{10} for eco-sensitive area considering annual average is _____ micrograms/m^3.
a) 60 b) 100
c) 8 d) 80

7) Noise pollution is created if sound is in excess to _____
a) 70-75 dB b) 50-60 dB
c) 80-99 dB d) 40-65 dB

8) Day time noise standard prescribed for residential areas in India is _____
a) 75 dB b) 65 dB
c) 50 dB d) 55 dB

9) _____ is needed in stack monitoring in order to obtain true and representative samples from stack.
a) Over isokinetic sampling b) Under isokinetic sampling
c) Isokinetic sampling d) None of these

10) Concentration of SPM in ambient air can be determined by using _____.
a) Stack monitoring kit
b) Auto exhaust analyzer
c) High volume sampler or respirable dust sampler
d) All of above

11) _____ can remove _____.
a) Scrubers, Water soluble Gases
b) Gravity settler, Particulates
c) Adsorption tower, organic gases
d) All of above

12) Molecular mass of H_2S is _____ grams/ mole.
a) 44 b) 48
c) 34 d) 28

13) If stack is having cross sectional area of 4 sq. m, then number of traverse points shall be equal to _____
a) 4 b) 12
c) 20 d) 30

14) _____ are categorized under dry collectors.
a) Venturi scrubber b) Spray tower
c) Cyclonic scrubber d) Cyclone separator

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is vulnerability in the context of development?
a) A measure of economic growth
b) The state of being exposed to the risk of harm or damage
c) A synonym for resilience
d) The level of technological advancement

2) How does vegetation and afforestation contribute to disaster mitigation?
a) By creating barriers to emergency responders
b) By increasing vulnerability to disasters
c) By providing natural barriers against floods, landslides, and soil erosion
d) By promoting deforestation

3) The National Disaster Management Authority (NDMA) is headed by ____.
a) Prime Minister of India b) President of India
c) Governor of States d) Chief Minister of States

4) What is the primary purpose of insurance in disaster risk management?
a) To create financial burdens for individuals
b) To transfer and manage the financial risks associated with disasters
c) To discourage risk reduction efforts
d) To ignore the impact of disasters

5) Which international agency is often involved in providing financial assistance for poverty reduction and development projects in developing countries?
a) United Nations Educational, Scientific and Cultural Organization (UNESCO)
b) World Health Organization (WHO)
c) World Bank
d) International Labour Organization (ILO)

6) In flood-prone areas, what feature is important for the ground floor of a disaster resistant house?

a) Elevated foundation b) Basement
c) Slab foundation d) Sunken living room

7) What is the primary goal of socio-economic rehabilitation?

a) Preservation of cultural heritage
b) Restoration of physical health
c) Restoration of economic and social well-being
d) Implementation of new policies

8) In the aftermath of a natural disaster, which aspect of socio-economic rehabilitation is crucial for long-term resilience?

a) Short-term financial aid b) Infrastructure reconstruction
c) Community empowerment d) Technological advancements

9) What is the role of baseline data in the monitoring process?

a) To determine the final project outcome
b) To establish a reference point for measuring changes and impacts
c) To identify the individuals responsible for the project
d) To compare different rehabilitation projects

10) What is the role of prioritization in time management during a disaster?

a) To focus solely on non-urgent tasks
b) To identify and address high-priority and time-sensitive activities
c) To promote procrastination
d) To discourage collaboration with external agencies

11) How does Community-Based Disaster Management contribute to increasing community resilience?

a) By promoting dependency on external aid
b) By isolating the community from the disaster management process
c) By enhancing local capacity, knowledge, and self-reliance
d) By avoiding community input for quick decision-making

12) What is a primary concern regarding drinking water during a disaster?

a) Over hydration b) Contamination
c) Lack of taste d) Excessive fluoride content

13) What is the purpose of a lightning rod in disaster-resistant construction?

a) Prevent earthquakes
b) Reduce wind impact
c) Protect against lightning strikes
d) Enhance insulation

14) What role does feedback play in the monitoring and evaluation process?

a) It is irrelevant to the process
b) It helps identify areas for improvement and informs decision-making
c) It is solely for public relations purposes
d) It is only necessary at the project's conclusion

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) In flood-prone areas, what feature is important for the ground floor of a disaster resistant house?
a) Elevated foundation b) Basement
c) Slab foundation d) Sunken living room

2) What is the primary goal of socio-economic rehabilitation?
a) Preservation of cultural heritage
b) Restoration of physical health
c) Restoration of economic and social well-being
d) Implementation of new policies

3) In the aftermath of a natural disaster, which aspect of socio-economic rehabilitation is crucial for long-term resilience?
a) Short-term financial aid b) Infrastructure reconstruction
c) Community empowerment d) Technological advancements

4) What is the role of baseline data in the monitoring process?
a) To determine the final project outcome
b) To establish a reference point for measuring changes and impacts
c) To identify the individuals responsible for the project
d) To compare different rehabilitation projects

5) What is the role of prioritization in time management during a disaster?
a) To focus solely on non-urgent tasks
b) To identify and address high-priority and time-sensitive activities
c) To promote procrastination
d) To discourage collaboration with external agencies

6) How does Community-Based Disaster Management contribute to increasing community resilience?
a) By promoting dependency on external aid
b) By isolating the community from the disaster management process
c) By enhancing local capacity, knowledge, and self-reliance
d) By avoiding community input for quick decision-making

7) What is a primary concern regarding drinking water during a disaster?
a) Over hydration
b) Contamination
c) Lack of taste
d) Excessive fluoride content

8) What is the purpose of a lightning rod in disaster-resistant construction?
a) Prevent earthquakes
b) Reduce wind impact
c) Protect against lightning strikes
d) Enhance insulation

9) What role does feedback play in the monitoring and evaluation process?
a) It is irrelevant to the process
b) It helps identify areas for improvement and informs decision-making
c) It is solely for public relations purposes
d) It is only necessary at the project's conclusion

10) What is vulnerability in the context of development?
a) A measure of economic growth
b) The state of being exposed to the risk of harm or damage
c) A synonym for resilience
d) The level of technological advancement

11) How does vegetation and afforestation contribute to disaster mitigation?
a) By creating barriers to emergency responders
b) By increasing vulnerability to disasters
c) By providing natural barriers against floods, landslides, and soil erosion
d) By promoting deforestation

12) The National Disaster Management Authority (NDMA) is headed by ____.
a) Prime Minister of India
b) President of India
c) Governor of States
d) Chief Minister of States

13) What is the primary purpose of insurance in disaster risk management?
a) To create financial burdens for individuals
b) To transfer and manage the financial risks associated with disasters
c) To discourage risk reduction efforts
d) To ignore the impact of disasters

14) Which international agency is often involved in providing financial assistance for poverty reduction and development projects in developing countries?

a) United Nations Educational, Scientific and Cultural Organization (UNESCO)
b) World Health Organization (WHO)
c) World Bank
d) International Labour Organization (ILO)

Seat No.		Set	S

Fourth. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Recovery, Rehabilitation and Reconstruction (BTN01717)

Day & Date: Friday 06-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q.2 is compulsory; answer any two from remaining questions from Section - I.
2) Q.6 is compulsory; answer any two from remaining questions from Section - II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2	**a)**	What is mean by Disaster mitigation? Write its importance.	**04**
	b)	Write the roles of Local elected bodies in rehabilitation.	**03**
	c)	What is role of World bank in Relief and reconstruction?	**03**
Q.3	**a)**	Give the classification of damage as per the Medvedev-Sponheuer-Karnik (MSK) Scale of 1964.	**05**
	b)	Write the importance of Disaster mitigation.	**04**
Q.4	**a)**	What do you mean by Social Infrastructure? Explain development of Social Infrastructure.	**05**
	b)	Describe Disaster Management Act.	**04**
Q.5	**a)**	Explain various traditional disaster-resistant construction techniques.	**05**
	b)	Write short note on Chief Minister's Disaster Relief Fund.	**04**

Section – II

Q.6	**a)**	Write note on rehabilitation of animal husbandry affected due to the disaster.	**04**
	b)	Explain various categories of Recovery.	**03**
	c)	Write note on Community Response in Disaster Management.	**03**
Q.7	**a)**	What are the key steps and considerations for evaluating rehabilitation work?	**05**
	b)	What is importance of Rural and Urban local bodies in recovery work?	**04**
Q.8	**a)**	What is Recovery and what are key elements of Recovery?	**05**
	b)	What is Speedy recovery? What is its importance?	**04**

Q.9	**a)**	Write note on Hygiene and Sanitation and response strategies for it after disaster.	**05**
	b)	What are tools for time management? And what are challenges in time management during disasters?	**04**

Bridge and Grade Separated Structures (BTN01718)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable data wherever needed and mention it clearly.
5) Draw neat sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) _____ following are components of bridges.
a) Pier b) Abutment
c) Foundation d) All of these

2) Factors affecting selection of type of Bridge and Bridge Site are _____.
a) The nature and bed conditions of river or stream
b) Hydraulic data collected at the site
c) The climatic condition of the area
d) All of these

3) Abutment of Bridge is _____.
a) Foundation b) End pier
c) Bearing d) All of these

4) Types of grades separated structures are _____.
a) Overpass b) Under pass
c) Flyover d) All of these

5) Types of Bridge foundations are _____.
a) Caisson Foundation b) Pile foundation
c) Pier Foundation d) All of these

6) Steps involved in the Construction of Diaphragm Walls are _____.
a) Excavation Preparation b) Slurry Trench
c) Concrete Pouring d) All of these

7) Pipe jacking involves moving _____ to the ground.
a) Box b) Pipe
c) both a and b d) All of these

8) Launching girders for bridges involves the following steps _____
a) Planning and Design b) Fabrication
c) Transportation to the Site d) All of these

9) Offshore platforms are _____.
a) Structure built in lake b) Structure built on the sea
c) Structure built in the pond d) All of these

10) Material handling is _____.
a) Process of change of material.
b) Process of transporting, lifting, and placing various construction materials and equipment.
c) Process of finding Quality of Construction Material.
d) Process of finding Quantity of Construction Material.

11) Erecting lightweight components on tall structures in bridges requires ___.
a) Engineering and Design b) Assembly and Connection
c) Specialized Equipment d) All of these

12) The cross section of a pier may be _____.
a) with triangular edges towards upstream and downstream sides
b) with curved faces on upstream and downstream sides
c) rectangular
d) all the above

13) Ground improvement techniques are _____.
a) Compaction b) Grouting
c) Deep Soil Mixing d) All of these

14) What is the basis for PERT analysis?
a) An optimistic time b) A pessimistic period of time
c) The date that is most likely d) All options mentioned above

Bridge and Grade Separated Structures (BTN01718)

Day & Date: Friday, 06-June-2025 Max. Marks:
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable data wherever needed and mention it clearly.
4) Draw neat sketches wherever necessary.

Section – I

Q.2 Solve following (Any 2) **14**

a) Enlist and explain various types of grade separated structures.
b) Explain structural requirements of grade separated structures.
c) Explain the construction process for 'Diaphragm Walls'.

Q.3 Solve following (Any 2) **14**

a) Enlist and explain various types of 'Tunneling Techniques'.
b) Explain, 'Bridge testing for safe carrying capacity' in detail.
c) Explain, 'Bridge Approaches' in detail.

Section – II

Q.4 Solve following (Any 2) **14**

a) Explain the process of Embankment Construction in detail.
b) Explain various types of Ground Improvement Techniques in details.
c) Explain the factors affecting selection of equipment and methods.

Q.5 Solve following (Any 2) **14**

a) Explain the concept of Equipment management in construction projects.
b) Differentiate between CPM and PERT Techniques.
c) The following table shows the list of activities and their durations. Calculate the project duration and critical path of the network.

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following is not considered in an LCA?
a) Energy consumption b) Water usage
c) Greenhouse gas emissions d) Aesthetics

2) How can sustainable engineering contribute to a circular economy?
a) By promoting linear production and consumption practices
b) By designing products for reuse, recycling and resource recovery
c) By disregarding environmental considerations in engineering decisions
d) By prioritizing short term economic gains

3) Which stage of the product life cycle is important for sustainable engineering?
a) Raw material extraction and processing
b) Manufacturing and production
c) End of life disposal
d) Product use and maintenance

4) From which perspective sustainable engineering designs are different from the conventional engineering designs?
a) Operational safety b) Environmental impact
c) Functionality d) Cost effectiveness

5) Which of following falls under environmental impact categories in LCA?
a) Acid rain b) Eutrophication
c) Photochemical smog d) All of the above

6) Which of the following is a principle of sustainable engineering?
a) Long term thinking and planning
b) Short term decision making
c) Minimizing resource efficiency
d) All of the above

7) Which statement dictates the relation between functional unit and reference flows?

a) Reference flows indicate the amounts of input necessary to fulfil the amount of function specified by the functional unit
b) Reference flow provides the basis for functional unit determination
c) Reference flow has no correlation with functional unit
d) Reference flow is the functional unit multiplied by impact factor

8) Elementary flows involve the input and output relation between _____.

a) two-unit processes and represents the function of unit process
b) two system boundaries and represents connection among systems
c) system boundary and impact category and represents the potential of impact from the system boundary chosen
d) environment and unit process and represents the environmental intervention

9) Which of the following stage cannot be ignored for conducting a comparative life cycle assessment between two waste management technologies for the same product?

a) Manufacturing
b) Product Usage
c) End-of-life
d) Resource acquisition

10) Electric vehicles (EVs) are not zero emission vehicles. Why?

a) Batteries needs to be recharged by electricity and electricity production has air emissions
b) Batteries emits radiation like nuclear wastes
c) EV has a non zero gasoline indicator installed in the car
d) Batteries contain heavy metals, production and disposal of these metals is associated with environmental emissions

11) Which instrument is used to measure the Beam radiations?

a) Pyrheliometer
b) Sunshine Recorder
c) Anemometer
d) All of the above

12) The chemical industry is not a cause of: _____

a) Water pollution
b) Noise pollution
c) Air pollution
d) Nuclear pollution

13) In which collector the solar radiation collection efficiency is maximum?

a) Flat Plate
b) Line Focusing
c) Evacuated Tube
d) Paraboloid Dish

14) The maximum number of individuals that can be supported by a given environment is called _____.

a) Biotic potential
b) Carrying capacity
c) Environmental resistance
d) Population size

Set Q

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Sustainable Engineering & Technology (BTN01719)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) Elementary flows involve the input and output relation between _____.
a) two-unit processes and represents the function of unit process
b) two system boundaries and represents connection among systems
c) system boundary and impact category and represents the potential of impact from the system boundary chosen
d) environment and unit process and represents the environmental intervention

2) Which of the following stage cannot be ignored for conducting a comparative life cycle assessment between two waste management technologies for the same product?
a) Manufacturing b) Product Usage
c) End-of-life d) Resource acquisition

3) Electric vehicles (EVs) are not zero emission vehicles. Why?
a) Batteries needs to be recharged by electricity and electricity production has air emissions
b) Batteries emits radiation like nuclear wastes
c) EV has a non zero gasoline indicator installed in the car
d) Batteries contain heavy metals, production and disposal of these metals is associated with environmental emissions

4) Which instrument is used to measure the Beam radiations?
a) Pyrheliometer b) Sunshine Recorder
c) Anemometer d) All of the above

5) The chemical industry is not a cause of: _____
a) Water pollution b) Noise pollution
c) Air pollution d) Nuclear pollution

6) In which collector the solar radiation collection efficiency is maximum?
a) Flat Plate b) Line Focusing
c) Evacuated Tube d) Paraboloid Dish

7) The maximum number of individuals that can be supported by a given environment is called _____.
a) Biotic potential b) Carrying capacity
c) Environmental resistance d) Population size

8) Which of the following is not considered in an LCA?
a) Energy consumption b) Water usage
c) Greenhouse gas emissions d) Aesthetics

9) How can sustainable engineering contribute to a circular economy?
a) By promoting linear production and consumption practices
b) By designing products for reuse, recycling and resource recovery
c) By disregarding environmental considerations in engineering decisions
d) By prioritizing short term economic gains

10) Which stage of the product life cycle is important for sustainable engineering?
a) Raw material extraction and processing
b) Manufacturing and production
c) End of life disposal
d) Product use and maintenance

11) From which perspective sustainable engineering designs are different from the conventional engineering designs?
a) Operational safety b) Environmental impact
c) Functionality d) Cost effectiveness

12) Which of following falls under environmental impact categories in LCA?
a) Acid rain b) Eutrophication
c) Photochemical smog d) All of the above

13) Which of the following is a principle of sustainable engineering?
a) Long term thinking and planning
b) Short term decision making
c) Minimizing resource efficiency
d) All of the above

14) Which statement dictates the relation between functional unit and reference flows?
a) Reference flows indicate the amounts of input necessary to fulfil the amount of function specified by the functional unit
b) Reference flow provides the basis for functional unit determination
c) Reference flow has no correlation with functional unit
d) Reference flow is the functional unit multiplied by impact factor

3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) _____ is set of components that work together for overall objectives.
a) System b) Goals
c) Objective d) None of these

2) _____ is termed as performance measure, simply an objective that stated in measurable terms.
a) Measure of Effectiveness b) Dimension
c) Planning d) None

3) Which of the following is not property of desired MOE?
a) Appropriateness b) Measurability
c) Realistic d) Cost Saving

4) The super systems are _____.
a) Higher level systems b) Lower level systems
c) Both d) None of these.

5) _____ models describe the amount of money needed to undertake specific action.
a) Demand b) Cost
c) Real d) Supply

6) Which of the following is tool for task of description?
a) Probability b) Statistics
c) Economics d) All of the above

7) _____ models are that use the mathematics of decision making to choose a course of action, design or policy.
a) Prescriptive b) Descriptive
c) Analog d) Real

8) _____ Provides basis for predicting the need for proposed civil system.
a) Planning b) Need Assessment
c) Controlling d) None

9) A _____ may be defined as deficiency, an unfulfilled requirement, lack of product that is necessary.
a) Supply b) Need
c) None d) All of these

10) Which of the following is the stakeholder of system?
a) Users b) Community
c) System Owner d) All

11) From _____ perspective, the system inputs considered in system planning could have short term, moderate term & long term effects.
a) Temporal b) Operational
c) Phase d) None

12) Which of the following is classification of design?
a) Selection Design b) Configuration Design
c) Both of the above d) None of the above

13) In Preliminary Design, analysis & evaluation of design is done on _____ stage.
a) Detailed b) Conceptual
c) Multiple d) Preliminary

14) In _____ design, analysis & evaluation of alternative designs is done in details.
a) Conceptual b) Preliminary
c) Detailed d) None

Fourth. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Civil Engineering System Analysis and Design (BTN01720)

Day & Date: Friday, 06-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 Answer any four. **28**

a) Explain various classifications of system.
b) Explain hierarchy of desired outcomes: Values. Goals. Objectives.
c) Classify different models with examples.
d) Explain Traditional tasks of analyzing systems in civil engineering.
e) Explain examples of tasks at each phase of civil system development.
f) Explain development of civil engineering system.

Section – II

Q.3 Answer any four. **28**

a) Explain engineering design process in detail with sketch.
b) Explain process for system planning.
c) i) Explain assessment of system needs.
ii) Explain Initial vs Recurring needs & Growing vs Sudden needs.
d) Explain classification of engineering design with examples.
e) Explain various principles of planning in detail.
f) Explain various of mechanisms for need assessment of system.

Fourth. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Civil Engineering System Analysis and Design (BTN01720)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following is tool for task of description?
a) Probability b) Statistics
c) Economics d) All of the above

2) _____ models are that use the mathematics of decision making to choose a course of action, design or policy.
a) Prescriptive b) Descriptive
c) Analog d) Real

3) _____ Provides basis for predicting the need for proposed civil system.
a) Planning b) Need Assessment
c) Controlling d) None

4) A _____ may be defined as deficiency, an unfulfilled requirement, lack of product that is necessary.
a) Supply b) Need
c) None d) All of these

5) Which of the following is the stakeholder of system?
a) Users b) Community
c) System Owner d) All

6) From _____ perspective, the system inputs considered in system planning could have short term, moderate term & long term effects.
a) Temporal b) Operational
c) Phase d) None

7) Which of the following is classification of design?
a) Selection Design b) Configuration Design
c) Both of the above d) None of the above

8) In Preliminary Design, analysis & evaluation of design is done on _____ stage.

a) Detailed b) Conceptual
c) Multiple d) Preliminary

9) In _____ design, analysis & evaluation of alternative designs is done in details.

a) Conceptual b) Preliminary
c) Detailed d) None

10) _____ is set of components that work together for overall objectives.

a) System b) Goals
c) Objective d) None of these

11) _____ is termed as performance measure, simply an objective that stated in measurable terms.

a) Measure of Effectiveness b) Dimension
c) Planning d) None

12) Which of the following is not property of desired MOE?

a) Appropriateness b) Measurability
c) Realistic d) Cost Saving

13) The super systems are _____.

a) Higher level systems b) Lower level systems
c) Both d) None of these.

14) _____ models describe the amount of money needed to undertake specific action.

a) Demand b) Cost
c) Real d) Supply

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct alternatives from the options. 20

1) Copyright law gives _____ exclusive rights to the owner of copyright.
a) 2 b) 4
c) 6 d) 3

2) Ethical Style is _____
a) Promises only what can be delivered
b) Deals honestly with others
c) Behaves unselfishly
d) Contributes to knowledge base

3) _____ is defined as the right of a person to guide.
a) Democracy b) Freedom
c) Responsibility d) Authority

4) Patents are granted by national patent offices or by regional offices that carry out examination work for a group of countries _____
a) True b) False

5) Rules that mandate or prohibit certain behavior in society _____
a) Regulation b) Law
c) Rules d) Moral ethics

6) The hardware or a process used in its manufacture may be protected by a _____
a) Copyright b) Design registry
c) Patent d) Trademark

7) The look of the product may be registered in the _____
a) Copyright b) Trademark
c) Patent d) Designs registry

8) Which of the following is not true with respect to ensure a safety design?

a) The maximum requirement is that a design must comply with the applicable laws.
b) An acceptable design must meet the standard of "accepted engineering practice."
c) Alternative designs that are potentially safer must be explored.
d) Engineer must attempt to foresee potential misuses of the product by the consumer and must design to avoid these problems.

9) In _____, a neutral third party assists the disputing parties in reaching a settlement of their dispute.

a) Infiltration b) Arbitration
c) Mediation d) Negotiation

10) Which of the following stakeholder has the responsibility of prescribing norms to ensure safety of the citizens?

a) Government b) Professional Societies
c) Standardization Bodies d) All of these

11) What does a trademark protect?

a) An invention
b) Logos, names and brands
c) The look, shape and feel of a product
d) A secret formula

12) How long do patents usually last for?

a) 10 years b) 20 years
c) 40 years d) 60 years

13) Safety provisions in Indian Factory Act does not cover _____

a) Fencing of machinery b) Precaution against fire
c) Lunch rooms d) Protection eyes

14) Which of the following matter are not referred to arbitration?

a) Civil matters b) Matrimonial matters
c) Banking matters d) Property matters

15) The quest to maximize profitability should be constrained by _____

a) Ethical obligations
b) Stakeholders
c) Unethical obligations
d) Lack of social responsibility

16) Which of the following is not usually the objective of a code of ethics?
   a) to create an ethical workplace
   b) to evaluate the ethical components of the proposed actions of the employees
   c) to improve the public image of the company
   d) to enhance the profits of the business continuously

17) What kinds of trademarks can be registered?
   a) one or a combination of words
   b) Letters
   c) Numerals
   d) All of these

18) Which of the following is not a way of protection?
   a) Personnel security
   b) Physical security
   c) Personal security
   d) Piracy

19) Industrial acts are useful for _____
   a) Guarantee of employee welfare
   b) Provision of legal platform
   c) Removes extortion of workers
   d) All of these

20) Workman's Compensation Act consists of which of following provisions of act?
   a) Partial disablement
   b) Total disablement
   c) Amount of compensation
   d) All of these

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Repairs & Rehabilitation of Structures (BTN01803)

Day & Date: Wednesday 28-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) The pH value of fresh concrete is around _____.
a) 10 b) 9
c) 8 d) 12.5

2) _____ is responsible for the combination of the polymer particles.
a) Monomer b) Nanomer
c) Tetramer d) Crystal

3) Bacterial concrete is a _____ concrete.
a) Porous b) Self healing
c) Foamed d) Vacuum

4) Process of maintaining different components of building so that it can provide proper service throughout its working life is known as _____.
a) Building maintenance b) Building management
c) Building service d) Building repairs

5) If the cracks width is less than 0.1 mm then they are called _____.
a) Fine b) Thin
c) Medium d) Wide

6) _____ is a similar phenomenon to explosion but the pieces collapse into the center of the object instead of being expelled.
a) Explosion b) An implosion
c) both a and b d) none

7) _____ type of activity is carried out during the maintenance process.
a) Repair of plaster
b) Repair of cracks in walls and ceiling
c) Repair of flooring settlement
d) All of the above

8) Epoxy resins have ____.
a) Poor mechanical strength b) poor thermal strength
c) low tensile strength d) none of the above

9) _____ type of plaster defect generates a series of hair cracks inside the plaster.
a) Crazing b) Blistering
c) Flaking d) Popping

10) _____ metal is used for making a foamed concrete.
a) Aluminum b) Zinc
c) a & b both d) none of the above

11) _____ method used for the fire damage assessment.
a) TDA b) XRD
c) DTA d) All

12) _____ is used to repair, strengthen or renewal of the foundation of an existing building.
a) Shoring b) Underpinning
c) Grouting d) Scaffolding

13) The repair and rehabilitation of damaged or spelled concrete is done by removing the _____.
a) Loose concrete b) Collapsing
c) Breakage d) Bonding

14) Main causes of failure of the structure _____.
a) Design error b) poor inspection
c) Poor quality of materials d) all of the above

15) _____ bacteria are commonly used in bacterial concrete for crack repair.
a) E. coli b) Lactobacillus
c) Streptococcus d) Salmonella

16) _____ NDT test used a chemical attack method.
a) Load test b) ultrasonic test
c) chloride test d) none of the above

17) _____ type of sensor is commonly used to measure structural strain.
a) Thermocouples b) Accelerometers
c) Strain gauges d) Pressure sensors

18) _____ compound is responsible for sulfate attack inside a concrete.
a) Gypsum b) K2O
c) K3O d) none of the above

19) _____ is the primary benefit of using carbon fiber reinforced polymer (CFRP) composites for retrofitting.

a) Decreased structural strength
b) Increased corrosion
c) High strength-to-weight ratio and durability
d) Reduced cost

20) One of the testing equipment used for inspection is _____.

a) Strain Gauge
b) Measuring Jar
c) Test Tubes
d) None of these

Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Solve any two. **16**

a) Explain necessity and importance of maintenance required for civil structures.
b) Explain the various causes for deterioration of concrete structures.
c) Explain bacterial concrete and fiber reinforced concrete.

Q.3 Solve any four. **24**

a) Explain Shoring and underpinning.
b) Describe on Shotcrete and Guniting with applications.
c) Explain Ferro cement concrete.
d) Explain about cracks observed in concrete structures.
e) Explain about polymer concrete.
f) Describe about cause of corrosion occurred in R.C. Concrete.

Section – II

Q.4 Solve any two. **16**

a) Describe causes of various distress occurred in marine structures.
b) Explain various demolition techniques used in dilapidated buildings.
c) Explain repair techniques used in R.C.slab for leakages.

Q.5 Solve any four. **24**

a) Explain in detail sensors used in structural health monitoring of buildings.
b) Explain strengthening of R.C beams.
c) Describe repair techniques used to overcome low member strength, deflection in R.C. members.
d) Explain repair methods in underwater structures.
e) Explain repairs in fire damaged structures.
f) Explain retrofitting of columns in R.C structures.

6) Use of scientific non programmable calculator is allowed.
7) Draw the appropriate sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct Answer. **20**

1) Which of the following load is to be considered on liquid retaining structure? **01**
a) Design Strength = Ultimate strength / Partial factor of safety
b) Design Strength = Ultimate strength + Partial factor of safety
c) Design Strength = Ultimate strength * Partial factor of safety
d) Design Strength = Ultimate strength - Partial factor of safety

2) Which of the following load is to be considered on liquid retaining structure? **01**
a) dynamic load b) earth pressure
c) hydrostatic load d) wave and current load

3) Proof stress for minimum bolt tension is ____. **01**
a) $0.7f_{yb}$ b) $0.5f_{yb}$
c) $0.7f_{ub}$ d) $0.5f_{ub}$

4) During design of elements in prefabricated structures due consideration should be given to ____. **01**
a) Quality Materials
b) Stresses developed during handling the members
c) Minimum factor of safety
d) All of these

5) Which of the following is not an assumption of first-order elastic analysis of rigid jointed frame? **01**

a) member instability effects cannot be ignored
b) materials behave linearly
c) frame instability effects can be ignored
d) yielding effects can be ignored

6) Which of the following is true regarding plastic design methods? **01**

a) moments produced by different loading conditions can be added together
b) lateral bracing requirements are less stringent than for elastic design
c) difficult to design for fatigue
d) more saving in column design

7) Calculate minimum wall thickness given a cylindrical prestressed water tank of internal diameter 30m over a depth of 7.5m and the permissible compressive stress at transfer is 13N/mm^2 and the maximum compressive stress under working pressure is 1N/mm^2 and the loss ratio is 0.75? **01**

a) 43.8 b) 82.3
c) 64.5 d) 90.4

8) A self-supporting steel chimney transmits the lateral forces to the foundation by ____ **01**

a) fixed beam action b) proposed beam action
c) cantilever action d) simply supported beam action

9) Coefficient of wind resistance of a circular surface is ____. **02**

a) ½ b) 1/3
c) 2/3 d) 3/2

10) Which of the following load combination is not possible? **02**

a) Dead load + Imposed load + Wind load
b) Dead load + Imposed load + Earthquake load
c) Dead load + Earthquake load + Wind load
d) Dead load + Imposed load

11) Which type of foundation bolts are used for fixing the heavy machines? **02**

a) Cotter foundation bolt b) Eye foundation bolt
c) Rag foundation bolt d) Lewis foundation bolt

12) Which of the following is not a type of machine foundation? **02**

a) unit type b) wall type
c) box type d) block type

13) If the combined C.G. of the machine and foundation lies in the same vertical line, then the twisting modes are ____. **02**

a) Coupled
b) Uncoupled
c) Both
d) None of these

14) The permissible amplitude should not exceed ____ for reciprocating machine. **02**

a) Probable amplitude
b) Limiting amplitude
c) Maximum amplitude
d) Minimum amplitude

Industrial Structures (BTN01804)

Day & Date: Wednesday 29-05-2025 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) Slove any 2 questions from remaining questions from each section.
2) Assume suitable data if necessary and mention it clearly before the Solution.
3) Use of scientific non-programmable calculator is allowed.
4) Draw the appropriate sketches wherever necessary.
5) Figures to the right indicate full marks.

Section – I

Q.2 An Industrial building has the following: **20**
a) Span- 20 m
b) Length- 50 m
c) Wind speed- 5 m/s
d) Clear height- 8 m
e) Class B Building
f) Galvanized Steel Sheet
Design roof truss, purlin, and girder for the industrial building.
Assume any missing data as Indian Standards.

Q.3 With the help of a diagram, explain structural framing of a braced industrial building. Show cross section at end bay and bottom chord bracing. **20**

Q.4 An elevated cylindrical tank is to be designed for a capacity of 250 KL, the tank has conical roof and suspended hemispherical bottom. Design the tank for the thickness of the plates at cylindrical and hemispherical sections. Also design the connections. Take Fy=250 and assume any missing data as per standards. **20**

Section – II

Q.5 A self-supporting steel chimney is 80 m high and its diameter at the top is 3 meters, design breech (flue) opening. Adopt the wind force as per IS: 875. The location of the place is such that the intensity of wind pressure at 30 m height is 130 kN/m^2. Assume any missing data as per Indian Standards. **20**

Q.6 **a)** Sketch the elevation of different transmission line towers. **10**
b) Explain the procedure for designing transmission line towers. **10**

Q.7 **a)** Explain the different types of machine foundation. **08**
b) Explain the design procedure of turbo generator foundation. **12**

c) difficult to design for fatigue
d) more saving in column design

2) Calculate minimum wall thickness given a cylindrical prestressed water tank of internal diameter 30m over a depth of 7.5m and the permissible compressive stress at transfer is 13N/mm^2 and the maximum compressive stress under working pressure is 1N/mm^2 and the loss ratio is 0.75? **01**
a) 43.8 b) 82.3
c) 64.5 d) 90.4

3) A self-supporting steel chimney transmits the lateral forces to the foundation by ____ **01**
a) fixed beam action b) proposed beam action
c) cantilever action d) simply supported beam action

4) Which of the following load is to be considered on liquid retaining structure? **01**

a) Design Strength = Ultimate strength / Partial factor of safety
b) Design Strength = Ultimate strength + Partial factor of safety
c) Design Strength = Ultimate strength * Partial factor of safety
d) Design Strength = Ultimate strength - Partial factor of safety

5) Which of the following load is to be considered on liquid retaining structure? **01**

a) dynamic load
b) earth pressure
c) hydrostatic load
d) wave and current load

6) Proof stress for minimum bolt tension is ____. **01**

a) $0.7f_{yb}$
b) $0.5f_{yb}$
c) $0.7f_{ub}$
d) $0.5f_{ub}$

7) During design of elements in prefabricated structures due consideration should be given to ____. **01**

a) Quality Materials
b) Stresses developed during handling the members
c) Minimum factor of safety
d) All of these

8) Which of the following is not an assumption of first-order elastic analysis of rigid jointed frame? **01**

a) member instability effects cannot be ignored
b) materials behave linearly
c) frame instability effects can be ignored
d) yielding effects can be ignored

9) Which type of foundation bolts are used for fixing the heavy machines? **02**

a) Cotter foundation bolt
b) Eye foundation bolt
c) Rag foundation bolt
d) Lewis foundation bolt

10) Which of the following is not a type of machine foundation? **02**

a) unit type
b) wall type
c) box type
d) block type

11) If the combined C.G. of the machine and foundation lies in the same vertical line, then the twisting modes are ____. **02**

a) Coupled
b) Uncoupled
c) Both
d) None of these

12) The permissible amplitude should not exceed ____ for reciprocating machine. **02**

a) Probable amplitude
b) Limiting amplitude
c) Maximum amplitude
d) Minimum amplitude

13) Coefficient of wind resistance of a circular surface is ____. **02**

a) ½ b) 1/3

c) 2/3 d) 3/2

14) Which of the following load combination is not possible? **02**

a) Dead load + Imposed load + Wind load

b) Dead load + Imposed load + Earthquake load

c) Dead load + Earthquake load + Wind load

d) Dead load + Imposed load

Set **Q**

Fourth.Y. (B. Tech) (Sem- II) (New) (CBCS) Examination: March/April - 2025
CIVIL ENGINEERING
Industrial Structures (BTN01804)

Day & Date: Wednesday 29-05-2025 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) Slove any 2 questions from remaining questions from each section.
2) Assume suitable data if necessary and mention it clearly before the Solution.
3) Use of scientific non-programmable calculator is allowed.
4) Draw the appropriate sketches wherever necessary.
5) Figures to the right indicate full marks.

Section – I

Q.2 An Industrial building has the following: **20**
a) Span- 20 m
b) Length- 50 m
c) Wind speed- 5 m/s
d) Clear height- 8 m
e) Class B Building
f) Galvanized Steel Sheet
Design roof truss, purlin, and girder for the industrial building.
Assume any missing data as Indian Standards.

Q.3 With the help of a diagram, explain structural framing of a braced industrial building. Show cross section at end bay and bottom chord bracing. **20**

Q.4 An elevated cylindrical tank is to be designed for a capacity of 250 KL, the tank has conical roof and suspended hemispherical bottom. Design the tank for the thickness of the plates at cylindrical and hemispherical sections. Also design the connections. Take Fy=250 and assume any missing data as per standards. **20**

Section – II

Q.5 A self-supporting steel chimney is 80 m high and its diameter at the top is 3 meters, design breech (flue) opening. Adopt the wind force as per IS: 875. The location of the place is such that the intensity of wind pressure at 30 m height is 130 kN/m^2. Assume any missing data as per Indian Standards. **20**

Q.6 **a)** Sketch the elevation of different transmission line towers. **10**
b) Explain the procedure for designing transmission line towers. **10**

Q.7 **a)** Explain the different types of machine foundation. **08**
b) Explain the design procedure of turbo generator foundation. **12**

Seat No.	

Set **R**

Fourth.Y. (B. Tech) (Sem- II) (New) (CBCS) Examination:
March/April - 2025
CIVIL ENGINEERING
Industrial Structures (BTN01804)

Day & Date: Wednesday 28-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.
5) Use of IS 800-2007 and IS 875 are allowed, but not allowed for MCQ (Q. No.1)
6) Use of scientific non programmable calculator is allowed.
7) Draw the appropriate sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct Answer. **20**

1) Proof stress for minimum bolt tension is ____. **01**

a) $0.7f_{yb}$ b) $0.5f_{yb}$
c) $0.7f_{ub}$ d) $0.5f_{ub}$

2) During design of elements in prefabricated structures due consideration should be given to ____. **01**

a) Quality Materials
b) Stresses developed during handling the members
c) Minimum factor of safety
d) All of these

3) Which of the following is not an assumption of first-order elastic analysis of rigid jointed frame? **01**

a) member instability effects cannot be ignored
b) materials behave linearly
c) frame instability effects can be ignored
d) yielding effects can be ignored

4) Which of the following is true regarding plastic design methods? **01**

a) moments produced by different loading conditions can be added together
b) lateral bracing requirements are less stringent than for elastic design
c) difficult to design for fatigue
d) more saving in column design

5) Calculate minimum wall thickness given a cylindrical prestressed water tank of internal diameter 30m over a depth of 7.5m and the permissible compressive stress at transfer is 13N/mm^2 and the maximum compressive stress under working pressure is 1N/mm^2 and the loss ratio is 0.75? **01**

a) 43.8 b) 82.3
c) 64.5 d) 90.4

6) A self-supporting steel chimney transmits the lateral forces to the foundation by ____ **01**

a) fixed beam action b) proposed beam action
c) cantilever action d) simply supported beam action

7) Which of the following load is to be considered on liquid retaining structure? **01**

a) Design Strength = Ultimate strength / Partial factor of safety
b) Design Strength = Ultimate strength + Partial factor of safety
c) Design Strength = Ultimate strength * Partial factor of safety
d) Design Strength = Ultimate strength - Partial factor of safety

8) Which of the following load is to be considered on liquid retaining structure? **01**

a) dynamic load b) earth pressure
c) hydrostatic load d) wave and current load

9) Which of the following load combination is not possible? **02**

a) Dead load + Imposed load + Wind load
b) Dead load + Imposed load + Earthquake load
c) Dead load + Earthquake load + Wind load
d) Dead load + Imposed load

10) Which type of foundation bolts are used for fixing the heavy machines? **02**

a) Cotter foundation bolt b) Eye foundation bolt
c) Rag foundation bolt d) Lewis foundation bolt

11) Which of the following is not a type of machine foundation? **02**

a) unit type b) wall type
c) box type d) block type

12) If the combined C.G. of the machine and foundation lies in the same vertical line, then the twisting modes are ____. **02**

a) Coupled b) Uncoupled
c) Both d) None of these

13) The permissible amplitude should not exceed ____ for reciprocating machine. **02**

a) Probable amplitude b) Limiting amplitude
c) Maximum amplitude d) Minimum amplitude

14) Coefficient of wind resistance of a circular surface is ____. **02**

a) ½ b) 1/3
c) 2/3 d) 3/2

4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) What does the transportation planning process primarily aim to achieve?
a) Minimizing land use
b) Maximizing individual vehicle usage
c) Efficient movement of people and goods
d) Increasing traffic congestion

2) Land use transportation planning involves:
a) Separating residential areas from commercial areas
b) Introducing mixed land-use developments
c) Creating transportation networks that support land use goals
d) All of the above

3) Which approach emphasizes the interconnectedness of transportation systems with other urban systems?
a) Linear approach b) Isolated approach
c) Systems approach d) Component approach

4) What are the stages typically involved in the transportation planning process?
a) Data collection, analysis, and implementation
b) Implementation, evaluation, and revision
c) Visioning, goal setting, and implementation
d) Feasibility study, design, and construction

5) Difficulties in implementing transportation plans often include:
a) Lack of funding and resources
b) Opposition from local communities
c) Conflicting interests among stakeholders
d) All of the above

6) Which of the following best defines urban sprawl?
a) Concentrated urban development
b) Dispersed, low-density urban expansion
c) Preservation of natural landscapes within urban areas
d) Controlled growth of urban infrastructure

7) What are the components of the urban system?
a) Transportation, housing, and agriculture
b) Land use, transportation, and infrastructure
c) Education, healthcare, and recreation
d) Government, industry, and commerce

8) Location theory in urban planning primarily focuses on:
a) Assessing environmental impact
b) Identifying optimal locations for urban development
c) Analyzing historical land use patterns
d) Evaluating cultural heritage sites

9) Criteria for measuring urban sprawl typically include all of the following except:
a) Population density
b) Land consumption per capita
c) Proximity to urban amenities
d) Access to public transportation

10) Urban growth or decline is influenced by factors such as:
a) Economic trends and technological advancements
b) Natural disasters and climate change
c) Political stability and government policies
d) All of the above

11) What is the primary factors governing trip generation?
a) Population density and land use mix
b) Road infrastructure quality
c) Average household income
d) Distance to recreational facilities

12) Which statistical technique is commonly used in trip generation analysis?
a) Descriptive statistics b) Regression analysis
c) Hypothesis testing d) Time series analysis

13) Which method is used for trip distribution?
a) Regression analysis b) Growth model
c) Synthetic model d) Gravity model

14) The gravity model in trip distribution is based on:
a) The mass of vehicles on the road
b) The attraction between origin and destination zones
c) The velocity of vehicles in motion
d) The friction between vehicles and road surfaces

15) Category analysis in trip generation involves:
a) Classifying trips based on their purpose and mode of travel
b) Analyzing the impact of weather on trip generation
c) Assessing the availability of parking spaces
d) Evaluating the efficiency of public transportation systems

16) What is the primary purpose of transport surveys?
a) To analyze land use patterns
b) To understand travel behavior and demand
c) To assess environmental impacts of transportation
d) To evaluate road infrastructure quality

17) In transport surveys, what does "study area" refer to?
a) The geographical region covered by the survey
b) The specific transportation mode being studied
c) The time duration of the survey
d) The socioeconomic characteristics of respondents

18) Zones in transport surveys are typically defined based on:
a) Administrative boundaries
b) Economic indicators
c) Environmental factors
d) Travel time between locations

19) Which of the following is NOT a type of transport survey?
a) Origin-Destination survey
b) Traffic flow survey
c) Household income survey
d) Mode choice survey

20) Traffic surveys for mass transit system planning are essential for:
a) Estimating passenger demand and route optimization
b) Assessing air quality in urban areas
c) Evaluating road pavement conditions
d) Determining parking requirements

Fourth. Y. (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Urban Transportation Planning (BTN01805)

Day & Date: Wednesday 28-05-2025 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).

SECTION – I

Q.2 Solve the following: (Any Two) **16**

a) Explain the criteria for measuring the urban sprawl and discuss its impact on urban development patterns.
b) Explain the process of transportation planning.
c) Define location theory and discuss its relevance in urban planning and development.
d) Discuss the factors influencing urban growth or decline in modern cities, considering economic, social, and environmental perspectives.

Q.3 Solve the following: (Any Four) **24**

a) Describe the transportation planning process, outlining its key stages and objectives.
b) Explain the importance of considering factors such as land use, environmental impact, and social equity in transportation planning.
c) Explain the Traffic surveys for mass transit system.
d) Elaborate on the stages involved in conducting an inventory of existing conditions in transportation planning. How is data collected and analyzed to inform the planning process?
e) Explain the types of Survey in Transportation and interpretation.

SECTION-II

Q.4 Solve the following: (Any Two) **16**

a) What are factors that govern trip generation and attraction in transportation planning?

b) Explain the application of regression analysis in trip generation modeling. How are regressions models developed, calibrated, and validated using empirical data? Discuss the strengths and limitations of regression analysis in predicting trip generation rates.

c) Describe the methods of trip distribution used in transportation planning, including gravity models, growth models, and synthetic models. How do these methods estimate the flow of trips between origin-destination pairs?

d) What are the key components of the gravity model, and how are parameters calibrated using observed trip data? How can the gravity model be used to analyze and optimize transportation networks?

Q.5 Solve the following: (Any four) **24**

a) Discuss the factors influencing modal split in transportation systems.

b) Explain the role of modal split in transport planning. How does understanding modal split help transportation planners optimize infrastructure investments, improve mobility, reduce congestion, and minimize environmental impacts?

c) Discuss the importance of promoting sustainable transportation modes in achieving modal shift objectives.

d) Explain the Fleet planning and Scheduling.

e) Explain the Land Use Models - Lowry Model-Hansen’s

a) Explain the criteria for measuring the urban sprawl and discuss its impact on urban development patterns.
b) Explain the process of transportation planning.
c) Define location theory and discuss its relevance in urban planning and development.
d) Discuss the factors influencing urban growth or decline in modern cities, considering economic, social, and environmental perspectives.

Q.3 Solve the following: (Any Four) **24**

a) Describe the transportation planning process, outlining its key stages and objectives.
b) Explain the importance of considering factors such as land use, environmental impact, and social equity in transportation planning.
c) Explain the Traffic surveys for mass transit system.
d) Elaborate on the stages involved in conducting an inventory of existing conditions in transportation planning. How is data collected and analyzed to inform the planning process?
e) Explain the types of Survey in Transportation and interpretation.

SECTION-II

Q.4 Solve the following: (Any Two) **16**

a) What are factors that govern trip generation and attraction in transportation planning?

b) Explain the application of regression analysis in trip generation modeling. How are regressions models developed, calibrated, and validated using empirical data? Discuss the strengths and limitations of regression analysis in predicting trip generation rates.

c) Describe the methods of trip distribution used in transportation planning, including gravity models, growth models, and synthetic models. How do these methods estimate the flow of trips between origin-destination pairs?

d) What are the key components of the gravity model, and how are parameters calibrated using observed trip data? How can the gravity model be used to analyze and optimize transportation networks?

Q.5 Solve the following: (Any four) **24**

a) Discuss the factors influencing modal split in transportation systems.

b) Explain the role of modal split in transport planning. How does understanding modal split help transportation planners optimize infrastructure investments, improve mobility, reduce congestion, and minimize environmental impacts?

c) Discuss the importance of promoting sustainable transportation modes in achieving modal shift objectives.

d) Explain the Fleet planning and Scheduling.

e) Explain the Land Use Models - Lowry Model-Hansen’s

Fourth. Y. (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Urban Transportation Planning (BTN01805)

Day & Date: Wednesday 28-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) What is the primary factors governing trip generation?
a) Population density and land use mix
b) Road infrastructure quality
c) Average household income
d) Distance to recreational facilities

2) Which statistical technique is commonly used in trip generation analysis?
a) Descriptive statistics b) Regression analysis
c) Hypothesis testing d) Time series analysis

3) Which method is used for trip distribution?
a) Regression analysis b) Growth model
c) Synthetic model d) Gravity model

4) The gravity model in trip distribution is based on:
a) The mass of vehicles on the road
b) The attraction between origin and destination zones
c) The velocity of vehicles in motion
d) The friction between vehicles and road surfaces

5) Category analysis in trip generation involves:
a) Classifying trips based on their purpose and mode of travel
b) Analyzing the impact of weather on trip generation
c) Assessing the availability of parking spaces
d) Evaluating the efficiency of public transportation systems

6) What is the primary purpose of transport surveys?
   a) To analyze land use patterns
   b) To understand travel behavior and demand
   c) To assess environmental impacts of transportation
   d) To evaluate road infrastructure quality

7) In transport surveys, what does "study area" refer to?
   a) The geographical region covered by the survey
   b) The specific transportation mode being studied
   c) The time duration of the survey
   d) The socioeconomic characteristics of respondents

8) Zones in transport surveys are typically defined based on:
   a) Administrative boundaries
   b) Economic indicators
   c) Environmental factors
   d) Travel time between locations

9) Which of the following is NOT a type of transport survey?
   a) Origin-Destination survey
   b) Traffic flow survey
   c) Household income survey
   d) Mode choice survey

10) Traffic surveys for mass transit system planning are essential for:
   a) Estimating passenger demand and route optimization
   b) Assessing air quality in urban areas
   c) Evaluating road pavement conditions
   d) Determining parking requirements

11) What does the transportation planning process primarily aim to achieve?
   a) Minimizing land use
   b) Maximizing individual vehicle usage
   c) Efficient movement of people and goods
   d) Increasing traffic congestion

12) Land use transportation planning involves:
   a) Separating residential areas from commercial areas
   b) Introducing mixed land-use developments
   c) Creating transportation networks that support land use goals
   d) All of the above

13) Which approach emphasizes the interconnectedness of transportation systems with other urban systems?
   a) Linear approach
   b) Isolated approach
   c) Systems approach
   d) Component approach

14) What are the stages typically involved in the transportation planning process?
a) Data collection, analysis, and implementation
b) Implementation, evaluation, and revision
c) Visioning, goal setting, and implementation
d) Feasibility study, design, and construction

15) Difficulties in implementing transportation plans often include:
a) Lack of funding and resources
b) Opposition from local communities
c) Conflicting interests among stakeholders
d) All of the above

16) Which of the following best defines urban sprawl?
a) Concentrated urban development
b) Dispersed, low-density urban expansion
c) Preservation of natural landscapes within urban areas
d) Controlled growth of urban infrastructure

17) What are the components of the urban system?
a) Transportation, housing, and agriculture
b) Land use, transportation, and infrastructure
c) Education, healthcare, and recreation
d) Government, industry, and commerce

18) Location theory in urban planning primarily focuses on:
a) Assessing environmental impact
b) Identifying optimal locations for urban development
c) Analyzing historical land use patterns
d) Evaluating cultural heritage sites

19) Criteria for measuring urban sprawl typically include all of the following except:
a) Population density
b) Land consumption per capita
c) Proximity to urban amenities
d) Access to public transportation

20) Urban growth or decline is influenced by factors such as:
a) Economic trends and technological advancements
b) Natural disasters and climate change
c) Political stability and government policies
d) All of the above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) National Disaster Management Authority chaired by _____.
a) Home minister b) Home secretary
c) PMO Secretary d) Prime minister

2) Arson is ____ type disaster.
a) Social b) Chemical
c) Geological d) Technological

3) As the magnitude of natural disasters increases their frequency of occurrence ____.
a) Increases b) Decreases
c) Remains the same d) Unpredictable

4) NDMA stands for ____.
a) National Disaster Mitigation Agency
b) National Disaster Management Authority
c) National Disaster Management Association
d) National Development Managing Association

5) ____ denotes the characteristics and circumstances of community or area that may be subjected to harm from hazardous situation.
a) Risk b) Vulnerability
c) Hazard d) Disaster

6) The National Institute of Disaster Management (NIDM) is at ____.
a) New Delhi b) Mumbai
c) Chennai d) Kolkata

7) ____ can be defined as the ability of community to cope with a disaster.
a) Potential b) Perception
c) Capacity d) None of these

8) ____ Hazards cause harm to the humans as also the environment and property.
a) Social b) Chemical
c) Biological d) Physical

9) The eye of a cyclone is ____.
a) Cloudy and highly stormy
b) Full of strong winds
c) Calm and cloudless
d) Site with high atmospheric pressure

10) Which of the following is not a specific function of disaster management?
a) Organizing b) Response
c) Preparedness d) Recovery

11) Warehousing of relief material is included in ____ of the following Phase of disaster management.
a) Response b) Mitigation
c) Preparedness d) Recovery

12) The change in elevation of a stream per unit length is called ____.
a) Base level b) Gradient
c) Velocity d) Discharge

13) Psychological impact of disaster means ____.
a) Destruction of infrastructure
b) Problem of hygiene and sanitation
c) People having nightmares after seeing the death and destruction
d) Injuries to people due to disaster

14) The apex body for disaster management in India is ____.
a) National Executive Committee
b) National Disaster Management Agency
c) National Disaster Response Force
d) National Disaster Response Platform

15) _____ Phase starts after the immediate threat to human life has subsided
a) Recovery b) Preparedness
c) Response d) Mitigation

16) In the disaster management cycle, mitigation refers to _____.
a) Relief operations done after disaster
b) Rescue operations done after disaster
c) Making preparations & getting ready before the disaster
d) Reduce the risks from a possible disaster

17) In the disaster management cycle, response refers to _____.
a) Relief operations done after disaster
b) Rescue operations done after disaster
c) Making preparations & getting ready before the disaster
d) Reduce the risks from a possible disaster

18) An example of an anthropogenic disaster is ____.
a) A road accident
b) An earth tremor
c) A landslide
d) A volcanic eruption

19) The objective of ____ phase is to provide relief to reduce the suffering of affected people.
a) Response
b) Preparedness
c) Recovery
d) Mitigation

20) NEC stands for ____.
a) National Emergency Corps
b) National Executive Committee
c) National Empowerment Committee
d) National Evacuation Corps

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. 20

1) Warehousing of relief material is included in ____ of the following Phase of disaster management.
a) Response b) Mitigation
c) Preparedness d) Recovery

2) The change in elevation of a stream per unit length is called ____.
a) Base level b) Gradient
c) Velocity d) Discharge

3) Psychological impact of disaster means ____.
a) Destruction of infrastructure
b) Problem of hygiene and sanitation
c) People having nightmares after seeing the death and destruction
d) Injuries to people due to disaster

4) The apex body for disaster management in India is ____.
a) National Executive Committee
b) National Disaster Management Agency
c) National Disaster Response Force
d) National Disaster Response Platform

5) _____ Phase starts after the immediate threat to human life has subsided
a) Recovery b) Preparedness
c) Response d) Mitigation

6) In the disaster management cycle, mitigation refers to _____.
a) Relief operations done after disaster
b) Rescue operations done after disaster
c) Making preparations & getting ready before the disaster
d) Reduce the risks from a possible disaster

7) In the disaster management cycle, response refers to _____.
a) Relief operations done after disaster
b) Rescue operations done after disaster
c) Making preparations & getting ready before the disaster
d) Reduce the risks from a possible disaster

8) An example of an anthropogenic disaster is ____.
a) A road accident
b) An earth tremor
c) A landslide
d) A volcanic eruption

9) The objective of ____ phase is to provide relief to reduce the suffering of affected people.
a) Response
b) Preparedness
c) Recovery
d) Mitigation

10) NEC stands for ____.
a) National Emergency Corps
b) National Executive Committee
c) National Empowerment Committee
d) National Evacuation Corps

11) National Disaster Management Authority chaired by _____.
a) Home minister
b) Home secretary
c) PMO Secretary
d) Prime minister

12) Arson is ____ type disaster.
a) Social
b) Chemical
c) Geological
d) Technological

13) As the magnitude of natural disasters increases their frequency of occurrence ____.
a) Increases
b) Decreases
c) Remains the same
d) Unpredictable

14) NDMA stands for ____.
a) National Disaster Mitigation Agency
b) National Disaster Management Authority
c) National Disaster Management Association
d) National Development Managing Association

15) ____ denotes the characteristics and circumstances of community or area that may be subjected to harm from hazardous situation.
a) Risk
b) Vulnerability
c) Hazard
d) Disaster

16) The National Institute of Disaster Management (NIDM) is at ____.
a) New Delhi b) Mumbai
c) Chennai d) Kolkata

17) ____ can be defined as the ability of community to cope with a disaster.
a) Potential b) Perception
c) Capacity d) None of these

18) ____ Hazards cause harm to the humans as also the environment and property.
a) Social b) Chemical
c) Biological d) Physical

19) The eye of a cyclone is ____.
a) Cloudy and highly stormy
b) Full of strong winds
c) Calm and cloudless
d) Site with high atmospheric pressure

20) Which of the following is not a specific function of disaster management?
a) Organizing b) Response
c) Preparedness d) Recovery

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Disaster Management (BTN01808)

Day & Date: Wednesday 28-05-2025 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q.2 is compulsory. Attempt any two out of Q.3 to Q.5.
2) Q.6 is compulsory. Attempt any two out of Q.7 to Q.9.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2	**a)**	Explain environmental disaster risk reduction using perception approach.	**09**
	b)	Explain the concept of environmental disaster.	**05**
Q.3	**a)**	Explain the distribution of earthquake prone zone in India.	**05**
	b)	Explain the hazardous effects of volcanic eruptions.	**08**
Q.4	**a)**	Describe the causes of Cyclones.	**08**
	b)	Explain about one of the recent cyclone hazards in India.	**05**
Q.5	**a)**	Explain drought control measures.	**08**
	b)	Describe the “Bhopal Gas Tragedy”.	**05**

Section – II

Q.6	**a)**	Explain post disaster phase in disaster management.	**09**
	b)	Discuss the measures of adjustments to natural hazards.	**05**
Q.7	**a)**	Explain the role of meteorological observatory in disaster mitigation.	**08**
	b)	Explain the role of GIS and GPS in disaster mitigation.	**05**
Q.8	**a)**	Elaborate the role of Panchayats in Disaster mitigation.	**05**
	b)	Explain about ecological planning for sustainability in India.	**08**
Q.9	**a)**	Discuss the details for disaster of land subsidence in India.	**08**
	b)	Describe the role of National Disaster Management authority in disaster management activities.	**05**

Seat No.		Set	S

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Disaster Management (BTN01808)

Day & Date: Wednesday 28-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) In the disaster management cycle, mitigation refers to _____.
a) Relief operations done after disaster
b) Rescue operations done after disaster
c) Making preparations & getting ready before the disaster
d) Reduce the risks from a possible disaster

2) In the disaster management cycle, response refers to _____.
a) Relief operations done after disaster
b) Rescue operations done after disaster
c) Making preparations & getting ready before the disaster
d) Reduce the risks from a possible disaster

3) An example of an anthropogenic disaster is ____.
a) A road accident b) An earth tremor
c) A landslide d) A volcanic eruption

4) The objective of ____ phase is to provide relief to reduce the suffering of affected people.
a) Response b) Preparedness
c) Recovery d) Mitigation

5) NEC stands for ____.
a) National Emergency Corps
b) National Executive Committee
c) National Empowerment Committee
d) National Evacuation Corps

6) National Disaster Management Authority chaired by _____.
a) Home minister b) Home secretary
c) PMO Secretary d) Prime minister

7) Arson is ____ type disaster.
a) Social b) Chemical
c) Geological d) Technological

8) As the magnitude of natural disasters increases their frequency of occurrence ____.
a) Increases b) Decreases
c) Remains the same d) Unpredictable

9) NDMA stands for ____.
a) National Disaster Mitigation Agency
b) National Disaster Management Authority
c) National Disaster Management Association
d) National Development Managing Association

10) ____ denotes the characteristics and circumstances of community or area that may be subjected to harm from hazardous situation.
a) Risk b) Vulnerability
c) Hazard d) Disaster

11) The National Institute of Disaster Management (NIDM) is at ____.
a) New Delhi b) Mumbai
c) Chennai d) Kolkata

12) ____ can be defined as the ability of community to cope with a disaster.
a) Potential b) Perception
c) Capacity d) None of these

13) ____ Hazards cause harm to the humans as also the environment and property.
a) Social b) Chemical
c) Biological d) Physical

14) The eye of a cyclone is ____.
a) Cloudy and highly stormy
b) Full of strong winds
c) Calm and cloudless
d) Site with high atmospheric pressure

15) Which of the following is not a specific function of disaster management?
a) Organizing b) Response
c) Preparedness d) Recovery

16) Warehousing of relief material is included in ____ of the following Phase of disaster management.
a) Response b) Mitigation
c) Preparedness d) Recovery

17) The change in elevation of a stream per unit length is called ____.

a) Base level
b) Gradient
c) Velocity
d) Discharge

18) Psychological impact of disaster means ____.

a) Destruction of infrastructure
b) Problem of hygiene and sanitation
c) People having nightmares after seeing the death and destruction
d) Injuries to people due to disaster

19) The apex body for disaster management in India is ____.

a) National Executive Committee
b) National Disaster Management Agency
c) National Disaster Response Force
d) National Disaster Response Platform

20) _____ Phase starts after the immediate threat to human life has subsided

a) Recovery
b) Preparedness
c) Response
d) Mitigation

Water and Air Quality Modelling (BTN01809)

Day & Date: Wednesday 28-05-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Ground water models are used to predict the effect of hydrological changes on the behavior of ____.
a) Soil water zone b) Aquifer
c) Capillary zone d) Intermediate zone

2) ____ states that the rate of any chemical reaction is proportional to product of masses of reacting substances with each mass raised to a power equal to coefficient that occurs in chemical reaction.
a) Mass balance b) Conservation of mass
c) Equilibrium Principle d) Rate Constants

3) The concentration of pollutants associated with moving vehicles is determined by ____.
a) Emission rate b) Mixing height
c) Wind speed and direction d) All of above

4) Water quality model is a mathematical representation of ____ from land-based sources to a water body.
a) Inorganic Pollutants b) Contamination of pollutants
c) Movement of pollutant d) Volatile compounds

5) ____ are mathematical models representing relationship with an individual system.
a) Statistical models b) Casual models
c) Stochastic Models d) Simple Models

6) ____ equation is used as water quality model to describe decrease of DO content in a river along a certain distance by degradation of BOD.

a) Delphi method
b) Streeter Phelps
c) Le Chatelier's
d) Darcy

7) The atmospheric stability is related to the variation with altitude of ____.

a) Temperature
b) Pressure
c) Humidity
d) All of above

8) Mass balance ensures a consistent and accurate record of ____ material.

a) Decision making
b) Quantity and Quality
c) Estimating
d) Cost cutting

9) Concentration such as CO and SO2 forecast ____ due to their relative inertness.

a) Non-reactive models
b) Emission Standards
c) Meteorology
d) Ambient air

10) The density of ambient water at room temperature 20-25^{o}C is ____.

a) 1 g/cm3
b) 0.5 g/cm3
c) 0.99 g/cm3
d) 1.98 g/cm3

11) The object of ambient water quality programs is to ensure water quality monitoring ____.

a) Toxic Control
b) Quality assurance and quality control
c) Standard quantity
d) Pollution control

12) The diffusion of pollutants by turbulence related to temperature, stratification and wind field leads to ____.

a) Stability class
b) Smog
c) Biological change in air
d) Physical change in air

13) The suitability of water sources for human consumption is described in terms of ____.

a) Non-reactive index
b) Extreme value index
c) Water quality index
d) Water control index

14) The national Air quality index was launched in New Delhi on ____ under Swach Bharat.

a) September 2014
b) September 2020
c) September 2000
d) September 1998

a) Emission rate b) Mixing height
c) Wind speed and direction d) All of above

13) Water quality model is a mathematical representation of ____ from land-based sources to a water body.
a) Inorganic Pollutants b) Contamination of pollutants
c) Movement of pollutant d) Volatile compounds

14) ____ are mathematical models representing relationship with an individual system.
a) Statistical models b) Casual models
c) Stochastic Models d) Simple Models

Seat No.		Set	S

Fourth. Y. (B. Tech) (Sem - II)(New) (CBCS) Examination: March/April - 2025
Civil Engineering
Water and Air Quality Modelling (BTN01809)

Day & Date: Wednesday 28-05-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programable calculator is allowed.

SECTION – I

Q.2	**a)**	What factors affect the intensity of Oxygen Sag Curve?	**05**
	b)	Explain 4 main types of Statistical model.	**05**
Q.3	**a)**	Explain the importance of Casual Model.	**05**
	b)	How can meteorology help in controlling air pollutants.	**04**
Q.4	**a)**	Explain the purpose of water quality model.	**05**
	b)	Explain 5 major air pollutants and their health effects.	**04**
Q.5	**Write Short Notes on:**		
	a)	Mechanism of Pollutant transport.	**05**
	b)	Benefits of Model Making.	**04**

SECTION-II

Q.6	**a)**	Explain diffusion model and also states application of this model.	**05**
	b)	Explain the features of Gaussian Plume Model.	**05**
Q.7	**a)**	What are the six categories of National Air Quality Index?	**04**
	b)	Explain Fixed box model with respect to wind blowing parallel to longer direction X.	**05**
Q.8	**a)**	Explain the advantages of Delphi model.	**05**
	b)	Explain theory of diffusion model and how it is useful in decision making.	**04**
Q.9	**Write Short Notes on:**		
	a)	Ambient Water Quality.	**05**
	b)	Fixed Box Model	**04**

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Concrete Composites (BTN01810)

Day & Date: Friday, 30-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct Answer. **20**

1) What is Fiber Reinforced Concrete (FRC)?
a) Concrete mixed with synthetic fibers only
b) Concrete mixed with steel fibers only
c) Concrete mixed with both synthetic and steel fibers
d) Concrete mixed with aggregate only

2) What is the main reinforcement material used in ferrocement?
a) Steel bars b) Fiberglass
c) Aluminum d) Wood

3) What is the primary reaction mechanism of silica fume in concrete?
a) Nucleation and crystallization
b) Hydration and pozzolanic reaction
c) Carbonation and hardening
d) Oxidation and reduction

4) Silica fume concrete exhibits enhanced durability primarily due to:
a) Increased permeability
b) Improved resistance to chemical attack
c) Higher shrinkage
d) Lower freeze-thaw resistance

5) Which constituent material provides improved chemical resistance in polymer concrete?
a) Aggregate b) Cement
c) Polymer d) Water

6) Which application is polymer concrete commonly used for?
a) Structural foundations b) Decorative flooring
c) Road construction d) All of the above

7) The addition of polymers in concrete can improve its: _____.
a) Workability b) Carbonation resistance
c) Curing time d) Density

8) Which method is commonly used for designing High Strength Concrete (HSC)?
a) Shaklok method b) Erintroy method
c) Microstructure method d) Ultra High Strength method

9) What are the typical requirements of High-Performance Concrete (HPC)?
a) High water-cement ratio b) Low compressive strength
c) High durability and strength d) High porosity

10) What distinguishes High Strength Concrete from conventional concrete?
a) Higher water-cement ratio b) Lower compressive strength
c) Lower density d) Higher compressive strength

11) Fiber Reinforced Concrete is most suitable for structures subjected to:
a) Dynamic loads
b) Static loads
c) Both dynamic and static loads
d) None of the above

12) Which application of Fiber Reinforced Concrete requires high tensile strength and durability?
a) Airport runways b) Seawalls
c) Architectural panels d) Residential driveways

13) The mechanical properties of Fiber Reinforced Concrete depend on:
a) Type of fibers b) Aspect ratio of fibers
c) Volume fraction of fibers d) All of the above

14) What role does the mesh or lath play in ferrocement construction?
a) Provides compressive strength
b) Provides tensile strength
c) Enhances durability
d) Acts as a thermal insulator

15) Which of the following factors influences the flexural behavior of ferrocement?
a) Type of cement
b) Thickness of the cement layer
c) Temperature during construction
d) Presence of additives

16) What is the approximate particle size range of silica fume?

a) 1-10 micrometers
b) 100-500 micrometers
c) 1-10 millimeters
d) 10-100 nanometers

17) Which of the following is a chemical property of silica fume?

a) High water content
b) Low pH
c) High electrical conductivity
d) Low specific surface area

18) What property of polymer concrete distinguishes it from traditional concrete?

a) Higher compressive strength
b) Lower tensile strength
c) Improved chemical resistance
d) Lower density

19) What is-the primary advantage of Ultra High Strength Concrete (UHSC)?

a) Lower cost
b) Higher workability
c) Exceptionally high compressive strength
d) Lower density

20) Which of the following properties is typically associated with High Performance Concrete?

a) Low strength
b) High porosity
c) High durability
d) Low workability

Fourth. Y. (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Concrete Composites (BTN01810)

Day & Date: Friday, 30-05-2025 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).

SECTION – I

Q.2 Solve any two. **16**

a) Explains the behavior of fiber reinforced concrete under the compression, tension and flexure.
b) What is mean by Fiber Reinforced Concrete? Explains the different types of constituents used for construction Fiber Reinforced Concrete.
c) Explain the advantages and disadvantages of fiber reinforced concrete.

Q.3 Solve any four. **24**

a) Explains the mechanical properties of Ferro cement.
b) Explain the materials used in Ferro cement.
c) What are the applications of Ferrocement?
d) Explains the merits of Ferro cement as a structural material.
e) Explain the properties of freshly mixed fiber reinforced concrete.
f) What is workability of Concrete? Explain the methods of measurement of workability.

SECTION – II

Q.4 Solve any two. **16**

a) Explain a) Polymer concrete b) Silica Fume Concrete.
b) Explain about the Durability of Silica Fume Concrete.
c) Explain the physical and chemical properties of Silica Fume Concrete.

Q.5 Solve any four. **24**

a) Write note on types of polymer concrete.
b) Explain properties of constituent materials of Polymer Concrete.
c) Explain ultra-high strength concrete.
d) What are the applications of polymer impregnated concrete and polymer concrete?
e) What is high performance concrete? Explain the properties of high-performance concrete.
f) What are the design consideration for High performance concrete?

Seat No.

CIVIL ENGINEERING
Rural Roads (BTN01812)

Day & Date: Friday, 30-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).
5) Draw neat sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) What is the primary consideration in planning rural roads?
a) Speed b) Cost
c) Aesthetics d) Safety

2) Which factor plays a significant role in determining the alignment of rural roads?
a) Population density b) Topography
c) Economic status d) Cultural heritage

3) Which type of surfacing is commonly used for rural roads due to its cost-effectiveness?
a) Asphalt b) Concrete
c) Gravel d) Cobblestone

4) What is the standard width of a single-lane rural road in most countries?
a) 2.5 meters b) 3.5 meters
c) 4.5 meters d) 5.5 meters

5) Which geometric design element primarily determines the curvature and alignment of a roadway?
a) Super-elevation b) Sight distance
c) Horizontal alignment d) Vertical alignment

6) What is the purpose of super-elevation in geometric design?
a) To increase sight distance
b) To provide drainage on the roadway
c) To counteract the centrifugal force acting on vehicles during curves
d) To control the vertical profile of the road

7) Which of the following factors affects the choice of horizontal alignment?
a) Traffic volume
b) Soil composition
c) Pavement thickness
d) Traffic signal placement

8) What is the primary purpose of a clear zone in geometric design?
a) To provide space for pedestrians
b) To allow for emergency stopping of vehicles
c) To provide a buffer area for errant vehicles
d) To accommodate utility lines

9) Which of the following materials is commonly used as a binder in asphalt pavement?
a) Concrete
b) Bitumen
c) Cement
d) Gravel

10) Which of the following properties makes gravel suitable for rural road pavements?
a) High cost
b) Low availability
c) Good drainage
d) High maintenance

11) Which material is often used as a surface course in rural road pavements due to its ease of construction and maintenance?
a) Concrete
b) Asphalt
c) Cobblestone
d) Bitumen

12) What is the primary purpose of pavement design in rural roads?
a) Aesthetics
b) Safety
c) Noise reduction
d) Environmental conservation

13) Which of the following factors is NOT considered in pavement design for rural roads?
a) Traffic volume
b) Soil type
c) Weather conditions
d) Proximity to urban areas

14) Which layer of pavement structure bears the maximum load?
a) Sub-base
b) Base
c) Surface course
d) Subgrade

15) Which of the following is NOT a common material used in the construction of rural roads?
a) Asphalt
b) Concrete
c) Brick
d) Steel

16) What is the primary purpose of specifications in rural road construction?
a) To increase project cost
b) To ensure quality and performance
c) To delay project completion
d) To decrease project durability

17) Which of the following factors is NOT typically considered in road construction specifications?
a) Traffic volume
b) Climate conditions
c) Local culture
d) Economic status of the area

18) What is the primary purpose of road drainage?
a) To enhance road aesthetics
b) To prevent soil erosion
c) To provide habitat for aquatic life
d) To regulate traffic flow

19) Which of the following is NOT a component of road drainage systems?
a) Culverts
b) Road signs
c) Ditches
d) Drains

20) Which type of drainage system is typically used to collect surface water from the road and divert it away?
a) Culverts
b) Gutter drains
c) French drains
d) Permeable pavements

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Rural Roads (BTN01812)

Day & Date: Friday, 30-05-2025 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).

Section – I

Q.2 Attempt any Two from the following. **20**

a) Explain various problems associated with planning of low volume rural roads in India.
b) Explain the concept of 'Network Planning in Rural Roads'.
c) A vehicle is moving on descending gradient of 5% on 2-lane divided road. Speed of overtaking vehicle is 70 kmph and reaction time is 3.5 seconds. Calculate Overtaking Sight Distance (OSD)

Q.3 Attempt any Two from the following. **20**

a) Explain special considerations for rural roads in hilly terrain.
b) Explain Soil investigations for low embankment, high embankment, cut sections, subgrade.
c) Explain uses of locally available materials for pavement construction.

Section – II

Q.4 Attempt any Two from the following. **20**

a) Explain various ***"Design parameters'*** for Pavement design in Rural Roads.
b) Explain procedure for the design of flexible pavement in Rural Roads.
c) Explain Construction of Earth (Subgrade &Embankment), Sub-base, Base course and surface course.

Q.5 Attempt any Two from the following. **20**

a) Explain Construction of ***lime fly ash bound.***
b) Explain Construction of dry lean fly ash concrete, cement stabilized fly ash.
c) Explain maintenance of paved roads.

Seat No.	

Set **Q**

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Rural Roads (BTN01812)

Day & Date: Friday, 30-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).
5) Draw neat sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) What is the purpose of super-elevation in geometric design?
a) To increase sight distance
b) To provide drainage on the roadway
c) To counteract the centrifugal force acting on vehicles during curves
d) To control the vertical profile of the road

2) Which of the following factors affects the choice of horizontal alignment?
a) Traffic volume b) Soil composition
c) Pavement thickness d) Traffic signal placement

3) What is the primary purpose of a clear zone in geometric design?
a) To provide space for pedestrians
b) To allow for emergency stopping of vehicles
c) To provide a buffer area for errant vehicles
d) To accommodate utility lines

4) Which of the following materials is commonly used as a binder in asphalt pavement?
a) Concrete b) Bitumen
c) Cement d) Gravel

5) Which of the following properties makes gravel suitable for rural road pavements?
a) High cost b) Low availability
c) Good drainage d) High maintenance

6) Which material is often used as a surface course in rural road pavements due to its ease of construction and maintenance?
a) Concrete b) Asphalt
c) Cobblestone d) Bitumen

7) What is the primary purpose of pavement design in rural roads?
a) Aesthetics b) Safety
c) Noise reduction d) Environmental conservation

8) Which of the following factors is NOT considered in pavement design for rural roads?
a) Traffic volume b) Soil type
c) Weather conditions d) Proximity to urban areas

9) Which layer of pavement structure bears the maximum load?
a) Sub-base b) Base
c) Surface course d) Subgrade

10) Which of the following is NOT a common material used in the construction of rural roads?
a) Asphalt b) Concrete
c) Brick d) Steel

11) What is the primary purpose of specifications in rural road construction?
a) To increase project cost
b) To ensure quality and performance
c) To delay project completion
d) To decrease project durability

12) Which of the following factors is NOT typically considered in road construction specifications?
a) Traffic volume b) Climate conditions
c) Local culture d) Economic status of the area

13) What is the primary purpose of road drainage?
a) To enhance road aesthetics
b) To prevent soil erosion
c) To provide habitat for aquatic life
d) To regulate traffic flow

14) Which of the following is NOT a component of road drainage systems?
a) Culverts b) Road signs
c) Ditches d) Drains

15) Which type of drainage system is typically used to collect surface water from the road and divert it away?
a) Culverts b) Gutter drains
c) French drains d) Permeable pavements

16) What is the primary consideration in planning rural roads?

a) Speed b) Cost
c) Aesthetics d) Safety

17) Which factor plays a significant role in determining the alignment of rural roads?

a) Population density b) Topography
c) Economic status d) Cultural heritage

18) Which type of surfacing is commonly used for rural roads due to its cost-effectiveness?

a) Asphalt b) Concrete
c) Gravel d) Cobblestone

19) What is the standard width of a single-lane rural road in most countries?

a) 2.5 meters b) 3.5 meters
c) 4.5 meters d) 5.5 meters

20) Which geometric design element primarily determines the curvature and alignment of a roadway?

a) Super-elevation b) Sight distance
c) Horizontal alignment d) Vertical alignment

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) A key difference between data and information is: _____.
a) Data is processed, information is raw
b) Data is meaningful, information is not
c) Data is raw, information is processed and meaningful
d) There is no difference

2) What does the acronym ERP stand for in a business context?
a) Employee Resource Planning
b) Enterprise Resource Planning
c) External Resource Protocol
d) Efficiency Reporting Program

3) TQM & ISO both focuses on _____.
a) Customer b) Employee
c) Supplier d) All of the above

4) ISO 9000 seeks standardization in terms of _____.
a) products b) production procedures
c) suppliers' specifications d) procedures to manage quality

5) The person who ensures that systems are developed on time, within budget, and with acceptable quality is a _____.
a) systems designer b) project manager
c) systems owner d) systems builder

6) An _____ is a set of processes and procedures that transform data into information and knowledge.
a) Information system b) Knowledge system
c) Database system d) Computer system

7) The focal point of all quality control should be: _____.
a) Price focus b) Cost Focus
c) Customer Focus d) Manufacturing Focus

8) A company wants to measure the length of a fan as a part of its quality control exercise. The type of data collected will be: _____.
a) Variable b) Attribute
c) Cannot be determined d) None of the above

9) _____ are used in six sigma.
a) black belt
b) green belt
c) both black belt and green belt
d) None of the above

10) _____ is any business-related exchange such as payments to employees, sales to customers, or payments to suppliers.
a) Data b) E-commerce
c) A transaction d) Input

11) In a company _____ is the centre which consists of all processing activities.
a) Data b) Production
c) Information d) Sale

12) _____ models to analysis a problem and provides possible solution for management evaluation.
a) Decision b) Standard
c) Structural d) Periodic

13) _____ is a standard that companies compare themselves to and strive to be that good.
a) Production b) Benchmarking
c) Structuring d) Formatting

14) Meaning of 'Seiri' IN 5s technique is _____.
a) Short b) Shine
c) Structured d) Straighten

15) Basically, _____ is raw material that is to be processed, while _____ is the processed data.
a) information, data b) data, information
c) format, detailing d) goods, services

16) Sigma (σ) is a Greek letter standing for _____.
a) Standard deviation b) Probability
c) Coefficient of Friction d) Currency

17) To reach a level of four Sigma, we can only have _____ defects per 1 million productions.

a) 6210 b) 66807
c) 308,537 d) 690,000

18) In quality management, ISO means _____.

a) Information Static Operator
b) International Organization for Standardization
c) Indian Standard Organization
d) Intelligent Office of Soviet

19) Meaning of 'Seiso' in 5s technique is _____.

a) Short b) Shine
c) Structured d) Straighten

20) Which of the following is NOT a core principle of Total Quality Management (TQM)?

a) Continuous improvement b) Customer focus
c) Defect detection d) Employee involvement

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).

Section – I

Q.2 Attempt any Four from the following. **40**

a) What is "Six Sigma"? Explain with statical view & relating sigma to defect level.
b) What is "Kaizen"? Explain with 7-key concepts & 5s Methodology.
c) Differentiate between "Total Quality Control" and "Total Quality Management".
d) Explain all 8 Principles of Quality Management.
e) What is Checklist? Enlist it for "Concreting", "Formwork" & "RCC Steelwork".
f) Explain Quality manual along with its importance, contents & documentation.

Section – II

Q.3 Attempt any Four from the following. **40**

a) Define data and information. What are the major differences between them? Explain with the help of suitable example.
b) What data information is required for planning of new road corridor between two megacities?
c) Describe the key steps involved in developing an MIS for a construction organization specializing in building works.
What specific challenges and considerations should be addressed during the implementation phase?
d) Explain Decision Support System with 'purpose' & 'components'.
e) How do these technologies contribute to efficient data processing and information flow within the organization?
f) Explain the various management subsystems of an MIS. How can the structure of an MIS be tailored to support different levels of management activity, such as operational control, management control, and strategic planning within a construction organization?

Set Q

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
TQM and MIS in Civil Engineering (BTN01813)

Day & Date: Friday, 30-05-2025 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).

Section – I

Q.2 Attempt any Four from the following. **40**

a) What is "Six Sigma"? Explain with statical view & relating sigma to defect level.
b) What is "Kaizen"? Explain with 7-key concepts & 5s Methodology.
c) Differentiate between "Total Quality Control" and "Total Quality Management".
d) Explain all 8 Principles of Quality Management.
e) What is Checklist? Enlist it for "Concreting", "Formwork" & "RCC Steelwork".
f) Explain Quality manual along with its importance, contents & documentation.

Section – II

Q.3 Attempt any Four from the following. **40**

a) Define data and information. What are the major differences between them? Explain with the help of suitable example.
b) What data information is required for planning of new road corridor between two megacities?
c) Describe the key steps involved in developing an MIS for a construction organization specializing in building works.
What specific challenges and considerations should be addressed during the implementation phase?
d) Explain Decision Support System with 'purpose' & 'components'.
e) How do these technologies contribute to efficient data processing and information flow within the organization?
f) Explain the various management subsystems of an MIS. How can the structure of an MIS be tailored to support different levels of management activity, such as operational control, management control, and strategic planning within a construction organization?

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
TQM and MIS in Civil Engineering (BTN01813)

Day & Date: Friday, 30-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) In a company _____ is the centre which consists of all processing activities.
a) Data b) Production
c) Information d) Sale

2) _____ models to analysis a problem and provides possible solution for management evaluation.
a) Decision b) Standard
c) Structural d) Periodic

3) _____ is a standard that companies compare themselves to and strive to be that good.
a) Production b) Benchmarking
c) Structuring d) Formatting

4) Meaning of 'Seiri' IN 5s technique is _____.
a) Short b) Shine
c) Structured d) Straighten

5) Basically, _____ is raw material that is to be processed, while _____ is the processed data.
a) information, data b) data, information
c) format, detailing d) goods, services

6) Sigma (σ) is a Greek letter standing for _____.
a) Standard deviation b) Probability
c) Coefficient of Friction d) Currency

7) To reach a level of four Sigma, we can only have _____ defects per 1 million productions.

a) 6210 b) 66807
c) 308,537 d) 690,000

8) In quality management, ISO means _____.

a) Information Static Operator
b) International Organization for Standardization
c) Indian Standard Organization
d) Intelligent Office of Soviet

9) Meaning of 'Seiso' in 5s technique is _____.

a) Short b) Shine
c) Structured d) Straighten

10) Which of the following is NOT a core principle of Total Quality Management (TQM)?

a) Continuous improvement b) Customer focus
c) Defect detection d) Employee involvement

11) A key difference between data and information is: _____.

a) Data is processed, information is raw
b) Data is meaningful, information is not
c) Data is raw, information is processed and meaningful
d) There is no difference

12) What does the acronym ERP stand for in a business context?

a) Employee Resource Planning
b) Enterprise Resource Planning
c) External Resource Protocol
d) Efficiency Reporting Program

13) TQM & ISO both focuses on _____.

a) Customer b) Employee
c) Supplier d) All of the above

14) ISO 9000 seeks standardization in terms of _____.

a) products b) production procedures
c) suppliers' specifications d) procedures to manage quality

15) The person who ensures that systems are developed on time, within budget, and with acceptable quality is a _____.

a) systems designer b) project manager
c) systems owner d) systems builder

16) An _____ is a set of processes and procedures that transform data into information and knowledge.

a) Information system b) Knowledge system
c) Database system d) Computer system

17) The focal point of all quality control should be: _____.

a) Price focus
b) Cost Focus
c) Customer Focus
d) Manufacturing Focus

18) A company wants to measure the length of a fan as a part of its quality control exercise. The type of data collected will be: _____.

a) Variable
b) Attribute
c) Cannot be determined
d) None of the above

19) _____ are used in six sigma.

a) black belt
b) green belt
c) both black belt and green belt
d) None of the above

20) _____ is any business-related exchange such as payments to employees, sales to customers, or payments to suppliers.

a) Data
b) E-commerce
c) A transaction
d) Input

Fourth. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
CIVIL ENGINEERING
Planning for Sustainable Development (BTN01814)

Day & Date: Friday, 30-05-2025 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no. 1 is compulsory in section I, and solve any four questions from the remaining.
2) Question no. 7 is compulsory in section II, and solve any four questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.

SECTION – I

Q.1	Explain the concept of sustainable development. How does it balance environmental, social, and economic considerations?	**10**
Q.2	Critically evaluate the concept of sustainable development. What are its limitations and criticisms in addressing global challenges?	**10**
Q.3	What are the key strategies for promoting sustainable development? Discuss their significance and provide examples of their application.	**10**
Q.4	Why is there resistance to the concept of sustainable development? Discuss the socio-political and economic factors that contribute to this resistance.	**10**
Q.5	Explain the role of innovation in achieving sustainable development. How can technological and social innovations contribute to sustainability goals?	**10**
Q.6	What are the key strategies for environmental management in the context of sustainable development? How do they address environmental challenges?	**10**

SECTION – II

Q.7	What are the key drivers of societal transformation towards sustainable development? How do social, cultural, and economic factors influence these changes?	**10**
Q.8	What are the major challenges in achieving societal transformations for sustainable development?	**10**
Q.9	Provide examples of successful societal transformations that have contributed to sustainable development. What lessons can be drawn from these cases?	**10**
Q.10	Why is capacity development important for fostering innovation in sustainable development? Discuss its role in building skills, resources, and institutions.	**10**
Q.11	What strategies can be employed to enhance capacity development for innovation? Provide examples of successful implementation.	**10**
Q.12	What are the main barriers to capacity development for innovation in sustainable development? How can they be addressed?	**10**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2025
Design of Machine Elements (BTN02501)

Day & Date: Saturday, 17-05-2024 Max. Marks: 70
Time: 10:00 PM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Use of non-programable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options: 14

1) The maximum shear stress in spring wire is induced at ____
a) inner surface of coil b) outer surface of coil
c) central surface of coil d) end coils

2) The function of spring is ____
a) to absorb shock b) to generate energy
c) to measure force d) to measure vibration

3) Stress concentration in static loading is more serious in ____
a) ductile material
b) brittle material
c) equally serious in both material
d) depends on other factor

4) The causes of stress concentration is ____
a) variation in material properties
b) variation in cross-sectional area
c) variation of factor of safety
d) all above

5) In case of repeated load which of the following is correct?
a) $\sigma_{\min} = 0$ b) $\sigma_{m} = 0$
c) $\sigma_{\max} = 0$ d) $\sigma_{a} = 0$

6) The type of spring used in door hinges is ____
a) helical extension spring b) multi leaf spring
c) spiral spring d) helical torsion spring

7) In lever terminology, 'mechanical advantage' is the ratio of ____
a) load to effort
b) effort to load
c) load arm to effort arm
d) effort arm to load arm

8) A cotter joint is used to transmit ____
a) axial tensile force only
b) axial tensile or compressive force
c) axial compressive force only
d) combined bending and torsional moment

9) A key made from a cylindrical disc having segmental cross-section, is known as ____
a) Feather key
b) Gib head key
c) Woodruff key
d) Flat saddle key

10) The standard width for square or flat key in terms of shaft diameter (d) is _____
a) d
b) d/2
c) d/4
d) d/8

11) A muff coupling is ____
a) rigid coupling
b) flexible coupling
c) shock absorbing coupling
d) none of the above

12) If the bolts are subjected to an eccentric load with the bolt axes perpendicular to the plane of line of application of load, every bolt will be subjected to ____
a) primary & secondary shear forces
b) primary shear force & tensile force
c) primary shear force & compressive force
d) tensile force & secondary shear force

13) The optimum velocity for Dunlop flat belts is approximately ____.
a) 5 m/s
b) 18 m/s
c) 50 m/s
d) 30 m/s

14) Guest's theory is used for ____
a) Brittle materials
b) Ductile materials
c) Elastic materials
d) Plastic materials

Seat No.		Set	P

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2025
Design of Machine Elements (BTN02501)

Day & Date: Saturday, 17-05-2024 Max. Marks: 56
Time: 10:00 PM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figure to right indicate full marks.
3) Use of Scientific calculator is allowed.
4) Assume additional suitable data if necessary and state it clearly.
5) Use university graph paper and semi-log paper if required.

Section – I

Q.2 Attempt the following questions:

a) Write and explain applications of Lever in engineering practice. **06**

b) Explain design procedure of Socket and Spigot cotter joint with necessary sketches. **08**

Q.3 Answer the following:

a) Explain Following terms **06**
i) Endurance Limit
ii) Notch Sensitivity
iii) Fatigue Failure

b) A rotating bar made of steel 45 C 8 having Sut = 630 Mpa is subjected to a completely reversed bending stress. The corrected endurance limit of bar is 315 Mpa. Calculate the fatigue strength of the bar for a life of 90000 cycles. Draw S-N diagram. **08**

Q.4 Answer the following:

a) Differentiate between Flat Belt and V-Belt Drive **06**

b) It is required to select a flat belt drive for a compressor running at 720 rpm driven by a 25 kW, 1440 rpm motor. The space is available for *a* centre distance of 3 m. The belt is open type. Assume a belt velocity of 18 m/s. The reference belt velocity may be taken as 5.08 m/s. Refer the data provided for flat belts. **08**

Section – II

Q.5 Answer the following:

a) What are the design considerations for casting. **06**

b) Design a Muff Coupling which is used to connect two steel shaft transmitting 40 Kw at 350 rpm. The material for the shaft and key is plain carbon steel for which allowable shear and crushing stresses may be taken as 40 Mpa and 80 Mpa respectively. The material for the muff is cast iron for which the allowable shear stress may be assumed as 15 Mpa. **08**

Q.6 Answer the following:

a) Explain different types of spring and their applications with neat sketches **06**

b) Design a helical spring for a spring loaded Ramsbottom safety valve for the following conditions **08**

Dia. of valve seat = 100 mm

Operating pressure = 1 N/ mm^2

Max. pressure when the valve blows off freely = 1.075 N/ mm^2

Max. lift the valve when the pressure rises from 1 to 1.075 N /mm^2 = 6 mm

Max. allowable stress = 400 N/mm^2

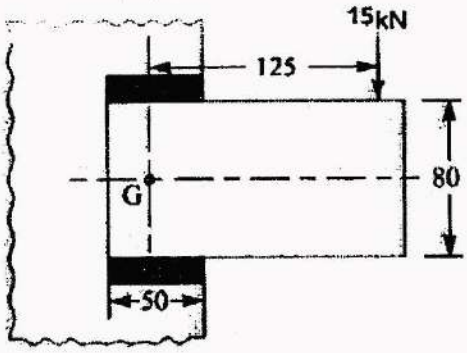
Modulus of rigidity = 84 KN/mm^2

Spring index = 5.5

Q.7 Answer the following:

a) Compare welded and bolted joint. **06**

b) A bracket carrying load of 15 KN is to welded as shown in figure. Find the size of weld required if the allowable shear stress is not be exceed 80 Mpa. **08**



Data for selection of Flat Belts

1) **Preferred diameters (in mm) of cast iron and mild steel pulleys are as below:**
100, 112, 125, 140, 160, 180, 200, 224, 250, 280, 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1100.

2) Table for Load Correction Factor (Fa)

Type of load	F_a
i) Normal load	1.0
ii) Steady load e.g. centrifugal pumps, fans light machine tools, conveyors	1.2
iii) International load e.g. heavy duty fans, blowers, compressors, reciprocating pumps, line shaft, heavy duty machines	1.3
iv) Shock load e.g. vacuum pumps, rolling mills, hammers, grinders	1.5

3) Table for Arc of Contact Factor (Fa):

α_s (Degrees)	120	130	140	150	160	170	180	190	200
F_d	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

4) **Power transmitting capacities of belts:**
HI-SPEED: 0.0118 kW per mm width per ply
FORT: 0.0147 kW per mm width per ply

5) **Table for standard widths of belts (in mm):**

3-Ply	25	40	50	63	76					
4-Ply	40	44	50	63	76	90	100	112	125	152
5-Ply	76	100	112	125	152					
6-Ply	112	125	152	180	200

Design of Machine Elements (BTN02501)

Day & Date: Saturday, 17-05-2024 Max. Marks: 70
Time: 10:00 PM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Use of non-programable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options: 14

1) A cotter joint is used to transmit ____
a) axial tensile force only
b) axial tensile or compressive force
c) axial compressive force only
d) combined bending and torsional moment

2) A key made from a cylindrical disc having segmental cross-section, is known as ____
a) Feather key b) Gib head key
c) Woodruff key d) Flat saddle key

3) The standard width for square or flat key in terms of shaft diameter (d) is _____
a) d b) d/2
c) d/4 d) d/8

4) A muff coupling is ____
a) rigid coupling b) flexible coupling
c) shock absorbing coupling d) none of the above

5) If the bolts are subjected to an eccentric load with the bolt axes perpendicular to the plane of line of application of load, every bolt will be subjected to ____
a) primary & secondary shear forces
b) primary shear force & tensile force
c) primary shear force & compressive force
d) tensile force & secondary shear force

6) The optimum velocity for Dunlop flat belts is approximately ____.
a) 5 m/s b) 18 m/s
c) 50 m/s d) 30 m/s

7) Guest's theory is used for ____
a) Brittle materials b) Ductile materials
c) Elastic materials d) Plastic materials

8) The maximum shear stress in spring wire is induced at ____
a) inner surface of coil b) outer surface of coil
c) central surface of coil d) end coils

9) The function of spring is ____
a) to absorb shock b) to generate energy
c) to measure force d) to measure vibration

10) Stress concentration in static loading is more serious in ____
a) ductile material
b) brittle material
c) equally serious in both material
d) depends on other factor

11) The causes of stress concentration is ____
a) variation in material properties
b) variation in cross-sectional area
c) variation of factor of safety
d) all above

12) In case of repeated load which of the following is correct?
a) $\sigma_{\min} = 0$ b) $\sigma_{\mathrm{m}} = 0$
c) $\sigma_{\max} = 0$ d) $\sigma_{\mathrm{a}} = 0$

13) The type of spring used in door hinges is ____
a) helical extension spring b) multi leaf spring
c) spiral spring d) helical torsion spring

14) In lever terminology, 'mechanical advantage' is the ratio of ____
a) load to effort b) effort to load
c) load arm to effort arm d) effort arm to load arm

a) What are the design considerations for casting. **06**

b) Design a Muff Coupling which is used to connect two steel shaft transmitting 40 Kw at 350 rpm. The material for the shaft and key is plain carbon steel for which allowable shear and crushing stresses may be taken as 40 Mpa and 80 Mpa respectively. The material for the muff is cast iron for which the allowable shear stress may be assumed as 15 Mpa. **08**

Q.6 Answer the following:

a) Explain different types of spring and their applications with neat sketches **06**

b) Design a helical spring for a spring loaded Ramsbottom safety valve for the following conditions **08**

Dia. of valve seat = 100 mm

Operating pressure = 1 N/ mm^2

Max. pressure when the valve blows off freely = 1.075 N/ mm^2

Max. lift the valve when the pressure rises from 1 to 1.075 N /mm^2 = 6 mm

Max. allowable stress = 400 N/mm^2

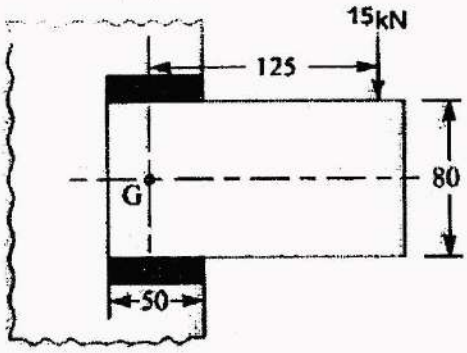
Modulus of rigidity = 84 KN/mm^2

Spring index = 5.5

Q.7 Answer the following:

a) Compare welded and bolted joint. **06**

b) A bracket carrying load of 15 KN is to welded as shown in figure. Find the size of weld required if the allowable shear stress is not be exceed 80 Mpa. **08**



Data for selection of Flat Belts

1) **Preferred diameters (in mm) of cast iron and mild steel pulleys are as below:**
100, 112, 125, 140, 160, 180, 200, 224, 250, 280, 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1100.

2) Table for Load Correction Factor (Fa)

Type of load	F_a
i) Normal load	1.0
ii) Steady load e.g. centrifugal pumps, fans light machine tools, conveyors	1.2
iii) International load e.g. heavy duty fans, blowers, compressors, reciprocating pumps, line shaft, heavy duty machines	1.3
iv) Shock load e.g. vacuum pumps, rolling mills, hammers, grinders	1.5

3) Table for Arc of Contact Factor (Fa):

α_s (Degrees)	120	130	140	150	160	170	180	190	200
F_d	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

4) **Power transmitting capacities of belts:**
HI-SPEED: 0.0118 kW per mm width per ply
FORT: 0.0147 kW per mm width per ply

5) **Table for standard widths of belts (in mm):**

3-Ply	25	40	50	63	76					
4-Ply	40	44	50	63	76	90	100	112	125	152
5-Ply	76	100	112	125	152					
6-Ply	112	125	152	180	200

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2025
Design of Machine Elements (BTN02501)

Day & Date: Saturday, 17-05-2024 Max. Marks: 70
Time: 10:00 PM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Use of non-programable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options: 14

1) A muff coupling is ____
a) rigid coupling b) flexible coupling
c) shock absorbing coupling d) none of the above

2) If the bolts are subjected to an eccentric load with the bolt axes perpendicular to the plane of line of application of load, every bolt will be subjected to ____
a) primary & secondary shear forces
b) primary shear force & tensile force
c) primary shear force & compressive force
d) tensile force & secondary shear force

3) The optimum velocity for Dunlop flat belts is approximately ____.
a) 5 m/s b) 18 m/s
c) 50 m/s d) 30 m/s

4) Guest's theory is used for ____
a) Brittle materials b) Ductile materials
c) Elastic materials d) Plastic materials

5) The maximum shear stress in spring wire is induced at ____
a) inner surface of coil b) outer surface of coil
c) central surface of coil d) end coils

6) The function of spring is ____
a) to absorb shock b) to generate energy
c) to measure force d) to measure vibration

7) Stress concentration in static loading is more serious in ____
a) ductile material
b) brittle material
c) equally serious in both material
d) depends on other factor

8) The causes of stress concentration is ____
a) variation in material properties
b) variation in cross-sectional area
c) variation of factor of safety
d) all above

9) In case of repeated load which of the following is correct?
a) $\sigma_{\min} = 0$ b) $\sigma_{\mathrm{m}} = 0$
c) $\sigma_{\max} = 0$ d) $\sigma_{\mathrm{a}} = 0$

10) The type of spring used in door hinges is ____
a) helical extension spring b) multi leaf spring
c) spiral spring d) helical torsion spring

11) In lever terminology, 'mechanical advantage' is the ratio of ____
a) load to effort b) effort to load
c) load arm to effort arm d) effort arm to load arm

12) A cotter joint is used to transmit ____
a) axial tensile force only
b) axial tensile or compressive force
c) axial compressive force only
d) combined bending and torsional moment

13) A key made from a cylindrical disc having segmental cross-section, is known as ____
a) Feather key b) Gib head key
c) Woodruff key d) Flat saddle key

14) The standard width for square or flat key in terms of shaft diameter (d) is _____
a) d b) d/2
c) d/4 d) d/8

Seat No.		Set	R

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2025
Design of Machine Elements (BTN02501)

Day & Date: Saturday, 17-05-2024 Max. Marks: 56
Time: 10:00 PM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figure to right indicate full marks.
3) Use of Scientific calculator is allowed.
4) Assume additional suitable data if necessary and state it clearly.
5) Use university graph paper and semi-log paper if required.

Section – I

Q.2 Attempt the following questions:

a) Write and explain applications of Lever in engineering practice. **06**

b) Explain design procedure of Socket and Spigot cotter joint with necessary sketches. **08**

Q.3 Answer the following:

a) Explain Following terms **06**
i) Endurance Limit
ii) Notch Sensitivity
iii) Fatigue Failure

b) A rotating bar made of steel 45 C 8 having Sut = 630 Mpa is subjected to a completely reversed bending stress. The corrected endurance limit of bar is 315 Mpa. Calculate the fatigue strength of the bar for a life of 90000 cycles. Draw S-N diagram. **08**

Q.4 Answer the following:

a) Differentiate between Flat Belt and V-Belt Drive **06**

b) It is required to select a flat belt drive for a compressor running at 720 rpm driven by a 25 kW, 1440 rpm motor. The space is available for *a* centre distance of 3 m. The belt is open type. Assume a belt velocity of 18 m/s. The reference belt velocity may be taken as 5.08 m/s. Refer the data provided for flat belts. **08**

Section – II

Q.5 Answer the following:

a) What are the design considerations for casting. **06**

b) Design a Muff Coupling which is used to connect two steel shaft transmitting 40 Kw at 350 rpm. The material for the shaft and key is plain carbon steel for which allowable shear and crushing stresses may be taken as 40 Mpa and 80 Mpa respectively. The material for the muff is cast iron for which the allowable shear stress may be assumed as 15 Mpa. **08**

Q.6 Answer the following:

a) Explain different types of spring and their applications with neat sketches **06**

b) Design a helical spring for a spring loaded Ramsbottom safety valve for the following conditions **08**

Dia. of valve seat = 100 mm

Operating pressure = 1 N/ mm^2

Max. pressure when the valve blows off freely = 1.075 N/ mm^2

Max. lift the valve when the pressure rises from 1 to 1.075 N /mm^2 = 6 mm

Max. allowable stress = 400 N/mm^2

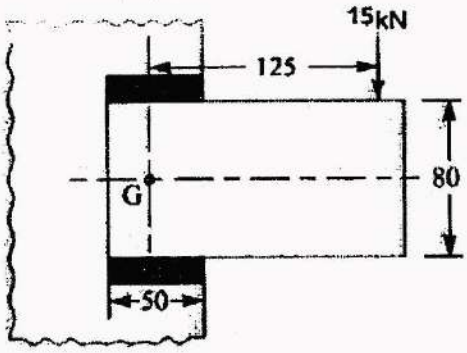
Modulus of rigidity = 84 KN/mm^2

Spring index = 5.5

Q.7 Answer the following:

a) Compare welded and bolted joint. **06**

b) A bracket carrying load of 15 KN is to welded as shown in figure. Find the size of weld required if the allowable shear stress is not be exceed 80 Mpa. **08**



Data for selection of Flat Belts

1) **Preferred diameters (in mm) of cast iron and mild steel pulleys are as below:**
100, 112, 125, 140, 160, 180, 200, 224, 250, 280, 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1100.

2) Table for Load Correction Factor (Fa)

Type of load	F_a
i) Normal load	1.0
ii) Steady load e.g. centrifugal pumps, fans light machine tools, conveyors	1.2
iii) International load e.g. heavy duty fans, blowers, compressors, reciprocating pumps, line shaft, heavy duty machines	1.3

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative: **14**

1) Which of the following is not a part of CAD hardware?
a) Graphical display terminal b) Keyboards
c) Computer program d) Peripheral equipment

2) Integration of all business function of enterprise is ____.
a) CIM b) CAD CAM
c) CAE d) None of these

3) Which geometric transformation does not change the basic dimensions of the graphics objects transformed?
a) Scaling b) Transition
c) Rotation d) Both b) and c)

4) IGES is ____.
a) Neutral file format b) Data format
c) Operating system d) All of the above

5) For the modeling of sheet metal parts of a car body, which one of the following may be generally recommended?
a) Wireframe modeling b) Surface modeling
c) Solid modeling d) None of these

6) FANUC is the name of ____.
a) CNC tool b) CNC controller
c) CNC job holding device d) None of these

7) Which curve exhibits better local control?
a) Bezier b) Benazir
c) B-spline d) All of these

8) Among these which is Drawing interchange file format.
a) DXF b) UCS
c) CAD d) None of these

9) The process of building the structure matrix [K] from the element stiffness matrices [K]e is called, ____.
a) Assembly b) Decomposition
c) Interpolation d) Extrapolation

10) APT stands for ____.
a) Automatically programmed tool
b) Auto power tool
c) Automatically punched tape
d) All

11) CAPP involves use of computer in ____.
a) Planning the processes b) Determine cutting conditions
c) Setting time standards d) All of these

12) In case of closed loop control system ____ is used.
a) Servo motors b) Stepper motors
c) DC motors d) All of these

13) The predefined sequence of movement of machine parts in CNC, stored in MCU is called as ____.
a) Machine cycles b) Operation cycles
c) Canned cycles d) None of these

14) The equipment used for the measurement of tool-offsets is called as ____.
a) Vernier b) Micrometer
c) CMM d) Tool pre setter

b) Tool magazine

c) Machine zero and work zero

d) open loop and closed loop control system

Seat No.		Set	R

T. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
CAD-CAM-CAE (BTN02502)

Day & Date: Monday 19-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and it should be solved in the first 30 minutes in the first 30 minutes in the answer book.
2) Each question carries one mark.
3) Figures to the right indicate foil marks.
4) Use of non-programmable calculators is allowed.
5) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative: **14**

1) CAPP involves use of computer in ____.
a) Planning the processes b) Determine cutting conditions
c) Setting time standards d) All of these

2) In case of closed loop control system ____ is used.
a) Servo motors b) Stepper motors
c) DC motors d) All of these

3) The predefined sequence of movement of machine parts in CNC, stored in MCU is called as ____.
a) Machine cycles b) Operation cycles
c) Canned cycles d) None of these

4) The equipment used for the measurement of tool-offsets is called as ____.
a) Vernier b) Micrometer
c) CMM d) Tool pre setter

5) Which of the following is not a part of CAD hardware?
a) Graphical display terminal b) Keyboards
c) Computer program d) Peripheral equipment

6) Integration of all business function of enterprise is ____.
a) CIM b) CAD CAM
c) CAE d) None of these

7) Which geometric transformation does not change the basic dimensions of the graphics objects transformed?
a) Scaling b) Transition
c) Rotation d) Both b) and c)

8) IGES is ____.
a) Neutral file format b) Data format
c) Operating system d) All of the above

9) For the modeling of sheet metal parts of a car body, which one of the following may be generally recommended?
a) Wireframe modeling b) Surface modeling
c) Solid modeling d) None of these

10) FANUC is the name of ____.
a) CNC tool b) CNC controller
c) CNC job holding device d) None of these

11) Which curve exhibits better local control?
a) Bezier b) Benazir
c) B-spline d) All of these

12) Among these which is Drawing interchange file format.
a) DXF b) UCS
c) CAD d) None of these

13) The process of building the structure matrix [K] from the element stiffness matrices [K]e is called, ____.
a) Assembly b) Decomposition
c) Interpolation d) Extrapolation

14) APT stands for ____.
a) Automatically programmed tool
b) Auto power tool
c) Automatically punched tape
d) All

T. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
CAD-CAM-CAE (BTN02502)

Day & Date: Monday 19-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from Section – I
2) Question no. 5 is compulsory and from the remaining attempt any one from Section – II
3) Figures to the right indicate full marks.
4) Use of non-programmable calculators is allowed.
5) Assume suitable data if necessary and mention it clearly.

Section – I

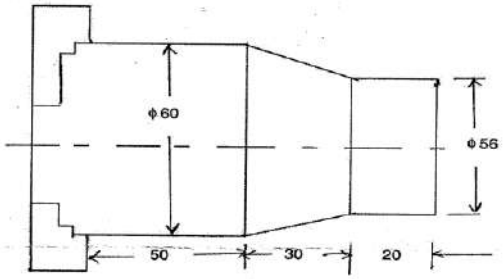
Q.2 Solve the following:
a) Explain in detail the various functions graphics software can perform. **07**
b) What are geometric transformations? Discuss any two transformations in detail with neat sketches **07**

Q.3 Solve the following:
a) For triangle the vertices are P(15, 10), Q(35, 20), R(25, 30) is rotate in anticlockwise direction by 30° about point Q. Show the final result with figure. **08**
b) What is the finite element method and explain types of analysis? **06**

Q.4 Solve the following: (Any Three) **14**
a) List of latest FEA Software's & their applications in Domain
b) CSG and Boolean operations
c) CAPP
d) Parametric representation of curves

Section – II

Q.5 a) Prepare a part program for stepped component given below. The various details are **10**
Speed: 400 rpm feed rate: 200 mm/min
Work material: Mild steel Tool type: Right hand facing tool.



b) Write notes on "Subprogram and macros in NC programming" **04**

Q.6 **a)** What is the concept of DNC? Discuss its advantages and limitations. **07**

b) Discuss the importance of ATC and tool magazine in CNC m/c. **07**

Q.7 **Write Short Notes: (Any Three)** **14**

a) Drives used in NC and CNC

b) Tool magazine

c) Machine zero and work zero

d) open loop and closed loop control system

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Eutectic means complete solubility in _____.
a) Liquid state b) Solid state
c) Liquid & solid state d) Neither liquid nor solid

2) Which of the following constituent is observed as proeutectic as well as eutectoid constituent in Fe-Fe3C diagram?
a) Ferrite b) Austenite
c) Delta Iron d) Cementite

3) Which of the following steel cannot be hardened by heat treatment?
a) Austenitic stainless steel b) Ferritic stainless steel
c) Maraging Steel d) HCHC Steel

4) Which of the following steels are oil hardened?
a) HCHC steels b) HSLA steel
c) Hadfield 'Mn' steel d) HSS steel

5) Which of the following are proeutectoid constituents present in steels between A3 and A1 temperatures?
a) Ferrite b) Austenite
c) Cementite d) Pearlite

6) Which of the following will subjected to modification treatment?
a) Al-Si alloys b) Al-Cu Alloys
c) Cu-Al Alloys d) None of the above

7) Which of the following alloy is given modification treatment?
a) Al-Cu alloy b) Cu-Sn alloy
c) Al-Si alloy d) Cu-Al alloy

8) After homogenization, which of the following treatment is carried out?
a) Full Annealing b) Spherodising
c) Isothermal Annealing d) No Any Treatment

9) Which of the following treatment is based on isothermal transformation of austenite?
a) Annealing b) Normalizing
c) Patenting d) Tempering

10) Which of the following steel is non hardenable by HT?
a) HSLA Steel b) 304 St. Steel
c) HCHC Steel d) Maraging Steel

11) Powders of metal like Zn, Sn are manufactured by _____method.
a) atomization b) electrodeposition
c) reduction d) condensation of metal vapours

12) Which of the following test is recommended for detecting internal flaws in welded vessel?
a) Gamma ray radiography b) Ultrasonic test
c) Dye penetrant test d) Eddy current test

13) To measure hard ness of hardened and tempered steel, which of the following harness test is recommended?
a) Rockwell b) Brinell
c) Shore's scleroscope d) Vicker's

14) S-N curve is related to test/phenomenon.

Q.1 Choose the correct Answer. **14**

1) Productivity can be increased with _____.
a) When production increased with increase in input
b) The same production with increase in input
c) The rate of increase in output is more compared to rate of increase in input
d) Production decreased without increase in input

2) Gilbreth contributed to _____.
a) Time study b) Motion study
c) Project study d) Value engg.

3) Basic tool in work measurement is _____.
a) Graph paper b) Process chart
c) Planning chart d) D. Stopwatch

4) Method study symbol "Rectangle" indicates _____.
a) Storage b) Inspection
c) Operation d) Delay

5) Travel chart indicate _____.
a) Frequency of movement b) Repetitive movement
c) Manual movement d) Ideal time of man & machine

6) Micro-motion study is used in _____.
a) SIMO chart b) Activity chart
c) Flow process chart d) MTM

7) Critical examination is carried out through _____.
a) Cumulative stop watch b) Work sampling technique
c) Travel chart d) Questioning process

8) The most frequently used components are arranged in/at _____.
a) Left side b) Right side
c) Central location d) Any of the above

9) Work study involves _____.
a) Only method study
b) Only work measurement
c) Method study and work measurement
d) Only motion study

10) Normal Time = _____ x Performance rating / 100
a) Standard time b) Observed time
c) Allowance d) Cumulative time

11) Tool breakage is an example of _____.
a) Contingency allowance b) Personal allowance
c) Fatigue allowance d) Policy allowance

12) Which type of layout is used in automobile industry?
a) Product b) Process
c) Fixed d) Group

13) Merit rating is useful for _____.
a) Rewarding the person b) Industrial safety
c) Machine allowance d) Performance appraisal

14) Job evaluation is to determine _____.
a) Worth of Jobs b) Skill required by worker
c) Job assessment d) Relative value of job and worker

Set P

T. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Industrial Engineering (BTN02504)

Day & Date: Wednesday 21-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2 Answer the following questions.
a) Discuss functions and scope of Industrial Engineering. **07**
b) Elaborate the contribution of Gilbreth. **07**

Q.3 Answer the following questions.
a) Explain two handed process chart with help of a suitable. **05**
b) Explain significance and application of following: **09**
i) Therblig
ii) String Diagram
iii) Multiple activity chart

Q.4 Answer the following questions.
a) Explain types of systems and Man- Machine system. **07**
b) Explain various types of displays with neat sketch. **07**

Section – II

Q.5 Answer the following questions.
a) Define work measurement. What are their objectives? **08**
b) Explains reasons for breaking the job into elements for time study. **06**

Q.6 Answer the following questions.
a) Explain various types of layout. **06**
b) Compare product layout and process layout. **08**

Q.7 Answer the following questions.
a) Explain job evaluation procedure in detail. **07**
b) What is merit rating? Explain its different methods. **07**

MECHANICAL ENGINEERING
Industrial Engineering (BTN02504)

Day & Date: Wednesday 21-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The most frequently used components are arranged in/at _____.
a) Left side b) Right side
c) Central location d) Any of the above

2) Work study involves _____.
a) Only method study
b) Only work measurement
c) Method study and work measurement
d) Only motion study

3) Normal Time = _____ x Performance rating / 100
a) Standard time b) Observed time
c) Allowance d) Cumulative time

4) Tool breakage is an example of _____.
a) Contingency allowance b) Personal allowance
c) Fatigue allowance d) Policy allowance

5) Which type of layout is used in automobile industry?
a) Product b) Process
c) Fixed d) Group

6) Merit rating is useful for _____.
a) Rewarding the person b) Industrial safety
c) Machine allowance d) Performance appraisal

7) Job evaluation is to determine _____.
a) Worth of Jobs b) Skill required by worker
c) Job assessment d) Relative value of job and worker

8) Productivity can be increased with _____.
a) When production increased with increase in input
b) The same production with increase in input
c) The rate of increase in output is more compared to rate of increase in input
d) Production decreased without increase in input

9) Gilbreth contributed to _____.
a) Time study b) Motion study
c) Project study d) Value engg.

10) Basic tool in work measurement is _____.
a) Graph paper b) Process chart
c) Planning chart d) D. Stopwatch

11) Method study symbol "Rectangle" indicates _____.
a) Storage b) Inspection
c) Operation d) Delay

12) Travel chart indicate _____.
a) Frequency of movement b) Repetitive movement
c) Manual movement d) Ideal time of man & machine

13) Micro-motion study is used in _____.

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 each question carries one marks.
2) Answer MCQ/Objective type question on Page No. 3 only. Don't forget to mention Q.P. Set (P/Q/R/S) on top of the page.
3) All the sub-questions in Q. No. 1 are compulsory for one mark each and every question has only one correct answer.
4) Answer cannot be changed once it is marked.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. 14

1) The primary application of gas turbines in aviation is due to their ____.
a) Compact size
b) Low fuel consumption
c) Ability to operate at high altitudes
d) Both A and C

2) The thermal efficiency of an ideal Brayton cycle increases with _____.
a) Increase in maximum cycle temperature
b) Decrease in pressure ratio
c) Increase in pressure ratio
d) None of the above

3) In a gas turbine cycle with regeneration, the thermal efficiency increases because _____.
a) The turbine work increases
b) The compressor work decreases
c) Heat input decreases
d) Heat rejected increases

4) A Brayton cycle operates with a pressure ratio of 6. The maximum and minimum temperatures are 1200 K and 300 K. Determine the thermal efficiency (y = 1.4).
a) 42.3% b) 50.6%
c) 45.1% d) 54.2%

5) The Mach angle is given by _____.
a) $\sin^{-1}(1/M)$ b) $\cos^{-1}(M)$
c) $\tan^{-1}(M)$ d) $\tan^{-1}(1/M)$

6) A convergent nozzle operates with an inlet pressure of 10 bar and outlet pressure of 5 bar. Calculate the exit Mach number. (y = 1.4)

a) 1.24 b) 0.95
c) 1.00 d) 0.84

7) The slip factor in a centrifugal compressor is defined as _____.

a) Ratio of actual velocity to theoretical velocity
b) Ratio of theoretical velocity to actual velocity
c) Difference between actual and theoretical velocity
d) None of the above

8) A centrifugal compressor with a blade speed of 300 m/s and outlet velocity of 150 m/s delivers a pressure rise of _____.

a) 45 kPa b) 60 kPa
c) 90 kPa d) 75 kPa

9) For an axial flow compressor, the velocity diagrams show _____.

a) Absolute and relative velocities of air
b) Absolute velocity only
c) Pressure distribution across stages
d) Temperature variation across stages

10) The main function of secondary air in a gas turbine combustion chamber is to _____.

a) Reduce NOx emissions b) Provide flame stability
c) Cool the turbine blades d) Ensure complete combustion

11) In a centrifugal compressor, the impeller blade width is designed to _____.

a) Reduce slip factor
b) Control mass flow rate
c) Increase the velocity of the fluid
d) Reduce pressure loss

12) A convergent-divergent nozzle accelerates the flow to supersonic speeds when the pressure ratio is _____.

a) Greater than the critical pressure ratio
b) Less than the critical pressure ratio
c) Equal to 1
d) Independent of the critical pressure ratio

13) Which of the following is a requirement for a gas turbine combustion chamber?

a) High temperature
b) Low-pressure drop
c) Efficient mixing of air and fuel
d) All of the above

14) The purpose of cooling turbine blades in a gas turbine is ____.

a) To increase the blade strength
b) To prevent corrosion
c) To maintain operational efficiency
d) To avoid blade failure due to overheating

Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Use of a calculator is allowed.
3) Figures to the right indicate full marks.
4) Assume additional suitable data, if necessary and mention it clearly

Section – I

Q.2 Attempt any two questions. **14**

a) Explain the classification of gas turbines with examples.

b) Compare gas turbines with reciprocating I.C. engines and steam turbines.

c) A gas turbine plant operates on an ideal Brayton cycle. The compressor inlet temperature is 300 K, and the maximum cycle temperature is 1200 K. The plant operates with a pressure ratio of 8. The specific heat capacity for air is 1.005 kJ/kg K, and the ratio of specific heats for air (γ) is 1.4.
Determine the following:
1) The compressor work per kg of air.
2) The turbine work per kg of air.
3) The thermal efficiency of the cycle.
4) The net work output per kg of air.

d) Derive the expression for the optimum pressure ratio for maximum work output in a Brayton cycle.

Q.3 Attempt any two questions. **14**

a) Explain the concept of Mach number and its significance in gas turbine applications.

b) A gas turbine plant operates with a compressor inlet temperature of 300 K and a turbine inlet temperature of 1400 K. The plant has a pressure ratio of 10. The polytropic efficiency of the compressor is 0.88, and the polytropic efficiency of the turbine is 0.90. The calorific value of the fuel used in the plant is 43,000 kJ/kg. The specific heat capacity for air is 1.005 kJ/kg K, and for gases, it is 1.15 kJ/kg K. The ratio of specific heat is 1.4 for air and 1.33 for gases.
Determine the following:
1) The overall efficiency of the plant.
2) The specific output of the plant.
3) The fuel-to-air ratio
4) The specific fuel consumption (SFC)

c) Describe the methods used to improve the thermal efficiency and specific work output of a gas turbine cycle. Explain with the help of a diagram.

d) Explain the concept of isentropic flow in a nozzle and its significance.

SECTION II

Q.4 Attempt any two questions. **14**

a) Discuss the construction and working principle of a centrifugal compressor.

b) What are the key factors affecting the performance of centrifugal compressors? Explain the terms "slip factor" and "power input factor.

c) Explain the combustion process in a gas turbine. What are the different types of combustion chambers used?

d) Find the polytropic efficiency of an axial flow compressor from the following data:
The total head pressure ratio=4
Overall total head isentropic efficiency=85%
Total head inlet temperature=290K
The inlet and outlet air angles from the rotor blades of the above compressor are 10° and 45° respectively. The rotor and stator blades are symmetrical. The mean blade speed and axial velocity remain constant throughout the compressor. Assuming a value of 220 m/s for blade speed and the work done factor as 0.86, find the number of stages required.

Q.5 Attempt any two questions. **14**

a) Draw and explain the velocity diagrams for a centrifugal compressor.

b) Discuss the components and working principle of an axial flow compressor. Explain the significance of the degree of reaction.

c) A centrifugal compressor has a pressure ratio of 4:1 with an isentropic efficiency of 80% when running at 15000 rpm and inducing air at 293 K. Curved vanes at inlet give the air a prewhirl of 25° to the axial direction at all radii and the mean dia. of eye is 250 mm. The absolute air velocity at inlet is 150 m/s. Impeller tip dia. is 600 mm. Calculate the slip factor.

d) Explore the different types of combustion chambers used in gas turbines.

Q.3 Attempt any two questions. **14**

a) Explain the concept of Mach number and its significance in gas turbine applications.

b) A gas turbine plant operates with a compressor inlet temperature of 300 K and a turbine inlet temperature of 1400 K. The plant has a pressure ratio of 10. The polytropic efficiency of the compressor is 0.88, and the polytropic efficiency of the turbine is 0.90. The calorific value of the fuel used in the plant is 43,000 kJ/kg. The specific heat capacity for air is 1.005 kJ/kg K, and for gases, it is 1.15 kJ/kg K. The ratio of specific heat is 1.4 for air and 1.33 for gases.
Determine the following:
1) The overall efficiency of the plant.
2) The specific output of the plant.
3) The fuel-to-air ratio
4) The specific fuel consumption (SFC)

c) Describe the methods used to improve the thermal efficiency and specific work output of a gas turbine cycle. Explain with the help of a diagram.

d) Explain the concept of isentropic flow in a nozzle and its significance.

SECTION II

Q.4 Attempt any two questions. **14**

a) Discuss the construction and working principle of a centrifugal compressor.

b) What are the key factors affecting the performance of centrifugal compressors? Explain the terms "slip factor" and "power input factor.

c) Explain the combustion process in a gas turbine. What are the different types of combustion chambers used?

d) Find the polytropic efficiency of an axial flow compressor from the following data:
The total head pressure ratio=4
Overall total head isentropic efficiency=85%
Total head inlet temperature=290K
The inlet and outlet air angles from the rotor blades of the above compressor are 10° and 45° respectively. The rotor and stator blades are symmetrical. The mean blade speed and axial velocity remain constant throughout the compressor. Assuming a value of 220 m/s for blade speed and the work done factor as 0.86, find the number of stages required.

Q.5 Attempt any two questions. **14**

a) Draw and explain the velocity diagrams for a centrifugal compressor.

b) Discuss the components and working principle of an axial flow compressor. Explain the significance of the degree of reaction.

c) A centrifugal compressor has a pressure ratio of 4:1 with an isentropic efficiency of 80% when running at 15000 rpm and inducing air at 293 K. Curved vanes at inlet give the air a prewhirl of 25° to the axial direction at all radii and the mean dia. of eye is 250 mm. The absolute air velocity at inlet is 150 m/s. Impeller tip dia. is 600 mm. Calculate the slip factor.

d) Explore the different types of combustion chambers used in gas turbines.

MECHANICAL ENGINEERING
Gas Turbines (BTN02514)

Day & Date: Thursday, 22-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 each question carries one marks.
2) Answer MCQ/Objective type question on Page No. 3 only. Don't forget to mention Q.P. Set (P/Q/R/S) on top of the page.
3) All the sub-questions in Q. No. 1 are compulsory for one mark each and every question has only one correct answer.
4) Answer cannot be changed once it is marked.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) In a centrifugal compressor, the impeller blade width is designed to _____.
a) Reduce slip factor
b) Control mass flow rate
c) Increase the velocity of the fluid
d) Reduce pressure loss

2) A convergent-divergent nozzle accelerates the flow to supersonic speeds when the pressure ratio is _____.
a) Greater than the critical pressure ratio
b) Less than the critical pressure ratio
c) Equal to 1
d) Independent of the critical pressure ratio

3) Which of the following is a requirement for a gas turbine combustion chamber?
a) High temperature
b) Low-pressure drop
c) Efficient mixing of air and fuel
d) All of the above

4) The purpose of cooling turbine blades in a gas turbine is ____.
a) To increase the blade strength
b) To prevent corrosion
c) To maintain operational efficiency
d) To avoid blade failure due to overheating

5) The primary application of gas turbines in aviation is due to their ____.
a) Compact size
b) Low fuel consumption
c) Ability to operate at high altitudes
d) Both A and C

6) The thermal efficiency of an ideal Brayton cycle increases with _____.
a) Increase in maximum cycle temperature
b) Decrease in pressure ratio
c) Increase in pressure ratio
d) None of the above

7) In a gas turbine cycle with regeneration, the thermal efficiency increases because _____.
a) The turbine work increases
b) The compressor work decreases
c) Heat input decreases
d) Heat rejected increases

8) A Brayton cycle operates with a pressure ratio of 6. The maximum and minimum temperatures are 1200 K and 300 K. Determine the thermal efficiency (y = 1.4).
a) 42.3% b) 50.6%
c) 45.1% d) 54.2%

9) The Mach angle is given by _____.
a) $\sin^{-1}(1/M)$ b) $\cos^{-1}(M)$
c) $\tan^{-1}(M)$ d) $\tan^{-1}(1/M)$

10) A convergent nozzle operates with an inlet pressure of 10 bar and outlet pressure of 5 bar. Calculate the exit Mach number. (y = 1.4)
a) 1.24 b) 0.95
c) 1.00 d) 0.84

11) The slip factor in a centrifugal compressor is defined as _____.
a) Ratio of actual velocity to theoretical velocity
b) Ratio of theoretical velocity to actual velocity
c) Difference between actual and theoretical velocity
d) None of the above

12) A centrifugal compressor with a blade speed of 300 m/s and outlet velocity of 150 m/s delivers a pressure rise of _____.
a) 45 kPa b) 60 kPa
c) 90 kPa d) 75 kPa

13) For an axial flow compressor, the velocity diagrams show _____.

a) Absolute and relative velocities of air
b) Absolute velocity only
c) Pressure distribution across stages
d) Temperature variation across stages

14) The main function of secondary air in a gas turbine combustion chamber is to _____.

a) Reduce NOx emissions
b) Provide flame stability
c) Cool the turbine blades
d) Ensure complete combustion

Section – I

Q.2 Attempt any two questions. **14**

a) Explain the classification of gas turbines with examples.

b) Compare gas turbines with reciprocating I.C. engines and steam turbines.

c) A gas turbine plant operates on an ideal Brayton cycle. The compressor inlet temperature is 300 K, and the maximum cycle temperature is 1200 K. The plant operates with a pressure ratio of 8. The specific heat capacity for air is 1.005 kJ/kg K, and the ratio of specific heats for air (γ) is 1.4.
Determine the following:
1) The compressor work per kg of air.
2) The turbine work per kg of air.
3) The thermal efficiency of the cycle.
4) The net work output per kg of air.

d) Derive the expression for the optimum pressure ratio for maximum work output in a Brayton cycle.

Q.3 Attempt any two questions. **14**

a) Explain the concept of Mach number and its significance in gas turbine applications.

b) A gas turbine plant operates with a compressor inlet temperature of 300 K and a turbine inlet temperature of 1400 K. The plant has a pressure ratio of 10. MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) A tool may fail due to _____
a) Cracking at the cutting edge due to thermal stresses
b) Plastic deformation of the cutting edge
c) Flank and crater wear
d) All of these

2) Crater wear occurs at _____
a) Tool flank b) Tool face
c) Tool shank d) Tool heel

3) The main factors likely to cure excessive heat during a metal cutting operations are _____
a) Cutting speed too high b) Worm out cutting edge
c) Formation or built up edge d) All of the above

4) Tool life is generally better when _____
a) The grain size of the metal is large
b) The grain size of the metal is small
c) Hard constituents are present in the microstructure of the tool material
d) None of the mentioned

5) Which of the following tool materials has highest cutting speed?
a) carbon steel b) tool steel
c) Carbide d) HSS

6) _____ is defined as the time interval between the two successive grinds.
a) Tool Wear b) Machinability
c) Tool Life d) Machinability Index

7) A broach has _____.
a) Roughing teeth b) semi-finishing teeth
c) finishing teeth d) all of the above

8) Fixed cost includes _____
a) Labor cost b) Power cost
c) Setup cost d) Cost of m/c

9) Depending upon the number of cutting edges the cutting tools are classified _____.
a) single b) Multipoint
c) Right hand tool d) a and b

10) Discontinuous chips are formed during machining of _____
a) Cast iron b) Mild steel
c) Aluminum d) None of these

11) Tool signature comprise _____
a) 4 elements b) 5 elements
c) 6 elements d) 7 elements

12) Cutting fluid should possesses the property of _____
a) Low viscosity b) High viscosity
c) Moderate viscosity d) None of these

13) Punching a number of holes in a sheet is known as _____
a) Notching b) Parting
c) Perforating d) Lancing

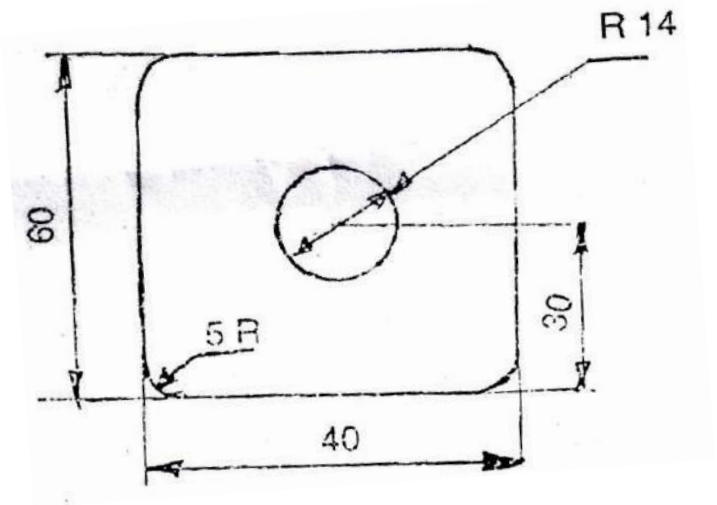
Q.2 a) Design press tool for the component shown in figure below giving following details: **14**
i) Strip layout
ii) Die set selection
iii) Force calculation
iv) Design of various elements
Also draw two views of a tool along with strip layout and part list.
Material - M.S.
Sheet thickness - 5mm
Ultimate shear stress - 320 Nmm^2
All dimension are in mm



OR

b) Design the drawing tool for the component shown in fig. an determine the following: **14**

i) % reduction
ii) No. of draws
iii) Blank size
iv) Draw ratio
v) Die clearance
vi) Drawing force
vii) Blank holding force
viii) Press capacity

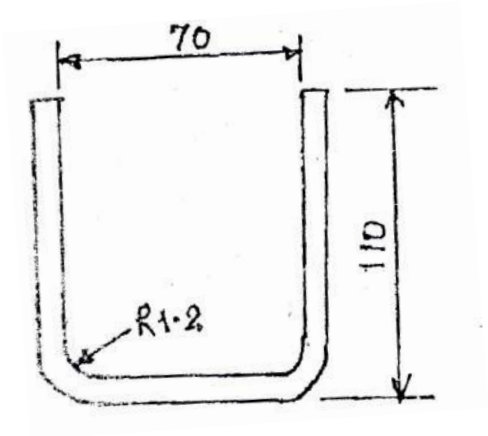
Also draw two views of drawing tool with part list.

Material - M.S.

Thickness = 1mm

UTS = 450 N/mm^2

All dimensions are in mm



Q.3 **a)** Explain ASA tool signature with suitable example. **04**

b) Differentiate between orthogonal cutting and Oblique cutting **03**

Q.4 **a)** Write a note on Cutting tool materials. **03**

b) Write a note on Merchant's circle to find shear force and thrust force. **04**

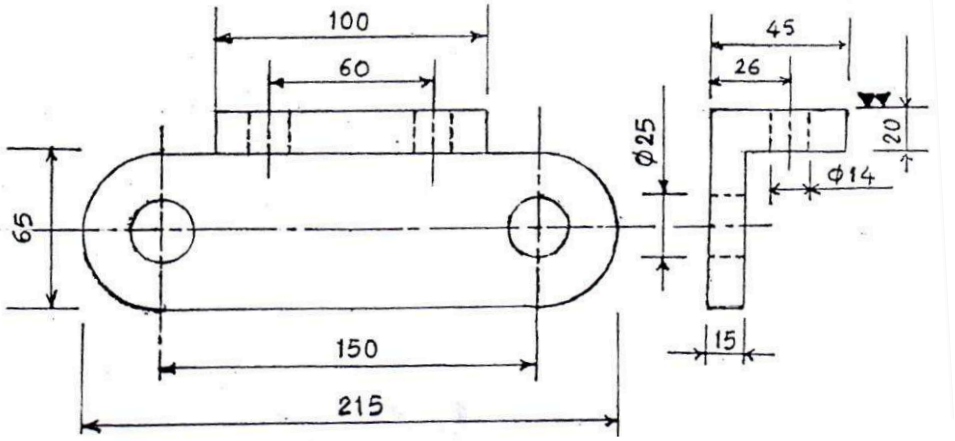
Q.5 In an orthogonal cutting operation the following data have been observed **07**

Uncut chip thickness = 0.127mm
Cutting speed = 2 m/s
Rake angle = 10°
Cutting force = 600 N
Thrust force = 250 N
Chip thickness = 0.3 mm
Determine:

i) Shear angle
ii) Friction angle
iii) Shear stress
iv) Shear force

Section – II

Q.6 Design and draw a jig for drilling 2 Holes of ∅14mm for the same component. **14**



OR

Design and draw a fixture for milling face for the component as shown in above figure for top surface milled up to 100 mm. **14**

Q.7 For machining C40 steel with H.S.S. the following V and T observations have been noted **07**

V m/min	25	35
T min	90	20

Calculate

i) n and c

ii) Recommend the cutting speed for a desired tool life of 70 minutes

Q.8 **a)** Explain the importance of locating devices in jig and fixture. Explain any one with neat sketch. **04**

b) Explain the is fool proofing pin in jig and fixture. **03**

Q.9 **a)** Explain the economic order quantity. **03**

b) Explain various types of costs in economics of tooling. **04**

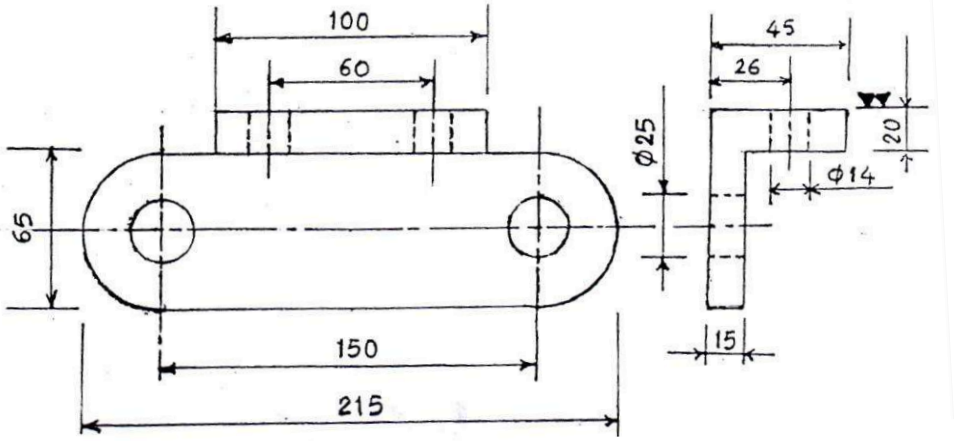
Q.6 Design and draw a jig for drilling 2 Holes of ∅14mm for the same component. **14**



OR

Design and draw a fixture for milling face for the component as shown in above figure for top surface milled up to 100 mm. **14**

Q.7 For machining C40 steel with H.S.S. the following V and T observations have been noted **07**

V m/min	25	35
T min	90	20

Calculate

i) n and c

ii) Recommend the cutting speed for a desired tool life of 70 minutes

Q.8 **a)** Explain the importance of locating devices in jig and fixture. Explain any one with neat sketch. **04**

b) Explain the is fool proofing pin in jig and fixture. **03**

Q.9 **a)** Explain the economic order quantity. **03**

b) Explain various types of costs in economics of tooling. **04**

T. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGGINERING
Tool Engineering (BTN02515)

Day & Date: Thursday 22-05-2025 Max. Marks: 70
Time: 10:00 AM To 02:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Tool signature comprise _____
a) 4 elements b) 5 elements
c) 6 elements d) 7 elements

2) Cutting fluid should possesses the property of _____
a) Low viscosity b) High viscosity
c) Moderate viscosity d) None of these

3) Punching a number of holes in a sheet is known as _____
a) Notching b) Parting
c) Perforating d) Lancing

4) Drill jig bush is made of _____
a) Mild steel b) Cast iron
c) Cast steel d) Carbon steel

5) A tool may fail due to _____
a) Cracking at the cutting edge due to thermal stresses
b) Plastic deformation of the cutting edge
c) Flank and crater wear
d) All of these

6) Crater wear occurs at _____
a) Tool flank b) Tool face
c) Tool shank d) Tool heel

7) The main factors likely to cure excessive heat during a metal cutting operations are _____
a) Cutting speed too high b) Worm out cutting edge
c) Formation or built up edge d) All of the above

8) Tool life is generally better when _____
a) The grain size of the metal is large
b) The grain size of the metal is small
c) Hard constituents are present in the microstructure of the tool material
d) None of the mentioned

9) Which of the following tool materials has highest cutting speed?
a) carbon steel b) tool steel
c) Carbide d) HSS

10) _____ is defined as the time interval between the two successive grinds.
a) Tool Wear b) Machinability
c) Tool Life d) Machinability Index

11) A broach has _____.
a) Roughing teeth b) semi-finishing teeth
c) finishing teeth d) all of the above

12) Fixed cost includes _____
a) Labor cost b) Power cost
c) Setup cost d) Cost of m/c

13) Depending upon the number of cutting edges the cutting tools are classified _____.
a) single b) Multipoint
c) Right hand tool d) a and b

14) Discontinuous chips are formed during machining of _____
a) Cast iron b) Mild steel
c) Aluminum d) None of these

T. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGGINERING
Tool Engineering (BTN02515)

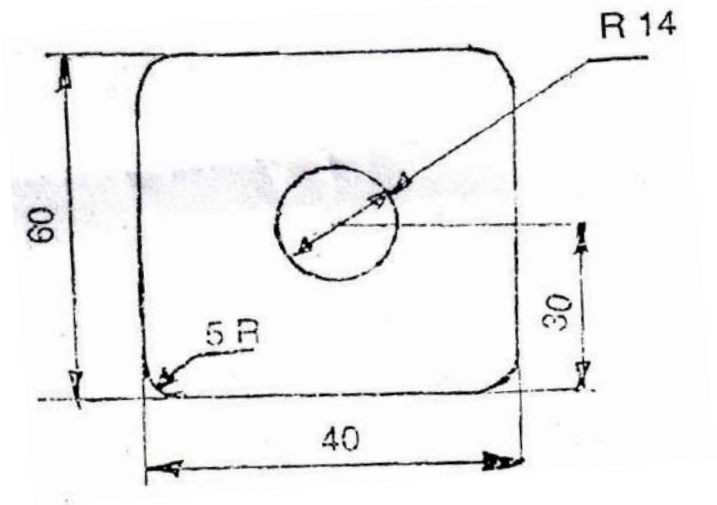
Day & Date: Thursday 22-05-2025 Max. Marks: 56
Time: 10:00 AM To 02:00 PM

Instructions: 1) In Section I, Q. No. 2 is compulsory. Attempt any two questions from the remaining questions.
2) In Section II, Q. No. 6 is compulsory. Attempt any two questions from the remaining questions.
3) Figures to the right indicate full marks.
4) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2 a) Design press tool for the component shown in figure below giving following details: **14**
i) Strip layout
ii) Die set selection
iii) Force calculation
iv) Design of various elements
Also draw two views of a tool along with strip layout and part list.

Material - M.S.
Sheet thickness - 5mm
Ultimate shear stress - 320 Nmm^2
All dimension are in mm



OR

b) Design the drawing tool for the component shown in fig. an determine the following: **14**

i) % reduction
ii) No. of draws
iii) Blank size
iv) Draw ratio
v) Die clearance
vi) Drawing force
vii) Blank holding force
viii) Press capacity

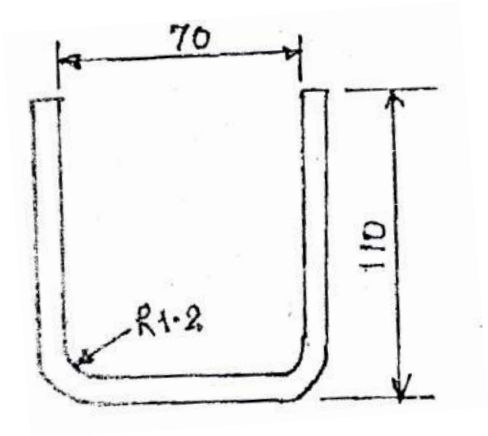
Also draw two views of drawing tool with part list.

Material - M.S.

Thickness = 1mm

UTS = 450 N/mm^2

All dimensions are in mm



Q.3 **a)** Explain ASA tool signature with suitable example. **04**

b) Differentiate between orthogonal cutting and Oblique cutting **03**

Q.4 **a)** Write a note on Cutting tool materials. **03**

b) Write a note on Merchant's circle to find shear force and thrust force. **04**

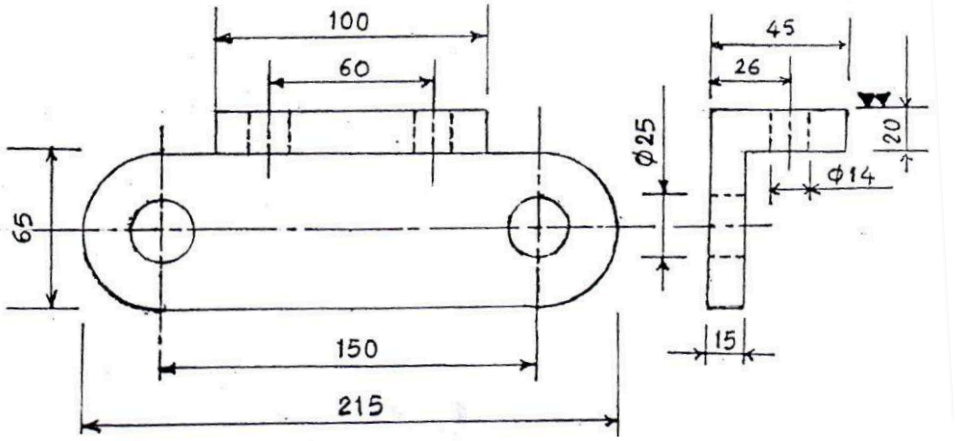
Q.5 In an orthogonal cutting operation the following data have been observed **07**

Uncut chip thickness = 0.127mm
Cutting speed = 2 m/s
Rake angle = 10°
Cutting force = 600 N
Thrust force = 250 N
Chip thickness = 0.3 mm
Determine:

i) Shear angle
ii) Friction angle
iii) Shear stress
iv) Shear force

Section – II

Q.6 Design and draw a jig for drilling 2 Holes of ∅14mm for the same component. **14**



OR

Design and draw a fixture for milling face for the component as shown in above figure for top surface milled up to 100 mm. **14**

Q.7 For machining C40 steel with H.S.S. the following V and T observations have been noted **07**

V m/min	25	35
T min	90	20

Calculate

3) Figures to the right indicates full marks.
4) Assume suitable data if required & state it clearly.
5) Use of nonprogrammable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) How is power transmitted in fluid power systems?
a) Power is transmitted instantaneously
b) Power is transmitted gradually
c) Both a and b
d) none of the above

2) Seals are used to avoid _____ in the fluid system.
a) Internal leakage
b) External leakage
c) Both internal and external leakage
d) None of the above

3) In case of spring loaded accumulator, the pressure of oil supplied by accumulator _____.
a) remains constant
b) varies
c) may remain constant or vary
d) None of the above

4) Pressure relief valve is normally _____ type valve.
a) Open b) Close
c) Open or Close d) none of these

5) What is the function of flow control valve?
a) Flow control valve changes the direction of oil flow
b) Flow control valve can adjust the flow rate of hydraulic oil
c) Both a and b
d) None of the above

6) A hydraulic intensifier is used to: _____
a) Reduce flow rate in the circuit
b) Increase pressure for specific applications
c) Balance load pressure during lifting
d) Control directional flow

7) An accumulator in a hydraulic circuit is primarily used to: _____
a) Store excess hydraulic energy
b) Regulate actuator speed
c) Limit maximum system pressure
d) Divert flow to the tank

8) In a hydraulic synchronizing circuit, equal flow distribution to actuators is achieved using: _____
a) Check valves b) Sequence valves
c) Flow dividers d) Relief valves

9) In a regenerative circuit, flow from the rod end of the cylinder is: _____
a) Diverted back to the tank
b) Used to assist the pump flow into the piston end
c) Directed to the next actuator in sequence
d) Blocked to build pressure

10) At inlet of air motor, air pressure is _____.
a) less b) more
c) less or more d) none of these

11) In case of pneumatic cylinder, cushioning is _____.
a) needed b) not needed at all
c) not possible due to air d) none of the given

12) The time-delay valve consists of _____.
a) throttle valve (flow control valve)
b) direction control valve
c) air chamber/reservoir
d) all of these

13) Mostly FRL unit is used at _____.
a) Compressor outlet b) Compressor inlet
c) At outlet of actuator d) none of the above

14) Pneumatic power tools are typically used because they offer: _____
a) More torque and speed than electric tools
b) Reduced risk of electrical hazards
c) Lighter weight
d) All of the above

MECHANICAL ENGGINERING
Industrial Hydraulics & Pneumatics (BTN02516)

Day & Date: Thursday 22-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required & state it clearly.
5) Use of nonprogrammable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) A hydraulic intensifier is used to: _____
a) Reduce flow rate in the circuit
b) Increase pressure for specific applications
c) Balance load pressure during lifting
d) Control directional flow

2) An accumulator in a hydraulic circuit is primarily used to: _____
a) Store excess hydraulic energy
b) Regulate actuator speed
c) Limit maximum system pressure
d) Divert flow to the tank

3) In a hydraulic synchronizing circuit, equal flow distribution to actuators is achieved using: _____
a) Check valves b) Sequence valves
c) Flow dividers d) Relief valves

4) In a regenerative circuit, flow from the rod end of the cylinder is: _____
a) Diverted back to the tank
b) Used to assist the pump flow into the piston end
c) Directed to the next actuator in sequence
d) Blocked to build pressure

5) At inlet of air motor, air pressure is _____.
a) less b) more
c) less or more d) none of these

6) In case of pneumatic cylinder, cushioning is _____.
a) needed b) not needed at all
c) not possible due to air d) none of the given

7) The time-delay valve consists of _____.
a) throttle valve (flow control valve)
b) direction control valve
c) air chamber/reservoir
d) all of these

8) Mostly FRL unit is used at _____.
a) Compressor outlet b) Compressor inlet
c) At outlet of actuator d) none of the above

9) Pneumatic power tools are typically used because they offer: _____
a) More torque and speed than electric tools
b) Reduced risk of electrical hazards
c) Lighter weight
d) All of the above

10) How is power transmitted in fluid power systems?
a) Power is transmitted instantaneously
b) Power is transmitted gradually
c) Both a and b
d) none of the above

11) Seals are used to avoid _____ in the fluid system.
a) Internal leakage
b) External leakage
c) Both internal and external leakage
d) None of the above

12) In case of spring loaded accumulator, the pressure of oil supplied by accumulator _____.
a) remains constant
b) varies
c) may remain constant or vary
d) None of the above

13) Pressure relief valve is normally _____ type valve.
a) Open b) Close
c) Open or Close d) none of these

14) What is the function of flow control valve?
a) Flow control valve changes the direction of oil flow
b) Flow control valve can adjust the flow rate of hydraulic oil
c) Both a and b
d) None of the above

T. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MACHENICAL ENGGINERING
Industrial Hydraulics & Pneumatics (BTN02516)

Day & Date: Thursday 22-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any Two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if required & state it clearly.
4) Use of nonprogrammable calculator is allowed.

Section – I

Q.2	**a)**	Explain advantages, limitations and applications of hydraulic systems.	**05**
	b)	Explain construction and working of telescopic cylinder.	**05**
	c)	Explain construction and working of gear motor.	**04**
Q.3	**a)**	Explain construction and working of 4/2 DCV with symbol.	**05**
	b)	What are the functions of accumulator? Explain construction and working of Spring loaded accumulator.	**05**
	c)	Explain construction and working of pilot operated pressure relief valve.	**04**
Q.4	**a)**	Explain with neat sketch pressure depending sequence control circuit to operate two double acting cylinders.	**05**
	b)	Explain with neat sketch regenerative circuit for double acting cylinder.	**05**
	c)	Explain meter in circuit with neat sketch.	**04**

Section – II

Q.5	**a)**	Explain construction and working of vane type air motor.	**05**
	b)	Explain construction and working of pneumatic tandem cylinder.	**05**
	c)	Differentiate hydraulic and pneumatic systems.	**04**
Q.6	**a)**	Explain construction and working of double acting reciprocating compressor.	**05**
	b)	Explain construction and working of regulator from FRL unit.	**05**
	c)	Explain with neat sketch working of quick exhaust valve.	**04**
Q.7	**a)**	Explain with neat sketch time delay circuit.	**05**
	b)	Explain with neat sketch pneumatic braking system.	**05**
	c)	Draw and explain pneumatic circuit for actuation of double acting cylinder.	**04**

4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the term used to describe the maximum displacement from the equilibrium position in a vibrating system?
a) Amplitude b) Frequency
c) Period d) Damping

2) Damping in a vibrating system:
a) Increases the amplitude of vibration
b) Decreases the amplitude of vibration
c) Has no effect on the amplitude of vibration
d) Changes the frequency of vibration

3) The critical damping ratio for a single degree of freedom system:
a) Is greater than 1
b) Is less than 1
c) Is equal to 1
d) Can be any value depending on the system

4) The displacement of an undamped free vibrating system with time can be represented by which mathematical function?
a) Exponential function b) Sine function
c) Cosine function d) Linear function

5) In undamped free vibration, what is the relationship between the frequency of vibration and the time period?
a) They are equal
b) Frequency is the reciprocal of time period
c) Frequency is the square of time period
d) There is no relationship between them

6) In forced vibration, the frequency of the external force is typically:
a) Equal to the natural frequency of the system
b) Less than the natural frequency of the system
c) Greater than the natural frequency of the system
d) Unrelated to the natural frequency of the system

7) Which of the following materials is commonly used for isolating vibrations in mechanical systems?
a) Steel b) Rubber
c) Aluminum d) Copper

8) Which of the following systems exhibits principal mode of vibration?
a) Spring-mass system b) Double pendulum
c) Torsional system d) Geared system

9) The natural frequency of a torsional system depends primarily on:
a) Mass b) Stiffness
c) Damping d) Length

10) Holzer's method is primarily used for:
a) Solving linear algebraic equations
b) Analyzing the stability of a vibrating system
c) Finding the mode shapes of a vibrating system
d) Estimating damping ratios of a vibrating system

11) What term describes a system's ability to resist deformation under an applied load?
a) Flexibility b) Stiffness
c) Damping d) Resonance

12) Condition monitoring data collection involves:
a) Continuously monitoring vibration levels
b) Collecting data at regular intervals
c) Recording only when faults are suspected
d) Using manual data entry methods

13) FFT analyzer is used to:
a) Measure displacement
b) Analyze frequency content of signals
c) Determine phase angles
d) Measure damping ratios

14) Which type of accelerometer measures both static and dynamic acceleration?
a) Undamped accelerometer b) Piezoelectric accelerometer
c) Capacitive accelerometer d) Damped accelerometer

Section – I

Q.2	**a)**	Explain the concept of vibration and oscillation. Differentiate between the two phenomena, providing examples for each.	**04**
	b)	Define and differentiate between periodic and non-periodic motion.	**04**
	c)	Define the degree of freedom in the context of vibrating systems. Explain how the number of degrees of freedom influences the complexity of vibration analysis and the behavior of mechanical systems.	**06**
Q.3	**a)**	Discuss the concept of logarithmic decrement as a measure of damping in vibrating systems.	**06**
	b)	Compare and contrast the methods of analysis for undamped free vibration, including D'Alembert's principle	**08**
Q.4	**a)**	Provide an introduction to forced vibration, explaining the concept and distinguishing it from free vibration.	**06**
	b)	Describe typical isolators and mounts used for vibration isolation in mechanical systems. Discuss the characteristics and applications of various types of isolators.	**08**

Section – II

Q.5	**a)**	Explain how the natural frequency is determined by the mass and stiffness properties of the system.	**06**
	b)	Describe the concept of the principal mode of vibration in mechanical systems. Discuss how the principal mode represents the dominant pattern of motion exhibited by a vibrating system and how it influences the system's response to external forces.	**08**
Q.6	**a)**	Discuss the concept of free vibration in multi-degree-of-freedom (DOF) systems.	**06**
	b)	Explain the matrix iteration method for analyzing the free vibration of multi-DOF systems.	**08**

Q.7	**a)**	Discuss the principle of operation of seismic instruments used for measuring vibrations.	**06**
	b)	Describe the different techniques used in condition and vibration monitoring, including vibration analysis, temperature monitoring, oil analysis, and acoustic emission monitoring.	**08**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative. **14**

1) Zero crossing of Laplacian represents location of corner in an image _____.
a) True b) False

2) Silhouette is obtained with front light source _____.
a) True b) False

3) With Harris comer detector, comer is detected when _____.
a) both eigenvalues of cross correlation matrix are zeros
b) one of the eigenvalues of cross correlation matrix is zero
c) both eigenvalues of cross correlation matrix are significant
d) none of the above

4) The process in which small part of image is compared with large image and located in large image, is called _____.
a) pattern recognition b) template matching
c) region growing d) split and merge technique

5) If path traced by end effector of robot arm is complex and continuous, then robot programming should be done by following approach _____.
a) manual leadthrouh b) powered leadthrouh
c) textual programming method d) none of the above

6) In the context of camera, the term CCD stands for _____.
a) Charge coupled device b) Charge creating device
c) Closed circuit device d) None of the above

7) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera
c) Vidicon Camera d) None of the above

8) Bin picking application of robot involves _____.
a) Identification and Servoing b) Identification and inspection
c) Inspection and Servoing d) None of the above

9) *Seam tracking in* continuous arc welding is an example of _____.
a) Visual servoing and navigation
b) Inspection
c) Identification
d) Inspection and identification

10) The application in which the purpose of machine vision system is to recognize and classify an object is called _____.
a) Inspection
b) Identification
c) Visual servoing and navigation
d) None of the above

11) Which of the following is a robot programming language?
a) SAIL b) MAIL
c) RAIL d) TAIL

12) An image which contains two distinct intensity levels between black and white is a _____ image.
a) Colour b) Grayscale
c) Binary d) Monochrome

13) The process of _____ is a technique which relates the location of pixels in the image array to the points in the scene.
a) Camera calibration b) Camera orientation
c) Camera adaptation d) Camera adjustment

14) The acronym AGV stands for _____.
a) Automatic Guided Vehicle b) Automated Guided Vehicle
c) Automated Gliding Vehicle d) Automatic Gliding Vehicle

Set **P**

T. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Machine Vision (BTN02518)

Day & Date: Friday 23-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

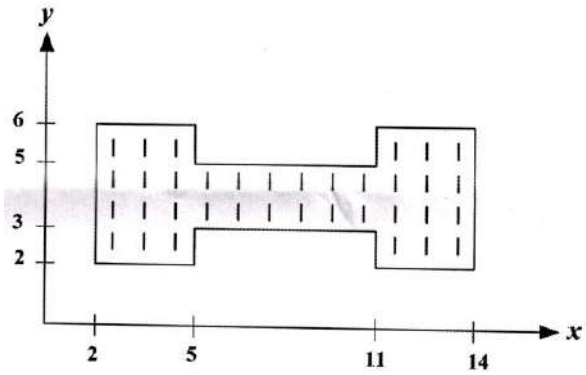
Instructions: 1) Answer any two questions from Section I and Section II.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 **a)** Draw neat sketch of block diagram of Machine Vision system. **07**
b) Explain with neat sketch flash type AD converter. **07**

Q.3 **a)** What do you understand by image segmentation? Discuss two techniques of image segmentation. **08**
b) Discuss in detail image thresholding. **06**

Q.4 **a)** Determine the area, minimum aspect ratio, the diameter, perimeter, centroid and thinness measures of the image. **10**



b) Why do we need image processing? Explain. **04**

Section – II

Q.5	**a)**	Explain the working of Harris corner detector.	**07**
	b)	Draw neat sketch of CMOS image sensor and explain its working.	**07**
Q.6	**a)**	Explain in detail camera calibration.	**07**
	b)	Explain in brief offline programming, teachthrough method and walkthrough method.	**07**
Q.7		**Write a short note on. (Any Three)**	**14**
	a)	Inspection application of machine vision in robotics	
	b)	Visual servoing and navigation application of machine vision in robotics	
	c)	Template matching	
	d)	Image representation	

Seat No.	

Set **Q**

T. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Machine Vision (BTN02518)

Day & Date: Friday 23-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Use of non-programmable scientific calculator is allowed.
5) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative. **14**

1) Bin picking application of robot involves _____.
a) Identification and Servoing b) Identification and inspection
c) Inspection and Servoing d) None of the above

2) *Seam tracking in* continuous arc welding is an example of _____.
a) Visual servoing and navigation
b) Inspection
c) Identification
d) Inspection and identification

3) The application in which the purpose of machine vision system is to recognize and classify an object is called _____.
a) Inspection
b) Identification
c) Visual servoing and navigation
d) None of the above

4) Which of the following is a robot programming language?
a) SAIL b) MAIL
c) RAIL d) TAIL

5) An image which contains two distinct intensity levels between black and white is a _____ image.
a) Colour b) Grayscale
c) Binary d) Monochrome

6) The process of _____ is a technique which relates the location of pixels in the image array to the points in the scene.
a) Camera calibration b) Camera orientation
c) Camera adaptation d) Camera adjustment

7) The acronym AGV stands for _____.
a) Automatic Guided Vehicle b) Automated Guided Vehicle
c) Automated Gliding Vehicle d) Automatic Gliding Vehicle

8) Zero crossing of Laplacian represents location of corner in an image _____.
a) True b) False

9) Silhouette is obtained with front light source _____.
a) True b) False

10) With Harris comer detector, comer is detected when _____.
a) both eigenvalues of cross correlation matrix are zeros
b) one of the eigenvalues of cross correlation matrix is zero
c) both eigenvalues of cross correlation matrix are significant
d) none of the above

11) The process in which small part of image is compared with large image and located in large image, is called _____.
a) pattern recognition b) template matching
c) region growing d) split and merge technique

12) If path traced by end effector of robot arm is complex and continuous, then robot programming should be done by following approach _____.
a) manual leadthrouh b) powered leadthrouh
c) textual programming method d) none of the above

13) In the context of camera, the term CCD stands for _____.
a) Charge coupled device b) Charge creating device
c) Closed circuit device d) None of the above

14) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the first step in the design process?
a) Make a prototype
b) Identify the problem or the need
c) Market your idea
d) Test and retest

2) Choose the correct sequence to generate prototype.
a) 3D CAD data - CAD solid model - STL file - RP prototype
b) CAD solid model - 3D CAD data - RP prototype - STL file
c) STL file - 3D CAD data - CAD solid model - RP prototype
d) 3D CAD data - STL file - CAD solid model - RP prototype

3) From following, the alternative name for Rapid Prototyping is ____.
a) Additive Manufacturing b) Layer Manufacturing
c) Direct CAD Manufacturing d) All of the above

4) Process of converting STL file model in to layers is called ____ in RP.
a) Chopping b) Slicing
c) Cutting d) Trimming

5) Full form of STL is ____.
a) Straight-lithography b) Streto-lithography
c) Stereo-lithography d) Straight-lipsography

6) In the ____ process, one starts with a single block of solid material larger than the final size of the desired object and material is removed until the desired shape is reached.
a) Subtractive process b) Additive process
c) Formative process d) All of above

7) Which of the following is typically the most expensive type of 3D printer?
a) SLA b) SLM
c) FDM d) None of the above

8) Which printer melts metal?
a) SLS b) SLM
c) SLA d) FDM

9) SLA printer's package material is in a ____.
a) Chain b) Spool
c) Cartridge d) None of the above

10) What material is not used in 3D printing?
a) Nylon b) ABS
c) PLA d) PVC

11) Which file type is most commonly exported from CAD software?
a) SLDRT b) JPG
c) STL d) X3G

12) Process of forming metal powder by directing molten metal through an orifice after which it is break into small particle using high pressure fluid is known as?
a) Atomization b) Reduction
c) Crushing d) Electrolysis

13) In Fused Deposition Modelling, the raw material is used in the form of ____.
a) Wax b) Wire
c) Powder d) All the above mentioned

14) In the process of Selective Laser Sintering, raw material used is in the form of ____.
a) Machining Wax b) Foam Core
c) Powder d) Rubber

9) Full form of STL is ____.
a) Straight-lithography b) Streto-lithography
c) Stereo-lithography d) Straight-lipsography

10) In the ____ process, one starts with a single block of solid material larger than the final size of the desired object and material is removed until the desired shape is reached.
a) Subtractive process b) Additive process
c) Formative process d) All of above

11) Which of the following is typically the most expensive type of 3D printer?
a) SLA b) SLM
c) FDM d) None of the above

12) Which printer melts metal?
a) SLS b) SLM
c) SLA d) FDM

13) SLA printer's package material is in a ____.
a) Chain b) Spool
c) Cartridge d) None of the above

14) What material is not used in 3D printing?
a) Nylon b) ABS
c) PLA d) PVC

T. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
3D Printing Material (BTN02519)

Day & Date: Friday 23-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section – I, Q. 2 is compulsory and attempt any two questions from the remaining questions.
2) In Section – II, Q. 6 is compulsory and attempt any two questions from the remaining questions.
3) Figures to the right indicate full marks.
4) Assume suitable data if requited.
5) Use of scientific calculator is allowed.

Section – I

Q.2	Explain the product design concept with respect to 3D printing.	**10**
Q.3	Compare Conventional Manufacturing v/s Additive Manufacturing.	**09**
Q.4	Enlist different thermo plastic materials used in 3D Printer. Explain in detail applications and characteristics of any 2 materials.	**09**
Q.5	Enlist different metal and alloy materials used in 3D Printer. Explain in detail applications and characteristics of any 03 metal and alloy materials.	**09**

Section – II

Q.6	Discuss various forms of raw material used in 3D Printing.	**10**
Q.7	Enlist the different techniques to generate the powder. And explain with neat sketch any 01 technique.	**09**
Q.8	Explain Selection process of 3d printing machine specification for following Materials: 1) Polymers 2) Composites	**09**
Q.9	Discuss the different applications of 3D printing in the various field.	**09**

Day & Date: Friday 23-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required.
5) Use of scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) In the ____ process, one starts with a single block of solid material larger than the final size of the desired object and material is removed until the desired shape is reached.
a) Subtractive process b) Additive process
c) Formative process d) All of above

2) Which of the following is typically the most expensive type of 3D printer?
a) SLA b) SLM
c) FDM d) None of the above

3) Which printer melts metal?
a) SLS b) SLM
c) SLA d) FDM

4) SLA printer's package material is in a ____.
a) Chain b) Spool
c) Cartridge d) None of the above

5) What material is not used in 3D printing?
a) Nylon b) ABS
c) PLA d) PVC

6) Which file type is most commonly exported from CAD software?
a) SLDRT b) JPG
c) STL d) X3G

7) Process of forming metal powder by directing molten metal through an orifice after which it is break into small particle using high pressure fluid is known as?

a) Atomization b) Reduction
c) Crushing d) Electrolysis

8) In Fused Deposition Modelling, the raw material is used in the form of ____.

a) Wax b) Wire
c) Powder d) All the above mentioned

9) In the process of Selective Laser Sintering, raw material used is in the form of ____.

a) Machining Wax b) Foam Core
c) Powder d) Rubber

10) What is the first step in the design process?

a) Make a prototype
b) Identify the problem or the need
c) Market your idea
d) Test and retest

11) Choose the correct sequence to generate prototype.

a) 3D CAD data - CAD solid model - STL file - RP prototype
b) CAD solid model - 3D CAD data - RP prototype - STL file
c) STL file - 3D CAD data - CAD solid model - RP prototype
d) 3D CAD data - STL file - CAD solid model - RP prototype

12) From following, the alternative name for Rapid Prototyping is ____.

a) Additive Manufacturing b) Layer Manufacturing
c) Direct CAD Manufacturing d) All of the above

13) Process of converting STL file model in to layers is called ____ in RP.

a) Chopping b) Slicing
c) Cutting d) Trimming

14) Full form of STL is ____.

a) Straight-lithography b) Streto-lithography
c) Stereo-lithography d) Straight-lipsography

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Which of the following statements are true?
a) Power is proportional to voltage only
b) Power is proportional to current only
c) Power is neither proportional to voltage nor to the current
d) Power is proportional to both the voltage and current

2) The various types of the instruments, which requires during audit need to be _____.
a) Easy to carry b) Easy to operate
c) Inexpensive d) All (a) to (c)

3) Which of the following is a good medium for constant temperature heating?
a) Water b) Steam
c) Coolant d) Diesel

4) What is energy Science?
a) Study of Energy
b) Study of energy conversion
c) Study of energy and its conversion in other forms
d) Study of energy generation

5) Which is not a Primary energy resources?
a) Petroleum products b) Electrical Energy
c) Geothermal Energy d) Biomass like wood

6) Indian per capita energy consumption is _____ of the world average.
a) 4% b) 20%
c) 1% d) 10%

7) Kilowatt-hour(kWh) is a unit of?
a) Current b) Power
c) Energy d) Resistance

8) Acid rain is caused by the release of the following components from combustion of fuels.
a) SOx and NOx b) SOx and CO2
c) CO2 and NOx d) H2O

9) Indian per capita energy consumption is _____ of the world average.
a) 4% b) 20%
c) 1% d) 10%

10) Sunlight, air. soil, and water are examples of ____.
a) Renewable resources b) Non- renewable resources
c) Conventional resources d) Non-natural resources

11) The effectiveness of a heat exchanger depends on _____.
a) Specific heat of hot fluid
b) Specific heat of cold fluid
c) Inlet temperature of hot fluid
d) LMTD

12) Which fuel dominates the energy mix in Indian energy scenario?
a) Oil b) Natural gas
c) Coal d) Nuclear

13) Thermo-compressor is commonly used for _____.
a) Compressing hot air
b) flash steam recovery
c) Distillation
d) reverse compression of CO2

14) Which of the following fuel needs maximum amount of excess air for complete combustion?
a) Furnace oil b) Natural gas
c) Pulverized coal d) Wood

Introduction to Electric and Hybrid Electric Vehicles (BTN02521)

Day & Date: Friday 23-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Gravitational energy density is best defined as:
a) Energy stored per unit mass due to gravity.
b) Energy stored per unit volume in a battery.
c) Energy required overcoming aerodynamic drag.
d) Energy required maintaining vehicle speed.

2) What is the primary purpose of using a Variable Frequency Drive (VFD)?
a) To regulate the torque produced by the motor
b) To control the speed of an AC motor by varying the input frequency
c) To convert DC power to AC
d) To reduce the energy consumption of a motor

3) What is the function of an inverter in a motor drive system?
a) To convert DC to AC
b) To convert AC to DC
c) To convert high voltage to low voltage AC
d) To control the torque in the motor

4) What is Primary byproduct of a Hydrogen Fuel Cell when generating electricity?
a) CO_2 b) NO_X
c) H_2O d) CH_4

5) In Series -Parallel Hybrid Vehicle during low-speed driving which mode is employed typically ____.
a) Parallel b) Series
c) Complex d) Hybrid

6) Which of the following challenges limit the widespread adoption of electric vehicles across PAN India?
a) Insufficient electricity supply and unstable grid
b) Low cost of Gasoline and Diesel
c) Absence of electric vehicle Manufacturers
d) High demand for public transport

7) In the context of EV Charging stations, what role does the Battery Management system play?
a) It monitors battery performance and ensures safety
b) It generates electricity from renewable energy sources
c) It converts AC to DC Power
d) It Provides connections between charging station and grid.

8) Which of the following statements best describe the concept of slip in an induction motor?
a) The difference between synchronous speed and rotor speed
b) The Speed at which motor operates at its maximum speed
c) The amount of electrical energy lost as heat
d) The speed of magnetic field in the stator

9) Which government initiative is primarily aimed at boosting electric vehicle adoption in India?
a) FAME-I & II
b) National Electric Mobility Mission Plan (NEMMP)
c) E-AMRIT
d) All of above

10) Braking and idling losses are ____ in Urban driving even higher in more congested driving.
a) Extremely High
b) Extremely Low
c) Both a & b
d) Neither a or b

11) Which of the following is a concern related to EV batteries that could impact the economics of owning an EV?
a) The speed at which the EV can charge
b) Battery degradation over time
c) The variety of charging station connectors available
d) The availability of autonomous driving features

12) Which of the following blocks in an Electronic Control Unit (ECU) is responsible for gathering data from sensors within a vehicle system?
a) Actuating
b) Acquisition
c) Computing/Control
d) Communication Bus

13) What is the typical percentage distribution between the ICE and the electric motor during start-up or full throttle acceleration in PHEVs?

a) 60-40%
b) 70-30%
c) 80-20%
d) 90-10%

14) If you frequently fast charge your EV battery, which of the following effects are most likely?

a) The battery's lifespan will increase
b) The battery’s capacity will expand
c) The battery will generate excessive heat and degrade faster
d) There will be no effect on the battery

T. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Introduction to Electric and Hybrid Electric Vehicles (BTN02521)

Day & Date: Friday 23-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2	**a)**	Describe the history of electric vehicles from their inception to the present day. How have technological advances and changing market conditions influenced the adoption of EVs over time?	**08**
	b)	Compare and contrast the operational and capital costs of EV batteries. Suggest strategies for reducing these costs.	**06**
Q.3	**a)**	Discuss the basic parameters of vehicle performance with the help of tractive effort Vs Vehicle Speed diagram.	**08**
	b)	Describe the Conceptual Illustration of the general EV Configuration.	**06**
Q.4	**a)**	Explain how a Plug-In Hybrid Electric Vehicle (PHEV), What are the benefits and challenges of PHEVs in terms of vehicle operation and energy management?	**08**
	b)	In the context of hybrid electric vehicles, explain the significance of Powertrain Sizing and how it affects the design of hybrid systems.	**06**

Section – II

Q.5	**a)**	Describe the construction and working principle of a Brushless DC (BLDC) motor. How does the absence of brushes affect the motor's efficiency and maintenance compared to a conventional DC motor? Discuss the role of the electronic controller in BLDC motors.	**08**
	b)	Explain the working principle of an AC induction motor. Describe how the rotor of an induction motor interacts with the rotating magnetic field of the stator to induce current and produce mechanical motion.	**06**
Q.6	**a)**	Discuss the principle of operation of a Variable Frequency Drive (VFD). What are the key components of a VFD system?	**08**
	b)	Explain the working principle of a DC chopper. How does it vary the output voltage?	**06**

Q.7	**a)**	Explain the MIDC (Modified Indian Drive Cycle), how does different driving conditions, such as city traffic and highway driving, impact the energy consumption?	**08**
	b)	Describe the concept of a "drive cycle". Discuss the significance of using standard drive cycles in real-world vehicle performance evaluation.	**06**

T. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Introduction to Electric and Hybrid Electric Vehicles (BTN02521)

Day & Date: Friday 23-05-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) Which of the following statements best describe the concept of slip in an induction motor?
a) The difference between synchronous speed and rotor speed
b) The Speed at which motor operates at its maximum speed
c) The amount of electrical energy lost as heat
d) The speed of magnetic field in the stator

2) Which government initiative is primarily aimed at boosting electric vehicle adoption in India?
a) FAME-I & II
b) National Electric Mobility Mission Plan (NEMMP)
c) E-AMRIT
d) All of above

3) Braking and idling losses are ____ in Urban driving even higher in more congested driving.
a) Extremely High b) Extremely Low
c) Both a & b d) Neither a or b

4) Which of the following is a concern related to EV batteries that could impact the economics of owning an EV?
a) The speed at which the EV can charge
b) Battery degradation over time
c) The variety of charging station connectors available
d) The availability of autonomous driving features

5) Which of the following blocks in an Electronic Control Unit (ECU) is responsible for gathering data from sensors within a vehicle system?
a) Actuating b) Acquisition
c) Computing/Control d) Communication Bus

6) What is the typical percentage distribution between the ICE and the electric motor during start-up or full throttle acceleration in PHEVs?

a) 60-40% b) 70-30%
c) 80-20% d) 90-10%

7) If you frequently fast charge your EV battery, which of the following effects are most likely?

a) The battery's lifespan will increase
b) The battery's capacity will expand
c) The battery will generate excessive heat and degrade faster
d) There will be no effect on the battery

8) Gravitational energy density is best defined as:

a) Energy stored per unit mass due to gravity.
b) Energy stored per unit volume in a battery.
c) Energy required overcoming aerodynamic drag.
d) Energy required maintaining vehicle speed.

9) What is the primary purpose of using a Variable Frequency Drive (VFD)?

a) To regulate the torque produced by the motor
b) To control the speed of an AC motor by varying the input frequency
c) To convert DC power to AC
d) To reduce the energy consumption of a motor

10) What is the function of an inverter in a motor drive system?

a) To convert DC to AC
b) To convert AC to DC
c) To convert high voltage to low voltage AC
d) To control the torque in the motor

11) What is Primary byproduct of a Hydrogen Fuel Cell when generating electricity?

a) CO_2 b) NO_X
c) H_2O d) CH_4

12) In Series -Parallel Hybrid Vehicle during low-speed driving which mode is employed typically ____.

a) Parallel b) Series
c) Complex d) Hybrid

13) Which of the following challenges limit the widespread adoption of electric vehicles across PAN India?

a) Insufficient electricity supply and unstable grid
b) Low cost of Gasoline and Diesel
c) Absence of electric vehicle Manufacturers
d) High demand for public transport

14) In the context of EV Charging stations, what role does the Battery Management system play?

a) It monitors battery performance and ensures safety
b) It generates electricity from renewable energy sources
c) It converts AC to DC Power
d) It Provides connections between charging station and grid.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks: 10

Q.1 Choose the correct alternatives from the options. 10

1) Which of the following market structures has a predominant feature of price leadership?
a) Perfectly competitive b) Monopoly
c) Oligopoly d) Monopolistic

2) Average revenue is _____
a) Total revenue divided by the number of units sold
b) Revenue earned by all the units of the output
c) Revenue earned by the average sized firm in the industry
d) Net addition made to the total revenue by selling one more unit of a commodity

3) Which of these is an economic activity?
a) Father teaching his son at home instead of spending on coaching
b) A housewife making food for the family on her own
c) A hair dresser doing hair cut designing on payment
d) A singer giving a show on his son's wedding anniversary

4) Which of the following is NOT an account in the Balance of Payments?
a) Current Account b) Capital Account
c) Financial Account d) Future Account

5) Which of the following is not a regulatory institution in Indian financial system?
a) RBI b) CIBIL
c) SEBI d) IRDA

6) In a mixed economy which sector (s) is 1 are found _____

a) Private only
b) Public only
c) None
d) Both (a) Private and (b)Public

7) Who is known as father of economics?

a) Adam Smith
b) Prof. A. Samulson
c) Alfred Marshall
d) J. R. Hicks

8) Micro and Macro are not two independent approaches to economic analysis but they are complementary to each other.

a) False
b) True
c) Partly true
d) Partly False

9) Which one of the following is not the function of money?

a) Medium of exchange
b) Measure of Happiness
c) Standard of deferred payment
d) Store of value

10) Which one of the following cost can never become zero?

a) Average cost
b) Fixed cost
c) Marginal cost
d) Variable cost

Economics (BTN02508)

Day & Date: Sunday, 25-05-2025 Max. Marks: 50
Time: 10:00 AM To 12:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required and state it clearly.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks: 10

Q.1 Choose the correct alternatives from the options. 10

1) Which one of the following is not the function of money?
a) Medium of exchange
b) Measure of Happiness
c) Standard of deferred payment
d) Store of value

2) Which one of the following cost can never become zero?
a) Average cost b) Fixed cost
c) Marginal cost d) Variable cost

3) Which of the following market structures has a predominant feature of price leadership?
a) Perfectly competitive b) Monopoly
c) Oligopoly d) Monopolistic

4) Average revenue is _____
a) Total revenue divided by the number of units sold
b) Revenue earned by all the units of the output
c) Revenue earned by the average sized firm in the industry
d) Net addition made to the total revenue by selling one more unit of a commodity

5) Which of these is an economic activity?
a) Father teaching his son at home instead of spending on coaching
b) A housewife making food for the family on her own
c) A hair dresser doing hair cut designing on payment
d) A singer giving a show on his son's wedding anniversary

6) Which of the following is NOT an account in the Balance of Payments?

a) Current Account b) Capital Account
c) Financial Account d) Future Account

7) Which of the following is not a regulatory institution in Indian financial system?

a) RBI b) CIBIL
c) SEBI d) IRDA

8) In a mixed economy which sector (s) is 1 are found _____

a) Private only b) Public only
c) None d) Both (a) Private and (b)Public

9) Who is known as father of economics?

a) Adam Smith b) Prof. A. Samulson
c) Alfred Marshall d) J. R. Hicks

10) Micro and Macro are not two independent approaches to economic analysis but they are complementary to each other.

MECHANICAL ENGINEERING
Professional Ethics and Human Value (BTN02512)

Day & Date: Sunday, 25-05-2025 Max. Marks: 50
Time: 10:00 AM To 12:00 PM

Instructions:1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer bookPage no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose amongst the alternatives. **10**

1) _____ is defined as the duty, obligation or even authority.
a) Work b) Responsibility
c) Democracy d) Authority

2) The study on ethics helps to know the people's _____.
a) Learn good or bad things
b) Copyright
c) Morality
d) Beliefs, values, and morals

3) The objectives of professional ethics in engineering are _____.
a) To understand the moral values that ought to guide the Engineering profession
b) To resolve the moral issues in the profession, and
c) To justify the moral judgment concerning the profession
d) All the above

4) The main core human values are _____.
a) Right conduct b) Peace
c) Both a & b d) None of these

5) Preconditioning is ____.
a) Assuming without knowing b) Knowing without assuming
c) Only assuming d) Only knowing

6) Value education deals with ____.
   a) What is universally valuable to all of us
   b) What is conductive to our individual and collective of us
   c) Enables to be in harmony with ourselves, other and rest of nature
   d) All of the above

7) Courage is the tendency to accept and face ____.
   a) Self-confidence
   b) Risks and difficult tasks in rational ways
   c) Physical courage
   d) Social courage

8) Human life is lived at four levels individuals, family, society and ____.
   a) Nature b) Nurture
   c) World d) Universe

9) Ethics is the word that refers to _____.
   a) Human tendency b) Morals, values, and beliefs
   c) Only Values d) Psychology

10) Word ethichs is definded as a _____
   a) Motivation
   b) Set of attitudes concerned with the value of work
   c) Attitude
   d) Values

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. 14

1) Wear strength of spur gear tooth depends upon _____.
a) Face width b) Number of teeth
c) Surface hardness d) All of the above

2) In a bearing no. 6312, the digit 3 designates _____.
a) Bore size b) Series of bearing
c) Type of bearing d) None of these

3) The breakdown of the oil film in gear causes _____.
a) Abrasive wear b) Destructive pitting
c) Scoring d) Creep

4) The bevel factor is given as _____.
a) b/L b) $b/2L$
c) $1 - b/2L$ d) $1 - b/L$

5) In helical gears, the distance between similar faces of adjacent teeth along a helix on the pitch cylinders normal to the teeth, is called _____.
a) Normal pitch b) Axial pitch
c) Diametric pitch d) Module

6) If Z is the actual no. of teeth on helical gear and β is a helix angle for the teeth, the formative no. of teeth is written as _____.
a) $Z \sec^3\beta$ b) $Z \sec^2\beta$
c) $Z/\sec^3\beta$ d) $Z \operatorname{cosec} \beta$

7) When bevel gears having equal teeth and equal pitch angles connect two shafts intersecting at 90° then they are known as _____.
a) Angular bevel gears b) Crown bevel gears
c) Internal bevel gears d) Mitre gears

8) Which of the following gear is used for the self-locking condition?
a) Spur gears b) Helical gears
c) Bevel gears d) Worm gears

9) When length of bearing is equal to the diameter of the journal it is called as _____.
a) Short bearing b) Long bearing
c) Square bearing d) All of these

10) The worm wheel should be _____.
a) Embeddable and conformable
b) Hard and conformable
c) Hard and embeddable
d) None of the above

11) Brake is used to _____ the energy possessed by a moving system or mechanism by means of friction.
a) absorb b) release
c) minimize d) maximize

12) If the lead angle $[\lambda]$ of worm is 10°, then the helix angle $[\Psi]$ will be _____.
a) 80^0 b) 70^0
c) 10^0 d) 100^0

13) Boundary lubricated bearings are _____.
a) Thick film bearing b) Hydrodynamic bearing
c) Thin film bearing d) Hydrostatic bearing

14) The ____ type of clutch is used in truck.
a) Cone clutch b) Electric clutch
c) Single plate clutch d) None of the above

Seat No.	

Set **P**

T.Y (B. Tech) (Sem - II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Transmission System Design (BTN02601)

Day & Date: Tuesday 27-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any Two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Draw neat diagram wherever necessary.

Section – I

Q.2 **a)** Define Beam Strength and Wear Strength of Spur Gears. **03**

b) Enlist the various types of gear tooth failures and explain the causes and remedies for any three failures. **04**

c) A pair of spur gears with 20° full-depth involute teeth consists of a 20 teeth pinion meshing with a 41 teeth gear. The module is 3 mm while the face width is 40 mm. The material for pinion as well as gear is steel with an ultimate tensile strength of 600 N/mm^2. The gears are heat treated to a surface hardness of 400 BHN. The pinion rotates at 1450 rpm and the service factor for the application is 1.75. Assume that velocity factor accounts for the dynamic load and the factor of safety is 1.5. Determine the rated power that the gears can transmit. Take Cv = 3/(3 + V), Y for 20 teeth = 0.32 **07**

Q.3 **a)** A 5-kW power at 720 rpm is supplied to the pinion A of helical gear through its shaft. The normal module is 5 mm and the normal pressure angle is 20°. The pinion has right-hand teeth, while the gear has left-hand teeth. The helix angle is 30°. The number of teeth on pinion and gear are 20 and 30, respectively. The pinion rotates in the clockwise direction when seen from the left side of the page. Determine the components of the tooth force and draw a free-body diagram showing the forces acting on the pinion and the gear. **07**

b) Worm gear box with an effective surface area of 1.5 m^2 is operating in still air with a heat transfer coefficient of 15 $W/m^{2}°C$. The temperature rise of the lubricating oil above the atmospheric temperature is limited to 50°C. The worm gears are designated as, 1/30/10/8. The worm shaft is rotating at 1440 rpm and the normal pressure angle is 20°. Take the coefficient of friction as 0.024. Calculate the power transmitting capacity based on the thermal considerations. **07**

Q.4	**a)**	A pair of worm and worm wheel is designated as 3/60/10/6. The worm is transmitting 5 kW power at 1440 rpm to the worm wheel. The coefficient of friction is 0.1 and the normal pressure angle is 20°. Determine the components of the gear tooth force acting on the worm and the worm wheel.	**07**
	b)	Explain the Virtual number of teeth for helical gears.	**04**
	c)	Differentiate between spur and helical gears.	**03**

Section – II

Q.5	**a)**	A pair of bevel gears transmitting 7.5 kW at 300 rpm having pitch circle diameters of pinion and gear as 200 mm and 150 mm. The face width is 40 mm. The pressure angle is 20°. The Determine the components of the resultant gear tooth force and draw a free-body diagram of forces acting on the pinion and the gear.	**07**
	b)	Explain the Bevel Gear Terminology.	**04**
	c)	Explain the Working principle of Hydrostatic Bearing.	**03**
Q.6	**a)**	Explain the procedure for selection of a bearing from the Manufacturer's Catalogue.	**07**
	b)	A ball bearing is operating on a work cycle consisting of three parts – a radial load of 3000 N at 1440 rpm for one quarter cycle, a radial load of 5000 N at 720 rpm for one half cycle, and radial load of 2500 N at 1440 rpm for the remaining cycle. The expected life of the bearing is 10000 h. Calculate the dynamic load carrying capacity of the bearing.	**07**
Q.7	**a)**	A plate clutch consists of one pair of contacting surfaces. The inner and outer diameters of the friction disk are 100 and 200 mm respectively. The coefficient of friction is 0.2 and the permissible intensity of pressure is 1 N/mm^2. Assuming uniform-wear theory, calculate the power-transmitting capacity of the clutch at 750 rpm.	**06**
	b)	Define Brake and Explain the classification of brakes.	**04**
	c)	A solid cast iron disk, 1 m in diameter and 0.2 m thick, is used as a flywheel. It is rotating at 350 rpm. It is brought to rest in 1.5 s by means of a brake. Calculate i) the energy absorbed by the brake; and ii) the torque capacity of the brake	**04**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Which of the following gear is used for the self-locking condition?
a) Spur gears b) Helical gears
c) Bevel gears d) Worm gears

2) When length of bearing is equal to the diameter of the journal it is called as _____.
a) Short bearing b) Long bearing
c) Square bearing d) All of these

3) The worm wheel should be _____.
a) Embeddable and conformable
b) Hard and conformable
c) Hard and embeddable
d) None of the above

4) Brake is used to _____ the energy possessed by a moving system or mechanism by means of friction.
a) absorb b) release
c) minimize d) maximize

5) If the lead angle [λ] of worm is 10°, then the helix angle [Ψ] will be _____.
a) 80^0 b) 70^0
c) 10^0 d) 100^0

6) Boundary lubricated bearings are _____.
a) Thick film bearing b) Hydrodynamic bearing
c) Thin film bearing d) Hydrostatic bearing

7) The ____ type of clutch is used in truck.
a) Cone clutch b) Electric clutch
c) Single plate clutch d) None of the above

8) Wear strength of spur gear tooth depends upon _____.
a) Face width b) Number of teeth
c) Surface hardness d) All of the above

9) In a bearing no. 6312, the digit 3 designates _____.
a) Bore size b) Series of bearing
c) Type of bearing d) None of these

10) The breakdown of the oil film in gear causes _____.
a) Abrasive wear b) Destructive pitting
c) Scoring d) Creep

11) The bevel factor is given as _____.
a) $\mathrm{b/L}$ b) $\mathrm{b/2L}$
c) $1 - \mathrm{b/2L}$ d) $1 - \mathrm{b/L}$

12) In helical gears, the distance between similar faces of adjacent teeth along a helix on the pitch cylinders normal to the teeth, is called _____.
a) Normal pitch b) Axial pitch
c) Diametric pitch d) Module

13) If Z is the actual no. of teeth on helical gear and β is a helix angle for the teeth, the formative no. of teeth is written as _____.
a) $\mathrm{Z}\sec^3\beta$ b) $\mathrm{Z}\sec^2\beta$
c) $\mathrm{Z}/\sec^3\beta$ d) $\mathrm{Z}\,\mathrm{cosec}\,\beta$

14) When bevel gears having equal teeth and equal pitch angles connect two shafts intersecting at 90° then they are known as _____.
a) Angular bevel gears b) Crown bevel gears
c) Internal bevel gears d) Mitre gears

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one marks.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. 14

1) If Z is the actual no. of teeth on helical gear and β is a helix angle for the teeth, the formative no. of teeth is written as _____.
a) $Z\sec^3\beta$ b) $Z\sec^2\beta$
c) $Z/\sec^3\beta$ d) $Z\,\mathrm{cosec}\,\beta$

2) When bevel gears having equal teeth and equal pitch angles connect two shafts intersecting at 90° then they are known as _____.
a) Angular bevel gears b) Crown bevel gears
c) Internal bevel gears d) Mitre gears

3) Which of the following gear is used for the self-locking condition?
a) Spur gears b) Helical gears
c) Bevel gears d) Worm gears

4) When length of bearing is equal to the diameter of the journal it is called as _____.
a) Short bearing b) Long bearing
c) Square bearing d) All of these

5) The worm wheel should be _____.
a) Embeddable and conformable
b) Hard and conformable
c) Hard and embeddable
d) None of the above

6) Brake is used to _____ the energy possessed by a moving system or mechanism by means of friction.
a) absorb b) release
c) minimize d) maximize

7) If the lead angle $[\lambda]$ of worm is 10°, then the helix angle $[\Psi]$ will be _____.

a) 80^0 b) 70^0

c) 10^0 d) 100^0

8) Boundary lubricated bearings are _____.

a) Thick film bearing b) Hydrodynamic bearing

c) Thin film bearing d) Hydrostatic bearing

9) The ____ type of clutch is used in truck.

a) Cone clutch b) Electric clutch

c) Single plate clutch d) None of the above

10) Wear strength of spur gear tooth depends upon _____.

a) Face width b) Number of teeth

c) Surface hardness d) All of the above

11) In a bearing no. 6312, the digit 3 designates _____.

a) Bore size b) Series of bearing

c) Type of bearing d) None of these

12) The breakdown of the oil film in gear causes _____.

a) Abrasive wear b) Destructive pitting

c) Scoring d) Creep

13) The bevel factor is given as _____.

a) $\mathrm{b/L}$ b) $\mathrm{b/2L}$

c) $1 - \mathrm{b/2L}$ d) $1 - \mathrm{b/L}$

14) In helical gears, the distance between similar faces of adjacent teeth along a helix on the pitch cylinders normal to the teeth, is called _____.

a) Normal pitch b) Axial pitch

c) Diametric pitch d) Module

Set **S**

T.Y (B. Tech) (Sem - II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Transmission System Design (BTN02601)

Day & Date: Tuesday 27-05-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any Two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Draw neat diagram wherever necessary.

Section – I

Q.2 **a)** Define Beam Strength and Wear Strength of Spur Gears. **03**

b) Enlist the various types of gear tooth failures and explain the causes and remedies for any three failures. **04**

c) A pair of spur gears with 20° full-depth involute teeth consists of a 20 teeth pinion meshing with a 41 teeth gear. The module is 3 mm while the face width is 40 mm. The material for pinion as well as gear is steel with an ultimate tensile strength of 600 N/mm^2. The gears are heat treated to a surface hardness of 400 BHN. The pinion rotates at 1450 rpm and the service factor for the application is 1.75. Assume that velocity factor accounts for the dynamic load and the factor of safety is 1.5. Determine the rated power that the gears can transmit. Take Cv = 3/(3 + V), Y for 20 teeth = 0.32 **07**

Q.3 **a)** A 5-kW power at 720 rpm is supplied to the pinion A of helical gear through its shaft. The normal module is 5 mm and the normal pressure angle is 20°. The pinion has right-hand teeth, while the gear has left-hand teeth. The helix angle is 30°. The number of teeth on pinion and gear are 20 and 30, respectively. The pinion rotates in the clockwise direction when seen from the left side of the page. Determine the components of the tooth force and draw a free-body diagram showing the forces acting on the pinion and the gear. **07**

b) Worm gear box with an effective surface area of 1.5 m^2 is operating in still air with a heat transfer coefficient of 15 W/m^2°C. The temperature rise of the lubricating oil above the atmospheric temperature is limited to 50°C. The worm gears are designated as, 1/30/10/8. The worm shaft is rotating at 1440 rpm and the normal pressure angle is 20°. Take the coefficient of friction as 0.024. Calculate the power transmitting capacity based on the thermal considerations. **07**

Q.4 **a)** A pair of worm and worm wheel is designated as 3/60/10/6. The worm is transmitting 5 kW power at 1440 rpm to the worm wheel. The coefficient of friction is 0.1 and the normal pressure angle is 20°. Determine the components of the gear tooth force acting on the worm and the worm wheel. **07**

b) Explain the Virtual number of teeth for helical gears. **04**

c) Differentiate between spur and helical gears. **03**

Section – II

Q.5 **a)** A pair of bevel gears transmitting 7.5 kW at 300 rpm having pitch circle diameters of pinion and gear as 200 mm and 150 mm. The face width is 40 mm. The pressure angle is 20°. The Determine the components of the resultant gear tooth force and draw a free-body diagram of forces acting on the pinion and the gear. **07**

b) Explain the Bevel Gear Terminology. **04**

c) Explain the Working principle of Hydrostatic Bearing. **03**

Q.6 **a)** Explain the procedure for selection of a bearing from the Manufacturer's Catalogue. **07**

b) A ball bearing is operating on a work cycle consisting of three parts – a radial load of 3000 N at 1440 rpm for one quarter cycle, a radial load of 5000 N at 720 rpm for one half cycle, and radial load of 2500 N at 1440 rpm for the remaining cycle. The expected life of the bearing is 10000 h. Calculate the dynamic load carrying capacity of the bearing. **07**

Q.7 **a)** A plate clutch consists of one pair of contacting surfaces. The inner and outer diameters of the friction disk are 100 and 200 mm respectively. The coefficient of friction is 0.2 and the permissible intensity of pressure is 1 N/mm^2. Assuming uniform-wear theory, calculate the power-transmitting capacity of the clutch at 750 rpm. **06**

b) Define Brake and Explain the classification of brakes. **04**

c) A solid cast iron disk, 1 m in diameter and 0.2 m thick, is used as a flywheel. It is rotating at 350 rpm. It is brought to rest in 1.5 s by means of a brake. **04**

Calculate

i) the energy absorbed by the brake; and

ii) the torque capacity of the brake

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly
5) Use of non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) The dynamic characteristics of the instrument are _____.
a) Measuring lag b) Calibration
c) Overshoot d) Resolution

2) Mechanical strain gauges can measure _____.
a) Static strains
b) Dynamic strains
c) Quasi-static strains
d) Both static and dynamic strains

3) Following substances can be used as thermometric substances for temperature measurements below -40°C
a) Rockel b) Pentane
c) Mercury d) Creosote

4) Which of the following is a self-generating type instrument?
a) Piezo-electricpickup
b) Thermištor
c) Potentiometric device
d) linear variable differential transformer

5) Indicate the externally powered type of instrument transducer _____.
a) Spring balance b) Centrifugal Tachometer
c) thermocouple or thermopile d) photo emissive cell

6) The uncertainty in the measurement is expressed in terms of _____.
a) Accuracy b) Error
c) Acceleration d) None of above

7) A hot wire anemometer is used to measure _____.
a) Pressure in gases b) Liquid discharge
c) Gas velocities d) Current meter

8) A person driving car and required to maintain speed the car at 60 km/hr is an example of _____.
a) Manual open loop system b) Manual closed loop system
c) Closed loop system d) Open loop system

9) In a block diagram algebra, the closed loop transfer function is usually given by _____.
a) H(S)/R(S) b) G(S)/1±G(S)H(S)
c) G(S)H(S) d) E(S)/C(S)

10) Control action which is never used alone is _____.
a) P - action b) D- action
c) ON/OFF action d) I – action

11) In first column of Routh's table containing the integers 2, 4,-5, 3. The system is _____.
a) Stable b) Unstable
c) Marginally Stable d) None

12) Angles of arrival are needed in a root locus if a system has _____.
a) Real poles b) Real zeros
c) complex conjugate zeros d) complex conjugate poles

13) Angle condition is used to determine _____.
a) The value of K for a point on root locus
b) The breakaway points in root locus
c) The existence of a point on the root locus
d) The centroid of asymptotes of root locus

14) For a control system on the verge of instability _____.
a) G.M. is positive b) P.M. is positive
c) G.M. and P.M. are zero d) G.M. and P.M. are negative

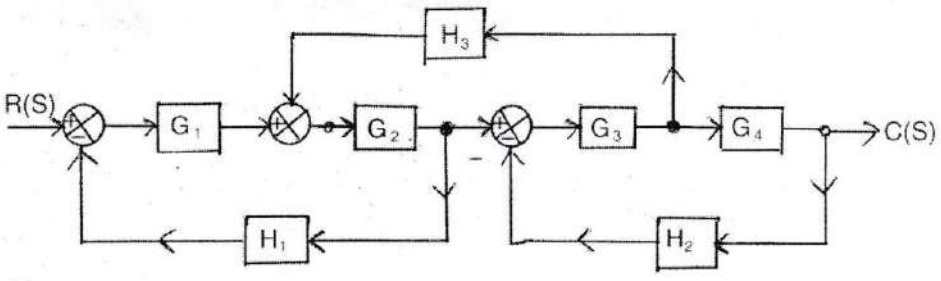
2) Figures to the right indicate full marks.
3) Use of non-programmable calculator is allowed.

Section – I

Q.2	**a)**	Explain with block diagram generalized measurement system and its functional elements.	**05**
	b)	Compare thermocouple and thermistor as regards to working principle, material, temperature range and applications.	**05**
	c)	Distinguish between static and dynamic characteristics of measuring instruments.	**04**
Q.3	**a)**	Explain with neat sketch drag-cup tachometer.	**05**
	b)	Draw a neat sketch and explain the working of Rotameter for flow measurement.	**05**
	c)	Explain with neat sketch McLeod pressure gauge.	**04**
Q.4	**a)**	Derive an expression for the gauge factor.	**05**
	b)	Explain the use of strain gauge for torque measurement.	**05**
	c)	Explain Wheatstone's bridge network in detail.	**04**

Section – II

Q.5	**a)**	Differentiate between open loop and closed loop method system.	**04**
	b)	Write a note on modern control systems.	**04**
	c)	For the block diagram of a feedback control system as shown in Fig, obtain the closed loop transfer function C(S)/R(S).	**06**



Q.6 **a)** Explain significance of root locus. **04**

b) Explain angle and magnitude conditions for a point on the root locus. **04**

c) Draw complete root locus and comment on the stability of a feedback control system with $G(S)H(S) = K/[S(S+2)\ (S+68+13)]$ **06**

Q.7 **a)** Explain Bode plot for: **04**

i) System gain

ii) Poles and Zeros at origin

iii) simple poles and Zeros

b) Explain gain margin and phase margin. Gain cross over margin and phase cross over frequency in detail. **04**

c) For a unity feedback system with $G(s) = \frac{100}{S(1+0.1s)(1+0.2s)}$ sketch Bode plots and comment on system stability. **06**

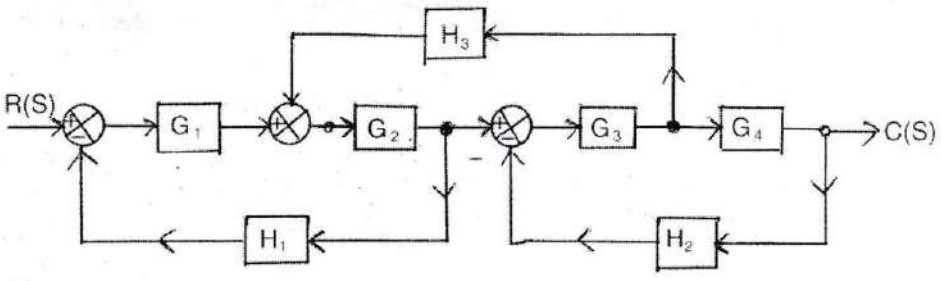
	c)	Explain with neat sketch McLeod pressure gauge.	**04**
Q.4	**a)**	Derive an expression for the gauge factor.	**05**
	b)	Explain the use of strain gauge for torque measurement.	**05**
	c)	Explain Wheatstone's bridge network in detail.	**04**

Section – II

Q.5	**a)**	Differentiate between open loop and closed loop method system.	**04**
	b)	Write a note on modern control systems.	**04**
	c)	For the block diagram of a feedback control system as shown in Fig, obtain the closed loop transfer function C(S)/R(S).	**06**



Q.6 **a)** Explain significance of root locus. **04**

b) Explain angle and magnitude conditions for a point on the root locus. **04**

c) Draw complete root locus and comment on the stability of a feedback control system with $G(S)H(S) = K/[S(S+2)\ (S+68+13)]$ **06**

Q.7 **a)** Explain Bode plot for: **04**

i) System gain

ii) Poles and Zeros at origin

iii) simple poles and Zeros

b) Explain gain margin and phase margin. Gain cross over margin and phase cross over frequency in detail. **04**

c) For a unity feedback system with $G(s) = \frac{100}{S(1+0.1s)(1+0.2s)}$ sketch Bode plots and comment on system stability. **06**

T. Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April -2025
MECHANICAL ENGINEERING
Heat Transfer (BTN02603)

Day & Date: Monday, 02-06-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) The unit of thermal conductivity is _____.
a) W/mK b) W/ms
c) W/mkg d) W/m^2K

2) The critical radius of a hollow sphere having thermal conductivity k and h_0 as convective heat transfer coefficient of outer fluid is given by _____.
a) $h_0 \,/\, k$ b) $k \,/\, h_0$
c) $2k \,/\, h_0$ d) $h_0 \,/\, 2k$

3) In which of the following cases most unsteady heat flow occurs?
a) Through the walls of a furnace
b) Through lagged pipes carrying steam
c) Through the wall of a refrigerator
d) During annealing of castings

4) What is the purpose of using fins in a particular heat transfer system?
a) To decrease rate of heat transfer
b) To increase rate of heat transfer
c) To maintain rate of heat transfer at a constant rate
d) cannot say

5) The emissive power of a black body depends on _____.
a) Physical nature b) Nature of a body
c) Temperature of a body d) All of above

6) What is the relation between reflectivity (ρ), absorptivity $(\alpha)$and transmissivity (τ)?

a) $\rho - \alpha + \tau = 1$ b) $\rho + \alpha - \tau = 1$
c) $\rho + \alpha + \tau = 1$ d) $\rho - \alpha - \tau = 1$

7) Unit of thermal diffusivity _____.

a) m/s^2 b) m^2/s
c) J/s d) None of the above

8) A _____ body reflects entire radiation incident on it.

a) Transparent b) Black
c) Gray d) White

9) In a film condensation, the vertical plate temperature should be _____.

a) more than the saturation temperature of the vapour
b) less than the saturation temperature of the vapour
c) equal to the saturation temperature of the vapour
d) none of the above

10) _____ number is generally associated with only natural convection heat transfer.

a) Prandtl b) Weber
c) Nusselt d) Grashoff

11) The thickness of thermal boundary layer is equal to that of hydrodynamic boundary layer when Prandtl number is _____.

a) 0 b) 0.1
c) 0.5 d) 1.0

12) An automobile radiator is _____ type of heat exchanger.

a) cross-flow b) regenerator
c) counter-flow d) recuperator

13) For the same heat transfer Q and same overall heat transfer coefficient U_o, surface area required for counter flow operation is always _____.

a) less than parallel flow b) more than parallel flow
c) same as parallel flow d) unpredictable

14) Multipass heat exchangers are used _____.

a) To obtain high heat transfer coefficient
b) To increase the manufacturing cost of the heat exchanger
c) To reduce pressure drop
d) None of above

Seat No.	

Set **P**

T. Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April -2025
MECHANICAL ENGINEERING
Heat Transfer (BTN02603)

Day & Date: Monday, 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary.
4) Use of scientific calculator is allowed.

Section – I

Q.2 Attempt the following questions.

a) Explain modes of heat transfer with governing laws. **04**

b) Derive the general heat conduction equation in three dimensions in Cartesian coordinates. **05**

c) A thick walled tube of stainless steel with 20 mm inner diameter & 40 mm outer diameter is covered with 30 mm layer of asbestos insulation (K = 0.2 W/m ^{0}C), if the inside wall temperature of the pipe is maintained at 600^{0}C and outside insulation at 1000 ^{0}C. Calculate the heat loss per meter of the length. **05**

Q.3 Attempt the following questions.

a) Derive an expression for temperature distribution and heat flow rate for infinitely long fin. **04**

b) Find out the amount of heat transferred through an iron fin of length 50 mm width 100 mm & thickness 5 mm Assume k = 210 W/m ^{0}C & h = 42 W/m^2 ^{0}C for the material of fin and the temperature at the base of fin as 80^{0}C. Also determine the temperature at the tip of fin when atmospheric temperature 20^{0}C. **05**

c) A small electrical heating application uses wire of 2mm diameter with 0.8 mm thick insulation (k = 0.12 W/m °C). The heat transfer coefficient on the insulation surface is 35 W/m^2 ^{o}C. Determine the critical thickness of insulation in this case & the percentage change in the heat transfer rate if the critical thickness is used. Assuming that the temperature difference between the surface of the wire and surrounding air remains unchanged. **05**

Q.4 Attempt the following questions. **04**

a) Explain the following terms:
i) Emissivity
ii) Radiosity
iii) Irradiation

b) State Plank's law of radiation. Hence derive Wien's displacement law. **05**

c) Determine the rate of heat loss by radiation from a steel tube of outside diameter 70 mm and 3 m long at the temperature of 227°C. If the tube is located in a square brick conduit of 0.3 m side and 27°C. Take $\varepsilon_{(\text{Steel})} = 0.79$ & $\varepsilon_{(\text{brick})} = 0.93$ **05**

Section – II

Q.5 Attempt the following questions.

a) Show by dimensional analysis, Nu = f (Re.Pr) for forced Convection. **04**

b) Explain with neat sketch velocity and thermal boundary layer. **05**

c) The Crankcase of an I.C. Engine measuring 80cm X 20cm may be idealized as a flat plate. The engine runs at 90 Km/hr & the crankcase is cooled by the air flowing past it at the same speed. Calculate the heat loss from the crank surface maintained at 85°C to the ambient air at 15°C. Due to road induced vibration the boundary layer becomes turbulent from the leading edge itself. **05**

The Properties of air at 50°C are:

$\text{K} = 0.02824\ \text{w/m°C}, \gamma = 17.95\ \times 10^{-6}\text{m/s}^2, \text{Pr} = 0.698$

Use

$Nu = 0.036(\text{Re})^{0.8}(\text{Pr})^{0.333}$

Q.6 Attempt the following questions.

a) Define Condensation and explain its types. **04**

b) Draw typical pool boiling curve and explain various regimes of pool boiling. **05**

c) A counter flow double pipe heat exchanger using hot water at the rate of 10500 kg/h. the steam enters the heat exchanger at 180°C & leaves at 130°C. The inlet & exit temperatures of water are 30°C and 80°Cresp. if overall heat transfer coefficient from steam to water is 814 W/m^2 °C. Calculate the heat transfer area. What would be the increase in area if fluid flow were parallel. Take specific heat of water 4.187 KJ/Kg K. **05**

Q.7 Attempt the following questions.

a) Explain Classification of the heat exchanger with neat sketch. **04**

b) Derive an expression for determining the LMTD of parallel flow heat exchanger. **05**

c) A chemical having specific heat of 3.3 KJ/KgK flowing at the rate of 20000 Kg/hr. enters the parallel flow heat exchanger at 120°C. The flow rate of cooling water is 50000 Kg/hr having specific heat of 4.186 KJ/KgK with an inlet temperature 20°C. The heat transfer area is 10 m^2 and the overall heat transfer coefficient is 1050 W/m^{2}K. Find: **05**

i) The effectiveness of heat exchanger

ii) The outlet temperature of water and chemical

a) 0 b) 0.1
c) 0.5 d) 1.0

7) An automobile radiator is _____ type of heat exchanger.
a) cross-flow b) regenerator
c) counter-flow d) recuperator

8) For the same heat transfer Q and same overall heat transfer coefficient U_o, surface area required for counter flow operation is always _____.
a) less than parallel flow b) more than parallel flow
c) same as parallel flow d) unpredictable

9) Multipass heat exchangers are used _____.
a) To obtain high heat transfer coefficient
b) To increase the manufacturing cost of the heat exchanger
c) To reduce pressure drop
d) None of above

10) The unit of thermal conductivity is _____.
a) W/mK b) W/ms
c) W/mkg d) W/m^2K

11) The critical radius of a hollow sphere having thermal conductivity k and h_0 as convective heat transfer coefficient of outer fluid is given by _____.
a) $h_0 \,/\, k$ b) $k \,/\, h_0$
c) $2k \,/\, h_0$ d) $h_0 \,/\, 2k$

12) In which of the following cases most unsteady heat flow occurs?
a) Through the walls of a furnace
b) Through lagged pipes carrying steam
c) Through the wall of a refrigerator
d) During annealing of castings

13) What is the purpose of using fins in a particular heat transfer system?
a) To decrease rate of heat transfer
b) To increase rate of heat transfer
c) To maintain rate of heat transfer at a constant rate
d) cannot say

14) The emissive power of a black body depends on _____.
a) Physical nature b) Nature of a body
c) Temperature of a body d) All of above

T. Y (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April -2025
MECHANICAL ENGINEERING
Heat Transfer (BTN02603)

Day & Date: Monday, 02-06-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary.
4) Use of scientific calculator is allowed.

Section – I

Q.2 Attempt the following questions.

a) Explain modes of heat transfer with governing laws. **04**

b) Derive the general heat conduction equation in three dimensions in Cartesian coordinates. **05**

c) A thick walled tube of stainless steel with 20 mm inner diameter & 40 mm outer diameter is covered with 30 mm layer of asbestos insulation (K = 0.2 W/m ^{0}C), if the inside wall temperature of the pipe is maintained at 600^{0}C and outside insulation at 1000 ^{0}C. Calculate the heat loss per meter of the length. **05**

Q.3 Attempt the following questions.

a) Derive an expression for temperature distribution and heat flow rate for infinitely long fin. **04**

b) Find out the amount of heat transferred through an iron fin of length 50 mm width 100 mm & thickness 5 mm Assume k = 210 W/m ^{0}C & h = 42 W/m^2 ^{0}C for the material of fin and the temperature at the base of fin as 80^{0}C. Also determine the temperature at the tip of fin when atmospheric temperature 20^{0}C. **05**

c) A small electrical heating application uses wire of 2mm diameter with 0.8 mm thick insulation (k = 0.12 W/m °C). The heat transfer coefficient on the insulation surface is 35 W/m^2 ^{o}C. Determine the critical thickness of insulation in this case & the percentage change in the heat transfer rate if the critical thickness is used. Assuming that the temperature difference between the surface of the wire and surrounding air remains unchanged. **05**

Q.4 Attempt the following questions. **04**

a) Explain the following terms:
i) Emissivity
ii) Radiosity
iii) Irradiation

b) State Plank's law of radiation. Hence derive Wien's displacement law. **05**

c) Determine the rate of heat loss by radiation from a steel tube of outside diameter 70 mm and 3 m long at the temperature of 227°C. If the tube is located in a square brick conduit of 0.3 m side and 27°C. Take $\varepsilon_{(\text{Steel})} = 0.79$ & $\varepsilon_{(\text{brick})} = 0.93$ **05**

Section – II

Q.5 Attempt the following questions.

a) Show by dimensional analysis, Nu = f (Re.Pr) for forced Convection. **04**

b) Explain with neat sketch velocity and thermal boundary layer. **05**

c) The Crankcase of an I.C. Engine measuring 80cm X 20cm may be idealized as a flat plate. The engine runs at 90 Km/hr & the crankcase is cooled by the air flowing past it at the same speed. Calculate the heat loss from the crank surface maintained at 85°C to the ambient air at 15°C. Due to road induced vibration the boundary layer becomes turbulent from the leading edge itself. **05**

The Properties of air at 50°C are:

$\text{K} = 0.02824\ \text{w/m°C}, \gamma = 17.95\ \times 10^{-6}\text{m/s}^2, \text{Pr} = 0.698$

Use

$Nu = 0.036(\text{Re})^{0.8}(\text{Pr})^{0.333}$

Q.6 Attempt the following questions.

a) Define Condensation and explain its types. **04**

b) Draw typical pool boiling curve and explain various regimes of pool boiling. **05**

c) A counter flow double pipe heat exchanger using hot water at the rate of 10500 kg/h. the steam enters the heat exchanger at 180°C & leaves at 130°C. The inlet & exit temperatures of water are 30°C and 80°Cresp. if overall heat transfer coefficient from steam to water is 814 W/m^2 °C. Calculate the heat transfer area. What would be the increase in area if fluid flow were parallel. Take specific heat of water 4.187 KJ/Kg K. **05**

Q.7 Attempt the following questions.

a) Explain Classification of the heat exchanger with neat sketch. **04**

b) Derive an expression for determining the LMTD of parallel flow heat exchanger. **05**

c) A chemical having specific heat of 3.3 KJ/KgK flowing at the rate of 20000 Kg/hr. enters the parallel flow heat exchanger at 120°C. The flow rate of cooling water is 50000 Kg/hr having specific heat of 4.186 KJ/KgK with an inlet temperature 20°C. The heat transfer area is 10 m^2 and the overall heat transfer coefficient is 1050 W/m^{2}K. Find: **05**

i) The effectiveness of heat exchanger

ii) The outlet temperature of water and chemical

MECHANICAL ENGINEERING
Industrial & Quality Management (BTN02604)

Day & Date: Wednesday, 04-06-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable fata if necessary.
5) Draw neat - labelled diagrams wherever necessary.
6) Use of log table and calculators is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct option from the following. (1 mark each) 14

1) Management is _____
a) a science b) an art
c) science as well as an art d) a commerce

2) 'Span of control' is decided under _____
a) Controlling function b) Budget control
c) Planning for project d) Organizing

3) Strategic planning is done by _____
a) top managers of the firm b) middle managers
c) supervisory managers d) non-supervisory employees

4) LTPD stands for _____
a) Lot Tolerance Perfect Defective
b) Lot Tolerance Percent Defective
c) Lot Tolerable Percent Defective
d) Lot Tolerance Piece Defective

5) Appraisal costs are _____
a) Cost of preventing defects before they occur
b) Cost of quality inspection and testing
c) The costs arising from a failure to meet quality standards
d) All of the above

6) Full form of CEO is ____
a) Chief Extreme Officer b) Chief Executive Officer
c) Chief Excise Officer d) None of the above

7) The chart that aggregates poor quality outcomes to show management which are the most problems is the _____

a) C chart b) Pareto chart
c) R chart d) X-bar chart

8) Controlling is needed at which level of management?

a) Top level b) Middle level
c) Lower level d) All level

9) 'C Chart' applies to the number of ____ in a subgroup of constant size.

a) Defectives b) Defects
c) Preciseness d) None of these

10) Benchmarking is used extensively in _____

a) Manufacturing organizations only
b) Service organizations only
c) Manufacturing and service organizations
d) Government institutions only

11) Which of the following is not concerned with staffing?

a) Recruitment b) Selection
c) Training d) Publicity

12) Quality is defined as the _____ for use.

a) Fitness b) Standard
c) Requirement d) Availability

13) Leadership may be defined as _____

a) the ability to motivate people to work towards a common goal
b) the ability to command people to work towards a common goal
c) the ability to discipline people
d) None of These

14) Total quality management (TQM) is the continuous improvement in _____ obtained by establishing management responsibility for processes as well as output.

a) Quality b) Productivity
c) Effectiveness d) All of the above

Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section I, Q. No. 3 is compulsory and attempt any two questions remaining of the questions. (Q. No. 2, 4 & 5)
2) In Section II, Q. No. 6 is compulsory and attempt any two questions remaining of the questions. (Q. No. 7, 8 & 9)
3) Assume suitable fata if necessary.
4) Draw neat - labelled diagrams wherever necessary.
5) Use of log table and calculators is allowed.

Section – I

Q.2 Attempt the following
a) Define Management. Explain Nature of Management. **05**
b) Explain the functions of Financial Management. **04**

Q.3 Attempt the following
a) Explain the selection process of staffing in details. **05**
b) What is planning? Explain steps in planning. **05**

Q.4 Attempt the following
a) Define communication. List its types. Differentiate between oral communication and written communication. **05**
b) Explain the process of controlling. **04**

Q.5 Write short note on (Any Three) **09**
a) Marketing Management
b) Carrot and Stick theory
c) Function of Manager
d) Controlling Techniques
e) Centralized and decentralized Organization

Section – II

Q.6 Attempt the following
a) Define various meanings of quality. Explain in detail quality specifications. **05**
b) Explain the different quality costs associated with quality. **05**

Q.7 Attempt the following
a) List the tools of quality control. Explain any two tools of quality control. **05**
b) Explain customer satisfaction. **04**

Q.8 Attempt the following

a) A single sampling plan uses a sample size of 15, and an acceptance number 1. Using the hyper geometric probabilities, compute the probability of acceptance of lots of 50 articles with 2% defective. **05**

b) Write short note on X bar chart and R chart. **04**

Q.9 Write short note on (Any Three) **09**

a) P chart

b) Quality Management systems

c) Continuous Process Improvement

d) Acceptance sampling

e) Cause and effect diagram with suitable example

3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) Which of the following is NOT a characteristic of a project?
a) Temporary in nature b) Unique output
c) Performed repeatedly d) Defined timeline

2) Who is primarily responsible for achieving project objectives?
a) Team members b) Project Manager
c) Stakeholders d) Sponsors

3) What does the term "deliverable" refer to in Project Management?
a) A project report
b) The desired result or outcome of a project
c) A list of resources
d) A stakeholder agreement

4) What is the main benefit of project performance evaluation?
a) Identifies cost-saving opportunities
b) Ensures project deliverables are met
c) Reduces project risks
d) Improves employee satisfaction

5) The payback period is the period _____
a) a project takes to pay back the loan taken to purchase the capital assets
b) equal to the useful life of the machines
c) a project takes to recover its initial cash outflow
d) over which the project will be getting operating cash inflows

6) What is the first step in Risk Management?
a) Risk Mitigation b) Risk Transfer
c) Risk Assessment d) Risk Identification

7) Which phase of the Project Lifecycle involves executing project plans?
a) Initiation b) Closure
c) Execution d) Planning

8) Which model considers both qualitative and quantitative criteria for project selection?
a) Scoring Model b) Payback Period Model
c) Break-Even Model d) Monte Carlo Model

9) Which of the following methods is based on the time required to recover the initial investment?
a) NPV b) IRR
c) Payback Period d) Add duration to each unit

10) In the initial stage of the project the probability of completing the project is _____.
a) Zero b) Low
c) High d) Medium

11) Which model is used to estimate the variability of project completion time?
a) CPM b) PERT
c) Network Diagram d) Resource Levelling

12) What is the primary function of MS Project?
a) Budget forecasting
b) Quality control
c) Risk analysis
d) Project planning and scheduling

13) What is a Gantt Chart primarily used for in project management?
a) Resource allocation b) Risk identification
c) Schedule visualization d) Cost estimation

14) What does Monte Carlo Simulation primarily address in project estimation?
a) Workforce allocation b) Budgeting
c) Resource levelling d) Risk and uncertainty

Seat No.	

Set | P

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
Mechanical Engineering
Project Management (BTN02608)

Day & Date: Friday, 06-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each Section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2	**a)**	Explain the role and responsibilities of a Project Manager throughout the project lifecycle.	**05**
	b)	Compare the Payback Period and Net Present Value (NPV) methods for project feasibility analysis.	**05**
	c)	Explain the various benefits of adopting a structured Project Management process.	**04**
Q.3	**a)**	Explain the concept of Break-Even Analysis with an example and its application in project feasibility studies.	**05**
	b)	Describe the project lifecycle and its importance in achieving project objectives.	**05**
	c)	Explain the concept of the Bottom-Up Estimating technique and its applications.	**04**
Q.4	**a)**	How can Scoring Models be used for project selection? Illustrate with an example.	**05**
	b)	Differentiate between Analogous Estimating and Parametric Estimating methods with examples	**05**
	c)	Explain the terms Jobbing and Factoring in the context of cost estimating.	**04**

Section – II

Q.5 **a)** Why is project planning necessary? Explain the components of the project planning process. **05**

b) A R & D project has a list of tasks to be performed whose time estimates are given in the Table as follows. **05**

Activity	A	B	C	D	E	F	G
Predecessors	-	-	A	A,B	D	C,E	E
Expected Time (Weeks)	7	9	12	8	9	6	5

i) Construct a project network
ii) Perform forward and backward passes
iii) State the critical path
iv) Determine Project completion time

c) What is a Work Breakdown Structure (WBS)? How does it aid in project planning? **04**

Q.6 **a)** Discuss the steps involved in monitoring and controlling a project effectively. **05**

b) What are the key features of a Project Management Information System (PMIS)? **05**

c) Describe the Project Control Process and its importance during project execution. **04**

Q.7 **a)** What is resource levelling, and how can it be implemented using MS Project? **05**

b) Define productivity in the context of Project Management. How can it be measured? **05**

c) Write a short note on Gantt chart. **04**

Seat No.	

Set **Q**

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
Mechanical Engineering
Project Management (BTN02608)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which model considers both qualitative and quantitative criteria for project selection?
a) Scoring Model b) Payback Period Model
c) Break-Even Model d) Monte Carlo Model

2) Which of the following methods is based on the time required to recover the initial investment?
a) NPV b) IRR
c) Payback Period d) Add duration to each unit

3) In the initial stage of the project the probability of completing the project is _____.
a) Zero b) Low
c) High d) Medium

4) Which model is used to estimate the variability of project completion time?
a) CPM b) PERT
c) Network Diagram d) Resource Levelling

5) What is the primary function of MS Project?
a) Budget forecasting
b) Quality control
c) Risk analysis
d) Project planning and scheduling

6) What is a Gantt Chart primarily used for in project management?
a) Resource allocation b) Risk identification
c) Schedule visualization d) Cost estimation

7) What does Monte Carlo Simulation primarily address in project estimation?

a) Workforce allocation
b) Budgeting
c) Resource levelling
d) Risk and uncertainty

8) Which of the following is NOT a characteristic of a project?

a) Temporary in nature
b) Unique output
c) Performed repeatedly
d) Defined timeline

9) Who is primarily responsible for achieving project objectives?

a) Team members
b) Project Manager
c) Stakeholders
d) Sponsors

10) What does the term "deliverable" refer to in Project Management?

a) A project report
b) The desired result or outcome of a project
c) A list of resources
d) A stakeholder agreement

11) What is the main benefit of project performance evaluation?

a) Identifies cost-saving opportunities
b) Ensures project deliverables are met
c) Reduces project risks
d) Improves employee satisfaction

12) The payback period is the period _____

a) a project takes to pay back the loan taken to purchase the capital assets
b) equal to the useful life of the machines
c) a project takes to recover its initial cash outflow
d) over which the project will be getting operating cash inflows

13) What is the first step in Risk Management?

a) Risk Mitigation
b) Risk Transfer
c) Risk Assessment
d) Risk Identification

14) Which phase of the Project Lifecycle involves executing project plans?

a) Initiation
b) Closure
c) Execution
d) Planning

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the primary purpose of a prototype in product design?
a) To showcase the final product to stakeholder
b) To test and validate design concepts
c) To expedite the mass production process
d) None of the above

2) What is the significance of the concept of "Design Thinking" in product design?
a) It emphasizes a linear and structured design process
b) It prioritizes cost efficiency over innovation
c) It focuses on understanding user needs and generating creative solutions
d) None of the above

3) What does TAM stand for?
a) Total Accessible Market b) Total Acquired Market
c) Total Achievable Market d) Total Available Market

4) What role does the psychology of scene play in industrial product design?
a) It has no relevance to product design
b) It helps create appealing visuals
c) It influences user perceptions and emotions
d) It affects production costs

5) The principles of good design are _____.
a) color, depth, form, line, shape, space, texture, and value
b) balance, contrast, emphasis, proportion, repetition, simplicity, space, and unity
c) All of the above
d) None of the above

6) Aesthetic requirements in industrial design are concerned with:
a) The cost of raw materials
b) The functionality and usability of the product
c) The environmental impact of production
d) The visual and sensory appeal of the product

7) What does the term "Design for Manufacturability" refer to in product design?
a) Designing products that are easy to manufacture
b) Designing products for a specific market
c) Designing products with complex features
d) None of the above

8) The colour of an object is influenced by:
a) The shape and form of the object
b) The colour of light it emits or reflects
c) The size of the object
d) The type of material used in production

9) How does the concept of purpose affect product design?
a) It determines the aesthetic choices in the design
b) It focuses on the price of materials
c) It guides the functionality and usability of the product
d) It ensures the product is mass-produced

10) _____ is a three-dimensional area enclosed by a surface.
a) Shape b) Form
c) Line d) None of the above

11) What is additive manufacturing commonly known as?
a) Subtractive manufacturing b) 3D printing
c) Injection molding d) Die casting

12) Design Thinking is: _____.
a) Thinking about design
b) Designing ways in which people think
c) Defining, framing and solving problems from users' perspectives
d) Asking users to solve problems

13) What role does ergonomics play in product design?
a) Enhancing aesthetics
b) Improving functionality
c) Ensuring environmental sustainability
d) None of the above

14) The necessity to know the environment in which the product will be used is termed as _____.
a) Ergonomics b) Design Analysis
c) Aesthetics d) Design Situation

b) It helps create appealing visuals
c) It influences user perceptions and emotions
d) It affects production costs

12) The principles of good design are _____.

a) color, depth, form, line, shape, space, texture, and value
b) balance, contrast, emphasis, proportion, repetition, simplicity, space, and unity
c) All of the above
d) None of the above

13) Aesthetic requirements in industrial design are concerned with:

a) The cost of raw materials
b) The functionality and usability of the product
c) The environmental impact of production
d) The visual and sensory appeal of the product

14) What does the term "Design for Manufacturability" refer to in product design?

a) Designing products that are easy to manufacture
b) Designing products for a specific market
c) Designing products with complex features
d) None of the above

T. Y. (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Industrial Product Design (BTN02609)

Day & Date: Friday, 06-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from Section I and Section II.
2) Figures to the right indicate full marks.
3) Assume additional suitable data, if necessary and mention it clearly.
4) Use of calculator is allowed.

Section – I

Q.2 Solve:
a) Explain the concept Mechanics of seeing with suitable examples. **07**
b) Explain the concept of Unit and concept of order with suitable examples. **07**

Q.3 Solve:
a) Define Ergonomics. Explain the fundamental factors for designing Automobiles. **07**
b) What factors are considered when choosing colours for Engineering Equipment? **07**

Q.4 Write short note (Any Two)
a) Aesthetics of Design **07**
b) General Inferences of Line, Light and Colour combinations **07**
c) Concept of Style, Environment, Aspiration **07**

Section – II

Q.5 Solve:
a) Explain role of setting specification and market requirements in Product Design. **07**
b) What are the Types of Market Survey influencing industrial Design & Production? **07**

Q.6 Solve:
a) Explain the concept of Quality Function Deployment and Business Model Canvas. **07**
b) What is Design Thinking? Explain steps in Design Thinking process. **07**

Q.7 Write short note (Any Two)
a) Additive Manufacturing **07**
b) Prototyping **07**
c) Design for Manufacturing and Design for Assembly **07**

Seat No.	

Set **R**

T. Y. (B. Tech.) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Industrial Product Design (BTN02609)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional suitable data, if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is additive manufacturing commonly known as?
a) Subtractive manufacturing b) 3D printing
c) Injection molding d) Die casting

2) Design Thinking is: _____.
a) Thinking about design
b) Designing ways in which people think
c) Defining, framing and solving problems from users' perspectives
d) Asking users to solve problems

3) What role does ergonomics play in product design?
a) Enhancing aesthetics
b) Improving functionality
c) Ensuring environmental sustainability
d) None of the above

4) The necessity to know the environment in which the product will be used is termed as _____.
a) Ergonomics b) Design Analysis
c) Aesthetics d) Design Situation

5) What is the primary purpose of a prototype in product design?
a) To showcase the final product to stakeholder
b) To test and validate design concepts
c) To expedite the mass production process
d) None of the above

6) What is the significance of the concept of "Design Thinking" in product design?
a) It emphasizes a linear and structured design process
b) It prioritizes cost efficiency over innovation
c) It focuses on understanding user needs and generating creative solutions
d) None of the above

7) What does TAM stand for?
a) Total Accessible Market
b) Total Acquired Market
c) Total Achievable Market
d) Total Available Market

8) What role does the psychology of scene play in industrial product design?
a) It has no relevance to product design
b) It helps create appealing visuals
c) It influences user perceptions and emotions
d) It affects production costs

9) The principles of good design are _____.
a) color, depth, form, line, shape, space, texture, and value
b) balance, contrast, emphasis, proportion, repetition, simplicity, space, and unity
c) All of the above
d) None of the above

10) Aesthetic requirements in industrial design are concerned with:
a) The cost of raw materials
b) The functionality and usability of the product
c) The environmental impact of production
d) The visual and sensory appeal of the product

11) What does the term "Design for Manufacturability" refer to in product design?
a) Designing products that are easy to manufacture
b) Designing products for a specific market
c) Designing products with complex features
d) None of the above

12) The colour of an object is influenced by:
a) The shape and form of the object
b) The colour of light it emits or reflects
c) The size of the object
d) The type of material used in production

13) How does the concept of purpose affect product design?
a) It determines the aesthetic choices in the design
b) It focuses on the price of materials
c) It guides the functionality and usability of the product
d) It ensures the product is mass-produced

14) _____ is a three-dimensional area enclosed by a surface.

a) Shape
b) Form
c) Line
d) None of the above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) In addition, polymerization reaction the polymer is formed in a _____ step.
a) Single b) Three
c) Double d) None

2) Epoxy resin is example of _____ plastic.
a) Thermoplastics b) Thermosetting
c) Elastomers d) None

3) Which of the following is an additive used for saving base plastic material?
a) Fillers b) Plasticizers
c) Pigments d) None of these

4) _____ is the most of commonly used manufacturing process for the plastic component.
a) Injection molding b) Blow Molding
c) Transfer Molding d) Rotational Molding

5) The Rotational Molding is _____ plastic forming process.
a) High Temperature
b) Low Temperature, High Pressure
c) Low Pressure
d) High Temperature, Low Pressure

6) For the more precise dimensional stability of Thermosets, _____ is used.
a) Transfer moulding b) Compression moulding
c) Any moulding process d) Calendering

7) In _____ welding method, the workpiece s to be joined are irradiated with a steam of neutron.

a) Infrared b) Hot gas
c) Nuclear d) Heated tool

8) Materials having a _____ shrinkage allowance can be molded with close tolerance.

a) Low b) Medium
c) High d) None

9) The ratio of volume of loose plastic powder to the volume of moulding is known as _____.

a) Clamping force b) Density factor
c) Bulk factor d) None

10) The depth of loading chamber is _____.

a) Inversely proportional to projected area
b) Inversely proportional to change in volume of plastic material
c) Directly proportional to projected area
d) None of the above

11) The heat to be removed by cooling circuits depend on _____.

a) Specific heat of material
b) Injection temperature of material
c) Latent heat of material
d) All of the above

12) The properties of the polymer will also depend on the _____ available for cooling.

a) Time b) Area
c) Peed d) Momentum

13) Polymers can be very _____ to chemicals

a) Resistant b) Similar
c) Opposite d) None

14) It is the _____ operation that sets the shape of thermoplastics.

a) heating b) grinding
c) cutting d) cooling speed

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Plastic Engineering (BTN02610)

Day & Date: Friday 06-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Draw neat sketches wherever necessary.
3) Figures to the right indicate full marks.

Section – I

Q.2 Solve the following questions.

a) Explain the process of Injection molding with a neat diagram. **05**

b) Differentiate between addition and condensation polymerization. **05**

c) Explain the different tests carried out on plastic material explain anyone. **04**

Q.3 Attempt the following.

a) What are different types of injection mould? Explain one of them with neat sketch. **05**

b) Explain design rules related to Ribs for plastic parts. **04**

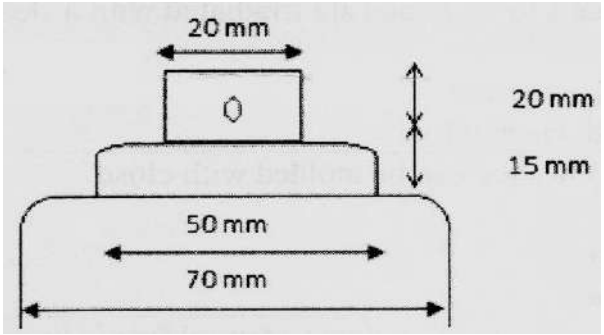
c) Explain with neat sketch hot gas welding. **05**

Q.4 Solve the following questions.

a) Explain the additives used in the plastics. **03**

b) Explain various tolerances and allowances considered for plastics parts design. **04**

c) A product has to be designed for an assembly of body of spray bottle. The body of spray bottle has the dimensions as shown in the figure below. The plastic body of spray bottle cap has to be designed to fit on the top of the bottle. The top end of the bottle is having diameter of 50 mm and its nozzle 20 mm. **07**



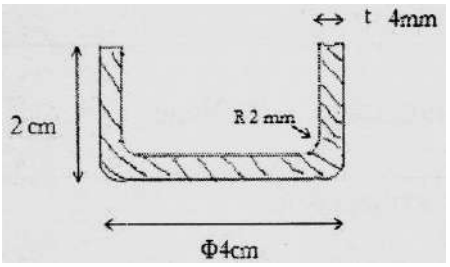
Section – II

Q.5 Solve the following questions.

a) Explain main parts of compression mould with neat sketch. **04**

b) Explain types transfer moulds and their main parts with neat sketch. **03**

c) Design a compression mold for the component shown in figure below which is made up of melamine material. Take K=2; compression pressure=90 kg/cm^2; density=1.7 gm./cm^3. **07**



Q.6 Solve the following questions.

a) Explain Ejection System for Injection mould with neat sketch. **04**

b) Explain different types of gates used in injection moulding. **05**

c) Write short note on. **05**

i) Design of loading chamber

ii) Design of punch

Q.7 Solve the following questions.

a) Find out the cooling time required for a mould with heaviest wall thickness 40 mm, for polypropylene material with following properties- **05**

Thermal conductivity = 0.22 w/m K

Density = 0.545 gm/cm^3

Specific heat = 1.68 kJ /kg k

b) Water entering at 400°C to the cooling system provided to mould is leaving at 600°C. If the total heat absorbed per hour is 20000kJ, then find out the amount of water circulated per hour (k=30.5) **05**

c) Explain cooling system for injection mould with neat sketch. **04**

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Plastic Engineering (BTN02610)

Day & Date: Friday 06-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page
3) Figures to right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) For the more precise dimensional stability of Thermosets, _____ is used.
a) Transfer moulding b) Compression moulding
c) Any moulding process d) Calendering

2) In _____ welding method, the workpiece s to be joined are irradiated with a steam of neutron.
a) Infrared b) Hot gas
c) Nuclear d) Heated tool

3) Materials having a _____ shrinkage allowance can be molded with close tolerance.
a) Low b) Medium
c) High d) None

4) The ratio of volume of loose plastic powder to the volume of moulding is known as _____.
a) Clamping force b) Density factor
c) Bulk factor d) None

5) The depth of loading chamber is _____.
a) Inversely proportional to projected area
b) Inversely proportional to change in volume of plastic material
c) Directly proportional to projected area
d) None of the above

6) The heat to be removed by cooling circuits depend on _____.
a) Specific heat of material
b) Injection temperature of material
c) Latent heat of material
d) All of the above

7) The properties of the polymer will also depend on the _____ available for cooling.

a) Time b) Area
c) Peed d) Momentum

8) Polymers can be very _____ to chemicals

a) Resistant b) Similar
c) Opposite d) None

9) It is the _____ operation that sets the shape of thermoplastics.

a) heating b) grinding
c) cutting d) cooling speed

10) In addition, polymerization reaction the polymer is formed in a _____ step.

a) Single b) Three
c) Double d) None

11) Epoxy resin is example of _____ plastic.

a) Thermoplastics b) Thermosetting
c) Elastomers d) None

12) Which of the following is an additive used for saving base plastic material?

a) Fillers b) Plasticizers
c) Pigments d) None of these

13) _____ is the most of commonly used manufacturing process for the plastic component.

a) Injection molding b) Blow Molding
c) Transfer Molding d) Rotational Molding

14) The Rotational Molding is _____ plastic forming process.

a) High Temperature
b) Low Temperature, High Pressure
c) Low Pressure
d) High Temperature, Low Pressure

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Plastic Engineering (BTN02610)

Day & Date: Friday 06-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Draw neat sketches wherever necessary.
3) Figures to the right indicate full marks.

Section – I

Q.2 Solve the following questions.

a) Explain the process of Injection molding with a neat diagram. **05**

b) Differentiate between addition and condensation polymerization. **05**

c) Explain the different tests carried out on plastic material explain anyone. **04**

Q.3 Attempt the following.

a) What are different types of injection mould? Explain one of them with neat sketch. **05**

b) Explain design rules related to Ribs for plastic parts. **04**

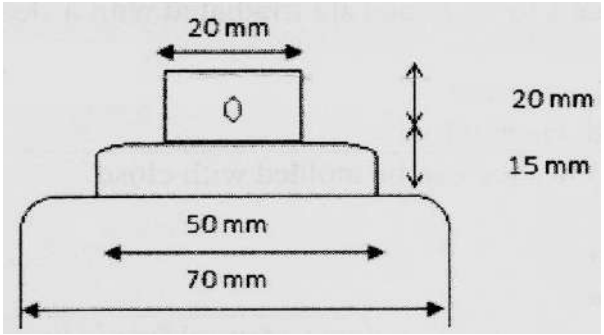
c) Explain with neat sketch hot gas welding. **05**

Q.4 Solve the following questions.

a) Explain the additives used in the plastics. **03**

b) Explain various tolerances and allowances considered for plastics parts design. **04**

c) A product has to be designed for an assembly of body of spray bottle. The body of spray bottle has the dimensions as shown in the figure below. The plastic body of spray bottle cap has to be designed to fit on the top of the bottle. The top end of the bottle is having diameter of 50 mm and its nozzle 20 mm. **07**



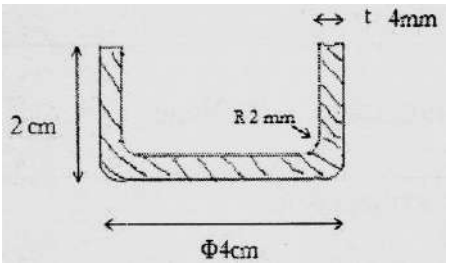
Section – II

Q.5 Solve the following questions.

a) Explain main parts of compression mould with neat sketch. **04**

b) Explain types transfer moulds and their main parts with neat sketch. **03**

c) Design a compression mold for the component shown in figure below which is made up of melamine material. Take K=2; compression pressure=90 kg/cm^2; density=1.7 gm./cm^3. **07**



Q.6 Solve the following questions.

a) Explain Ejection System for Injection mould with neat sketch. **04**

b) Explain different types of gates used in injection moulding. **05**

c) Write short note on. **05**

i) Design of loading chamber

ii) Design of punch

Q.7 Solve the following questions.

a) Find out the cooling time required for a mould with heaviest wall thickness 40 mm, for polypropylene material with following properties- **05**

Thermal conductivity = 0.22 w/m K

Density = 0.545 gm/cm^3

Specific heat = 1.68 kJ /kg k

b) Water entering at 400°C to the cooling system provided to mould is leaving at 600°C. If the total heat absorbed per hour is 20000kJ, then find out the amount of water circulated per hour (k=30.5) **05**

c) Explain cooling system for injection mould with neat sketch. **04**

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Railway Transportation System (BTN02611)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Weight of the car body is categorized in _____.
a) sprung mass b) unsprung mass
c) non-sprung mass d) dummy mass

2) Which of the following is not a component of the rail?
a) Head b) Web
c) Ballast d) Foot

3) Weight of the wheels is categorized in _____
a) sprung mass b) unsprung mass
c) non-sprung mass d) dummy mass

4) Cant deficiency occurs when a vehicle travels around a curve at _____
a) Equilibrium speed
b) Speeds higher than equilibrium speed
c) Speeds lower than equilibrium speed
d) Booked speed

5) The grip between wheel and the rail is known as _____.
a) Traction b) Adhesion
c) Braking d) Acceleration

6) The longitudinal movement of the rails in a track is technically known as _____
a) Buckling b) Hogging
c) Creeping d) Cracking

7) The rail is designed by its _____
a) Length b) Weight
c) Cross-section d) Weight per unit length

8) Which of the following is not a type of force acting on the track?
a) Vertical load
b) Lateral force
c) Magnetic force
d) Contact stresses

9) Why is the value of dynamic load much more than that of static load?
a) Due to impact of speed and rail vibrations
b) Additional live load during motion
c) More traffic
d) Both loads are same

10) Which is the major force developed due to revolving masses like pins and coupling rods in the wheel?
a) Centrifugal force
b) Vertical force
c) Lateral force
d) Centripetal force

11) How is the lateral displacement of rail balanced?
a) By coning of wheels
b) By friction between rail and sleeper
c) By manual means
d) By electrical equipment

12) What is Photo-elastic method used for?
a) For measuring stresses on the rail
b) For measuring strain of the rail
c) For calculating depth of ballast
d) For Reconnaissance survey

13) Why the railway track is made resilient and elastic?
a) To make it economic
b) So that it absorbs shocks
c) It can be adjusted easily
d) Easy fixing

14) Which one of the following is used as extra rail to prevent derailment?
a) Stock rail
b) Guard rail
c) Tongue rail
d) Wing rail

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Railway Transportation System (BTN02611)

Day & Date: Friday, 06-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from Section I and Section II.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Solve:
a) State and explain components of railway transportation systems. **07**
b) Explain the lateral behavior of vehicle with conventional bogies. **07**

Q.3 Solve:
a) Define the term derailment of railway vehicle. Explain factors affecting derailment. **07**
b) Explain behavior of single railway wheel set moving on straight path. **07**

Q.4 Solve:
a) Explain behavior of single railway wheel set moving in curves. **07**
b) Describe the term derailment with wheel climb. **07**

Section – II

Q.5 Solve:
a) Explain the term daily traffic loads acting on the track. **07**
b) Classify transversal loads on the track. Explain gravitational force in brief. **07**

Q.6 Solve:
a) Enlist quasi-static loads acting on the track. Explain any one in brief. **07**
b) Explain the with neat sketch transversal cross wind forces acting on track. Also state how to avoid it. **07**

Q.7 Solve:
a) Write short note on design loads on bridges. **07**
b) Explain the following terms. **07**
i) Creep forces when vehicle running on straight path
ii) Creep forces when vehicle running in curves

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) A block diagram is a graphical representation of:
a) Internal components b) Random errors
c) External disturbances d) System performance

2) A mathematical model of a system can be used to:
a) Analyze existing data b) Control the system
c) Predict system behavior d) None of the above

3) _____ response is the part of time response which remains after complete transient response vanishes from the system output.
a) Untransient b) Steady state
c) Variant d) All of the above

4) Integral (I) control helps to:
a) Reduce steady-state error
b) Respond quickly to changes
c) Limit control signal magnitude
d) Simplify controller design

5) Derivative (D) control anticipates future errors by considering _____.
a) Only the current error value
b) The rate of change of the error
c) The integral of the error over time
d) A pre-defined threshold value

6) Joint space schemes in trajectory planning involve
a) Planning trajectories based on Cartesian coordinates
b) Planning trajectories based on joint angles
c) Planning trajectories based on polar coordinates
d) Planning trajectories based on velocity

7) The simplest polynomial that ensures a continuous velocity and acceleration between given initial and final points is _____.

a) Cubic
b) Linear
c) Quintic
d) None of the above

8) Which type of actuator is most commonly used in applications requiring high force?

a) Hydraulic
b) Pneumatic
c) Electric
d) All of the above

9) Power screws are often used for:

a) Linear motion
b) Rotary motion
c) Both Linear and Rotary motion
d) None of the above

10) The speed of an AC motor is determined by

a) No. of stator windings
b) The frequency of AC supply
c) The voltage of AC supply
d) The size of rotor

11) Workcell control involves:

a) Setting up physical barriers
b) Integrating safety systems
c) Optimizing robot performance
d) Installing lighting fixtures

12) Walk-through programming is commonly used when:

a) Precise path control is required
b) The programming needs to be done quickly and efficiently
c) The programming task is complex and requires detailed instructions
d) The robot needs to be programmed remotely from a different location

13) In autonomous navigation, obstacle avoidance is typically achieved using:

a) Gyroscopes
b) GPS signals
c) Compass sensors
d) Proximity Sensor

14) Wheeled robots are commonly used for:

a) Uneven terrain
b) Smooth surfaces
c) Rail transport
d) None of these

Industrial Networks and Controllers (BTN02612)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each Section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).
4) Use of non-programmable scientific calculator is allowed.

Section – I

Q.2 **a)** Discuss the significance of transfer functions in control systems. How are they derived from differential equations? Provide an example to illustrate their application. **07**

b) Derive the model equation of a mechanical system with spring, mass and damper. **07**

Q.3 **a)** Explain with block diagram PI control mode with advantages and disadvantages. **07**

b) Explain the importance of control system analysis in the design and optimization of feedback control systems. Discuss the key performance metrics used to evaluate control system performance, such as transient response, steady-state error, and stability. **07**

Q.4 **a)** Derive the trajectory equation of Cubic Trajectory in Joint Space Scheme. **07**

b) Discuss in detail the working of Bug algorithm. **07**

Section – II

Q.5 **a)** Distinguish between hydraulic and pneumatic actuators. **07**

b) Describe the basic components and working principle of an electric motor. Draw a block diagram illustrating the components of a DC motor and explain how it converts electrical energy into mechanical energy. **07**

Q.6 **a)** How are the robot cell layouts classified? Discuss each of them. **07**

b) Compare and contrast different programming methodologies for industrial robots, including lead-through programming, walk-through programming, and offline programming. **07**

Q.7	**a)**	Define AGVs. Discuss the classification of AGVs.	**07**
	b)	Compare and contrast the applications of wheeled and tracked mobile robots in different scenarios.	**07**

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Industrial Networks and Controllers (BTN02612)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Which type of actuator is most commonly used in applications requiring high force?
a) Hydraulic b) Pneumatic
c) Electric d) All of the above

2) Power screws are often used for:
a) Linear motion
b) Rotary motion
c) Both Linear and Rotary motion
d) None of the above

3) The speed of an AC motor is determined by
a) No. of stator windings
b) The frequency of AC supply
c) The voltage of AC supply
d) The size of rotor

4) Workcell control involves:
a) Setting up physical barriers
b) Integrating safety systems
c) Optimizing robot performance
d) Installing lighting fixtures

5) Walk-through programming is commonly used when:
a) Precise path control is required
b) The programming needs to be done quickly and efficiently
c) The programming task is complex and requires detailed instructions
d) The robot needs to be programmed remotely from a different location

6) In autonomous navigation, obstacle avoidance is typically achieved using:

a) Gyroscopes b) GPS signals
c) Compass sensors d) Proximity Sensor

7) Wheeled robots are commonly used for:

a) Uneven terrain b) Smooth surfaces
c) Rail transport d) None of these

8) A block diagram is a graphical representation of:

a) Internal components b) Random errors
c) External disturbances d) System performance

9) A mathematical model of a system can be used to:

a) Analyze existing data b) Control the system
c) Predict system behavior d) None of the above

10) _____ response is the part of time response which remains after complete transient response vanishes from the system output.

a) Untransient b) Steady state
c) Variant d) All of the above

11) Integral (I) control helps to:

a) Reduce steady-state error
b) Respond quickly to changes
c) Limit control signal magnitude
d) Simplify controller design

12) Derivative (D) control anticipates future errors by considering _____.

a) Only the current error value
b) The rate of change of the error
c) The integral of the error over time
d) A pre-defined threshold value

13) Joint space schemes in trajectory planning involve

a) Planning trajectories based on Cartesian coordinates
b) Planning trajectories based on joint angles
c) Planning trajectories based on polar coordinates
d) Planning trajectories based on velocity

14) The simplest polynomial that ensures a continuous velocity and acceleration between given initial and final points is _____.

a) Cubic b) Linear
c) Quintic d) None of the above

T. Y. (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Industrial Networks and Controllers (BTN02612)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each Section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).
4) Use of non-programmable scientific calculator is allowed.

Section – I

Q.2 **a)** Discuss the significance of transfer functions in control systems. How are they derived from differential equations? Provide an example to illustrate their application. **07**

b) Derive the model equation of a mechanical system with spring, mass and damper. **07**

Q.3 **a)** Explain with block diagram PI control mode with advantages and disadvantages. **07**

b) Explain the importance of control system analysis in the design and optimization of feedback control systems. Discuss the key performance metrics used to evaluate control system performance, such as transient response, steady-state error, and stability. **07**

Q.4 **a)** Derive the trajectory equation of Cubic Trajectory in Joint Space Scheme. **07**

b) Discuss in detail the working of Bug algorithm. **07**

Section – II

Q.5 **a)** Distinguish between hydraulic and pneumatic actuators. **07**

b) Describe the basic components and working principle of an electric motor. Draw a block diagram illustrating the components of a DC motor and explain how it converts electrical energy into mechanical energy. **07**

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Which technology is used to create digital models for 3D printing?
a) Computer-Aided Design (CAD)
b) Virtual Reality (VR)
c) Augmented Reality (AR)
d) Artificial Intelligence (AI)

2) What is the main advantage of using layers in 3D printing?
a) It makes the printing process faster
b) It allows for more precise and complex designs
c) It reduces the cost of materials
d) It allows for a smoother surface finish

3) How are 3D printing processes classified?
a) By the type of material used
b) By the size of the object being printed
c) By the number of colors in the design
d) By the speed of the printing process

4) What is the purpose of software in 3D printing?
a) To create a physical object from a digital design
b) To choose the color and texture of the final product
c) To determine the size and shape of the final product
d) To program the printer's hardware

5) What is an STL file?
a) A file format used in 2D printing
b) A file format used in 3D printing
c) A file format used in video editing
d) A file format used in music production

6) Which additive manufacturing technology uses a UV laser to cure photopolymer resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

7) Which additive manufacturing technology uses a digital light projector to cure liquid resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

8) Which additive manufacturing technology extrudes thermoplastic filament layer by layer to build a 3D object?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

9) Which design approach focuses on optimizing the design for efficient manufacturing and assembly?
a) Design for 3D Printing
b) Design for Manufacturing and Assembly
c) Core DFM for 3D Printing
d) Design Tools for 3D Printing

10) What is one of the objectives of Design for 3D Printing?
a) Maximizing production planning and control
b) Minimizing the use of additive manufacturing technologies
c) Optimizing design for efficient manufacturing and assembly
d) Implementing traditional manufacturing techniques in 3D printing

11) Which type of software is used for creating the 3D models that will be printed?
a) Slicing/CAM software
b) Printer Control/Client software
c) 3D Modeling/CAD software
d) Rendering software

12) What is the purpose of slicing software in 3D printing?
a) Creating 3D models
b) Controlling the 3D printer
c) Transforming 3D models into printable instructions
d) Visualizing the final printed object

13) Which software is responsible for controlling the 3D printer during the printing process?

a) Slicing/CAM software
b) Printer Control/Client software
c) 3D Modeling/CAD software
d) Simulation software

14) What is the purpose of 3D scanning?

a) Creating 3D models for virtual reality
b) Capturing real-world objects and converting them into digital 3D models
c) Controlling the 3D printer during the printing process
d) Transforming 2D images into 3D representations

b) By the size of the object being printed
c) By the number of colors in the design
d) By the speed of the printing process

8) What is the purpose of software in 3D printing?
a) To create a physical object from a digital design
b) To choose the color and texture of the final product
c) To determine the size and shape of the final product
d) To program the printer's hardware

9) What is an STL file?
a) A file format used in 2D printing
b) A file format used in 3D printing
c) A file format used in video editing
d) A file format used in music production

10) Which additive manufacturing technology uses a UV laser to cure photopolymer resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

11) Which additive manufacturing technology uses a digital light projector to cure liquid resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

12) Which additive manufacturing technology extrudes thermoplastic filament layer by layer to build a 3D object?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

13) Which design approach focuses on optimizing the design for efficient manufacturing and assembly?
a) Design for 3D Printing
b) Design for Manufacturing and Assembly
c) Core DFM for 3D Printing
d) Design Tools for 3D Printing

14) What is one of the objectives of Design for 3D Printing?
a) Maximizing production planning and control
b) Minimizing the use of additive manufacturing technologies
c) Optimizing design for efficient manufacturing and assembly
d) Implementing traditional manufacturing techniques in 3D printing

T. Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: March/April - 2025
MECHANICAL ENGINEERING
3D Printing Hardware & Software (BTN02613)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory; answer any two from remaining questions from Section - I.
2) Q.6 is compulsory; answer any two from remaining questions from Section - II.
3) Figures to the right indicate full marks.
4) Assume suitable data if required and mention it clearly.
5) Use of scientific calculator is allowed.

Section – I

Q.2 Discuss CAD and Associated technology used in 3d printer. **10**

Q.3 Illustrate Classification of 3d printing processes. **09**

Q.4 Enlist different 3D Printing Technologies and describe any 01 with application. **09**

Q.5 Explain the concept of Design for Manufacturing and Assembly (DFMA) and explain its significance in the context of 3D printing. **09**

Section - II

Q.6 Discuss the significance of 3D modeling/CAD software in the 3D printing workflow. **10**

Q.7 Explain the key steps involved in preparing a 3D model for printing using slicing/CAM software. **09**

Q.8 Describe the basic principles behind 3D scanning technology and the process involved in creating digital 3D models. **09**

Q.9 Illustrate the importance of cleaning and repairing 3D scans before 3D printing. **09**

MECHANICAL ENGINEERING
3D Printing Hardware & Software (BTN02613)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions:1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer bookPage no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Assume suitable data required.
4) Use of scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Which additive manufacturing technology uses a UV laser to cure photopolymer resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

2) Which additive manufacturing technology uses a digital light projector to cure liquid resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

3) Which additive manufacturing technology extrudes thermoplastic filament layer by layer to build a 3D object?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

4) Which design approach focuses on optimizing the design for efficient manufacturing and assembly?
a) Design for 3D Printing
b) Design for Manufacturing and Assembly
c) Core DFM for 3D Printing
d) Design Tools for 3D Printing

5) What is one of the objectives of Design for 3D Printing?
a) Maximizing production planning and control
b) Minimizing the use of additive manufacturing technologies
c) Optimizing design for efficient manufacturing and assembly
d) Implementing traditional manufacturing techniques in 3D printing

6) Which type of software is used for creating the 3D models that will be printed?
a) Slicing/CAM software
b) Printer Control/Client software
c) 3D Modeling/CAD software
d) Rendering software

7) What is the purpose of slicing software in 3D printing?
a) Creating 3D models
b) Controlling the 3D printer
c) Transforming 3D models into printable instructions
d) Visualizing the final printed object

8) Which software is responsible for controlling the 3D printer during the printing process?
a) Slicing/CAM software
b) Printer Control/Client software
c) 3D Modeling/CAD software
d) Simulation software

9) What is the purpose of 3D scanning?
a) Creating 3D models for virtual reality
b) Capturing real-world objects and converting them into digital 3D models
c) Controlling the 3D printer during the printing process
d) Transforming 2D images into 3D representations

10) Which technology is used to create digital models for 3D printing?
a) Computer-Aided Design (CAD)
b) Virtual Reality (VR)
c) Augmented Reality (AR)
d) Artificial Intelligence (Al)

11) What is the main advantage of using layers in 3D printing?
a) It makes the printing process faster
b) It allows for more precise and complex designs
c) It reduces the cost of materials
d) It allows for a smoother surface finish

12) How are 3D printing processes classified?
a) By the type of material used
b) By the size of the object being printed
c) By the number of colors in the design
d) By the speed of the printing process

13) What is the purpose of software in 3D printing?
a) To create a physical object from a digital design
b) To choose the color and texture of the final product
c) To determine the size and shape of the final product
d) To program the printer's hardware

14) What is an STL file?
a) A file format used in 2D printing
b) A file format used in 3D printing
c) A file format used in video editing
d) A file format used in music production

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Operation of thermocouple is governed by _____.
a) Peltier effect b) Seebeck effect
c) Thomson effect d) All of the mentioned

2) The amount of photo generated current increases slightly with an increase in _____.
a) Temperature b) Photons
c) Diode current d) Shunt current

3) Solar cells are made from bulk materials that are cut into wafer of _____ thickness.
a) 120-180μm b) 120-220μm
c) 180-220μm d) 180-240μm

4) Chemical energy is converted to _____ energy by a fuel cell.
a) solar b) electrical
c) potential d) mechanical

5) Which of the following element is used as a thermocouple in nuclear reactor?
a) Boron b) Platinum
c) Copper d) Iron

6) Which of the following does not affect the reactions in a fuel cell?
a) Electrolyte composition
b) Electrode composition
c) A combination of fuel and oxidizer
d) Catalytic effect of the reaction container

7) Thermo couple cannot be used to measure _____.
a) Temperature of gas
b) Temperature of liquid
c) IR radiation
d) None of the mentioned

8) Quantum dot solar cells are based on _____.
a) Gratzel cell
b) Solar cell
c) Voltaic cell
d) Galvanic cell

9) The Otto cycle consists of _____.
a) two reversible isotherms and two reversible isobars
b) two reversible isochores and two reversible adiabatics
c) two reversible isotherms and two reversible isochores
d) two reversible isobars and two reversible adiabatics

10) The Diesel cycle consists of _____.
a) two reversible isotherms and two reversible isobars
b) one reversible isochore and two reversible adiabatics and one reversible isobar
c) one reversible isotherm and two reversible isochores and one reversible isobar
d) two reversible isobars and two reversible adiabatics

11) The efficiency of Diesel cycle is _____ the efficiency of Otto cycle.
a) less than
b) greater than
c) equal to
d) none of the mentioned

12) A gas turbine power plant uses _____.
a) Otto cycle
b) Rankine cycle
c) Brayton cycle
d) Diesel cycle

13) The Brayton cycle consists of _____.
a) two reversible isotherms and two reversible isobars
b) two reversible isochores and two reversible adiabatics
c) two reversible isotherms and two reversible isochores
d) two reversible isobars and two reversible adiabatics

14) For a Rankine cycle, which of the following is true?
a) a reversible constant pressure heating process happens in steam boiler
b) reversible adiabatic expansion of steam in turbine
c) reversible constant pressure heat rejection in condenser
d) all of the mentioned

Day & Date: Tuesday, 10-June-2025 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3)Answer cannot be changed once it is marked.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Which charging standard is widely used in Europe for fast Charging?
a) CHAdeMOC)
b) Tesla Supercharger
c) CCS (Combined Charging System)
d) GB/T

2) What is the main barrier to widespread EV adoption regarding charging Infrastructure?
a) Lack of Public interest
b) Limited Battery Lifespan
c) Inadequate number of Charging Stations
d) High Charging Station maintenance cost

3) Which type of Battery is most commonly used in EV?
a) Laid acid b) Solid State
c) Lithium Ion d) Nickel-Metal hybrid

4) What property of lithium -ion batteries makes them ideal for EV?
a) Low Cost
b) High Energy Density
c) Short Recharge Time
d) Wide Operating Temperature Range

5) What is Purpose of a Battery Management System _____.
a) To increase vehicle speed
b) To monitor and Optimize battery Performance
c) To regulate Regenerative Breaking
d) To charge Battery Faster

6) What is the typical Lifespan of a Lithium-Ion battery used in EV?
a) 2-4 Years b) 5-8 Years
c) 10-15 Years d) 20-25 Year

7) Which Material is commonly used to reduce vehicle weight in EV?
a) Steel b) Brass
c) Cast Iron d) Aluminum

8) Number of cells connected in series provide a _____.
a) High current carrying capacity
b) Higher Voltage
c) Higher power
d) None of the above

9) The capacity of a battery is expressed in terms of _____.
a) Current rating b) Voltage rating
c) Ampere hour rating d) None of the above

10) _____ avoids the direct contact of the positive and negative plate in a lithium-ion battery?
a) Separator b) Electrolyte
c) Load d) Rectifier

11) Which is the electrolyte used in Li-ion battery?
a) Lead dioxide b) Lithium-based gel
c) Sulfur dioxide d) Cobalt

12) Which of the following material is used as separator material in Lithium-ion battery?
a) Brass b) Metal sheet
c) Paper d) Plastic

13) The electrode for a battery must be _____.
a) a semi conductor
b) An insulator
c) A good conductor of electricity
d) A bad conductor of electricity

14) Which of the following statement is true for the movement of electrons concerning the direction of current?
a) Same as the direction of current
b) Opposite direction of current
c) Does not depend on the direction of current
d) No movement of electrons

T. Y (B. Tech) (Sem-II) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Battery Technology and Charging Infrastructure (BTN02615)

Day & Date: Tuesday, 10-June-2025 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions form Section I and Section II.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).

Section – I

Q.2 a) Define the following: **07**
1) State of charge
2) C-Rate
3) Specific Energy Density
4) Life cycles
5) Depth of Discharge
6) Usable capacity
7) Energy capacity

b) Explain significance of energy density and cycle life of EV Battery. **07**

Q.3 a) Describe the construction and working of a Li-ion battery with a clear diagram. **07**

b) Describe the safety concerns associated with Li-ion batteries. **07**

Q.4 a) Explain Solid-state Lithium with neat sketch. **07**

b) Explain Lithium Sulphur Battery with neat sketch. **07**

Section – II

Q.5 a) Explain stages of battery pack design. **07**

b) Explain Electrical Design of battery pack. **07**

Q.6 a) Explain the role of thermal interface material. **07**

b) Describe the concepts of Active and Passive Thermal Management. **07**

Q.7 a) Explain Charger Architecture. **07**

b) Explain Charging standards and protocols. **07**

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Multiple Choice Questions **10**

1) What is the fundamental mechanism involved in most metal joining processes?
a) Cutting and shearing b) Heat and pressure
c) Cooling and condensation d) Abrasion and polishing

2) Which of the following best describes the classification of joining processes?
a) Temporary and permanent b) Fast and slow
c) Welded and non-welded d) Mechanical and Electrical

3) Why is weld metal protection important during the welding process?
a) To reduce the welding speed
b) To prevent contamination and maintain weld quality
c) To increase the melting point of the metal
d) To ensure uniform cooling

4) What is the primary mechanism of arc heat generation in fusion welding?
a) Friction between the electrode and base metal
b) Chemical reaction of shielding gases
c) Electrical discharge creating an arc between the electrode and base metal
d) Pressure applied by the welding torch

5) Which of the following welding processes uses a non-consumable electrode and shielding gas?
a) Shielded Metal Arc Welding (SMAW)
b) Submerged Arc Welding (SAW)
c) Gas Tungsten Arc Welding (GTAW)
d) Electro-slag Welding

6) In Shielded Metal Arc Welding (SMAW), what is the effect of using direct current electrode positive (DCEP)?

a) Decreases penetration and increases melting rate
b) Increases penetration and decreases melting rate
c) Increases penetration and electrode melting rate
d) Decreases penetration and electrode melting rate

7) What is the Heat Affected Zone (HAZ) in welding?

a) The area where the base metal is entirely melted
b) The zone adjacent to the weld metal where the microstructure and properties are altered due to heat
c) The area of the base metal unaffected by the welding process
d) The region where the shielding gas protects the weld pool

8) What is the purpose of the Schaeffer diagram in the weldability of stainless steels?

a) To predict the thermal cycle during welding
b) To determine the corrosion resistance of stainless steels
c) To predict the phase transformations and microstructure in the weld and heat- affected zone
d) To calculate the cooling rate during welding9.Which of the following is not the welding position?

9) What is a common issue encountered when welding aluminum alloys that can affect weld quality?

a) HAZ hardening
b) Porosity due to gas entrapment
c) Excessive spatter formation
d) Formation of martensite

10) Which type of cracking in welded joints is associated with the rapid cooling of the weld metal?

a) Liquation cracking
b) Solidification cracking
c) Cold cracking
d) HAZ softening

Set P

T. Y. (B.Tech.) (Sem - II) (CBCS) Examination: March/April-2025
Mechanical Engineering
Joining Technologies for Metals (197041615)

Day & Date: Tuesday, 27-05-2025 Max. Marks: 40
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Neat sketches must be drawn wherever necessary.

SECTION – I

Q.2 Attempt four from following questions.

a) Explain the basic mechanisms involved in metal joining. State role do heat and pressure play in joining processes? **05**

b) Provide a classification of metal joining processes with examples for each category. Discuss the advantages of using heat and power density concepts in welding. **05**

c) What are the different approaches to protecting weld metal during the welding process? Analyze the effects of gases on weld properties and suggest ways to mitigate negative impacts. **05**

d) Explain the principles of oxy-fuel gas welding and describe its key applications. Define different types of welds, joint types, and welding positions used in fusion welding. **05**

e) Discuss how arc heat is generated, maintained, and its role in welding processes. Describe the factors affecting electrode melting rate and the impact of electrode polarity on SMAW. **05**

f) Compare Gas Tungsten Arc Welding (GTAW) and Gas Metal Arc Welding (GMAW), highlighting their key differences. Briefly describe the working principles of submerged arc welding, electro-slag welding, and laser beam welding. **05**

SECTION – II

Q.3 Attempt four from following questions.

a)	Define the weld thermal cycle and explain its significance in welding. What is the heat-affected zone (HAZ), and how does it influence the mechanical properties of a weld?	**05**
b)	Discuss the solidification process of weld metal and the factors that affect it. Explain the fundamentals of weldability and describe how the Fe-C phase diagram and continuous cooling transformation (CCT) curves are used to assess the weldability of carbon and alloy steels.	**05**
c)	Explain the Schaeffer diagram and its application in determining the weldability of stainless steels. Describe the metallurgical transformations that occur in the weld and heat-affected zone of steels during the welding process.	**05**
d)	Discuss the common weldability issues in aluminium alloys, such as porosity, HAZ softening, and PMZ problems. Explain the factors that contribute to solidification and cracking in aluminium welds and suggest methods to control them.	**05**
e)	Define residual stresses in welded joints and explain their effect on joint performance. What methods can be used to control or reduce residual stresses in welded joints?	**05**
f)	Describe the types of cracks that can occur in welded joints, including solidification cracks, liquation cracks, and cold cracking. Discuss the factors contributing to each type of crack and propose techniques to prevent or minimize cracking during welding.	**05**

Q.3 Attempt four from following questions.

a)	Define the weld thermal cycle and explain its significance in welding. What is the heat-affected zone (HAZ), and how does it influence the mechanical properties of a weld?	**05**
b)	Discuss the solidification process of weld metal and the factors that affect it. Explain the fundamentals of weldability and describe how the Fe-C phase diagram and continuous cooling transformation (CCT) curves are used to assess the weldability of carbon and alloy steels.	**05**
c)	Explain the Schaeffer diagram and its application in determining the weldability of stainless steels. Describe the metallurgical transformations that occur in the weld and heat-affected zone of steels during the welding process.	**05**
d)	Discuss the common weldability issues in aluminium alloys, such as porosity, HAZ softening, and PMZ problems. Explain the factors that contribute to solidification and cracking in aluminium welds and suggest methods to control them.	**05**
e)	Define residual stresses in welded joints and explain their effect on joint performance. What methods can be used to control or reduce residual stresses in welded joints?	**05**
f)	Describe the types of cracks that can occur in welded joints, including solidification cracks, liquation cracks, and cold cracking. Discuss the factors contributing to each type of crack and propose techniques to prevent or minimize cracking during welding.	**05**

T. Y. (B.Tech.) (Sem - II) (CBCS) Examination: March/April-2025
Mechanical Engineering
Joining Technologies for Metals (197041615)

Day & Date: Tuesday, 27-05-2025 Max. Marks: 50
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Neat sketches must be drawn wherever necessary.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Multiple Choice Questions **10**

1) What is a common issue encountered when welding aluminum alloys that can affect weld quality?
a) HAZ hardening b) Porosity due to gas entrapment
c) Excessive spatter formation d) Formation of martensite

2) Which type of cracking in welded joints is associated with the rapid cooling of the weld metal?
a) Liquation cracking b) Solidification cracking
c) Cold cracking d) HAZ softening

3) What is the fundamental mechanism involved in most metal joining processes?
a) Cutting and shearing b) Heat and pressure
c) Cooling and condensation d) Abrasion and polishing

4) Which of the following best describes the classification of joining processes?
a) Temporary and permanent b) Fast and slow
c) Welded and non-welded d) Mechanical and Electrical

5) Why is weld metal protection important during the welding process?
a) To reduce the welding speed
b) To prevent contamination and maintain weld quality
c) To increase the melting point of the metal
d) To ensure uniform cooling

6) What is the primary mechanism of arc heat generation in fusion welding?
- a) Friction between the electrode and base metal
- b) Chemical reaction of shielding gases
- c) Electrical discharge creating an arc between the electrode and base metal
- d) Pressure applied by the welding torch

7) Which of the following welding processes uses a non-consumable electrode and shielding gas?
- a) Shielded Metal Arc Welding (SMAW)
- b) Submerged Arc Welding (SAW)
- c) Gas Tungsten Arc Welding (GTAW)
- d) Electro-slag Welding

8) In Shielded Metal Arc Welding (SMAW), what is the effect of using direct current electrode positive (DCEP)?
- a) Decreases penetration and increases melting rate
- b) Increases penetration and decreases melting rate
- c) Increases penetration and electrode melting rate
- d) Decreases penetration and electrode melting rate

9) What is the Heat Affected Zone (HAZ) in welding?
- a) The area where the base metal is entirely melted
- b) The zone adjacent to the weld metal where the microstructure and properties are altered due to heat
- c) The area of the base metal unaffected by the welding process
- d) The region where the shielding gas protects the weld pool

10) What is the purpose of the Schaeffer diagram in the weldability of stainless steels?
- a) To predict the thermal cycle during welding
- b) To determine the corrosion resistance of stainless steels
- c) To predict the phase transformations and microstructure in the weld and heat- affected zone
- d) To calculate the cooling rate during welding9.Which of the following is not the welding position?

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Multiple Choice Questions **10**

1) The ideal Carnot cycle is more efficient than the Rankine cycle because ____
a) It operates at a higher pressure
b) It has reversible processes
c) It uses a perfect fluid
d) It operates at a lower temperature

2) Superheating the steam in a Rankine cycle results in: _____.
a) Reduced thermal efficiency
b) Increased work output from the turbine
c) Decreased turbine work
d) Reduced condenser temperature

3) Cogeneration systems are particularly useful in industries where _____.
a) Only electricity is required
b) Heat is needed for industrial processes
c) The energy demand fluctuates drastically
d) The fuel cost is very high

4) The critical pressure is the pressure at which _____
a) Water changes from liquid to gas at a constant temperature
b) Steam and water become indistinguishable
c) The boiling point of water is zero degrees Celsius
d) Heat transfer efficiency is maximized

5) Supercritical steam conditions are typically achieved at: _____
a) Pressures above 22 MPa and temperatures above 374°C
b) Pressures below 10 MPa and temperatures below 300°C'
c) Pressures around 15 MPa and temperatures around 200°C
d) Pressures below 1 MPa and temperatures below 100°C

6) Which of the following is a primary advantage of Fluidized Bed Combustion (FBC) boilers?
   a) High fuel efficiency at low temperatures
   b) Low capital cost and maintenance
   c) Capability to burn a wide range of fuels, including low-grade coal and biomass
   d) Reduced production of pollutants such as nitrogen oxides (NOx)

7) In a reaction steam turbine, the steam expands: _____
   a) Only in the nozzles
   b) Only in the stationary blades
   c) Only in the moving blades
   d) Partly in the nozzles and partly in the moving blades

8) The velocity-compounding of steam in a steam turbine is achieved by _____
   a) Dividing the steam flow into multiple stages and expanding it at each stage
   b) Using multiple sets of blades that change the direction and velocity of steam
   c) Increasing the steam flow rate through the turbine
   d) Decreasing the number of turbine blades to increase the velocity of steam

9) In a counterflow cooling tower, the air flows _____.
   a) Horizontally across the tower while water flows vertically
   b) Vertically downward while water flows vertically upward
   c) Vertically upward while water flows vertically downward
   d) In a circular motion around the tower

10) Scaling in cooling towers is caused by _____.
   a) The high pressure of water inside the tower
   b) The deposition of minerals from the water as it evaporates
   c) The flow of air in the tower
   d) The cooling of water below the dew point

b) Pressures below 10 MPa and temperatures below 300°C'
c) Pressures around 15 MPa and temperatures around 200°C
d) Pressures below 1 MPa and temperatures below 100°C

4) Which of the following is a primary advantage of Fluidized Bed Combustion (FBC) boilers?
a) High fuel efficiency at low temperatures
b) Low capital cost and maintenance
c) Capability to burn a wide range of fuels, including low-grade coal and biomass
d) Reduced production of pollutants such as nitrogen oxides (NOx)

5) In a reaction steam turbine, the steam expands: _____
a) Only in the nozzles
b) Only in the stationary blades
c) Only in the moving blades
d) Partly in the nozzles and partly in the moving blades

6) The velocity-compounding of steam in a steam turbine is achieved by _____
a) Dividing the steam flow into multiple stages and expanding it at each stage
b) Using multiple sets of blades that change the direction and velocity of steam
c) Increasing the steam flow rate through the turbine
d) Decreasing the number of turbine blades to increase the velocity of steam

7) In a counterflow cooling tower, the air flows _____.
a) Horizontally across the tower while water flows vertically
b) Vertically downward while water flows vertically upward
c) Vertically upward while water flows vertically downward
d) In a circular motion around the tower

8) Scaling in cooling towers is caused by _____.
a) The high pressure of water inside the tower
b) The deposition of minerals from the water as it evaporates
c) The flow of air in the tower
d) The cooling of water below the dew point

9) The ideal Carnot cycle is more efficient than the Rankine cycle because ____
a) It operates at a higher pressure
b) It has reversible processes
c) It uses a perfect fluid
d) It operates at a lower temperature

10) Superheating the steam in a Rankine cycle results in: _____.
a) Reduced thermal efficiency
b) Increased work output from the turbine
c) Decreased turbine work
d) Reduced condenser temperature

Seat No.		Set	S

T. Y. (B.Tech.) (Sem - II) (CBCS) Examination: March/April-2025
Mechanical Engineering
Steam Power Engineering (197041616)

Day & Date: Tuesday, 27-05-2025 Max. Marks: 40
Time: 03:00 PM To 06:00 PM

Instructions: 1) Solve any two questions from question no.2 & 3.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 solve any two questions from following

a) Discuss the Rankine Cycle as the ideal vapor power cycle. Explain its working principle, components, and Also, discuss the advantages and limitations of the Rankine cycle and how its efficiency can be improved **10**

b) Discuss the steam cycle used in a nuclear power plant. Explain the working principle, key components, and safety measures associated with the steam cycle in nuclear reactors. Additionally, highlight the advantages and limitations of using the steam cycle in nuclear power generation. **10**

c) Compare and contrast subcritical and supercritical boilers in terms of their design, operation, efficiency, and applications in power plants. Discuss the advantages and disadvantages of each type **10**

d) Explain the boiler mountings and accessories in detail. Discuss their functions, types, and importance in ensuring safe and efficient boiler operation. **10**

SECTION – II

Q.3 solve any two questions from following

a) Explain the impulse and reaction turbines with respect to their working principles, design, components, and applications. Compare their advantages and disadvantages **10**

b) Explain the concepts of velocity compounding and pressure compounding in turbines. Discuss their principles, advantages, and applications in improving the performance and efficiency of steam turbines. **10**

c) Explain the principle, design, types, and applications of cooling towers. Discuss their working, advantages, disadvantages, and their role in improving the efficiency of thermal power plants. **10**

d) Explain the concepts of hygrometry and psychrometry. Discuss the principles, terms, and various parameters related to these concepts. Illustrate how a psychrometric chart is used to analyze air properties in various processes. **10**

Fourth Y (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Refrigeration and Air Conditioning (BTN02701)

Day & Date: Monday, 02-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes on answer book Page No. 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper Set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct answers from the given options. 14

1) Which of these refrigerants is highly flammable and toxic?
a) R-12 b) Sulphur dioxide
c) Carbon dioxide d) Ammonia

2) On which of the following cycle the air conditioning systems are based in transport aviation?
a) Reversed Joule's cycle b) Otto cycle
c) Reversed Carnot cycle d) Reversed Brayton cycle

3) Why is the evaporator used?
a) To absorb heat
b) To decrease the refrigeration effect
c) To reject heat
d) To improve C.O.P.

4) In which of the following capillary tube is used as an expansion device?
a) Room air conditioners b) Water coolers
c) Domestic refrigerators d) All of the mentioned

5) How is the cascade system achieved?
a) VCR system in a parallel combination
b) VCR system in a series combination
c) VAR system in a series combination
d) VAR system in a parallel combination

6) Which of these increases during the process of humidification?
a) Specific humidity b) Dry bulb temperature
c) Relative humidity d) Wet-bulb temperature

7) On the psychrometric chart, the marking of the alignment circle will be at _____.

a) 50% RH and 20°C DBT
b) 50% RH and 26°C DBT
c) 60% RH and 20°C DBT
d) 60% RH and 26°C DBT

8) When moisture is added to air at constant dry bulb temperature, the process is known as _____.

a) Sensible cooling
b) Humidification
c) Dehumidification
d) Chilling

9) Which of the following process is used in summer air conditioning?

a) Heating and Humidification
b) Cooling and Dehumidification
c) Humidification
d) Dehumidification

10) What is the value of optimum effective temperature in winter?

a) 17
b) 18
c) 19
d) 20

11) A person with heavy clothing needs _____ optimum temperature as compared to a person with light clothing.

a) Higher
b) Lesser
c) Zero
d) Same

12) Which of the following type of refrigerants take a direct part in the refrigeration system?

a) Primary
b) Secondary
c) Tertiary
d) Mixed

13) Cryogenics deals with which type of product?

a) Low-temperature
b) Low-pressure
c) High-temperature
d) High-pressure

14) What does a vapour absorption refrigerator use in the form of a refrigerant?

a) Aqua-ammonia
b) Freon
c) Ammonia
d) Water

Seat No.	

Set **P**

Fourth Y (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Refrigeration and Air Conditioning (BTN02701)

Day & Date: Monday, 02-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicates full marks.
3) Assume suitable data if required.
4) Use of refrigerant property tables, psychrometric charts, and scientific non- programmable calculators are allowed.

Section – I

Q.2 **a)** Explain the properties of refrigerants. **05**
b) Explain the effect on Ozone depletion and Global warming. **05**
c) Explain Reversed Carnot cycle with neat sketch. **04**

Q.3 **a)** What is the effect of suction and discharge pressure on performance of VCC. **05**
b) Explain working of simple VCRS with P-h chart. **05**
c) What are the advantages of cryogenics, and explain a simple Linde system. **04**

Q.4 **a)** A vapour compression refrigerator uses methyl chloride R40 & operates between temperature limits of -10°C & 45°C. At the entry to the compressor, the refrigerant is dry saturated & after compression, it acquires a temperature of 60°C. Find COP of refrigerator. **08**
Data:

Saturation temp. (°C)	Sp. Enthalpy (kJ/kg)		Sp. Entropy (kJ/kg k)	
	Liquid	Vapour	Liquid	Vapour
-10	45.4	460.7	0.183	1.637
45	133.0	483.6	0.485	1.587

b) What are the limitations of VCRS and explain the practical VARS. **06**

Section – II

Q.5 **a)** Define the following terms: **05**

i) Saturated air
ii) Relative humidity
iii) DBT
iv) WBT
v) DPT

b) The readings from a sling psychrometer are as follows: **05**
Dry bulb temperature = 30°C, Wet bulb temperature = 20°C, Barometer reading = 740 mm of Hg. Using steam tables, determine:

i) Dew point temperature
ii) Relative humidity and
iii) Specific humidity

c) Explain the factors affecting human comfort. **04**

Q.6 **a)** Explain the comfort chart in detail. **05**

b) Explain the factors forming load on refrigeration & air conditioning systems. **05**

c) Explain air washer with neat sketch. **04**

Q.7 **a)** A hall is to be maintained at 24^0C DBT and 60 % RH under the following conditions: **08**
Outdoor conditions = 38°C DBT and 28°C WBT
Sensible heat load in room = 46.4 KW
Latent heat load in room = 11.6 KW
Total infiltration air = 1200 m^3 /h
Apparatus dew point temperature = 10°C
Quantity of recirculated air from the hall = 60%
If the quantity of recirculated air is mixed with the conditioned air after the cooling coil, find the following:

i) Conditions of air leaving the conditioner coil and before mixing with the recirculated air;
ii) The condition of air before entering the hall.
iii) The mass of air entering the cooler.

b) Classify duct design methods. Explain any one in detail. **06**

Q.6 **a)** Explain the comfort chart in detail. **05**

b) Explain the factors forming load on refrigeration & air conditioning systems. **05**

c) Explain air washer with neat sketch. **04**

Q.7 **a)** A hall is to be maintained at 24^0C DBT and 60 % RH under the following conditions: **08**
Outdoor conditions = 38°C DBT and 28°C WBT
Sensible heat load in room = 46.4 KW
Latent heat load in room = 11.6 KW
Total infiltration air = 1200 m^3 /h
Apparatus dew point temperature = 10°C
Quantity of recirculated air from the hall = 60%
If the quantity of recirculated air is mixed with the conditioned air after the cooling coil, find the following:
- i) Conditions of air leaving the conditioner coil and before mixing with the recirculated air;
- ii) The condition of air before entering the hall.
- iii) The mass of air entering the cooler.

b) Classify duct design methods. Explain any one in detail. **06**

Fourth. Y.(B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Automobile Engineering (BTN02702)

Day & Date: Tuesday 03-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).
5) Use of a non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The loads supported by an automobile frame are _____.
a) Weight of the body, passengers and cargo loads
b) Torque from engine and transmission
c) Sudden impacts from collisions
d) All of the mentioned

2) The basic purpose of a four wheel drive (4WD) system is that it _____.
a) Delivers improved cornering on dry road surfaces
b) Eliminates the need of snow tyres, tyre chains, etc
c) Ensures effective transmission of engine torque to all four wheels, even on slippery road surfaces
d) Ensures that effective braking can be performed, even on slippery surfaces

3) Transfer case is located next to the gearbox in _____.
a) Four wheel drive b) Rear wheel drive
c) Front wheel drive d) All of the above

4) The force available at the contact between road and driving wheel is called _____.
a) Brake power b) Friction power
c) Engine torque d) Tractive effort

5) If 'V' is vehicle speed (in meters/min) and 'R' is radius of driving wheel (in meters) then the rpm of the driving wheel is given by _____.
a) $\mathrm{rpm} = \mathrm{V}/2\pi\mathrm{R}$ b) $\mathrm{rpm} = 2\pi\mathrm{V}/\mathrm{R}$
c) $\mathrm{rpm} = \pi\mathrm{R}/\mathrm{V}$ d) $\mathrm{rpm} = \pi\mathrm{V}/\mathrm{R}$

6) The force that opposes the motion of a vehicle is _____.
a) Rolling resistance b) Gradient resistance
c) Wind or air resistance d) All of the above

7) The component of the torque converter that allows multiplication of torque is the _____.
a) Turbine b) Impeller
c) Pump d) Stator

8) The purpose of transmission in an automobile is _____.
a) to vary the speed of automobile
b) to vary the torque at the road wheel
c) to vary the power of automobile
d) none of above

9) Which of the following factors affect the wheel alignment?
a) Factors pertaining to wheel
b) Steering geometry
c) Steering linkages
d) All of the above

10) The included angle is the sum of the _____.
a) Camber and Caster b) Caster and S.A.I.
c) Camber and S.A.I. d) Camber and Toe-in

11) The function of master cylinder is _____.
a) to increase pressure unequally in all cylinders
b) to increase pressure equally in all cylinders
c) to decrease pressure unequally in all cylinders
d) to decrease power equally in all cylinders

12) The _____ system of an automobile is one which separates the wheel/axle assembly from the body.
a) auxiliary system b) transmission system
c) suspension system d) None of these

13) The unsprung weight is weight of the _____.
a) weight of passenger carriage
b) weight of the wheel axle system
c) weight of leaf spring
d) none of these

14) Spring shackles are used to join _____.
a) Spring and Axle b) Chassis frame and spring
c) Chassis frame and axle d) All of the above

Set **P**

Fourth. Y.(B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Automobile Engineering (BTN02702)

Day & Date: Tuesday 03-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Answer any two questions from each section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions (if necessary and state them clearly).
4) Use of a non-programmable calculator is allowed.

Section – I

Q.2 **a)** Explain with a neat sketch of front engine front wheel drive. **06**

b) Define the following. **04**
1) Air Resistance
2) Rolling Resistance
3) Gradient Resistance
4) Traction and Tractive effort

c) Draw a neat sketch of a centrifugal type clutch. Explain its working. **04**

Q.3 **a)** For a typical motor car the road resistance is given by 23N per 1000N, the air resistance by expression $0.0827V^2$, transmission efficiency 88% in top speed, and the car weighs 19934N when fully loaded. Calculate. **10**
1) The brake power (kW) required for a top speed of 144 km/hr.
2) The acceleration in m/s^2 at 48 km/hr, assuming the torque at 48 km/hr in top gear is 25% more than at 144 km/hr.
3) The BP in KW required to drive the car up a gradient of 1 in 5 at 48 km/hr, transmission efficiency 80% in bottom gear. The resistance is in N and speed (V) is in km/hr. Take acceleration due to gravity (g) = 9.81 m/s^2.

b) Explain in brief Gradeability and draw bar pull. **04**

Q.4 **a)** Explain with a neat sketch working of a sliding mesh gear box. **06**

b) Write a short note on the final drive and its types. **04**

c) Write a short note on overdrive. **04**

Section – II

Q.5 **a)** Explain the power steering system with a neat sketch and state its advantages over manual steering. **06**

b) Explain in brief the following terms with figures: **04**

1) Caster angle
2) Camber angle

c) Explain with a schematic Anti-lock Braking System (ABS). **04**

Q.6 **a)** A motor car has a wheel base of 2.64 m, the height of its C.G above the ground is 0.61 m and it is 1.2 m in front of the rear axle. If the car is traveling at 40 km/hr on a level track. Determine the minimum stopping distance in which the car may be stopped, when **06**

1) Rear wheels are braked
2) Front wheels are braked
3) All wheels are braked

The coefficient of friction between tyre and road may be taken as 0.6.

b) Draw a neat sketch of a master cylinder and explain its construction and working. **04**

c) Write short notes on Disc Brake. **04**

Q.7 **a)** Explain in detail the functions and requirements of automobile suspension systems. **06**

b) Compare conventional and independent suspension systems. **04**

c) Write a short note on the MacPherson strut assembly. **04**

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Automation and Robotics (BTN02703)

Day & Date: Wednesday, 04-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.
5) Use of non- programmable calculators is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given option **14**

1) Which type of robot used for assembly purpose?
a) Jointed arm b) PUMA
c) SCARA d) None of this

2) A _____ motors provides output in the form of discrete angular motion increment.
a) Steeper b) Shunt
c) Synchronous d) None of these

3) Spot welding and Arc welding are the examples of ____
a) Point-to-point tasks
b) Continuous path tasks
c) Point-to-point and continuous path tasks, respectively
d) Continuous path task and point-to-point tasks, respectively

4) A tactile array sensor is special type of _____ sensor.
a) Range b) Electrical
c) Force d) None of These

5) Forward kinematics and Inverse kinematics of a serial manipulator will have _____
a) Multiple solutions and unique solution, respectively
b) Unique solution and Multiple solutions, respectively
c) Unique solution only
d) Multiple solutions only

6) The term CCD with regards to "CCD Camera" stands for _____
a) Charged Coupled Device b) Coupled Charged Device
c) Charged Calibrated Device d) Calibrated Charged Device

7) _____ deals with finding the joint parameters for given position and orientation of robots.

a) Direct Kinematics b) Forward Dynamics
c) Inverse Kinematics d) Inverse Dynamics

8) The input and output of image processing are?

a) Signal and image b) Signal only
c) Image only d) Depends on input

9) The _____ technique is currently investigated as the approach that helps in automatic programming.

a) Specification by example b) Generative CAI
c) Non-hierarchical planning d) All of the above

10) In which of the following operations Continuous Path System is used?

a) Pick and Place b) Loading and Unloading
c) Continuous welding d) All of the above

11) From the following which is the benefits of AS/RS?

a) Less product damage
b) Good and easy housekeeping in FMS
c) Reduce labour cost
d) All of the above

12) Which of the following is not a programming language for computer controlled robot?

a) AMU b) VAL
c) RAIL d) HELP

13) _____ is the name for space inside which a robot unit operates?

a) Environment b) Spatial base
c) Exclusion zone d) Work envelope

14) A technology for the application of mechanical, electronics, and computer -based systems to control and operate the systems is called _____

a) PLC b) Sequential controller
c) Microprocessor-based systems d) Automation

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Automation and Robotics (BTN02703)

Day & Date: Wednesday, 04-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Answer any two questions from Section I and Section II.
2) Figure to the right indicate full marks.
3) Use of non-programmable scientific calculator is allowed.
4) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Attempt the following.
a) Explain navigation techniques used in AGVs. **07**
b) Explain various components used in industrial robot. **07**

Q.3 Attempt the following.
a) Explain working principle of DC motor with neat sketch and application. **07**
b) Explain mechanical and vacuum griper with neat sketch. **07**

Q.4 Attempt the following.
a) Explain forward kinematics of 2DOF & 3DOF planar manipulator robot with diagram. **07**
b) Explain with neat sketch adaptive control techniques. **07**

Section – II

Q.5 Attempt the following.
a) Explain the various components of machine vision system with neat sketch. **07**
b) Differentiate between CCD & CMOS **07**

Q.6 Attempt the following.
a) Discuss robot centered and In-line workcell layout with neat sketch. **07**
b) Explain lead through programming and walk through programming. **07**

Q.7 Attempt the following.
a) Explain continuous arc welding application of robot with neat sketch. **07**
b) Discuss general considerations for selecting robot for material handling. **07**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Which kind of labor force is required in case of Job-shop Production?
a) Highly Skilled b) Semi-skilled
c) Unskilled d) Any of the above

2) Sales forecasts are based on estimates of ____.
a) Demand b) Supply
c) Demand and supply d) None of the above

3) Payback Period Criteria is used for ____.
a) Capacity planning b) Forecasting
c) Production control d) Investment decisions

4) The correct sequence of operations in production planning and control is ____.
a) Routing-Scheduling-Dispatching-Follow up
b) Scheduling-Routing-Dispatching-Follow up
c) Dispatching-Routing-Scheduling-Follow up
d) Routing-Scheduling-Follow up-Dispatching

5) TPM Means ____.
a) Total Production Management
b) Total Process Management
c) Total Productive Maintenance
d) None of these

6) JIT is targeted for ____.
a) Average inventory b) Zero inventory
c) High inventory d) None of the above

7) Who has developed Economic lot size (EOQ) model?
a) F. B. Gilbreth b) F. W. Harris
c) T. H. C. Tippett d) None of the above

8) Which of the following statement is correct?
a) A-B-C analysis is based on pareto's principle
b) Simulation can be used for inventory control
c) Economic order quality formula ignores variations in demand pattern
d) All of the above

9) Regression method of forecasting is applicable mainly for ____.
a) Casual models b) Qualitative forecasting
c) Delphi method d) Time-sense model

10) Systematic plant maintenance is called ____.
a) Corrective maintenance b) Break-down maintenance
c) Operational maintenance d) Preventive maintenance

11) Short term forecasting involves period of ____.
a) Less than one year b) One of three year
c) Above three years d) None of the above

12) Gantt chart is mostly used for ____.
a) Routing b) Scheduling
c) Forecasting d) Inspection and quality control

13) Just-In-Time was successfully implemented by ____.
a) Toyota b) Honda
c) Suzuki d) Volkswagen

14) "ABC" analysis is done by arranging items in decreasing order of ____.
a) Total Inventory costs b) Item value
c) Annual usage valued d) Item demand

Fourth. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Production and Operations Management (BTN02706)

Day & Date: Thursday, 05-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks.
3) Draw neat diagram whenever necessary.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** Explain different types of forecasting & also a brief on qualitative forecasting. **07**

b) Following data gives the sales of the company for the various years of the company. **07**
Using 3 yearly moving average method, forecast the sales for the next three years,

Year:	2001	2002	2003	2004	2005	2006	2007
Sale(000units):	80	90	92	83	94	99	92

Q.3 **a)** Explain procedure for capacity planning. **07**

b) Discuss different measures and measurements in capacity planning. **07**

Q.4 **Attempt the following: (Any Two)**

a) Aggregate Planning **07**

b) Co-ordination of PPC with another Department **07**

c) Discuss Follow up, Evolution in PPC **07**

Section – II

Q.5 **a)** With neat sketch explain in brief about inventory cost relationship also state various cost associated with inventory. **07**

b) ABC corporation has got a demand for particular part at 10,000 units per year. The cost unit is Rs. 2 and it costa Rs. 36 to place an order and to process the delivery. The inventory carrying cost is estimated at 9 percent of average inventory investment. Determine: **07**
i) EOQ,
ii) Optimum number of orders to be placed per annum.
iii) Minimum total cost of inventory per annum.

Q.6	**a)**	Explain with block diagram value analysis procedure.	**07**
	b)	Explain in details term JIT and KAIZEN.	**07**
Q.7	**Attempt the following: (Any Two)**		
	a)	ABC Analysis	**07**
	b)	Preventive and break down maintenance.	**07**

c) Discuss Follow up, Evolution in PPC **07**

Section – II

Q.5 **a)** With neat sketch explain in brief about inventory cost relationship also state various cost associated with inventory. **07**

b) ABC corporation has got a demand for particular part at 10,000 units per year. The cost unit is Rs. 2 and it costa Rs. 36 to place an order and to process the delivery. The inventory carrying cost is estimated at 9 percent of average inventory investment. Determine: **07**
i) EOQ,
ii) Optimum number of orders to be placed per annum.
iii) Minimum total cost of inventory per annum.

Q.6	**a)**	Explain with block diagram value analysis procedure.	**07**
	b)	Explain in details term JIT and KAIZEN.	**07**
Q.7	**Attempt the following: (Any Two)**		
	a)	ABC Analysis	**07**
	b)	Preventive and break down maintenance.	**07**
	c)	TPM	**07**

Seat No.		Set	R

Fourth. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Production and Operations Management (BTN02706)

Day & Date: Thursday, 05-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Short term forecasting involves period of ____.
a) Less than one year b) One of three year
c) Above three years d) None of the above

2) Gantt chart is mostly used for ____.
a) Routing b) Scheduling
c) Forecasting d) Inspection and quality control

3) Just-In-Time was successfully implemented by ____.
a) Toyota b) Honda
c) Suzuki d) Volkswagen

4) "ABC" analysis is done by arranging items in decreasing order of ____.
a) Total Inventory costs b) Item value
c) Annual usage valued d) Item demand

5) Which kind of labor force is required in case of Job-shop Production?
a) Highly Skilled b) Semi-skilled
c) Unskilled d) Any of the above

6) Sales forecasts are based on estimates of ____.
a) Demand b) Supply
c) Demand and supply d) None of the above

7) Payback Period Criteria is used for ____.
a) Capacity planning b) Forecasting
c) Production control d) Investment decisions

8) The correct sequence of operations in production planning and control is ____.
a) Routing-Scheduling-Dispatching-Follow up
b) Scheduling-Routing-Dispatching-Follow up
c) Dispatching-Routing-Scheduling-Follow up
d) Routing-Scheduling-Follow up-Dispatching

9) TPM Means ____.
a) Total Production Management
b) Total Process Management
c) Total Productive Maintenance
d) None of these

10) JIT is targeted for ____.
a) Average inventory b) Zero inventory
c) High inventory d) None of the above

11) Who has developed Economic lot size (EOQ) model?
a) F. B. Gilbreth b) F. W. Harris
c) T. H. C. Tippett d) None of the above

12) Which of the following statement is correct?
a) A-B-C analysis is based on pareto's principle
b) Simulation can be used for inventory control
c) Economic order quality formula ignores variations in demand pattern
d) All of the above

13) Regression method of forecasting is applicable mainly for ____.
a) Casual models b) Qualitative forecasting
c) Delphi method d) Time-sense model

14) Systematic plant maintenance is called ____.
a) Corrective maintenance b) Break-down maintenance
c) Operational maintenance d) Preventive maintenance

Set **R**

Fourth. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Production and Operations Management (BTN02706)

Day & Date: Thursday, 05-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks.
3) Draw neat diagram whenever necessary.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** Explain different types of forecasting & also a brief on qualitative forecasting. **07**

b) Following data gives the sales of the company for the various years of the company. **07**
Using 3 yearly moving average method, forecast the sales for the next three years,

Year:	2001	2002	2003	2004	2005	2006	2007
Sale(000units):	80	90	92	83	94	99	92

Q.3 **a)** Explain procedure for capacity planning. **07**

b) Discuss different measures and measurements in capacity planning. **07**

Q.4 **Attempt the following: (Any Two)**

a) Aggregate Planning **07**

b) Co-ordination of PPC with another Department **07**

c) Discuss Follow up, Evolution in PPC **07**

Section – II

Q.5 **a)** With neat sketch explain in brief about inventory cost relationship also state various cost associated with inventory. **07**

b) ABC corporation has got a demand for particular part at 10,000 units per year. The cost unit is Rs. 2 and it costa Rs. 36 to place an order and to process the delivery. The inventory carrying cost is estimated at 9 percent of average inventory investment. Determine: **07**
i) EOQ,
ii) Optimum number of orders to be placed per annum.
iii) Minimum total cost of inventory per annum.

Q.6	**a)**	Explain with block diagram value analysis procedure.	**07**
	b)	Explain in details term JIT and KAIZEN.	**07**
Q.7	**Attempt the following: (Any Two)**		
	a)	ABC Analysis	**07**
	b)	Preventive and break down maintenance.	**07**
	c)	TPM	**07**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Objective Type (Each question carries one mark) **14**

1) What is Artificial Intelligence?
a) A field that aims to make humans more intelligent
b) A field that aims to improve the security
c) A field that aims to develop intelligent machines
d) A field that aims to mine the data

2) Which of the following is the branch of Artificial Intelligence?
a) Machine Learning b) Cyber forensics
c) Full-Stack Developer d) Network Design

3) What is state space?

a) The whole problem
b) Your Definition to a problem
c) Problem you design
d) Representing your problem with variable and parameter

4) What is the form of Fuzzy logic?
a) Two-valued logic b) Crisp set logi
c) Many-valued logic d) Binary set logic

5) The values of the set membership is represented by _____

a) Discrete Set
b) Degree of truth
c) Probabilities
d) Both Degree of truth & Probabilities

6) What is the field of Natural Language Processing (NLP)?
a) Computer Science b) Artificial Intelligence
c) Linguistics d) All of the mentioned

7) What is Machine Translation?
a) Converts one human language to another
b) Converts human language to machine language
c) Converts any human language to English
d) Converts Machine language to human language

8) Which of the factors affect the performance of learner system does not include?
a) Representation scheme used
b) Training scenario
c) Type of feedback
d) Good data structures

9) In language understanding, the levels of knowledge that does not include?
a) Phonological
b) Syntactic
c) Empirical
d) Logical

10) A model of language consists of the categories which does not include?
a) Language units
b) Role structure of units
c) System constraints
d) Structural units

11) What are the essential elements in a Markov Decision Process?
a) States, Model, Probabilities, Stations
b) States, Model, Actions, Rewards
c) Model, Lines, Decisions. Rewards
d) States, Actions

12) In reinforcement learning, the purpose or goal of the agent is formalized in terms of a special signal, called the _____
a) Return
b) State
c) Action
d) Reward

13) What's the main point of difference between human & machine intelligence?
a) human perceive everything as a pattern while machine perceive it merely as data
b) human have emotions
c) human have more IQ & intellect
d) human have sense organs

14) What is plasticity in neural networks?
a) input pattern keeps on changing
b) input pattern has become static
c) output pattern keeps on changing
d) Output is static

Fourth.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Artificial Intelligence and Machine Learning (BTN02707)

Day & Date: Thursday 05-06-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) In Section I, attempt any two questions.
2) In Section II, attempt any two questions.
3) Figure to the right indicate full marks.
4) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Attempt the following questions.
a) Explain applications of Artificial Intelligence. **07**
b) Explain Depth First Search Technique. **07**

Q.3 Attempt the following questions.
a) Define fuzzy logic and explain basic elements of fuzzy logic. **07**
b) Explain advantages and disadvantages of fuzzy logic. **07**

Q.4 Attempt the following.
a) What is Morphology analysis? Discuss in detail. **07**
b) Explain image processing steps with neat sketch. **07**

Section – II

Q.5 Attempt the following.
a) Define machine learning and explain various types of machine learning. **07**
b) Explain applications of machine learning in Mechanical Engineering. **07**

Q.6 Attempt the following.
a) Compare between Supervised learning, Unsupervised learning and Reinforcement learning. **07**
b) Explain various types of Supervised machine learning algorithms. **07**

Q.7 Attempt the following.
a) Define neural network. Explain various types of neural networks. **07**
b) Explain applications of Artificial Neural Network (ANN) in Mechanical Engineering. **07**

Fourth.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Railway Systems Management (BTN02708)

Day & Date: Thursday 05-06-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Weight of the engine is categorized in _____
a) sprung mass b) un-sprung mass
c) non-sprung mass d) dummy mass

2) Tractive force can be increasing by _____
a) reducing the load b) increasing the load
c) reducing friction d) none of this

3) _____ is not a part of VCC used in A/C
a) Evaporator b) Condenser
c) compressor d) deflector

4) _____ Type Air Conditioning units are used in LHB A.C. Coaches now days.
a) RMPU b) RMCU
c) Conventional d) none of these

5) In railway, green light indicates _____
a) Stop b) Proceed
c) Proceed cautiously d) None

6) Electric locomotives in India are manufactured at ____
a) Jamalpur b) Bangalore
c) Chittranjan d) Gorakhpur

7) _____ Locomotive has the highest operational availability.
a) Electric b) Diesel
c) Steam d) None

8) Maintenance consist of the following action(s) _____
a) Replace of component
b) Repair of component
c) Service of component
d) All of the above

9) Belt of an electric motor is broken, it needs _____
a) Corrective maintenance b) Scheduled maintenance
c) Preventive maintenance d) Timely maintenance

10) POH period of maintenance for HHP-Loco is _____
a) 6 years b) 4 years
c) 18 years d) 10 years

11) By 2019 Indian Railways expected _____% bio-toilet coaches.
a) 50 b) 70
c) 40 d) 100

12) _____ is not a stage for fire.
a) propagation b) period of decline
c) flash over d) fully developed

13) _____ is not a Digital Technology used in Traffic Control.
a) RFID b) LiDAR
c) Li-Fi d) Wi-Fi

14) RFID means _____
a) Radio Frequency Identification Tags
b) Radio Frequency Indicative Tub
c) Resonance Frequency Identification Tags
d) None of these

Instructions: 1) Attempt any two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if required.
4) Use of scientific calculator is allowed.

Section – I

Q.2 Attempt the following questions.

a) What are the components of air suspension in the Indian Railway? Elaborate in details. **04**

b) Draw typical passenger Vehicle showing the layout of air conditioning & heating equipment. **05**

c) What is Head on Generation (HOG) technology? Explain in details of HOG. **05**

Q.3 Attempt the following questions.

a) Classify in details the types of braking system in Indian Railway. **04**

b) Explain in details the components of C.B.C coupler. **05**

c) Define tractive force. Write its effects on Diesel locomotives. **05**

Q.4 Attempt the following.

a) Describe D.C electric supply unit for EMU with neat Sketches. **04**

b) Write a short note R.M.P.U in LHB coaches. **05**

c) Classify in details the types of Power supply units. **05**

Section – II

Q.5 Attempt the following questions.

a) Describe the duties & responsibilities of Senior Section Engineer (Diesel locomotives). **04**

b) Explain with neat sketch the Bio-Vacuum toilet system used in Indian railway. **05**

c) Write Short note on RMS in Indian railway. **05**

Q.6 Attempt the following questions.

a) What are different components of Bio-Vacuum toilet system explain in detail. **05**

b) Write short note on Traffic management system in Indian railway. **05**

c) Describe all parts of D.C traction Motor with neat Sketches. **04**

Q.7 Attempt the following.

a) Write in details the Scrap management system in Indian Railway. **04**

b) What is mean by rolling stock management? Which types of rolling stock management used in Indian railway? **05**

c) Which digital technologies in traffic control? Explain RFID in details. **05**

Analysis and Synthesis of Mechanisms (BTN02709)

Day & Date: Thursday 05-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) The analysis of mechanism deals with _____.
a) the determination of input and output angles of a mechanism
b) the determination of dimensions of the links in a mechanism
c) the determination of displacement, velocity and acceleration of the links in a mechanism
d) the determination of number of joints in a mechanism

2) The synthesis of mechanism deals with _____.
a) the determination of input and output angles of a mechanism
b) the determination of dimensions of the links in a mechanism
c) the determination of displacement, velocity and acceleration of the links in a mechanism
d) the determination of number of joints in a mechanism

3) The difference between the desired motion and the actual motion produced is known as _____
a) Structural error b) Mechanical error
c) Graphical error d) Mathematical error

4) The error resulting from tolerance in the length of links and bearing clearance is known as _____
a) Structural error b) Mechanical error
c) Graphical error d) Mathematical error

5) Which of the following is not a kind of synthesis problem?
a) Function generation b) Path generation
c) Body guidance d) Linkage guidance

6) Designing a four-bar mechanism to generate the function y = f(x) is an example of _____

a) Function generation
b) Path generation
c) Body guidance
d) Linkage guidance

7) When a mechanism is required to guide a point, it falls under category of _____ synthesis.

a) Function generation
b) Path generation
c) Body guidance
d) Linkage guidance

8) Synthesis of the mechanism starts with which of the following step?

a) Dimensional synthesis
b) Joints synthesis
c) Number synthesis
d) Type synthesis

9) What do you mean by cognate linkages?

a) The same curve can always be generated by three different linkages
b) The same curve can always be generated by two different linkages
c) The same curve can always be generated by four different linkages
d) The same curve can always be generated by relative position of coupler and driver linkage

10) If the crank rotation angle varies from 45 degrees to 135 degrees, Using three precision points with Chebyshev's spacing, synthesize a slider crank mechanism where displacement of slider is square of the crank rotation. From the above information calculate 'b' in mm.

a) 148.2
b) 158.2
c) 135.7
d) 120.2

11) What is the relation between displacement of slider and crank angle over an interval?

a) Quadratic
b) Directly proportional
c) Linear
d) Inversely proportional

12) Which of the following is true regarding synthesis of mechanisms?

a) It determines the dimensions of the link
b) It determines the input and output angles of the links
c) It determines velocity of link
d) It determines acceleration of link

13) What is the unit of constant of proportionality C used in the relation between displacement of slider and crank angle?

a) m/rad
b) m/s-rad
c) m-s/rad
d) m/s^2

14) From the given data calculate the constant of proportionality, s = 10mm, Ss = 5mm θ = 50 degrees and θs = 45 degrees.

a) 1
b) -1
c) 1/2
d) -1/2

2) Figures to the right indicate full marks.

Section – I

Q.2 Attempt the following questions.
a) Classify various types of spatial mechanisms and mention their applications. **07**
b) Explain Grubbler criterion for spatial mechanism and reduce the form to apply for planer mechanism. **07**

Q.3 Attempt the following questions.
a) Explain various static and dynamic forces exist in mechanisms. **07**
b) Explain kinetostatic analysis of mechanisms. **07**

Q.4 Attempt the following questions.
a) Derive Euler Savary equation. **07**
b) Explain cubic of stationary curvature. **07**

Section – II

Q.5 Attempt the following questions.
a) Explain the concept of Branch and order defects and types of error in kinematic synthesis. **07**
b) Explain two position and three position synthesis of slider crank mechanism. **07**

Q.6 Attempt the following questions.
a) Explain complex number method of synthesis. **07**
b) Derive an expression for coupler's point curve for a four bar linkage. **07**

Q.7 Attempt the following.
a) Explain the concept of Denvit - Hartenberg parameters and their use in the study of spatial mechanism. **07**
b) Explain compatibility condition of synthesis. **07**

d) -1/2

8) The analysis of mechanism deals with _____.

a) the determination of input and output angles of a mechanism
b) the determination of dimensions of the links in a mechanism
c) the determination of displacement, velocity and acceleration of the links in a mechanism
d) the determination of number of joints in a mechanism

9) The synthesis of mechanism deals with _____.

a) the determination of input and output angles of a mechanism
b) the determination of dimensions of the links in a mechanism
c) the determination of displacement, velocity and acceleration of the links in a mechanism
d) the determination of number of joints in a mechanism

10) The difference between the desired motion and the actual motion produced is known as _____

a) Structural error
b) Mechanical error
c) Graphical error
d) Mathematical error

11) The error resulting from tolerance in the length of links and bearing clearance is known as _____

a) Structural error
b) Mechanical error
c) Graphical error
d) Mathematical error

12) Which of the following is not a kind of synthesis problem?

a) Function generation
b) Path generation
c) Body guidance
d) Linkage guidance

13) Designing a four-bar mechanism to generate the function y = f(x) is an example of _____

a) Function generation
b) Path generation
c) Body guidance
d) Linkage guidance

14) When a mechanism is required to guide a point, it falls under category of _____ synthesis.

a) Function generation
b) Path generation
c) Body guidance
d) Linkage guidance

Set **Q**

Fourth.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Analysis and Synthesis of Mechanisms (BTN02709)

Day & Date: Thursday 05-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Figures to the right indicate full marks.

Section – I

Q.2 Attempt the following questions.
a) Classify various types of spatial mechanisms and mention their applications. **07**
b) Explain Grubbler criterion for spatial mechanism and reduce the form to apply for planer mechanism. **07**

Q.3 Attempt the following questions.
a) Explain various static and dynamic forces exist in mechanisms. **07**
b) Explain kinetostatic analysis of mechanisms. **07**

Q.4 Attempt the following questions.
a) Derive Euler Savary equation. **07**
b) Explain cubic of stationary curvature. **07**

Section – II

Q.5 Attempt the following questions.
a) Explain the concept of Branch and order defects and types of error in kinematic synthesis. **07**
b) Explain two position and three position synthesis of slider crank mechanism. **07**

Q.6 Attempt the following questions.
a) Explain complex number method of synthesis. **07**
b) Derive an expression for coupler's point curve for a four bar linkage. **07**

Q.7 Attempt the following.
a) Explain the concept of Denvit - Hartenberg parameters and their use in the study of spatial mechanism. **07**
b) Explain compatibility condition of synthesis. **07**

Seat No.	

Set **R**

Fourth.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Analysis and Synthesis of Mechanisms (BTN02709)

Day & Date: Thursday 05-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) What is the relation between displacement of slider and crank angle over an interval?
a) Quadratic
b) Directly proportional
c) Linear
d) Inversely proportional

2) Which of the following is true regarding synthesis of mechanisms?
a) It determines the dimensions of the link
b) It determines the input and output angles of the links
c) It determines velocity of link
d) It determines acceleration of link

3) What is the unit of constant of proportionality C used in the relation between displacement of slider and crank angle?
a) m/rad
b) m/s-rad
c) m-s/rad
d) m/s^2

4) From the given data calculate the constant of proportionality, s = 10mm, Ss = 5mm θ = 50 degrees and θs = 45 degrees.
a) 1
b) -1
c) 1/2
d) -1/2

5) The analysis of mechanism deals with _____.
a) the determination of input and output angles of a mechanism
b) the determination of dimensions of the links in a mechanism
c) the determination of displacement, velocity and acceleration of the links in a mechanism
d) the determination of number of joints in a mechanism

6) The synthesis of mechanism deals with _____.
   a) the determination of input and output angles of a mechanism
   b) the determination of dimensions of the links in a mechanism
   c) the determination of displacement, velocity and acceleration of the links in a mechanism
   d) the determination of number of joints in a mechanism

7) The difference between the desired motion and the actual motion produced is known as _____
   a) Structural error b) Mechanical error
   c) Graphical error d) Mathematical error

8) The error resulting from tolerance in the length of links and bearing clearance is known as _____
   a) Structural error b) Mechanical error
   c) Graphical error d) Mathematical error

9) Which of the following is not a kind of synthesis problem?
   a) Function generation b) Path generation
   c) Body guidance d) Linkage guidance

10) Designing a four-bar mechanism to generate the function y = f(x) is an example of _____
   a) Function generation b) Path generation
   c) Body guidance d) Linkage guidance

11) When a mechanism is required to guide a point, it falls under category of _____ synthesis.
   a) Function generation b) Path generation
   c) Body guidance d) Linkage guidance

12) Synthesis of the mechanism starts with which of the following step?
   a) Dimensional synthesis b) Joints synthesis
   c) Number synthesis d) Type synthesis

13) What do you mean by cognate linkages?
   a) The same curve can always be generated by three different linkages
   b) The same curve can always be generated by two different linkages
   c) The same curve can always be generated by four different linkages
   d) The same curve can always be generated by relative position of coupler and driver linkage

14) If the crank rotation angle varies from 45 degrees to 135 degrees, Using three precision points with Chebyshev's spacing, synthesize a slider crank mechanism where displacement of slider is square of the crank rotation. From the above information calculate 'b' in mm.
   a) 148.2 b) 158.2
   c) 135.7 d) 120.2

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) If supply & demand both shift outward, but demand shifts outward more than supply, the equilibrium price _____.
a) will increase & quantity will increase
b) will increase & quantity will decrease
c) will decrease & quantity will decrease
d) will decrease & quantity will increase

2) Bread and butter have _____.
a) negative CPED b) positive CPED
c) positive IED d) negative IED

3) Maximum ceiling price must be _____.
a) below the equilibrium price
b) same as the equilibrium price
c) above the equilibrium price
d) same as production cost

4) Higher angle of incidence indicates _____.
a) higher loss b) higher profit
c) higher fixed cost d) lower variable cost

5) Cost that cannot be shown in a statement is known as _____.
a) opportunity cost b) incremental cost
c) direct cost d) current cost

6) Cost of welding rods is an example of _____.
a) direct material cost b) sunk cost
c) economist's cost d) indirect material cost

7) Which of the following reduces time value of money?
a) Hike in prices b) Inflation
c) Devaluation of currency d) All of above

8) Replacing casting by forging is an example of _____.
a) raw material substitution b) product modification
c) process modification d) design modification

9) _____ favours 'make' decision.
a) Higher fixed cost b) Protection of own patent
c) Availability of vendors d) Less production volume

10) Anticipating the possible failure is an essential feature of _____ maintenance.
a) Breakdown b) Opportunistic
c) Routine d) Predictive

11) For an asset, _____.
a) economic life < useful life b) useful life < economic life
c) physical life < useful life d) physical life < economic life

12) Pollution is considered in _____ appraisal.
a) Social b) Technical
c) Ecological d) Economic

13) Feasibility study is done in _____ stage of project management life cycle.
a) Execution b) Initial
c) Planning d) Closeout

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Cost of welding rods is an example of _____.
a) direct material cost b) sunk cost
c) economist's cost d) indirect material cost

2) Which of the following reduces time value of money?
a) Hike in prices b) Inflation
c) Devaluation of currency d) All of above

3) Replacing casting by forging is an example of _____.
a) raw material substitution b) product modification
c) process modification d) design modification

4) _____ favours 'make' decision.
a) Higher fixed cost b) Protection of own patent
c) Availability of vendors d) Less production volume

5) Anticipating the possible failure is an essential feature of _____ maintenance.
a) Breakdown b) Opportunistic
c) Routine d) Predictive

6) For an asset, _____.
a) economic life < useful life b) useful life < economic life
c) physical life < useful life d) physical life < economic life

7) Pollution is considered in _____ appraisal.
a) Social b) Technical
c) Ecological d) Economic

8) Feasibility study is done in _____ stage of project management life cycle.

a) Execution
b) Initial
c) Planning
d) Closeout

9) Which of the following is the correct sequence of steps in value engineering?

a) creating, blasting, refining
b) refining, creating, blasting
c) blasting, creating, refining
d) creating, refining, blasting

10) If supply & demand both shift outward, but demand shifts outward more than supply, the equilibrium price _____.

a) will increase & quantity will increase
b) will increase & quantity will decrease
c) will decrease & quantity will decrease
d) will decrease & quantity will increase

11) Bread and butter have _____.

a) negative CPED
b) positive CPED
c) positive IED
d) negative IED

12) Maximum ceiling price must be _____.

a) below the equilibrium price
b) same as the equilibrium price
c) above the equilibrium price
d) same as production cost

13) Higher angle of incidence indicates _____.

a) higher loss
b) higher profit
c) higher fixed cost
d) lower variable cost

14) Cost that cannot be shown in a statement is known as _____.

a) opportunity cost
b) incremental cost
c) direct cost
d) current cost

Fourth.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Business Economics (BTN02710)

Day & Date: Thursday, 05-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Solve any two questions from each section.
2) Use of scientific calculator is allowed.
3) Figures to right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.

SECTION – I

Q.2 **a)** Explain law of supply and relation between demand & supply. **08**
b) Sudhir is currently investing money in a bank account having a nominal 7 % interest compounded annually. If he invests Rs. 50000 today, how many years will it take for his account to grow to Rs. 600000? **06**

Q.3 **a)** Explain graphically 'Break Even Analysis' stating important expressions. **08**
b) Sneha wants her savings to yield Rs. 800000 at the end of six years. How much should she deposit today if interest rate is fixed at 8% compounded annually. **06**

Q.4 **a)** Explain in brief the following terms. **08**
i) factory cost
ii) prime cost
iii) incremental cost
iv) implicit cost
b) Describe 'indifference curves' graphically. **06**

SECTION – II

Q.5 **a)** Explain various aspects of make or buy decision. **08**
b) Explain with a block diagram 'project management life cycle'. **06**

Q.6 **a)** Explain the importance of 'value analysis' with a suitable example. **08**
b) Explain in details C.B.M. **06**

Q.7 **a)** Explain various lives of an asset. **08**
b) What do you mean by process modification and why is it needed? **06**

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Advanced topics in robotics (BTN02718)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).
5) Use of non-programmable scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) From the following which is the types of Automated Guided Vehicle (AGV)?
a) Driver less train b) Pallet trucks
c) Unit load carriers d) All of the above

2) _____ is a general purpose, programmable machine possessing certain human like characteristics.
a) Robot b) Manipulator
c) Gripper d) None of the above

3) _____ is a collection of mechanical linkage connected by joints.
a) End effector b) Gripper
c) Sensor d) Manipulator

4) From which of the following is robot programming language?
a) VAL b) AML
c) ABD d) Both a & b

5) Up and down motion along an axis known as _____ in robotics.
a) Pitch b) Roll
c) Yaw d) None of the above

6) In which of the following areas are Robots currently being used?
a) Industry b) Medicine
c) Consumer electronics d) All of these

7) From which of the following is benefit of robot?
a) Variety of task b) Computer control
c) Repetitive task d) All of the above

8) _____ is the name for space inside which a robot unit operates.
a) environment b) spatial base
c) exclusion zone d) work envelope

9) Technology that is concerned with the use of mechanical, electronic and computer-based systems in the operation and control of production?
a) Mechanization b) Automation
c) Industrialization d) All the above

10) Unmanned Ground Vehicles (UGV) are primarily designed for: _____
a) Aerial surveillance
b) Underwater exploration
c) Ground-based tasks without human intervention
d) Space exploration

11) _____ maintenance of robot is the case when the maintenance is done at periodic intervals.
a) Preventive b) Predictive
c) Remedial d) All of the above

12) MARR stands for _____ in economic analysis.
a) Mean Annual Rate of Return
b) Minimum Annual Rate of Return
c) Minimum Attractive Rate of Return
d) Maximum Annual Rate of Return

13) Slip in the context of WMR refers to: _____
a) Smooth motion on flat surfaces
b) The loss of traction and wheel slippage
c) Precise positioning on uneven terrain
d) Reducing the wheel diameter

14) The estimated value of robot at the end of its useful life is called _____.
a) Depreciation cost b) MARR
c) ROI d) Salvage value

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the primary goal of automation in manufacturing?
a) Reduce workforce
b) Increase production speed and efficiency
c) Decrease product quality
d) Increase manual labour

2) Which of the following is an example of a basic automated process?
a) Handcrafting b) 3D printing
c) Wood carving d) Sewing by hand

3) What is the purpose of 3D CAD modeling in the manufacturing process?
a) Creating physical prototypes b) Designing user interfaces
c) Modeling 2D graphics d) Drafting blueprints

4) Which 3D printing technology is associated with the acronym "SLA"?
a) Solid Ground Curing (SGC) System
b) Solid Creation System
c) 3D Systems SLA
d) EOS' Stereos System

5) What does "SGC" stand for in 3D printing technology?
a) Solid Ground Curing b) Solid Creation System
c) Stereolithography d) Selective Laser Sintering

6) What does CAD stand for?
a) Computer-Aided Design b) Computer-Aided Development
c) Computer-Activated Drawing d) Computer-Appointed Diagram

7) In feature-based 3D CAD modeling, what are "features"?
   a) Specific design elements with no parametric relations
   b) Geometric shapes that cannot be edited
   c) Parametric design elements like holes, fillets, and extrusions
   d) 3D scans of physical objects

8) What is the primary goal of Rapid Tooling?
   a) To produce high-quality, long-lasting molds
   b) To create functional prototypes quickly
   c) To handcraft tools for manufacturing
   d) To minimize the use of technology in tooling

9) Rapid Tooling is often used in which phase of product development?
   a) Conceptual design
   b) Mass production
   c) Market research
   d) Distribution

10) Which of the following is NOT a key advantage of Rapid Tooling?
   a) Cost-effectiveness
   b) High tool durability
   c) Short lead times
   d) Increased design flexibility

11) What does "STL" stand for in the context of 3D printing?
   a) Stereolithography
   b) Standard Triangle Language
   c) Structured Text Language
   d) Solid Transition Layer

12) What is the primary purpose of an STL file in 3D printing?
   a) Storing color information for 3D models
   b) Defining the dimensions of a 3D printer
   c) Describing the geometry of a 3D object
   d) Managing printer firmware

13) What is post-processing in the context of 3D printing?
   a) The initial setup of a 3D printer
   b) The process of designing 3D models
   c) Additional treatments or finishing steps after 3D printing
   d) The method of slicing 3D models for printing

14) Which phase of 3D printing involves post-processing?
   a) Modeling
   b) Printing
   c) Design
   d) Finishing

Q.1 Choose the correct Answer. **14**

1) What is the primary goal of Rapid Tooling?
a) To produce high-quality, long-lasting molds
b) To create functional prototypes quickly
c) To handcraft tools for manufacturing
d) To minimize the use of technology in tooling

2) Rapid Tooling is often used in which phase of product development?
a) Conceptual design b) Mass production
c) Market research d) Distribution

3) Which of the following is NOT a key advantage of Rapid Tooling?
a) Cost-effectiveness b) High tool durability
c) Short lead times d) Increased design flexibility

4) What does "STL" stand for in the context of 3D printing?
a) Stereolithography b) Standard Triangle Language
c) Structured Text Language d) Solid Transition Layer

5) What is the primary purpose of an STL file in 3D printing?
a) Storing color information for 3D models
b) Defining the dimensions of a 3D printer
c) Describing the geometry of a 3D object
d) Managing printer firmware

6) What is post-processing in the context of 3D printing?
a) The initial setup of a 3D printer
b) The process of designing 3D models
c) Additional treatments or finishing steps after 3D printing
d) The method of slicing 3D models for printing

7) Which phase of 3D printing involves post-processing?
a) Modeling b) Printing
c) Design d) Finishing

8) What is the primary goal of automation in manufacturing?
a) Reduce workforce
b) Increase production speed and efficiency
c) Decrease product quality
d) Increase manual labour

9) Which of the following is an example of a basic automated process?
a) Handcrafting b) 3D printing
c) Wood carving d) Sewing by hand

10) What is the purpose of 3D CAD modeling in the manufacturing process?
a) Creating physical prototypes b) Designing user interfaces
c) Modeling 2D graphics d) Drafting blueprints

11) Which 3D printing technology is associated with the acronym "SLA"?
a) Solid Ground Curing (SGC) System
b) Solid Creation System
c) 3D Systems SLA
d) EOS' Stereos System

12) What does "SGC" stand for in 3D printing technology?
a) Solid Ground Curing b) Solid Creation System
c) Stereolithography d) Selective Laser Sintering

13) What does CAD stand for?
a) Computer-Aided Design b) Computer-Aided Development
c) Computer-Activated Drawing d) Computer-Appointed Diagram

14) In feature-based 3D CAD modeling, what are "features"?
a) Specific design elements with no parametric relations
b) Geometric shapes that cannot be edited
c) Parametric design elements like holes, fillets, and extrusions
d) 3D scans of physical objects

Set **Q**

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Advanced topics on 3D Printing (BTN02719)

Day & Date: Friday 06-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 2 is compulsory in section I, and solve any two questions from the remaining. Q. No. 6 is compulsory in section II, and solve any two questions from the remaining
2) Use if scientific calculator is allowed.
3) Figures to the right indicate full marks.
4) Assume suitable data if required.

Section – I

Q.2	Enlist the types of 3D printing technologies and illustrate any 01 with neat sketch.	**10**
Q.3	Compare Automated processes in w.r.t 3D printing.	**09**
Q.4	Elaborate the Stratasys's Fused Deposition Modeling process with applications.	**09**
Q.5	Discuss feature-based 3D CAD modeling.	**09**

Section – II

Q.6	Enlist different types of Indirect tooling. Explain any 01 with neat sketch.	**10**
Q.7	What is meant by Rapid Tooling? Discuss Architecture of Rapid Tooling Integrated Manufacturing system.	**09**
Q.8	Discuss common errors in CAD to STL conversion.	**09**
Q.9	Describe techniques for improvement in surface finish and geometry in 3D Printing.	**09**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Kyto Protocol launched in _____.
a) India b) Japan
c) China d) U.S.A.

2) The time taken by the project to pay for itself is called as _____.
a) Pay hold period b) Payback period
c) a & b d) None of the Above

3) Source of energy in the biosphere is _____.
a) Producer b) Decomposer
c) Sunlight d) Heat of earth

4) "Bet on Climate change was won by _____."
a) Eherlich b) Watson
c) Jorge d) Simon

5) Which is the following is Environmental impact?
a) Soil damage b) Gas leakage
c) Air pollution d) Temperature

6) NPV stands for _____
a) Net Protect Value b) Net Present value
c) a & b d) None of the Above

7) Simon-Erich bet on planet was formalized on Sep 29, 1980.
a) True b) False

8) Major Challenge in solar power plant _____
a) Water b) Solar Panels
c) Land Acquisition d) Money

9) EIA Stands for Environmental Impact Assessment.
a) True b) False

10) Carbon credits also called as _____
a) Carbon b) Pollution
c) Emission d) Carbon Offset

11) National Solar Mission launched in _____
a) Jan 2011 b) Jan 2023
c) Jan 2022 d) Jan 2010

12) Which of the following Energy Resources is renewable?
a) Coal b) Hydropower plan
c) Natural gas d) Petroleum

13) Preferences are nothing but Choice given by person.
a) True b) False

2) Figures to the right indicate full marks.
3) Assume suitable data, diagrams if required.
4) Use of scientific calculator is allowed.

Section – I

Q.2 Solve:

a) What are the Energy Resources? Explain the primary Energy Analysis. **04**

b) Explain in detail the "National Solar Mission". **05**

c) What is the meaning of "Quality of Life"? How it is increases by Energy? **05**

Q.3 Solve:

a) Explain Following terms. **04**
i) Kaya identity ii) Emission Factor

b) Explain the Linkage between "Energy & Development." **05**

c) Write a short note on "Global Energy use in India". **05**

Q.4 Solve:

a) Write a short note on "Country Energy Balance". **04**

b) What is the Net present value? Explain positive & Negative NPV of energy Economics. **05**

c) Explain following terms **05**
i) Energy Inequality ii) Energy Security

Section – II

Q.5 Solve:

a) Explain the term "Carbon Credits". **04**

b) Explain the term "Climate Change from Green House Gases CO_2 Emission". **05**

c) What is Hoteling rule? Explain the terms "Utility & Preferences of energy". **05**

Q.6 Solve:

a) Define Pollution and Explain types of Pollution in detailed. **04**

b) Write a short note on “Kayto Protocol” of Energy & Environment. **05**

c) Write a short note on “Global Warming”. **05**

Q.7 Solve:

a) What is Energy Analysis? Explain in detailed “Future energy demand & Supply of energy Analysis.” **04**

b) Explain “Preferences & Utility” of energy. **05**

a) True b) False

5) Carbon credits also called as _____
a) Carbon b) Pollution
c) Emission d) Carbon Offset

6) National Solar Mission launched in _____
a) Jan 2011 b) Jan 2023
c) Jan 2022 d) Jan 2010

7) Which of the following Energy Resources is renewable?
a) Coal b) Hydropower plan
c) Natural gas d) Petroleum

8) Preferences are nothing but Choice given by person.
a) True b) False

9) The main Constitute of biogas is _____.
a) Methane b) Carbon dioxide
c) Hydrogen d) HCL

10) Kyto Protocol launched in _____.
a) India b) Japan
c) China d) U.S.A.

11) The time taken by the project to pay for itself is called as _____.
a) Pay hold period b) Payback period
c) a & b d) None of the Above

12) Source of energy in the biosphere is _____.
a) Producer b) Decomposer
c) Sunlight d) Heat of earth

13) "Bet on Climate change was won by _____."
a) Eherlich b) Watson
c) Jorge d) Simon

14) Which is the following is Environmental impact?
a) Soil damage b) Gas leakage
c) Air pollution d) Temperature

Seat No.		Set	S

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Energy Resources, Economics and Environment (BTN02716)

Day & Date: Friday, 06-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Answer any two questions form Section I and Section II.
2) Figures to the right indicate full marks.
3) Assume suitable data, diagrams if required.
4) Use of scientific calculator is allowed.

Section – I

Q.2 Solve:

a) What are the Energy Resources? Explain the primary Energy Analysis. **04**

b) Explain in detail the "National Solar Mission". **05**

c) What is the meaning of "Quality of Life"? How it is increases by Energy? **05**

Q.3 Solve:

a) Explain Following terms. **04**
i) Kaya identity ii) Emission Factor

b) Explain the Linkage between "Energy & Development." **05**

c) Write a short note on "Global Energy use in India". **05**

Q.4 Solve:

a) Write a short note on "Country Energy Balance". **04**

b) What is the Net present value? Explain positive & Negative NPV of energy Economics. **05**

c) Explain following terms **05**
i) Energy Inequality ii) Energy Security

Section – II

Q.5 Solve:

a) Explain the term "Carbon Credits". **04**

b) Explain the term "Climate Change from Green House Gases CO_2 Emission". **05**

c) What is Hoteling rule? Explain the terms "Utility & Preferences of energy". **05**

Q.6 Solve:

a) Define Pollution and Explain types of Pollution in detailed. **04**

b) Write a short note on “Kayto Protocol” of Energy & Environment. **05**

c) Write a short note on “Global Warming”. **05**

Q.7 Solve:

a) What is Energy Analysis? Explain in detailed “Future energy demand & Supply of energy Analysis.” **04**

b) Explain “Preferences & Utility” of energy. **05**

c) Write a short note on “Betting on Planet Simons change.” **05**

Fourth. Y. (B. Tech) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Advanced Topics in Electric Vehicles (BTN02717)

Day & Date: Friday, 06-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the role of the catalyst in a fuel cell?
a) It conducts electrons from the cathode to the anode.
b) It facilitates the reaction between hydrogen and oxygen.
c) It blocks the flow of protons through the membrane.
d) It stores energy for later use.

2) What is the primary function of a fuel cell?
a) To store energy
b) To convert fuel into heat
c) To convert chemical potential energy into electrical energy
d) To generate mechanical power

3) Which component in an electric vehicle's traction control system is responsible for processing data from various sensors and making real-time control decisions?
a) Battery pack b) Electric motor
c) Traction control module d) Headlights

4) Traction control systems in electric vehicles often work in conjunction with: _____
a) Windshield wipers b) Air conditioning systems
c) Stability control systems d) AM/FM radios

5) Which type of diode is designed to emit light when forward-biased?
a) Zener diode b) Schottky diode 1
c) Light-emitting diode (LED) d) Varactor diode

6) IGBTs combine the advantages of which two types of transistors?
a) Diode and BJT b) BJT and MOSFET
c) Diode and MOSFET d) Thyristor and BJT

7) Which layer of autonomy involves full human control with no automation?
a) Layer 0 b) Layer 1
c) Layer 2 d) Layer 3

8) What is the primary goal of Advanced Driver Assistance Systems (ADAS)?
a) Enhancing driver distraction
b) Reducing driver involvement
c) Increasing the likelihood of accidents
d) Enhancing road safety and driver convenience

9) In robotics, what is the main goal of path planning?
a) Maximizing fuel efficiency
b) Finding the shortest path between two points
c) Avoiding obstacles while reaching a target destination
d) Minimizing manufacturing costs

10) Which of the following is an advantage of regenerative braking in electric vehicles?
a) Increased brake pad wear
b) Improved energy efficiency and extended range
c) Reduced battery capacity
d) Higher energy consumption

11) When it comes to electric vehicle safety, what should first responders be trained to do?
a) Approach the vehicle without protective gear
b) Assume that EV accidents are identical to accidents involving 1traditional vehicles
c) Identify and follow proper shutdown procedures for the high-voltage system
d) Open the vehicle's battery compartment to check for damage

12) Which of the following is a potential security concern associated with IoT in EVs?
a) Enhanced vehicle tracking for theft prevention
b) Unauthorized access and control of vehicle functions
c) Improved vehicle-to-vehicle communication
d) Reduced risk of accidents

13) What is the primary benefit of charging EVs from renewable energy sources such as solar or wind power?
a) Lowering the vehicle's weight
b) Reducing greenhouse gas emissions
c) Increasing the need for battery replacement
d) Making EV charging more expensive

14) What is the primary concept behind battery swap stations for EVs?
a) Charging EVs using solar power
b) Replacing the entire battery with a fully charged one
c) Enhancing vehicle aesthetics
d) Installing additional batteries in EVs

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following best defines entrepreneurship?
a) The art of managing resources effectively
b) The process of identifying and exploiting opportunities for innovation
c) The ability to manage employees efficiently
d) The ownership of a business

2) Which of the following is NOT a direct benefit of entrepreneurial activity?
a) Job creation b) Economic growth
c) Environmental degradation d) Innovation

3) Why is entrepreneurship important for economic development?
a) It ensures government control over the economy
b) It drives industrial growth and innovation
c) It reduces competition in the market
d) It discourages private investments

4) Which is NOT a characteristic of a successful entrepreneur?
a) Risk-taking
b) Dependence on others for decision-making
c) Creativity
d) Resilience

5) Which of the following is NOT a focus area of EDPs?
a) Enhancing entrepreneurial motivation
b) Providing technical skills
c) Addressing workforce grievances
d) Developing business planning skills

6) The curriculum of an EDP typically includes: ____.
   a) Leadership training, market research, and financial planning
   b) Personal grooming sessions
   c) Political campaign management
   d) Meditation and yoga classes

7) Which phase involves mentoring and providing ongoing support?
   a) Pre-training phase
   b) Classroom training phase
   c) Post-training phase
   d) Feedback collection phase

8) A brainstorming session is an example of: ____.
   b) Individual idea generation
   b) Group-based idea generation
   c) SWOT analysis
   d) Market segmentation

9) The most critical factor in identifying business ideas is: ____.
   a) Capital investment
   b) Feasibility and market demand
   c) Presence of competition
   d) Company size

10) The lean canvas model is primarily used for: ____.
   a) Creating a detailed market report
   b) Designing product prototypes
   c) Tracking financial performance
   d) Quickly summarizing a business idea

11) The break-even point indicates: ____.
   a) The maximum profit achievable
   b) The level of sales where total revenue equals total cost
   c) The minimum investment required
   d) The net income after taxes

12) MSMEs contribute significantly to: ____.
   a) Importing raw materials
   b) National employment and GDP growth
   c) Stock market stability
   d) Increasing government expenditure

13) What is the first step in setting up a small business unit?
   a) Preparing a project report
   b) Registering the business
   c) Identifying the business opportunity
   d) Securing funding

14) Which government policy specifically focuses on the promotion of MSMEs?
   a) MSME Development Act, 2006
   b) Start-up India Policy
   c) Make in India Initiative
   d) Digital India Programme

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Entrepreneurship Development (BTN02711)

Day & Date: Monday, 09-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) A brainstorming session is an example of: ____.
b) Individual idea generation b) Group-based idea generation
c) SWOT analysis d) Market segmentation

2) The most critical factor in identifying business ideas is: ____.
a) Capital investment b) Feasibility and market demand
c) Presence of competition d) Company size

3) The lean canvas model is primarily used for: ____.
a) Creating a detailed market report
b) Designing product prototypes
c) Tracking financial performance
d) Quickly summarizing a business idea

4) The break-even point indicates: ____.
a) The maximum profit achievable
b) The level of sales where total revenue equals total cost
c) The minimum investment required
d) The net income after taxes

5) MSMEs contribute significantly to: ____.
a) Importing raw materials
b) National employment and GDP growth
c) Stock market stability
d) Increasing government expenditure

6) What is the first step in setting up a small business unit?
   a) Preparing a project report
   b) Registering the business
   c) Identifying the business opportunity
   d) Securing funding

7) Which government policy specifically focuses on the promotion of MSMEs?
   a) MSME Development Act, 2006
   b) Start-up India Policy
   c) Make in India Initiative
   d) Digital India Programme

8) Which of the following best defines entrepreneurship?
   a) The art of managing resources effectively
   b) The process of identifying and exploiting opportunities for innovation
   c) The ability to manage employees efficiently
   d) The ownership of a business

9) Which of the following is NOT a direct benefit of entrepreneurial activity?
   a) Job creation
   b) Economic growth
   c) Environmental degradation
   d) Innovation

10) Why is entrepreneurship important for economic development?
   a) It ensures government control over the economy
   b) It drives industrial growth and innovation
   c) It reduces competition in the market
   d) It discourages private investments

11) Which is NOT a characteristic of a successful entrepreneur?
   a) Risk-taking
   b) Dependence on others for decision-making
   c) Creativity
   d) Resilience

12) Which of the following is NOT a focus area of EDPs?
   a) Enhancing entrepreneurial motivation
   b) Providing technical skills
   c) Addressing workforce grievances
   d) Developing business planning skills

13) The curriculum of an EDP typically includes: ____.
   a) Leadership training, market research, and financial planning
   b) Personal grooming sessions
   c) Political campaign management
   d) Meditation and yoga classes

14) Which phase involves mentoring and providing ongoing support?

a) Pre-training phase
b) Classroom training phase
c) Post-training phase
d) Feedback collection phase

Set | Q

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Entrepreneurship Development (BTN02711)

Day & Date: Monday, 09-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Answer any two full questions from each Section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions, if required and state them clearly.

Section – I

Q.2	**a)**	Discuss various definitions of entrepreneurship given by notable scholars and their significance.	**07**
	b)	What is corporate entrepreneurship? How does it differ from traditional entrepreneurship?	**07**
Q.3	**a)**	What are the essential qualities and skills required to be a successful entrepreneur?	**07**
	b)	What is Entrepreneurial Development Program (EDPs), and why are they important for fostering entrepreneurship?	**07**
Q.4	**a)**	What funding options can EDPs introduce to entrepreneurs to address financial constraints?	**07**
	b)	Explain the concept of franchising and its benefits for entrepreneurs with limited resources.	**07**

Section – II

Q.5	**a)**	How does brainstorming differ from other idea-generation techniques.	**07**
	b)	What is the lean canvas model, and how is it used by entrepreneurs?	**07**
Q.6	**a)**	What are the essential components of a project report or business plan?	**07**
	b)	What is break-even analysis, and how is it used in decision-making?	**07**
Q.7	**a)**	What are the major differences between micro, small, and medium enterprises?	**07**
	b)	Explain the role of angel investors and venture capitalists in funding startups and SMEs.	**07**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the full form of PERT?
a) Project Evaluation and Review Technique
b) Program Evaluation and Resource Technique
c) Program Estimation and Review Technique
d) Project Estimation and Resource Technique

2) In a balanced assignment problem, the total supply is: _____
a) Less than total demand b) Equal to total demand
c) More than total demand d) Not related to total demand

3) Johnson's Rule is used for: _____
a) Queuing problems
b) Project scheduling
c) Sequencing jobs on machines
d) Linear programming

4) Which method is used to calculate the earliest and latest times in CPM?
a) Backward pass and forward pass
b) Simplex method
c) Johnson's Rule
d) Probability analysis

5) The critical path in a network represents: _____
a) The longest path and minimum time for completion
b) The shortest path and maximum time for completion
c) The longest path and cost minimization
d) None of the above

6) The graphical method of LPP is applicable for how many variables?
a) Two or more b) Two only
c) One only d) Three only

7) For a queuing system, if arrival rate λ\lambda = 5 customers/hour and service rate μ\mu$\mu$ = 10 customers/hour, the traffic intensity (ρ\rho$\rho$) is: _____
a) 0.2 b) 0.5
c) 0.8 d) 2.0

8) In the North-West Corner Rule, allocations start from: _____
b) The cell with the least cost b) The top-left corner
c) The bottom-right corner d) Any random cell

9) What does duality in LPP provide?
a) An alternative optimal solution
b) An infeasible solution
c) A solution to the primal problem
d) Insight into the shadow prices

10) A cash flow diagram is used in: _____
a) PERT analysis b) Linear programming problems
c) Engineering economics d) Transportation problems

11) Which cost is an example of an intangible cost?
a) Labour cost b) Material cost
c) Lost customer goodwill d) Equipment cost

12) What is the purpose of calculating floats in CPM?
a) To reduce the project duration
b) To determine slack in non-critical activities
c) To identify the critical path
d) To calculate the expected completion time

13) What is the objective of linear programming?
a) Maximization or minimization of a linear function
b) Solving non-linear equations
c) Estimating probabilities
d) Scheduling projects

14) The term "waiting line" is associated with: _____
a) Assignment problems b) Queuing theory
c) Sequencing rales d) Transportation models

Seat No.	

Set P

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Operations Research (BTN02712)

Day & Date: Monday, 09-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Answer any two full questions from each Section.
2) Figures to the right indicate full marks.
3) Assume additional suitable data, if necessary and mention it clearly.
4) Use of calculator is allowed.

Section – I

Q.2 **a)** Solve following LPP by Graphical method. **07**
Subjected to, $x_1 + x_2 \leq 30$
$x_2 \geq 3$
$x_2 \leq 12$
$x_1 - x_2 \geq 0$
$0 \leq x_1 \leq 20$

b) Solve the minimal assignment problem whose effectiveness matrix is **07**

	1	2	3	4
I	2	3	4	5
II	4	5	6	7
III	7	8	9	8
IV	3	5	8	4

Q.3 **a)** Consider the following unbalanced transportation problem. **07**

	1	2	3	Supply
A	5	1	7	10
B	6	4	6	80
C	3	2	5	15
Demand	75	20	50	

Since there is not enough supply, some of the demands at these destinations may not be satisfied. Suppose there are penalty costs for every unsatisfied demand unit which are given by 5, 3 and 2 for destination 1, 2, and 3 respectively. Find the optimal solution.

b) Solve Transportation Problem where sell enters are unit costs. **07**

	D1	D2	D3	D4	D5	Available
1	68	35	4	74	15	18
2	57	88	91	3	8	17
3	91	60	75	45	60	19
4	52	53	24	7	82	13
5	51	18	82	13	7	15
Required	16	18	20	14	14	82/82

Q.4 **a)** Solve the following LLP by Graphical Method. $Z = 5x_1 + 7x_2$ **07**

$$x_1 + x_2 \leq 4$$
$$3x_1 + 8x_2 \leq 24$$
$$10x_1 + 7x_2 \leq 35$$
$$x_1, x_2 \geq 0$$

b) What are the different types of models used in Operations Research? Discuss their applications. **07**

Section – II

Q.5 **a)** Explain the differences between CPM and PERT, highlighting their specific uses in project management. **05**

b) Estimated times for the jobs of a project are given below: **09**

Job	A	B	C	D	E	F	G	H	I	J	K	L
Time (Weeks)	13	5	8	10	9	7	7	12	8	9	4	17

The constraints governing the jobs are as follows:
A and B are start jobs; A controls C, D and E; B controls F and J; G depends upon C; H depends on D; E and F control I and L; K follows J; L is also controlled by K; G, H, I and L are the last jobs. Draw the network; determine project duration and the critical path.

Q.6 **a)** A company plans to invest ₹1,00,000 in a project for 5 years at an annual interest rate of 10%. Calculate interest earned at the end of 5 years. **07**

b) There are seven jobs, each of which has to go through the machines A and B in the order AB. Processing times in hours are given as **07**

Job	1	2	3	4	5	6	7
Machine A	3	12	15	6	10	11	9
Machine B	8	10	10	6	12	1	3

Determine a sequence of these jobs that will minimize the total elapsed time T. Also find T and idle time for machines A and B.

Q.7 **a)** Eight jobs 1, 2, …, 8 are to be processed on a single machine. The processing times, due dates and importance weights of the jobs are represented in below table. **09**

Job	Processing Time t_i (Minutes)	Due Date d_i (Minutes)	Importance Weight w_i	T_i / w_i
1	5	15	1	5.0
2	8	10	2	4.0
3	6	15	3	2.0
4	3	25	1	3.0
5	10	20	2	5.0
6	14	40	3	4.7
7	7	45	2	3.5
8	3	50	1	3.0

Assuming that no new jobs arrive thereafter, determine using SPT rule and W'SPT rule

i) Optimal sequence,
ii) Completion time of the jobs,
iii) Mean flow time,
iv) Average in-process inventory,
v) Maximum lateness,
vi) Number of jobs actually late.

b) Discuss the importance of Engineering Economics in decision-making. Explain its applications in engineering projects. **05**

A	5	1	7	10
B	6	4	6	80
C	3	2	5	15
Demand	75	20	50	

Since there is not enough supply, some of the demands at these destinations may not be satisfied. Suppose there are penalty costs for every unsatisfied demand unit which are given by 5, 3 and 2 for destination 1, 2, and 3 respectively. Find the optimal solution.

b) Solve Transportation Problem where sell enters are unit costs. **07**

	D1	D2	D3	D4	D5	Available
1	68	35	4	74	15	18
2	57	88	91	3	8	17
3	91	60	75	45	60	19
4	52	53	24	7	82	13
5	51	18	82	13	7	15
Required	16	18	20	14	14	82/82

Q.4 **a)** Solve the following LLP by Graphical Method. $Z = 5x_1 + 7x_2$ **07**

$$x_1 + x_2 \leq 4$$
$$3x_1 + 8x_2 \leq 24$$
$$10x_1 + 7x_2 \leq 35$$
$$x_1, x_2 \geq 0$$

b) What are the different types of models used in Operations Research? Discuss their applications. **07**

Section – II

Q.5 **a)** Explain the differences between CPM and PERT, highlighting their specific uses in project management. **05**

b) Estimated times for the jobs of a project are given below: **09**

Job	A	B	C	D	E	F	G	H	I	J	K	L
Time (Weeks)	13	5	8	10	9	7	7	12	8	9	4	17

The constraints governing the jobs are as follows:
A and B are start jobs; A controls C, D and E; B controls F and J; G depends upon C; H depends on D; E and F control I and L; K follows J; L is also controlled by K; G, H, I and L are the last jobs. Draw the network; determine project duration and the critical path.

Q.6 **a)** A company plans to invest ₹1,00,000 in a project for 5 years at an annual interest rate of 10%. Calculate interest earned at the end of 5 years. **07**

b) There are seven jobs, each of which has to go through the machines A and B in the order AB. Processing times in hours are given as **07**

Job	1	2	3	4	5	6	7
Machine A	3	12	15	6	10	11	9
Machine B	8	10	10	6	12	1	3

Determine a sequence of these jobs that will minimize the total elapsed time T. Also find T and idle time for machines A and B.

Q.7 **a)** Eight jobs 1, 2, …, 8 are to be processed on a single machine. The processing times, due dates and importance weights of the jobs are represented in below table. **09**

Job	Processing Time t_i (Minutes)	Due Date d_i (Minutes)	Importance Weight w_i	T_i / w_i
1	5	15	1	5.0
2	8	10	2	4.0
3	6	15	3	2.0
4	3	25	1	3.0
5	10	20	2	5.0
6	14	40	3	4.7
7	7	45	2	3.5
8	3	50	1	3.0

Assuming that no new jobs arrive thereafter, determine using SPT rule and W'SPT rule

i) Optimal sequence,
ii) Completion time of the jobs,
iii) Mean flow time,
iv) Average in-process inventory,
v) Maximum lateness,
vi) Number of jobs actually late.

b) Discuss the importance of Engineering Economics in decision-making. Explain its applications in engineering projects. **05**

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Operations Research (BTN02712)

Day & Date: Monday, 09-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which cost is an example of an intangible cost?
a) Labour cost b) Material cost
c) Lost customer goodwill d) Equipment cost

2) What is the purpose of calculating floats in CPM?
a) To reduce the project duration
b) To determine slack in non-critical activities
c) To identify the critical path
d) To calculate the expected completion time

3) What is the objective of linear programming?
a) Maximization or minimization of a linear function
b) Solving non-linear equations
c) Estimating probabilities
d) Scheduling projects

4) The term "waiting line" is associated with: _____
a) Assignment problems b) Queuing theory
c) Sequencing rales d) Transportation models

5) What is the full form of PERT?
a) Project Evaluation and Review Technique
b) Program Evaluation and Resource Technique
c) Program Estimation and Review Technique
d) Project Estimation and Resource Technique

6) In a balanced assignment problem, the total supply is: _____
a) Less than total demand b) Equal to total demand
c) More than total demand d) Not related to total demand

7) Johnson's Rule is used for: _____
a) Queuing problems
b) Project scheduling
c) Sequencing jobs on machines
d) Linear programming

8) Which method is used to calculate the earliest and latest times in CPM?
a) Backward pass and forward pass
b) Simplex method
c) Johnson's Rule
d) Probability analysis

9) The critical path in a network represents: _____
a) The longest path and minimum time for completion
b) The shortest path and maximum time for completion
c) The longest path and cost minimization
d) None of the above

10) The graphical method of LPP is applicable for how many variables?
a) Two or more b) Two only
c) One only d) Three only

11) For a queuing system, if arrival rate λ\lambda = 5 customers/hour and service rate μ\mu$\mu$ = 10 customers/hour, the traffic intensity (ρ\rho$\rho$) is: _____
a) 0.2 b) 0.5
c) 0.8 d) 2.0

12) In the North-West Corner Rule, allocations start from: _____
b) The cell with the least cost b) The top-left corner
c) The bottom-right corner d) Any random cell

13) What does duality in LPP provide?
a) An alternative optimal solution
b) An infeasible solution
c) A solution to the primal problem
d) Insight into the shadow prices

14) A cash flow diagram is used in: _____
a) PERT analysis b) Linear programming problems
c) Engineering economics d) Transportation problems

Set **R**

Fourth. Y. (B. Tech.) (Sem-I) (New) (CBCS) Examination: March/April-2025
MECHANICAL ENGINEERING
Operations Research (BTN02712)

Day & Date: Monday, 09-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Answer any two full questions from each Section.
2) Figures to the right indicate full marks.
3) Assume additional suitable data, if necessary and mention it clearly.
4) Use of calculator is allowed.

Section – I

Q.2 **a)** Solve following LPP by Graphical method. **07**
Subjected to, $x_1 + x_2 \leq 30$
$x_2 \geq 3$
$x_2 \leq 12$
$x_1 - x_2 \geq 0$
$0 \leq x_1 \leq 20$

b) Solve the minimal assignment problem whose effectiveness matrix is **07**

	1	**2**	**3**	**4**
I	2	3	4	5
II	4	5	6	7
III	7	8	9	8
IV	3	5	8	4

Q.3 **a)** Consider the following unbalanced transportation problem. **07**

	1	**2**	**3**	**Supply**
A	5	1	7	10
B	6	4	6	80
C	3	2	5	15
Demand	75	20	50	

Since there is not enough supply, some of the demands at these destinations may not be satisfied. Suppose there are penalty costs for every unsatisfied demand unit which are given by 5, 3 and 2 for destination 1, 2, and 3 respectively. Find the optimal solution.

b) Solve Transportation Problem where sell enters are unit costs. **07**

	D1	D2	D3	D4	D5	Available
1	68	35	4	74	15	18
2	57	88	91	3	8	17
3	91	60	75	45	60	19
4	52	53	24	7	82	13
5	51	18	82	13	7	15
Required	16	18	20	14	14	82/82

Q.4 **a)** Solve the following LLP by Graphical Method. $Z = 5x_1 + 7x_2$ **07**

$$x_1 + x_2 \leq 4$$
$$3x_1 + 8x_2 \leq 24$$
$$10x_1 + 7x_2 \leq 35$$
$$x_1, x_2 \geq 0$$

b) What are the different types of models used in Operations Research? Discuss their applications. **07**

Section – II

Q.5 **a)** Explain the differences between CPM and PERT, highlighting their specific uses in project management. **05**

b) Estimated times for the jobs of a project are given below: **09**

Job	A	B	C	D	E	F	G	H	I	J	K	L
Time (Weeks)	13	5	8	10	9	7	7	12	8	9	4	17

The constraints governing the jobs are as follows:
A and B are start jobs; A controls C, D and E; B controls F and J; G depends upon C; H depends on D; E and F control I and L; K follows J; L is also controlled by K; G, H, I and L are the last jobs. Draw the network; determine project duration and the critical path.

Q.6 **a)** A company plans to invest ₹1,00,000 in a project for 5 years at an annual interest rate of 10%. Calculate interest earned at the end of 5 years. **07**

b) There are seven jobs, each of which has to go through the machines A and B in the order AB. Processing times in hours are given as **07**

Job	1	2	3	4	5	6	7
Machine A	3	12	15	6	10	11	9
Machine B	8	10	10	6	12	1	3

Determine a sequence of these jobs that will minimize the total elapsed time T. Also find T and idle time for machines A and B.

Q.7 **a)** Eight jobs 1, 2, …, 8 are to be processed on a single machine. The processing times, due dates and importance weights of the jobs are represented in below table. **09**

Job	Processing Time t_i (Minutes)	Due Date d_i (Minutes)	Importance Weight w_i	T_i / w_i
1	5	15	1	5.0
2	8	10	2	4.0

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The graphical method of LPP is applicable for how many variables?
a) Two or more b) Two only
c) One only d) Three only

2) For a queuing system, if arrival rate λ\lambda = 5 customers/hour and service rate μ\mu$\mu$ = 10 customers/hour, the traffic intensity (ρ\rho$\rho$) is: _____
a) 0.2 b) 0.5
c) 0.8 d) 2.0

3) In the North-West Corner Rule, allocations start from: _____
b) The cell with the least cost b) The top-left corner
c) The bottom-right corner d) Any random cell

4) What does duality in LPP provide?
a) An alternative optimal solution
b) An infeasible solution
c) A solution to the primal problem
d) Insight into the shadow prices

5) A cash flow diagram is used in: _____
a) PERT analysis b) Linear programming problems
c) Engineering economics d) Transportation problems

6) Which cost is an example of an intangible cost?
a) Labour cost b) Material cost
c) Lost customer goodwill d) Equipment cost

7) What is the purpose of calculating floats in CPM?
a) To reduce the project duration
b) To determine slack in non-critical activities
c) To identify the critical path
d) To calculate the expected completion time

8) What is the objective of linear programming?
a) Maximization or minimization of a linear function
b) Solving non-linear equations
c) Estimating probabilities
d) Scheduling projects

9) The term "waiting line" is associated with: _____
a) Assignment problems b) Queuing theory
c) Sequencing rales d) Transportation models

10) What is the full form of PERT?
a) Project Evaluation and Review Technique
b) Program Evaluation and Resource Technique
c) Program Estimation and Review Technique
d) Project Estimation and Resource Technique

11) In a balanced assignment problem, the total supply is: _____
a) Less than total demand b) Equal to total demand
c) More than total demand d) Not related to total demand

MECHANICAL ENGINEERING
Supply Chain Management (BTN02714)

Day & Date: Monday, 09-June-2025 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required & state it clearly.
5) Use of non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) In the cycle view of Supply Chain, which cycle involves the manufacturer and supplier?
a) Customer Order Cycle b) Procurement Cycle
c) Replenishment Cycle d) Manufacturing Cycle

2) What is the "typology of supply chains" primarily concerned with?
a) Classification of supply chain based on customer needs and product flow
b) Designing warehouse locations
c) Determining the exact number of suppliers
d) Evaluating employee performance

3) Which of the following is NOT a common problem in Supply Chain Management?
a) Bullwhip Effect
b) Poor Inventory Management
c) Low Collaboration among Partners
d) Excessive Focus on Automation

4) What is the main effect of a lack of coordination on supply chain performance?
a) Increased transparency across the supply chain
b) Lower levels of inventory buildup
c) Higher costs and reduced customer satisfaction
d) Improved forecasting accuracy

5) Which of the following strategies can help to achieve coordination in a supply chain?
   a) Siloed decision-making across supply chain members
   b) Establishing a culture of secrecy among partners
   c) Information sharing and collaborative forecasting
   d) Eliminating all intermediaries in the supply chain

6) Structuring supply chain capabilities involves: ____.
   a) Creating separate strategies for marketing and supply chain processes
   b) Building specific skills and infrastructure to support business objectives
   c) Designing independent functions without integration
   d) Avoiding investments in logistics and distribution

7) Matching supply chain design with business strategy focuses on: ___.
   a) Prioritizing low costs irrespective of customer needs
   b) Ensuring the supply chain aligns with the company's competitive priorities
   c) Avoiding flexibility in supply chain operations
   d) Eliminating redundancies regardless of operational risks

8) Which inventory model is best suited for managing demand that is both constant and known?
   a) Economic Order Quantity (EOQ) model
   b) Periodic Review model
   c) Just-in-Time (JIT) inventory system
   d) ABC classification model

9) Which of the following is NOT an impediment to improving supply chain performance?
   a) Lack of information sharing
   b) Advanced technological integration
   c) Resistance to change
   d) Fragmented decision-making

10) Measuring logistics cost in performance evaluation includes which of the following components?
   a) Transportation costs b) Warehousing costs
   c) Inventory holding costs d) All of the above

11) Which of the trends is transforming international supply chain management?
   a) Increased reliance on manual processes
   b) Adoption of digital technologies like AI and blockchain
   c) Reduced focus on sustainability
   d) Avoidance of data-driven decision-making

12) Which of the following best describes "Co-Makership" in supply chain management?

a) A strategy for cost reduction by eliminating partnerships
b) A collaboration where suppliers and manufacturers jointly work to improve product development
c) A conflict management technique between supply chain partners
d) Outsourcing all operations to third-party service providers

13) What role does Distribution Resource Planning (DRP) play in supply chain management?

a) Forecasting customer demand
b) Managing inventory levels across distribution centres
c) Optimizing replenishment schedules
d) All of the above

14) What differentiates World-Class Supply Chain Management from traditional practices?

a) Emphasis on localized operations only
b) Adoption of advanced technology, agility, and customer-centric approaches
c) Complete reliance on manual processes
d) Avoidance of sustainability and innovation

MECHANICAL ENGINEERING
Supply Chain Management (BTN02714)

Day & Date: Monday, 09-June-2025 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Solve any 2 questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if required & state it clearly.
4) Use of non-programmable calculator is allowed.

Section - I

Q.2	**a)**	What are the key problems in Supply Chain Management, and what solutions are suggested?	**05**
	b)	What are the key drivers of Supply Chain Management, and how do they impact its performance?	**05**
	c)	Compare the different types of Supply Chain Management (SCM).	**04**
Q.3	**a)**	Explain the obstacles for achieving coordination in a supply chain.	**05**
	b)	Explain the strategies to achieve better coordination in a supply chain.	**05**
	c)	Explain the methods and strategies for building strategic partnerships and fostering trust within a supply chain.	**04**
Q.4	**a)**	Explain in detail How does a company align its supply chain design with its overall business strategy?	**05**
	b)	Explain the key factors that companies need to consider when developing a global supply chain strategy.	**05**
	c)	Explain companies supply chain structure to support their strategic goals.	**04**

Section - II

Q.5	**a)**	Describe the role of safety stock and the factors affecting its determination.	**05**
	b)	Discuss common inventory models used in supply chain management.	**05**
	c)	Explain forecasting models and their significance in inventory flow management.	**04**
Q.6	**a)**	Discuss the common impediments for improving supply chain performance.	**05**
	b)	Explain the methods to measure logistics costs and performance in a supply chain.	**05**
	c)	Explain How do trends in international supply chain management impact performance measurement.	**04**

Q.7	**a)**	What are the recent developments in supply chain management, and how do they address current challenges?	**05**
	b)	Explain the main characteristics of World-Class Supply Chain Management.	**05**
	c)	Discuss the significance of Distribution Resource Planning (DRP) in supply chain management.	**04**
