T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Design of Steel Structures (CIVPCC-07)

Day & Date: Saturday, 02-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.
5) Use IS 800:2007 and Steel table are allowed after first 30 min.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **14**

1) What is the minimum pitch distance according to IS 800:2007 if d is the bolt diameter?
a) 2d b) d
c) 1.7d d) 2.5d

2) What is the maximum distance between two consecutive bolts (in tension) if the plate thickness is 10 mm?
a) 160 mm b) 200 mm
c) 250 mm d) 180 mm

3) Two plates of 14 mm and 12 mm are joined by fillet weld, the maximum size of fillet weld may be _____.
a) 16.5 b) 15.5
c) 10.5 d) 12.5

4) If the fusion angle between two faces is 110° then the value of constant K is _____.
a) 0.7 b) 0.55
c) 0.65 d) 0.6

5) The maximum effective slenderness ratio for a member if always in tension (other than pretensioned member) is _____.
a) 180 b) 400
c) 250 d) 300

6) The failure mode in which an axially loaded compression member may fail is by _____.
a) local buckling
b) squashing
c) torsional buckling
d) All of these

7) The effective length of a structural steel compression member of length L effectively held in position and restrained against rotation at one end but neither held in position nor restrained against rotation at the other end, is _____.
a) L
b) 1.2 L
c) 0.8 L
d) 2.0 L

8) The yield stress ratio (ε) of Fe 410 grade of steel is _____.
a) 0.25
b) 0.5
c) 0.75
d) 1.0

9) In double lacing system the angle of inclination of lacing bar to the axis of the member should be in the range of _____.
a) 5° to 15°
b) 15° to 40°
c) 40° to 70°
d) 70° to 105°

10) The maximum allowable slenderness ratio of lacing bars in built-up columns is _____.
a) 85
b) 105
c) 145
d) 180

11) What is the effective depth of the web if the top flange restrained against lateral deflection and rotation (depth of web = d)?
a) d/2
b) 2d/3
c) d
d) d/3

12) When electric operated crane carries up to 50t then deflection of the gantry girder should not exceed _____.
a) L/500
b) L/1000
c) L/750
d) L/600

13) The thickness of base plate is determined from the _____.
a) Flexural strength of the plate
b) Shear strength of the plate
c) Bearing strength of the concrete pedestal
d) Punching criteria

14) Which of the following is a flexural member?
a) Stanchion
b) Girt
c) Boom
d) Strut

Seat No.	

Set **P**

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Design of Steel Structures (CIVPCC-07)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. 2 is compulsory; answer any two remaining questions from Section – I.
2) Q. 6 is compulsory; answer any two from remaining questions from Section – II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.
5) Use IS 800:2007 and Steel table are allowed after first 30 mins.

Section – I

Q.2 Solve Following.

a) Differentiate PEB vs Conventional Buildings. **04**

b) Define Shape Factor and derive Shape factor for circle and Square. **06**

Q.3 **a)** Explain different Failure ways Bolted Connections. **03**

b) Two plates of 8 mm and 12 mm thickness are to be connected by butt weld. Joint is subjected to factored tensile load 330kN. Due to some reason weld length is restriction to 120 mm, check safety of joint if: **06**
i) Single groove is provided
ii) Double groove is provided
If the design is unsafe then calculate required effective weld length.

Q.4 Determine the tensile strength of an ISMC 175 when it is connected to gusset plate through the two flanges by two rows of 16mm bolts with a connection length of 200 mm. **09**

Q.5 Design a double angle tie member in a truss carries working load of 130kN. Also design a welded connection, if member is connected with 10 mm thick gusset plate back to back on opposite side. Use Fe 410 steel. **09**

Section – II

Q.6 **a)** Classify the following sections, where fy = 250 MPa. **03**

i) ISMB 400 @ 61.67 Kg/m
ii) ISHB 400 @ 77.4 Kg/m

b) An ISA 200×200×10 used as a strut has the effective length as 3.6 m. Calculate the strength when it is connected by: **07**

i) One bolt at each end
ii) Welded at each end

Q.7 Design a built up column consisting of two rolled Channel sections placed back to back to resist an axial load of 1300kN. The length of the column is 4.12 m. It is restrained against rotation and translation at bottom and restrained against rotation and free at top. Take fy=250MPa. Also design the single lacing system. **09**

Q.8 Design a laterally unsupported beam for the following data: **09**
Effective span = 5 m
Maximum bending moment = 480 kN-m
Maximum shear force = 230 kN
Steel of grade Fe 410

Q.9 A column ISHB 400 @77.4 kg/m carries an axial compressive factored load of 1200 KN. Design a suitable welded slab base. The base rests on M25 grade concrete pedestal. **09**

Seat No.	

Set **Q**

3) Figures to the right indicates full marks.
4) Assume suitable data where needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Solve following Multiple Choice Question: 14

1) The ruling design speed on plain terrain as per IRC for National Highways is _____.
a) 80 km/h b) 100 km/h
c) 120 km/h d) 60 km/h

2) The extra widening required on horizontal curves depends on _____.
a) Speed of vehicle b) Radius of curve
c) Length of vehicle d) All of the above

3) Super elevation is provided on horizontal curves to _____.
a) Reduce frictional demand between tires and road
b) Increase vehicle speed
c) Increase road strength
d) Reduce road length

4) The maximum superelevation in plain and rolling terrain as per IRC is _____.
a) 7% b) 10%
c) 5% d) 12%

5) The length of summit curve is designed with respect to _____.
a) Comfort criteria b) Sight distance
c) Aesthetics d) Pavement strength

6) What is the purpose of dowel bars in rigid pavements?
a) Drainage b) Expansion
c) Load transfer across joints d) Surface friction improvement

7) Which test is used for quality control of bituminous mix in flexible pavement construction?
a) Slump test
b) Los Angeles Abrasion test
c) Marshall Stability test
d) Soundness test

8) Which one of the following is not a step in cement concrete pavement construction?
a) Mixing
b) Compaction
c) Vibration
d) Tack coat application

9) Functional evaluation of pavement primarily assesses ____.
a) Pavement modulus
b) Structural strength
c) Surface distress and ride quality
d) Load carrying capacity

10) Which of the following is a common failure in cement concrete pavement?
a) Rutting
b) Alligator cracking
c) Pumping
d) Polishing

11) What are 'imaginary surfaces' in airport design?
a) Runways not yet constructed
b) Hypothetical boundaries for controlling obstacles
c) Water bodies near airports
d) Painted markings on runways

12) Runway orientation is primarily based on _____.
a) Ground slope
b) Wind direction
c) Terminal location
d) Taxiway alignment

13) What is the function of an exit taxiway?
a) To refuel aircraft
b) To allow aircraft to leave the runway quickly after landing
c) To store baggage
d) To park ground vehicles

14) Heliport site selection must consider _____.
a) Water availability
b) Elevation and surrounding obstacles
c) Runway lighting
d) Fuel pipeline network

Set **P**

T. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Transportation Engineering (CIVPCC-08)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data where needed & mention it clearly.
4) Draw neat sketches wherever necessary.

SECTION – I

Q.2 Solve the following. (Any Four) **16**

a) Explain Principles of Highway planning.

b) Explain road development in India.

c) A vehicle is moving with speed of 88 kmph on descending gradient of 5%. Coefficient of Horizontal friction is 0.37 and reaction time is average of 2-3 seconds. Calculate Stopping Sight Distance (SSD).

d) Explain Tests on subgrade soils (CBR and Plate load tests).

e) Explain various causes of pavement failures.

Q.3 Solve the following. (Any Two) **12**

a) Calculate length of Valley curve required to move the vehicle with design speed of 80 kmph and reaction time of 2.5 seconds. Vehicle is moving with acceding gradient of 5% and then descending gradient of 3%. Coefficient of longitudinal friction is 0.37. Calculate length of valley curve for cases: -
i) L > SSD
ii) L < SSD

b) Explain Tests on aggregates and bituminous materials.

c) A 4 lane 2 ways road is presently carrying traffic of 1000 cvpd, vehicle damage factor is 3.5, rate of traffic growth is 8 % construction period is 2.5 years and design life is 25 years. Design CBR value is 5 %, design the pavement for granular base and sub-base conditions.

SECTION – II

Q.4 Solve the following. (Any Four) **16**

a) Explain Super elevation, Equilibrium cant and cant-deficiency, Gradients and grade compensation in Railway Engineering.

b) State functions of turn outs.

c) Explain in detail Bus transit, metro, mono rail, sky bus, flyovers, underpasses.

d) Explain characteristics of helicopter.

e) Explain Imaginary surfaces in Airport.

Q.5 Solve the following. (Any Two) **12**

a) A 7 degree curve branches off from 3 degree curve in opposite direction. If speed is restricted on branch line as 30 Kmph. permissible cant deficiency is 7.6 cm. Determine speed restriction on main line.

b) Explain Tracks fixtures and fastenings.

c) The length of runway at sea level under standard condition at zero gradient is 1000 m. The airport site is at an elevation of 500 m. The reference temperature is 25°C. The proposed runway permits ascending gradient of 0.4 %. Determine actual length of Runway.

T. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Transportation Engineering (CIVPCC-08)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data where needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Solve following Multiple Choice Question: 14

1) Which one of the following is not a step in cement concrete pavement construction?
a) Mixing b) Compaction
c) Vibration d) Tack coat application

2) Functional evaluation of pavement primarily assesses ____.
a) Pavement modulus
b) Structural strength
c) Surface distress and ride quality
d) Load carrying capacity

3) Which of the following is a common failure in cement concrete pavement?
a) Rutting b) Alligator cracking
c) Pumping d) Polishing

4) What are 'imaginary surfaces' in airport design?
a) Runways not yet constructed
b) Hypothetical boundaries for controlling obstacles
c) Water bodies near airports
d) Painted markings on runways

5) Runway orientation is primarily based on _____.
a) Ground slope b) Wind direction
c) Terminal location d) Taxiway alignment

6) What is the function of an exit taxiway?
a) To refuel aircraft
b) To allow aircraft to leave the runway quickly after landing
c) To store baggage
d) To park ground vehicles

7) Heliport site selection must consider _____.
   a) Water availability
   b) Elevation and surrounding obstacles
   c) Runway lighting
   d) Fuel pipeline network

8) The ruling design speed on plain terrain as per IRC for National Highways is _____.
   a) 80 km/h
   b) 100 km/h
   c) 120 km/h
   d) 60 km/h

9) The extra widening required on horizontal curves depends on _____.
   a) Speed of vehicle
   b) Radius of curve
   c) Length of vehicle
   d) All of the above

10) Super elevation is provided on horizontal curves to _____.
   a) Reduce frictional demand between tires and road
   b) Increase vehicle speed
   c) Increase road strength
   d) Reduce road length

11) The maximum superelevation in plain and rolling terrain as per IRC is _____.
   a) 7%
   b) 10%
   c) 5%
   d) 12%

12) The length of summit curve is designed with respect to _____.
   a) Comfort criteria
   b) Sight distance
   c) Aesthetics
   d) Pavement strength

13) What is the purpose of dowel bars in rigid pavements?
   a) Drainage
   b) Expansion
   c) Load transfer across joints
   d) Surface friction improvement

14) Which test is used for quality control of bituminous mix in flexible pavement construction?
   a) Slump test
   b) Los Angeles Abrasion test
   c) Marshall Stability test
   d) Soundness test

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answers from the given options. 14

1) The ratio of volume of air to volume of voids is called _____.
a) porosity b) percentage voids
c) void ratio d) air content

2) As per IS classification, the soil is classified as coarse grained soil, if ___.
a) The % of soil passing through 75 μ sieve is greater than 50%
b) The % of soil passing through 4.75 mm sieve is greater than 50%
c) The % of soil retained on 75 μ sieve is greater than 50%
d) The % of soil retained on 4.75 mm sieve is greater than 50%

3) In flow net equipotential lines and flow lines intersect each other at an angle of _____.
a) 45-degrees b) 90-degrees
c) 30-degrees d) 60-degrees

4) Coefficient of permeability of a soil _____.
a) Increases with the decrease in temperature.
b) Increases with increase in temperature.
c) Does not depend upon temperature.
d) None of these.

5) Shear strength depends on _____.
a) Cohesion only
b) Angle of internal friction only
c) Both cohesion and angle of internal friction
d) None of these

6) Vane tester is normally used for determining in-situ shear strength of _____.

a) Soft clays
b) Sand
c) Stiff clays
d) Gravel

7) The 'y' intercept of Coulombs failure envelope is equal to _____.

a) Cohesion
b) Maximum shear stress
c) Maximum normal stress
d) Angle of friction

8) Compaction is a process is which _____.

a) Removal of water from the voids of the soil mass
b) Removal of air from the voids of the soil mass
c) Removal of both air and water from the voids of the soil mass
d) None of the above

9) Sheep foot rollers are preferred for _____.

a) Cohesionless soils
b) Cohesive soils
c) All types of soils
d) None of the above

10) In the field, compaction control is done by measuring the _____.

a) dry density
b) moisture content
c) both of these
d) None of these

11) When degree of consolidation is 40%, the time factor Tv is _____.

a) 0.196
b) 0.126
c) 0.158
d) 0.400

12) A change in voids ratio per unit change in pressure is termed as _____.

a) Coefficient of compressibility
b) Coefficient of volume change
c) Coefficient of consolidation
d) None of these

13) The coefficient of passive earth pressure for a bac fill having $\varphi = 35$, as per Rankine's theory is _____.

a) 027
b) 0.33
c) 1.67
d) 3.69

14) During passive earth pressure case the wall _____.

a) Moves towards the backfill
b) Away from the backfill
c) Does not move at all
d) None of the above

Set **P**

T.Y. (B. Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Geotechnical Engineering (CIVPCC-09)

Day & Date: Thursday, 07-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 & Q. No. 6 are compulsory. Attempt any Two from Remaining from each section.
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary & mention it clearly.

SECTION – I

Q.2 Answer the following questions. (Any Four) **08**

a) Define porosity and moisture content.

b) List the various methods of determination of water content.

c) Write a note on consistency of soil.

d) Explain the Darcy's Law.

e) Discuss the limitations of box shear test.

Q.3 a) Derive relation between voids ratio and porosity with the help of three phase diagram. **05**

b) A soil sample is compacted into a cylindrical mould of 10 cm dia 15 cm high. The weight of moist sample was 2360 gm. After oven drying the wt. of sample was 2200 gm. Determine, Moisture content, Bulk density, Dry Density, Voids ratio and degree of saturation. **05**

Q.4 a) Derive the equation of coefficient of permeability for falling head method. **05**

b) A constant head permeability test was carried out on a cylindrical sample of sand 10 cm diameter and 15 cm height. 160 cm^3 of water was collected in 1.75 min, under a head of 30 cm. Compute the coefficient of permeability in m/year and the velocity of flow in m/sec. **05**

Q.5 a) Explain the differences between the Direct shear test and Triaxial shear. **05**

b) An undrained triaxial test on a sample of compacted soil gave the following results. **05**

Cell pressure KN/m^2	100	200	300
Deviator pressure KN/m^2	140	180	230
Pore pressure KN/m^2	50	80	130

Find Total strength parameters.

SECTION – II

Q.6 Answer the following questions. (Any Four) **08**

a) Draw typical compaction curve for standard compaction test.

b) Enlist the assumptions made in Rankine's theory.

c) Write differences between consolidation and compaction.

d) Draw typical e-log p curve and label various parts of it.

e) Define Compression index.

Q.7 a) Write differences between Standard Proctor Test & Modified Proctor Test. **05**

b) The following results were obtained from a standard compaction test on a sample of soil. **05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

Q.8 a) What is the pre-consolidation pressure? With a neat sketch explain procedure to calculate pre-consolidation pressure. **05**

b) A 1 cm thick laboratory soil sample reaches 60% consolidation in 32.5 seconds under double drainage conditions. Find how much time will it require for a 10 m thick layer in the field to reach the same degree of consolidation if it has drainage face on one side only. **05**

Q.9 a) Write differences between Active Earth Pressure and Passive Earth Pressure. **05**

b) A rigid vertical retaining wall 6 m high has a dry backfill of cohesionless soil. The properties are $\gamma = 16\ \mathrm{kN/m^3}, \varphi = 25°$. The backfill is subjected to uniform surcharge pressure of $10\ \mathrm{kN/m^2}$. Determine total active earth force and its point of application. **05**

Examination: March/April – 2026
Geotechnical Engineering (CIVPCC-09)

Day & Date: Thursday, 07-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answers from the given options. 14

1) Compaction is a process is which _____.
a) Removal of water from the voids of the soil mass
b) Removal of air from the voids of the soil mass
c) Removal of both air and water from the voids of the soil mass
d) None of the above

2) Sheep foot rollers are preferred for _____.
a) Cohesionless soils b) Cohesive soils
c) All types of soils d) None of the above

3) In the field, compaction control is done by measuring the _____.
a) dry density b) moisture content
c) both of these d) None of these

4) When degree of consolidation is 40%, the time factor Tv is _____.
a) 0.196 b) 0.126
c) 0.158 d) 0.400

5) A change in voids ratio per unit change in pressure is termed as _____.
a) Coefficient of compressibility b) Coefficient of volume change
c) Coefficient of consolidation d) None of these

6) The coefficient of passive earth pressure for a bac fill having $\varphi = 35$, as per Rankine's theory is _____.
a) 027 b) 0.33
c) 1.67 d) 3.69

7) During passive earth pressure case the wall _____.
a) Moves towards the backfill b) Away from the backfill
c) Does not move at all d) None of the above

8) The ratio of volume of air to volume of voids is called _____.
a) porosity b) percentage voids
c) void ratio d) air content

9) As per IS classification, the soil is classified as coarse grained soil, if ___.
a) The % of soil passing through 75 μ sieve is greater than 50%
b) The % of soil passing through 4.75 mm sieve is greater than 50%
c) The % of soil retained on 75 μ sieve is greater than 50%
d) The % of soil retained on 4.75 mm sieve is greater than 50%

10) In flow net equipotential lines and flow lines intersect each other at an angle of _____.
a) 45-degrees b) 90-degrees
c) 30-degrees d) 60-degrees

11) Coefficient of permeability of a soil _____.
a) Increases with the decrease in temperature.
b) Increases with increase in temperature.
c) Does not depend upon temperature.
d) None of these.

12) Shear strength depends on _____.
a) Cohesion only
b) Angle of internal friction only
c) Both cohesion and angle of internal friction
d) None of these

13) Vane tester is normally used for determining in-situ shear strength of _____.
a) Soft clays b) Sand
c) Stiff clays d) Gravel

14) The 'y' intercept of Coulombs failure envelope is equal to _____.
a) Cohesion b) Maximum shear stress
c) Maximum normal stress d) Angle of friction

Seat No.	

Set **Q**

T.Y. (B. Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Geotechnical Engineering (CIVPCC-09)

Day & Date: Thursday, 07-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 & Q. No. 6 are compulsory. Attempt any Two from Remaining from each section.
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary & mention it clearly.

SECTION – I

Q.2 Answer the following questions. (Any Four) **08**

a) Define porosity and moisture content.

b) List the various methods of determination of water content.

c) Write a note on consistency of soil.

d) Explain the Darcy's Law.

e) Discuss the limitations of box shear test.

Q.3 a) Derive relation between voids ratio and porosity with the help of three phase diagram. **05**

b) A soil sample is compacted into a cylindrical mould of 10 cm dia 15 cm high. The weight of moist sample was 2360 gm. After oven drying the wt. of sample was 2200 gm. Determine, Moisture content, Bulk density, Dry Density, Voids ratio and degree of saturation. **05**

Q.4 a) Derive the equation of coefficient of permeability for falling head method. **05**

b) A constant head permeability test was carried out on a cylindrical sample of sand 10 cm diameter and 15 cm height. 160 cm^3 of water was collected in 1.75 min, under a head of 30 cm. Compute the coefficient of permeability in m/year and the velocity of flow in m/sec. **05**

Q.5 a) Explain the differences between the Direct shear test and Triaxial shear. **05**

b) An undrained triaxial test on a sample of compacted soil gave the following results. **05**

Cell pressure KN/m^2	100	200	300
Deviator pressure KN/m^2	140	180	230
Pore pressure KN/m^2	50	80	130

Find Total strength parameters.

SECTION – II

Q.6 Answer the following questions. (Any Four) **08**

a) Draw typical compaction curve for standard compaction test.

b) Enlist the assumptions made in Rankine's theory.

c) Write differences between consolidation and compaction.

d) Draw typical e-log p curve and label various parts of it.

e) Define Compression index.

Q.7 a) Write differences between Standard Proctor Test & Modified Proctor Test. **05**

b) The following results were obtained from a standard compaction test on a sample of soil. **05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

Q.8 a) What is the pre-consolidation pressure? With a neat sketch explain procedure to calculate pre-consolidation pressure. **05**

b) A 1 cm thick laboratory soil sample reaches 60% consolidation in 32.5 seconds under double drainage conditions. Find how much time will it require for a 10 m thick layer in the field to reach the same degree of consolidation if it has drainage face on one side only. **05**

Q.9 a) Write differences between Active Earth Pressure and Passive Earth Pressure. **05**

b) A rigid vertical retaining wall 6 m high has a dry backfill of cohesionless soil. The properties are $\gamma = 16\ \mathrm{kN/m^3}, \varphi = 25°$. The backfill is subjected to uniform surcharge pressure of $10\ \mathrm{kN/m^2}$. Determine total active earth force and its point of application. **05**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple choice questions: **14**

1) Which of the following is a pozzolanic material?
a) Silica fume b) Gypsum
c) Lime d) Slag

2) Plasticizers are mainly used to _____.
a) Reduce strength b) Increase workability
c) Accelerate setting d) Decrease durability

3) Segregation in concrete can be avoided by _____.
a) Adding more water b) Proper grading of aggregates
c) Using coarse sand d) Reducing cement content

4) Which test is non-destructive?
a) Compressive strength test b) Rebound hammer test
c) Flexural test d) Crushing value test

5) Self-compacting concrete (SCC) eliminates the need for _____.
a) Cement b) Compaction
c) Admixtures d) Aggregates

6) Fiber-reinforced concrete improves _____.
a) Compressive strength b) Ductility and toughness
c) Permeability d) None of these

7) Ferrocement is made of _____.
a) High grade concrete
b) Thin section with wire mesh reinforcement
c) Lightweight aggregate
d) Fly ash and lime

8) Mivan technology is related to _____.
a) Steel formwork system b) Pumped concrete
c) Precast flooring d) Grouting

9) In a central RMC plant, concrete is mixed _____.
a) At site b) At batching plant
c) During transit d) By hand

10) A key principle of quality control in concrete is _____.
a) Reduce inspection
b) Continuous monitoring and testing
c) Ignore variability
d) Use untested materials

11) The main parameter controlled in high-strength concrete mix design is _____.
a) Water-cement ratio b) Sand percentage
c) Mixing time d) Aggregate shape

12) Variability in test results is expressed statistically as _____.
a) Mean value b) Standard deviation
c) Range d) Median

13) The effect of silica fume in concrete is mainly to _____.
a) Increase permeability b) Reduce strength
c) Improve bond and strength d) Increase bleeding

14) Which type of concrete is used for radiation shielding?
a) High strength concrete b) High density concrete
c) Foam concrete d) Fiber reinforced concrete

T.Y. (B.Tech.) (Civil Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Advanced Concrete Technology (CIVPEC-01A)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicates full marks.
3) Use of non-programmable calculator is allowed.

Section – I

Q.2 Answer the following questions. **10**

a) Discuss workability and the factors affecting it. Explain any two tests used to measure workability.

b) Describe different types and properties of fiber-reinforced concrete with a neat sketch.

Q.3 Answer Any Three following questions. **18**

a) Explain the types and functions of admixtures used in concrete and their effects on workability and setting.

b) Define durability and explain various causes of deterioration of concrete.

c) Describe non-destructive testing methods for assessing concrete structures.

d) Explain high-performance concrete - its composition, properties and applications.

e) Write a note on 3D-printing technology in construction and its advantages.

SECTION – II

Q.4 Answer the following questions. **10**

a) Explain sprayed concrete process and its applications.

b) Write a short note on roller compacted concrete and its field uses.

Q.5 Answer Any Three following questions. **18**

a) Explain the production process of ready-mixed concrete and its advantages.

b) Describe pumped concrete and the factors affecting its pumping efficiency.

c) Discuss the mix-design procedure for high-grade concrete with example parameters.

d) Write a note on sustainability of concrete industry and eco-friendly practices.

e) Explain the principles and tools of quality management used in concrete construction.

Set **R**

T.Y. (B.Tech.) (Civil Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Advanced Concrete Technology (CIVPEC-01A)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Use of non-programmable calculators is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple choice questions: **14**

1) The main parameter controlled in high-strength concrete mix design is _____.
a) Water-cement ratio b) Sand percentage
c) Mixing time d) Aggregate shape

2) Variability in test results is expressed statistically as _____.
a) Mean value b) Standard deviation
c) Range d) Median

3) The effect of silica fume in concrete is mainly to _____.
a) Increase permeability b) Reduce strength
c) Improve bond and strength d) Increase bleeding

4) Which type of concrete is used for radiation shielding?
a) High strength concrete b) High density concrete
c) Foam concrete d) Fiber reinforced concrete

5) Which of the following is a pozzolanic material?
a) Silica fume b) Gypsum
c) Lime d) Slag

6) Plasticizers are mainly used to _____.
a) Reduce strength b) Increase workability
c) Accelerate setting d) Decrease durability

7) Segregation in concrete can be avoided by _____.
a) Adding more water b) Proper grading of aggregates
c) Using coarse sand d) Reducing cement content

8) Which test is non-destructive?
a) Compressive strength test b) Rebound hammer test
c) Flexural test d) Crushing value test

9) Self-compacting concrete (SCC) eliminates the need for _____.
a) Cement b) Compaction
c) Admixtures d) Aggregates

10) Fiber-reinforced concrete improves _____.
a) Compressive strength b) Ductility and toughness
c) Permeability d) None of these

11) Ferrocement is made of _____.
a) High grade concrete
b) Thin section with wire mesh reinforcement
c) Lightweight aggregate
d) Fly ash and lime

12) Mivan technology is related to _____.
a) Steel formwork system b) Pumped concrete
c) Precast flooring d) Grouting

13) In a central RMC plant, concrete is mixed _____.
a) At site b) At batching plant
c) During transit d) By hand

14) A key principle of quality control in concrete is _____.
a) Reduce inspection
b) Continuous monitoring and testing
c) Ignore variability
d) Use untested materials

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple choice questions: **14**

1) The study of rocks, minerals, and Earth's crust is mainly covered under _____.
a) Physical geology b) Structural geology
c) Engineering geology d) Mineralogy

2) The uppermost layer of the Earth is called _____.
a) Mantle b) Crust
c) Core d) Lithosphere

3) The product of both mechanical and chemical weathering is _____.
a) Clay b) Sandstone
c) Soil d) Gravel

4) Which of the following is not a rock-forming mineral?
a) Feldspar b) Quartz
c) Calcite d) Coal

5) Igneous rocks having large crystals are formed due to _____.
a) Rapid cooling b) Slow cooling
c) High pressure d) High temperature

6) The rock suitable for building foundation is _____.
a) Shale b) Laterite
c) Granite d) Marl

7) A fracture along which displacement has occurred is called _____.
a) Fold b) Fault
c) Joint d) Cleavage

8) Remote sensing helps in _____
a) Laboratory testing
b) Subsurface drilling
c) Obtaining surface information
d) Seismic wave analysis

9) The presence of groundwater can cause _____.
a) Strength gain in concrete
b) Settlement of foundations
c) Increase in bearing capacity
d) None of these

10) The property of a material to regain its original shape removal of load is _____.
a) Plasticity
b) Elasticity
c) Ductility
d) Toughness

11) Ceramics are generally _____.
a) Conductors
b) Insulators
c) Magnetic materials
d) Ductile

12) The main compound responsible for early strength in cement is _____.
a) C_2S
b) C_3S
c) C_3A
d) C_4AF

13) Shape Memory Alloys exhibit _____.
a) Self-healing property
b) Elastic deformation
c) Ability to regain shape when heated
d) None of these

14) Nanotechnology in construction materials improves _____.
a) Surface finish
b) Durability and strength
c) Color only
d) Curing time only

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Lack of access to basic water and sanitation services can have a profound impact on _____.
a) Health and well-being b) Economic development
c) Education and livelihoods d) All of the above

2) Which region has the highest percentage of people lacking access to safe drinking water?
a) North America b) Western Europe
c) Sub-Saharan Africa d) Australia

3) If the chosen diameter of a pipe, is less than the economical diameter _____.
a) Cost of pipe will be less
b) Head loss will be high
c) Cost of pumping will be more than saving
d) All the above

4) Resistance offered by thrust block should be _____ times horizontal thrust.
a) <2 b) >2
c) >1.8 d) >1.5

5) Settling velocity of a spherical body in a viscous fluid is given by _____.
a) Reynolds law b) Newton's law
c) Stokes law d) Charles law

6) The thickness of the base material of a rapid sand filter on which filter media are supported is _____.

a) 45−60cm
b) 20−80cm
c) 30−75cm
d) 10−30cm

7) What is the primary substance responsible for temporary hardness in water?

a) Calcium bicarbonate
b) Sodium chloride
c) Magnesium chloride
d) Calcium sulfate

8) What is the primary reason for choosing an 'egg-shaped sewer' over a circular sewer when constructing a combined sewer system?

a) The shape provides maximum capacity during peak storm flow
b) They provide better self-cleansing velocity at 'low dry-weather flow'
c) The shape is structurally stronger than a circular cross-section
d) Egg-shaped sewers are easier to lay and maintain

9) The Rational Formula, Q=CIA, is most commonly used in storm water drainage design to estimate the peak runoff rate (Q). What does the factor 'C' represent in this formula?

a) The Catchment area of the watershed
b) The Time of Concentration
c) The Rainfall intensity in mm/hr
d) The Coefficient of runoff

10) A key design feature of a septic tank is that it must provide conditions for _____.

a) Removal of nutrients like nitrogen and phosphorus
b) Aerobic decomposition of solids and subsequent filtration
c) High-rate oxidation of organic matter using forced air
d) Settling of solids and anaerobic digestion of the settled sludge

11) In an oxidation pond, the dissolved oxygen (DO) required by the bacteria is supplied mainly by _____.

a) Mechanical surface aerators
b) Recirculation of highly oxygenated water
c) Absorption from the atmosphere
d) Photosynthesis by algae

12) The most aggressive and localized form of corrosion in water pipes, which often leads to rapid pipe failure (pinhole leaks) and is difficult to detect externally, is _____.

a) Erosion corrosion
b) Crevice corrosion
c) Pitting corrosion
d) Intergranular corrosion

13) Which year was the primary Indian legislation for the prevention and control of water pollution enacted?

a) 1986 (Environmental Protection Act)
b) 1972 (Wildlife Protection Act)
c) 1974 (Water Prevention and Control of Pollution Act)
d) 1981 (Air Prevention and Control of Pollution Act)

14) A maintenance practice for buried metal pipelines where metal blocks (like magnesium or zinc) are electrically connected to the pipe to divert corrosive currents is known as _____.

a) Anodic protection
b) Cathodic protection
c) Impressed current protection
d) Passivation

T.Y. (B.Tech.) (Civil Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Water and Sanitation Infrastructure (CIVPEC-01C)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Section-I Q.4 is compulsory & attempt any two questions from the remaining question.
2) Section-II Q.6 is compulsory & attempt any two questions from the remaining question.
3) Figures to the right indicate full marks.
4) Use of Scientific calculator is allowed.
5) Assume additional suitable data if necessary and state it clearly.

SECTION – I

Q.2 **a)** What are the specific regional challenges of water and sanitation access in developing countries like India? **04**

b) Design a thrust block for 1000 m diameter conveying water at a pressure of 10 kg/cm^2 at a location where deviation angle is 45° in a horizontal plane. The subsoil has a density of 1800 kg/m, Angle of internal friction=30° and cohesion is zero. Velocity of flow in pipe is 2 m/sec. Take density of concrete as 2400 kg/m^3. Take soil cove = 0.6 m. **05**

Q.3 **a)** Write the factors governing the location of Intake. **04**

b) Explain the chemical principles for the removal of both types of hardness using the Lime-Soda process. **05**

Q.4 **a)** Find dimensions of rectangular sedimentation basin for following data: Volume of water = 3 mld, Detention Period = 4 hrs, Velocity of flow = 10 cm/min. consider effective depth=3m. sludge accumulation=1m, Freeboard=0.5m. **05**

b) Outline the key targets of Sustainable Development Goal 6 (SDG 6) and analyse their significance for global development. **05**

Q.5 **a)** What are the various forces acting on pressure conduits? Explain water hammer pressure. **04**

b) Explain the theory of flocculation and write purpose of the slow mixing process. **05**

SECTION – II

Q.6	**a)**	Discuss the necessity of sewer ventilation. Briefly explain any one common methods of ventilation used in sewer networks.	**05**
	b)	Describe the key design criteria for a constant-velocity Grit Removal Basin.	**05**
Q.7	**a)**	Explain the significance of Food-to-Microorganism (F/M) ratio in the design and operational control of Activated Sludge Process (ASP).	**05**
	b)	Analyse the major causes of leakage in a piped water distribution system.	**04**
Q.8	**a)**	Discuss the role and benefits of implementing Smart Metering and Real-Time Monitoring systems within a modern water distribution network.	**05**
	b)	Explain the primary hydraulic advantage of using an egg-shaped sewer cross-section.	**04**
Q.9	**a)**	State and explain Rational Formula.	**03**
	b)	Describe the functions of the three main zones within the septic tank.	**03**
	c)	Describe two distinct detection techniques used to pinpoint leaks.	**03**

Seat No.

Examination: March/April – 2026
Water and Sanitation Infrastructure (CIVPEC-01C)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable if necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) What is the primary reason for choosing an 'egg-shaped sewer' over a circular sewer when constructing a combined sewer system?
a) The shape provides maximum capacity during peak storm flow
b) They provide better self-cleansing velocity at 'low dry-weather flow'
c) The shape is structurally stronger than a circular cross-section
d) Egg-shaped sewers are easier to lay and maintain

2) The Rational Formula, Q=CIA, is most commonly used in storm water drainage design to estimate the peak runoff rate (Q). What does the factor 'C' represent in this formula?
a) The Catchment area of the watershed
b) The Time of Concentration
c) The Rainfall intensity in mm/hr
d) The Coefficient of runoff

3) A key design feature of a septic tank is that it must provide conditions for _____.
a) Removal of nutrients like nitrogen and phosphorus
b) Aerobic decomposition of solids and subsequent filtration
c) High-rate oxidation of organic matter using forced air
d) Settling of solids and anaerobic digestion of the settled sludge

4) In an oxidation pond, the dissolved oxygen (DO) required by the bacteria is supplied mainly by _____.
a) Mechanical surface aerators
b) Recirculation of highly oxygenated water
c) Absorption from the atmosphere
d) Photosynthesis by algae

5) The most aggressive and localized form of corrosion in water pipes, which often leads to rapid pipe failure (pinhole leaks) and is difficult to detect externally, is _____.

a) Erosion corrosion
b) Crevice corrosion
c) Pitting corrosion
d) Intergranular corrosion

6) Which year was the primary Indian legislation for the prevention and control of water pollution enacted?

a) 1986 (Environmental Protection Act)
b) 1972 (Wildlife Protection Act)
c) 1974 (Water Prevention and Control of Pollution Act)
d) 1981 (Air Prevention and Control of Pollution Act)

7) A maintenance practice for buried metal pipelines where metal blocks (like magnesium or zinc) are electrically connected to the pipe to divert corrosive currents is known as _____.

a) Anodic protection
b) Cathodic protection
c) Impressed current protection
d) Passivation

8) Lack of access to basic water and sanitation services can have a profound impact on _____.

a) Health and well-being
b) Economic development
c) Education and livelihoods
d) All of the above

9) Which region has the highest percentage of people lacking access to safe drinking water?

a) North America
b) Western Europe
c) Sub-Saharan Africa
d) Australia

10) If the chosen diameter of a pipe, is less than the economical diameter _____.

a) Cost of pipe will be less
b) Head loss will be high
c) Cost of pumping will be more than saving
d) All the above

11) Resistance offered by thrust block should be _____ times horizontal thrust.

a) <2
b) >2
c) >1.8
d) >1.5

12) Settling velocity of a spherical body in a viscous fluid is given by _____.

a) Reynolds law
b) Newton's law
c) Stokes law
d) Charles law

13) The thickness of the base material of a rapid sand filter on which filter media are supported is _____.

a) 45−60cm
b) 20−80cm
c) 30−75cm
d) 10−30cm

14) What is the primary substance responsible for temporary hardness in water?

Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Mention Question Paper Set (P/Q/R/S) on Top of Page.
4) Use of non-programmable calculators is allowed.

Answer

Q.1 Multiple Choice Questions.

1) Innovation mainly focuses on _____.
a) Generating ideas only b) Implementing creative ideas
c) Copying others d) Marketing

2) Creativity and Innovation together lead to _____.
a) Routine performance b) Problem discovery
c) Practical novelty d) Mechanical repetition

3) A characteristic of a creative person is _____.
a) Rigidity b) Curiosity
c) Fearfulness d) Passivity

4) Which of the following represents a major *barrier* to creativity?
a) Time pressure b) Risk-taking
c) Playfulness d) Flexibility

5) The “Ideate” stage in design thinking focuses on _____.
a) Understanding users b) Generating solutions
c) Testing ideas d) Building prototypes

6) Design thinking is fundamentally _____.
a) User-centered b) Manager-centered
c) Engineer-centered d) Cost-centered

7) Which of these helps to *overcome* creative blocks?
a) Collaboration b) Fear of mistakes
c) Over-planning d) Isolation

8) A design thinker empathizes to _____.
a) Know customer feelings and needs
b) Find product cost
c) Estimate profit
d) Collect market data

9) The *Define* phase results in _____.
a) Problem statement b) Prototype
c) Survey d) Marketing plan

10) Barriers to creativity can be removed through _____.
a) Open communication b) Discouragement
c) Repetition d) Judgmental thinking

11) The last phase of design thinking is _____.
a) Prototype b) Test
c) Ideate d) Define

12) Which term best describes the ability to see connections between unrelated ideas?
a) Fluency b) Flexibility
c) Originality d) Association

13) One of the benefits of design thinking is _____.
a) Focusing on user-friendly solutions
b) Ignoring customers
c) Cost reduction only
d) Quick fixes

14) Divergent and convergent thinking together ensure _____.
a) Balance between idea generation and selection
b) Faster production
c) Market analysis
d) Less creativity

15) In brainstorming, criticism should be ____.
a) Encouraged b) Postponed
c) Ignored d) Repeated

16) SCAMPER is mainly used for _____.
a) Modifying existing ideas b) Market study
c) Testing materials d) Estimating cost

17) In mind mapping, central themes are _____.
a) Placed at center with branches outward
b) At the edges
c) Hidden
d) Random

18) TRIZ encourages _____.
a) Systematic innovation through contradictions
b) Copying existing patents
c) Brainstorm blocking
d) Linear analysis

19) Which is a creative ideation technique?
a) Storyboarding b) Checklist creation
c) Prototype testing d) Quality audit

20) Concept sketching helps _____.
a) Express ideas visually b) Replace written reports
c) Perform tests d) Manage finance

21) In SCAMPER, “C” stands for _____.
a) Combine b) Copy
c) Create d) Classify

22) The purpose of divergent thinking is to _____.
a) Explore many possibilities b) Select one answer
c) Limit imagination d) Finalize design

23) Which of the following tools is best suited for *organizing ideas?*
a) Mind map b) Pie chart
c) Spreadsheet d) Histogram

24) “Storytelling” in concept development helps designers _____.
a) Communicate user experiences effectively
b) Draw detailed schematics
c) Analyze budget
d) Fix prototypes

25) The last step of concept development is _____.
a) Visualization of ideas b) Brainstorming
c) TRIZ analysis d) Market feedback

26) Prototyping in design helps _____.
a) Convert abstract ideas into tangible models
b) Replace manufacturing
c) Finalize budgets
d) Avoid testing

27) Which prototype type is *cheapest* and fastest?
a) Low-fidelity b) High-fidelity
c) Final d) Medium

28) High-fidelity prototypes allow _____.
a) User interaction and realism
b) Concept only
c) Paper sketching
d) Cost saving only

29) The iterative approach focuses on _____.
a) Refining design through repeated feedback
b) Making single model
c) Reducing creativity
d) Avoiding testing

30) The first step in rapid prototyping is _____.
a) 3D CAD modeling b) Final assembly
c) Testing d) Polishing

31) Which tool is commonly used in rapid prototyping?
a) 3D printer b) Spreadsheet
c) CNC lathe d) Mind map

32) User testing is most crucial in which stage?
a) Prototype evaluation b) Ideation
c) Definition d) Empathize

33) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

34) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

35) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

36) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

37) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

38) The goal of sustainable design is _____.
a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

39) Which phase is crucial for sustainability decisions?
a) Design stage b) Disposal
c) Marketing d) Sales

40) Product life-cycle assessment includes _____.
a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

41) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

42) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

43) "Design for reuse" aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

44) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

45) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

46) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

47) Case studies in sustainable design show _____.
a) Application of eco-friendly materials
b) Ignoring user needs
c) Over-production
d) Energy waste

48) The most important sustainability factor in manufacturing is _____.
a) Resource efficiency
b) Advertisement
c) Branding
d) Design color

49) Which practice promotes a circular economy?
a) Recycling and remanufacturing
b) Landfilling
c) Burning waste
d) Exporting scrap

50) Sustainable engineering mainly targets _____.
a) Balance between economy, society, and environment
b) Maximizing output only
c) Technological monopoly
d) Short-term gains

Examination: March/April – 2026
Creativity and Design Thinking (AEC-02)

Day & Date: Tuesday, 12-05-2026 Max. Marks: 50
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Mention Question Paper Set (P/Q/R/S) on Top of Page.
4) Use of non-programmable calculators is allowed.

Answer

Q.1 Multiple Choice Questions.

1) In SCAMPER, "C" stands for _____.
a) Combine b) Copy
c) Create d) Classify

2) The purpose of divergent thinking is to _____.
a) Explore many possibilities b) Select one answer
c) Limit imagination d) Finalize design

3) Which of the following tools is best suited for *organizing ideas?*
a) Mind map b) Pie chart
c) Spreadsheet d) Histogram

4) "Storytelling" in concept development helps designers _____.
a) Communicate user experiences effectively
b) Draw detailed schematics
c) Analyze budget
d) Fix prototypes

5) The last step of concept development is _____.
a) Visualization of ideas b) Brainstorming
c) TRIZ analysis d) Market feedback

6) Prototyping in design helps _____.
a) Convert abstract ideas into tangible models
b) Replace manufacturing
c) Finalize budgets
d) Avoid testing

7) Which prototype type is *cheapest* and fastest?
a) Low-fidelity b) High-fidelity
c) Final d) Medium

8) High-fidelity prototypes allow _____.
a) User interaction and realism
b) Concept only
c) Paper sketching
d) Cost saving only

9) The iterative approach focuses on _____.
a) Refining design through repeated feedback
b) Making single model
c) Reducing creativity
d) Avoiding testing

10) The first step in rapid prototyping is _____.
a) 3D CAD modeling b) Final assembly
c) Testing d) Polishing

11) Which tool is commonly used in rapid prototyping?
a) 3D printer b) Spreadsheet
c) CNC lathe d) Mind map

12) User testing is most crucial in which stage?
a) Prototype evaluation b) Ideation
c) Definition d) Empathize

13) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

14) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

15) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

16) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

17) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

18) The goal of sustainable design is _____.
a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

19) Which phase is crucial for sustainability decisions?
a) Design stage b) Disposal
c) Marketing d) Sales

20) Product life-cycle assessment includes _____.
a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

21) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

22) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

23) "Design for reuse" aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

24) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

25) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

26) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

27) Case studies in sustainable design show _____.
a) Application of eco-friendly materials
b) Ignoring user needs
c) Over-production
d) Energy waste

28) The most important sustainability factor in manufacturing is _____.
a) Resource efficiency b) Advertisement
c) Branding d) Design color

29) Which practice promotes a circular economy?
a) Recycling and remanufacturing
b) Landfilling
c) Burning waste
d) Exporting scrap

30) Sustainable engineering mainly targets _____.
a) Balance between economy, society, and environment
b) Maximizing output only
c) Technological monopoly
d) Short-term gains

31) Innovation mainly focuses on _____.
a) Generating ideas only b) Implementing creative ideas
c) Copying others d) Marketing

32) Creativity and Innovation together lead to _____.
a) Routine performance b) Problem discovery
c) Practical novelty d) Mechanical repetition

33) A characteristic of a creative person is _____.
a) Rigidity b) Curiosity
c) Fearfulness d) Passivity

34) Which of the following represents a major *barrier* to creativity?
a) Time pressure b) Risk-taking
c) Playfulness d) Flexibility

35) The “Ideate” stage in design thinking focuses on _____.
a) Understanding users b) Generating solutions
c) Testing ideas d) Building prototypes

36) Design thinking is fundamentally _____.
a) User-centered b) Manager-centered
c) Engineer-centered d) Cost-centered

37) Which of these helps to *overcome* creative blocks?
a) Collaboration b) Fear of mistakes
c) Over-planning d) Isolation

38) A design thinker empathizes to _____.
a) Know customer feelings and needs
b) Find product cost
c) Estimate profit
d) Collect market data

39) The *Define* phase results in _____.
a) Problem statement b) Prototype
c) Survey d) Marketing plan

40) Barriers to creativity can be removed through _____.
a) Open communication b) Discouragement
c) Repetition d) Judgmental thinking

41) The last phase of design thinking is _____.
a) Prototype b) Test
c) Ideate d) Define

42) Which term best describes the ability to see connections between unrelated ideas?
a) Fluency b) Flexibility
c) Originality d) Association

43) One of the benefits of design thinking is _____.
a) Focusing on user-friendly solutions
b) Ignoring customers
c) Cost reduction only
d) Quick fixes

44) Divergent and convergent thinking together ensure _____.
a) Balance between idea generation and selection
b) Faster production
c) Market analysis
d) Less creativity

45) In brainstorming, criticism should be ____.
a) Encouraged b) Postponed
c) Ignored d) Repeated

46) SCAMPER is mainly used for _____.
a) Modifying existing ideas b) Market study
c) Testing materials d) Estimating cost

47) In mind mapping, central themes are _____.
a) Placed at center with branches outward
b) At the edges
c) Hidden
d) Random

48) TRIZ encourages _____.

a) Systematic innovation through contradictions
b) Copying existing patents
c) Brainstorm blocking
d) Linear analysis

49) Which is a creative ideation technique?

a) Storyboarding
b) Checklist creation
c) Prototype testing
d) Quality audit

50) Concept sketching helps _____.

a) Express ideas visually
b) Replace written reports
c) Perform tests
d) Manage finance

Answer

Q.1 Multiple Choice Questions.

1) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

2) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

3) "Design for reuse" aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

4) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

5) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

6) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

7) Case studies in sustainable design show _____.
a) Application of eco-friendly materials
b) Ignoring user needs
c) Over-production
d) Energy waste

8) The most important sustainability factor in manufacturing is _____.
a) Resource efficiency b) Advertisement
c) Branding d) Design color

9) Which practice promotes a circular economy?
a) Recycling and remanufacturing
b) Landfilling
c) Burning waste
d) Exporting scrap

10) Sustainable engineering mainly targets _____.
a) Balance between economy, society, and environment
b) Maximizing output only
c) Technological monopoly
d) Short-term gains

11) Innovation mainly focuses on _____.
a) Generating ideas only b) Implementing creative ideas
c) Copying others d) Marketing

12) Creativity and Innovation together lead to _____.
a) Routine performance b) Problem discovery
c) Practical novelty d) Mechanical repetition

13) A characteristic of a creative person is _____.

c) Fearfulness d) Passivity

14) Which of the following represents a major *barrier* to creativity?
a) Time pressure b) Risk-taking
c) Playfulness d) Flexibility

15) The “Ideate” stage in design thinking focuses on _____.
a) Understanding users b) Generating solutions
c) Testing ideas d) Building prototypes

16) Design thinking is fundamentally _____.
a) User-centered b) Manager-centered
c) Engineer-centered d) Cost-centered

17) Which of these helps to *overcome* creative blocks?
a) Collaboration b) Fear of mistakes
c) Over-planning d) Isolation

18) A design thinker empathizes to _____.
a) Know customer feelings and needs
b) Find product cost
c) Estimate profit
d) Collect market data

19) The *Define* phase results in _____.
a) Problem statement b) Prototype
c) Survey d) Marketing plan

20) Barriers to creativity can be removed through _____.
a) Open communication b) Discouragement
c) Repetition d) Judgmental thinking

21) The last phase of design thinking is _____.
a) Prototype b) Test
c) Ideate d) Define

22) Which term best describes the ability to see connections between unrelated ideas?
a) Fluency b) Flexibility
c) Originality d) Association

23) One of the benefits of design thinking is _____.
a) Focusing on user-friendly solutions
b) Ignoring customers
c) Cost reduction only
d) Quick fixes

24) Divergent and convergent thinking together ensure _____.
a) Balance between idea generation and selection
b) Faster production
c) Market analysis
d) Less creativity

25) In brainstorming, criticism should be ____.
a) Encouraged b) Postponed
c) Ignored d) Repeated

26) SCAMPER is mainly used for _____.
a) Modifying existing ideas b) Market study
c) Testing materials d) Estimating cost

27) In mind mapping, central themes are _____.
a) Placed at center with branches outward
b) At the edges
c) Hidden
d) Random

28) TRIZ encourages _____.
a) Systematic innovation through contradictions
b) Copying existing patents
c) Brainstorm blocking
d) Linear analysis

29) Which is a creative ideation technique?
a) Storyboarding b) Checklist creation
c) Prototype testing d) Quality audit

30) Concept sketching helps _____.
a) Express ideas visually b) Replace written reports
c) Perform tests d) Manage finance

31) In SCAMPER, "C" stands for _____.
a) Combine b) Copy
c) Create d) Classify

32) The purpose of divergent thinking is to _____.
a) Explore many possibilities b) Select one answer
c) Limit imagination d) Finalize design

33) Which of the following tools is best suited for *organizing ideas?*
a) Mind map b) Pie chart
c) Spreadsheet d) Histogram

34) "Storytelling" in concept development helps designers _____.
a) Communicate user experiences effectively
b) Draw detailed schematics
c) Analyze budget
d) Fix prototypes

35) The last step of concept development is _____.
a) Visualization of ideas b) Brainstorming
c) TRIZ analysis d) Market feedback

36) Prototyping in design helps _____.
a) Convert abstract ideas into tangible models
b) Replace manufacturing
c) Finalize budgets
d) Avoid testing

37) Which prototype type is *cheapest* and fastest?
a) Low-fidelity b) High-fidelity
c) Final d) Medium

38) High-fidelity prototypes allow _____.
a) User interaction and realism
b) Concept only
c) Paper sketching
d) Cost saving only

39) The iterative approach focuses on _____.
a) Refining design through repeated feedback
b) Making single model
c) Reducing creativity
d) Avoiding testing

40) The first step in rapid prototyping is _____.
a) 3D CAD modeling b) Final assembly
c) Testing d) Polishing

41) Which tool is commonly used in rapid prototyping?
a) 3D printer b) Spreadsheet
c) CNC lathe d) Mind map

42) User testing is most crucial in which stage?
a) Prototype evaluation b) Ideation
c) Definition d) Empathize

43) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

44) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

45) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

46) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

47) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

48) The goal of sustainable design is _____.

a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

49) Which phase is crucial for sustainability decisions?

a) Design stage b) Disposal
c) Marketing d) Sales

50) Product life-cycle assessment includes _____.

a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

d) Fix prototypes

15) The last step of concept development is _____.
a) Visualization of ideas b) Brainstorming
c) TRIZ analysis d) Market feedback

16) Prototyping in design helps _____.
a) Convert abstract ideas into tangible models
b) Replace manufacturing
c) Finalize budgets
d) Avoid testing

17) Which prototype type is *cheapest* and fastest?
a) Low-fidelity b) High-fidelity
c) Final d) Medium

18) High-fidelity prototypes allow _____.
a) User interaction and realism
b) Concept only
c) Paper sketching
d) Cost saving only

19) The iterative approach focuses on _____.
a) Refining design through repeated feedback
b) Making single model
c) Reducing creativity
d) Avoiding testing

20) The first step in rapid prototyping is _____.
a) 3D CAD modeling b) Final assembly
c) Testing d) Polishing

21) Which tool is commonly used in rapid prototyping?
a) 3D printer b) Spreadsheet
c) CNC lathe d) Mind map

22) User testing is most crucial in which stage?
a) Prototype evaluation b) Ideation
c) Definition d) Empathize

23) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

24) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

25) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

26) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

27) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

28) The goal of sustainable design is _____.
a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

29) Which phase is crucial for sustainability decisions?
a) Design stage b) Disposal
c) Marketing d) Sales

30) Product life-cycle assessment includes _____.
a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

31) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

32) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

33) “Design for reuse” aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

34) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

35) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

36) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

37) Case studies in sustainable design show _____.
a) Application of eco-friendly materials
b) Ignoring user needs
c) Over-production
d) Energy waste

38) The most important sustainability factor in manufacturing is _____.
a) Resource efficiency b) Advertisement
c) Branding d) Design color

39) Which practice promotes a circular economy?
a) Recycling and remanufacturing
b) Landfilling
c) Burning waste
d) Exporting scrap

40) Sustainable engineering mainly targets _____.
a) Balance between economy, society, and environment
b) Maximizing output only
c) Technological monopoly
d) Short-term gains

41) Innovation mainly focuses on _____.
a) Generating ideas only b) Implementing creative ideas
c) Copying others d) Marketing

42) Creativity and Innovation together lead to _____.
a) Routine performance b) Problem discovery
c) Practical novelty d) Mechanical repetition

43) A characteristic of a creative person is _____.
a) Rigidity b) Curiosity
c) Fearfulness d) Passivity

44) Which of the following represents a major *barrier* to creativity?
a) Time pressure b) Risk-taking
c) Playfulness d) Flexibility

45) The “Ideate” stage in design thinking focuses on _____.
a) Understanding users b) Generating solutions
c) Testing ideas d) Building prototypes

46) Design thinking is fundamentally _____.
a) User-centered b) Manager-centered
c) Engineer-centered d) Cost-centered

47) Which of these helps to *overcome* creative blocks?
a) Collaboration b) Fear of mistakes
c) Over-planning d) Isolation

48) A design thinker empathizes to _____.

a) Know customer feelings and needs
b) Find product cost
c) Estimate profit
d) Collect market data

49) The *Define* phase results in _____.

a) Problem statement
b) Prototype
c) Survey
d) Marketing plan

50) Barriers to creativity can be removed through _____.

a) Open communication
b) Discouragement
c) Repetition
d) Judgmental thinking

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Honors in Innovation and Design Engineering (Stage - I)
Engineering Systems and Design Optimization (CIVHON-03A)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page No. 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper Set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) Types of Optimization Algorithm are _____.
a) Single Variable Algorithm b) Multi Variable Algorithm
c) Specialized Algorithm d) All of these

2) Which of the following is not application of Optimization?
a) Maximize Discharge through Pipe
b) Minimize the cost of Construction
c) Calculation of shear force in column
d) None of these

3) Which are main goal of optimization?
a) Minimizing b) Maximising
c) Both a) and b) d) None of these

4) Region Elimination Methods are _____.
a) Fibonacci Search Method b) Golden Section Method
c) Both 'a' and 'b' d) None of these

5) Process involved in genetic Algorithm are _____.
a) Selection b) Mutation
c) Cross-over d) All of these

6) Re-analysis techniques in optimization are _____.
a) Fast Techniques b) Slow Techniques
c) Both a and b d) None of these

7) Gradient-Based Methods are _____.
a) Newton Raphson Method b) Bisection Method
c) Both ‘a’ and ‘b’ d) None of these

8) Which of the following field in which optimization is used?
a) Finance b) Demand and Supply
c) Airline d) All of these

9) Bracketing methods are _____.
a) Extensive search method b) Bound phase Method
c) Both a and b d) None of these

10) Which of the following is specialized method for optimization?
a) Integer Programming b) Geometric Programming
c) Simulated Annealing d) All of these

11) Which of the following is not type of crossover?
a) One-point crossover b) Two-point crossover
c) Three-point crossover d) Uniform crossover

12) Global Optimization considers _____.
a) Entire Region b) Only Boundary Points
c) Both a and b d) None of these

13) Which of the following is not method for multi-objective optimization?
a) Fibonacci Search Method
b) Unidirectional Search Method
c) Direct Search Method
d) Newton’s Method

14) Number of search direction required in Powell’s Conjugate Direction Method search are _____.
a) One b) Two
c) Three d) Four

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Honors in Innovation and Design Engineering (Stage - I)
Engineering Systems and Design Optimization (CIVHON-03A)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.

SECTION – I

Q.2 Answer the following. (Any Two) **12**

a) Formulate Optimization Problem in any field.

b) Describe 'Optimization Algorithm' in detail.

c) Explain various application of Optimization.

Q.3 Solve the following. (Any Two) **08**

a) Optimize the given function.
$f(x) = x^2 + \frac{36}{x}$ using extensive search method.
$a = 0, b = 5, n = 20$

b) Solve an optimization problem using 'Fibonacci Search Method' with the function.
$f(x) = x^2 + \frac{20}{x}, n = 3, k = 2, a = 0.4, b = 6.5$
$F_0 = 1, F_1 = 1, F_2 = 2, F_3 = 3, F_4 = 5$

c) Optimize the given function.
$f(x) = x^2 - 2x + 1$ Use Bisection method.
$a = 0 \quad b = 5 \quad \varepsilon = 10^{-3}$

Q.4 Solve the following. (Any Two) **08**

a) Optimize the given function using uni-directional search.
$f(x) = (x_1 - 6)^2 + (x_2 - 3)^2$
$x^{(0)} = (1,0), s = (1,1), \varepsilon = 10^{-3}$

b) Formulate an optimization search using steepest decent method.
$f(x) = {x_1}^2 - 2x_1x_2 - {x_2}^2, x^{(0)} = (1,1)$

c) Optimize the given function using Powell's conjugate directional Method.
$f(x) = {x_1}^2 - 3x_1x_2 + {x_2}^2$
$x^{(0)} = (1,1) \quad s_1 = (1,0) \quad s_2 = (0,1) \quad \varepsilon = 10^{-3}$

SECTION – II

Q.5 Answer the following. (Any Two) **12**

a) Optimize the given function.

$Z = 8\,x + 6y$

Subject to constraints

$2x + 4y \leq 16$

$x \leq 3$

$y \geq 0, x \geq 0$

b) Optimize the given function using Geometric Programming.

$f(x) = x_1 + x_2 + \frac{1}{x_1 x_2}$

c) Optimize the given function using Simulated Annealing.

$f(x) = 450 - {x_1}^2 - 2x_1{x_2}^2 - {x_2}^2$

$x^{(0)} = (1,1), \varepsilon = 10^{-3}$

Q.6 Answer the following. (Any Two) **08**

a) Explain ‘Genetic Algorithm’ in Details.

b) What is difference between ‘Genetic Algorithm’ & ‘Traditional Techniques’.

c) Write down computer programme for ‘Newton Raphson Method.

Q.7 Answer the following. (Any Two) **08**

a) Describe various ‘Reanalysis’ Techniques.

b) Explain ‘Reduction in size of optimization problem’.

c) What is the concept of ‘Multi-Level Optimization’?

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct alternatives. **14**

1) The index map shows _____.
a) Topography b) Soil
c) Area of the site d) Plan

2) Detailed size drawings are prepared in which sheet?
a) A1 b) A2
c) A3 d) A4

3) The report that includes all the works including soil, bridges, topography, material studies and drainage studies is called as _____.
a) Feasibility report b) Detailed project report
c) Survey report d) Primary report

4) Which of the following must be considered while conducting a road survey?
a) Density b) Alignment of the curves
c) Specific gravity d) Atmospheric condition

5) Which of the following indicates the objective of road survey?
a) Specific gravity b) Density
c) Pavement design d) Detailed layout of road way

6) Transition curve is introduced in _____.
a) Horizontal curve
b) Circular curve
c) Between horizontal curve and circular curve
d) Vertical curve

7) In India, the type of traffic assumed to design pavements is _____.
   a) Low traffic
   b) Heavy traffic
   c) Mixed traffic flow
   d) Very low traffic

8) Scoping is procedure of _____ environmental issues.
   a) Identifying
   b) impact
   c) physical impact
   d) attributes

9) What is essential in an EIA?
   a) that it allows decision makers to assess a project's impacts in all its phases
   b) that it allows the public and other stakeholders to present their views and inputs on the planned development
   c) that it contributes to and improve the project design, so that environmental as well as Socio economic measures are core parts of it
   d) All of the above

10) EIA is study of probable change in socio economic and characteristics of environment due to proposed action.
   a) biophysical
   b) geological
   c) hydrological
   d) Potential

11) The DPR consists of how many components?
   a) One
   b) Two
   c) Three
   d) Four

12) The first step in the detail checklist of DPR is _____.
   a) Executive summary
   b) Background
   c) Roadway features
   d) General details of the project

13) Group index method of design of flexible pavement is _____.
   a) A theoretical method
   b) An empirical method based on physical properties of sub-grade soil
   c) An empirical method based on strength characteristics of subgrade soil
   d) A semi-empirical method

14) In highway construction, rolling starts from _____.
   a) Sides and proceed to center
   b) Center and proceed to sides
   c) One side and proceed to another side
   d) Any of the above

Roads and Highway Project Development (CIVHON-03B)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Solve Any Two **14**

a) Write down salient features of ongoing Road project in India.

b) Define HR structure of construction industry. Write how to implement HR structure in project.

c) Explain topographic survey, Write its important for highway constructions?

Q.3 Solve Any Two **14**

a) Write Down material survey, Which type of test conducted on highway material?

b) A vertical summit curve is formed when an ascending gradient of 4% another descending gradient of 6%. find the length of summit curve to provide the required stopping sight distance for a design speed of 80 kmph. Take reaction time of driver is 2.3 sec and F=0.36.

c) Explain various design factors controlling the Horizontal alignment of highways.

Section – II

Q.4 Solve Any Two **14**

a) Describe the various components of process of EIA.

b) Explain stepwise the procedure for environment appraisal.

c) State the drawing required for DPR Project explain any one in details.

Q.5 Solve Any Two **14**

a) Difference between- Technical and financial Evaluation.

b) Write stepwise procedure of construction of Cement concrete road.

c) What are the desirable properties of sub grade soil? Enumerate the identification and classification teste of soils.

Seat No.	

Set **Q**

T.Y. (B.Tech.) (Civil Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Honors in Infrastructure Engineering (Stage - I)
Roads and Highway Project Development (CIVHON-03B)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct alternatives. **14**

1) Scoping is procedure of _____ environmental issues.
a) Identifying b) impact
c) physical impact d) attributes

2) What is essential in an EIA?
a) that it allows decision makers to assess a project's impacts in all its phases
b) that it allows the public and other stakeholders to present their views and inputs on the planned development
c) that it contributes to and improve the project design, so that environmental as well as Socio economic measures are core parts of it
d) All of the above

3) EIA is study of probable change in socio economic and characteristics of environment due to proposed action.
a) biophysical b) geological
c) hydrological d) Potential

4) The DPR consists of how many components?
a) One b) Two
c) Three d) Four

5) The first step in the detail checklist of DPR is _____.
a) Executive summary b) Background
c) Roadway features d) General details of the project

6) Group index method of design of flexible pavement is _____.
   a) A theoretical method
   b) An empirical method based on physical properties of sub-grade soil
   c) An empirical method based on strength characteristics of subgrade soil
   d) A semi-empirical method

7) In highway construction, rolling starts from _____.
   a) Sides and proceed to center
   b) Center and proceed to sides
   c) One side and proceed to another side
   d) Any of the above

8) The index map shows _____.
   a) Topography
   b) Soil
   c) Area of the site
   d) Plan

9) Detailed size drawings are prepared in which sheet?
   a) A1
   b) A2
   c) A3
   d) A4

10) The report that includes all the works including soil, bridges, topography, material studies and drainage studies is called as _____.
   a) Feasibility report
   b) Detailed project report
   c) Survey report
   d) Primary report

11) Which of the following must be considered while conducting a road survey?
   a) Density
   b) Alignment of the curves
   c) Specific gravity
   d) Atmospheric condition

12) Which of the following indicates the objective of road survey?
   a) Specific gravity
   b) Density
   c) Pavement design
   d) Detailed layout of road way

13) Transition curve is introduced in _____.
   a) Horizontal curve
   b) Circular curve
   c) Between horizontal curve and circular curve
   d) Vertical curve

14) In India, the type of traffic assumed to design pavements is _____.
   a) Low traffic
   b) Heavy traffic
   c) Mixed traffic flow
   d) Very low traffic

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) What are the three pillars of sustainability?
a) Reduce, Reuse, Recycle
b) Social, Economic, Environmental
c) Energy, Water, Waste
d) Urban, Industrial, Rural

2) Which of the following is NOT one of the 5R principles of sustainability?
a) Reduce b) Recycle
c) Recover d) Regulate

3) A key sustainability goal for the construction industry is _____.
a) Maximizing construction speed
b) Minimizing labor costs
c) Effective management of Construction and Demolition (C&D) waste
d) Using only traditional materials

4) CLC Blocks are characterized by their _____.
a) High density and weight
b) Cellular structure and light weight
c) High thermal conductivity
d) Soluble nature in water

5) Fly ash bricks are an example of a sustainable material because they _____.
   a) Are made from 100% virgin clay
   b) Utilize an industrial waste product
   c) Are more expensive than traditional bricks
   d) Require high-energy firing

6) AAC blocks stand for _____.
   a) Autoclaved Aerated Concrete
   b) Automated Aggregate Composite
   c) Advanced Aluminum Cement
   d) Alkali-Activated Compound

7) The use of Fly Ash in concrete improves _____.
   a) The rate of hydration
   b) Workability and long-term strength
   c) The initial setting time
   d) The cost of the concrete

8) Silica Fume in concrete is used primarily to _____.
   a) Reduce cost
   b) Increase workability
   c) Produce high-strength, low-permeability concrete
   d) Add color to the concrete

9) The core concept of a green building revolves around _____.
   a) Using only green-colored materials
   b) Maximizing the building's height
   c) Creating structures that are environmentally responsible and resource-efficient
   d) Building exclusively in rural areas

10) The necessity for green buildings arises from issues like _____.
   a) High initial cost
   b) Resource depletion and environmental degradation
   c) Lack of architectural styles
   d) Shortage of construction labor

11) The selection of a building site for a green project should consider _____.
   a) Proximity to sensitive ecological areas
   b) Access to public transport and existing infrastructure
   c) Potential for urban sprawl
   d) Both a) and b)

12) Proper building orientation (e.g., in the Northern Hemisphere) can help _____.

a) Maximize solar heat gain in summer
b) Maximize solar heat gain in winter and minimize it in summer
c) Block all-natural light
d) Increase reliance on artificial lighting

13) What does LEED stand for?

a) Leadership in Energy and Environmental Design
b) Low Energy and Economic Development
c) Legal Environmental Enforcement Directive
d) Land and Ecological Evaluation Database

14) GRIHA is a green building rating system developed for which country's context?

a) United States
b) United Kingdom
c) India
d) Germany

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

Section – I

Q.2 **a)** Define sustainability in the context of civil engineering. Elaborate on the three pillars of sustainability and their inter-relationship. **05**

b) Explain the 5R principles of sustainability with a relevant case study from an urban area. **05**

Q.3 **a)** Discuss the challenges and opportunities associated with Construction and Demolition (C&D) waste management. How does it contribute to the sustainability goals of the construction industry? **05**

b) Classify green construction materials into natural and man-made categories. Provide three examples of each and justify their classification as “green.” **04**

Q.4 **a)** Describe the manufacturing process, properties, and advantages of CLC (Cellular Lightweight Concrete) blocks over traditional clay bricks. **05**

b) Compare and contrast Fly Ash Bricks and AAC (Autoclaved Aerated Concrete) blocks in terms of raw materials, manufacturing process, properties, and environmental benefits. **04**

Q.5 **a)** Explain the mechanism by which fly ash improves the long-term strength and durability of concrete. What are the potential drawbacks of using a high volume of fly ash? **05**

b) What is Silica Fume? Describe its effect on the micro-structure and properties of concrete, making it a high-performance material. **04**

SECTION – II

Q.6	**a)**	Define a Green Building. Discuss the necessity and core concepts behind the green building movement in India.	**05**
	b)	Elaborate on the fundamental principles of green building design. How do these principles guide the entire building lifecycle?	**05**
Q.7	**a)**	Illustrate with examples how the 5R principle (Refuse, Reduce, Reuse, Repurpose, Recycle) can be applied at various stages of a green building's life.	**05**
	b)	What factors should be considered during the selection of a site for a green building project to minimize its environmental impact?	**04**
Q.8	**a)**	Explain the significance of building orientation, form, and layout in achieving thermal comfort and reducing energy loads for heating and cooling.	**05**
	b)	What are low-energy materials? List any four such materials and justify their low embodied energy with reasons.	**04**
Q.9	**a)**	What is the fundamental purpose of a green building rating system? Explain its importance for promoting sustainable construction practices.	**05**
	b)	Compare and contrast the LEED (Leadership in Energy and Environmental Design) and GRIHA (Green Rating for Integrated Habitat Assessment) rating systems on the basis of their origin, approach, and key emphasis areas.	**04**

Examination: March/April – 2026
Honors in Sustainability Engineering (Stage - I)
Sustainable Materials and Green Buildings (CIVHON-03C)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) The selection of a building site for a green project should consider _____.
a) Proximity to sensitive ecological areas
b) Access to public transport and existing infrastructure
c) Potential for urban sprawl
d) Both a) and b)

2) Proper building orientation (e.g., in the Northern Hemisphere) can help _____.
a) Maximize solar heat gain in summer
b) Maximize solar heat gain in winter and minimize it in summer
c) Block all-natural light
d) Increase reliance on artificial lighting

3) What does LEED stand for?
a) Leadership in Energy and Environmental Design
b) Low Energy and Economic Development
c) Legal Environmental Enforcement Directive
d) Land and Ecological Evaluation Database

4) GRIHA is a green building rating system developed for which country's context?
a) United States b) United Kingdom
c) India d) Germany

5) What are the three pillars of sustainability?
a) Reduce, Reuse, Recycle
b) Social, Economic, Environmental
c) Energy, Water, Waste
d) Urban, Industrial, Rural

6) Which of the following is NOT one of the 5R principles of sustainability?
a) Reduce
b) Recycle
c) Recover
d) Regulate

7) A key sustainability goal for the construction industry is _____.
a) Maximizing construction speed
b) Minimizing labor costs
c) Effective management of Construction and Demolition (C&D) waste
d) Using only traditional materials

8) CLC Blocks are characterized by their _____.
a) High density and weight
b) Cellular structure and light weight
c) High thermal conductivity
d) Soluble nature in water

9) Fly ash bricks are an example of a sustainable material because they _____.
a) Are made from 100% virgin clay
b) Utilize an industrial waste product
c) Are more expensive than traditional bricks
d) Require high-energy firing

10) AAC blocks stand for _____.
a) Autoclaved Aerated Concrete
b) Automated Aggregate Composite
c) Advanced Aluminum Cement
d) Alkali-Activated Compound

11) The use of Fly Ash in concrete improves _____.
a) The rate of hydration
b) Workability and long-term strength
c) The initial setting time
d) The cost of the concrete

12) Silica Fume in concrete is used primarily to _____.
a) Reduce cost
b) Increase workability
c) Produce high-strength, low-permeability concrete
d) Add color to the concrete

13) The core concept of a green building revolves around _____.
   a) Using only green-colored materials
   b) Maximizing the building's height
   c) Creating structures that are environmentally responsible and resource-efficient
   d) Building exclusively in rural areas

14) The necessity for green buildings arises from issues like _____.
   a) High initial cost
   b) Resource depletion and environmental degradation
   c) Lack of architectural styles
   d) Shortage of construction labor

T.Y. (B.Tech.) (Civil Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Honors in Sustainability Engineering (Stage - I)
Sustainable Materials and Green Buildings (CIVHON-03C)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

Section – I

Q.2	**a)**	Define sustainability in the context of civil engineering. Elaborate on the three pillars of sustainability and their inter-relationship.	**05**
	b)	Explain the 5R principles of sustainability with a relevant case study from an urban area.	**05**
Q.3	**a)**	Discuss the challenges and opportunities associated with Construction and Demolition (C&D) waste management. How does it contribute to the sustainability goals of the construction industry?	**05**
	b)	Classify green construction materials into natural and man-made categories. Provide three examples of each and justify their classification as “green.”	**04**
Q.4	**a)**	Describe the manufacturing process, properties, and advantages of CLC (Cellular Lightweight Concrete) blocks over traditional clay bricks.	**05**
	b)	Compare and contrast Fly Ash Bricks and AAC (Autoclaved Aerated Concrete) blocks in terms of raw materials, manufacturing process, properties, and environmental benefits.	**04**
Q.5	**a)**	Explain the mechanism by which fly ash improves the long-term strength and durability of concrete. What are the potential drawbacks of using a high volume of fly ash?	**05**
	b)	What is Silica Fume? Describe its effect on the micro-structure and properties of concrete, making it a high-performance material.	**04**

SECTION – II

Q.6	**a)**	Define a Green Building. Discuss the necessity and core concepts behind the green building movement in India.	**05**
	b)	Elaborate on the fundamental principles of green building design. How do these principles guide the entire building lifecycle?	**05**
Q.7	**a)**	Illustrate with examples how the 5R principle (Refuse, Reduce, Reuse, Repurpose, Recycle) can be applied at various stages of a green building's life.	**05**
	b)	What factors should be considered during the selection of a site for a green building project to minimize its environmental impact?	**04**
Q.8	**a)**	Explain the significance of building orientation, form, and layout in achieving thermal comfort and reducing energy loads for heating and cooling.	**05**
	b)	What are low-energy materials? List any four such materials and justify their low embodied energy with reasons.	**04**
Q.9	**a)**	What is the fundamental purpose of a green building rating system? Explain its importance for promoting sustainable construction practices.	**05**
	b)	Compare and contrast the LEED (Leadership in Energy and Environmental Design) and GRIHA (Green Rating for Integrated Habitat Assessment) rating systems on the basis of their origin, approach, and key emphasis areas.	**04**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option. 14

1) Which of the following is NOT an advantage of tunnels over open cuts?
a) Less environmental disturbance
b) Ability to avoid surface obstructions
c) Lower construction cost
d) Less land area required

2) The primary advantage of tunnelling in comparison to open cuts is _____.
a) Increased surface area for excavation
b) Minimal surface disruption
c) Lower construction time
d) Easier muck removal

3) What is the role of ventilation in tunnelling?
a) To cool down the tunnel environment
b) To supply fresh air and remove harmful gases
c) To support tunnel construction
d) To prevent the entry of water into the tunnel

4) Which method is best suited for tunnelling in soft soils?
a) Shield tunnelling b) Fore poling method
c) Blasting d) Tunnel boring machine (TBM)

5) What is the primary purpose of a shield in tunnelling?
a) To provide ventilation
b) To support the tunnel face
c) To carry muck out of the tunnel
d) To control water flow

6) Which of the following is a type of drill bit used in tunnelling?
a) Carbide bit
b) Diamond bit
c) Tungsten bit
d) All of the above

7) Which system is used to control water pressure in water-bearing soils during tunnelling?
a) Shield system
b) Well points system
c) Grouting
d) Tunnel boring machine

8) In rock tunnelling, what is used to prevent the drill from slipping?
a) Drilling fluids
b) Rock bolts
c) Drill-bits
d) Forged bits

9) NATM is a tunnelling method that focuses on _____.
a) Full use of TBMs
b) Continuous monitoring and ground stabilization
c) Shield tunnelling
d) Explosive use

10) Which of the following is NOT a key feature of a Tunnel Boring Machine (TBM)?
a) Cutting head
b) Excavation chamber
c) Shield casing
d) Grout mixing chamber

11) The primary function of a shaft in tunnelling is to _____.
a) Ventilate the tunnel
b) Provide a construction entry point
c) Stabilize the tunnel walls
d) Drain water from the tunnel

12) The primary objective of tunnel lining is to _____.
a) Provide structural stability
b) Prevent water ingress
c) Increase tunnel diameter
d) Ensure worker safety

13) Which system is used for tunnel drainage?
a) Plenum system
b) Dewatering system
c) Shield system
d) Well point system

14) Which disease is a health concern for tunnel workers due to prolonged exposure to dust?
a) Silicosis
b) Asthma
c) Tuberculosis
d) Caisson’s disease

Instructions: 1) Q.2 is compulsory; answer any two from remaining questions from Section – I.
2) Q.6 is compulsory; answer any two from remaining questions from Section – II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

SECTION – I

Q.2	**a)**	Explain the advantages and disadvantages of tunnels compared to open cuts.	**05**
	b)	Describe the factors affecting the selection of alignment of a tunnel.	**05**
Q.3	**a)**	Explain the Fore Poling method of tunnelling with neat sketches.	**04**
	b)	Compare the Belgian method and German method of tunnelling in soft soil.	**05**
Q.4	**a)**	Explain the compressed air (plenum) process of tunnelling and its equipment.	**04**
	b)	Discuss the safety precautions to be observed during rock tunnelling and blasting operations.	**05**
Q.5	**a)**	What are the different drill-hole patterns used in rock tunnelling? Explain with sketches.	**05**
	b)	Write short note on Needle beam method.	**04**

SECTION – II

Q.6	**a)**	What are the types of supports used in tunnels? Explain their importance under adverse ground conditions.	**05**
	b)	Describe the working principle and types of Tunnel Boring Machines (TBM).	**05**
Q.7	**a)**	Explain the advantages, size, and location of shafts in tunnelling.	**04**
	b)	Describe the construction of shafts in rock and soft ground with necessary precautions.	**05**

Q.8	**a)**	Discuss the types of drainage systems used in tunnels - pre-drainage, dewatering, and permanent drainage.	**05**
	b)	Explain the methods of ventilation in tunnels, distinguishing between temporary and permanent systems.	**04**
Q.9	**a)**	Rock bolting	**05**
	b)	Dust prevention write notes on	**04**

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option. **14**

1) Which of the following is a type of drill bit used in tunnelling?
a) Carbide bit b) Diamond bit
c) Tungsten bit d) All of the above

2) Which system is used to control water pressure in water-bearing soils during tunnelling?
a) Shield system b) Well points system
c) Grouting d) Tunnel boring machine

3) In rock tunnelling, what is used to prevent the drill from slipping?
a) Drilling fluids b) Rock bolts
c) Drill-bits d) Forged bits

4) NATM is a tunnelling method that focuses on _____.
a) Full use of TBMs
b) Continuous monitoring and ground stabilization
c) Shield tunnelling
d) Explosive use

5) Which of the following is NOT a key feature of a Tunnel Boring Machine (TBM)?
a) Cutting head b) Excavation chamber
c) Shield casing d) Grout mixing chamber

6) The primary function of a shaft in tunnelling is to _____.
   a) Ventilate the tunnel
   b) Provide a construction entry point
   c) Stabilize the tunnel walls
   d) Drain water from the tunnel

7) The primary objective of tunnel lining is to _____.
   a) Provide structural stability
   b) Prevent water ingress
   c) Increase tunnel diameter
   d) Ensure worker safety

8) Which system is used for tunnel drainage?
   a) Plenum system
   b) Dewatering system
   c) Shield system
   d) Well point system

9) Which disease is a health concern for tunnel workers due to prolonged exposure to dust?
   a) Silicosis
   b) Asthma
   c) Tuberculosis
   d) Caisson's disease

10) Which of the following is NOT an advantage of tunnels over open cuts?
   a) Less environmental disturbance
   b) Ability to avoid surface obstructions
   c) Lower construction cost
   d) Less land area required

11) The primary advantage of tunnelling in comparison to open cuts is _____.
   a) Increased surface area for excavation
   b) Minimal surface disruption
   c) Lower construction time
   d) Easier muck removal

12) What is the role of ventilation in tunnelling?
   a) To cool down the tunnel environment
   b) To supply fresh air and remove harmful gases
   c) To support tunnel construction
   d) To prevent the entry of water into the tunnel

13) Which method is best suited for tunnelling in soft soils?
   a) Shield tunnelling
   b) Fore poling method
   c) Blasting
   d) Tunnel boring machine (TBM)

14) What is the primary purpose of a shield in tunnelling?
   a) To provide ventilation
   b) To support the tunnel face
   c) To carry muck out of the tunnel
   d) To control water flow

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.
5) Use of IS 800-2007 and Steel Book are allowed, but not allowed for MCQs (Q. No. 1) for first 30 minutes.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct option. **14**

1) A structural member subjected to compressive stress in a direction parallel to its longitudinal axis, is generally known as _____.
a) strut b) post
c) column d) All of these

2) If the outstand element of compression flange of rolled section is less than _____ the section is classified as plastic.
a) 8.4 £ b) 10.5 £
c) 9.4 £ d) 15.7 £

3) The structural advantages of using steel as a structural material is _____.
a) small weight to strength b) speed of dismantling
c) speed of erection d) All of above

4) In plastic analysis, the shape factor for Diamond section is _____.
a) 2.0 b) 1.7
c) 1.6 d) None of these

5) A beam section is selected & provided on the basis of _____.
a) Section modulus b) Deflection
c) Shear d) All of above

6) In case of an axially loaded column to the base plate in gusseted base are designed for _____.
a) 100% of the column load b) 50% of the column load
c) 25% of the column load d) erecting load only

7) Allowable deflection in case of laterally supported beams is _____.
a) L/300 b) L/250
c) L/325 d) L/400

8) The partial safety factor for the material of bolt is _____.
a) 1.0 b) 1.10
c) 1.5 d) 1.25

9) A gusset Plate is subjected to _____.
a) Direct stress b) Shear stress
c) Bending stress d) All the above

10) The most suitable compression member section for a roof truss is _____.
a) Single angle
b) Double angles placed back to back
c) Double angles placed as star
d) Tubes

11) The effective length of a column with one end effectively held in position and restrained against rotation but not held in position and free to rotate at the other end is _____.
a) 0.65L b) 0.8L
c) 1.2L d) 2L

12) The slenderness ratio of limited to lacing flat is _____.
a) 350 b) 145
c) 180 d) 250

13) Thickness of lacing flats for a single lacing system should not be less than of the length between the inner end bolts of the length between the inner end bolts.
a) 1/40 b) 1/60
c) 1/50 d) 1/70

14) Design of pins is primarily governed by _____.
a) Shear b) Bearing
c) Flexure d) All the above

Examination: March/April - 2026
Design of Steel Structures (BTN01501)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.5 and Q.7 are compulsory and solve any 2 questions from the remaining questions of each Section.
2) Figures to the right indicates full marks.
3) Use of IS 800-2007 and Steel Book are allowed, but not allowed for MCQs (Q. No. 1) for first 30 minutes.
4) Assume suitable data if necessary and mention state it clearly before the solution.
5) Draw the appropriate sketches whenever necessary.

Section – I

Q.2 **a)** State advantages and disadvantages of steel structures. **03**

b) Calculate the Strength of 18 mm diameter bolt of grade 4.6 for the lap joint. The main plate to be jointed are 10 mm thick. Use Fe 410 steel. **06**

Q.3 Design a tension member to carry a factored load of 310 kN. Use 20 mm diameter bolts of grade 5.6 for the connection. Use Fe 410 steel. **09**

Q.4 Design a Principal rafter in truss of length 3.0 m. The rafter can carry factored compressive load of 250 kN. Design a bolted connection using 10 mm thick gusset plate. Use steel of grade Fe 410, fy = 250 N/mm^2. **09**

Q.5 Attempt the Following.

a) Write a note on applications of PEB? **03**

b) What is Shape Factor? Find the shape factor for Rectangular Section. **04**

c) State the purpose of providing anchor bolts in the column foundations? **03**

Section – II

Q.6 A simply supported steel beam of 5.0 m effective span is laterally supported throughout. It carries a total uniformly distributed load of 45 kN (Inclusive of self weight). Design an appropriate section using steel of grade Fe 410. **09**

Q.7 Design a built up column consisting of two rolled steel channel sections placed back to back to resist an axial load of 1250 kN. The length of the column is 4.5 m. it is restrained against rotation and translation at both the ends. Take fy = 250MPa. Also design the batten system with bolted connection. **10**

Q.8 A column ISHB 350 @661.2 N/m carries an axial compressive factored load of 900 kN. Design a suitable welded slab base. The base rests on M25 grade concrete pedestal. **09**

Q.9 A Continuous Beam ABCD Fixed at support A and simply at B, C and at D. The Span AB carries a central point load of 70 kN, 2.5 m from each support. Span BC of 3.5 m length carries a point load of magnitude 110 kN a at distance 1m from support C. The Span CD is 4 m, subjected to UDL of intensity 35 kN/m. Find the Collapse moment and draw the bending moment diagram**.** **09**

c) Double angles placed as star
d) Tubes

6) The effective length of a column with one end effectively held in position and restrained against rotation but not held in position and free to rotate at the other end is _____.

a) 0.65L b) 0.8L
c) 1.2L d) 2L

7) The slenderness ratio of limited to lacing flat is _____.

a) 350 b) 145
c) 180 d) 250

8) Thickness of lacing flats for a single lacing system should not be less than of the length between the inner end bolts of the length between the inner end bolts.

a) 1/40 b) 1/60
c) 1/50 d) 1/70

9) Design of pins is primarily governed by _____.

a) Shear b) Bearing
c) Flexure d) All the above

10) A structural member subjected to compressive stress in a direction parallel to its longitudinal axis, is generally known as _____.

a) strut b) post
c) column d) All of these

11) If the outstand element of compression flange of rolled section is less than _____ the section is classified as plastic.

a) 8.4 £ b) 10.5 £
c) 9.4 £ d) 15.7 £

12) The structural advantages of using steel as a structural material is _____.

a) small weight to strength b) speed of dismantling
c) speed of erection d) All of above

13) In plastic analysis, the shape factor for Diamond section is _____.

a) 2.0 b) 1.7
c) 1.6 d) None of these

14) A beam section is selected & provided on the basis of _____.

a) Section modulus b) Deflection
c) Shear d) All of above

Set **S**

T. Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April - 2026
Design of Steel Structures (BTN01501)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.5 and Q.7 are compulsory and solve any 2 questions from the remaining questions of each Section.
2) Figures to the right indicates full marks.
3) Use of IS 800-2007 and Steel Book are allowed, but not allowed for MCQs (Q. No. 1) for first 30 minutes.
4) Assume suitable data if necessary and mention state it clearly before the solution.
5) Draw the appropriate sketches whenever necessary.

Section – I

Q.2 **a)** State advantages and disadvantages of steel structures. **03**

b) Calculate the Strength of 18 mm diameter bolt of grade 4.6 for the lap joint. The main plate to be jointed are 10 mm thick. Use Fe 410 steel. **06**

Q.3 Design a tension member to carry a factored load of 310 kN. Use 20 mm diameter bolts of grade 5.6 for the connection. Use Fe 410 steel. **09**

Q.4 Design a Principal rafter in truss of length 3.0 m. The rafter can carry factored compressive load of 250 kN. Design a bolted connection using 10 mm thick gusset plate. Use steel of grade Fe 410, fy = 250 N/mm^2. **09**

Q.5 Attempt the Following.

a) Write a note on applications of PEB? **03**

b) What is Shape Factor? Find the shape factor for Rectangular Section. **04**

c) State the purpose of providing anchor bolts in the column foundations? **03**

Section – II

Q.6 A simply supported steel beam of 5.0 m effective span is laterally supported throughout. It carries a total uniformly distributed load of 45 kN (Inclusive of self weight). Design an appropriate section using steel of grade Fe 410. **09**

Q.7 Design a built up column consisting of two rolled steel channel sections placed back to back to resist an axial load of 1250 kN. The length of the column is 4.5 m. it is restrained against rotation and translation at both the ends. Take fy = 250MPa. Also design the batten system with bolted connection. **10**

Q.8 A column ISHB 350 @661.2 N/m carries an axial compressive factored load of 900 kN. Design a suitable welded slab base. The base rests on M25 grade concrete pedestal. **09**

Q.9 A Continuous Beam ABCD Fixed at support A and simply at B, C and at D. The Span AB carries a central point load of 70 kN, 2.5 m from each support. Span BC of 3.5 m length carries a point load of magnitude 110 kN a at distance 1m from support C. The Span CD is 4 m, subjected to UDL of intensity 35 kN/m. Find the Collapse moment and draw the bending moment diagram**.** **09**

Set P

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Geotechnical Engineering (BTN01502)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The unit weight of soil at zero air voids depends on _____.
a) Water content b) Specific gravity
c) Unit weight of water d) All of the above

2) The degree of saturation of a fully saturated soil is _____.
a) 0.25 b) 0.50
c) 1.0 d) 0.0

3) In flow net equipotential lines and flow lines intersect each other at an angle of _____.
a) 45-degress b) 90-degress
c) 30-degress d) 60-degress

4) Which test is suitable to find permeability of black cotton soil?
a) Constant head b) Falling head
c) Both d) None

5) Shear strength depends on _____.
a) Cohesion only
b) Angle of internal friction only
c) Both cohesion and angle of internal friction
d) None of these

6) In vane test vanes are welded _____ to rod.
a) Parallel b) Orthogonal
c) Inclined d) None

7) The angle of internal friction (φ) of a soil depends on _____.
a) Shape and roughness
b) State of packing and amount of interlocking
c) Lateral pressure
d) all of these

8) Compaction is a process is which _____.
a) Removal of water from the voids of the soil mass
b) Removal of air from the voids of the soil mass
c) Removal of both air and water from the voids of the soil mass
d) None of the above

9) The unit weight of soil at zero air voids depends on _____.
a) Specific gravity
b) Water content
c) Unit weight of water
d) All of the above

10) For a degree of consolidation of 50%, the time factor Tv is _____.
a) 0.3927
b) 0.1963
c) 0.5000
d) None

11) Consolidation is a process of removal of _____.
a) Air from the voids
b) Water from the voids
c) Both air and water from the voids
d) None of these

12) A change in voids ratio per unit change in pressure is termed as _____.
a) Coefficient of compressibility
b) Coefficient of volume change
c) Coefficient of consolidation
d) None of these

13) For a retaining wall of height 3 m with cohesion less backfill of $\varphi = 35$ the distance of resultant earth pressure above the base of wall is _____.
a) 0.33 m
b) 1.33 m
c) 1 m
d) 1.5 m

14) During active earth pressure case the wall _____.
a) Moves towards the backfill
b) Away from the backfill
c) Does not move at all
d) None of the above

Seat No.

Geotechnical Engineering (BTN01502)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 and Q.6 are compulsory.
2) Solve any two questions out of Q.no. 3, 4 and 5. and
3) Solve any two questions out of Q.no. 7, 8 and 9.
4) Figures to the right indicate full marks.
5) Assume suitable data if required and mention it clearly.

SECTION – I

Q.2 Answer any four questions. **08**

a) Define Voids Ratio and degree of saturation.

b) Write the limitations of Direct Shear Test.

c) Write any two applications of flow net.

d) Explain the Darcy's Law.

e) State Coulomb's Law of Shear Strength.

Q.3 a) Derive the relation between G, w, e and S with usual notations. **05**

b) 1 m^3 of wet soil weight = 20 KN its dry weight is 18 KN, G = 2.67. Calculate dry density, water content, void ratio, degree of saturation. **05**

Q.4 a) What is permeability of soil? Explain Constant Head Permeability Test with neat sketch. **05**

b) Calculate the coefficient of permeability of a soil sample 8 cm in height and 50 cm^2 in cross sectional area, if a quantity of water equals to 440 ml passed down in 12 minutes under an effective constant head of 40 cm. On oven drying the test specimen has mass of 498 gm, calculate seepage velocity. Take G = 2.70. **05**

Q.5 **a)** Explain Direct Shear Test to determine shear strength parameter of soil. **05**

b) Following results were obtained in direct box shear test on sandy clay. **05**

Normal Stress	50	100	200	300
Shear Stress	36	80	154	235

Determine the shear parameter.

SECTION – II

Q.6 **Answer any four questions.** **08**

a) Define OMC and MDD.

b) Enlist the assumptions made in Rankine's theory.

c) Explain Over-Consolidated Soil.

d) Define Active earth pressure.

e) Define Coefficient of Consolidation.

Q.7 **a)** Explain Standard Proctor Test. **05**

b) The following results were obtained from a standard compaction test on a sample of soil. **05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

Q.8 **a)** Explain the significance of Pre-consolidation Pressure. Describe the Casagrande method of determining it. **05**

b) The laboratory consolidation data for an undisturbed clay sample are as follows **05**
$e1 = 0.70, \sigma 1 = 100$ kN/m^2 and $e2 = 0.60, \sigma 2 = 300$ kN/m^2.

Q.9 **a)** Write differences between Active Earth Pressure and Passive Earth Pressure. **05**

b) A retaining wall 09 m height with a smooth vertical back retains a backfill with C = 0 kN/m^2, Φ = 25° and Y = 18 kN/m^3. What is the total Rankine's active thrust on the wall. **05**

Geotechnical Engineering (BTN01502)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 and Q.6 are compulsory.
2) Solve any two questions out of Q.no. 3, 4 and 5. and
3) Solve any two questions out of Q.no. 7, 8 and 9.
4) Figures to the right indicate full marks.
5) Assume suitable data if required and mention it clearly.

SECTION – I

Q.2 Answer any four questions. **08**

a) Define Voids Ratio and degree of saturation.

b) Write the limitations of Direct Shear Test.

c) Write any two applications of flow net.

d) Explain the Darcy's Law.

e) State Coulomb's Law of Shear Strength.

Q.3 a) Derive the relation between G, w, e and S with usual notations. **05**

b) 1 m^3 of wet soil weight = 20 KN its dry weight is 18 KN, G = 2.67. Calculate dry density, water content, void ratio, degree of saturation. **05**

Q.4 a) What is permeability of soil? Explain Constant Head Permeability Test with neat sketch. **05**

b) Calculate the coefficient of permeability of a soil sample 8 cm in height and 50 cm^2 in cross sectional area, if a quantity of water equals to 440 ml passed down in 12 minutes under an effective constant head of 40 cm. On oven drying the test specimen has mass of 498 gm, calculate seepage velocity. Take G = 2.70. **05**

Q.5 **a)** Explain Direct Shear Test to determine shear strength parameter of soil. **05**

b) Following results were obtained in direct box shear test on sandy clay. **05**

Normal Stress	50	100	200	300
Shear Stress	36	80	154	235

Determine the shear parameter.

SECTION – II

Q.6 **Answer any four questions.** **08**

a) Define OMC and MDD.

b) Enlist the assumptions made in Rankine's theory.

c) Explain Over-Consolidated Soil.

d) Define Active earth pressure.

e) Define Coefficient of Consolidation.

Q.7 **a)** Explain Standard Proctor Test. **05**

b) The following results were obtained from a standard compaction test on a sample of soil. **05**

Water content %	7.7	11.5	14.6	17.5	19.7	21.2
Mass of wet soil (kg)	1.7	1.89	2.03	1.99	1.96	1.92

The volume of the mould used was 950 ml. Make necessary calculations and plot the compaction curve and obtain the maximum dry density and optimum water content.

Q.8 **a)** Explain the significance of Pre-consolidation Pressure. Describe the Casagrande method of determining it. **05**

b) The laboratory consolidation data for an undisturbed clay sample are as follows **05**
$e1 = 0.70, \sigma 1 = 100$ kN/m^2 and $e2 = 0.60, \sigma 2 = 300$ kN/m^2.

Q.9 **a)** Write differences between Active Earth Pressure and Passive Earth Pressure. **05**

b) A retaining wall 09 m height with a smooth vertical back retains a backfill with C = 0 kN/m^2, Φ = 25° and Y = 18 kN/m^3. What is the total Rankine's active thrust on the wall. **05**

Examination: March/April – 2026
Highway and Tunnel Engineering (BTN01503)

Day & Date: Thursday, 07-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No.1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple choice questions. **14**

1) Match List-I (class of road) with List-II (width of c/w) and select the correct answer using the codes _____.

List – I	List – II
A) Single lane	1) 7.5m
B) Two lane without raised Kerbs	2) 3.5m per lane
C) Two lane with raised Kerbs	3) 3.75m
D) Multilane pavement	4) 7.0m

Codes:

	A	B	C	D
a)	2	3	4	1
b)	4	1	2	3
c)	3	4	1	2
d)	2	1	4	3

2) Lag distance is the distance during the _____.
a) Vehicle travelled during the reaction time, t
b) Vehicle travelled during the speed, v
c) Vehicle travelled during the braking operation
d) None of these

3) In order to fit the transition, the circular curve is moved inwards by a certain distance known as _____.
a) Set back distance b) Shift of curve
c) Right of way d) Building control line

4) Grade compensation is not required for gradients flatter than _____.
a) 4% b) 5%
c) 6% d) 7%

5) In using the data from a plate bearing test for determining the modulus of subgrade reaction, the value of settlement to be used is _____.
a) 1.25mm b) 2.50mm
c) 3.75mm d) 1.75mm

6) The modulus of subgrade reaction using 30cm diameter plate is obtained as 16.86kg/cm^3, the value of the same using standard plate will be _____.
a) 7.75 kg/cm^3 b) 6.75 kg/cm^3
c) 8.75 kg/cm^3 d) 5.75 kg/cm^3

7) Which of the following represents hardest grade of bitumen?
a) 30/40 b) 60/70
c) 80/100 d) 100/120

8) Aggregate abrasion value indicates which of the following property?
a) Durability b) Toughness
c) Hardness d) Strength

9) When the bituminous surfacing is done on already existing black top road or over existing cement concrete road, the type of treatment given is _____.
a) Seal coat b) Tack coat
c) Prime coat d) Spray of emulsion

10) The critical combination of stresses for corner region in cement concrete road during summer midnight is _____.
a) Load stress + warping stress frictional stress
b) Load stress + warping stress + frictional stress
c) Load stress + warping stress
d) Load stress + frictional stress

11) DBFOT stands for _____.
a) Design, Build, Finance, Own, Transfer
b) Design, Borrow, Finance, Operate, Transfer
c) Design, Build, Finance, Operate, Transfer
d) Design, Build, Forecast, Operate, Transfer

12) The most suitable equipment for compacting clayey soils is a _____.
a) Smooth wheeled roller b) Pneumatic tyred roller
c) Sheep foot roller d) Vibrator

13) Bituminous concrete is a mix comprising of _____.
a) Fine aggregate, filler and bitumen
b) Fine aggregate and bitumen
c) Coarse aggregate, fine aggregate, filler and bitumen
d) Coarse aggregate, filler and bitumen

14) In full face method of constructing tunnel, the first operation relates to _____.

a) Removal of bottom portion
b) Excavation of one drift in the center
c) Removal of top portion
d) Excavation being done along the perimeter

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Highway and Tunnel Engineering (BTN01503)

Day & Date: Thursday, 07-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever needed and mention it clearly.

SECTION – I

Q.2 Solve any two questions. **12**

a) Explain the various factors to be considered in deciding the highway alignment.

b) Draw a typical cross section of Two Lane National Highway in cutting and embankment indicating width of road, camber, roadway and land.

c) Derive the expression for finding the stopping sight distance at level and at gradients.

Q.3 Solve any two questions. **16**

a) A radius of 500 m has to be provided at a locality due to site restrictions on a National Highway with design speed 100 kmph. Design the super elevation. Should there be any restriction in speed? Assume Suitable data.

b) On a two-way traffic road, the speed of overtaking and overtaken vehicles is 65kmph and 40kmph respectively. If the average acceleration 0.92m/sec^2. Determine the overtaking sight distance indicating the details of overtaking operations with sketch. Assume t=2.0sec

c) An expressway four lane divided, passing through a flat terrain has a horizontal curve of radius equal to ruling minimum radius and design speed is 120kmph. Assume design coefficient of lateral friction=0.15, length of the vehicle wheel base=6.1m. Calculate the following elements of the curve,

i) Ruling minimum radius
ii) Super elevation
iii) Extra Widening
iv) Length of transition curve using IRC equation. Assume Suitable data.

SECTION – II

Q.4 Solve any two questions. **12**

a) Differentiate between flexible & rigid pavement.

b) A pavement designer has arrived at a design traffic of 100 million standard axles for a newly developing national highway as per IRC-37 guidelines using the following data:
design life = 15 years, commercial vehicle count at the end of the construction = 4500 vehicles/day, annual traffic growth rate = 8%.
Calculate the vehicle damage factor used in this pavement design.
Explain the importance of Vehicle Damage Factor in flexible pavement design.

c) Write a short on applications of softening point & Ductility test on bitumen.

Q.5 Solve any two questions. **16**

a) Write a note on surface and sub surface drainage system for highway.

b) Calculate the stresses at the interior, edge and corner region of cement concrete pavement using Westergaard's analysis. Use the following data:
Wheel Load P = 4100kg, pavement thickness, h = 15cm, Poisson's ratio, $\mu = 0.15$, Modulus of subgrade reaction, K = 3.0kg/cm^3, Radius of contact area, a = 15cm, modulus of elasticity of concrete,
E = 3×10^5 kg/cm^2

c) State methods of tunneling in soft rock. Explain with sketch any one method in detail.

Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever needed and mention it clearly.

SECTION – I

Q.2 Solve any two questions. **12**

a) Explain the various factors to be considered in deciding the highway alignment.

b) Draw a typical cross section of Two Lane National Highway in cutting and embankment indicating width of road, camber, roadway and land.

c) Derive the expression for finding the stopping sight distance at level and at gradients.

Q.3 Solve any two questions. **16**

a) A radius of 500 m has to be provided at a locality due to site restrictions on a National Highway with design speed 100 kmph. Design the super elevation. Should there be any restriction in speed? Assume Suitable data.

b) On a two-way traffic road, the speed of overtaking and overtaken vehicles is 65kmph and 40kmph respectively. If the average acceleration 0.92m/sec^2. Determine the overtaking sight distance indicating the details of overtaking operations with sketch. Assume t=2.0sec

c) An expressway four lane divided, passing through a flat terrain has a horizontal curve of radius equal to ruling minimum radius and design speed is 120kmph. Assume design coefficient of lateral friction=0.15, length of the vehicle wheel base=6.1m. Calculate the following elements of the curve,

i) Ruling minimum radius
ii) Super elevation
iii) Extra Widening
iv) Length of transition curve using IRC equation. Assume Suitable data.

SECTION – II

Q.4 Solve any two questions. **12**

a) Differentiate between flexible & rigid pavement.

b) A pavement designer has arrived at a design traffic of 100 million standard axles for a newly developing national highway as per IRC-37 guidelines using the following data:
design life = 15 years, commercial vehicle count at the end of the construction = 4500 vehicles/day, annual traffic growth rate = 8%.
Calculate the vehicle damage factor used in this pavement design.
Explain the importance of Vehicle Damage Factor in flexible pavement design.

c) Write a short on applications of softening point & Ductility test on bitumen.

Q.5 Solve any two questions. **16**

a) Write a note on surface and sub surface drainage system for highway.

b) Calculate the stresses at the interior, edge and corner region of cement concrete pavement using Westergaard's analysis. Use the following data:
Wheel Load P = 4100kg, pavement thickness, h = 15cm, Poisson's ratio, $\mu = 0.15$, Modulus of subgrade reaction, K = 3.0kg/cm^3, Radius of contact area, a = 15cm, modulus of elasticity of concrete,
E = 3×10^5 kg/cm^2

c) State methods of tunneling in soft rock. Explain with sketch any one method in detail.

Examination: March/April – 2026
Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 MCQ/Objective type questions: 14

1) The water year in India starts on the first day of _____.
a) January b) April
c) June d) September

2) Depth-Area-Duration curves of precipitation at a station would normally be _____.
a) Curves, concave upwards, with duration increasing outward
b) Curves, concave downwards, with duration increasing outward
c) Curves, concave upwards, with duration decreasing outward
d) Curves, concave downwards, with duration decreasing outward

3) The S-curve hydrograph is the summation of _____.
a) Unit hydrograph b) Total runoff hydrograph
c) Effective rainfall hyetograph d) Base flow recession curve

4) Which of the following instrument is not connected with stream flow measurement?
a) Hygrometer b) Echo-depth recorder
c) Electro-magnetic flow meter d) Sounding weight

5) The geological formation, which yields only insignificant quantity of groundwater, is an _____.
a) aquifer b) aquifuse
c) aquiclude d) aquitard

6) The zone of aeration in a ground profile does not include _____.
a) capillary fringe
b) soil water zone
c) intermediate zone
d) saturation zone

7) The rate of flow of water through ground strata can be estimated by _____.
a) Darcy's formula
b) Stricker's formula
c) Dupuit's formula
d) Manning's formula

8) Pinpoint the correct statement _____.
a) irrigation helps in adopting mixed cropping
b) 'mixed cropping' means sowing of a different crop after a particular crop has been grown
c) over-irrigation may lead to saving in fertilizer
d) irrigation helps in avoiding mixed cropping

9) The interlinking of rivers can help in _____.
a) Increase in irrigation area
b) Control of flood
c) Both a and b
d) None of these

10) An irrigation project is classified as a major project when the cultural command involved in the project, is more than _____.
a) 2,000 hectares
b) 5,000 hectares
c) 10,000 hectares
d) None of the above

11) If the irrigation water applied to a field penetrates uniformly throughout, then the water distribution efficiency is _____.
a) 1
b) 0
c) 0.5
d) None of them, as more data is required to ascertain it

12) The efficiency of water conveyance does not depend upon _____.
a) climatic conditions
b) geometry of the conveyance system
c) nature of the boundary of the conveyance system
d) method of application of water

13) The capacity of an irrigation canal is usually controlled by _____.
a) average kharif demand
b) average rabi demand
c) kor demand of rabi crops
d) kor demand of kharif crops

14) Cooperative water users' organizations help in _____.
a) soil management
b) water management
c) soil conservation
d) None of these

Examination: March/April – 2026
Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 & 6 are compulsory in Section I & Section II, and solve any two questions from the remaining of each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 **a)** Define the following terms: **04**
i) Rain gauge density
ii) Evapotranspiration
iii) Specific yield of Aquifer
iv) W – Index

b) The average annual rainfall in cm, observed at four existing rain Gauge stations in a basin is 105, 79, 70, and 66 cm respectively. If the average depth of rainfall over the basin is to be estimated within a 10% error, determine the additional number of rain gauges needed. **06**

Q.3 **a)** What is a unit hydrograph? Enlist assumptions and limitations of 'Unit Hydrograph theory'. **04**

b) Find the ordinates of a storm hydrograph resulting from a 3-hour storm with rainfall of 2, 6.75, and 3.75 cm during subsequent 3-hour intervals. The ordinates of the unit hydrograph are given below. Assume an initial loss of 5 mm infiltration index of 2.5 mm/hour and base flow of 10 cumecs. **05**

Time (hr)	Ordinates of unit hydrograph (m^3/sec)
3	0
6	110
9	365
12	500
15	390
18	310
21	250
24	235
3	175
6	130
9	95

Time (hr)	Ordinates of unit hydrograph (m^3/sec)
12	65
15	40
18	22
21	10
24	0

Q.4 **a)** Enumerate the different methods used for stream gauging. Discuss any one of them in detail. **04**

b) Given the ordinates of runoff hydrograph from a catchment area of 100 sqkm having a constant base flow of 2 cumec. Derive the ordinates of UH **05**

Duration (h)	2	4	6	8	10	12	14
Ordinate of runoff hydrograph (m^3/s)	2	3	4	6	5	3	2

Q.5 **a)** Derive an equation for the steady state discharge of a well fully penetrating a 'Confined Aquifer'. **04**

b) In an artesian aquifer of 8m thick, a 10 cm diameter well is pumped at a constant rate of 100 lit/minute. The steady state drawdown observed in two wells located at a distance of 10 m and 50 m distances from the center of the well are 3 m and 0.5 m respectively, compute the transmissivity and the hydraulic conductivity of the aquifer. **05**

SECTION – II

Q.6 **a)** Enlist the proposed inter-basin water transfer links proposed for Himalayan Rivers, a Development component of the National perspective plan. State the advantages of the Himalayan component. **05**

b) With a neat sketch explain the general layout and component parts of the lift irrigation system also, state when it is required to be implemented. **05**

Q.7 **a)** Discuss the suitability and construction features of Kolhapur type weir for irrigation. **03**

b) The table below gives necessary data about the crops, their duty, and the area under each crop, commanded by a canal, taking off from a storage reservoir. Taking a time factor for a canal to be 10/20. Calculate the discharge required at the head of the canal. Also determine design discharge, if the capacity factor of a canal is 0.9. **06**

Crop	Base period	Area (hectares)	Duty at the head of canal (ha/cumec)
Sugarcane (yearly)	320	800	580
Overlap of sugarcane in hot weather	90	140	580
Wheat (Rabbi)	120	700	1600
Bajri (Kharif)	120	600	2000
Vegetable (Hot weather)	120	360	600

Q.8 **a)** Define the following terms: **03**

i) Gross Command area
ii) Crop period
iii) Base period

b) What is meant by watershed management? Why it is essential? Explain in detail. **06**

Q.9 **a)** What is meant by sedimentation of the reservoir? Enlist the measures adopted for control of sediment inflow in the reservoirs. **03**

b) The root zone of irrigation soil has a dry weight of 15.3 kN/m^3 and a field capacity of 30%. The root zone depth of the crop having, a permanent wilting coefficient 9% is 0.9m. **06**

Determine:

i) the Depth of moisture in the root zone at field capacity
ii) the Depth of moisture in the root zone at the permanent wilting point
iii) the Depth of water available

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 MCQ/Objective type questions: 14

1) Pinpoint the correct statement _____.
a) irrigation helps in adopting mixed cropping
b) 'mixed cropping' means sowing of a different crop after a particular crop has been grown
c) over-irrigation may lead to saving in fertilizer
d) irrigation helps in avoiding mixed cropping

2) The interlinking of rivers can help in _____.
a) Increase in irrigation area b) Control of flood
c) Both a and b d) None of these

3) An irrigation project is classified as a major project when the cultural command involved in the project, is more than _____.
a) 2,000 hectares b) 5,000 hectares
c) 10,000 hectares d) None of the above

4) If the irrigation water applied to a field penetrates uniformly throughout, then the water distribution efficiency is _____.
a) 1
b) 0
c) 0.5
d) None of them, as more data is required to ascertain it

5) The efficiency of water conveyance does not depend upon _____.
a) climatic conditions
b) geometry of the conveyance system
c) nature of the boundary of the conveyance system
d) method of application of water

6) The capacity of an irrigation canal is usually controlled by _____.
a) average kharif demand b) average rabi demand
c) kor demand of rabi crops d) kor demand of kharif crops

7) Cooperative water users' organizations help in _____.
a) soil management b) water management
c) soil conservation d) None of these

8) The water year in India starts on the first day of _____.
a) January b) April
c) June d) September

9) Depth-Area-Duration curves of precipitation at a station would normally be _____.
a) Curves, concave upwards, with duration increasing outward
b) Curves, concave downwards, with duration increasing outward
c) Curves, concave upwards, with duration decreasing outward
d) Curves, concave downwards, with duration decreasing outward

10) The S-curve hydrograph is the summation of _____.
a) Unit hydrograph b) Total runoff hydrograph
c) Effective rainfall hyetograph d) Base flow recession curve

11) Which of the following instrument is not connected with stream flow measurement?
a) Hygrometer b) Echo-depth recorder
c) Electro-magnetic flow meter d) Sounding weight

12) The geological formation, which yields only insignificant quantity of groundwater, is an _____.
a) aquifer b) aquifuse
c) aquiclude d) aquitard

13) The zone of aeration in a ground profile does not include _____.
a) capillary fringe b) soil water zone
c) intermediate zone d) saturation zone

Q.1 MCQ/Objective type questions: 14

1) The zone of aeration in a ground profile does not include _____.
a) capillary fringe b) soil water zone
c) intermediate zone d) saturation zone

2) The rate of flow of water through ground strata can be estimated by _____.
a) Darcy's formula b) Stricker's formula
c) Dupuit's formula d) Manning's formula

3) Pinpoint the correct statement _____.
a) irrigation helps in adopting mixed cropping
b) 'mixed cropping' means sowing of a different crop after a particular crop has been grown
c) over-irrigation may lead to saving in fertilizer
d) irrigation helps in avoiding mixed cropping

4) The interlinking of rivers can help in _____.
a) Increase in irrigation area b) Control of flood
c) Both a and b d) None of these

5) An irrigation project is classified as a major project when the cultural command involved in the project, is more than _____.
a) 2,000 hectares b) 5,000 hectares
c) 10,000 hectares d) None of the above

6) If the irrigation water applied to a field penetrates uniformly throughout, then the water distribution efficiency is _____.
   a) 1
   b) 0
   c) 0.5
   d) None of them, as more data is required to ascertain it

7) The efficiency of water conveyance does not depend upon _____.
   a) climatic conditions
   b) geometry of the conveyance system
   c) nature of the boundary of the conveyance system
   d) method of application of water

8) The capacity of an irrigation canal is usually controlled by _____.
   a) average kharif demand
   b) average rabi demand
   c) kor demand of rabi crops
   d) kor demand of kharif crops

9) Cooperative water users' organizations help in _____.
   a) soil management
   b) water management
   c) soil conservation
   d) None of these

10) The water year in India starts on the first day of _____.
   a) January
   b) April
   c) June
   d) September

11) Depth-Area-Duration curves of precipitation at a station would normally be _____.
   a) Curves, concave upwards, with duration increasing outward
   b) Curves, concave downwards, with duration increasing outward
   c) Curves, concave upwards, with duration decreasing outward
   d) Curves, concave downwards, with duration decreasing outward

12) The S-curve hydrograph is the summation of _____.
   a) Unit hydrograph
   b) Total runoff hydrograph
   c) Effective rainfall hyetograph
   d) Base flow recession curve

13) Which of the following instrument is not connected with stream flow measurement?
   a) Hygrometer
   b) Echo-depth recorder
   c) Electro-magnetic flow meter
   d) Sounding weight

14) The geological formation, which yields only insignificant quantity of groundwater, is an _____.
   a) aquifer
   b) aquifuse
   c) aquiclude
   d) aquitard

Set **S**

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 & 6 are compulsory in Section I & Section II, and solve any two questions from the remaining of each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 **a)** Define the following terms: **04**
i) Rain gauge density
ii) Evapotranspiration
iii) Specific yield of Aquifer
iv) W – Index

b) The average annual rainfall in cm, observed at four existing rain Gauge stations in a basin is 105, 79, 70, and 66 cm respectively. If the average depth of rainfall over the basin is to be estimated within a 10% error, determine the additional number of rain gauges needed. **06**

Q.3 **a)** What is a unit hydrograph? Enlist assumptions and limitations of 'Unit Hydrograph theory'. **04**

b) Find the ordinates of a storm hydrograph resulting from a 3-hour storm with rainfall of 2, 6.75, and 3.75 cm during subsequent 3-hour intervals. The ordinates of the unit hydrograph are given below. Assume an initial loss of 5 mm infiltration index of 2.5 mm/hour and base flow of 10 cumecs. **05**

Time (hr)	Ordinates of unit hydrograph (m^3/sec)
3	0
6	110
9	365
12	500
15	390
18	310
21	250
24	235
3	175
6	130
9	95

Time (hr)	Ordinates of unit hydrograph (m^3/sec)
12	65
15	40
18	22
21	10
24	0

Q.4 **a)** Enumerate the different methods used for stream gauging. Discuss any one of them in detail. **04**

b) Given the ordinates of runoff hydrograph from a catchment area of 100 sqkm having a constant base flow of 2 cumec. Derive the ordinates of UH **05**

Duration (h)	2	4	6	8	10	12	14
Ordinate of runoff hydrograph (m^3/s)	2	3	4	6	5	3	2

Q.5 **a)** Derive an equation for the steady state discharge of a well fully penetrating a 'Confined Aquifer'. **04**

b) In an artesian aquifer of 8m thick, a 10 cm diameter well is pumped at a constant rate of 100 lit/minute. The steady state drawdown observed in two wells located at a distance of 10 m and 50 m distances from the center of the well are 3 m and 0.5 m respectively, compute the transmissivity and the hydraulic conductivity of the aquifer. **05**

SECTION – II

Q.6 **a)** Enlist the proposed inter-basin water transfer links proposed for Himalayan Rivers, a Development component of the National perspective plan. State the advantages of the Himalayan component. **05**

b) With a neat sketch explain the general layout and component parts of the lift irrigation system also, state when it is required to be implemented. **05**

Q.7 **a)** Discuss the suitability and construction features of Kolhapur type weir for irrigation. **03**

b) The table below gives necessary data about the crops, their duty, and the area under each crop, commanded by a canal, taking off from a storage reservoir. Taking a time factor for a canal to be 10/20. Calculate the discharge required at the head of the canal. Also determine design discharge, if the capacity factor of a canal is 0.9. **06**

Crop	Base period	Area (hectares)	Duty at the head of canal (ha/cumec)
Sugarcane (yearly)	320	800	580
Overlap of sugarcane in hot weather	90	140	580
Wheat (Rabbi)	120	700	1600
Bajri (Kharif)	120	600	2000
Vegetable (Hot weather)	120	360	600

Q.8 **a)** Define the following terms: **03**

i) Gross Command area
ii) Crop period
iii) Base period

b) What is meant by watershed management? Why it is essential? Explain in detail. **06**

Q.9 **a)** What is meant by sedimentation of the reservoir? Enlist the measures adopted for control of sediment inflow in the reservoirs. **03**

b) The root zone of irrigation soil has a dry weight of 15.3 kN/m^3 and a field capacity of 30%. The root zone depth of the crop having, a permanent wilting coefficient 9% is 0.9m. **06**

Determine:

i) the Depth of moisture in the root zone at field capacity
ii) the Depth of moisture in the root zone at the permanent wilting point
iii) the Depth of water available

Examination: March/April – 2026
Design of Concrete Structures - I (BTN01505)

Day & Date: Monday, 11-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.
5) While solving MCQ, IS 456-2000 is not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) In two ways restrained slab torsion steel is provided at _____. **01**
a) Top b) Bottom
c) Top & Bottom d) None of the above

2) Spacing of stirrups in a rectangular beam, is _____. **01**
a) Kept constant throughout the length
b) Decreased towards the center of the beam
c) Increased at the ends
d) Increased at the center of the beam

3) A rectangular slab 4m × 6m supported on two opposite shorter edge should be designed as _____. **01**
a) One way slab spanning along longer edge
b) Two ways slab
c) One way slab spanning along shorter edge
d) None of above

4) The effective cover of beam depends on _____. **01**
a) Diameter of main reinforcement
b) Grade of reinforcing steel
c) Width of beam
d) All of these

5) In a simply supported slab, alternate bars are curtailed at _____. **01**

a) $1/4^{th}$ of the span
b) $1/5^{th}$ of the span
c) $1/6^{th}$ of the span
d) $1/7^{th}$ of the span

6) A short column of size 250mm×350mm is provided with longitudinal reinforcement of diameter 20mm and the diameter of tie is 8mm. According to IS456:2000, the maximum spacing between two ties is _____. **01**

a) 200 mm
b) 350 mm
c) 300 mm
d) 250 mm

7) The length of torsion reinforcement in two ways slab is provided as _____. **01**

a) Shorter span/4
b) Shorter span/5
c) Shorter span/8
d) Shorter span/10

8) The minimum tension reinforcement for 250 mm × 400 mm effective deep beam of Fe500 grade steel is _____. **02**

a) 150 mm^2
b) 170 mm^2
c) 180 N/mm^2
d) 220 N/mm^2

9) The factored load carrying capacity of column of 300mm × 600mm size with minimum percentage of steel for M20 and Fe415 grade is _____. **02**

a) 1840 KN
b) 1900 KN
c) 1829 KN
d) 1800 KN

10) If the diameter of the longitudinal bars of a square column is 16 mm, the diameter of the lateral ties should not be less than _____. **01**

a) 4 mm
b) 5 mm
c) 6 mm
d) 8 mm

11) A axially loaded column is of 300 mm × 300 mm size. Effective length of column is 3 m. What is the minimum eccentricity of the axial load of the column. **02**

a) 0
b) 10 mm
c) 16 mm
d) 20 mm

Day & Date: Monday, 11-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 and Q. No. 6 are compulsory.
2) Solve any two from Q. No. 3 to Q. No. 5 and Q. No. 7 to Q. No. 9 questions from each section.
3) Use of IS 456-2000 and non-programmable calculator are allowed.
4) Draw neat sketch's where required and assume suitable data if required and state it clearly.

SECTION – I

Q.2 A roof of clear dimensions 4m × 5m supported on walls of 230mm thickness, with corners are held down. All the four edges of the slab are discontinuous. Design the slab, if the beam is carrying a live load of 3 kN/m^2. Use M 20 & Fe 415 steel. **10**

Q.3 Design a simply supported beam of clear span of 5m has to carry a superimposed load of 45 kN/m at service. The beam has bearing of 400 mm of each end. Use M 20 & Fe 415 steel. **09**

Q.4 A doubly reinforced beam 250 mm × 450 mm deep to centre of tensile reinforcement is provided with 2 bars of 16 mm diameter as compression steel with an effective cover of 50 mm and 4 bars of 25 mm diameter as tensile steel. Determine flexural strength & safe UDL on the simply supported beam of span 6 m. if M20 and Fe 250 grade steel. **09**

Q.5 Calculate the limiting moment of resistance & reinforcement required for T beam section having following sectional properties: **09**
Width of flange=1400 mm
Flange thickness =100 mm
Width of rib=250 mm
Effective depth =500 mm
Materials: M20, Fe 250

SECTION – II

Q.6 Design a rectangular beam, continuous over four column supports with effective span 6m each. The beam is subjected to an imposed load of 10 kN/m and live load of 15 kN/m. Use M25 concrete and Fe500 steel. **10**

Q.7 Determine reinforcement required for a beam size 230 mm × 600 mm subjected to shear force of 60 kN, torsional moment of 35 kN.m and bending moment of 80 kN.m. Use M 20 concrete and Fe 500 steel. **09**

Q.8 A short column 420 mm × 420 mm is provided with 8-16 mm diameter. The length of column is 2.25 m. It is effectively held in position at both the ends & restrained against rotation at other end. Find ultimate load of the column. Use M20 & Fe 415. **09**

Q.9 Design a circular column of diameter 400 mm with helical reinforcement subjected to a load of 1400 kN. Use M25 concrete and Fe415 steel. The column has unsupported length of 3 m and is effectively held in position at both ends but not restrained against rotation. **09**

d) All of these

2) In a simply supported slab, alternate bars are curtailed at _____. **01**
a) $1/4^{th}$ of the span b) $1/5^{th}$ of the span
c) $1/6^{th}$ of the span d) $1/7^{th}$ of the span

3) A short column of size 250mm×350mm is provided with longitudinal reinforcement of diameter 20mm and the diameter of tie is 8mm. According to IS456:2000, the maximum spacing between two ties is _____. **01**
a) 200 mm b) 350 mm
c) 300 mm d) 250 mm

4) The length of torsion reinforcement in two ways slab is provided as _____. **01**
a) Shorter span/4 b) Shorter span/5
c) Shorter span/8 d) Shorter span/10

5) The minimum tension reinforcement for 250 mm × 400 mm effective deep beam of Fe500 grade steel is _____. **02**
a) 150 mm^2 b) 170 mm^2
c) 180 N/mm^2 d) 220 N/mm^2

6) The factored load carrying capacity of column of 300mm × 600mm size with minimum percentage of steel for M20 and Fe415 grade is _____. **02**

a) 1840 KN
b) 1900 KN
c) 1829 KN
d) 1800 KN

7) If the diameter of the longitudinal bars of a square column is 16 mm, the diameter of the lateral ties should not be less than _____. **01**

a) 4 mm
b) 5 mm
c) 6 mm
d) 8 mm

8) A axially loaded column is of 300 mm × 300 mm size. Effective length of column is 3 m. What is the minimum eccentricity of the axial load of the column. **02**

a) 0
b) 10 mm
c) 16 mm
d) 20 mm

9) In two ways restrained slab torsion steel is provided at _____. **01**

a) Top
b) Bottom
c) Top & Bottom
d) None of the above

10) Spacing of stirrups in a rectangular beam, is _____. **01**

a) Kept constant throughout the length
b) Decreased towards the center of the beam
c) Increased at the ends
d) Increased at the center of the beam

11) A rectangular slab 4m × 6m supported on two opposite shorter edge should be designed as _____. **01**

a) One way slab spanning along longer edge
b) Two ways slab
c) One way slab spanning along shorter edge
d) None of above

Set S

T.Y. (B.Tech.) (Civil Engineering) (Sem - I) (Old) (CBCS)
Examination: March/April – 2026
Design of Concrete Structures - I (BTN01505)

Day & Date: Monday, 11-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 and Q. No. 6 are compulsory.
2) Solve any two from Q. No. 3 to Q. No. 5 and Q. No. 7 to Q. No. 9 questions from each section.
3) Use of IS 456-2000 and non-programmable calculator are allowed.
4) Draw neat sketch's where required and assume suitable data if required and state it clearly.

SECTION – I

Q.2 A roof of clear dimensions 4m × 5m supported on walls of 230mm thickness, with corners are held down. All the four edges of the slab are discontinuous. Design the slab, if the beam is carrying a live load of 3 kN/m^2. Use M 20 & Fe 415 steel. **10**

Q.3 Design a simply supported beam of clear span of 5m has to carry a superimposed load of 45 kN/m at service. The beam has bearing of 400 mm of each end. Use M 20 & Fe 415 steel. **09**

Q.4 A doubly reinforced beam 250 mm × 450 mm deep to centre of tensile reinforcement is provided with 2 bars of 16 mm diameter as compression steel with an effective cover of 50 mm and 4 bars of 25 mm diameter as tensile steel. Determine flexural strength & safe UDL on the simply supported beam of span 6 m. if M20 and Fe 250 grade steel. **09**

Q.5 Calculate the limiting moment of resistance & reinforcement required for T beam section having following sectional properties: **09**
Width of flange=1400 mm
Flange thickness =100 mm
Width of rib=250 mm
Effective depth =500 mm
Materials: M20, Fe 250

SECTION – II

Q.6 Design a rectangular beam, continuous over four column supports with effective span 6m each. The beam is subjected to an imposed load of 10 kN/m and live load of 15 kN/m. Use M25 concrete and Fe500 steel. **10**

Q.7 Determine reinforcement required for a beam size 230 mm × 600 mm subjected to shear force of 60 kN, torsional moment of 35 kN.m and bending moment of 80 kN.m. Use M 20 concrete and Fe 500 steel. **09**

Q.8 A short column 420 mm × 420 mm is provided with 8-16 mm diameter. The length of column is 2.25 m. It is effectively held in position at both the ends & restrained against rotation at other end. Find ultimate load of the column. Use M20 & Fe 415. **09**

Q.9 Design a circular column of diameter 400 mm with helical reinforcement subjected to a load of 1400 kN. Use M25 concrete and Fe415 steel. The column has unsupported length of 3 m and is effectively held in position at both ends but not restrained against rotation. **09**

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Environmental Engineering - II (BTN01506)

Day & Date: Tuesday, 12-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the quantity of wastewater required if water supply is 300 lpcd?
a) 260 lpcd b) 240 lpcd
c) 235 lpcd d) 250 lpcd

2) Which of the following is correct sequence?
a) Screening > Distribution > Aeration > Landfill
b) Screening > Sedimentation > Aeration > Landfill
c) Sedimentation > Aeration > Screening > Landfill
d) Aeration > Sedimentation > Landfill > Distribution

3) Which of the following are not the sources of wastewater?
a) Plume b) MSW
c) Industrial water d) All of the Above

4) In composting method by trenching, trenches of _____ m length are excavated.
a) 4 - 10 b) 7 - 12
c) 10 - 20 d) Above 20

5) Controlled tipping method of disposal of refuse requires an area of _____ m^2/c/yr.
a) 0.1 - 0.3 b) 0.3 - 0.5
c) 0.5 - 1.0 d) 1.0 - 1.2

6) Which type of pollutant does Ozone belong to?
a) Primary b) Secondary
c) Natural d) None of the above

7) The Fumigation plume from the stacks is observed in _____ type of atmosphere.
   a) Stable
   b) Unstable
   c) Inversion
   d) Neutral

8) As per CPCB, the COD limit is _____.
   a) 1000 mg/lt
   b) 800 mg/lt
   c) 250 mg/lt
   d) 300 mg/lt

9) Which of the standards govern the discharge of wastewater into streams?
   a) IS 10500:2016
   b) Schedule IV of Environmental (Protection) Rules,1986
   c) Schedule I of IUCN
   d) Schedule II of WHO

10) Which of the following is/are the sources of Air Pollution?
   a) Burning of Wood for Cooking
   b) Vehicular Emission
   c) Chimney Smoke from Industries
   d) All of the Above

11) What is Garbage?
   a) Domestic waste
   b) Wastewater from Landfill
   c) Both a) & b)
   d) None of the above

12) What is Leachate?
   a) rubbish or waste, especially domestic refuse
   b) wastewater from Landfill
   c) Both a) & b)
   d) None of the above

13) What is the sequence for Solid Waste treatment & Disposal?
   a) Segregation > Collection > Waste to energy > Landfill
   b) Waste to energy > Landfill > Segregation > Collection
   c) Landfill > Segregation > Collection > Waste to energy
   d) None of the above

14) The dilution method of sewage disposal is most preferred when _____.
   a) The sewage arriving at outfall point is septic
   b) There are non-forward currents
   c) Discharge in water body is not low
   d) All of the above

Environmental Engineering - II (BTN01506)

Day & Date: Tuesday, 12-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

SECTION – I

Q.2 **a)** Draw complete and neat sketch of Activated Sludge treatment plant and discuss each part. **07**

b) Define the following with equations: **03**
i) Mean Cell Residence Time
ii) F/M ratio

Q.3 **a)** Design a completely mixed ASP for following data: **06**
i) Wastewater flow = 20 MLd
ii) Influent BOD = 200 mg/Lit
iii) Effluent BOD = 25 mg/Lit
iv) MLSS = 2000 mg/Lit
v) F/M = 0.2
vi) SVI = 80 ml/gm
vii) Sludge age = 10 days
Assume any missing data appropriately.

b) What is Chemical Oxygen Demand? Differentiate between Chemical Oxygen Demand and Biochemical Oxygen Demand. **03**

Q.4 **a)** Explain Trickling filter with the help of a diagram. **06**

b) Differentiate between Vermicomposting and Indore Method of composting. **03**

Q.5 **a)** Determine Ultimate BOD & BOD_3. If the BOD_5 is 200 mg/lt at 20°C. assuming the deoxygenation constant as 0.25/day. **06**

b) Explain Moving Bed Biofilm Reactor with a neat diagram. **03**

SECTION – II

Q.6 **a)** Discuss the oxygen sag analysis with the help of a diagram. **04**

b) A stream, saturated with DO has flow of 1.3 m^3/s, BOD of 4 mg/L and rate constant of 0.25 per day. It receives an effluent discharge of 0.35 m^3/s. Having BOD 20 mg/L, DO 5 mg/L and rate constant 0.13 per day. The average velocity of flow of the stream is 0.15 m/s. Calculate the DO deficit at point 20 km & 40 km downstream. Assume that the temperature is 20°C throughout and BOD is measured at 5 days. Take saturation DO at 20°C as 9.17 mg/L. **06**

Q.7 **a)** With the help of a diagram, explain Electrostatic Precipitator. **05**

b) Discuss the sources of Air pollution, with the help of a diagram. **04**

Q.8 **a)** Illustrate the functioning of Bangalore method of composting with the help of a diagram. **05**

b) Explain the concept of number of trip for solid waste with the help of a diagram. **04**

Q.9 Discuss the following: **09**

i) Cyclone Precipitator
ii) Sludge drying Bed
iii) SBR

- a) 260 lpcd
- b) 240 lpcd
- c) 235 lpcd
- d) 250 lpcd

11) Which of the following is correct sequence?
- a) Screening > Distribution > Aeration > Landfill
- b) Screening > Sedimentation > Aeration > Landfill
- c) Sedimentation > Aeration > Screening > Landfill
- d) Aeration > Sedimentation > Landfill > Distribution

12) Which of the following are not the sources of wastewater?
- a) Plume
- b) MSW
- c) Industrial water
- d) All of the Above

13) In composting method by trenching, trenches of _____ m length are excavated.
- a) 4 - 10
- b) 7 - 12
- c) 10 - 20
- d) Above 20

14) Controlled tipping method of disposal of refuse requires an area of _____ m^2/c/yr.
- a) 0.1 - 0.3
- b) 0.3 - 0.5
- c) 0.5 - 1.0
- d) 1.0 - 1.2

Seat No.		Set	S

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Environmental Engineering - II (BTN01506)

Day & Date: Tuesday, 12-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

SECTION – I

Q.2 **a)** Draw complete and neat sketch of Activated Sludge treatment plant and discuss each part. **07**

b) Define the following with equations: **03**
i) Mean Cell Residence Time
ii) F/M ratio

Q.3 **a)** Design a completely mixed ASP for following data: **06**
i) Wastewater flow = 20 MLd
ii) Influent BOD = 200 mg/Lit
iii) Effluent BOD = 25 mg/Lit
iv) MLSS = 2000 mg/Lit
v) F/M = 0.2
vi) SVI = 80 ml/gm
vii) Sludge age = 10 days
Assume any missing data appropriately.

b) What is Chemical Oxygen Demand? Differentiate between Chemical Oxygen Demand and Biochemical Oxygen Demand. **03**

Q.4 **a)** Explain Trickling filter with the help of a diagram. **06**

b) Differentiate between Vermicomposting and Indore Method of composting. **03**

Q.5 **a)** Determine Ultimate BOD & BOD_3. If the BOD_5 is 200 mg/lt at 20°C. assuming the deoxygenation constant as 0.25/day. **06**

b) Explain Moving Bed Biofilm Reactor with a neat diagram. **03**

SECTION – II

Q.6 **a)** Discuss the oxygen sag analysis with the help of a diagram. **04**

b) A stream, saturated with DO has flow of 1.3 m^3/s, BOD of 4 mg/L and rate constant of 0.25 per day. It receives an effluent discharge of 0.35 m^3/s. Having BOD 20 mg/L, DO 5 mg/L and rate constant 0.13 per day. The average velocity of flow of the stream is 0.15 m/s. Calculate the DO deficit at point 20 km & 40 km downstream. Assume that the temperature is 20°C throughout and BOD is measured at 5 days. Take saturation DO at 20°C as 9.17 mg/L. **06**

Q.7 **a)** With the help of a diagram, explain Electrostatic Precipitator. **05**

b) Discuss the sources of Air pollution, with the help of a diagram. **04**

Q.8 **a)** Illustrate the functioning of Bangalore method of composting with the help of a diagram. **05**

b) Explain the concept of number of trip for solid waste with the help of a diagram. **04**

Q.9 Discuss the following: **09**

i) Cyclone Precipitator
ii) Sludge drying Bed
iii) SBR

Examination: March/April – 2026
Risk Assessment and Vulnerability Analysis (BTN01514)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the primary goal of risk assessment?
a) Identifying all potential risks
b) Eliminating all risks
c) Evaluating and prioritizing risks
d) Mitigating all risks

2) Which of the following is NOT a step in the risk assessment process?
a) Risk identification b) Risk control
c) Risk analysis d) Risk evaluation

3) Vulnerability refers to _____.
a) The likelihood of a threat occurring
b) The potential impact of a threat
c) Weaknesses in a system that could be exploited
d) The effectiveness of security measures

4) Which of the following is NOT a common method for assessing risk?
a) Qualitative risk analysis b) Quantitative risk analysis
c) Probability risk assessment d) Semi-quantitative risk analysis

5) A risk matrix is used to _____.
a) Determine the probability of a risk occurring
b) Quantify the impact of a risk
c) Assess and prioritize risks based on their likelihood and impact
d) Calculate the total risk exposure of an organization

6) Which of the following is NOT a category typically included in a risk assessment?
a) Financial risks
b) Operational risks
c) Human resources risks
d) Marketing risks

7) In a qualitative risk assessment, risks are typically evaluated based on _____.
a) Numeric values
b) Financial impact
c) Descriptive scales
d) Probability distributions

8) Which of the following is a key benefit of conducting vulnerability analysis?
a) Identifying potential threats
b) Eliminating all risks
c) Understanding weaknesses in a system
d) Implementing security measures

9) Which of the following is NOT a common type of vulnerability?
a) Physical vulnerability
b) Software vulnerability
c) Environmental vulnerability
d) Human vulnerability

10) Which of the following is an example of a technical vulnerability?
a) Poor password policies
b) Untrained employees
c) Physical access to sensitive areas
d) Outdated software

11) The CIA triad stands for _____.
a) Confidentiality, Identification, Availability
b) Confidentiality, Integrity, Authentication
c) Confidentiality, Integrity, Availability
d) Confidentiality, Identification, Authentication

12) Which of the following is an example of a mitigation strategy for reducing risk?
a) Accepting the risk
b) Transferring the risk
c) Ignoring the risk
d) Enhancing the risk

13) Which risk response strategy involves taking specific actions to reduce the likelihood or impact of a risk?
a) Avoidance
b) Mitigation
c) Acceptance
d) Transference

14) Which of the following is a limitation of qualitative risk analysis?
a) Difficulty in prioritizing risks
b) Lack of depth in understanding risks
c) Inability to assess impact
d) Subjectivity in risk evaluation

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Solve following multiple choice questions: **14**

1) Intermediate sight distance is defined as ____ the stopping sight distance.
a) Three time b) One time
c) Twice d) Four time

2) Transition curve is provided at both ends of Curve.
a) Horizontal b) Vertical
c) Widening d) None of the above

3) What is the Side slope (H: V) for rural Roads when the condition is Embankment in silty/sandy/gravelly soil?
a) 2.5:1 to 3:1 b) 2:1
c) 1:1 to 0.5:1 d) 1/12:1 to 1/16:1

4) The required value of camber is dependent on the type of and rainfall.
a) Pavement b) Embankment
c) Rural d) None of these

5) The maximum super elevation on hill roads should not exceed _____.
a) 7% b) 8%
c) 9% d) 10%

6) The type of Transition Curve that is generally provided on hill road is _____.
a) Circular
b) Cubic parabola
c) Lemniscate spiral
d) Spiral

7) The water may be collected in _____.
a) Catch pits
b) Kerb
c) Longitudinal drains
d) Filter sand

8) The sight distance is measured along the middle of the _____.
a) Inner lane
b) Outer lane
c) Middle lane
d) None of these

9) Minimum thickness of the base of a flexible pavement is _____.
a) 15 cm
b) 20 cm
c) 10 cm
d) 5 cm

10) Which of the following it NOT a critical parameter to control cracking and rutting in a flexible pavement?
a) Tensile strain near the surface close to the edge of the wheel
b) Vertical sub-base strain
c) Vertical subgrade strain
d) Tensile strain at the bottom of bituminous layer

11) What is normally the primary objective of a Self Help Group (SHG)?
a) To provide micro-finance to groups
b) To improve technology of farming
c) To provide high quality seeds
d) To provide education needs

12) The interface treatment provided to plug in the voids of porous surfaces and to bond loose particles in bituminous pavements is called _____.
a) Tack coat
b) Prime coat
c) Seal coat
d) Surface dressing

13) Causeways are the type of _____.
a) Cross drainage structure
b) Side drains
c) Sub-surface drainage structure
d) Jelly drains

14) The seepage flow is present in _____.
a) Surface drainage
b) Sub surface drainage
c) Camber
d) Cross slope

Section – I

Q.2 Solve Any Two of the following. **14**

a) Write short note on '*Planning Database in Rural Roads.'*

b) Explain in detail *''Road alignment and Surveys'* in rural roads.

c) Enlist and explain various factors affecting geometric design of roads.

Q.3 Solve Any Two of the following. **14**

a) One two-way traffic road, speed of overtaking vehicle is 65 kmph and overtaken vehicle is 45 kmph. If average acceleration is 0.92 m/sec^2 and reaction time is 2.5 seconds, calculate Overtaking Sight Distance (OSD).

b) What are the various *'Design parameters'* for Pavement design in Rural Roads?

c) CBR test is performed on flexible pavement and load verses penetration table is shown below, an initial traffic of 30 CVPD, with a growth rate of 6 per cent per annum for a location having annual rainfall of 1200 mm. The design life is 10 years. Determine the pavement thickness.

Penetration	0	0.5	1	1.5	2	2.5	3	4	5	7.5	10	12.5
Load (kg)	0	8	26	43	63	75	84	105	114	135	151	165

Section - II

Q.4 Solve Any Two of the following. **14**

a) Explain the requirements of surface drain; road side drains, shoulder drains, catch water drains.

b) Explain Standard design of culverts.

c) Explain Construction of *fly ash embankments.*

Q.5 Solve Any Two of the following. **14**

a) Explain *quality control in construction.*

b) Explain maintenance of paved roads.

c) Explain the concept of '*Rehabilitation*.'

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Planning and Design of Rural Roads (BTN01515)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.
5) Draw neat sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Solve following multiple choice questions: **14**

1) The sight distance is measured along the middle of the _____.

a) Inner lane b) Outer lane
c) Middle lane d) None of these

2) Minimum thickness of the base of a flexible pavement is _____.

a) 15 cm b) 20 cm
c) 10 cm d) 5 cm

3) Which of the following it NOT a critical parameter to control cracking and rutting in a flexible pavement?

a) Tensile strain near the surface close to the edge of the wheel
b) Vertical sub-base strain
c) Vertical subgrade strain
d) Tensile strain at the bottom of bituminous layer

4) What is normally the primary objective of a Self Help Group (SHG)?

a) To provide micro-finance to groups
b) To improve technology of farming
c) To provide high quality seeds
d) To provide education needs

5) The interface treatment provided to plug in the voids of porous surfaces and to bond loose particles in bituminous pavements is called _____.
a) Tack coat
b) Prime coat
c) Seal coat
d) Surface dressing

6) Causeways are the type of _____.
a) Cross drainage structure
b) Side drains
c) Sub-surface drainage structure
d) Jelly drains

7) The seepage flow is present in _____.
a) Surface drainage
b) Sub surface drainage
c) Camber
d) Cross slope

8) Intermediate sight distance is defined as ____ the stopping sight distance.
a) Three time
b) One time
c) Twice
d) Four time

9) Transition curve is provided at both ends of Curve.
a) Horizontal
b) Vertical
c) Widening
d) None of the above

10) What is the Side slope (H: V) for rural Roads when the condition is Embankment in silty/sandy/gravelly soil?
a) 2.5:1 to 3:1
b) 2:1
c) 1:1 to 0.5:1
d) 1/12:1 to 1/16:1

11) The required value of camber is dependent on the type of and rainfall.
a) Pavement
b) Embankment
c) Rural
d) None of these

12) The maximum super elevation on hill roads should not exceed _____.
a) 7%
b) 8%
c) 9%
d) 10%

13) The type of Transition Curve that is generally provided on hill road is _____.
a) Circular
b) Cubic parabola
c) Lemniscate spiral
d) Spiral

14) The water may be collected in _____.

a) Catch pits
b) Kerb
c) Longitudinal drains
d) Filter sand

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple choice questions. **14**

1) Which of these materials is considered a salvaged material?
a) New bricks b) Reclaimed wood
c) Steel rods d) Fiber cement boards

2) Low-VOC paints are used in sustainable construction because they _____.
a) Improve structural integrity
b) Reduce air pollution and health hazards
c) Are cheaper than conventional paints
d) Enhance durability of the building

3) What does the term "cradle to cradle" imply in sustainable construction?
a) Recycling materials back into the production cycle
b) Using materials only once and disposing of them
c) Tracking energy usage from construction to demolition
d) Designing buildings with zero operational energy

4) Which dataset is commonly used for calculating the embodied energy of materials?
a) Environmental Product Declarations (EPDs)
b) Urban Land Institute Reports
c) Building Code Requirements
d) ASHRAE Standards

5) Embodied carbon refers to _____.
   a) The carbon released during a building's operation
   b) The total carbon emissions associated with a material's life cycle
   c) The amount of carbon stored in construction materials
   d) The carbon content in the atmosphere

6) Ferrocement is commonly used for _____.
   a) Roofing systems only
   b) Walls, roofs, and water tanks
   c) Decorative elements only
   d) Foundation systems

7) Which sustainable construction technique uses locally available materials and reduces energy consumption?
   a) Steam cured blocks
   b) Composite beam and panel
   c) Compressed Stabilized Earth Bricks (CSEB)
   d) Reinforced concrete masonry

8) Which industrial byproduct is widely used as a cement replacement in concrete production?
   a) Fly ash
   b) Paper waste
   c) Glass cullet
   d) Rubber crumbs

9) What is a common application of tires in sustainable construction?
   a) Roofing material
   b) Structural walls in earthship homes
   c) Flooring systems
   d) Window frames

10) What is a key principle in materials selection for eco-audits?
   a) Prioritizing the cheapest material available
   b) Considering environmental impact alongside performance and cost
   c) Avoiding renewable resources due to cost constraints
   d) Ignoring material durability for short-term projects

11) What is the function of property charts in material selection?
   a) To calculate the cost of materials
   b) To visualize and compare material properties like strength, energy use, and durability
   c) To assess the recyclability of materials
   d) To determine the legal requirements for materials

12) What is an example of systematic eco-selection in transportation applications?
   a) Using steel for crash barriers
   b) Designing lightweight car structures with composite materials
   c) Replacing aluminum parts with heavier alloys
   d) Ignoring environmental impact for cost savings

13) Initial embodied energy in buildings refers to _____.

a) The energy used in the production, transport, and assembly of materials
b) The energy consumed during the operational life of a building
c) The energy required for heating and cooling systems
d) The energy lost due to inefficiencies in construction techniques

14) Material substitution for eco-efficient design focuses on _____.

a) Replacing high-performance materials with low-cost alternatives
b) Using materials with lower environmental impact without compromising performance
c) Reducing overall project costs without considering sustainability
d) Increasing the complexity of material processing

Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

Section – I

Q.2	**a)**	What are salvaged materials, and how do they contribute to waste reduction and resource efficiency in construction?	**05**
	b)	Explain the concept of low-VOC paints and their role in enhancing indoor air quality and reducing health risks.	**05**
Q.3	**a)**	How do biomaterials contribute to sustainable construction, and what distinguishes them from conventional materials?	**05**
	b)	What is the concept of embodied carbon, and how is it linked to the carbon footprint of materials?	**04**
Q.4	**a)**	Provide an overview of calculation techniques for embodied energy and carbon footprint in construction materials.	**05**
	b)	What strategies can be employed to offset the high embodied energy of materials in construction projects?	**04**
Q.5	**a)**	What are funicular shells, and how do they achieve strength and sustainability in construction?	**05**
	b)	Discuss the environmental benefits of using vaulted roofs in sustainable building design.	**04**

Section – II

Q.6	**a)**	Describe the innovative use of tires in creating structural elements in earthship or alternative homes.	**05**
	b)	What are the benefits of using demolition waste as an aggregate in concrete?	**05**
Q.7	**a)**	Provide examples of how post-consumer materials like glass bottles and paper waste are integrated into construction projects.	**05**
	b)	What is eco-auditing, and why is it important for evaluating the environmental impact of everyday items?	**04**
Q.8	**a)**	Explain the concept of material energy versus use-phase energy with an example of family cars.	**05**
	b)	Discuss the principles of materials selection and their significance in reducing environmental impact.	**04**
Q.9	**a)**	What is the difference between initial and recurring embodied energy in buildings, and why is it significant?	**05**
	b)	How does material substitution contribute to eco-efficient design? Provide an example.	**04**

   b) Using materials with lower environmental impact without compromising performance
   c) Reducing overall project costs without considering sustainability
   d) Increasing the complexity of material processing

8) Which of these materials is considered a salvaged material?
   a) New bricks
   b) Reclaimed wood
   c) Steel rods
   d) Fiber cement boards

9) Low-VOC paints are used in sustainable construction because they _____.
   a) Improve structural integrity
   b) Reduce air pollution and health hazards
   c) Are cheaper than conventional paints
   d) Enhance durability of the building

10) What does the term “cradle to cradle” imply in sustainable construction?
   a) Recycling materials back into the production cycle
   b) Using materials only once and disposing of them
   c) Tracking energy usage from construction to demolition
   d) Designing buildings with zero operational energy

11) Which dataset is commonly used for calculating the embodied energy of materials?
   a) Environmental Product Declarations (EPDs)
   b) Urban Land Institute Reports
   c) Building Code Requirements
   d) ASHRAE Standards

12) Embodied carbon refers to _____.
   a) The carbon released during a building's operation
   b) The total carbon emissions associated with a material's life cycle
   c) The amount of carbon stored in construction materials
   d) The carbon content in the atmosphere

13) Ferrocement is commonly used for _____.
   a) Roofing systems only
   b) Walls, roofs, and water tanks
   c) Decorative elements only
   d) Foundation systems

14) Which sustainable construction technique uses locally available materials and reduces energy consumption?
   a) Steam cured blocks
   b) Composite beam and panel
   c) Compressed Stabilized Earth Bricks (CSEB)
   d) Reinforced concrete masonry

Set **Q**

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Construction Materials: Sustainability and Usability (BTN01516)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

Section – I

Q.2	**a)**	What are salvaged materials, and how do they contribute to waste reduction and resource efficiency in construction?	**05**
	b)	Explain the concept of low-VOC paints and their role in enhancing indoor air quality and reducing health risks.	**05**
Q.3	**a)**	How do biomaterials contribute to sustainable construction, and what distinguishes them from conventional materials?	**05**
	b)	What is the concept of embodied carbon, and how is it linked to the carbon footprint of materials?	**04**
Q.4	**a)**	Provide an overview of calculation techniques for embodied energy and carbon footprint in construction materials.	**05**
	b)	What strategies can be employed to offset the high embodied energy of materials in construction projects?	**04**
Q.5	**a)**	What are funicular shells, and how do they achieve strength and sustainability in construction?	**05**
	b)	Discuss the environmental benefits of using vaulted roofs in sustainable building design.	**04**

Section – II

Q.6	**a)**	Describe the innovative use of tires in creating structural elements in earthship or alternative homes.	**05**
	b)	What are the benefits of using demolition waste as an aggregate in concrete?	**05**
Q.7	**a)**	Provide examples of how post-consumer materials like glass bottles and paper waste are integrated into construction projects.	**05**
	b)	What is eco-auditing, and why is it important for evaluating the environmental impact of everyday items?	**04**
Q.8	**a)**	Explain the concept of material energy versus use-phase energy with an example of family cars.	**05**
	b)	Discuss the principles of materials selection and their significance in reducing environmental impact.	**04**
Q.9	**a)**	What is the difference between initial and recurring embodied energy in buildings, and why is it significant?	**05**
	b)	How does material substitution contribute to eco-efficient design? Provide an example.	**04**

Seat No.	

Set **R**

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Construction Materials: Sustainability and Usability (BTN01516)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple choice questions. **14**

1) What is the function of property charts in material selection?
a) To calculate the cost of materials
b) To visualize and compare material properties like strength, energy use, and durability
c) To assess the recyclability of materials
d) To determine the legal requirements for materials

2) What is an example of systematic eco-selection in transportation applications?
a) Using steel for crash barriers
b) Designing lightweight car structures with composite materials
c) Replacing aluminum parts with heavier alloys
d) Ignoring environmental impact for cost savings

3) Initial embodied energy in buildings refers to _____.
a) The energy used in the production, transport, and assembly of materials
b) The energy consumed during the operational life of a building
c) The energy required for heating and cooling systems
d) The energy lost due to inefficiencies in construction techniques

4) Material substitution for eco-efficient design focuses on _____.
a) Replacing high-performance materials with low-cost alternatives
b) Using materials with lower environmental impact without compromising performance
c) Reducing overall project costs without considering sustainability
d) Increasing the complexity of material processing

5) Which of these materials is considered a salvaged material?
a) New bricks
b) Reclaimed wood
c) Steel rods
d) Fiber cement boards

6) Low-VOC paints are used in sustainable construction because they _____.
a) Improve structural integrity
b) Reduce air pollution and health hazards
c) Are cheaper than conventional paints
d) Enhance durability of the building

7) What does the term “cradle to cradle” imply in sustainable construction?
a) Recycling materials back into the production cycle
b) Using materials only once and disposing of them
c) Tracking energy usage from construction to demolition
d) Designing buildings with zero operational energy

8) Which dataset is commonly used for calculating the embodied energy of materials?
a) Environmental Product Declarations (EPDs)
b) Urban Land Institute Reports
c) Building Code Requirements
d) ASHRAE Standards

9) Embodied carbon refers to _____.
a) The carbon released during a building’s operation
b) The total carbon emissions associated with a material’s life cycle
c) The amount of carbon stored in construction materials
d) The carbon content in the atmosphere

10) Ferrocement is commonly used for _____.
a) Roofing systems only
b) Walls, roofs, and water tanks
c) Decorative elements only
d) Foundation systems

11) Which sustainable construction technique uses locally available materials and reduces energy consumption?
a) Steam cured blocks
b) Composite beam and panel
c) Compressed Stabilized Earth Bricks (CSEB)
d) Reinforced concrete masonry

12) Which industrial byproduct is widely used as a cement replacement in concrete production?
a) Fly ash
b) Paper waste
c) Glass cullet
d) Rubber crumbs

13) What is a common application of tires in sustainable construction?
   a) Roofing material
   b) Structural walls in earthship homes
   c) Flooring systems
   d) Window frames

14) What is a key principle in materials selection for eco-audits?
   a) Prioritizing the cheapest material available
   b) Considering environmental impact alongside performance and cost
   c) Avoiding renewable resources due to cost constraints
   d) Ignoring material durability for short-term projects

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) Which economic theory considers entrepreneurs as coordinators of scarce resources?
a) Innovation Theory b) Classical Theory
c) Risk-Bearing Theory d) Resource-Based Theory

2) What is a core distinction between managerial and entrepreneurial competencies?
a) Managerial competencies involve risk-taking, entrepreneurial competencies do not
b) Entrepreneurial competencies emphasize vision and innovation, while managerial competencies focus on stability and operations
c) Managerial competencies are industry-specific, while entrepreneurial competencies are universal
d) There is no distinction between the two

3) What is a major factor in entrepreneurial growth and development?
a) Declining market trends
b) Government policies and support
c) Technological stagnation
d) Reduced competition

4) What does the term "Shifting Composition of the Economy" refer to in innovation?
a) The transition from agriculture to industrial and service-based economies
b) The focus on rural over urban economic activities
c) The diminishing role of technology in the economy
d) A stagnant economic structure

5) In the innovation process, what stage follows “Concept Development”?
   a) Commercialization
   b) Prototype Development
   c) Idea Generation
   d) Marketing Strategy

6) Which of the following is a key feature of disruptive innovation strategies?
   a) Focusing only on premium customer segments
   b) Enhancing existing high-performance products
   c) Creating simpler, more affordable solutions for overlooked markets
   d) Maintaining the status quo in existing markets

7) Why is planning considered incompatible with innovation in entrepreneurship?
   a) It discourages flexibility and risk-taking.
   b) It prioritizes creativity over execution.
   c) It lacks a financial focus.
   d) It only applies to large enterprises

8) What is the primary role of continuous learning for entrepreneurs?
   a) To achieve financial stability
   b) To stay relevant in dynamic environments and adopt new technologies
   c) To do increamental development rather than radical development
   d) To specialize in a dual-skill areas

9) What is a strategic issue often faced by international entrepreneurs?
   a) Balancing centralized decision-making with the need for local responsiveness
   b) Avoiding partnerships with foreign stakeholders
   c) Developing identical marketing strategies across all international markets
   d) Limiting innovation to comply with host country regulations

10) How does the changing international environment influence international entrepreneurship?
   a) By creating equal opportunities for all businesses regardless of size
   b) By favoring large multinational corporations over small entrepreneurs
   c) By increasing access to global talent pools and resources for innovative ventures
   d) By standardizing regulatory frameworks across all regions

11) Which of these is NOT an entrepreneurial competency?

a) Risk-taking ability
b) Creative thinking
c) Financial literacy
d) Avoiding challenges

12) Which of the following is NOT one of the seven sources of innovative opportunity?

a) Industry and market structure changes
b) Demographics
c) Global warming
d) Process needs

13) What does ‘nAch’ stand for in entrepreneurial motivation?

a) Need for Acceptance
b) Need for Achievement
c) Need for Acknowledgment
d) Need for Affiliation

14) What is a business model?

a) It is a planned activity, designed for profit in marketplace
b) It is a planned activity, designed for established business
c) It is a planned activity, for generating new jobs
d) None of the above

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of these is NOT an entrepreneurial competency?
a) Risk-taking ability b) Creative thinking
c) Financial literacy d) Avoiding challenges

2) Which of the following is NOT one of the seven sources of innovative opportunity?
a) Industry and market structure changes
b) Demographics
c) Global warming
d) Process needs

3) What does 'nAch' stand for in entrepreneurial motivation?
a) Need for Acceptance b) Need for Achievement
c) Need for Acknowledgment d) Need for Affiliation

4) What is a business model?
a) It is a planned activity, designed for profit in marketplace
b) It is a planned activity, designed for established business
c) It is a planned activity, for generating new jobs
d) None of the above

5) Which economic theory considers entrepreneurs as coordinators of scarce resources?
a) Innovation Theory b) Classical Theory
c) Risk-Bearing Theory d) Resource-Based Theory

6) What is a core distinction between managerial and entrepreneurial competencies?
   a) Managerial competencies involve risk-taking, entrepreneurial competencies do not
   b) Entrepreneurial competencies emphasize vision and innovation, while managerial competencies focus on stability and operations
   c) Managerial competencies are industry-specific, while entrepreneurial competencies are universal
   d) There is no distinction between the two

7) What is a major factor in entrepreneurial growth and development?
   a) Declining market trends
   b) Government policies and support
   c) Technological stagnation
   d) Reduced competition

8) What does the term “Shifting Composition of the Economy” refer to in innovation?
   a) The transition from agriculture to industrial and service-based economies
   b) The focus on rural over urban economic activities
   c) The diminishing role of technology in the economy
   d) A stagnant economic structure

9) In the innovation process, what stage follows “Concept Development”?
   a) Commercialization
   b) Prototype Development
   c) Idea Generation
   d) Marketing Strategy

10) Which of the following is a key feature of disruptive innovation strategies?
   a) Focusing only on premium customer segments
   b) Enhancing existing high-performance products
   c) Creating simpler, more affordable solutions for overlooked markets
   d) Maintaining the status quo in existing markets

11) Why is planning considered incompatible with innovation in entrepreneurship?
   a) It discourages flexibility and risk-taking.
   b) It prioritizes creativity over execution.
   c) It lacks a financial focus.
   d) It only applies to large enterprises

12) What is the primary role of continuous learning for entrepreneurs?
   a) To achieve financial stability
   b) To stay relevant in dynamic environments and adopt new technologies
   c) To do increamental development rather than radical development
   d) To specialize in a dual-skill areas

13) What is a strategic issue often faced by international entrepreneurs?
   a) Balancing centralized decision-making with the need for local responsiveness
   b) Avoiding partnerships with foreign stakeholders
   c) Developing identical marketing strategies across all international markets
   d) Limiting innovation to comply with host country regulations

14) How does the changing international environment influence international entrepreneurship?
   a) By creating equal opportunities for all businesses regardless of size
   b) By favoring large multinational corporations over small entrepreneurs
   c) By increasing access to global talent pools and resources for innovative ventures
   d) By standardizing regulatory frameworks across all regions

Set | **R**

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Managing Innovation and Entrepreneurship (BTN01517)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. Section II is compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2	**a)**	What are managerial competencies? Explain two in detail.	**04**
	b)	List types of entrepreneurship and types of businesses. Explain types of business in detail.	**06**
Q.3	**a)**	List 7 sources. Explain process needs, demographics & structure change.	**05**
	b)	List types of purposeful innovation. Explain purposeful innovation.	**04**
Q.4	**a)**	Explain government grants, angel investors, venture capital.	**05**
	b)	Explain ‘innovation & entrepreneurship’ in detail.	**04**
Q.5	**a)**	Give difference between types of innovative strategies with examples.	**05**
	b)	Define the term ‘shifting economy’ and explain the concept in detail with a sketch.	**04**

Section – II

Q.6	**a)**	Brief in short story of any successful Indian entrepreneur with turnover.	**06**
	b)	Explain adaptability and sustainability in detail.	**04**

Q.7 Write a note on Any Three of the following. **09**

a) Advantages of International Entrepreneurship
b) Elements of International business environment
c) Ethics in international entrepreneurship
d) Strategies in International Entrepreneurship

Q.8 Write a note on Any Three of the following. **09**

a) Methods of problem identification

b) Significance of problem solving

c) Steps in problem identification

d) Steps in problem solving

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose the correct Answer. **10**

1) Which of the following best defines Stress?
a) A positive emotional state.
b) A physical and psychological response to demands.
c) A permanent personality trait.
d) A learned coping technique.

2) Chronic Stress is most likely to cause _____.
a) Increased immunity
b) Improved digestion
c) Heart disease and hypertension
d) Higher energy levels

3) Social support helps on coping because it _____.
a) Increase stress levels
b) Reduces physiological arousal
c) Stops all stressors
d) Replaces coping strategies

4) Which of the following are the physical symptoms of anxiety?
a) Racing heart b) Sweaty palms
c) Flushed cheeks d) All of the above

5) Which of the following busters?
a) Trying to find something funny in a difficult situation
b) Developing a support network
c) Taking a mindful walk
d) All of the above

6) Aches, shallow breathing, and sweating frequent colds are _____.
   a) Physical symptoms of stress
   b) Behavioral symptoms of stress
   c) Emotional symptoms of stress
   d) Cognitive symptoms of stress

7) When is a person more likely to have difficulty in coping with a stressful situation?
   a) When he is over the age of fifty
   b) When he expects a positive outcome
   c) When he thinks he does not have control over the situation
   d) When he has a good social support network

8) Which one is not considered as Environmental stressors?
   a) Weather
   b) Traffic

Set Q

T.Y. (B.Tech.) (Civil Engineering) (Semester - I) (Old) (CBCS)
Examination: March/April – 2026
Professional Ethics & Human Value (BTN01512)

Day & Date: Sunday, 10-05-2026 Max. Marks: 50
Time: 10:00 AM To 12:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose the correct alternatives from the options. 10

1) Courage is the tendency to accept and face _____.
a) Self confidence
b) Physical courage
c) Risks and difficult tasks in rational ways
d) Social courage

2) Which value promotes treating everyone fairly?
a) Favoritism b) Respect
c) Equality d) Corruption

3) Which of the following best defines empathy?
a) Feeling superior to others
b) Understanding other's feelings
c) Ignoring emotional cues
d) Forcing opinions on people

4) Which of the following is a core professional value?
a) Integrity b) Dishonesty
c) Bias d) Manipulation

5) Value and skills should go hand in hand.
a) True b) False
c) Can not tell d) Wrong question

6) Professional ethics primarily refers to _____.
a) Personal hobbies
b) Standards of behavior expected in a profession
c) Religious gridlines
d) Social media etiquette

7) Professional values are important because they _____.
a) Reduce work quality
b) Promote trust and credibility
c) Slow down productivity
d) Encourage personal gain

8) One of the basic desires of every human being is to be always ____.
a) Happy
b) Sad
c) Laugh
d) Earn money

9) _____ is defined as the duty, obligation or even authority.
a) Work
b) Responsibility
c) Democracy
d) Authority

10) The participation of human beings is seen in two forms _____.
a) Prosperity & Work
b) Behavior & Wealth
c) Behavior & Work
d) Values & Understanding

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the option and rewrite the sentence. **14**

1) The design shear strength of concrete τ_c in beams depends on _____. **01**
a) Grade of concrete and percentage of tension steel
b) Grade of steel only
c) Concrete grade only
d) Shear force

2) The limit state of serviceability includes _____. **01**
a) Collapse b) Shear failure
c) Deflection and Cracking d) Torsion failure

3) Minimum reinforcement for slab using HYSD bars is _____. **01**
a) 0.15% of gross area b) 0.12% of gross area
c) 0.20% of gross area d) 0.10% of gross area

4) Torsion reinforcement at the corners of a two-way slab is what fraction of the maximum midspan reinforcement? **01**
a) 25% b) 50%
c) 75% d) 100%

5) For a stair step with a Riser (R) of 150 mm and Going (G) of 250 mm, the dead load of the waist slab of thickness 150 mm, is approximately _____. **02**
a) 3.75 kN/m^2 b) 4.37 kN/m^2
c) 5.34 kN/m^2 d) 6.25 kN/m^2

6) The live load for stairs in public buildings as per IS 875 is _____. **01**

a) 2.0 kN/m^2 b) 3.0 kN/m^2

c) 5.0 kN/m^2 d) 1.5 kN/m^2

7) The deep beam 300mm × 500 mm subjected to shear force of 150 kN and torsion 30 kN-m, then equivalent shear is _____. **02**

a) 180 kN b) 210 kN

c) 246 kN d) 310 kN

8) The maximum percentage of longitudinal reinforcement in a column is _____. **01**

a) 6% b) 4%

c) 8% d) 10%

9) A short column 400 mm × 400 mm is reinforced with 4 bars of 20 mm diameter. Using M20/Fe 415, its axial load capacity (Pu) is _____. **02**

a) 1240 KN b) 1392 KN

c) 1550 KN d) 1680 KN

10) The critical section for two-way shear (punching shear) in a footing is at _____. **01**

a) Face of column b) (2d) from face of column

c) (d) from face of column d) (d/2) from face of column

11) Footings are designed for which limit state? **01**

a) Serviceability b) Durability

c) Collapse d) Deflection

Set **P**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Design of Concrete Structures - I (CIVPCC-10)

Day & Date: Friday, 15-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 and Q. No. 6 are compulsory.
2) Solve any two from Q. No. 3 to Q. No. 5 and Q. No. 7 to Q. No. 9 questions from each section.
3) Use of IS 456-2000 is allowed.
4) Draw neat sketch's where required and assume suitable data if required and state it clearly.
5) Figures to the right indicate full marks.

SECTION – I

Q.2 Calculate the ultimate moment of resistance of doubly reinforced beam of size 250 mm × 500 mm, if it is reinforced with 2 bars of 16 mm diameter on compression side & 4 bars of 25 mm diameter on tension side. Assume M20 and Fe 250. Effective cover provided is 50 mm on both the sides. **08**

Q.3 Design the simply supported rectangular beam of 300 mm width to carry live load of 12 kN/m. The span of the beam is 6 m and width of support is 230 mm. Use M20, Fe 415. **10**

Q.4 A hall has clear dimension of 3 m × 9 m with wall thickness of 230 mm. The live load on slab is 3 kN/m^2 and finish load of 1 kN/m^2 may be assumed. Using M 25 grade concrete and Fe 500 steel, design the slab. **10**

Q.5 Design a dog-legged type staircase for a residential building using following data: **10**

a) floor to floor height = 3.6 m
b) size of steps: Riser = 180 mm and tread = 250 mm
c) LL = 3.2 KN/m^2
d) assume width of stair = 1 m
e) Material – M 20, Fe 415
f) width of beams = 300 mm

The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. Sketch the reinforcement details.

SECTION – II

Q.6 Determine reinforcement required for a rectangular beam section with following data: **08**

Size of beam = 300 mm × 600 mm

Factored shear force (Vu) = 95 kN,

Factored torsional moment (Tu) = 45 kNm

Factored bending moment (Mu) = 115 kN.m

Use M 20 concrete and Fe 415 steel and sketch the reinforcement details.

Q.7 A short column 500 mm × 500 mm is provided with 8-16 mm diameter. The length of column is 2.25 m. It is effectively held in position at both the ends & restrained against rotation at one end. Find ultimate load of the column. Use M20 & Fe 415. **10**

Q.8 Design a circular column of diameter 400 mm with helical reinforcement subjected to a load of 1200 kN. Use M25 concrete and Fe 415 steel. The column has unsupported length of 3 m and is effectively held in position at both ends but not restrained against rotation. **10**

Q.9 A rectangular column 400 mm × 600 mm carries an axial load of 2000 kN. The SBC of soil is 150 kN/m^2. Using M20 concrete and Fe 415 steel, design a rectangular footing to support the column. Sketch the reinforcement details. **10**

5) Figures to the right indicate full marks.

SECTION – I

Q.2 Calculate the ultimate moment of resistance of doubly reinforced beam of size 250 mm × 500 mm, if it is reinforced with 2 bars of 16 mm diameter on compression side & 4 bars of 25 mm diameter on tension side. Assume M20 and Fe 250. Effective cover provided is 50 mm on both the sides. **08**

Q.3 Design the simply supported rectangular beam of 300 mm width to carry live load of 12 kN/m. The span of the beam is 6 m and width of support is 230 mm. Use M20, Fe 415. **10**

Q.4 A hall has clear dimension of 3 m × 9 m with wall thickness of 230 mm. The live load on slab is 3 kN/m^2 and finish load of 1 kN/m^2 may be assumed. Using M 25 grade concrete and Fe 500 steel, design the slab. **10**

Q.5 Design a dog-legged type staircase for a residential building using following data: **10**

a) floor to floor height = 3.6 m
b) size of steps: Riser = 180 mm and tread = 250 mm
c) LL = 3.2 KN/m^2
d) assume width of stair = 1 m
e) Material – M 20, Fe 415
f) width of beams = 300 mm

The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. Sketch the reinforcement details.

SECTION – II

Q.6 Determine reinforcement required for a rectangular beam section with following data: **08**

Size of beam = 300 mm × 600 mm

Factored shear force (Vu) = 95 kN,

Factored torsional moment (Tu) = 45 kNm

Factored bending moment (Mu) = 115 kN.m

Use M 20 concrete and Fe 415 steel and sketch the reinforcement details.

Q.7 A short column 500 mm × 500 mm is provided with 8-16 mm diameter. The length of column is 2.25 m. It is effectively held in position at both the ends & restrained against rotation at one end. Find ultimate load of the column. Use M20 & Fe 415. **10**

Q.8 Design a circular column of diameter 400 mm with helical reinforcement subjected to a load of 1200 kN. Use M25 concrete and Fe 415 steel. The column has unsupported length of 3 m and is effectively held in position at both ends but not restrained against rotation. **10**

Q.9 A rectangular column 400 mm × 600 mm carries an axial load of 2000 kN. The SBC of soil is 150 kN/m^2. Using M20 concrete and Fe 415 steel, design a rectangular footing to support the column. Sketch the reinforcement details. **10**

Examination: March/April – 2026
Design of Concrete Structures - I (CIVPCC-10)

Day & Date: Friday, 15-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) While solving MCQ, IS 456-2000 is not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the option and rewrite the sentence. **14**

1) Torsion reinforcement at the corners of a two-way slab is what fraction of the maximum midspan reinforcement? **01**
a) 25% b) 50%
c) 75% d) 100%

2) For a stair step with a Riser (R) of 150 mm and Going (G) of 250 mm, the dead load of the waist slab of thickness 150 mm, is approximately _____. **02**
a) 3.75 kN/m^2 b) 4.37 kN/m^2
c) 5.34 kN/m^2 d) 6.25 kN/m^2

3) The live load for stairs in public buildings as per IS 875 is _____. **01**
a) 2.0 kN/m^2 b) 3.0 kN/m^2
c) 5.0 kN/m^2 d) 1.5 kN/m^2

4) The deep beam 300mm × 500 mm subjected to shear force of 150 kN and torsion 30 kN-m, then equivalent shear is _____. **02**
a) 180 kN b) 210 kN
c) 246 kN d) 310 kN

5) The maximum percentage of longitudinal reinforcement in a column is _____. **01**
a) 6% b) 4%
c) 8% d) 10%

6) A short column 400 mm × 400 mm is reinforced with 4 bars of 20 mm diameter. Using M20/Fe 415, its axial load capacity (Pu) is _____. **02**

a) 1240 KN
b) 1392 KN
c) 1550 KN
d) 1680 KN

7) The critical section for two-way shear (punching shear) in a footing is at _____. **01**

a) Face of column
b) (2d) from face of column
c) (d) from face of column
d) (d/2) from face of column

8) Footings are designed for which limit state? **01**

a) Serviceability
b) Durability
c) Collapse
d) Deflection

9) The design shear strength of concrete τ_c in beams depends on _____. **01**

a) Grade of concrete and percentage of tension steel
b) Grade of steel only
c) Concrete grade only
d) Shear force

10) The limit state of serviceability includes _____. **01**

a) Collapse
b) Shear failure
c) Deflection and Cracking
d) Torsion failure

11) Minimum reinforcement for slab using HYSD bars is _____. **01**

a) 0.15% of gross area
b) 0.12% of gross area
c) 0.20% of gross area
d) 0.10% of gross area

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) If the intensity of rainfall is less than the infiltration capacity of the soil, then the infiltration rate will be _____.
a) equal to the rate of rainfall
b) equal to the infiltration capacity
c) more than the infiltration capacity
d) has no relation either with the rainfall intensity or the infiltration capacity.

2) Transpiration ratio of a crop increases, when _____.
a) the water required by the crop is more
b) the water required by the crop is less
c) the harvesting period is more
d) the harvesting period is less

3) Generally the average depth of rainfall _____.
a) decreases from the centre of storm towards its periphery
b) increases from the centre of storm towards its periphery
c) decreases from periphery of storm towards the center of storm
d) all of these

4) The S-curve is used _____.
a) to develop synthetic unit hydrograph
b) to derive unit hydrograph of a complex storm
c) to convert the unit hydrograph of any given duration into a unit hydrograph of any other desired duration
d) to estimate the peak flow of a basin from the given storm

5) A flood with a return period of 100 years which occurs _____.
a) every Hundredth years
b) once in every hundred year on the average
c) The maximum observed flood in the past hundred years
d) only after hundred years in the immediate future

6) The volume of ground water, which can be extracted by gravity drainage from a soil stratum, when expressed as percentage fraction of the cum of the soil stratum, is called _____.
a) pellicular water
b) available water
c) field capacity
d) specific yield

7) Water wells excavated through confined aquifers are known as _____.
a) artesian wells
b) pressure wells
c) both a) and b)
d) none of these

8) Minor irrigation scheme is limited up to _____.
a) 150 hectors
b) 200 hectors
c) 2000 hectors
d) 5000 hectors

9) Percolation tank is example of _____.
a) major irrigation scheme
b) Minor irrigation scheme
c) medium irrigation scheme
d) both a) and b)

10) With the increase in supplied irrigation water, the yield of crops _____.
a) increases continuously
b) decreases continuously
c) increases up to a certain limit, and then becomes constant
d) increases up to a certain limit, and then decreases

11) The crop, out of the following, which is not a cash crop, is _____.
a) Jute
b) Tea
c) Rice
d) Sugarcane

12) Consumptive use of water for a crop represents _____.
a) the transpiration needs of the crop
b) evaporation needs of the cropped area
c) evapotranspiration needs of the cropped area plus the minor quantity required in plant metabolism
d) None of the above

13) The most economical method of-soil conservation is to _____.
a) construct check dams
b) construct contour bunds
c) drain the soil
d) a forest the soil

14) Cooperative water users organizations helps in _____.
a) soil management
b) water management
c) soil conservation
d) none of these

2) Question No. 6 is compulsory in section II, and solve any two questions from remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 **a)** What is mean by precipitation enlist and explain forms of precipitation. **05**

b) Find the ordinates of a storm hydrograph resulting from a 3 hours storm with rainfall of 2, 6.75 and 3.75 cm during sub sequent 3 hours intervals. The ordinates of unit hydrograph are given below. Assume an initial loss of 5 mm infiltration index of 2.5 mm/hour and base flow of 10 cumecs. **05**

Time (hr)	3	6	9	12	15	18	21	24
Ordinates of unit hydrograph (m^3/sec)	0	110	365	500	390	310	250	235

Q.3 **a)** Derive equation for steady state discharge for well completely penetrating unconfined aquifer. **04**

b) The isohyets for annual-rainfall over a catchment were drawn. The areas of strips between the isohyets are indicated below. Find the average depth of annual precipitation over the basin. **05**

Isohyets (cm)	Area between Isohyets (sq.km.)
9-10	22
10-11	80
11-12	105
12-13	98
13-14	78
14-15	16

Q.4 **a)** Enlist different methods of stream gauging and explain any one method with neat sketch. **04**

b) During the recuperation test of well the recuperation of depression head from 2.5 to 1.6 m were found to take place in 70 minutes. Determine the yield from a well if its diameter is 3 m under depression heads of 3.5 m. also, determine diameter of well to yield 10 l/sec under depression head of 2.5m. **05**

Q.5 **a)** Define Unit Hydrograph and state assumptions made in its derivation. **04**

b) A precipitation station 'X' was inoperative for some time during which a storm occurred. The storm rainfall totals at the stations 'A', 'B', 'C' surrounding station 'X' were respectively 6.60, 4.80 and 3.70 cm. The normal annual precipitation amounts at stations X, A, B and C are 65.6, 72.6, 51.8 and 38.2 cm. Estimate the missing storm precipitation at station X. **05**

SECTION – II

Q.6 **a)** Explain different methods of allocation of water to the users and explain Warabandi. **05**

b) What is meant by 'Duty' and 'Delta' of canal water? Derive a relationship between duty and delta for a given base period. **05**

Q.7 **a)** State the main components of Drip Irrigation system and describe the functions of each. **04**

b) Table below gives necessary data about the crop, their duty and the area under each crop, commanded by a canal taking off from storage reservoir. Find the reservoir capacities if the canal losses are 20% and reservoir losses are 12%. **05**

Crop	Base period (days)	Duty at field (ha / cumec)	Area under the crop (Ha)
Wheat	120	1800	4800
Sugarcane	360	800	5600
Cotton	200	1400	2400
Rice	120	900	3200
Vegetables	120	700	1400

Q.8 **a)** Explain the need of soil and water conservation. **04**

b) What are the different types of Sprinkler irrigation method? Explain any one with neat sketch. **05**

Q.9 **a)** Enlist and explain different methods used for water conservation in a catchment. **04**

b) After how many days will you supply water to soil (clay loam), in order to ensure efficient irrigation of the given crop if: **05**

i) Field capacity of soil - 27%
ii) Permanent wilting point - 14%
iii) Density of soil - 1.5 gm/cm^3
iv) Effective depth of root zone - 75 cm
v) Daily consumptive use of water for a given crop - 11 mm

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The crop, out of the following, which is not a cash crop, is _____.
a) Jute b) Tea
c) Rice d) Sugarcane

2) Consumptive use of water for a crop represents _____.
a) the transpiration needs of the crop
b) evaporation needs of the cropped area
c) evapotranspiration needs of the cropped area plus the minor quantity required in plant metabolism
d) None of the above

3) The most economical method of-soil conservation is to _____.
a) construct check dams b) construct contour bunds
c) drain the soil d) a forest the soil

4) Cooperative water users organizations helps in _____.
a) soil management b) water management
c) soil conservation d) none of these

5) If the intensity of rainfall is less than the infiltration capacity of the soil, then the infiltration rate will be _____.
a) equal to the rate of rainfall
b) equal to the infiltration capacity
c) more than the infiltration capacity
d) has no relation either with the rainfall intensity or the infiltration capacity.

6) Transpiration ratio of a crop increases, when _____.
a) the water required by the crop is more
b) the water required by the crop is less
c) the harvesting period is more
d) the harvesting period is less

7) Generally the average depth of rainfall _____.
a) decreases from the centre of storm towards its periphery
b) increases from the centre of storm towards its periphery
c) decreases from periphery of storm towards the center of storm
d) all of these

a) to develop synthetic unit hydrograph
b) to derive unit hydrograph of a complex storm
c) to convert the unit hydrograph of any given duration into a unit hydrograph of any other desired duration
d) to estimate the peak flow of a basin from the given storm

9) A flood with a return period of 100 years which occurs _____.
a) every Hundredth years
b) once in every hundred year on the average
c) The maximum observed flood in the past hundred years
d) only after hundred years in the immediate future

10) The volume of ground water, which can be extracted by gravity drainage from a soil stratum, when expressed as percentage fraction of the cum of the soil stratum, is called _____.
a) pellicular water b) available water
c) field capacity d) specific yield

11) Water wells excavated through confined aquifers are known as _____.
a) artesian wells b) pressure wells
c) both a) and b) d) none of these

12) Minor irrigation scheme is limited up to _____.
a) 150 hectors b) 200 hectors
c) 2000 hectors d) 5000 hectors

13) Percolation tank is example of _____.
a) major irrigation scheme b) Minor irrigation scheme
c) medium irrigation scheme d) both a) and b)

14) With the increase in supplied irrigation water, the yield of crops _____.
a) increases continuously
b) decreases continuously
c) increases up to a certain limit, and then becomes constant
d) increases up to a certain limit, and then decreases

Set R

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April - 2026
Hydrology and Water Resources Engineering (CIVPCC-11)

Day & Date: Monday, 18-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question No. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question No. 6 is compulsory in section II, and solve any two questions from remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 **a)** What is mean by precipitation enlist and explain forms of precipitation. **05**

b) Find the ordinates of a storm hydrograph resulting from a 3 hours storm with rainfall of 2, 6.75 and 3.75 cm during sub sequent 3 hours intervals. The ordinates of unit hydrograph are given below. Assume an initial loss of 5 mm infiltration index of 2.5 mm/hour and base flow of 10 cumecs. **05**

Time (hr)	3	6	9	12	15	18	21	24
Ordinates of unit hydrograph (m^3/sec)	0	110	365	500	390	310	250	235

Q.3 **a)** Derive equation for steady state discharge for well completely penetrating unconfined aquifer. **04**

b) The isohyets for annual-rainfall over a catchment were drawn. The areas of strips between the isohyets are indicated below. Find the average depth of annual precipitation over the basin. **05**

Isohyets (cm)	Area between Isohyets (sq.km.)
9-10	22
10-11	80
11-12	105
12-13	98
13-14	78
14-15	16

Q.4 **a)** Enlist different methods of stream gauging and explain any one method with neat sketch. **04**

b) During the recuperation test of well the recuperation of depression head from 2.5 to 1.6 m were found to take place in 70 minutes. Determine the yield from a well if its diameter is 3 m under depression heads of 3.5 m. also, determine diameter of well to yield 10 l/sec under depression head of 2.5m. **05**

Q.5 **a)** Define Unit Hydrograph and state assumptions made in its derivation. **04**

b) A precipitation station 'X' was inoperative for some time during which a storm occurred. The storm rainfall totals at the stations 'A', 'B', 'C' surrounding station 'X' were respectively 6.60, 4.80 and 3.70 cm. The normal annual precipitation amounts at stations X, A, B and C are 65.6, 72.6, 51.8 and 38.2 cm. Estimate the missing storm precipitation at station X. **05**

SECTION – II

Q.6 **a)** Explain different methods of allocation of water to the users and explain Warabandi. **05**

b) What is meant by 'Duty' and 'Delta' of canal water? Derive a relationship between duty and delta for a given base period. **05**

Q.7 **a)** State the main components of Drip Irrigation system and describe the functions of each. **04**

b) Table below gives necessary data about the crop, their duty and the area under each crop, commanded by a canal taking off from storage reservoir. Find the reservoir capacities if the canal losses are 20% and reservoir losses are 12%. **05**

Crop	Base period (days)	Duty at field (ha / cumec)	Area under the crop (Ha)
Wheat	120	1800	4800
Sugarcane	360	800	5600
Cotton	200	1400	2400
Rice	120	900	3200
Vegetables	120	700	1400

Q.8 **a)** Explain the need of soil and water conservation. **04**

b) What are the different types of Sprinkler irrigation method? Explain any one with neat sketch. **05**

Q.9 **a)** Enlist and explain different methods used for water conservation in a catchment. **04**

b) After how many days will you supply water to soil (clay loam), in order to ensure efficient irrigation of the given crop if: **05**

i) Field capacity of soil - 27%
ii) Permanent wilting point - 14%
iii) Density of soil - 1.5 gm/cm^3
iv) Effective depth of root zone - 75 cm
v) Daily consumptive use of water for a given crop - 11 mm

Set **S**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April - 2026
Hydrology and Water Resources Engineering (CIVPCC-11)

Day & Date: Monday, 18-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The volume of ground water, which can be extracted by gravity drainage from a soil stratum, when expressed as percentage fraction of the cum of the soil stratum, is called _____.
a) pellicular water b) available water
c) field capacity d) specific yield

2) Water wells excavated through confined aquifers are known as _____.
a) artesian wells b) pressure wells
c) both a) and b) d) none of these

3) Minor irrigation scheme is limited up to _____.
a) 150 hectors b) 200 hectors
c) 2000 hectors d) 5000 hectors

4) Percolation tank is example of _____.
a) major irrigation scheme b) Minor irrigation scheme
c) medium irrigation scheme d) both a) and b)

5) With the increase in supplied irrigation water, the yield of crops _____.
a) increases continuously
b) decreases continuously
c) increases up to a certain limit, and then becomes constant
d) increases up to a certain limit, and then decreases

6) The crop, out of the following, which is not a cash crop, is _____.
a) Jute b) Tea
c) Rice d) Sugarcane

7) Consumptive use of water for a crop represents _____.
a) the transpiration needs of the crop
b) evaporation needs of the cropped area
c) evapotranspiration needs of the cropped area plus the minor quantity required in plant metabolism
d) None of the above

8) The most economical method of-soil conservation is to _____.
a) construct check dams
b) construct contour bunds
c) drain the soil
d) a forest the soil

9) Cooperative water users organizations helps in _____.
a) soil management
b) water management
c) soil conservation
d) none of these

10) If the intensity of rainfall is less than the infiltration capacity of the soil, then the infiltration rate will be _____.
a) equal to the rate of rainfall
b) equal to the infiltration capacity
c) more than the infiltration capacity
d) has no relation either with the rainfall intensity or the infiltration capacity.

11) Transpiration ratio of a crop increases, when _____.
a) the water required by the crop is more
b) the water required by the crop is less
c) the harvesting period is more
d) the harvesting period is less

12) Generally the average depth of rainfall _____.
a) decreases from the centre of storm towards its periphery
b) increases from the centre of storm towards its periphery
c) decreases from periphery of storm towards the center of storm
d) all of these

13) The S-curve is used _____.
a) to develop synthetic unit hydrograph
b) to derive unit hydrograph of a complex storm
c) to convert the unit hydrograph of any given duration into a unit hydrograph of any other desired duration
d) to estimate the peak flow of a basin from the given storm

14) A flood with a return period of 100 years which occurs _____.
a) every Hundredth years
b) once in every hundred year on the average
c) The maximum observed flood in the past hundred years
d) only after hundred years in the immediate future

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) In PERT, the beta distribution is used because _____.
a) It is symmetric
b) It can model skewed activity time distributions with defined endpoints
c) It requires only one time estimate
d) It follows a normal curve exactly

2) Which of the following is NOT a time estimate used in PERT?
a) Optimistic time b) Pessimistic time
c) Most likely time d) Deterministic time

3) The primary objective of construction safety management is to _____.
a) Reduce project cost only
b) Prevent accidents, injuries, and occupational hazards
c) Speed up construction activities
d) Avoid legal formalities

4) PPE stands for _____.
a) Project Planning Equipment
b) Personal Protective Equipment
c) Pre-Planned Execution
d) Physical Protection Engineering

5) The cycle time of a scraper includes _____.
a) Load time only
b) Load + haul + dump + return time
c) Haul and dump time only
d) Maneuver time only

6) The main advantage of aluminium formwork over conventional steel formwork is _____.
a) Higher strength
b) Lighter weight, faster assembly, higher reusability, and smoother concrete finish
c) Lower initial cost
d) better resistance to corrosion only

7) The efficiency of a trencher machine depends on _____.
a) Operator height
b) Soil type, trench depth, and machine speed
c) Weather conditions only
d) Crane capacity nearby

8) Mivan formwork uses which material?
a) Steel plates
b) Aluminium alloy panels
c) Timber planks
d) Fibre-reinforced plastic

9) A Gantt chart is primarily used for _____.
a) Finding the critical path
b) Resource levelling
c) Displaying project schedule with activities plotted against time on a bar chart
d) Calculating project cost

10) Primavera is categorized as _____.
a) A free open-source scheduling tool
b) A professional enterprise-level Project Management Software
c) A simple spreadsheet application
d) A Building Information Modelling (BIM) tool

11) Fulkerson's Rule is used for _____.
a) Calculating float of activities
b) Numbering events in a network diagram such that tail event number is always less than head event number
c) Finding the critical path
d) Resource levelling

12) On the critical path, the value of total float is always _____.
a) Maximum
b) Equal to 1
c) Zero
d) Negative

13) Which of the following software is open-source and freely available for project scheduling?
a) MS Project
b) Primavera P6
c) Google Spreadsheet
d) PRINCE2

14) PRINCE stands for _____.

a) Project Resource and Integration Network for Construction Execution
b) Projects in Controlled Environments
c) Programme for Integrated Construction Evaluation
d) Project Review and Improvement Network for Cost Estimation

2) Question No. 6 is compulsory in section II, and solve any two questions from remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 a) The following activities are involved in a construction project. Draw the network diagram, perform forward and backward pass, calculate all floats, identify the critical path, and find the project duration. **08**

Activity	Predecessor	Duration (Days)
A	-	4
B	-	6
C	A	5
D	A	3
E	B, C	7
F	D	4
G	E, F	3

b) Explain Fulkerson's Rule for numbering events in a network with an example. **04**

Q.3 a) What is network compression? Explain the step-by-step procedure for crashing a network. **04**

b) What is updating? Explain the step-by-step procedure for updating. **04**

Q.4 A project has the following activities with normal time, crash time, normal cost and crash cost. The indirect cost = ₹100 per day. **08**

Activity	Normal Time (days)	Crash Time (days)	Normal Cost (₹)	Crash Cost (₹)
A	6	4	300	500
B	5	3	200	400
C	7	5	350	650
D	4	2	250	450

Q.5 **a)** Describe any four Project Management Software tools used in construction projects. **04**

b) What is CPM? Explain the step-by-step procedure to find the critical path of a project. **04**

SECTION – II

Q.6 A project consists of the following activities with three-time estimates. Calculate expected time table Draw network diagram Find paths and critical path Calculate variance and standard deviation. **12**

Activity	Predecessor	Optimistic (to)	Most Likely (tm)	Pessimistic (tp)
A	-	2	4	6
B	A	3	5	9
C	A	1	2	3
D	B	4	6	8
E	C	2	3	4
F	D, E	3	5	7

Q.7 Explain construction safety on the following sites: (Solve any Two) **08**

a) Dam construction
b) Tunnel construction
c) Bridge construction. Highlight specific hazards and preventive measures for each.

Q.8 Explain the following earth-moving equipment with their working principles, applications, and factors affecting production: (Solve any Two) **08**

a) Bulldozer
b) Scraper
c) Power Shovel

Q.9 **a)** Describe Mivan (Aluminium) formwork with its components, advantages. **04**

b) Compare Aluform, Tunnel Form, and Mivan formwork under: material, application. **04**

c) Displaying project schedule with activities plotted against time on a bar chart
d) Calculating project cost

14) Primavera is categorized as _____.

a) A free open-source scheduling tool
b) A professional enterprise-level Project Management Software
c) A simple spreadsheet application
d) A Building Information Modelling (BIM) tool

Seat No.	

Set **R**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Construction Management Practices (CIVPCC-12)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question No. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question No. 6 is compulsory in section II, and solve any two questions from remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 **a)** The following activities are involved in a construction project. Draw the network diagram, perform forward and backward pass, calculate all floats, identify the critical path, and find the project duration. **08**

Activity	Predecessor	Duration (Days)
A	-	4
B	-	6
C	A	5
D	A	3
E	B, C	7
F	D	4
G	E, F	3

b) Explain Fulkerson's Rule for numbering events in a network with an example. **04**

Q.3 **a)** What is network compression? Explain the step-by-step procedure for crashing a network. **04**

b) What is updating? Explain the step-by-step procedure for updating. **04**

Q.4 A project has the following activities with normal time, crash time, normal cost and crash cost. The indirect cost = ₹100 per day. **08**

Activity	Normal Time (days)	Crash Time (days)	Normal Cost (₹)	Crash Cost (₹)
A	6	4	300	500
B	5	3	200	400
C	7	5	350	650
D	4	2	250	450

Q.5 **a)** Describe any four Project Management Software tools used in construction projects. **04**

b) What is CPM? Explain the step-by-step procedure to find the critical path of a project. **04**

SECTION – II

Q.6 A project consists of the following activities with three-time estimates. Calculate expected time table Draw network diagram Find paths and critical path Calculate variance and standard deviation. **12**

Activity	Predecessor	Optimistic (to)	Most Likely (tm)	Pessimistic (tp)
A	-	2	4	6
B	A	3	5	9
C	A	1	2	3
D	B	4	6	8
E	C	2	3	4
F	D, E	3	5	7

Q.7 Explain construction safety on the following sites: (Solve any Two) **08**

a) Dam construction
b) Tunnel construction
c) Bridge construction. Highlight specific hazards and preventive measures for each.

Q.8 Explain the following earth-moving equipment with their working principles, applications, and factors affecting production: (Solve any Two) **08**

a) Bulldozer
b) Scraper
c) Power Shovel

Q.9 **a)** Describe Mivan (Aluminium) formwork with its components, advantages. **04**

b) Compare Aluform, Tunnel Form, and Mivan formwork under: material, application. **04**

SLR-QH-257

Seat No.		Set	S

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Construction Management Practices (CIVPCC-12)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The main advantage of aluminium formwork over conventional steel formwork is _____.
a) Higher strength
b) Lighter weight, faster assembly, higher reusability, and smoother concrete finish
c) Lower initial cost
d) better resistance to corrosion only

2) The efficiency of a trencher machine depends on _____.
a) Operator height
b) Soil type, trench depth, and machine speed
c) Weather conditions only
d) Crane capacity nearby

3) Mivan formwork uses which material?
a) Steel plates b) Aluminium alloy panels
c) Timber planks d) Fibre-reinforced plastic

4) A Gantt chart is primarily used for _____.
a) Finding the critical path
b) Resource levelling
c) Displaying project schedule with activities plotted against time on a bar chart
d) Calculating project cost

5) Primavera is categorized as _____.
a) A free open-source scheduling tool
b) A professional enterprise-level Project Management Software
c) A simple spreadsheet application
d) A Building Information Modelling (BIM) tool

6) Fulkerson's Rule is used for _____.
a) Calculating float of activities
b) Numbering events in a network diagram such that tail event number is always less than head event number
c) Finding the critical path
d) Resource levelling

7) On the critical path, the value of total float is always _____.
a) Maximum
b) Equal to 1
c) Zero
d) Negative

8) Which of the following software is open-source and freely available for project scheduling?
a) MS Project
b) Primavera P6
c) Google Spreadsheet
d) PRINCE2

9) PRINCE stands for _____.
a) Project Resource and Integration Network for Construction Execution
b) Projects in Controlled Environments
c) Programme for Integrated Construction Evaluation
d) Project Review and Improvement Network for Cost Estimation

10) In PERT, the beta distribution is used because _____.
a) It is symmetric
b) It can model skewed activity time distributions with defined endpoints
c) It requires only one time estimate
d) It follows a normal curve exactly

11) Which of the following is NOT a time estimate used in PERT?
a) Optimistic time
b) Pessimistic time
c) Most likely time
d) Deterministic time

12) The primary objective of construction safety management is to _____.
a) Reduce project cost only
b) Prevent accidents, injuries, and occupational hazards
c) Speed up construction activities
d) Avoid legal formalities

13) PPE stands for _____.
a) Project Planning Equipment
b) Personal Protective Equipment
c) Pre-Planned Execution
d) Physical Protection Engineering

14) The cycle time of a scraper includes _____.
a) Load time only
b) Load + haul + dump + return time
c) Haul and dump time only
d) Maneuver time only

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **14**

1) Which of the following is a method of soil exploration?
a) Tacheometry b) Chain surveying
c) Wash boring d) Levelling

2) The RQD in rock drilling stands for _____.
a) Rock Quality Design b) Rock Quantity Designation
c) Rock Quality Designation d) Rock Quotation Data

3) Bearing capacity of soil is defined as _____.
a) Weight of structure
b) Ability of soil to support loads safely
c) Depth of footing
d) Density of soil

4) Terzaghi's bearing capacity theory is applicable mainly for _____.
a) Deep foundations b) Shallow foundations
c) Raft foundations only d) Pile foundations only

5) A strap footing consists of _____.
a) Two isolated footings connected by a beam
b) Single raft slab
c) Pile and pile cap
d) Circular footing only

6) A rectangular combined footing is used when _____.
   a) Column loads are equal and symmetrically placed
   b) Columns are unequal or asymmetrical
   c) Soil is rocky
   d) Foundation is circular

7) Terzaghi's bearing capacity factors depends on ____.
   a) Cohesion of soil
   b) Φ of soil
   c) Permeability of soil
   d) None

8) A Cast in situ piles are constructed by _____.
   a) Driving precast piles
   b) Placing steel sheets
   c) Using timber sections
   d) Casting concrete in boreholes at site

9) Dynamic formulae for pile capacity are based on _____.
   a) Energy principles during driving
   b) Static equilibrium only
   c) Water pressure
   d) Soil classification

10) Under-reamed piles are especially suitable for _____.
   a) Rocky soils
   b) Sandy soils
   c) Black cotton soils
   d) Gravel deposits

11) The slip circle method assumes the failure surface to be _____.
   a) Triangular
   b) Circular
   c) Rectangular
   d) Parabolic

12) The factor of safety in slope stability is the ratio of _____.
   a) Driving forces to resisting forces
   b) Resisting forces to driving forces
   c) Load to area
   d) Stress to strain

13) Which type of cofferdam is suitable for deep water and large areas?
   a) Earth fill cofferdam
   b) Rock fill cofferdam
   c) Cellular cofferdam
   d) Timber crib cofferdam

14) Vibro-floatation is mainly used for _____.
   a) Clay stabilization
   b) Concrete curing
   c) Rock blasting
   d) Densification of granular soils

Set **P**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Foundation Engineering (CIVPEC - 02A)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 and Q.6 are compulsory questions, solve any two from remaining questions from Section – I & any two from remaining questions from Section – II
2) Figures to the right indicate full marks.
3) Assume suitable data if required and mention it clearly.

SECTION – I

Q.2 Solve the following questions.

a) With the help of neat sketch, define **04**
i) Area ratio
ii) Inside clearance ratio
iii) Outside clearance ratio
iv) Recovery ratio

b) Draw a typical Bore hole log chart. **03**

c) Distinguish between disturbed and undisturbed soil samples. **03**

Q.3 Solve of the following questions.

a) Explain the different modes of shear failure with the help of neat sketches. **04**

b) Determine the depth at which a circular footing of 1.8 m diameter be installed to provide a factor of safety 3 to carry a safe load of 2000 KN. Soil has following properties. **05**
$C = 10\ kN/m^2\ \ \Phi = 30°\ \ \Upsilon = 18\ kN/m^3\ N_c = 37.2, N_q = 22.5\ \ N_\Upsilon = 19.7$

Q.4 Solve the following questions.

a) Write a note on standard penetration test and its corrections. **04**

b) A square footing of size 1.2 m × 1.2 m carries a load of 250 kN/ m^2 and immediate settlement under foundation is 25 mm. Calculate the immediate settlement of a footing of size 3 m × 3 m carrying a load of 200 kN/m^2? The subsoil conditions are identical in both the footings. take Iw = 0.62 and 0.84 for first and second footing respectively. **05**

Q.5 Solve of the following questions.

a) With neat sketches, explain different types of shallow foundations. **04**

b) Proportion of trapezoidal combined footing for two columns 350×350 mm carrying column loads of 1000 KN and 1400 KN. If the spacing between the columns is 4 m. Take the allowable soil pressure 280 kN/m^2 and length of the footing as 5 m. **05**

SECTION – II

Q.6 Solve the following questions.

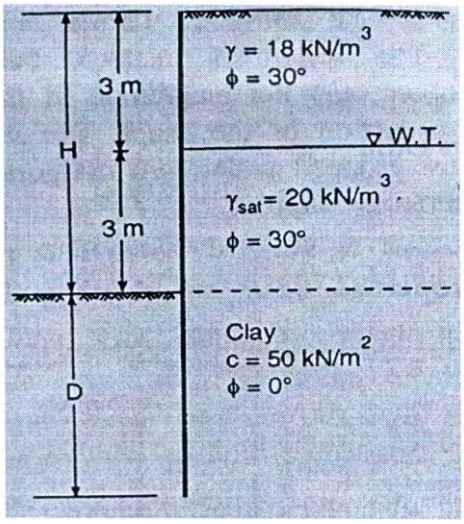
a) List and explain the classification of pile foundations based on functions and installation method. **05**

b) A group of 16 piles of 500 mm diameter is arranged with a centre to centre spacing of 1 m. The piles are 8 m long and are embedded in soft clay with cohesion of 40 kN/m^2.Bearing resistance neglected for piles. Take adhesion factor as 0.7. Determine the ultimate load capacity of pile group. **05**

Q.7 Solve the following questions.

a) Draw a neat sketch of well foundation and mention its parts. **04**

b) Compute the embedment length D for the sheet pile wall shown in fig. **05**



Q.8 Solve the following questions.

a) Explain the causes for a slope failure. **04**

b) Explain Swedish Circle method of stability analysis of slopes. **05**

Q.9 Solve the following questions.

a) Explain in detail applications of Geotextile in civil engineering. **04**

b) What is expansive soil. What are the precautions are to be taken before starting of construction in expansive soil? **05**

Seat No.

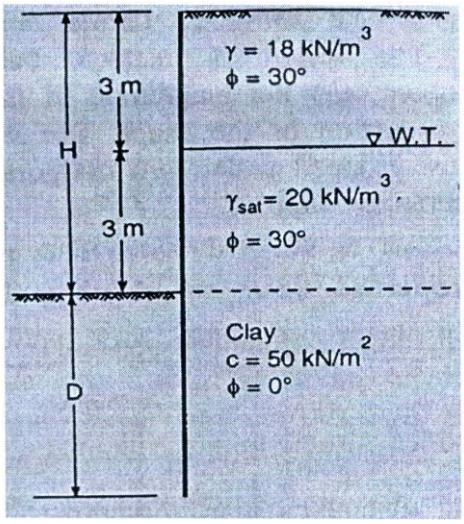
The piles are 8 m long and are embedded in soft clay with cohesion of 40 kN/m^2.Bearing resistance neglected for piles. Take adhesion factor as 0.7. Determine the ultimate load capacity of pile group. **05**

Q.7 Solve the following questions.

a) Draw a neat sketch of well foundation and mention its parts. **04**

b) Compute the embedment length D for the sheet pile wall shown in fig. **05**



Q.8 Solve the following questions.

a) Explain the causes for a slope failure. **04**

b) Explain Swedish Circle method of stability analysis of slopes. **05**

Q.9 Solve the following questions.

a) Explain in detail applications of Geotextile in civil engineering. **04**

b) What is expansive soil. What are the precautions are to be taken before starting of construction in expansive soil? **05**

Seat No.		Set	S

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Foundation Engineering (CIVPEC - 02A)

Day & Date: Friday, 22-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **14**

1) A rectangular combined footing is used when _____.
a) Column loads are equal and symmetrically placed
b) Columns are unequal or asymmetrical
c) Soil is rocky
d) Foundation is circular

2) Terzaghi's bearing capacity factors depends on ____.
a) Cohesion of soil b) Φ of soil
c) Permeability of soil d) None

3) A Cast in situ piles are constructed by _____.
a) Driving precast piles
b) Placing steel sheets
c) Using timber sections
d) Casting concrete in boreholes at site

4) Dynamic formulae for pile capacity are based on _____.
a) Energy principles during driving
b) Static equilibrium only
c) Water pressure
d) Soil classification

5) Under-reamed piles are especially suitable for _____.
a) Rocky soils b) Sandy soils
c) Black cotton soils d) Gravel deposits

6) The slip circle method assumes the failure surface to be _____.
a) Triangular b) Circular
c) Rectangular d) Parabolic

7) The factor of safety in slope stability is the ratio of _____.
a) Driving forces to resisting forces
b) Resisting forces to driving forces
c) Load to area
d) Stress to strain

8) Which type of cofferdam is suitable for deep water and large areas?
a) Earth fill cofferdam b) Rock fill cofferdam
c) Cellular cofferdam d) Timber crib cofferdam

9) Vibro-floatation is mainly used for _____.
a) Clay stabilization b) Concrete curing
c) Rock blasting d) Densification of granular soils

10) Which of the following is a method of soil exploration?
a) Tacheometry b) Chain surveying
c) Wash boring d) Levelling

11) The RQD in rock drilling stands for _____.
a) Rock Quality Design b) Rock Quantity Designation
c) Rock Quality Designation d) Rock Quotation Data

12) Bearing capacity of soil is defined as _____.
a) Weight of structure
b) Ability of soil to support loads safely
c) Depth of footing
d) Density of soil

13) Terzaghi's bearing capacity theory is applicable mainly for _____.
a) Deep foundations b) Shallow foundations
c) Raft foundations only d) Pile foundations only

14) A strap footing consists of _____.
a) Two isolated footings connected by a beam
b) Single raft slab
c) Pile and pile cap
d) Circular footing only

Set **S**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Foundation Engineering (CIVPEC - 02A)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 and Q.6 are compulsory questions, solve any two from remaining questions from Section – I & any two from remaining questions from Section – II
2) Figures to the right indicate full marks.
3) Assume suitable data if required and mention it clearly.

SECTION – I

Q.2 Solve the following questions.

a) With the help of neat sketch, define **04**
i) Area ratio
ii) Inside clearance ratio
iii) Outside clearance ratio
iv) Recovery ratio

b) Draw a typical Bore hole log chart. **03**

c) Distinguish between disturbed and undisturbed soil samples. **03**

Q.3 Solve of the following questions.

a) Explain the different modes of shear failure with the help of neat sketches. **04**

b) Determine the depth at which a circular footing of 1.8 m diameter be installed to provide a factor of safety 3 to carry a safe load of 2000 KN. Soil has following properties. **05**
$C = 10\ kN/m^2\ \ \Phi = 30°\ \ \Upsilon = 18\ kN/m^3\ N_c = 37.2, N_q = 22.5\ \ N_\Upsilon = 19.7$

Q.4 Solve the following questions.

a) Write a note on standard penetration test and its corrections. **04**

b) A square footing of size 1.2 m × 1.2 m carries a load of 250 kN/ m^2 and immediate settlement under foundation is 25 mm. Calculate the immediate settlement of a footing of size 3 m × 3 m carrying a load of 200 kN/m^2? The subsoil conditions are identical in both the footings. take Iw = 0.62 and 0.84 for first and second footing respectively. **05**

Q.5 Solve of the following questions.

a) With neat sketches, explain different types of shallow foundations. **04**

b) Proportion of trapezoidal combined footing for two columns 350×350 mm carrying column loads of 1000 KN and 1400 KN. If the spacing between the columns is 4 m. Take the allowable soil pressure 280 kN/m^2 and length of the footing as 5 m. **05**

SECTION – II

Q.6 Solve the following questions.

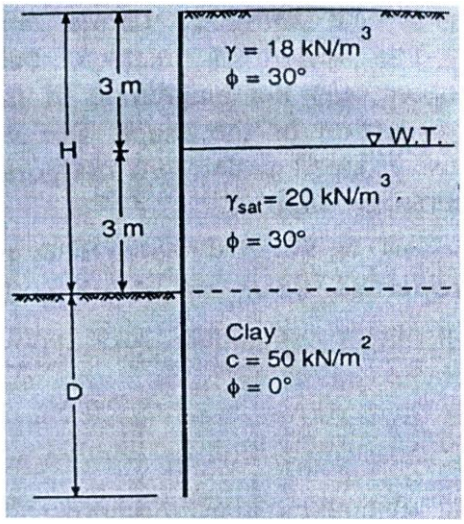
a) List and explain the classification of pile foundations based on functions and installation method. **05**

b) A group of 16 piles of 500 mm diameter is arranged with a centre to centre spacing of 1 m. The piles are 8 m long and are embedded in soft clay with cohesion of 40 kN/m^2.Bearing resistance neglected for piles. Take adhesion factor as 0.7. Determine the ultimate load capacity of pile group. **05**

Q.7 Solve the following questions.

a) Draw a neat sketch of well foundation and mention its parts. **04**

b) Compute the embedment length D for the sheet pile wall shown in fig. **05**



Q.8 Solve the following questions.

a) Explain the causes for a slope failure. **04**

b) Explain Swedish Circle method of stability analysis of slopes. **05**

Q.9 Solve the following questions.

a) Explain in detail applications of Geotextile in civil engineering. **04**

b) What is expansive soil. What are the precautions are to be taken before starting of construction in expansive soil? **05**

Air and Noise Pollution and Control (CIVPEC - 02C)

Day & Date: Friday, 22-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. **14**

1) Radioactive element emission in the atmosphere causes _____ effects in human beings.
a) Carcinogenic b) Pulmonary
c) Allergic d) Genetic

2) _____ is commonly found carcinogenic indoor pollutant.
a) Ozone b) Radon
c) Both a) & b) d) Uranium

3) What is high pressure area with sinking air also known as?
a) Anti-cyclone b) Eddy zone
c) Cyclone d) Richardson zone

4) When Environmental Lapse Rate equals to Adiabatic Lapse Rate and both the lines coincide, the environment is called _____.
a) Neutral b) Unstable
c) Stable d) Calm

5) _____ prevents upward movement of air pollutants if it exists in atmosphere.
a) DALR b) Wind
c) Clouds d) An inversion

6) If stack is having cross sectional area of 5 sq.m. then no. of traverse points shall be equal to _____.
a) 4 b) 20
c) 12 d) 30

7) Which of the following greenhouse gas is contributed by cattle farming?
a) Nitrous oxide
b) Methane
c) Carbon Monoxide
d) CFC

8) In ESP particulates are separated by virtue of _____ action.
a) Gravitational
b) Electrostatic
c) Centrifugal
d) Diffusion

9) Cyclonic Scubber is a type of _____.
a) Stack monitoring kit
b) Dry collector
c) Wet collector
d) Bag house filter

10) Which of the following is the largest sink for carbon dioxide gas?
a) Oceans
b) Forests
c) Ice sheets
d) Grasslands

11) Concentration of pollutants in stack emissions can be measured by _____.
a) High volume sampler
b) Stack monitoring kit
c) Thermometer
d) Hygrometer

12) As per CPCB, the permissible nighttime noise limit in educational areas is _____.
a) 55 dB(A)
b) 65 dB(A)
c) 40 dB(A)
d) 85 dB(A)

13) Which of the following is a psychological effect of noise pollution?
a) Cancer
b) Asthma
c) Anxiety and stress
d) Diabetes

14) Prolonged exposure to high noise levels can lead to _____.
a) Improved hearing
b) Hearing loss
c) Enhanced concentration
d) Better sleep

Examination: March/April – 2026
Air and Noise Pollution and Control (CIVPEC - 02C)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In section- I Q. No. 2 is compulsory and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) In section- II Q. No. 6 is compulsory and solve any two questions from the remaining (Q. No. 7, 8, & 9)
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

SECTION – I

Q.2 **a)** What are different zones of atmosphere? Explain with the help of neat graph. **05**

b) Explain the different sources of particulate matter. Illustrate with examples. **05**

Q.3 **a)** Explain the effects of SO_2 on man and plants. Give concentration values. **05**

b) What is meant by radiation inversion and subsidence inversion? Explain with sketch. **04**

Q.4 **a)** Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

b) A factory uses 150000 litre of fuel oil per month. The exhaust gases from factory contain the following quantities of pollutant per ML per year: **05**

i) Particulate matter= 3 tonnes
ii) Sulphur dioxide= 59.7 tonnes
iii) Hydrocarbons= 0.37 tonnes
iv) Carbon monoxide= 0.5 tonnes. Determine the safe height of chimney required for safe dispersion of pollutants.

Q.5 **a)** Explain stack monitoring? Write in detail isokinetic sampling? **04**

b) A conventional cyclone with diameter 1 m handles 3m^3/sec of air carrying particles of density 2000 kg/m^3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.80 \times 10^{-5}$kg/m.sec. (Note - treat it as a standard cyclone). **05**

SECTION – II

Q.6 **a)** Define air pollution index. Explain any one method of determining API with the help of illustrative example. **05**

b) A settling chamber is designed for removing 90 μ dia. Particles with 100% efficiency. The particulate matter density is 1200 kg/m^3. Depth and width of chamber is 2 m each. Determine: **05**

i) Length of chamber required without trays
ii) Length of chamber with 10 trays.

Q.7 **a)** An ESP with overall spacing of 0.23 cm and mean gas velocity 1.2 m/s has collector plate area of 6000 m^2 gives efficiency of 97% in treating 200 m3/s of gas. To achieve 98% and 99% efficiency. What should be plate area required? **05**

b) Explain the principle working of settling chamber. **04**

Q.8 **a)** Explain any two methods of controlling gaseous pollutants. **04**

b) Describe the impact of long-term exposure to high noise levels on children's learning and cognitive development. **05**

Q.9 Write short notes on following: **09**

a) Role of Noise Mapping and GIS in environmental noise assessment

b) Sources of noise

c) Instrumentation Requirements in noise

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In section- I Q. No. 2 is compulsory and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) In section- II Q. No. 6 is compulsory and solve any two questions from the remaining (Q. No. 7, 8, & 9)
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

SECTION – I

Q.2 **a)** What are different zones of atmosphere? Explain with the help of neat graph. **05**

b) Explain the different sources of particulate matter. Illustrate with examples. **05**

Q.3 **a)** Explain the effects of SO_2 on man and plants. Give concentration values. **05**

b) What is meant by radiation inversion and subsidence inversion? Explain with sketch. **04**

Q.4 **a)** Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

b) A factory uses 150000 litre of fuel oil per month. The exhaust gases from factory contain the following quantities of pollutant per ML per year: **05**

i) Particulate matter= 3 tonnes
ii) Sulphur dioxide= 59.7 tonnes
iii) Hydrocarbons= 0.37 tonnes
iv) Carbon monoxide= 0.5 tonnes. Determine the safe height of chimney required for safe dispersion of pollutants.

Q.5 **a)** Explain stack monitoring? Write in detail isokinetic sampling? **04**

b) A conventional cyclone with diameter 1 m handles 3m^3/sec of air carrying particles of density 2000 kg/m^3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.80 \times 10^{-5}$kg/m.sec. (Note - treat it as a standard cyclone). **05**

SECTION – II

Q.6 **a)** Define air pollution index. Explain any one method of determining API with the help of illustrative example. **05**

b) A settling chamber is designed for removing 90 μ dia. Particles with 100% efficiency. The particulate matter density is 1200 kg/m^3. Depth and width of chamber is 2 m each. Determine: **05**

i) Length of chamber required without trays

ii) Length of chamber with 10 trays.

Q.7 **a)** An ESP with overall spacing of 0.23 cm and mean gas velocity 1.2 m/s has collector plate area of 6000 m^2 gives efficiency of 97% in treating 200 m3/s of gas. To achieve 98% and 99% efficiency. What should be plate area required? **05**

b) Explain the principle working of settling chamber. **04**

Q.8 **a)** Explain any two methods of controlling gaseous pollutants. **04**

b) Describe the impact of long-term exposure to high noise levels on children's learning and cognitive development. **05**

Q.9 **Write short notes on following:** **09**

a) Role of Noise Mapping and GIS in environmental noise assessment

b) Sources of noise

c) Instrumentation Requirements in noise

Set P

T.Y. (B.Tech.) (Civil Engineering) (Sem - II) (New) (CBCS)
Examination: March/April – 2026
Planning for Sustainable Development (CIVPEC - 03B)

Day & Date: Monday, 25-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) Sustainable development mainly aims at _____.
a) Industrial growth only
b) Economic profit only
c) Balancing present and future needs
d) Urban expansion

2) Environmental degradation directly affects _____.
a) Biodiversity only b) Poverty and quality of life
c) Industries only d) Technology only

3) One major principle of sustainable development is _____.
a) Unlimited consumption b) Intergenerational equity
c) Excessive industrialization d) Privatization

4) Resistance to sustainable development commonly occurs due to _____.
a) Economic interests b) Awareness
c) Education d) Research

5) Alternative approaches to sustainability include _____.
a) Green economy b) Circular economy
c) Eco-development d) All of the above

6) ICT in sustainable development helps in _____.
a) Resource monitoring
b) Communication and awareness
c) Smart management systems
d) All of the above

7) Innovation for sustainable development focuses on _____.
a) Environmental protection only
b) Economic growth only
c) Long-term sustainable solutions
d) None

8) Institutional theory mainly studies _____.
a) Natural resources
b) Social institutions and structures
c) Soil conservation
d) Marketing systems

9) Equity in sustainability means _____.
a) Equal industrial growth
b) Fair distribution of resources
c) Urbanization
d) Population growth

10) Governance for sustainable development requires _____.
a) Policy integration
b) Public participation
c) Accountability
d) All of the above

11) NITI Aayog is associated with _____.
a) Defense policy
b) Planning and policy development
c) Medical education
d) Banking regulation

12) MoEFCC stands for _____.
a) Ministry of Energy and Forest Climate Council
b) Ministry of Environment, Forest and Climate Change
c) Ministry of Ecology and Financial Climate Control
d) None

13) Research methods in sustainable development are used for _____.
a) Data analysis
b) Problem identification
c) Policy recommendations
d) All of the above

14) Capacity development for innovation mainly improves _____.
a) Technical and research skills
b) Pollution levels
c) Resource depletion
d) Deforestation

Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 Answer the following questions. **10**

a) Define sustainable development and explain its main principles.

b) Explain the role of ICT in promoting sustainable development.

Q.3 Answer any three of the following questions. **18**

a) Discuss the relationship between environmental degradation and poverty.

b) Explain the evolution of ideas related to sustainability.

c) Discuss strategies for promoting sustainable development.

d) Explain important current issues and debates related to sustainable development.

e) Describe innovation strategies used in environmental management.

SECTION – II

Q.4 Answer the following questions. **10**

a) Explain institutional theory and its role in sustainability.

b) Discuss governance for sustainable development.

Q.5 Answer any three of the following questions.

a) Explain societal transformations in sustainable development. **18**

b) Discuss equity and social justice in sustainability.

c) Explain policy responses to environmental degradation.

d) Describe the role of NITI Aayog and MoEFCC in sustainable development.

e) Explain research challenges and policy interventions in sustainable development.

4) Assume suitable data wherever needed and state them clearly.
5) Use of IS 1893(part-1): 2016 is permitted.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. (Each Two Marks) 14

1) The seismic wave which travels the fastest through the Earth?
a) Rayleigh's wave b) Secondary wave
c) Primary wave d) Love wave

2) In free undamped vibration, the amplitude of vibration _____.
a) Gradually decreases b) Gradually increases
c) Rapidly Becomes zero d) Remains constant

3) In a damped SDOF system under harmonic force, the steady-state response depends on _____.
a) Initial conditions
b) Frequency ratio and damping
c) Mass only
d) Time only

4) The magnification factor (dynamic amplification factor) represents _____.
a) Ratio of dynamic displacement to static displacement
b) Ratio of velocity to acceleration
c) Ratio of force to displacement
d) Ratio of mass to stiffness

5) In earthquake resistant design, the "strong column-weak beam" concept is used to _____.
a) Reduce building height
b) Ensure beams yield before columns
c) Increase column stiffness
d) Reduce foundation size

6) The base shear in a building due to earthquake depends on _____.

a) Seismic zone factor
b) Importance factor
c) Response reduction factor
d) All of the above

7) In earthquake resistant masonry construction, horizontal bands are provided to _____.

a) Increase building height
b) Reduce construction cost
c) Improve structural integrity and resistance
d) Increase dead load

Day & Date: Monday, 25-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and state them clearly.
5) Use of IS 1893(part-1): 2016 is permitted.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. (Each Two Marks) 14

1) In a damped SDOF system under harmonic force, the steady-state response depends on _____.
a) Initial conditions
b) Frequency ratio and damping
c) Mass only
d) Time only

2) The magnification factor (dynamic amplification factor) represents _____.
a) Ratio of dynamic displacement to static displacement
b) Ratio of velocity to acceleration
c) Ratio of force to displacement
d) Ratio of mass to stiffness

3) In earthquake resistant design, the "strong column-weak beam" concept is used to _____.
a) Reduce building height
b) Ensure beams yield before columns
c) Increase column stiffness
d) Reduce foundation size

4) The base shear in a building due to earthquake depends on _____.
a) Seismic zone factor b) Importance factor
c) Response reduction factor d) All of the above

5) In earthquake resistant masonry construction, horizontal bands are provided to _____.

a) Increase building height
b) Reduce construction cost
c) Improve structural integrity and resistance
d) Increase dead load

6) The seismic wave which travels the fastest through the Earth?

a) Rayleigh's wave
b) Secondary wave
c) Primary wave
d) Love wave

7) In free undamped vibration, the amplitude of vibration _____.

a) Gradually decreases
b) Gradually increases
c) Rapidly Becomes zero
d) Remains constant

Seat No.	

Set **R**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Earthquake Engineering (CIVPEC - 03C)

Day & Date: Monday, 25-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 4 & Q. 6 are compulsory. Attempt any two questions from the remaining of each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever needed & mention it clearly.
4) Use of IS 1893(Part-I): 2016 is permitted.

SECTION – I

Q.2 Explain elastic rebound theory with neat sketches. **09**

Q.3 From first principle derive the governing differential equation for free vibration of undamped SDOF system. Obtain the general solution of this differential equation. Plot the graph if system is given initial displacement y_0. **09**

Q.4 Derive the governing differential equation of undamped forced vibration of a SDOF system subjected to harmonic loading. Also obtain the complete solution of differential equation and plot graph of magnification factor vs frequency ratio ‘r’. **10**

Q.5 Explain the concept of Duhamel’s integral for damped systems. Derive its expression. **09**

SECTION – II

Q.6 It is proposed to construct a R.C.C. four storied commercial building having plan dimensions as shown in Fig. 1 in zone III with following data. Determine the lateral forces and base shear. The all column sizes are 250 × 450 mm and beams sizes are 250 × 450 mm. The slab thickness is 140 mm and thickness of walls is 230 mm. The height of floor is 3.2 m and live load is 3.0 kN/m^2. IS 13920 will be used. The strata is hard. **10**

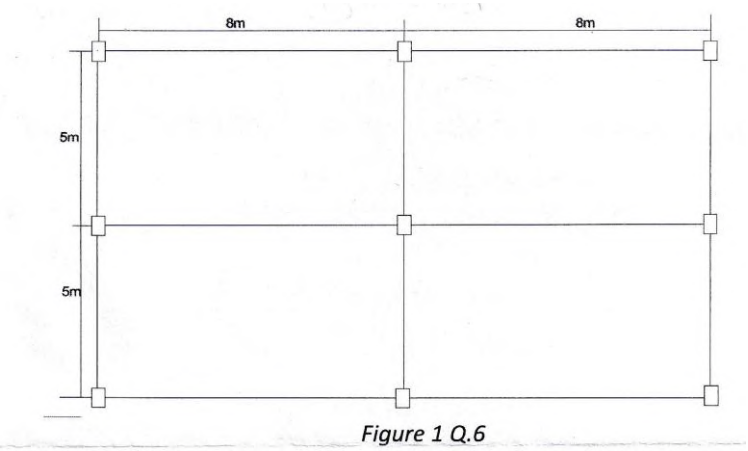

Figure 1 Q.6

Q.7 Explain the types of irregularities and their effects in the buildings during earthquakes? **09**

Q.8 Explain the strong column-weak beam concept. **09**

Q.9 Explain the importance of seismic bands in masonry structures. **09**

Seat No.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Solve following Multiple Choice Questions. **14**

1) Which of the following is the stakeholder of system?
a) Users b) Community
c) System Owner d) All

2) _____ models are that use the mathematics of decision making to choose a course of action, design or policy.
a) Prescriptive b) Descriptive
c) Analog d) Real

3) A _____ may be defined as deficiency, an unfulfilled requirement, lack of product that is necessary.
a) Supply b) Need
c) None d) All of these

4) Which of the following is not property desired MOE?
a) Appropriateness b) Measurability
c) Realistic d) Cost Saving

5) In _____ design, analysis & evaluation of alternative designs is done in details.
a) Conceptual b) Preliminary
c) Detailed d) None

6) _____ is termed as performance measure, simply an objective that stated in measurable terms.
a) Measure of Effectiveness b) Dimension
c) Planning d) None

7) The super systems are _____.
a) Higher level systems b) Lower level systems
c) Both d) None of these

8) _____ provides basis for predicting the need for proposed civil system.
a) Planning b) Need Assessment
c) Controlling d) None

9) Which of the following is tool for task of description?
a) Probability b) Statistics
c) Economics d) All of the above

10) From _____ perspective, the system inputs considered in system planning could have short term, moderate term & long term effects.
a) Temporal b) Operational
c) Phase d) None

11) Which of the following is classification of design?
a) Selection Design b) Configuration Design
c) Both of the above d) None of the above

12) _____ Models describe the amount of money needed to undertake specific action.
a) Demand b) Cost
c) Real d) Sup

13) _____ is set of components that work together for overall objectives.
a) System b) Goals
c) Objective d) None of these

14) In Preliminary Design, analysis & evaluation of design is done on _____ stage.
a) Detailed b) Conceptual
c) Multiple d) Preliminary

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Pipe jacking involves moving _____ to the ground.
a) Box b) Pipe
c) Both a) and b) d) All of these

2) Launching girders for bridges involves the following steps _____.
a) Planning and Design b) Fabrication
c) Transportation to the Site d) All of these

3) Types of Bridge Bearings are _____.
a) Fixed Bearings b) Elastomeric Bearings
c) Pot Bearings d) All of these

4) Types of grade separated structures are _____.
a) Overpass b) Under pass
c) Flyover d) All of these

5) Abutment of Bridge is _____.
a) Foundation b) End pier
c) Bearing d) All of these

6) Steps involved in the Construction of Diaphragm Walls are _____.
- a) Excavation Preparation
- b) Slurry Trench
- c) Concrete Pouring
- d) All of these

7) Types of Bridge foundations are _____.
- a) Caisson Foundation
- b) Pile foundation
- c) Pier Foundation
- d) All of these

8) Ground improvement techniques are _____.
- a) Compaction
- b) Grouting
- c) Deep Soil Mixing
- d) All of these

9) _____ basic things you should wear to work site.
- a) Helmet, mask, boots, and the best clothes you have
- b) Helmet, mask, sandals, and casual clothes
- c) Helmet, mask, boots, and casual clothes
- d) None of these

10) Material handling is _____.
- a) Process of change of material
- b) Process of transporting, lifting, and placing various construction materials and equipment.
- c) Process of finding Quality of Construction Material.
- d) Process of finding Quantity of Construction Material.

11) Embankment construction refers to the _____.
- a) Process of Site Investigation
- b) Process of building raised structures made of compacted earth, rock, or other materials
- c) Process of Earthwork
- d) Process of Quality Control

12) According to straight line method of providing depreciation, the amount of depreciation _____.
- a) Remains constant each year
- b) Increase each year
- c) Decrease each year
- d) None of them

13) The main function of retaining walls at hill side is to _____.

a) Stabilize hillside
b) Control erosion
c) Reduce the grades of road
d) All are correct

14) _____ is the basis for PERT analysis.

a) An optimistic time
b) A pessimistic period of time
c) The date that is most likely
d) All options mentioned above

Q.2 Attempt Any Two. **14**

a) Explain Hydraulic requirements of Bridge.

b) Explain various basic elements of Bridge.

c) Enlist and explain various types of *'Piling Techniques'.*

Q.3 Attempt Any Two. **14**

a) Discuss on process of 'Dewatering' in construction of bridge structure.

b) Explain, *'Strengthening of bridges'* in detail.

c) Enlist and explain various types of bearings used in bridges.

SECTION – II

Q.4 Attempt Any Two. **14**

a) Explain the Factors affecting selection of equipment and methods.

b) Explain various types of Ground Improvement Techniques in details.

c) Discuss on methods of calculation of depreciation cost of construction equipment.

Q.5 Attempt Any Two. **14**

a) Explain the concept of Maintenance management in construction projects.

b) The following table shows the list of activities and their Durations.
Calculate the project duration and critical path of the network.

Activity	Duration	Depends on
A	3	-
B	5	A
C	3	A
D	6	B,C
E	7	B
F	3	D,E

c) Enlist and explain various types of software available in project management.

Examination: March/April – 2026
Honors in Infrastructure Engineering (Stage – I)
Bridge and Grade Separated Structures (CIVHON-04B)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.
5) Draw neat sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) Ground improvement techniques are _____.
a) Compaction b) Grouting
c) Deep Soil Mixing d) All of these

2) _____ basic things you should wear to work site.
a) Helmet, mask, boots, and the best clothes you have
b) Helmet, mask, sandals, and casual clothes
c) Helmet, mask, boots, and casual clothes
d) None of these

3) Material handling is _____.
a) Process of change of material
b) Process of transporting, lifting, and placing various construction materials and equipment.
c) Process of finding Quality of Construction Material.
d) Process of finding Quantity of Construction Material.

4) Embankment construction refers to the _____.
   a) Process of Site Investigation
   b) Process of building raised structures made of compacted earth, rock, or other materials
   c) Process of Earthwork
   d) Process of Quality Control

5) According to straight line method of providing depreciation, the amount of depreciation _____.
   a) Remains constant each year
   b) Increase each year
   c) Decrease each year
   d) None of them

6) The main function of retaining walls at hill side is to _____.
   a) Stabilize hillside b) Control erosion
   c) Reduce the grades of road d) All are correct

7) _____ is the basis for PERT analysis.
   a) An optimistic time
   b) A pessimistic period of time
   c) The date that is most likely
   d) All options mentioned above

8) Pipe jacking involves moving _____ to the ground.
   a) Box b) Pipe
   c) Both a) and b) d) All of these

9) Launching girders for bridges involves the following steps _____.
   a) Planning and Design b) Fabrication
   c) Transportation to the Site d) All of these

10) Types of Bridge Bearings are _____.
   a) Fixed Bearings b) Elastomeric Bearings
   c) Pot Bearings d) All of these

11) Types of grade separated structures are _____.
   a) Overpass b) Under pass
   c) Flyover d) All of these

12) Abutment of Bridge is _____. ____

a) Foundation b) End pier
c) Bearing d) All of these

13) Steps involved in the Construction of Diaphragm Walls are _____.

a) Excavation Preparation b) Slurry Trench
c) Concrete Pouring d) All of these

14) Types of Bridge foundations are _____.

a) Caisson Foundation b) Pile foundation
c) Pier Foundation d) All of these

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. 14

1) As per UIC, high-speed rail on new lines generally operates above ____.
a) 160 km/h b) 200 km/h
c) 250 km/h d) 300 km/h

2) The main limitation of High Speed Rail is _____.
a) Low capacity b) High initial capital cost
c) Low safety d) Slow travel

3) Standard gauge adopted for Mumbai-Ahmedabad HSR corridor is _____.
a) 1676 mm b) 1520 mm
c) 1435 mm d) 1000 mm

4) Cant deficiency occurs when _____.
a) Provided cant > equilibrium cant
b) Provided cant < equilibrium cant
c) Cant = zero
d) Train is stationary

5) Level crossings in High Speed Rail are _____.
a) Allowed b) Restricted
c) Completely eliminated d) Temporary

6) Rail pads are provided to _____.
a) Increase speed b) Provide elasticity
c) Reduce track width d) Increase cant

7) Ballastless track is also known as _____.
a) Loose track b) Slab track
c) Mixed track d) Flexible track

8) Geotextiles are mainly used for _____.
a) Increasing friction b) Separation and filtration
c) Decoration d) Reducing cant

9) Track tolerances for high-speed routes are _____.
a) Same as conventional b) More relaxed
c) Much stricter d) Not required

10) Ballast cleaning improves _____.
a) Signaling b) Drainage and stability
c) Station design d) Ticket booking

11) High Speed Recording Car is used to measure _____.
a) Passenger count b) Track geometry
c) Ticket rates d) Platform height

12) WINALC system is used for _____.
a) Train scheduling b) Guiding tamping machines
c) Signaling d) Electrification

13) Selection of HSR system depends mainly on _____.
a) Political factors only
b) Passenger demand and terrain
c) Train color
d) Station type

14) Transition curve is provided to _____.
a) Increase curvature
b) Gradually introduce curvature and cant
c) Reduce speed
d) Eliminate gradient

2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 Solve the following questions. **14**

a) Define High Speed Rail as per International Union of Railways (UIC) and explain the classification criteria of High Speed systems.

b) Discuss the need for High Speed Rail corridors in India with reference to the Mumbai-Ahmedabad corridor feasibility study.

Q.3 Solve the following questions. **14**

a) Explain track gauge, cant, cant deficiency and cant excess in High Speed Rail design.

b) Discuss transition curves and superelevation ramps for High Speed tracks.

Q.4 Solve the following questions. **14**

a) Explain the design considerations for tunnels and bridges in High Speed Rail systems.

b) Describe rails, sleepers, fastening systems and stiffness requirements of High Speed track.

SECTION – II

Q.5 Solve the following questions. **14**

a) Compare ballast track and ballastless (slab) track used in High Speed Rail.

b) Discuss operating conditions and special features of High Speed rolling stock.

Q.6 Solve the following questions. **14**

a) Explain the life cycle of High Speed track components and importance of life cycle costing.

b) Discuss standard track tolerances and danger limits for High Speed Rail on standard gauge.

Q.7 Solve the following questions. **14**

a) Explain track geometry measurement through transfer function for High Speed track.

b) Describe the working and applications of the UFM 160 multifunctional recording car.

Honors in Railway Infrastructure (Stage - I)
High Speed Railway Infrastructure (CIVHON-04D)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two main questions from section-I and any two main questions from Section-II.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and state it clearly.

SECTION – I

Q.2 Solve the following questions. **14**

a) Define High Speed Rail as per International Union of Railways (UIC) and explain the classification criteria of High Speed systems.

b) Discuss the need for High Speed Rail corridors in India with reference to the Mumbai-Ahmedabad corridor feasibility study.

Q.3 Solve the following questions. **14**

a) Explain track gauge, cant, cant deficiency and cant excess in High Speed Rail design.

b) Discuss transition curves and superelevation ramps for High Speed tracks.

Q.4 Solve the following questions. **14**

a) Explain the design considerations for tunnels and bridges in High Speed Rail systems.

b) Describe rails, sleepers, fastening systems and stiffness requirements of High Speed track.

SECTION – II

Q.5 Solve the following questions. **14**

a) Compare ballast track and ballastless (slab) track used in High Speed Rail.

b) Discuss operating conditions and special features of High Speed rolling stock.

Q.6 Solve the following questions. **14**

a) Explain the life cycle of High Speed track components and importance of life cycle costing.

b) Discuss standard track tolerances and danger limits for High Speed Rail on standard gauge.

Q.7 Solve the following questions. **14**

a) Explain track geometry measurement through transfer function for High Speed track.

b) Describe the working and applications of the UFM 160 multifunctional recording car.

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Honors in Railway Infrastructure (Stage - I)
High Speed Railway Infrastructure (CIVHON-04D)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **14**

1) Rail pads are provided to _____.
a) Increase speed b) Provide elasticity
c) Reduce track width d) Increase cant

2) Ballastless track is also known as _____.
a) Loose track b) Slab track
c) Mixed track d) Flexible track

3) Geotextiles are mainly used for _____.
a) Increasing friction b) Separation and filtration
c) Decoration d) Reducing cant

4) Track tolerances for high-speed routes are _____.
a) Same as conventional b) More relaxed
c) Much stricter d) Not required

5) Ballast cleaning improves _____.
a) Signaling b) Drainage and stability
c) Station design d) Ticket booking

6) High Speed Recording Car is used to measure _____.
a) Passenger count b) Track geometry
c) Ticket rates d) Platform height

7) WINALC system is used for _____.
a) Train scheduling b) Guiding tamping machines
c) Signaling d) Electrification

8) Selection of HSR system depends mainly on _____.
a) Political factors only
b) Passenger demand and terrain
c) Train color
d) Station type

9) Transition curve is provided to _____.
a) Increase curvature
b) Gradually introduce curvature and cant
c) Reduce speed
d) Eliminate gradient

10) As per UIC, high-speed rail on new lines generally operates above ____.
a) 160 km/h b) 200 km/h
c) 250 km/h d) 300 km/h

11) The main limitation of High Speed Rail is _____.
a) Low capacity b) High initial capital cost
c) Low safety d) Slow travel

12) Standard gauge adopted for Mumbai-Ahmedabad HSR corridor is _____.
a) 1676 mm b) 1520 mm
c) 1435 mm d) 1000 mm

13) Cant deficiency occurs when _____.
a) Provided cant > equilibrium cant
b) Provided cant < equilibrium cant
c) Cant = zero
d) Train is stationary

14) Level crossings in High Speed Rail are _____.
a) Allowed b) Restricted
c) Completely eliminated d) Temporary

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **14**

1) One of the purposes of Soil exploration is _____.
a) To understand the behaviour of the structure
b) To estimate the load coming on the soil
c) To find the quantity and quality of water
d) To determine basic properties of soil

2) The angle of Shear Resistance $\Phi > 36^o$, then the type of failure in soil is _____.
a) General Shear Failure b) Local Shear Failure
c) Punching Shear Failure d) None

3) Load increments applied in 'Plate Load Test' is _____.
a) 1/20 of the estimated ultimate bearing capacity
b) 1/15 of the estimated ultimate bearing capacity
c) 1/10 of the estimated ultimate bearing capacity
d) 1/5 of the estimated ultimate bearing capacity

4) These types soils are those appear to be strong and stable in their natural state, but which rapidly consolidate under wetting, generating large and often unexpected settlements.
a) Weak/Compressible soil b) Collapsible soil
c) Corrosive Soil d) None

5) A strip footing of width 1m is resting on a soft clay strata at depth of 1m. The angle of internal friction is zero, and cohesion is $20\ \text{kN/m}^2$. The water table is at a great depth, the ultimate bearing capacity of soil according to Terzaghi's equation is _____.
a) $120\ \text{kN/m}^2$ b) $114\ \text{kN/m}^2$
c) $57\ \text{kN/m}^2$ d) None

6) Bearing capacity can be evaluated by Skempton's method in case of _____.
a) Cohesive soil b) Cohesionless soil
c) C - Φ soil d) Rocks

7) Terzaghi's bearing capacity factors depends on _____.
a) Cohesion of soil b) Φ of soil
c) Permeability of soil d) None

8) A combined footing is generally used when _____.
a) No. of columns is two and they are spaced close to each other
b) No. of columns is two and they are spaced far apart
c) No. of columns is more than two and they are spaced far apart
d) There is only one column

9) Piles used to anchor down structures subjected to uplift due to hydrostatic pressure or overturning moments, are called _____.
a) Anchor piles b) Fender piles
c) Tension piles d) Bearing piles

10) Under reamed piles are generally _____.
a) Driven piles b) Bored piles
c) Precast piles d) None of the above

11) The bottom plug-in foundation well is usually made of _____.
a) Brick masonry b) Reinforced cement concrete
c) Cement concrete d) None of the above

12) Caisson disease is associated with _____.
a) The workers working on sinking of open well foundations
b) The workers working on sinking of pneumatic caisson
c) The tilting of caissons and wells during their sinking
d) None of the above

13) In stability analysis, the term mobilized shear strength is referred to as _____.
a) Shear strength b) Maximum shear stress
c) Applied shear stress d) None

14) For cantilever sheet pile supporting clayey soil having $c = 25\ \text{kPa}$, pressure intensity at the top of wall is _____.
a) 0 b) $-25\ \text{kPa}$
c) $-50\ \text{kPa}$ d) None

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Foundation Engineering (BTN01601)

Day & Date: Friday, 15-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory; answer any two from remaining question from Section - I.
2) Q.6 is compulsory; answer any two from remaining question from Section - II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

SECTION – I

Q.2 **a)** Distinguish between undisturbed and disturbed sample of soil. What are the tests Conducted on these samples in the laboratory. **04**

b) A sampling tube has inner diameter 70mm and that of cutting edge is equal to 68mm. Their outer diameters are 72mm and 74mm respectively. Determine the inside clearance, outside clearance and area ratio of the sampler. This tube is pushed at bottom of a bore hole to a distance of 550mm and length of sample covered is 80mm. Find the recovery ratio. **06**

Q.3 **a)** Explain the different modes of shear failure with the help of neat sketches. **04**

b) A circular footing is resting on a stiff saturated clay with $\text{c} = 125\ \text{kN/m}^2$. The depth of foundation is 1.8m. Determine the diameter of footing. Take safe load on footing as 800kN and factor of safety is 2.5. The bulk unit weight of soil is $20\ \text{kN/m}^3$. Take $\Phi = 0, \text{N}_\text{c} = 5.7, \text{N}_\text{q} = 1, \text{N}_\Upsilon = 0$. **05**

Q.4 **a)** Write a note on standard penetration test and its corrections. **05**

b) Determine the immediate settlement of a footing $3\text{m} \times 3\ \text{m}$ resting on a sandy soil with $\text{Es} = 45000\ \text{kN/m}^2$ and $\mu = 0.3$. Footing carries a load of $2000\ \text{kN}$. Assume $\text{Iw} = 0.82$. **04**

Q.5 **a)** Enlist ground improvement techniques. Explain any one in detail with its suitability. **05**

b) What is collapsible soil? What the precautions are of be taken before starting of construction in collapsible soil? **04**

SECTION – II

Q.6 **a)** Explain different types of shallow foundations with neat sketches. **05**

b) Explain Feld's rule and find group efficiency for 9 piles and 16 piles using this rule. **05**

Q.7 **a)** Mention the situations where pile foundation is necessary and explain the classification of piles based on their functions. **04**

b) In a 16 pile group, the pile diameter is $450\ \mathrm{mm}$ and $\mathrm{c/c}$ spacing of the square group is $1.5\ \mathrm{m}, \mathrm{c} = 50\ \mathrm{kN/m^2}$, determine whether the failure would occur with the pile acting individually or as group? Neglect bearing at tip of the pile. All piles are $10\ \mathrm{m}$ long. Take $\alpha = 0.7$ and $\mathrm{FOS} = 2.5$. Also find safe allowable load. **05**

Q.8 **a)** What are the types of slope failure? Explain with neat sketches. **05**

b) Draw a neat sketch of well foundation. Explain its various parts **04**

Q.9 **a)** Write a note on Taylor's Stability Charts. **04**

b) Calculate the factor of safety with respect to cohesion of clay, slope laid at 1 in 2 to a length of $11\mathrm{m}$. If the angle of internal friction $\Phi = 10^0$, Taylors stability number $0.064, \mathrm{c} = 20\mathrm{kN/m^2}$ and unit weight $19\mathrm{kN/m^3}$. Determine the critical height of slope in this soil. **05**

Q.7 **a)** Mention the situations where pile foundation is necessary and explain the classification of piles based on their functions. **04**

b) In a 16 pile group, the pile diameter is $450\ \mathrm{mm}$ and $\mathrm{c/c}$ spacing of the square group is $1.5\ \mathrm{m}, \mathrm{c} = 50\ \mathrm{kN/m^2}$, determine whether the failure would occur with the pile acting individually or as group? Neglect bearing at tip of the pile. All piles are $10\ \mathrm{m}$ long. Take $\alpha = 0.7$ and $\mathrm{FOS} = 2.5$. Also find safe allowable load. **05**

Q.8 **a)** What are the types of slope failure? Explain with neat sketches. **05**

b) Draw a neat sketch of well foundation. Explain its various parts **04**

Q.9 **a)** Write a note on Taylor's Stability Charts. **04**

b) Calculate the factor of safety with respect to cohesion of clay, slope laid at 1 in 2 to a length of $11\mathrm{m}$. If the angle of internal friction $\Phi = 10^0$, Taylors stability number $0.064, \mathrm{c} = 20\mathrm{kN/m^2}$ and unit weight $19\mathrm{kN/m^3}$. Determine the critical height of slope in this soil. **05**

Examination: March/April – 2026
Foundation Engineering (BTN01601)

Day & Date: Friday, 15-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 in minutes Answer Book Page no. 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **14**

1) Bearing capacity can be evaluated by Skempton's method in case of _____.
a) Cohesive soil b) Cohesionless soil
c) C - Φ soil d) Rocks

2) Terzaghi's bearing capacity factors depends on _____.
a) Cohesion of soil b) Φ of soil
c) Permeability of soil d) None

3) A combined footing is generally used when _____.
a) No. of columns is two and they are spaced close to each other
b) No. of columns is two and they are spaced far apart
c) No. of columns is more than two and they are spaced far apart
d) There is only one column

4) Piles used to anchor down structures subjected to uplift due to hydrostatic pressure or overturning moments, are called _____.
a) Anchor piles b) Fender piles
c) Tension piles d) Bearing piles

5) Under reamed piles are generally _____.
a) Driven piles b) Bored piles
c) Precast piles d) None of the above

6) The bottom plug-in foundation well is usually made of _____.
a) Brick masonry b) Reinforced cement concrete
c) Cement concrete d) None of the above

7) Caisson disease is associated with _____.
- a) The workers working on sinking of open well foundations
- b) The workers working on sinking of pneumatic caisson
- c) The tilting of caissons and wells during their sinking
- d) None of the above

8) In stability analysis, the term mobilized shear strength is referred to as _____.
- a) Shear strength
- b) Maximum shear stress
- c) Applied shear stress
- d) None

9) For cantilever sheet pile supporting clayey soil having $\mathrm{c} = 25\ \mathrm{kPa}$, pressure intensity at the top of wall is _____.
- a) 0
- b) $-25\ \mathrm{kPa}$
- c) $-50\ \mathrm{kPa}$
- d) None

10) One of the purposes of Soil exploration is _____.
- a) To understand the behaviour of the structure
- b) To estimate the load coming on the soil
- c) To find the quantity and quality of water
- d) To determine basic properties of soil

11) The angle of Shear Resistance $\Phi > 36^{o}$, then the type of failure in soil is _____.
- a) General Shear Failure
- b) Local Shear Failure
- c) Punching Shear Failure
- d) None

12) Load increments applied in 'Plate Load Test' is _____.
- a) 1/20 of the estimated ultimate bearing capacity
- b) 1/15 of the estimated ultimate bearing capacity
- c) 1/10 of the estimated ultimate bearing capacity
- d) 1/5 of the estimated ultimate bearing capacity

13) These types soils are those appear to be strong and stable in their natural state, but which rapidly consolidate under wetting, generating large and often unexpected settlements.
- a) Weak/Compressible soil
- b) Collapsible soil
- c) Corrosive Soil
- d) None

14) A strip footing of width $1\mathrm{m}$ is resting on a soft clay strata at depth of $1\mathrm{m}$. The angle of internal friction is zero, and cohesion is $20\ \mathrm{kN/m^2}$. The water table is at a great depth, the ultimate bearing capacity of soil according to Terzaghi's equation is _____.
- a) $120\ \mathrm{kN/m^2}$
- b) $114\ \mathrm{kN/m^2}$
- c) $57\ \mathrm{kN/m^2}$
- d) None

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Foundation Engineering (BTN01601)

Day & Date: Friday, 15-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory; answer any two from remaining question from Section - I.
2) Q.6 is compulsory; answer any two from remaining question from Section - II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

SECTION – I

Q.2 **a)** Distinguish between undisturbed and disturbed sample of soil. What are the tests Conducted on these samples in the laboratory. **04**

b) A sampling tube has inner diameter 70mm and that of cutting edge is equal to 68mm. Their outer diameters are 72mm and 74mm respectively. Determine the inside clearance, outside clearance and area ratio of the sampler. This tube is pushed at bottom of a bore hole to a distance of 550mm and length of sample covered is 80mm. Find the recovery ratio. **06**

Q.3 **a)** Explain the different modes of shear failure with the help of neat sketches. **04**

b) A circular footing is resting on a stiff saturated clay with $\text{c} = 125\ \text{kN/m}^2$. The depth of foundation is 1.8m. Determine the diameter of footing. Take safe load on footing as 800kN and factor of safety is 2.5. The bulk unit weight of soil is $20\ \text{kN/m}^3$. Take $\Phi = 0, \text{N}_\text{c} = 5.7, \text{N}_\text{q} = 1, \text{N}_\Upsilon = 0$. **05**

Q.4 **a)** Write a note on standard penetration test and its corrections. **05**

b) Determine the immediate settlement of a footing $3\text{m} \times 3\ \text{m}$ resting on a sandy soil with $\text{Es} = 45000\ \text{kN/m}^2$ and $\mu = 0.3$. Footing carries a load of $2000\ \text{kN}$. Assume $\text{Iw} = 0.82$. **04**

Q.5 **a)** Enlist ground improvement techniques. Explain any one in detail with its suitability. **05**

b) What is collapsible soil? What the precautions are of be taken before starting of construction in collapsible soil? **04**

SECTION – II

Q.6 **a)** Explain different types of shallow foundations with neat sketches. **05**

b) Explain Feld's rule and find group efficiency for 9 piles and 16 piles using this rule. **05**

Q.7 **a)** Mention the situations where pile foundation is necessary and explain the classification of piles based on their functions. **04**

b) In a 16 pile group, the pile diameter is $450\ \mathrm{mm}$ and $\mathrm{c/c}$ spacing of the square group is $1.5\ \mathrm{m}, \mathrm{c} = 50\ \mathrm{kN/m^2}$, determine whether the failure would occur with the pile acting individually or as group? Neglect bearing at tip of the pile. All piles are $10\ \mathrm{m}$ long. Take $\alpha = 0.7$ and $\mathrm{FOS} = 2.5$. Also find safe allowable load. **05**

Q.8 **a)** What are the types of slope failure? Explain with neat sketches. **05**

b) Draw a neat sketch of well foundation. Explain its various parts **04**

Q.9 **a)** Write a note on Taylor's Stability Charts. **04**

b) Calculate the factor of safety with respect to cohesion of clay, slope laid at 1 in 2 to a length of $11\mathrm{m}$. If the angle of internal friction $\Phi = 10^0$, Taylors stability number $0.064, \mathrm{c} = 20\mathrm{kN/m^2}$ and unit weight $19\mathrm{kN/m^3}$. Determine the critical height of slope in this soil. **05**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct Answer. 14

1) The 'useful storage' in a dam reservoir is the volume of water stored between _____.
a) Minimum and maximum reservoir level
b) Minimum and normal reservoir levels
c) Normal and maximum reservoir levels
d) None of the above

2) A hydel power project has been envisaged to serve the water supply and irrigation needs of the area at its inception stage. The dam reservoir, so constructed, will be known as _____.
a) Multiple reservoir b) Single purpose reservoir
c) Both (a) & (b) d) None of the above

3) The most economical type of arch dam in general is of _____.
a) constant radius type b) variable radius type
c) constant angle type d) None of these

4) Transverse joint in concrete gravity dams is the _____.
a) horizontal construction joints at each lift height
b) vertical construction joints full of height and width
c) diagonal construction joints for torsion
d) None of the above

5) The most preferred soil for the central impervious core of a zoned embankment type of an earthen dam is _____.
a) highly impervious clay b) highly previous gravel
c) coarse sand d) clay mixed with fine sand

6) A rock toe and a horizontal filter is provided on the downstream base of an earthen dam in order to _____.
a) prevent piping action in the dam body
b) prevents piping action in the dam foundation
c) to reduce the seepage quantity by blocking its flow
d) to collect and drain out the seepage flow

7) The effective length of an ogee spillway will be different from its actual length, in case of _____.
a) gated spillway
b) ungated spillway
c) both gated as well as ungated spillway
d) None of these

8) The value of Khosla's safe exit gradient for usually met alluvial river soils of our country, is _____.
a) 0 b) 1
c) ∞ d) 1/4 to 1/6

9) The safety of a hydraulic structure founded on previous foundation can be ensured _____.
a) by providing sufficient length of its concrete floor
b) by providing sufficient depth of its concrete floor
c) by providing a downstream cutoff of some reasonable depth
d) All of the above

10) The canal constructed to bypass the excess water entering a canal, is called a _____.
a) Canal module b) Canal siphon
c) Canal escape d) Canal regulator

11) Lining of irrigation channels _____.
a) increase water logging b) increase channel cross section
c) increase command area d) increase chances of breaching

12) Aggrading rivers are _____.
a) silting rivers b) scouring rivers
c) rivers in regime d) meandering rivers

13) The minimum power, which a hydro-power plant can generate throughout the year, is called _____.
a) power plant capacity b) power plant load
c) firm power d) water power

14) Pondage requirement in a hydropower plant includes the need _____.
a) to balance the varying demand
b) to compensate for wastage and spillage
c) to balance short time fluctuations in the flow
d) All of these

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.3 is compulsory; answer any two from remaining question from Section - I.
2) Q.9 is compulsory; answer any two from remaining question from Section - II.
3) Assume suitable data if necessary and state it clearly.
4) Figures to right indicates full marks.

Section – I

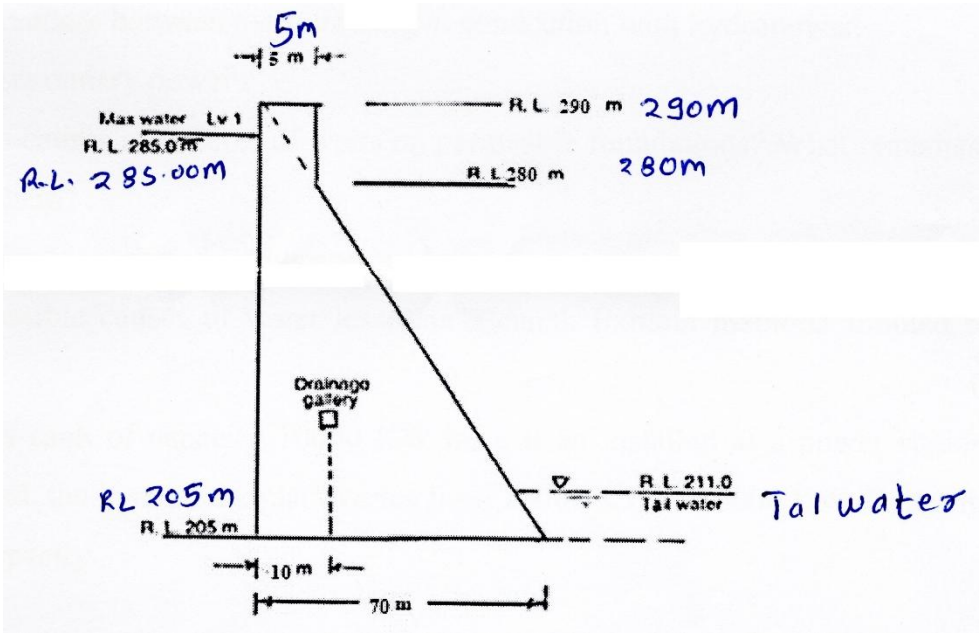
Q.2 **a)** Enlist the factors on which rate of silting of an impounding reservoir depends. Explain what is trap efficiency of a reservoir? **04**

b) Discuss the reservoir sedimentation phenomenon. What are the factors affecting reservoir sedimentation? **05**

Q.3 Figure shows the section of a gravity dam (non overflow portion) built of concrete. Calculate (neglecting earthquake effects), **10**

i) The maximum vertical stresses at toe and heel of the dam
ii) The major principal stresses at the toe of the dam

Assume unit weight of concrete = 25 kN/m^2. Allowable compressive stress in concrete = 2500 kN/m^2. Allowable shear stress in concrete = 420 kN/m^2. Assume that reservoir is full of water upto M.W.L.



Q.4 **a)** Draw a cross section of a 'Zoned Embankment type Earth Dam' and discuss the significance of each component. **05**

b) For a homogeneous earth dam 52 m high and 2 m free board, a flow net was constructed and following results were obtained. Number of potential drops = 30, Number of flow channels = 5. The dam has horizontal filter of 50 m length at its downstream end. Calculate the seepage discharge per meter length of the dam. Assume coefficient of permeability of the dam material as 3×10^{-3} cm/sec. **04**

Q.5 **a)** Determine the discharge over a Chute spillway with 'Ogee Crest' using the following data: Length of spillway is 250 m, Height of spillway crest in front of at upstream approach channels is 10 m. Width of approach channel is 250 m and depth of water over spillway crest is 5 m. (C/Cd =1) **04**

b) Explain elementary profile of a gravity dam. Also explain its dimensions and how the profile is modified into Practical Profile? **05**

Section – II

Q.6 **a)** State the fundamental difference between Khosla's theory and Bligh's creep theory for seepage below a weir. **04**

b) Explain high, low and medium river training works. **05**

Q.7 **a)** Explain with neat sketches the different types of 'spurs' which are commonly used for controlling and training Indian rivers. **05**

b) Define and differentiate between the following in connection with hydropower. **04**

- Firm power and secondary power

Q.8 **a)** Enlist main causes of failures of weirs on permeable foundations. What remedies would you suggest to prevent them? **05**

b) Write short notes on watershed canals and contour canals. **04**

Q.9 **a)** Enlist possible causes of water losses in a canal. Explain methods adopted for reducing such losses. **05**

b) Three generators each of capacity 10000 KW have been installed at a power station. During a certain period of load, the load on the plant varies from 15000 KW to 30000 KW. Determine: **05**

i) Total installed capacity
ii) Load factor
iii) Plant factor
iv) Utilization factor

Width of approach channel is 250 m and depth of water over spillway crest is 5 m. (C/Cd =1) **04**

b) Explain elementary profile of a gravity dam. Also explain its dimensions and how the profile is modified into Practical Profile? **05**

Section – II

Q.6 **a)** State the fundamental difference between Khosla's theory and Bligh's creep theory for seepage below a weir. **04**

b) Explain high, low and medium river training works. **05**

Q.7 **a)** Explain with neat sketches the different types of 'spurs' which are commonly used for controlling and training Indian rivers. **05**

b) Define and differentiate between the following in connection with hydropower. **04**

- Firm power and secondary power

Q.8 **a)** Enlist main causes of failures of weirs on permeable foundations. What remedies would you suggest to prevent them? **05**

b) Write short notes on watershed canals and contour canals. **04**

Q.9 **a)** Enlist possible causes of water losses in a canal. Explain methods adopted for reducing such losses. **05**

b) Three generators each of capacity 10000 KW have been installed at a power station. During a certain period of load, the load on the plant varies from 15000 KW to 30000 KW. Determine: **05**

i) Total installed capacity
ii) Load factor
iii) Plant factor
iv) Utilization factor

Examination: March/April – 2026
Hydraulic Structures & Water Power Engineering (BTN01602)

Day & Date: Monday, 18-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) A rock toe and a horizontal filter is provided on the downstream base of an earthen dam in order to _____.
a) prevent piping action in the dam body
b) prevents piping action in the dam foundation
c) to reduce the seepage quantity by blocking its flow
d) to collect and drain out the seepage flow

2) The effective length of an ogee spillway will be different from its actual length, in case of _____.
a) gated spillway
b) ungated spillway
c) both gated as well as ungated spillway
d) None of these

3) The value of Khosla's safe exit gradient for usually met alluvial river soils of our country, is _____.
a) 0 b) 1
c) ∞ d) 1/4 to 1/6

4) The safety of a hydraulic structure founded on previous foundation can be ensured _____.
a) by providing sufficient length of its concrete floor
b) by providing sufficient depth of its concrete floor
c) by providing a downstream cutoff of some reasonable depth
d) All of the above

5) The canal constructed to bypass the excess water entering a canal, is called a _____.
a) Canal module b) Canal siphon
c) Canal escape d) Canal regulator

6) Lining of irrigation channels _____.
a) increase water logging b) increase channel cross section
c) increase command area d) increase chances of breaching

7) Aggrading rivers are _____.
a) silting rivers b) scouring rivers
c) rivers in regime d) meandering rivers

8) The minimum power, which a hydro-power plant can generate throughout the year, is called _____.
a) power plant capacity b) power plant load
c) firm power d) water power

9) Pondage requirement in a hydropower plant includes the need _____.
a) to balance the varying demand
b) to compensate for wastage and spillage
c) to balance short time fluctuations in the flow
d) All of these

10) The 'useful storage' in a dam reservoir is the volume of water stored between _____.
a) Minimum and maximum reservoir level
b) Minimum and normal reservoir levels
c) Normal and maximum reservoir levels
d) None of the above

11) A hydel power project has been envisaged to serve the water supply and irrigation needs of the area at its inception stage. The dam reservoir, so constructed, will be known as _____.
a) Multiple reservoir b) Single purpose reservoir
c) Both (a) & (b) d) None of the above

12) The most economical type of arch dam in general is of _____.
a) constant radius type b) variable radius type
c) constant angle type d) None of these

13) Transverse joint in concrete gravity dams is the _____.
a) horizontal construction joints at each lift height
b) vertical construction joints full of height and width
c) diagonal construction joints for torsion
d) None of the above

14) The most preferred soil for the central impervious core of a zoned embankment type of an earthen dam is _____.
a) highly impervious clay b) highly previous gravel
c) coarse sand d) clay mixed with fine sand

Seat No.		Set	S

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Hydraulic Structures & Water Power Engineering (BTN01602)

Day & Date: Monday, 18-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.3 is compulsory; answer any two from remaining question from Section - I.
2) Q.9 is compulsory; answer any two from remaining question from Section - II.
3) Assume suitable data if necessary and state it clearly.
4) Figures to right indicates full marks.

Section – I

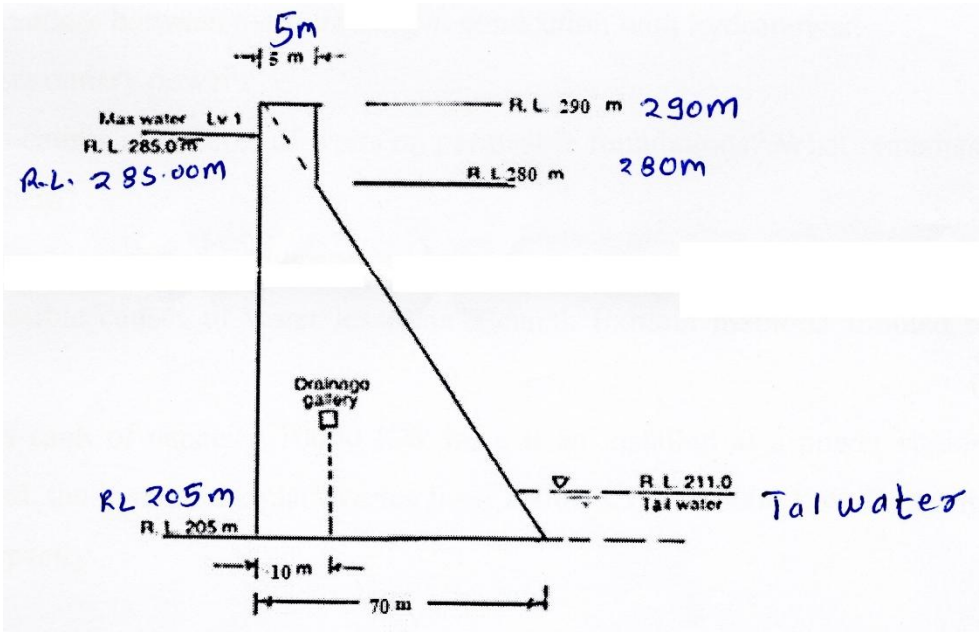
Q.2 **a)** Enlist the factors on which rate of silting of an impounding reservoir depends. Explain what is trap efficiency of a reservoir? **04**

b) Discuss the reservoir sedimentation phenomenon. What are the factors affecting reservoir sedimentation? **05**

Q.3 Figure shows the section of a gravity dam (non overflow portion) built of concrete. Calculate (neglecting earthquake effects), **10**

i) The maximum vertical stresses at toe and heel of the dam
ii) The major principal stresses at the toe of the dam

Assume unit weight of concrete = 25 kN/m^2. Allowable compressive stress in concrete = 2500 kN/m^2. Allowable shear stress in concrete = 420 kN/m^2. Assume that reservoir is full of water upto M.W.L.



Q.4 **a)** Draw a cross section of a 'Zoned Embankment type Earth Dam' and discuss the significance of each component. **05**

b) For a homogeneous earth dam 52 m high and 2 m free board, a flow net was constructed and following results were obtained. Number of potential drops = 30, Number of flow channels = 5. The dam has horizontal filter of 50 m length at its downstream end. Calculate the seepage discharge per meter length of the dam. Assume coefficient of permeability of the dam material as 3×10^{-3} cm/sec. **04**

Q.5 **a)** Determine the discharge over a Chute spillway with 'Ogee Crest' using the following data: Length of spillway is 250 m, Height of spillway crest in front of at upstream approach channels is 10 m. Width of approach channel is 250 m and depth of water over spillway crest is 5 m. (C/Cd =1) **04**

b) Explain elementary profile of a gravity dam. Also explain its dimensions and how the profile is modified into Practical Profile? **05**

Section – II

Q.6 **a)** State the fundamental difference between Khosla's theory and Bligh's creep theory for seepage below a weir. **04**

b) Explain high, low and medium river training works. **05**

Q.7 **a)** Explain with neat sketches the different types of 'spurs' which are commonly used for controlling and training Indian rivers. **05**

b) Define and differentiate between the following in connection with hydropower. **04**

- Firm power and secondary power

Q.8 **a)** Enlist main causes of failures of weirs on permeable foundations. What remedies would you suggest to prevent them? **05**

b) Write short notes on watershed canals and contour canals. **04**

Q.9 **a)** Enlist possible causes of water losses in a canal. Explain methods adopted for reducing such losses. **05**

b) Three generators each of capacity 10000 KW have been installed at a power station. During a certain period of load, the load on the plant varies from 15000 KW to 30000 KW. Determine: **05**

i) Total installed capacity

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. 14

1) The frequency of a system in damped vibration is _____.
a) Always less than the natural frequency
b) Always more than the natural frequency
c) Equal to the natural frequency
d) Zero

2) Resonance occurs when the frequency of the exciting force is _____.
a) Equal to the natural frequency
b) Half the natural frequency
c) Double the natural frequency
d) Zero

3) The Damping Ratio (ζ) is given by _____.
a) c/cc b) cc/c
c) k/m d) m/k

4) The unit of stiffness (k) in the M-K-S system is _____.
a) N/m b) N-m
c) N/s d) N-s/m

5) Damping in a system is a mechanism primarily for _____.
a) Storing energy b) Dissipating energy
c) Increasing frequency d) Increasing amplitude

6) An impulsive force is characterized by a _____.
a) Long duration and small magnitude
b) Long duration and large magnitude
c) Short duration and large magnitude
d) Short duration and small magnitude

7) Duhamel's integral is used to find the response of a system subjected to _____.
a) Harmonic loading only
b) Free vibration only
c) General, arbitrary dynamic loading
d) Static loading

8) The number of independent coordinates required to define the configuration of a system is known as _____.
a) Mode Shapes
b) Degrees of Freedom (DOF)
c) Natural Frequencies
d) Stiffness

9) A system that vibrates without any external exciting force is said to be in _____.
a) Forced vibration
b) Damped vibration
c) Free vibration
d) Resonance

10) The Logarithmic Decrement (δ) is used to measure _____.
a) Stiffness
b) Damping
c) Mass
d) Natural Frequency

11) The Orthogonality principle states that the mode shapes are orthogonal with respect to the _____.
a) Mass matrix only
b) Stiffness matrix only
c) Both mass and stiffness matrices
d) Damping matrix only

12) Rayleigh's method is used to determine an approximate value of the _____.
a) Fundamental natural frequency
b) Second natural frequency
c) Damping ratio
d) Forced response

13) For an underdamped system, the damping ratio (ζ) is _____.
a) $\zeta = 1$
b) $\zeta > 1$
c) $\zeta < 1$
d) $\zeta = 0$

14) A cantilever beam vibrating in flexure is an example of a _____.
a) Single-Degree-of-Freedom system
b) Two-Degree-of-Freedom system
c) Distributed Parameter system
d) Rigid body

Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data if required.

Section – I

Q.2 Attempt the following. (Any Two) **14**

a) A single-degree-of-freedom system consists of a mass of 20 kg, a spring of stiffness 35 kN/m, and a dashpot with a damping coefficient of 150 N-s/m. Find:
i) Damping ratio (ζ)
ii) Natural frequency (ω_n)
iii) Damped natural frequency (ω_d)
iv) State whether the system is underdamped, critically damped, or overdamped.

b) Derive the equation of motion for an undamped SDOF system subjected to a harmonic load $F(t) = F_0 \sin(\omega t)$. Find the complete solution (transient and steady-state) and discuss the condition of resonance.

c) Define Damping. Explain in detail any two types of damping (e.g., Viscous Damping, Coulomb/Dry-Friction Damping) with their characteristics.

Q.3 Attempt the following. (Any Two) **14**

a) Define Transmissibility Ratio (TR). Derive the expression for motion transmissibility (TR) for a damped SDOF system subjected to support motion $y(t) = Y_0 \sin(\omega t)$. Plot the TR vs. frequency ratio (r) for various damping ratios (ζ).

b) What is a periodic load? Explain how Fourier series can be used to represent a general periodic load and how the response of an SDOF system to such a load is determined.

c) Derive the Duhamel's Integral (convolution integral) for the response of an SDOF system to a general dynamic loading $\$p(t)\$$.

Section – II

Q.4 Attempt the following. (Any Two) **14**

a) For the two-storey shear building shown, formulate the mass matrix [M] and stiffness matrix [K]. Determine the natural frequencies and corresponding mode shapes. Assume $m_1=m_2=m$ and $k_1=k_2=k$.

b) State and prove the Orthogonality Principle for the mode shapes of an MDOF system. What is the significance of this principle in structural dynamics?

c) Explain the procedure of Static Condensation. Why is it used in the dynamic analysis of MDOF systems?

Q.5 Attempt the following. (Any Two) **14**

a) Explain the Mode Superposition Method for finding the dynamic response of an MDOF system. How does it simplify the analysis compared to solving the coupled equations directly? (Numerical solution not required).

b) Derive the partial differential equation (PDE) governing the free flexural (transverse) vibrations of a uniform beam. State the assumptions made.

c) Explain the following methods for finding the fundamental natural frequency of a discrete system:

i) Rayleigh's Method

ii) Dunkerly's Method

6) The Orthogonality principle states that the mode shapes are orthogonal with respect to the _____.
   a) Mass matrix only
   b) Stiffness matrix only
   c) Both mass and stiffness matrices
   d) Damping matrix only

7) Rayleigh's method is used to determine an approximate value of the _____.
   a) Fundamental natural frequency
   b) Second natural frequency
   c) Damping ratio
   d) Forced response

8) For an underdamped system, the damping ratio (ζ) is _____.
   a) $\zeta = 1$ b) $\zeta > 1$
   c) $\zeta < 1$ d) $\zeta = 0$

9) A cantilever beam vibrating in flexure is an example of a _____.
   a) Single-Degree-of-Freedom system
   b) Two-Degree-of-Freedom system
   c) Distributed Parameter system
   d) Rigid body

10) The frequency of a system in damped vibration is _____.
   a) Always less than the natural frequency
   b) Always more than the natural frequency
   c) Equal to the natural frequency
   d) Zero

11) Resonance occurs when the frequency of the exciting force is _____.
   a) Equal to the natural frequency
   b) Half the natural frequency
   c) Double the natural frequency
   d) Zero

12) The Damping Ratio (ζ) is given by _____.
   a) c/cc b) cc/c
   c) k/m d) m/k

13) The unit of stiffness (k) in the M-K-S system is _____.
   a) N/m b) N-m
   c) N/s d) N-s/m

14) Damping in a system is a mechanism primarily for _____.
   a) Storing energy b) Dissipating energy
   c) Increasing frequency d) Increasing amplitude

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Structural Dynamics (BTN01609)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data if required.

Section – I

Q.2 Attempt the following. (Any Two) **14**

a) A single-degree-of-freedom system consists of a mass of 20 kg, a spring of stiffness 35 kN/m, and a dashpot with a damping coefficient of 150 N-s/m. Find:
i) Damping ratio (ζ)
ii) Natural frequency (ω_n)
iii) Damped natural frequency (ω_d)
iv) State whether the system is underdamped, critically damped, or overdamped.

b) Derive the equation of motion for an undamped SDOF system subjected to a harmonic load $F(t) = F_0 \sin(\omega t)$. Find the complete solution (transient and steady-state) and discuss the condition of resonance.

c) Define Damping. Explain in detail any two types of damping (e.g., Viscous Damping, Coulomb/Dry-Friction Damping) with their characteristics.

Q.3 Attempt the following. (Any Two) **14**

a) Define Transmissibility Ratio (TR). Derive the expression for motion transmissibility (TR) for a damped SDOF system subjected to support motion $y(t) = Y_0 \sin(\omega t)$. Plot the TR vs. frequency ratio (r) for various damping ratios (ζ).

b) What is a periodic load? Explain how Fourier series can be used to represent a general periodic load and how the response of an SDOF system to such a load is determined.

c) Derive the Duhamel's Integral (convolution integral) for the response of an SDOF system to a general dynamic loading $\$p(t)\$$.

Section – II

Q.4 Attempt the following. (Any Two) **14**

a) For the two-storey shear building shown, formulate the mass matrix [M] and stiffness matrix [K]. Determine the natural frequencies and corresponding mode shapes. Assume $m_1=m_2=m$ and $k_1=k_2=k$.

b) State and prove the Orthogonality Principle for the mode shapes of an MDOF system. What is the significance of this principle in structural dynamics?

c) Explain the procedure of Static Condensation. Why is it used in the dynamic analysis of MDOF systems?

Q.5 Attempt the following. (Any Two) **14**

a) Explain the Mode Superposition Method for finding the dynamic response of an MDOF system. How does it simplify the analysis compared to solving the coupled equations directly? (Numerical solution not required).

b) Derive the partial differential equation (PDE) governing the free flexural (transverse) vibrations of a uniform beam. State the assumptions made.

c) Explain the following methods for finding the fundamental natural frequency of a discrete system:

i) Rayleigh's Method

ii) Dunkerly's Method

Design of Bridges (BTN01610)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options and rewrite the sentence. **14**

1) Total load of class AA wheeled is _____.
a) 700kN b) 400kN
c) 554kN d) 332kN

2) Braking force is assumed to act along the line parallel to roadway & _____ above it.
a) 1.2m b) 1.5m
c) 1.8m d) 2.0m

3) The ground contact length of the track of IRC class AA loading is _____.
a) 3.6m b) 4.57m
c) 3.5m d) None of these

4) For small bridges, with open foundations, the economical span is approximately equal to _____ times height of Pier.
a) 2.0 b) 1.2
c) 1.0 d) 1.5

5) _____ is the minimum grade of concrete for prestressed concrete bridges.
a) M-30 b) M-20
c) M-40 d) M-25

6) The minimum width of carriage way for a single lane bridge is _____.
a) 4.25m b) 6m
c) 10m d) 7.5m

7) For spans greater than 9m, impact factor for Tracked vehicle is _____.
a) 10% b) 20%
c) 25% d) 15%

8) Guideline for the design of bridge foundation are available in IRC bridge code section _____.
a) I b) III
c) V d) VII

9) Span is called as economical span when _____.
a) Cost of substructure should be equal to cost of superstructure
b) Cost of substructure should be greater than Cost of superstructure
c) Cost of substructure should be less than Cost of superstructure
d) Does not depend on cost

10) Simply supported span requires _____.
a) Fixed bearing at both ends
b) Expansion bearing at both ends
c) Fixed bearing at one end and expansion bearing at the other
d) Either a or b, both are correct

11) Continuous girder requires _____.
a) Fixed bearing on all supports
b) Expansion bearing on all supports
c) Expansion bearing on all support except at one
d) Fixed bearing on all support except at one

12) The pier cap or abutment cap should be of minimum _____concrete.
a) M20 grade b) M25 grade
c) M30 grade d) None one of these

13) Solid deck slab is adopted for spans _____.
a) more than 8 m b) more than 20 m
c) less than 8 m d) between 10-25 m

14) Following is not type of Expansion bearing _____.
a) Sliding plate beam b) Steel roller-cum-rocker bearing
c) Elastomeric bearing d) Rocker bearing

2) Question No. 6 is compulsory in section II, and solve any two questions from the remaining
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Design a solid deck slab for Two lane bridge with following data: **10**
a) Effective span – 5 m
b) Carriage way width – 7.5 m
c) Kerb – 600 × 275 on both side
d) Live load – IRC Class AA tracked
e) Wearing coat – 100 mm thick
f) Use M-25 concrete and Fe- 415 steel
g) Use $\alpha = 2.64$

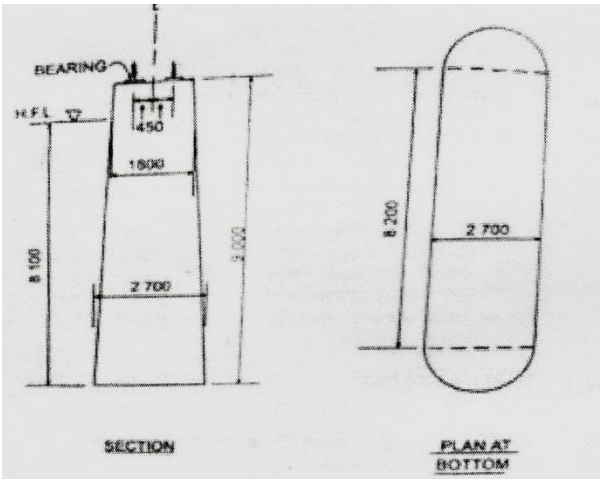
Q.3 Answer the following.
a) What are the investigations need to be carried out for bridge across a river? **05**
b) Give the detail classification of Bridges. **04**

Q.4 A RCC 'T' beam type bridge having deck slab of 200 mm thick, wearing coat of 100 mm thick, four longitudinal girders and five cross girders. Design the exterior longitudinal girder. **09**
Use following additional data:
a) Carriage way width –10 m
b) Span of bridge – 16 m
c) Live Load – IRC class AA Tracked
d) Kerb – 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder – 300 mm
f) Longitudinal Girder spacing – 300 mm
g) Use M-25 concrete and Fe-415 steel

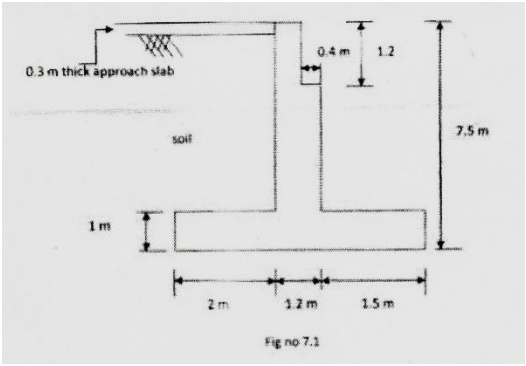
Q.5 Answer the following.
a) Write a note on components of bridges. **05**
b) Describe the effective width method of analysis of deck slab. **04**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Superstructure: 21.3 span
Reaction due to live load on the one span – 900 KN
Maximum mean velocity of current – 3.6 m/sec
Material for pier: M20 grade concrete
Live load: IRC Class AA Tracked



Q.7 Verify the suitability of abutment as shown in the fig 7.1. **09**
Use following data:
Density of soil – 18 kN/m^3,
Friction angle of soil $(\emptyset) = 30°$
Coefficient of friction – 0.5,
Live load reaction at bearing – 500 kN,
DL reaction from super structure – 2200 kN



Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data. **05**
Vertical load (sustained) = 200 KN
Vertical load (dynamic) = 40 KN
Horizontal force (H) = 60 KN
Modulus of rigidity of elastomer (G) = 1 N/mm^2
Friction coefficient = 0.3

b) Write a note on expansion joints. **04**

Q.9 Write a note on following. (Any Three) **09**

a) Cantilever method of construction

b) Erection methods for Bridges

c) Types of bridge inspection

d) Functions of bearing

g) Use $\alpha = 2.64$

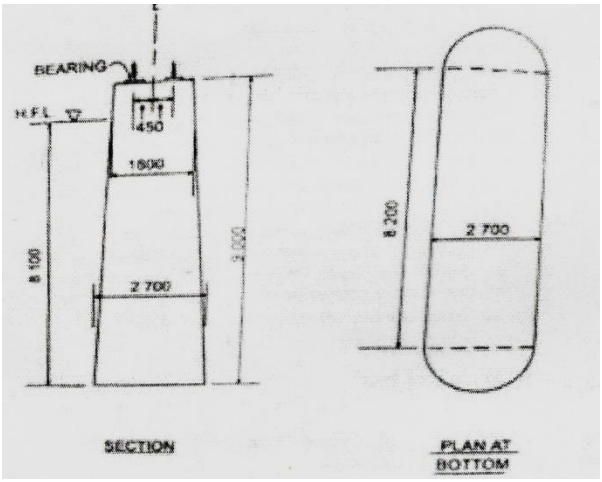
Q.3 Answer the following.
a) What are the investigations need to be carried out for bridge across a river? **05**
b) Give the detail classification of Bridges. **04**

Q.4 A RCC 'T' beam type bridge having deck slab of 200 mm thick, wearing coat of 100 mm thick, four longitudinal girders and five cross girders. Design the exterior longitudinal girder. **09**
Use following additional data:
a) Carriage way width –10 m
b) Span of bridge – 16 m
c) Live Load – IRC class AA Tracked
d) Kerb – 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder – 300 mm
f) Longitudinal Girder spacing – 300 mm
g) Use M-25 concrete and Fe-415 steel

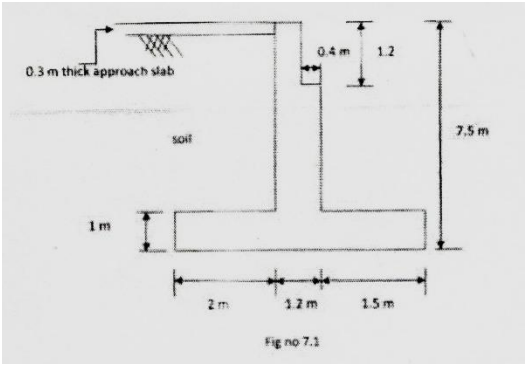
Q.5 Answer the following.
a) Write a note on components of bridges. **05**
b) Describe the effective width method of analysis of deck slab. **04**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Superstructure: 21.3 span
Reaction due to live load on the one span – 900 KN
Maximum mean velocity of current – 3.6 m/sec
Material for pier: M20 grade concrete
Live load: IRC Class AA Tracked



Q.7 Verify the suitability of abutment as shown in the fig 7.1. **09**
Use following data:
Density of soil – 18 kN/m^3,
Friction angle of soil $(\emptyset) = 30°$
Coefficient of friction – 0.5,
Live load reaction at bearing – 500 kN,
DL reaction from super structure – 2200 kN



Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data. **05**
Vertical load (sustained) = 200 KN
Vertical load (dynamic) = 40 KN
Horizontal force (H) = 60 KN
Modulus of rigidity of elastomer (G) = 1 N/mm^2
Friction coefficient = 0.3

b) Write a note on expansion joints. **04**

Q.9 Write a note on following. (Any Three) **09**

a) Cantilever method of construction

b) Erection methods for Bridges

c) Types of bridge inspection

d) Functions of bearing

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Advanced Concrete Technology (BTN01616)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) Which of the following materials is commonly used as an additive in blended cement?
a) Silica fume b) Coal
c) Gypsum d) Bentonite

2) Which of the following factors can increase the rate of hydration in cement?
a) Lower temperature
b) Higher water-cement ratio
c) Presence of pozzolanic materials
d) Higher temperature

3) Which of the following is a common issue when using crushed sand in concrete?
a) Higher water demand b) Improved workability
c) Reduced water absorption d) Lower strength

4) Mass concrete is defined as concrete with a large volume, typically used in _____.
a) Thin structural elements like beams and slabs
b) Large structural elements like dams and foundations
c) Decorative concrete elements
d) High-rise building facades

5) Which of the following is NOT an advantage of sprayed concrete?
a) Ability to apply to complex shapes
b) Faster application than traditional casting
c) Lower cost of materials
d) Can be applied in thin layers with high strength

6) The primary types of sprayed concrete are _____.
a) Wet mix and dry mix
b) Low strength and high strength
c) Cement-based and polymer-based
d) Precast and cast-in-situ

7) What is a key characteristic of ferro-cement construction?
a) It uses large structural steel beams
b) It has low material strength compared to conventional concrete
c) It involves dense layers of wire mesh and small steel bars for reinforcement
d) It is only used for decorative purposes

8) Which type of pump is typically used for pumping concrete?
a) Hydraulic piston pump
b) Centrifugal pump
c) Gear pump
d) Concrete pump with twin cylinders or a peristaltic pump

9) The main ingredient that is often added to High-Strength Concrete (HSC) to reduce its water-cement ratio is _____.
a) Super plasticizer b) Fly ash
c) Silica fume d) Air-entraining agent

10) What is the primary advantage of using steel fibers in concrete?
a) Improved ductility and control of cracking
b) Lower cost of concrete
c) Reduced workability
d) Increased permeability

11) Self-Compacting Concrete (SCC) is characterized by _____.
a) High strength and low workability
b) High workability and ability to flow without vibration
c) Low water-cement ratio
d) Reduced permeability due to excess water

12) One of the main challenges of using Recycled Concrete Aggregate (RCA) in new concrete is _____.
a) Increased workability
b) Increased porosity and reduced strength
c) Improved durability
d) Decreased water absorption

13) In which type of construction is mass concrete primarily used?

a) Pavements
b) Skyscrapers
c) Dams, foundations, and other large structures
d) Road curbs

14) The hydration of cement is primarily a _____.

a) Physical process
b) Chemical process
c) Biological process
d) Physical and biological process

Examination: March/April – 2026
Advanced Concrete Technology (BTN01616)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In section- I Q. No. 2 is compulsory and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) In section- II Q. No. 6 is compulsory and solve any two questions from the remaining (Q. No. 7, 8, & 9)
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

SECTION – I

Q.2 Solve Any Two. **08**

a) Explain briefly heat of hydration process occurred in the cement.

b) Write a note bogues compound of cement.

c) Explain in detail blended cement.

Q.3 Solve Any Two question. **10**

a) Explain the effect using admixture in the concrete.

b) Compare the effects of pulverized fuel ash, ground granulated blast furnace slag, and silica fume on the following properties, of concrete:
i) Workability
ii) Durability
iii) Strength development

c) Explain admixture, super plasticizer, plasticizers, accelerator and retarder.

Q.4 Solve Any Two question. **10**

a) How does particle size of aggregates influence the properties of concrete?

b) Write a short note on placing and compaction of concrete.

c) Explain the effect of impermeability and particle size on concrete.

Q.5 Solve Any One question. **10**

a) Solve any Two.
i) What are the key benefits of using high-performance concrete in construction?
ii) What is the effect of using lightweight aggregates on the compressive strength and workability of concrete?
iii) Compare the advantages of high-performance concrete and fiber-reinforced concrete

b) Solve any Two.

i) What are the primary factors that influence the curing process of high-strength concrete?

ii) How does the addition of fibers to concrete influence its compressive strength?

iii) Compare and contrast the properties, advantages, and limitations of high-performance concrete and high-strength concrete.

SECTION - II

Q.6 Solve Any Two question. **08**

a) Short note on Sprayed Concrete.

b) Short note on Sustainable Concrete.

c) Define ferro-cement concrete. What materials are typically used in its production?

Q.7 Solve Any Two question. **10**

a) What are the common methods of transporting RMC from the plant to the construction site?

b) Short note on Ready Mix Concrete and its applications to the construction industries.

c) What is ready mix concrete? Explain the working of RMC plant in detail.

Q.8 Solve Any Two question. **10**

a) What measures should be taken to ensure the quality of concrete at a construction site?

b) What are the causes for deterioration & distress in structures? Describe each cause.

c) Why and when NDT Test are performed, explain with its application.

Q.9 Solve Any One question. **10**

a) What are the main advantages of using roller compacted concrete over conventional concrete in construction?

b) What is mix design? Write down design steps of concrete mix design using IS 10262:2009 methods.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Specific force represents the sum of pressure force and _____.
a) Datum head
b) Momentum flux per unit weight
c) Momentum flux and datum head
d) None

2) The ratio of inertia force and gravitational force is called as _____.
a) Reynolds number b) Stokes number
c) Froude's number d) Euler's number

3) Hydraulic jump is an example of _____.
a) Gradually varied flow b) Rapidly varied flow
c) Spatially varied flow d) None

4) Extreme condition of meanders is called as _____.
a) Leave b) Spurs
c) Cut-off d) Island

5) River gauge is used to measure _____.
a) Still level b) Water level
c) Turbulence d) Current

6) The dimension of kinematic viscosity is _____.
a) $L^{-1}T^{-1}$ b) $L^{2}T^{-1}$
c) $L^{-3}T^{-3}$ d) $L^{-2}T^{-3}$

7) Shield's diagram is a plot of non-dimensional shear stress (τC) against _____.

a) Relative depth
b) Shear Reynold's number
c) Hydraulic radius
d) Reynold's number

8) The flow in open channel may be characterized as turbulant when _____.

a) Re<500
b) Re>2000
c) Re>4000
d) 500<Re>2000

9) For the trapezoidal section _____.

a) Shape is of half hexagon
b) Depth of flow equal to half bed width
c) Side slope equal to 45°
d) None

10) The momentum correction factor, is given as _____.

a) $1/V^2A\int V^3 \cdot dA$
b) $1/VA\int V \cdot dA$
c) $1/V^3A\int V^2 \cdot dA$
d) $1/V^2A\int V^2 \cdot dA$

11) Hydraulic model and corresponding prototype should have _____.

a) Geometric similitude
b) Kinematic similitude
c) Dynamic similitude
d) All the above

12) If the Froude's number is 2.4 then the jump is known as _____.

a) Steady
b) Oscillating
c) Undular
d) Weak

13) The maximum velocity in open channel occurs at _____.

a) At the free surface
b) Near the channel bottom
c) Little below the free surface
d) None

14) Whose theory was the first to provide semi-theoretical analysis of the problem of incipient condition of bed motion?

a) Lacey's theory
b) Kennedy's theory
c) Shield's theory
d) Strickler's equation

Set **P**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Open Channel Flow & River Hydraulics (BTN01617)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Attempt the following. (Any Four) **16**

a) Derive an expression for the depth of flow after the jump in a rectangular channel in terms of the depth before the jump.

b) Define Hydraulic jump and classify it on the basis of Froude's number.

c) A 3.2 m wide rectangular channel conveys 14 m^3/s of water with velocity 5.0 m/s. State if there is formation of hydraulic jump. If yes, calculate height, length and strength of Jump and what is loss of energy per kg of water.

d) Find the rate of and conveyance for a rectangular channel 7.4 m wide for uniform flow at depth of 3.0 m. The channel is having bed slope as 1/1000. Take n=0.015.

e) What do you understand by most economical channel section? Derive most economical rectangular channel section.

Q.3 Attempt the following. (Any Two) **12**

a) A discharge of 800 m^3/s flows down a spillway and then passes on a 55 m wide concrete apron (n=0.012). The velocity of water at the toe of spillway is 10 m/s. A tail water depth of 4.40 m causes a hydraulic jump.
Determine:
i) Depth before the jump
ii) Length of jump
iii) Energy loss in jump
iv) Specific force at the toe

b) Show that for a most economical trapezoidal section: Half of top width = Length of one of sloping side, and hydraulic mean depth = half the depth of flow.

c) Derive the equation for loss of energy through a Hydraulic Jump.

SECTION – II

Q.4 Attempt the following. (Any Four) **16**

a) Derive ‘Reynold’s model law’ and state giving examples where it can be used.

b) A model of water meter is tested in 90 mm diameter pipe. The discharge was 50 lit/sec and pressure difference is 0.10 N/mm^2. What will be the discharge in pipe of 500 mm diameter pipe and what will be the pressure.

c) Differentiate between Kennedy's theory and Lacey's theory for channel design.

d) Write short notes on
i) Levee
ii) Guide banks

e) Draw a neat sketch of current meter and explain its working in details.

Q.5 Attempt the following. (Any Two) **12**

a) Write the objectives of river training work in detail.

b) Design a channel section by using 'Kennedy's Theory' from following data:
i) discharge = 28 cumecs
ii) Kutter's (N = 0.0024)
iii) m = 1, side slope 0.5:1, B/D = 7.6. Also find Bed slope.

c) A spillway 7.0 m high and 150 m long discharges 2100 m3/sec, under a head of 4.0 m. If 1:16 model of spill way is to be constructed, find the dimensions of model, head over the model and discharge through the model.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answers from the given options. 14

1) Importment aspect in the implementation of sanitary landfill includes _____.
a) site selection
b) land filling methods
c) movement & control of land fill gases & leachate
d) All the above

2) Household hazardous waste include batteries & _____.
a) Radioactive waste b) Food waste
c) Leachate d) Nail polish

3) What is recovered in magnetic separation?
a) Ferrous material b) Non-ferrous material
c) Heat d) None

4) Indore method of composting is _____.
a) aerobic method b) anaerobic method
c) both a) and b) d) none

5) Hazardous biomedical wastes are generated in _____.
a) Hospitals
b) Biological research facilities
c) Industrial biological conversion process
d) All of above

6) The final functional element in solid waste management system is _____.
a) transfer & transportation b) collection
c) processing & recovery d) disposal

7) Problem of solid waste disposal can be reduced through _____.
a) Recycling b) lesser pollution
c) Population control d) None of above

8) The aerobic method of mechanical composting as practiced in India is called _____.
a) Bangalore method b) Nagpur method
c) Bhopal method d) Indore method

9) Bio-medical waste consists of _____.
a) Solid waste b) Liquid waste
c) Both a) & b) d) None

10) The Pyrolysis process of SWM _____ in nature.
a) Endothermic b) Exothermic
c) Heterothermic d) None of the above

11) MRF's term in SWM is used for _____.
a) Major relief funds b) Material Recovery Facilities
c) Minimum Raw Food d) None of the above

12) Recovery of energy in the form of heat is obtained from _____.
a) combustion process b) sanitary land filling
c) anaerobic process d) none of these

13) The average per capita generation of MSW in Indian cities _____.
a) 0.4-0.6 kg/day b) 1-2 kg/day
c) 2-3 kg/day d) 0.8-1.5 kg/day

14) Composting process is affected due to _____.
a) Temperature b) Moisture content
c) C/N ratio d) All the above

Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining
3) Figures to the right indicates full marks.

SECTION – I

Q.2 **a)** Estimate the moisture content of solid waste sample of 100 kg using the following data. **06**

Sr. No.	Component	% by Mass	% by M.C.
1	Food waste	16	65
2	Paper	36	08
3	Cardboards	05	05
4	Plastic	10	02
5	Grass	12	55
6	Wood	08	04
7	Metals	13	03

b) Explain hauled container and stationary container method for collection for solid waste with sketch. **04**

Q.3 **a)** Explain with flow diagram functional outline of the refuse. **05**

b) Illustrate the Economic aspect of refuse collection and transport. **04**

Q.4 **a)** Discuss the concept of bio-medical and hazardous waste management. **05**

b) Explain Windrows method of composting. **04**

Q.5 **a)** Explain Indore method and Bangalore method. **05**

b) Enumerate the factors affecting composting process. **04**

SECTION – II

Q.6	**a)**	Define hazardous waste? State and Explain characteristic of hazardous waste.	**06**
	b)	Explain in detail Natural and man-made hazard.	**04**
Q.7	**a)**	Explain with sketch components of land fill.	**04**
	b)	Explain site selection criteria for site selection of the engineered land fill.	**05**
Q.8	**a)**	Discuss the procedure of Leachate control.	**04**
	b)	What are the different factors affecting site selection of hazardous waste.	**05**
Q.9	**a)**	Explain in brief how you will minimize the damage due to natural hazard.	**04**
	b)	Explain “status of solid waste management in India”.	**05**

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Solid and Hazardous Waste Management (BTN01618)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answers from the given options. 14

1) The aerobic method of mechanical composting as practiced in India is called _____.
a) Bangalore method b) Nagpur method
c) Bhopal method d) Indore method

2) Bio-medical waste consists of _____.
a) Solid waste b) Liquid waste
c) Both a) & b) d) None

3) The Pyrolysis process of SWM _____ in nature.
a) Endothermic b) Exothermic
c) Heterothermic d) None of the above

4) MRF's term in SWM is used for _____.
a) Major relief funds b) Material Recovery Facilities
c) Minimum Raw Food d) None of the above

5) Recovery of energy in the form of heat is obtained from _____.
a) combustion process b) sanitary land filling
c) anaerobic process d) none of these

6) The average per capita generation of MSW in Indian cities _____.
a) 0.4-0.6 kg/day b) 1-2 kg/day
c) 2-3 kg/day d) 0.8-1.5 kg/day

7) Composting process is affected due to _____.
a) Temperature b) Moisture content
c) C/N ratio d) All the above

8) Importment aspect in the implementation of sanitary landfill includes _____.
   a) site selection
   b) land filling methods
   c) movement & control of land fill gases & leachate
   d) All the above

9) Household hazardous waste include batteries & _____.
   a) Radioactive waste b) Food waste
   c) Leachate d) Nail polish

10) What is recovered in magnetic separation?
   a) Ferrous material b) Non-ferrous material
   c) Heat d) None

11) Indore method of composting is _____.
   a) aerobic method b) anaerobic method
   c) both a) and b) d) none

12) Hazardous biomedical wastes are generated in _____.
   a) Hospitals
   b) Biological research facilities
   c) Industrial biological conversion process
   d) All of above

13) The final functional element in solid waste management system is _____.
   a) transfer & transportation b) collection
   c) processing & recovery d) disposal

14) Problem of solid waste disposal can be reduced through _____.
   a) Recycling b) lesser pollution
   c) Population control d) None of above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Alternative from the option and rewrite the sentence. **14**

1) For stairs spanning horizontally, the minimum waist slab provided is _____. **01**

a) 10 cm b) 8 cm
c) 6 cm d) 12 cm

2) In case of footing, the critical section for BM occurs _____. **01**

a) At a distance of 'd/2' from face of column
b) At a distance of 'd' from face of column
c) At the face of the column
d) None of the above

3) Total pressure on the vertical face of a retaining wall of height h acts parallel to free surface and from the base at a distance of _____. **01**

a) h/4 b) h/3
c) h/2 d) 2h/3

4) The weight of a foundation is assumed as _____. **01**

a) 5% of wall weight b) 7% of wall weight
c) 10% of column weight d) 12% of wall weight

5) The stability of a retaining wall is checked for which of the following condition _____. **01**

a) Overturning about toe b) Overturning about heal
c) Both of these d) None of the above

6) For thickness of slab upto 100 mm in case of water tank the minimum percentage of reinforcement should be _____. **01**

a) 0.1 b) 0.2
c) 0.3 d) 0.4

7) Prestressing losses in post-tensioned and pre-tensioned beams are respectively _____. **01**

a) 15% and 20% b) 20% and 15%
c) 18% and 15% d) 20% and 20%

8) The simplest method of analysis of bursting tensile forces in anchorage zone is _____. **01**

a) Magnel method b) Guyons method
c) Balton method d) None

9) Friction loss depends upon _____. **01**

a) type of jack b) type of anchorage
c) type of tendons d) type of jack and anchorage

10) Which of the following is a disadvantage of fressyinet system of post tensioning _____. **01**

a) Projection of Plug left in the concrete
b) safeguarding of wires is economical
c) stresses in the wires are not similar
d) Rapid attainment of stretching force

11) A simply supported concrete beam prestressed with a force of 2500 KN is designed by load balancing concept for an effective span of 10 m & carry total load of 40 kN/m, the central dip of the cable profile is _____. **02**

a) 100 mm b) 200 mm
c) 300 mm d) 400 mm

12) A rectangular prestressed beam 150 mm wide and 300mm deep is used over a effective span of 10m and the cable with zero eccentricity at the supports, linearly varying to 50mm at the centre carries an effective prestressing force of 500kn $(Z = 225 \times 104)$. Evaluate stress due to prestressing? **02**

a) 22.2 N/mm^2 b) 42.2 N/mm^2
c) 32.2 N/mm^2 d) 52.2 N/mm^2

Set P

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Design of Concrete Structures - II (BTN01603)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 and Q. No. 6 are compulsory.
2) Solve any two from Q. No. 3 to Q. No. 5 and Q. No. 7 to Q. No. 9 questions from each section.
3) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.
4) Draw neat sketch's where required and assume suitable data if required and state it clearly.

SECTION – I

Q.2 Design the dog-legged type staircase for a residential building using following data: floor to floor height = 3.2 m, No. of flight per floor = 2, size of steps =175 mm riser and 250 mm tread, live load is 3 kN/m^2 and assume width of stair as 1.0 m. Use M20 concrete and Fe 415 steel. The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. **08**

Q.3 A square column 420 mm × 420 mm carries an axial load of 1400 kN. Design square footing to support the column. The SBC of soil is 200 kN/m^2. Use M20 concrete and Fe 415 steel. Sketch the reinforcement details. **10**

Q.4 Design the stem slab of a cantilever retaining wall, if the overall height is 5.5m. SBC of soil is 200 kN/m^2, angle of repose of the soil is 30° and unit weight of soil 18 kN/m^3, width of the slab base is 3.2 m, toe projection is 0.6 m. Use M 25 concrete and Fe 500 steel. **10**

Q.5 Design a circular water tank having capacity 4 lakh liters, rests on firm ground is free at top and bottom is fixed. The depth of water is 3.3 m. Assume the free board of 0.3m. Use M30 grade of concrete and Fe415 steel. Solve by IS code method. **10**

SECTION – II

Q.6 A Prestressed concrete beam 400 mm × 650 mm in section has a span of 8 m & is subjected to udl of 8 kN/m including self-weight of the beam & point load of 190 KN at centre. The prestressing tendons are located at an eccentricity of 125 mm from soffit of the beam. Determine the extreme stresses in concrete at the mid span section. Solve by following method: Stress concept method, strength concept method & load balancing method. Take prestressing force 1275 KN. **08**

Q.7 A post tensioned concrete beam 250 mm × 400 mm has a span of 12m. The beam is prestressed by steel wires of area 350 mm^2 provided at uniform eccentricity of 60 mm with an initial prestress of 1150 N/mm^2. Determine the percentage loss of stress in the wires. Take $E_s = 210\ kN/mm^2$, $E_c = 35\ kN/mm^2$, Ultimate creep strain $= 22\times10^{-6}$ mm/mm per N/mm^2, Shrinkage of concrete $= 215\times10^{-6}$, Relaxation of steel stress = 5% of the initial stress. Anchorage Slip = 1.25 mm, Friction coefficient for wave effect K = 0.0015. **10**

Q.8 Design PSC I section for the following data: **10**
Span = 20m
Superimposed load = 35 kN/m
Cube strength of concrete at 28 days = 30 kN/m^2
Safe stress in concrete at transfer = 0.5 fck,
Allowable tensile stress in concrete = $0.129(fck)^{1/2}$
Safe stress in steel = 40% of ultimate stress,
Total loss of stress = 18%,
Ultimate stress in steel = 1350 mpa,
Safe stress in concrete at service = 0.4 fck

Q.9 A PSC beam is 400 mm × 800 mm deep. Determine the horizontal, vertical, shear & principal stresses. The tendons are placed at an eccentricity of 100 mm. The anchor plate is 300 mm deep & 200 mm wide. Take P = 1000 KN. Design the end block by Magnel method for x/d = 0.75, take Kq = 0.251 and Kz = −2.47 **10**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Alternative from the option and rewrite the sentence. **14**

1) For thickness of slab upto 100 mm in case of water tank the minimum percentage of reinforcement should be _____. **01**
a) 0.1 b) 0.2
c) 0.3 d) 0.4

2) Prestressing losses in post-tensioned and pre-tensioned beams are respectively _____. **01**
a) 15% and 20% b) 20% and 15%
c) 18% and 15% d) 20% and 20%

3) The simplest method of analysis of bursting tensile forces in anchorage zone is _____. **01**
a) Magnel method b) Guyons method
c) Balton method d) None

4) Friction loss depends upon _____. **01**
a) type of jack b) type of anchorage
c) type of tendons d) type of jack and anchorage

5) Which of the following is a disadvantage of fressyinet system of post tensioning _____. **01**
a) Projection of Plug left in the concrete
b) safeguarding of wires is economical
c) stresses in the wires are not similar
d) Rapid attainment of stretching force

6) For stairs spanning horizontally, the minimum waist slab provided is _____. **01**

a) 10 cm b) 8 cm
c) 6 cm d) 12 cm

7) In case of footing, the critical section for BM occurs _____. **01**

a) At a distance of 'd/2' from face of column
b) At a distance of 'd' from face of column
c) At the face of the column
d) None of the above

8) Total pressure on the vertical face of a retaining wall of height h acts parallel to free surface and from the base at a distance of _____. **01**

a) h/4 b) h/3
c) h/2 d) 2h/3

9) The weight of a foundation is assumed as _____. **01**

a) 5% of wall weight b) 7% of wall weight
c) 10% of column weight d) 12% of wall weight

10) The stability of a retaining wall is checked for which of the following condition _____. **01**

a) Overturning about toe b) Overturning about heal
c) Both of these d) None of the above

11) A simply supported concrete beam prestressed with a force of 2500 KN is designed by load balancing concept for an effective span of 10 m & carry total load of 40 kN/m, the central dip of the cable profile is _____. **02**

a) 100 mm b) 200 mm
c) 300 mm d) 400 mm

12) A rectangular prestressed beam 150 mm wide and 300mm deep is used over a effective span of 10m and the cable with zero eccentricity at the supports, linearly varying to 50mm at the centre carries an effective prestressing force of 500kn ($Z = 225 \times 104$). Evaluate stress due to prestressing? **02**

a) 22.2 N/mm^2 b) 42.2 N/mm^2
c) 32.2 N/mm^2 d) 52.2 N/mm^2

Set Q

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Design of Concrete Structures - II (BTN01603)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 and Q. No. 6 are compulsory.
2) Solve any two from Q. No. 3 to Q. No. 5 and Q. No. 7 to Q. No. 9 questions from each section.
3) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.
4) Draw neat sketch's where required and assume suitable data if required and state it clearly.

SECTION – I

Q.2 Design the dog-legged type staircase for a residential building using following data: floor to floor height = 3.2 m, No. of flight per floor = 2, size of steps =175 mm riser and 250 mm tread, live load is 3 kN/m^2 and assume width of stair as 1.0 m. Use M20 concrete and Fe 415 steel. The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. **08**

Q.3 A square column 420 mm × 420 mm carries an axial load of 1400 kN. Design square footing to support the column. The SBC of soil is 200 kN/m^2. Use M20 concrete and Fe 415 steel. Sketch the reinforcement details. **10**

Q.4 Design the stem slab of a cantilever retaining wall, if the overall height is 5.5m. SBC of soil is 200 kN/m^2, angle of repose of the soil is 30° and unit weight of soil 18 kN/m^3, width of the slab base is 3.2 m, toe projection is 0.6 m. Use M 25 concrete and Fe 500 steel. **10**

Q.5 Design a circular water tank having capacity 4 lakh liters, rests on firm ground is free at top and bottom is fixed. The depth of water is 3.3 m. Assume the free board of 0.3m. Use M30 grade of concrete and Fe415 steel. Solve by IS code method. **10**

SECTION – II

Q.6 A Prestressed concrete beam 400 mm × 650 mm in section has a span of 8 m & is subjected to udl of 8 kN/m including self-weight of the beam & point load of 190 KN at centre. The prestressing tendons are located at an eccentricity of 125 mm from soffit of the beam. Determine the extreme stresses in concrete at the mid span section. Solve by following method: Stress concept method, strength concept method & load balancing method. Take prestressing force 1275 KN. **08**

Q.7 A post tensioned concrete beam 250 mm × 400 mm has a span of 12m. The beam is prestressed by steel wires of area 350 mm^2 provided at uniform eccentricity of 60 mm with an initial prestress of 1150 N/mm^2. Determine the percentage loss of stress in the wires. Take $E_s = 210\ kN/mm^2$, $E_c = 35\ kN/mm^2$, Ultimate creep strain $= 22\times10^{-6}$ mm/mm per N/mm^2, Shrinkage of concrete $= 215\times10^{-6}$, Relaxation of steel stress = 5% of the initial stress. Anchorage Slip = 1.25 mm, Friction coefficient for wave effect K = 0.0015. **10**

Q.8 Design PSC I section for the following data: **10**
Span = 20m
Superimposed load = 35 kN/m
Cube strength of concrete at 28 days = 30 kN/m^2
Safe stress in concrete at transfer = 0.5 fck,
Allowable tensile stress in concrete = $0.129(fck)^{1/2}$
Safe stress in steel = 40% of ultimate stress,
Total loss of stress = 18%,
Ultimate stress in steel = 1350 mpa,
Safe stress in concrete at service = 0.4 fck

Q.9 A PSC beam is 400 mm × 800 mm deep. Determine the horizontal, vertical, shear & principal stresses. The tendons are placed at an eccentricity of 100 mm. The anchor plate is 300 mm deep & 200 mm wide. Take P = 1000 KN. Design the end block by Magnel method for x/d = 0.75, take Kq = 0.251 and Kz = −2.47 **10**

Examination: March/April – 2026
Design of Concrete Structures - II (BTN01603)

Day & Date: Friday, 22-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions:1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book) Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) While solving MCQ, IS 456-2000, IS 3370 & IS 1343 are not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Alternative from the option and rewrite the sentence. **14**

1) Friction loss depends upon _____. **01**
a) type of jack b) type of anchorage
c) type of tendons d) type of jack and anchorage

2) Which of the following is a disadvantage of fressyinet system of post tensioning _____. **01**
a) Projection of Plug left in the concrete
b) safeguarding of wires is economical
c) stresses in the wires are not similar
d) Rapid attainment of stretching force

3) For stairs spanning horizontally, the minimum waist slab provided is _____. **01**
a) 10 cm b) 8 cm
c) 6 cm d) 12 cm

4) In case of footing, the critical section for BM occurs _____. **01**
a) At a distance of 'd/2' from face of column
b) At a distance of 'd' from face of column
c) At the face of the column
d) None of the above

5) Total pressure on the vertical face of a retaining wall of height h acts parallel to free surface and from the base at a distance of _____. **01**
a) h/4 b) h/3
c) h/2 d) 2h/3

6) The weight of a foundation is assumed as _____. **01**

a) 5% of wall weight b) 7% of wall weight
c) 10% of column weight d) 12% of wall weight

7) The stability of a retaining wall is checked for which of the following condition _____. **01**

a) Overturning about toe b) Overturning about heal
c) Both of these d) None of the above

8) For thickness of slab upto 100 mm in case of water tank the minimum percentage of reinforcement should be _____. **01**

a) 0.1 b) 0.2
c) 0.3 d) 0.4

9) Prestressing losses in post-tensioned and pre-tensioned beams are respectively _____. **01**

a) 15% and 20% b) 20% and 15%
c) 18% and 15% d) 20% and 20%

10) The simplest method of analysis of bursting tensile forces in anchorage zone is _____. **01**

a) Magnel method b) Guyons method
c) Balton method d) None

11) A simply supported concrete beam prestressed with a force of 2500 KN is designed by load balancing concept for an effective span of 10 m & carry total load of 40 kN/m, the central dip of the cable profile is _____. **02**

a) 100 mm b) 200 mm
c) 300 mm d) 400 mm

12) A rectangular prestressed beam 150 mm wide and 300mm deep is used over a effective span of 10m and the cable with zero eccentricity at the supports, linearly varying to 50mm at the centre carries an effective prestressing force of 500kn $(Z = 225 \times 104)$. Evaluate stress due to prestressing? **02**

a) 22.2 N/mm^2 b) 42.2 N/mm^2
c) 32.2 N/mm^2 d) 52.2 N/mm^2

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Alternative from the option and rewrite the sentence. **14**

1) Total pressure on the vertical face of a retaining wall of height h acts parallel to free surface and from the base at a distance of _____. **01**

a) h/4 b) h/3
c) h/2 d) 2h/3

2) The weight of a foundation is assumed as _____. **01**

a) 5% of wall weight b) 7% of wall weight
c) 10% of column weight d) 12% of wall weight

3) The stability of a retaining wall is checked for which of the following condition _____. **01**

a) Overturning about toe b) Overturning about heal
c) Both of these d) None of the above

4) For thickness of slab upto 100 mm in case of water tank the minimum percentage of reinforcement should be _____. **01**

a) 0.1 b) 0.2
c) 0.3 d) 0.4

5) Prestressing losses in post-tensioned and pre-tensioned beams are respectively _____. **01**

a) 15% and 20% b) 20% and 15%
c) 18% and 15% d) 20% and 20%

6) The simplest method of analysis of bursting tensile forces in anchorage zone is _____. **01**

a) Magnel method
b) Guyons method
c) Balton method
d) None

7) Friction loss depends upon _____. **01**

a) type of jack
b) type of anchorage
c) type of tendons
d) type of jack and anchorage

8) Which of the following is a disadvantage of fressyinet system of post tensioning _____. **01**

a) Projection of Plug left in the concrete
b) safeguarding of wires is economical
c) stresses in the wires are not similar
d) Rapid attainment of stretching force

9) For stairs spanning horizontally, the minimum waist slab provided is _____. **01**

a) 10 cm
b) 8 cm
c) 6 cm
d) 12 cm

10) In case of footing, the critical section for BM occurs _____. **01**

a) At a distance of 'd/2' from face of column
b) At a distance of 'd' from face of column
c) At the face of the column
d) None of the above

11) A simply supported concrete beam prestressed with a force of 2500 KN is designed by load balancing concept for an effective span of 10 m & carry total load of 40 kN/m, the central dip of the cable profile is _____. **02**

a) 100 mm
b) 200 mm
c) 300 mm
d) 400 mm

12) A rectangular prestressed beam 150 mm wide and 300mm deep is used over a effective span of 10m and the cable with zero eccentricity at the supports, linearly varying to 50mm at the centre carries an effective prestressing force of 500kn $(Z = 225 \times 104)$. Evaluate stress due to prestressing? **02**

a) 22.2 N/mm^2
b) 42.2 N/mm^2
c) 32.2 N/mm^2
d) 52.2 N/mm^2

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) An Enterprise is a group of People with _____.
a) Common goal b) Separate goal for each
c) Multiple goals d) Two or More goals

2) Hungarian method is suitable for _____.
a) Graphical Problem b) Transportation Model
c) Simplex Problem d) Assignment Model

3) _____ -means one employee getting orders and instructions from one supervisor.
a) Order b) Remuneration
c) Discipline d) Unity of command

4) Row wise and column wise difference between second lowest cell and lowest cell in VAM method is _____.
a) Set up cost b) Capital cost
c) Penalty d) Derived cell

5) Graphical method to solve the linear programming problem is commonly used if we have _____.
a) Number of decision variables are two
b) Number of decent variables are three
c) Number of decision variables are four
d) Number of decision variables is one

6) Dual of the Dual is _____.
a) Primal b) Dual
c) Zero d) Infinity

7) When total supply is not equals to total demand, the transportation problem is called _____.
a) Simple b) Balanced
c) Equated d) Unbalanced

8) Pure strategy games are those in which both players ____.
a) Play more than one strategy
b) Play with one strategy throughout
c) Don't play with saddle point
d) employ free strategies every time

9) 'Decision Tree' technique used to solve problems of 'Decision under _____'.
a) Certainty b) Risk
c) Uncertainty d) Conflict

10) Lean Construction includes _____.
a) Adding Value Added Things
b) Removing non-value-added Things
c) Minimizing the waste
d) All the above

11) EOQ decreases when the Ordering cost of item _____.
a) Increases b) Decreases
c) Zero d) None of these

12) 'Moderate inventory control' is sufficient for _____.
a) A class items b) B class items
c) C Class items d) All of these

13) _____ problem is a special problem of LPP.
a) Queuing b) Transportation
c) Simulation d) Decision Tree

14) If primal is maximize $30X_1 + 40X_2$; subjected to $6X_1 + 12X_2 \leq 16$; and $8X_1 + 5X_2 \leq 12$; $X_1, X_2 \geq 0$, Then objective function of the dual as _____.
a) Minimize $6Y_1 + 8Y_2$ b) Maximize $6Y_1 - 8Y_2$
c) Minimize $16Y_1 + 12Y_2$ d) Minimize $12Y_1 + 5Y_2$

Q.2 Solve any three of following. **24**

a) Using Graphical method, Solve
Maximize $Z = 2X_1 + 3X_2$
Subject to, $X_1 + X_2 \leq 30$;
$X_1 - X_2 \geq 0$;
$X_2 \geq 3$;
$0 \leq X_1 \leq 20$;
$0 \leq X_2 \leq 12$;

b) Determine the optimal strategy & value of game.

		Player B		
		I	II	III
Player A	I	6	5	2
	II	-1	1	-2
	III	4	9	6

c) Determine the decision under Maximin and Laplace criteria for the following process.

Alternatives	States of nature (product demand)			
	High (₹)	Moderate (₹)	Low (₹)	Nil (₹)
Expand	50,000	25,000	-25,000	-45,000
Construct	70,000	30,000	-40,000	-80,000
Subcontract	30,000	15,000	-1,000	-10,000

d) Discuss 14 Principles of modern Management.

e) Write a note on “Work sampling & Lean Constructions”.

Q.3 Write a note. (Any One) **04**

a) Centralization & Decentration

b) Decision Tree

Section – II

Q.4 Attempt the following. (Any Three) **24**

a) Find The A-Class, B-Class And C-Class Material, for following and draw the Graph with ABC Analysis.

Item ID	Annual Consumption in unit	Unit Price in Rs
1	700	50
2	2400	30
3	150	100
4	60	220
5	3800	15
6	4000	5
7	6000	2
8	300	35
9	30	80
10	2900	4

b) What is Break-Even Analysis? Explain with an example. How it is important for material management?

c) A cycle brand ‘X’ has demanded 9000 units per year. The cost of one procurement is Rs.100 and the holding cost per unit is Rs.2.4 per year. The replacement is instantaneous and no shortage are allowed.
Determine
i) Economic lot size
ii) Number of orders per year
iii) Time between orders
iv) Total cost per year if the cost of one cycle is Rs.300

d) What are quality control charts? What are the different pattern indications in quality control charts?

e) Write a note on the ERP system.

Q.5 Write a note. (Any One) **04**

a) Five major functional modules of ERP

b) Various types of inventory costs

Set **Q**

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Principles of Management and Quantitative Techniques
(BTN01604)

Day & Date: Monday, 25-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) Pure strategy games are those in which both players ____.
a) Play more than one strategy
b) Play with one strategy throughout
c) Don't play with saddle point
d) employ free strategies every time

2) 'Decision Tree' technique used to solve problems of 'Decision under _____'.
a) Certainty b) Risk
c) Uncertainty d) Conflict

3) Lean Construction includes _____.
a) Adding Value Added Things
b) Removing non-value-added Things
c) Minimizing the waste
d) All the above

4) EOQ decreases when the Ordering cost of item _____.
a) Increases b) Decreases
c) Zero d) None of these

5) 'Moderate inventory control' is sufficient for _____.
a) A class items b) B class items
c) C Class items d) All of these

6) _____ problem is a special problem of LPP.
a) Queuing b) Transportation
c) Simulation d) Decision Tree

7) If primal is maximize $30X_1 + 40X_2$; subjected to $6X_1 + 12X_2 \leq 16$; and $8X_1 + 5X_2 \leq 12$; $X_1, X_2 \geq 0$, Then objective function of the dual as _____.

a) Minimize $6Y_1 + 8Y_2$
b) Maximize $6Y_1 - 8Y_2$
c) Minimize $16Y_1 + 12Y_2$
d) Minimize $12Y_1 + 5Y_2$

8) An Enterprise is a group of People with _____.

a) Common goal
b) Separate goal for each
c) Multiple goals
d) Two or More goals

9) Hungarian method is suitable for _____.

a) Graphical Problem
b) Transportation Model
c) Simplex Problem
d) Assignment Model

10) _____ -means one employee getting orders and instructions from one supervisor.

a) Order
b) Remuneration
c) Discipline
d) Unity of command

11) Row wise and column wise difference between second lowest cell and lowest cell in VAM method is _____.

a) Set up cost
b) Capital cost
c) Penalty
d) Derived cell

12) Graphical method to solve the linear programming problem is commonly used if we have _____.

a) Number of decision variables are two
b) Number of decent variables are three
c) Number of decision variables are four
d) Number of decision variables is one

13) Dual of the Dual is _____.

a) Primal
b) Dual
c) Zero
d) Infinity

14) When total supply is not equals to total demand, the transportation problem is called _____.

a) Simple
b) Balanced
c) Equated
d) Unbalanced

Set **Q**

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Principles of Management and Quantitative Techniques
(BTN01604)

Day & Date: Monday, 25-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Solve any three of following. **24**

a) Using Graphical method, Solve
Maximize $Z = 2X_1 + 3X_2$
Subject to, $X_1 + X_2 \leq 30$;
$X_1 - X_2 \geq 0$;
$X_2 \geq 3$;
$0 \leq X_1 \leq 20$;
$0 \leq X_2 \leq 12$;

b) Determine the optimal strategy & value of game.

		Player B		
		I	II	III
Player A	I	6	5	2
	II	-1	1	-2
	III	4	9	6

c) Determine the decision under Maximin and Laplace criteria for the following process.

Alternatives	States of nature (product demand)			
	High (₹)	Moderate (₹)	Low (₹)	Nil (₹)
Expand	50,000	25,000	-25,000	-45,000
Construct	70,000	30,000	-40,000	-80,000
Subcontract	30,000	15,000	-1,000	-10,000

d) Discuss 14 Principles of modern Management.

e) Write a note on “Work sampling & Lean Constructions”.

Q.3 Write a note. (Any One) **04**

a) Centralization & Decentration

b) Decision Tree

Section – II

Q.4 Attempt the following. (Any Three) **24**

a) Find The A-Class, B-Class And C-Class Material, for following and draw the Graph with ABC Analysis.

Item ID	Annual Consumption in unit	Unit Price in Rs
1	700	50
2	2400	30
3	150	100
4	60	220
5	3800	15
6	4000	5
7	6000	2
8	300	35
9	30	80
10	2900	4

b) What is Break-Even Analysis? Explain with an example. How it is important for material management?

c) A cycle brand 'X' has demanded 9000 units per year. The cost of one procurement is Rs.100 and the holding cost per unit is Rs.2.4 per year. The replacement is instantaneous and no shortage are allowed.
Determine
i) Economic lot size
ii) Number of orders per year
iii) Time between orders
iv) Total cost per year if the cost of one cycle is Rs.300

d) What are quality control charts? What are the different pattern indications in quality control charts?

e) Write a note on the ERP system.

Q.5 Write a note. (Any One) **04**

a) Five major functional modules of ERP

b) Various types of inventory costs

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Bearing plates are used to fix _____.
a) Flat footed rails to the wooden sleepers
b) Double headed rails to the wooden sleepers
c) Bull headed rails to the wooden sleepers
d) Flat footed rails to the cast iron sleepers

2) Coning of wheels _____.
a) Prevent lateral movement of wheels
b) Provide smooth running of trains
c) Avoid excessive wear of inner faces of rail
d) All of the above

3) A scissors cross over consists of one diamond and _____.
a) One turn out b) Two turn outs
c) Three turn outs d) Four turn outs

4) Which of the following is not a component of the rail?
a) Ballast b) Foot
c) Web d) Head

5) The standard length of rail of BG and MG track is _____.
a) 13 & 12 m b) 12 & 12m
c) 12 & 13m d) None of the above

6) The gradient on which an additional engine is required to negotiate the gradient, is called _____.
a) Momentum gradient b) Pusher gradient
c) Ruling gradient d) Steep gradient

7) Which of the following is the most used ballast on Indian railways?
a) Coal ash ballast
b) Brickbat ballast
c) Broken stone ballast
d) Sand ballast

8) As per ICAO recommendation, minimum width of safety area for instrumental runway should be _____.
a) 78 m
b) 150 m
c) 300 m
d) 450 m

9) As per ICAO, for A, B, and C type of airports, maximum effective, transverse and longitudinal grades in percentage respectively are _____.
a) 1.0, 1.5 and 1.5
b) 1.0, 1.5 and 2.0
c) 1.5, 1.5 and 2.0
d) 2.0, 2.0 and 2.0

10) As per ICAO recommendation, the rate of change of longitudinal gradient per 30 m length of vertical curve for A and B type of airports is limited to a maximum of _____.
a) 0.1%
b) 0.2%
c) 0.3%
d) 0.4%

11) Assertion A: The ratio of arriving and departing aircrafts influences the airport capacity: Reason R: Landing operation is generally given priority over-the taking off operation. Select your answer based on the coding system given below _____.
a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true and R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

12) Assertion A: Depth and width required at the entrance to a harbour are more than those required in the channel. Reason R: The entrance to a harbour is usually more exposed to waves as compared to the harbour itself. Select your answer based on the coding system given below _____.
a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true but R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

13) When a ship floats at its designed water line, the vertical distance from water line to the bottom of the ship is known as _____.
a) Beam
b) Depth
c) Freeboard
d) Draft

14) The maximum harbour depth below lowest low water is generally equal to _____.

i) Loaded draft + 1.2 m when bottom is rock
ii) Loaded draft + 1.8 m when bottom is soft
iii) Loaded draft + 1.2 m when bottom is soft
iv) Loaded draft + 1.8 m when bottom is rock

of these statements:

a) i) and ii) are correct
b) i) and iii) are correct
c) ii) and iv) are correct
d) iii) and iv) are correct

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Railway, Airport and Harbour Engineering (BTN01605)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever needed & mention it clearly.

SECTION – I

Q.2 Solve Any Two questions. **08**

a) Explain different types of gauges on railway track.

b) Explain creep of rail and factors affecting on creep of rail.

c) Explain Advantages and disadvantages of coning of wheel.

Q.3 Answer Any One question. **06**

a) A train having 20 wagons weighing 18 tonnes each is to run at a speed of 50 kmph. The tractive effort of 2-8-2 locomotives with 22.5 tonnes load on each driving axle is 15 tonnes. The weight of locomotives is 120 tonnes Rolling resistance of wagons and locomotives are 2.5kg/tonne and 3.5 kg/tone. The resistance which depends on speed is 2.65 tonnes. Find out steepest gradient for this condition. Coefficient of friction is 1/6.

b) Define permanent way with neat sketch. Explain each component of permanent way.

Q.4 Answer Any Two questions. **10**

a) Explain various methods and steps for the construction and maintenance of railway track.

b) Explain detailed note on mono rail and metro rail.

c) What is the need of providing super elevation on curves of railway tracks?

d) Write a short note on Modern Indian Railways

SECTION – II

Q.5 Answer Any Two questions. **10**

a) Calculate the actual length of the runway from the following data Airport elevation: R. L. 100 Airport reference temperature : 28°C, Basic length of runway 600 m, Highest point along the length: R.L 98.2 Lowest point along the length R.L.95.2, Check the total correction for elevation plus temperature as per ICAO.

b) Draw cross-section of Airport showing all component parts and explain it in detail.

c) Explain site selection criteria for airport engineering.

Q.6 Answer Any Two questions. **10**

a) A taxiway is to be designed for operating an aircraft which has following characteristics.
Determine turning radius of taxiway
i) Wheel base-17.70 m
ii) Tread of main loading gear-6.62 m
iii) Turning speed-40kmph
iv) Coefficient of friction between tyre and pavement surface-0.13 and width of taxiway – 22.5m.

b) The data for the hottest month of year is the year of maximum daily temperature is 43.72°C and mean of average daily temperature is 20.32°C then what is the airport reference temperature?

c) Write a note on Runway configuration with its types.

Q.7 Answer Any Three questions. **12**

a) Write short note on different types of break water with neat sketches.

b) What are the factors to be considered while selecting site for harbor?

c) What are fenders? Why are they used? Describe various types of fenders with sketches.

d) Write a note on Geometric design of taxiway.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) As per ICAO recommendation, minimum width of safety area for instrumental runway should be _____.
a) 78 m b) 150 m
c) 300 m d) 450 m

2) As per ICAO, for A, B, and C type of airports, maximum effective, transverse and longitudinal grades in percentage respectively are _____.
a) 1.0, 1.5 and 1.5 b) 1.0, 1.5 and 2.0
c) 1.5, 1.5 and 2.0 d) 2.0, 2.0 and 2.0

3) As per ICAO recommendation, the rate of change of longitudinal gradient per 30 m length of vertical curve for A and B type of airports is limited to a maximum of _____.
a) 0.1% b) 0.2%
c) 0.3% d) 0.4%

4) Assertion A: The ratio of arriving and departing aircrafts influences the airport capacity: Reason R: Landing operation is generally given priority over-the taking off operation. Select your answer based on the coding system given below _____.
a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true and R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

5) Assertion A: Depth and width required at the entrance to a harbour are more than those required in the channel. Reason R: The entrance to a harbour is usually more exposed to waves as compared to the harbour itself. Select your answer based on the coding system given below _____.

a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true but R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

6) When a ship floats at its designed water line, the vertical distance from water line to the bottom of the ship is known as _____.

a) Beam
b) Depth
c) Freeboard
d) Draft

7) The maximum harbour depth below lowest low water is generally equal to _____.

i) Loaded draft + 1.2 m when bottom is rock
ii) Loaded draft + 1.8 m when bottom is soft
iii) Loaded draft + 1.2 m when bottom is soft
iv) Loaded draft + 1.8 m when bottom is rock

of these statements:

a) i) and ii) are correct
b) i) and iii) are correct
c) ii) and iv) are correct
d) iii) and iv) are correct

8) Bearing plates are used to fix _____.

a) Flat footed rails to the wooden sleepers
b) Double headed rails to the wooden sleepers
c) Bull headed rails to the wooden sleepers
d) Flat footed rails to the cast iron sleepers

9) Coning of wheels _____.

a) Prevent lateral movement of wheels
b) Provide smooth running of trains
c) Avoid excessive wear of inner faces of rail
d) All of the above

10) A scissors cross over consists of one diamond and _____.

a) One turn out
b) Two turn outs
c) Three turn outs
d) Four turn outs

11) Which of the following is not a component of the rail?

a) Ballast
b) Foot
c) Web
d) Head

12) The standard length of rail of BG and MG track is _____.

a) 13 & 12 m
b) 12 & 12m
c) 12 & 13m
d) None of the above

13) The gradient on which an additional engine is required to negotiate the gradient, is called _____.

a) Momentum gradient
b) Pusher gradient
c) Ruling gradient
d) Steep gradient

14) Which of the following is the most used ballast on Indian railways?

a) Coal ash ballast
b) Brickbat ballast
c) Broken stone ballast
d) Sand ballast

Set Q

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Railway, Airport and Harbour Engineering (BTN01605)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever needed & mention it clearly.

SECTION – I

Q.2 Solve Any Two questions. **08**

a) Explain different types of gauges on railway track.

b) Explain creep of rail and factors affecting on creep of rail.

c) Explain Advantages and disadvantages of coning of wheel.

Q.3 Answer Any One question. **06**

a) A train having 20 wagons weighing 18 tonnes each is to run at a speed of 50 kmph. The tractive effort of 2-8-2 locomotives with 22.5 tonnes load on each driving axle is 15 tonnes. The weight of locomotives is 120 tonnes Rolling resistance of wagons and locomotives are 2.5kg/tonne and 3.5 kg/tone. The resistance which depends on speed is 2.65 tonnes. Find out steepest gradient for this condition. Coefficient of friction is 1/6.

b) Define permanent way with neat sketch. Explain each component of permanent way.

Q.4 Answer Any Two questions. **10**

a) Explain various methods and steps for the construction and maintenance of railway track.

b) Explain detailed note on mono rail and metro rail.

c) What is the need of providing super elevation on curves of railway tracks?

d) Write a short note on Modern Indian Railways

SECTION – II

Q.5 Answer Any Two questions. **10**

a) Calculate the actual length of the runway from the following data Airport elevation: R. L. 100 Airport reference temperature : 28°C, Basic length of runway 600 m, Highest point along the length: R.L 98.2 Lowest point along the length R.L.95.2, Check the total correction for elevation plus temperature as per ICAO.

b) Draw cross-section of Airport showing all component parts and explain it in detail.

c) Explain site selection criteria for airport engineering.

Q.6 Answer Any Two questions. **10**

a) A taxiway is to be designed for operating an aircraft which has following characteristics.
Determine turning radius of taxiway
i) Wheel base-17.70 m
ii) Tread of main loading gear-6.62 m
iii) Turning speed-40kmph
iv) Coefficient of friction between tyre and pavement surface-0.13 and width of taxiway – 22.5m.

b) The data for the hottest month of year is the year of maximum daily temperature is 43.72°C and mean of average daily temperature is 20.32°C then what is the airport reference temperature?

c) Write a note on Runway configuration with its types.

Q.7 Answer Any Three questions. **12**

a) Write short note on different types of break water with neat sketches.

b) What are the factors to be considered while selecting site for harbor?

c) What are fenders? Why are they used? Describe various types of fenders with sketches.

d) Write a note on Geometric design of taxiway.

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no. 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Assertion A: The ratio of arriving and departing aircrafts influences the airport capacity: Reason R: Landing operation is generally given priority over-the taking off operation. Select your answer based on the coding system given below _____.
a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true and R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

2) Assertion A: Depth and width required at the entrance to a harbour are more than those required in the channel. Reason R: The entrance to a harbour is usually more exposed to waves as compared to the harbour itself. Select your answer based on the coding system given below _____.
a) Both A and R are true and R is the correct explanation of A
b) Both A and R are true but R is not the correct explanation of A
c) A is true but R is false
d) A is false but R is true

3) When a ship floats at its designed water line, the vertical distance from water line to the bottom of the ship is known as _____.
a) Beam b) Depth
c) Freeboard d) Draft

4) The maximum harbour depth below lowest low water is generally equal to _____.

i) Loaded draft + 1.2 m when bottom is rock
ii) Loaded draft + 1.8 m when bottom is soft
iii) Loaded draft + 1.2 m when bottom is soft
iv) Loaded draft + 1.8 m when bottom is rock

of these statements:

a) i) and ii) are correct
b) i) and iii) are correct
c) ii) and iv) are correct
d) iii) and iv) are correct

5) Bearing plates are used to fix _____.

a) Flat footed rails to the wooden sleepers
b) Double headed rails to the wooden sleepers
c) Bull headed rails to the wooden sleepers
d) Flat footed rails to the cast iron sleepers

6) Coning of wheels _____.

a) Prevent lateral movement of wheels
b) Provide smooth running of trains
c) Avoid excessive wear of inner faces of rail
d) All of the above

7) A scissors cross over consists of one diamond and _____.

a) One turn out
b) Two turn outs
c) Three turn outs
d) Four turn outs

8) Which of the following is not a component of the rail?

a) Ballast
b) Foot
c) Web
d) Head

9) The standard length of rail of BG and MG track is _____.

a) 13 & 12 m
b) 12 & 12m
c) 12 & 13m
d) None of the above

10) The gradient on which an additional engine is required to negotiate the gradient, is called _____.

a) Momentum gradient
b) Pusher gradient
c) Ruling gradient
d) Steep gradient

11) Which of the following is the most used ballast on Indian railways?

a) Coal ash ballast
b) Brickbat ballast
c) Broken stone ballast
d) Sand ballast

12) As per ICAO recommendation, minimum width of safety area for instrumental runway should be _____.

a) 78 m
b) 150 m
c) 300 m
d) 450 m

13) As per ICAO, for A, B, and C type of airports, maximum effective, transverse and longitudinal grades in percentage respectively are _____.

a) 1.0, 1.5 and 1.5
b) 1.0, 1.5 and 2.0
c) 1.5, 1.5 and 2.0
d) 2.0, 2.0 and 2.0

14) As per ICAO recommendation, the rate of change of longitudinal gradient per 30 m length of vertical curve for A and B type of airports is limited to a maximum of _____.

a) 0.1%
b) 0.2%
c) 0.3%
d) 0.4%

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct alternative from the given options. 14

1) The planning, design and construction of either a network of new roads or road link is called _____.
a) Highway project b) Highway estimate
c) Highway interlinking d) Highway design

2) The New highway project is divided into how many stages?
a) One b) Two
c) Three d) Four

3) _____ is an assessment of the overall appeal of the product or service being proposed.
a) Concept testing
b) Product/service feasibility analysis
c) Test marketing
d) Usability testing

4) Which of the following will come under the manual method of road survey?
a) GIS
b) Walking and windshield survey
c) Walking survey
d) Windshield survey

5) Which of the following is included in the road project survey report?
a) Location b) Terrain
c) Slope d) Gradient

6) The most important factor that is required for road geometric is _____.
- a) SSD
- b) OSD
- c) ISD
- d) Speed of vehicle

7) The extra width of pavement is provided on _____.
- a) Horizontal curve
- b) Width of pavement
- c) Length of pavement
- d) Super elevation

8) What is included in an Impact assessment?
- a) A detailed assessment of the planned project and selected alternatives compared to the baseline conditions
- b) Qualitative descriptions measuring high, medium and low impacts
- c) Quantitative descriptions such as indicating the cubic metres of water withdrawn, sewage produced, and pollutants released
- d) All of the above

9) EIA is _____ and _____ environmental impacts.
- a) beneficial and adverse
- b) social and benefit
- c) adverse and economical
- d) None of above

10) Scoping is procedure of environmental issues _____.
- a) Identifying
- b) Impact
- c) Physical impact
- d) Attributes

11) Which of the following is prepared first during estimate?
- a) Schedule of rates
- b) Rate analysis
- c) Detailed cost estimate
- d) Detailed project

12) The name of the work and project details is managed under which category of DPR?
- a) Executive summary
- b) Background
- c) Roadway details
- d) General details

13) In soils having the same values of plasticity index, if the liquid limit is increased, then _____.
- a) Compressibility and permeability decrease & dry strength Increases
- b) Compressibility, permeability, & dry strength decrease
- c) Compressibility, permeability, & dry strength increase
- d) Compressibility and permeability increase & dry strength Decreases

14) Select the correct statement.
- a) More the value of group index, less thickness of pavement will be required
- b) More the value of CBR, greater thickness of pavement will be required
- c) Minimum and maximum values of group index can be 0 and 20 respectively
- d) All of the above

   b) Walking and windshield survey
   c) Walking survey
   d) Windshield survey

12) Which of the following is included in the road project survey report?
   a) Location
   b) Terrain
   c) Slope
   d) Gradient

13) The most important factor that is required for road geometric is _____.
   a) SSD
   b) OSD
   c) ISD
   d) Speed of vehicle

14) The extra width of pavement is provided on _____.

a) Horizontal curve
b) Width of pavement
c) Length of pavement
d) Super elevation

Set **Q**

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Roads and Highway Project Development (BTN01621)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary.

SECTION – I

Q.2 Solve Any Two. **14**

a) Define feasibility. Write Scope of feasibility.

b) Briefly explain the engineering surveys needed for locating a new highway.

c) What is the importance of studying behaviour of soil as a highway material.

Q.3 Solve Any Two. **14**

a) List the various traffic engineering studies. Mention the objectives and important of each study.

b) Give an account of the importance of development as against Environment protection.

c) List the various geometric elements to be considered in highway design. Explain One in details.

SECTION – II

Q.4 Solve Any Two. **14**

a) Enumerate the various design factors controlling the Horizontal alignment of highways.

b) Describe the various components of process of EIA.

c) Which type of drawing required for DPR Project explain any one in details.

Q.5 Solve Any Two. **14**

a) Write Note on a
- i) Estimate
- ii) BOQ
- iii) Tender
- iv) Contract
- v) Tender Evaluation
- vi) EIA
- vii) DPR

b) Explain the important functions of highway embankment and subgrade in the performance of highway pavement?

c) Write explanatory notes on the following types of bituminous pavement layers:
- i) Stone matrix mix
- ii) Slurry seal
- iii) Micro surfacing

Seat No.	

Set | R

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Roads and Highway Project Development (BTN01621)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct alternative from the given options. 14

1) Which of the following is prepared first during estimate?
a) Schedule of rates b) Rate analysis
c) Detailed cost estimate d) Detailed project

2) The name of the work and project details is managed under which category of DPR?
a) Executive summary b) Background
c) Roadway details d) General details

3) In soils having the same values of plasticity index, if the liquid limit is increased, then _____.
a) Compressibility and permeability decrease & dry strength Increases
b) Compressibility, permeability, & dry strength decrease
c) Compressibility, permeability, & dry strength increase
d) Compressibility and permeability increase & dry strength Decreases

4) Select the correct statement.
a) More the value of group index, less thickness of pavement will be required
b) More the value of CBR, greater thickness of pavement will be required
c) Minimum and maximum values of group index can be 0 and 20 respectively
d) All of the above

5) The planning, design and construction of either a network of new roads or road link is called _____.
a) Highway project b) Highway estimate
c) Highway interlinking d) Highway design

6) The New highway project is divided into how many stages?
a) One b) Two
c) Three d) Four

7) _____ is an assessment of the overall appeal of the product or service being proposed.
a) Concept testing
b) Product/service feasibility analysis
c) Test marketing
d) Usability testing

8) Which of the following will come under the manual method of road survey?
a) GIS
b) Walking and windshield survey
c) Walking survey
d) Windshield survey

9) Which of the following is included in the road project survey report?
a) Location b) Terrain
c) Slope d) Gradient

10) The most important factor that is required for road geometric is _____.
a) SSD b) OSD
c) ISD d) Speed of vehicle

11) The extra width of pavement is provided on _____.
a) Horizontal curve b) Width of pavement
c) Length of pavement d) Super elevation

12) What is included in an Impact assessment?
a) A detailed assessment of the planned project and selected alternatives compared to the baseline conditions
b) Qualitative descriptions measuring high, medium and low impacts
c) Quantitative descriptions such as indicating the cubic metres of water withdrawn, sewage produced, and pollutants released
d) All of the above

13) EIA is _____ and _____ environmental impacts.
a) beneficial and adverse b) social and benefit
c) adverse and economical d) None of above

14) Scoping is procedure of environmental issues _____.
a) Identifying b) Impact
c) Physical impact d) Attributes

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Composite cements have _____ (percent by weight) proportion of flyash in it.
a) 10-20 b) 15-35
c) 20-40 d) 50-70

2) Sustainable forestry practices involve _____.
a) Clear-cutting old-growth forests
b) Planting monoculture tree plantations
c) Selective logging and reforestation
d) Using chemical pesticides and fertilizers extensively

3) Which of the following materials is considered a sustainable alternative to traditional plastics?
a) Polyethylene b) Polystyrene
c) Bioplastics d) PVC

4) What is the primary advantage of using recycled materials in manufacturing?
a) Increased cost
b) Reduced environmental impact
c) Limited availability
d) Lower quality

5) Which certification is commonly used to identify wood products sourced from sustainably managed forests?
a) FSC b) ISO
c) EPA d) FDA

6) Which of the following materials is commonly used as a sustainable alternative to traditional insulation materials like fiberglass?

a) Styrofoam
b) Mineral wool
c) Spray foam
d) Cellulose

7) Which certification is associated with sustainable textile production and ensures that environmental and social criteria are met throughout the manufacturing process?

a) LEED
b) GOTS
c) BREEAM
d) ISO 14001

8) Which of the following materials is commonly used in sustainable packaging as an alternative to conventional plastic wrap?

a) Polyethylene terephthalate (PET)
b) Beeswax wrap
c) Polypropylene
d) PVC film

9) What is the primary purpose of incorporating passive solar design strategies in green buildings?

a) To reduce reliance on mechanical heating and cooling systems
b) To increase energy consumption
c) To maximize artificial lighting
d) To minimize natural ventilation

10) Which of the following building certifications is widely recognized as a benchmark for green building design and construction?

a) LEED
b) ISO 9001
c) BREEAM
d) OHSAS 18001

11) Which of the following features contributes to the thermal comfort of occupants in a green building?

a) Poor insulation
b) Single-pane windows
c) High-performance glazing
d) Lack of shading devices

12) Which of the following strategies can help reduce water consumption in green buildings?

a) Installing water-intensive landscaping
b) Using inefficient plumbing fixtures
c) Implementing rainwater harvesting systems
d) Increasing irrigation demand

13) Which of the following materials is commonly used for insulation in green buildings due to its high R-value and renewable nature?

a) Fiberglass
b) Spray foam
c) Mineral wool
d) Recycled concrete

14) Which of the following certifications focuses specifically on evaluating the sustainability of interior spaces within buildings?

a) LEED for Homes
b) WELL Building Standard
c) Green Globes
d) ENERGY STAR

Instructions: 1) Question No. 2 is compulsory in section I, and Slove any two questions from the remaining.
2) Question No. 6 is compulsory in section II, and Slove any two questions from the remaining.
3) Use of non-programmable calculator is allowed.
4) Figures to the right indicate full marks.
5) Assume suitable data wherever necessary & mention it clearly.

Section – I

Q.2	**a)**	Inspect cost-effectiveness of using fly ash bricks in construction projects, considering factors such as material cost, labour, and long-term maintenance.	**05**
	b)	What is sustainability? Explain pillars of sustainability with a neat diagram. Discuss interaction between pillars in the sustainability.	**05**
Q.3	**a)**	Explain benefits of Nano technology in cement concrete used in conventional RCC building.	**05**
	b)	Elucidate four dimensions of Sustainability in detail.	**04**
Q.4	**a)**	Demonstrate any four applications of Cement fibre board in construction work.	**05**
	b)	Provide characteristics and application of Fly ash bricks in detail.	**04**
Q.5	**a)**	Analyse how do green buildings incorporate energy storage solutions to optimize the utilization of renewable energy sources such as solar and wind power.	**05**
	b)	Elucidate applications of cement fibre board in green building.	**04**

Section – II

Q.6	**a)**	What is GRIHA? Explain various sections allocated in the GRIHA in detail.	**05**
	b)	Stipulate LEED in sustainability, and explain importance of various sections allocated in the LEED.	**05**

Q.7	**a)**	Explain 5 R's and their applications in constructing Green Buildings.	**05**
	b)	Discuss numerous applications of sustainable technology in 'Building Stock Management'.	**04**
Q.8	**a)**	Justify emergency backup systems, such as generators or uninterruptible power supplies (UPS), integrated into an electrical system are able to provide reliable power during outages or emergencies.	**05**
	b)	Discuss the contribution of effective water system design to overall building sustainability and energy efficiency, particularly in terms of reducing water heating costs and wastewater treatment.	**04**
Q.9	**a)**	Analyse the role do thermostats, controls, and automation systems play in optimizing the operation of cooling and heating systems and minimizing energy consumption.	**05**
	b)	Explain any four considerations for selecting and specifying low-energy materials in building projects.	**04**

Section – I

Q.2	**a)**	Inspect cost-effectiveness of using fly ash bricks in construction projects, considering factors such as material cost, labour, and long-term maintenance.	**05**
	b)	What is sustainability? Explain pillars of sustainability with a neat diagram. Discuss interaction between pillars in the sustainability.	**05**
Q.3	**a)**	Explain benefits of Nano technology in cement concrete used in conventional RCC building.	**05**
	b)	Elucidate four dimensions of Sustainability in detail.	**04**
Q.4	**a)**	Demonstrate any four applications of Cement fibre board in construction work.	**05**
	b)	Provide characteristics and application of Fly ash bricks in detail.	**04**
Q.5	**a)**	Analyse how do green buildings incorporate energy storage solutions to optimize the utilization of renewable energy sources such as solar and wind power.	**05**
	b)	Elucidate applications of cement fibre board in green building.	**04**

Section – II

Q.6	**a)**	What is GRIHA? Explain various sections allocated in the GRIHA in detail.	**05**
	b)	Stipulate LEED in sustainability, and explain importance of various sections allocated in the LEED.	**05**

Q.7	**a)**	Explain 5 R's and their applications in constructing Green Buildings.	**05**
	b)	Discuss numerous applications of sustainable technology in 'Building Stock Management'.	**04**
Q.8	**a)**	Justify emergency backup systems, such as generators or uninterruptible power supplies (UPS), integrated into an electrical system are able to provide reliable power during outages or emergencies.	**05**
	b)	Discuss the contribution of effective water system design to overall building sustainability and energy efficiency, particularly in terms of reducing water heating costs and wastewater treatment.	**04**
Q.9	**a)**	Analyse the role do thermostats, controls, and automation systems play in optimizing the operation of cooling and heating systems and minimizing energy consumption.	**05**
	b)	Explain any four considerations for selecting and specifying low-energy materials in building projects.	**04**

Seat No.		Set	S

T.Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Sustainable Materials and Green Buildings (BTN01622)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions (if necessary and state them clearly).

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Which of the following materials is commonly used as a sustainable alternative to traditional insulation materials like fiberglass?
a) Styrofoam b) Mineral wool
c) Spray foam d) Cellulose

2) Which certification is associated with sustainable textile production and ensures that environmental and social criteria are met throughout the manufacturing process?
a) LEED b) GOTS
c) BREEAM d) ISO 14001

3) Which of the following materials is commonly used in sustainable packaging as an alternative to conventional plastic wrap?
a) Polyethylene terephthalate (PET)
b) Beeswax wrap
c) Polypropylene
d) PVC film

4) What is the primary purpose of incorporating passive solar design strategies in green buildings?
a) To reduce reliance on mechanical heating and cooling systems
b) To increase energy consumption
c) To maximize artificial lighting
d) To minimize natural ventilation

5) Which of the following building certifications is widely recognized as a benchmark for green building design and construction?
a) LEED b) ISO 9001
c) BREEAM d) OHSAS 18001

6) Which of the following features contributes to the thermal comfort of occupants in a green building?
a) Poor insulation
b) Single-pane windows
c) High-performance glazing
d) Lack of shading devices

7) Which of the following strategies can help reduce water consumption in green buildings?
a) Installing water-intensive landscaping
b) Using inefficient plumbing fixtures
c) Implementing rainwater harvesting systems
d) Increasing irrigation demand

8) Which of the following materials is commonly used for insulation in green buildings due to its high R-value and renewable nature?
a) Fiberglass
b) Spray foam
c) Mineral wool
d) Recycled concrete

9) Which of the following certifications focuses specifically on evaluating the sustainability of interior spaces within buildings?
a) LEED for Homes
b) WELL Building Standard
c) Green Globes
d) ENERGY STAR

10) Composite cements have _____ (percent by weight) proportion of flyash in it.
a) 10-20
b) 15-35
c) 20-40
d) 50-70

11) Sustainable forestry practices involve _____.
a) Clear-cutting old-growth forests
b) Planting monoculture tree plantations
c) Selective logging and reforestation
d) Using chemical pesticides and fertilizers extensively

12) Which of the following materials is considered a sustainable alternative to traditional plastics?
a) Polyethylene
b) Polystyrene
c) Bioplastics
d) PVC

13) What is the primary advantage of using recycled materials in manufacturing?
a) Increased cost
b) Reduced environmental impact
c) Limited availability
d) Lower quality

14) Which certification is commonly used to identify wood products sourced from sustainably managed forests?

a) FSC
b) ISO
c) EPA
d) FDA

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) Which of the following is specialized method for optimization?
a) Integer programming b) Geometric programming
c) Simulated Annealing d) All of these

2) Which of the following is not Fibonacci number?
a) 4 b) 21
c) 55 d) 13

3) Following method of optimization belongs to bracketing method _____.
a) Exhaustive Search Method b) Golden Section Method
c) Newton Raphson Method d) Bisection Method

4) The maximization or minimization of a quantity is the ____.
a) Goal of management science
b) The decision for decision analysis
c) The constraint of operation research
d) The objective of linear programming

5) The Newton - Raphson method fails if _____.
a) $f'(x_0) = 0$ b) $f''(x_0) = 0$
c) $f(x_0) = 0$ d) $f'''(x_0) = 0$

6) Gradient based method is _____.
a) Newton Raphson method b) Bisection method
c) Both 'a' and 'b' d) None of these

7) Processes involved in Genetic Algorithm are _____.
a) Selection
b) Mutation
c) Cross over
d) All of these

8) In which of the following case is application of optimization is not used?
a) Maximize discharge through pipe
b) Minimize the cost of construction
c) Calculation of shear force in beam
d) None of these

9) Unidirectional search is _____.
a) Converting multivariable problem to single variable problem
b) Funding optimized solution
c) Both ‘a’ and ‘b’
d) None of these

10) In linear programming, the solution is based on _____.
a) Tensile properties
b) Strain properties
c) Elementary properties
d) Shear properties

11) What is liner programming?
a) Constrained optimization technique
b) Technique for economic allocation of limited resources
c) Mathematical technique
d) All of these

12) While solving a linear programming model graphically, the area bounded by the constraints is called _____.
a) Feasible region
b) Infeasible region
c) Unbounded solution
d) Non bounded solution

13) When the optimization problem cost functions are differentiable, the problem is referred to as _____.
a) Rough
b) Non smooth
c) Smooth
d) Non-Rough

14) Which of the following field is which optimization is used?
a) Finance
b) Demand and Supply
c) Airline
d) All of these

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary.

Section – I

Q.2 Answer the following. (Any Two) **12**

a) Enlist and explain various types of Optimization Algorithm.

b) Explain in detail various applications of optimization.

c) Enlist and explain various steps involved in the formulation of any optimization problem.

Q.3 Answer the following. (Any Two) **08**

a) Write the detailed Algorithm for the Exhaustive Search Method.

b) Optimize the given function $f(x) = x^2 + \frac{54}{x}$ using Exhaustive Search Method.
Take $a = 0 \quad b = 10 \quad n = 50$

c) Optimize the given function using "Fibonacci Search Method".
$f(x) = x^2 + \frac{20}{x}$
$a = 0.4 \quad b = 6.5 \quad n = 3$ and $k = 2$

Q.4 Answer the following. (Any Two) **08**

a) Optimize the given function using unidirectional search method for the function.
$f(x) = 2{x_1}^2 + {x_2}^2 - 2x_1x_2 + 4$ where $x^{(0)} = (1,1)\ s = (2,3)$ and $E = 10^{-3}$

b) Optimize the given function using Powell's conjugate direction method
$f(x) = {x_1}^2 - 2{x_2}^2 + 2$ where $x^{(0)} = (2,1)\ \ s_1 = (1,0)\ s_2 = (0,1)$ & $E = 10^{-3}$

c) Perform an optimization search using steepest descent method where.
$f(x) = {x_1}^2 - 2x_1x_2 - {x_2}^2 \quad x^{(0)} = (1,1)$ & $E = 10^{-3}$

Section – II

Q.5 Answer the following. (Any Two) **12**

a) Optimize the objective function
$z = 5x + 7y$ subjected to
$3x + 2y \leq 12$
$2x + 3y \leq 13$
$x, y \geq 0$ By Graphical Method.

b) Explain limitations of Linear programming.

c) Optimize the function
$f(x) = {x_1}^2 - 2x_1x_2 - {x_2}^2$
using Geometric Programming.

Q.6 Answer the following. (Any Two) **08**

a) Explain in concept of Genetic Algorithm.

b) Explain similarities between Genetic Algorithm & Traditional Method.

c) Write a computer program for Newton Raphson method.

Q.7 Answer the following. (Any Two) **08**

a) What are various fast reanalysis techniques?

b) Explain the concept of multilevel optimization.

c) What are the techniques to reduce the size of the optimization problem?

d) Non-Rough

9) Which of the following field is which optimization is used?
a) Finance
b) Demand and Supply
c) Airline
d) All of these

10) Which of the following is specialized method for optimization?
a) Integer programming
b) Geometric programming
c) Simulated Annealing
d) All of these

11) Which of the following is not Fibonacci number?
a) 4
b) 21
c) 55
d) 13

12) Following method of optimization belongs to bracketing method _____.
a) Exhaustive Search Method
b) Golden Section Method
c) Newton Raphson Method
d) Bisection Method

13) The maximization or minimization of a quantity is the ____.
a) Goal of management science
b) The decision for decision analysis
c) The constraint of operation research
d) The objective of linear programming

14) The Newton - Raphson method fails if _____.
a) $f'(x_0) = 0$
b) $f''(x_0) = 0$
c) $f(x_0) = 0$
d) $f'''(x_0) = 0$

Set **S**

T. Y. (B.Tech.) (Civil Engineering) (Semester - II) (Old) (CBCS)
Examination: March/April – 2026
Engineering System Design Optimization (BTN01623)

Day & Date: Wednesday, 27-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary.

Section – I

Q.2 Answer the following. (Any Two) **12**

a) Enlist and explain various types of Optimization Algorithm.

b) Explain in detail various applications of optimization.

c) Enlist and explain various steps involved in the formulation of any optimization problem.

Q.3 Answer the following. (Any Two) **08**

a) Write the detailed Algorithm for the Exhaustive Search Method.

b) Optimize the given function $f(x) = x^2 + \frac{54}{x}$ using Exhaustive Search Method.
Take $a = 0 \quad b = 10 \quad n = 50$

c) Optimize the given function using "Fibonacci Search Method".
$f(x) = x^2 + \frac{20}{x}$
$a = 0.4 \quad b = 6.5 \quad n = 3$ and $k = 2$

Q.4 Answer the following. (Any Two) **08**

a) Optimize the given function using unidirectional search method for the function.
$f(x) = 2{x_1}^2 + {x_2}^2 - 2x_1x_2 + 4$ where $x^{(0)} = (1,1)\ s = (2,3)$ and $E = 10^{-3}$

b) Optimize the given function using Powell's conjugate direction method
$f(x) = {x_1}^2 - 2{x_2}^2 + 2$ where $x^{(0)} = (2,1)\ \ s_1 = (1,0)\ s_2 = (0,1)$ & $E = 10^{-3}$

c) Perform an optimization search using steepest descent method where.
$f(x) = {x_1}^2 - 2x_1x_2 - {x_2}^2 \quad x^{(0)} = (1,1)$ & $E = 10^{-3}$

Section – II

Q.5 Answer the following. (Any Two) **12**

a) Optimize the objective function
$z = 5x + 7y$ subjected to
$3x + 2y \leq 12$
$2x + 3y \leq 13$
$x, y \geq 0$ By Graphical Method.

b) Explain limitations of Linear programming.

c) Optimize the function
$f(x) = {x_1}^2 - 2x_1x_2 - {x_2}^2$
using Geometric Programming.

Q.6 Answer the following. (Any Two) **08**

a) Explain in concept of Genetic Algorithm.

b) Explain similarities between Genetic Algorithm & Traditional Method.

c) Write a computer program for Newton Raphson method.

Q.7 Answer the following. (Any Two) **08**

a) What are various fast reanalysis techniques?

b) Explain the concept of multilevel optimization.

c) What are the techniques to reduce the size of the optimization problem?

Set P

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2026
Estimating, Costing and Valuation (BTN01701)

Day & Date: Saturday, 02-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **14**

1) The Tile Skirting is measured in _____.
a) Cub.m b) Sq.m.
c) Running Metres d) None of these

2) The excavation exceeding 1.5 m in width and 10 sq.m. in plan area with a depth not exceeding 30 cm, is termed as _____.
a) Excavation b) Surface dressing
c) Cutting d) Surface excavation

3) In normal circumstances, minimum period before striking vertical formwork of columns, beams shall be _____.
a) 16-24 Hr. b) 7 days
c) 14 days d) 21 days

4) In rate analysis, salary of technical personnel engaged for the work are covered in _____.
a) Labour cost b) General overheads
c) Job overheads d) Contingencies

5) During the execution of project, structural modifications are required or addition work is added for construction, the estimate for additional work is called _____.
a) Preliminary estimate b) Supplementary estimate
c) Revised estimate d) Detailed estimate

6) We prepare revised estimate against the original estimate due to change in _____.
   a) the rate of material or change in specification of materials
   b) change in structural drawing
   c) additional items
   d) All the above

7) If rise and tread of a step is 0.15m and 0.25m respectively, then the volume (in cubic meter) of 9 number of steps of 1 m length be recorded in measurement sheet shall be _____.
   a) 0.3375 b) 0.337
   c) 0.34 d) 0.33

8) Earnest money is paid to enable the Government to ensure that a tenderer does not _____.
   a) back out of his tender before its acceptance
   b) refuse to execute the work after it has been awarded to him
   c) compromise with quality of work
   d) a or b

9) For labour component the escalation rise will be payable based on _____.
   a) Increase in the minimum wages of unskilled male mazdoor
   b) Increase in the actual wages of unskilled male mazdoor
   c) Increase in the minimum wages of skilled male mazdoor
   d) Increase in the actual wages of skilled male mazdoor

10) 'Money received today is more worth than money received in future' is based on which of the following term _____.
   a) Time Value of money b) Storage Value of Money
   c) Time Machine d) Cash Value of Machine

11) The net present value (NPV) is _____.
   a) equal to the sum of the present values of all cash flows
   b) equal to the sum of returns
   c) equal to the sum of all cash flows
   d) None of the above

12) The value at the end of utility of property but without dismantling is known as _____.
   a) Scrap Value b) Salvage value
   c) Market value d) Book value

13) Following is not the purpose of Valuation _____.
   a) For submission to financial agency/bank while borrowing loan
   b) For preparing tender documents
   c) For income tax/wealth tax assessment
   d) For compensation after the land acquisition

14) Valuation of the properties which perform non profitable community functions is done by _____.

a) Rental method
b) Land and building method
c) Direct comparison method
d) Profit based method

Examination: March/April - 2026
Estimating, Costing and Valuation (BTN01701)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. 2 is compulsory; answer any two remaining questions from Section – I.
2) Q. 6 is compulsory; answer any two from remaining questions from Section – II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Calculate the quantity of concrete for slab as shown in attached drawing. **08**

b) Also prepare an Abstract sheet for these items by assuming suitable market rates according to economical year 2023-24. **04**

Q.3 **a)** Define Specification for building, explain types of specifications. **04**

b) Write the detailed specifications for Concrete Lined Canal. **04**

Q.4 **a)** What is the Rate analysis? Explain the factors affecting rate analysis. **04**

b) Curry out rate analysis for external painting with water base colour. **04**

Q.5 **a)** Define estimation of building and its types. **04**

b) Write a thumb rule for amount of steel required for construction of building. **04**

Section – II

Q.6 **a)** Prepare a tender notice for the work of construction of a Zilha Parishad Primary School for First to Fourth class with a capacity of 40 students per class. Make suitable assumptions for required data. **08**

b) Write a short note on BOT and BOOT projects with suitable example. **04**

Q.7 **a)** Explain following Acts **04**
i) The Indian Easement Act, 1882
ii) The Indian Contract Act, 1872

b) Write a note on Turn Key Contract with its advantages and disadvantages. **04**

Q.8	**a)**	Explain different types of values - Scrap value, Potential value, distress value.	**04**
	b)	Compare following methods of calculating depreciation. Straight line method & Double Declining Balance method.	**04**
Q.9	**a)**	Explain development method of land valuation.	**04**
	b)	Calculate Years Purchase for a property with a useful life of 35 years if rate of interest is 4.5 % per year. Assume rate of interest for sinking fund as 3.5%	**04**

a) Cub.m
b) Sq.m.
c) Running Metres
d) None of these

11) The excavation exceeding 1.5 m in width and 10 sq.m. in plan area with a depth not exceeding 30 cm, is termed as _____.
a) Excavation
b) Surface dressing
c) Cutting
d) Surface excavation

12) In normal circumstances, minimum period before striking vertical formwork of columns, beams shall be _____.
a) 16-24 Hr.
b) 7 days
c) 14 days
d) 21 days

13) In rate analysis, salary of technical personnel engaged for the work are covered in _____.
a) Labour cost
b) General overheads
c) Job overheads
d) Contingencies

14) During the execution of project, structural modifications are required or addition work is added for construction, the estimate for additional work is called _____.

a) Preliminary estimate
b) Supplementary estimate
c) Revised estimate
d) Detailed estimate

Seat No.		Set	S

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2026
Estimating, Costing and Valuation (BTN01701)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. 2 is compulsory; answer any two remaining questions from Section – I.
2) Q. 6 is compulsory; answer any two from remaining questions from Section – II.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Calculate the quantity of concrete for slab as shown in attached drawing. **08**

b) Also prepare an Abstract sheet for these items by assuming suitable market rates according to economical year 2023-24. **04**

Q.3 **a)** Define Specification for building, explain types of specifications. **04**

b) Write the detailed specifications for Concrete Lined Canal. **04**

Q.4 **a)** What is the Rate analysis? Explain the factors affecting rate analysis. **04**

b) Curry out rate analysis for external painting with water base colour. **04**

Q.5 **a)** Define estimation of building and its types. **04**

b) Write a thumb rule for amount of steel required for construction of building. **04**

Section – II

Q.6 **a)** Prepare a tender notice for the work of construction of a Zilha Parishad Primary School for First to Fourth class with a capacity of 40 students per class. Make suitable assumptions for required data. **08**

b) Write a short note on BOT and BOOT projects with suitable example. **04**

Q.7 **a)** Explain following Acts **04**
i) The Indian Easement Act, 1882
ii) The Indian Contract Act, 1872

b) Write a note on Turn Key Contract with its advantages and disadvantages. **04**

Q.8	**a)**	Explain different types of values - Scrap value, Potential value, distress value.	**04**
	b)	Compare following methods of calculating depreciation. Straight line method & Double Declining Balance method.	**04**
Q.9	**a)**	Explain development method of land valuation.	**04**
	b)	Calculate Years Purchase for a property with a useful life of 35 years if rate of interest is 4.5 % per year. Assume rate of interest for sinking fund as 3.5%	**04**

Earthquake Engineering (BTN01702)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries two marks.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) One of the following is not effect of an earthquake _____.
a) Volcano b) Landslide
c) Movement of plates d) Tsunami

2) Energy released during an earthquake is indicated by_____.
a) Intensity b) Magnitude
c) Eargs d) Joules

3) Which of the following is not a damping case?
a) Viscous damping b) Critical damping
c) Under critical damping d) Over critical damping

4) Body waves consist of the _____.
a) P waves only b) S waves only
c) P and S waves only d) Surface waves

5) Which of the following forces is not acting on the vibrating body?
a) Elastic force b) Inertia force
c) Damping force d) Virtual force

6) Degrees of freedom is _____.
a) No of independent coordinates to the geometry of vibrating body
b) Kinematic unknown
c) Static unknown
d) Unknown displacements

7) Epicentral distance is _____.
   a) Distance from epicenter to seismological centre
   b) Distance from hypocenter to seismological centre
   c) Distance from focus to seismological centre
   d) Distance from the origin of the earth

8) Importance factor, depending upon the functional use of the structures, characterized by _____.
   a) hazardous consequences of its failure
   b) post-earthquake functional needs
   c) historical value or economic importance
   d) All the above

9) Response reduction factor depends on _____.
   a) characteristic of ductile or brittle deformations
   b) functional use of the structures
   c) rock or soil sites
   d) All the above

10) Fundamental natural period of vibration for moment resisting frame building without brick infill panel may be estimated using building _____.
   a) Height only
   b) Base dimension only
   c) Height and base dimensions
   d) All the above

11) The basic factors contributing to the proper seismic behavior of a building _____.
   a) Simplicity
   b) Symmetry
   c) Ductility and transfer of the lateral loads
   d) All the above

12) Torsional effects in the buildings are produced due to _____.
   a) lack of symmetry in columns
   b) lack of symmetry in walls
   c) irregularity in the elevation
   d) All the above

13) Buildings are classified as having a "soft story" if that level is less than the following percent as stiff as the average stiffness of the three floors above it.
   a) 70 %
   b) 80 %
   c) 60 %
   d) None of the above

14) The response of structural to ground vibrations is a function of _____.
   a) nature of foundation soil
   b) material, form, size
   c) mode of construction of structures
   d) All the above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Which of the following tool is used when there is uncertainty in activity duration?
a) PERT b) milestone chart
c) CPM d) bar chart

2) Please read the following statements _____.
i) Critical path has no float and it determines the project completion period.
ii) Critical path is the comparatively longest path.
Which of the above statements is/are wrong?
a) Neither i nor ii b) i
c) ii d) Both i & ii

3) PERT is a Project Management tool for managing _____.
a) Time b) Cost
c) Quality d) Resources

4) Which of the following is not a characteristic of a project?
a) Unique b) Heterogeneous
c) Infinite duration d) Non-repetitive

5) The early finish time of an activity is always _____.
a) greater than earliest start time of succeeding activity
b) less than earliest start time of succeeding activity
c) less than or equal to earliest start time of the succeeding activity
d) greater than or equal to earliest start time of the succeeding activity

6) _____ is the maximum delay possible for an activity if succeeding activity starts as early as possible and preceding activity ends as late as possible.

a) interfering float
b) total float
c) independent float
d) free float

7) In PERT calculation, if factor Z comes negative then Probability of completion of project in scheduled time is always _____.

a) 100%
b) 50%
c) less than 50%
d) greater than 50%

8) Economic haul distance for Dozer and Loader is _____.

a) up to 20 m
b) up to 100 m
c) up to 1000 m
d) above 1000 m

9) Odd man out.

a) Cost of Fuel
b) Depreciation Cost
c) Repair & Maintenance Cost
d) Operator salary

10) When there is digging or dumping in a vertical plane of relatively soft soil then _____ is effectively used.

a) Scrapper
b) Clamshell
c) Compactor
d) Bulldozer

11) Which of these causes the most construction fatalities?

a) Electrocution
b) Trench collapses
c) Contact with chemicals
d) Falls

12) Choose the correct condition for crashing.
(If CC = crash cost, NC = normal cost, CD = crash duration, ND = normal duration)

a) CC < NC, CD < ND
b) CC < NC, CD > ND
c) CC > NC, CD > ND
d) CC > NC, CD < ND

13) The extra attached arm to the 'Latice boom' to increase the working radius is called as _____.

a) Ripper
b) Angle of Swing
c) Ring base
d) Jib

14) Which of the roller is most suitable for Silty & Clayey sand and black cotton soil?

a) Pneumatic Rubber Tired Rollers
b) Smooth Wheeled Rollers
c) Vibratory roller
d) Sheep foot Roller

Set **P**

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Construction Management and Practices (BTN01703)

Day & Date: Thursday, 07-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All Questions compulsory.
3) Figure to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

SECTION – I

Q.2 Attempt Any FOUR from the following.

a) i) Draw the Bar Chart for the project with following data and find the project duration. **04**

Activity	A	B	C	D	E	F	G	H	I
Preceding Activities	-	-	-	B	A, B	B	B	C, D	G, H
Duration (Days)	2	4	10	3	5	6	4	1	7

ii) Differentiate between Bar chart and Milestone chart. **03**

b) Draw network, find out CP & PD. Calculate All floats of each non-critical Activity. **07**

Activity	A	B	C	D	E	F	G	H	I	J	K	L	M	N
Immediate Predecessor	-	-	-	B	A	A	B	C,D	C,D	E	F,G,H	F,G,H	I	J,K
Time in Months	2	6	4	3	6	8	3	7	2	5	4	3	13	7

c) Indirect Cost is given as Rs. 75/- per day. Draw the network diagram and determine the optimum project completion time and the minimum total cost of the project. **07**

Activity	Normal Time in Days	Normal Cost in Rs.	Crash Time in Days	Crash Cost in Rs.
2-4	6	120	4	200
4-6	10	1000	8	1100
4-8	13	300	9	400
4-10	19	1000	14	1100
6-8	-	-	-	-
6-10	10	400	6	800
8-10	4	500	3	575

d) A small project consists of seven activities. The time estimates in weeks of different activities are given below. Find out probability of completing the project in 18 weeks. **07**

Activity	Estimated Time		
	to	tm	tp
1-2	1	1	7
1-3	1	4	7
1-4	2	2	8
2-5	1	1	1
3-5	2	5	14
4-6	2	5	8
5-6	3	6	15

Probability Factor	Probability
0	50%
1	84.13%
2	97.72%
3	99.87%

e) Make a brief note on 'Resource Allocation.' Explain with Histogram, Timescale network, Resource Levelling & Resource Smoothening. **07**

f) i) Explain Network Updating with its need & Steps. **03**
ii) Enlist different Project Management Software. Explain any one in detail. **04**

SECTION – II

Q.3 Attempt Any FOUR from the following.

a) Write a note on *'Pneumatic Tired Roller'* with diagrams. **07**

b) Differentiate 'Manual Construction' vs 'Machine Construction'. **07**

c) Write a short note on Construction Safety, Causes of Accident, and losses due to Accident. **07**

d) Explain Prefabricated Construction including Advantages, Disadvantages, Site Prefabrication and Factory Prefabrication. **07**

e) What is 'Scrapper'? Where it is used? Explain its types, and working principle with diagram in details. **07**

f) Write a note on both.
i) Clamshell **03**
ii) Diaphragm Wall **04**

Seat No.	

Set **Q**

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Construction Management and Practices (BTN01703)

Day & Date: Thursday, 07-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Economic haul distance for Dozer and Loader is _____.
a) up to 20 m b) up to 100 m
c) up to 1000 m d) above 1000 m

2) Odd man out.
a) Cost of Fuel b) Depreciation Cost
c) Repair & Maintenance Cost d) Operator salary

3) When there is digging or dumping in a vertical plane of relatively soft soil then _____ is effectively used.
a) Scrapper b) Clamshell
c) Compactor d) Bulldozer

4) Which of these causes the most construction fatalities?
a) Electrocution b) Trench collapses
c) Contact with chemicals d) Falls

5) Choose the correct condition for crashing.
(If CC = crash cost, NC = normal cost, CD = crash duration, ND = normal duration)
a) CC < NC, CD < ND b) CC < NC, CD > ND
c) CC > NC, CD > ND d) CC > NC, CD < ND

6) The extra attached arm to the 'Latice boom' to increase the working radius is called as _____.
a) Ripper b) Angle of Swing
c) Ring base d) Jib

7) Which of the roller is most suitable for Silty & Clayey sand and black cotton soil?
a) Pneumatic Rubber Tired Rollers
b) Smooth Wheeled Rollers
c) Vibratory roller
d) Sheep foot Roller

8) Which of the following tool is used when there is uncertainty in activity duration?
a) PERT
b) milestone chart
c) CPM
d) bar chart

9) Please read the following statements _____.
i) Critical path has no float and it determines the project completion period.
ii) Critical path is the comparatively longest path.
Which of the above statements is/are wrong?
a) Neither i nor ii
b) i
c) ii
d) Both i & ii

10) PERT is a Project Management tool for managing _____.
a) Time
b) Cost
c) Quality
d) Resources

11) Which of the following is not a characteristic of a project?
a) Unique
b) Heterogeneous
c) Infinite duration
d) Non-repetitive

12) The early finish time of an activity is always _____.
a) greater than earliest start time of succeeding activity
b) less than earliest start time of succeeding activity
c) less than or equal to earliest start time of the succeeding activity
d) greater than or equal to earliest start time of the succeeding activity

13) _____ is the maximum delay possible for an activity if succeeding activity starts as early as possible and preceding activity ends as late as possible.
a) interfering float
b) total float
c) independent float
d) free float

14) In PERT calculation, if factor Z comes negative then Probability of completion of project in scheduled time is always _____.
a) 100%
b) 50%
c) less than 50%
d) greater than 50%

Traffic Engineering and Management (BTN01710)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) The speed limit sign is a type of _____.
a) Warning Sign b) Regulatory Sign
c) Informatory Sign d) Route Marker

2) Which percentile speed is typically used for the geometric design of highways (Design Speed)?
a) 15th Percentile b) 50th Percentile
c) 85th Percentile d) 98th Percentile

3) In a traffic stream, if the traffic density is zero, the corresponding traffic speed is _____.
a) Zero b) Optimum Speed
c) Free Flow Speed d) Jam Speed

4) The "3-Es" of Traffic Engineering stand for _____.
a) Engineering, Education, Enforcement
b) Engineering, Economics, Enforcement
c) Education, Environment, Engineering
d) Enforcement, Efficiency, Economy

5) A diagram showing the approximate path of vehicles and pedestrians involved in an accident is called _____.
a) Spot Map b) Condition Diagram
c) Collision Diagram d) Desire Line Diagram

6) If the average length of a vehicle is 5m and the theoretical capacity is 3600 vehicles/hour/lane, what is the saturation velocity?
a) 18 kmph b) 20 kmph
c) 36 kmph d) 50 kmph

7) In Webster's method of signal design, the amber time is primarily provided to _____.
   a) Allow pedestrians to cross
   b) Allow vehicles to clear the intersection
   c) Increase capacity
   d) Reduce cycle length

8) The full form of ITS in-traffic management is _____.
   a) Indian Traffic System
   b) Intelligent Transportation System
   c) Integrated Traffic Solutions
   d) International Transport Standard

9) Desire lines are plotted in which type of traffic survey?
   a) Speed and Delay
   b) Origin and Destination (O-D)
   c) Parking Survey
   d) Accident Survey

10) When the capacity of a rotary intersection is reached, the weaving ratio is generally around _____.
   a) 0.4 to 0.5
   b) 0.8 to 0.9
   c) 1.0
   d) 0.1 to 0.2

11) Determine the PCU value for a motorcycle according to IRC standards _____.
   a) 0.5
   b) 1.0
   c) 3.0
   d) 4.5

12) Parallel parking requires _____ road width compared to 45-degree angle parking.
   a) More
   b) Less
   c) Same
   d) Double

13) If the AADT is 5000 vehicles, the expansion factor used to convert a 24-hour count to AADT depends on _____.
   a) Day of the week
   b) Month of the year
   c) Season
   d) All of the above

14) The maximum number of conflict points at a standard 4-legged intersection with two-way traffic is _____.
   a) 16
   b) 24
   c) 32
   d) 44

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Traffic Engineering and Management (BTN01710)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Solve any Two of the following. **14**

a) Define Traffic Engineering. Discuss the scope and various functions of a traffic engineer in modern urban planning.

b) A parking survey was conducted for a lot with 50 bays. The initial count at 9:00 AM was 20 vehicles. The In-Out data is given below. Calculate the Parking Accumulation and Parking Load for the given period.

Time	In	Out
9:00 – 9:05	4	2
9:05 – 9:10	3	5
9:10 – 9:15	6	2
9:15 – 9:20	5	3
9:20 – 9:25	2	4

c) Explain the "Floating Car Method" for speed and delay studies. What data is collected during this study?

d) Write short notes on any two:
i) Off-street parking facilities
ii) PIEV Theory
iii) 30th Highest Hourly Volume

Q.3 Solve any Two of the following. **14**

a) Derive and explain the fundamental relationship between Traffic Flow (q), Speed (v), and Density (k). Draw the fundamental diagrams.

b) A vehicle weighing 1500 kg skids a distance of 30 m before colliding with a stationary vehicle of 1000 kg. After the collision, both vehicles skid a distance of 10 m together. Assuming a coefficient of friction f = 0.5, calculate the initial speed of the moving vehicle.

Speed Range (kmph)	0-10	10-20	20-30	30-40	40-50	50-60	60-70
No. of Vehicles	5	15	40	110	160	80	20

c) Spot speed data for a highway is given below. Construct a frequency distribution table and determine the 15th and 85th percentile speeds.

d) What is "Passenger Car Unit" (PCU)? List the factors affecting PCU values.

Section – II

Q.4 Solve Any Two of the following. **14**

a) Sketch and explain the three major types of Traffic Signs (Regulatory, Warning, Informatory) with two examples for each.

b) A 2-phase signal is to be designed for an intersection.
Amber time = 2 sec per phase.
Startup lost time = 2 sec per phase.
Calculate the Optimum Cycle Time (C_0) and Green splits (G_1, G_2) using Webster's Method.

Arm	Normal Flow (q) (PCU/hr)	Saturation Flow (s) (PCU/hr)
North	900	2500
South	500	2000
East	700	2800
West	600	2800

c) Explain the concept of "Intelligent Transportation Systems" (ITS). Describe three specific applications of ITS in India.

d) Write a note on the design principles of street lighting. What are the different lighting layouts?

Q.5 Solve any Two of the following. **14**

a) Calculate the practical capacity of a rotary intersection using the IRC formula.
Weaving width = 12 m
Entry width = 8 m
Weaving length = 48 m
Proportion of weaving traffic = 0.6

b) Discuss the various causes of road accidents. Suggest engineering and enforcement measures to reduce them.

c) Explain the following road markings with sketches:
i) Centre Line (Broken vs Solid)
ii) Stop Line
iii) No Overtaking Zone

d) Vehicle A is traveling on a major road and Vehicle B on a minor road. An obstruction is located at the corner.
Distance of obstruction from Path A = 10 m.
Distance of obstruction from Path B = 15 m.
Design speed of Major Road = 60 kmph.
Calculate the safe speed limit for the Minor road using the National Safety Council (NSC) method.

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Traffic Engineering and Management (BTN01710)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) The full form of ITS in-traffic management is _____.
a) Indian Traffic System
b) Intelligent Transportation System
c) Integrated Traffic Solutions
d) International Transport Standard

2) Desire lines are plotted in which type of traffic survey?
a) Speed and Delay b) Origin and Destination (O-D)
c) Parking Survey d) Accident Survey

3) When the capacity of a rotary intersection is reached, the weaving ratio is generally around _____.
a) 0.4 to 0.5 b) 0.8 to 0.9
c) 1.0 d) 0.1 to 0.2

4) Determine the PCU value for a motorcycle according to IRC standards _____.
a) 0.5 b) 1.0
c) 3.0 d) 4.5

5) Parallel parking requires _____ road width compared to 45-degree angle parking.
a) More b) Less
c) Same d) Double

6) If the AADT is 5000 vehicles, the expansion factor used to convert a 24-hour count to AADT depends on _____.
a) Day of the week b) Month of the year
c) Season d) All of the above

7) The maximum number of conflict points at a standard 4-legged intersection with two-way traffic is _____.

a) 16 b) 24
c) 32 d) 44

8) The speed limit sign is a type of _____.

a) Warning Sign b) Regulatory Sign
c) Informatory Sign d) Route Marker

9) Which percentile speed is typically used for the geometric design of highways (Design Speed)?

a) 15th Percentile b) 50th Percentile
c) 85th Percentile d) 98th Percentile

10) In a traffic stream, if the traffic density is zero, the corresponding traffic speed is _____.

a) Zero b) Optimum Speed
c) Free Flow Speed d) Jam Speed

11) The "3-Es" of Traffic Engineering stand for _____.

a) Engineering, Education, Enforcement
b) Engineering, Economics, Enforcement
c) Education, Environment, Engineering
d) Enforcement, Efficiency, Economy

12) A diagram showing the approximate path of vehicles and pedestrians involved in an accident is called _____.

a) Spot Map b) Condition Diagram
c) Collision Diagram d) Desire Line Diagram

13) If the average length of a vehicle is 5m and the theoretical capacity is 3600 vehicles/hour/lane, what is the saturation velocity?

a) 18 kmph b) 20 kmph
c) 36 kmph d) 50 kmph

14) In Webster's method of signal design, the amber time is primarily provided to _____.

a) Allow pedestrians to cross
b) Allow vehicles to clear the intersection
c) Increase capacity
d) Reduce cycle length

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) What are the natural products used in Geotechnical Constructions?
a) Coir, Polymer, Hemp b) Jute, Hemp, Metal
c) Coir, Jute, Hemp d) Metal, Polymer, Coir

2) The modern concept of reinforced earth was invented by _____.
a) Terzaghi b) Skempton
c) Henri Vidal d) Bjerrum

3) Woven Geotextile can be used as _____.
a) Separator b) Filter
c) Reinforcement d) All of the above

4) Indian standard test number pertaining to the sampling of geosynthetic specimen is _____.
a) IS 14716 b) IS 14706
c) ISO 554 d) None of the above

5) What are the hydraulic properties of Geosynthetics?
a) Gradient ratio b) Permittivity
c) Transmissivity d) All the above

6) For good compatibility between the geotextile and the soil, the gradient ratio should be _____.
a) less than 3 b) 3 to 5
c) more than 3 d) Any reasonable value

7) Which type of structure is NOT suitable for deep excavations in restricted areas?
a) Diaphragm Walls b) Reinforced Soil Walls
c) Secant Piles d) Sheet Piles

8) Trapezoidal walls are suitable in case of _____.
a) Weak foundation soil
b) Strong foundation soil
c) For law height of walls
d) For high height of walls

9) Which of the following walls of the same height exert the least pressure on the foundation soil?
a) Geosynthetics reinforced soil retaining walls
b) Masonry gravity wall
c) Reinforced concrete gravity walls
d) All walls will exert the same foundation pressure

10) Creep reduction factor is applicable to which type of reinforcement?
a) Polymeric reinforcement
b) Metallic Strips
c) Metallic Meshes
d) Applicable to all reinforcement types

11) What are the different surface treatments used to protect the slope surfaces?
a) Vegetation
b) Coir or jute mats
c) Gabion facings
d) All of the above

12) Which Indian Code is pertaining to the design of stone columns?
a) IS 15284
b) IS 2700
c) IS 3820
d) IS 456

13) Most suitable geosynthetics for dramas application will be _____.
a) Geogrid
b) Woven geotextiles
c) Nonwoven geotextiles
d) Geomembranes

14) Why is the cover provided above the landfill?
a) To prevent the ingress of rain water
b) To prevent the release of order
c) To prevent bird menace
d) All of the above

Seat No.		Set	P

Fourth. Y. (B.Tech.) (Civil Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Geo Synthetics and Soil Structures (BTN01711)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. 2 from Section I is compulsory. Solve any two questions from the remaining Q.3, 4 and 5.
2) Q.6 from Section II is compulsory. Solve any two questions from the remaining Q.7, 8 and 9
3) Figures to the right indicate full marks.
4) Assume additional suitable data if necessary and state it clearly

SECTION – I

Q.2 Answer the following questions. (Any Four) **08**

a) Write a note on Mohr Circle Analysis.
b) List various testing methods of Geosynthetics
c) List various types of Reinforced Soil retaining walls
d) Different Slope Stability Analysis Methods
e) Apparent opening size

Q.3 **a)** Explain the different types of geosynthetics and their primary functions. **05**
b) What are the main functions of Geotextiles in Geotechnical Engg? **05**

Q.4 **a)** Explain in detail cross plane permeability tests. **05**
b) Enlist different techniques of testing strength properties of geosynthetics. **05**

Q.5 **a)** Explain FHWA method of construction for reinforced soil retaining walls. **05**
b) Write a detailed note on Planer Wedge Method. **05**

Section – II

Q.6 Answer the following questions. (Any Four) **08**

a) Erosion control on slopes using geosynthetics
b) Write a short note Giroud-Norway approach.
c) Write a note on landfills.
d) Collection techniques for Leachate
e) Criteria for selection of geotextiles

Q.7	**a)**	Explain erosion control on slopes can be done by using Geosynthetics.	**05**
	b)	Write a detailed note on application of geosynthetics in drainage and filtration.	**05**
Q.8	**a)**	Explain the use of geosynthetics for construction of heavy container yards and railway lines.	**05**
	b)	Explain the role of geonets for drainage in landfills.	**05**
Q.9	**a)**	Explain geosynthetic clay liner as barrier.	**05**
	b)	Write short notes on: i) Gabian walls ii) Mechanically Stabilized Earth (MSE) walls	**05**

Examination: March/April – 2026
Geo Synthetics and Soil Structures (BTN01711)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Trapezoidal walls are suitable in case of _____.
a) Weak foundation soil b) Strong foundation soil
c) For law height of walls d) For high height of walls

2) Which of the following walls of the same height exert the least pressure on the foundation soil?
a) Geosynthetics reinforced soil retaining walls
b) Masonry gravity wall
c) Reinforced concrete gravity walls
d) All walls will exert the same foundation pressure

3) Creep reduction factor is applicable to which type of reinforcement?
a) Polymeric reinforcement
b) Metallic Strips
c) Metallic Meshes
d) Applicable to all reinforcement types

4) What are the different surface treatments used to protect the slope surfaces?
a) Vegetation b) Coir or jute mats
c) Gabion facings d) All of the above

5) Which Indian Code is pertaining to the design of stone columns?
a) IS 15284 b) IS 2700
c) IS 3820 d) IS 456

6) Most suitable geosynthetics for dramas application will be _____.
a) Geogrid b) Woven geotextiles
c) Nonwoven geotextiles d) Geomembranes

7) Why is the cover provided above the landfill?
a) To prevent the ingress of rain water
b) To prevent the release of order
c) To prevent bird menace
d) All of the above

8) What are the natural products used in Geotechnical Constructions?
a) Coir, Polymer, Hemp
b) Jute, Hemp, Metal
c) Coir, Jute, Hemp
d) Metal, Polymer, Coir

9) The modern concept of reinforced earth was invented by _____.
a) Terzaghi
b) Skempton
c) Henri Vidal
d) Bjerrum

10) Woven Geotextile can be used as _____.
a) Separator
b) Filter
c) Reinforcement
d) All of the above

11) Indian standard test number pertaining to the sampling of geosynthetic specimen is _____.
a) IS 14716
b) IS 14706
c) ISO 554
d) None of the above

12) What are the hydraulic properties of Geosynthetics?
a) Gradient ratio
b) Permittivity
c) Transmissivity
d) All the above

13) For good compatibility between the geotextile and the soil, the gradient ratio should be _____.
a) less than 3
b) 3 to 5
c) more than 3
d) Any reasonable value

14) Which type of structure is NOT suitable for deep excavations in restricted areas?
a) Diaphragm Walls
b) Reinforced Soil Walls
c) Secant Piles
d) Sheet Piles

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Question. **14**

1) Venture capital is concerned with _____.
a) New project having potential for higher profit
b) New project of high technology
c) New project having high risk
d) All the above

2) Why should an entrepreneur do a feasibility study for starting a new venture _____.
a) To identify possible sources of funds
b) To see if there are possible barriers to success
c) To estimate the expected sales
d) To explore potential customers

3) What is the process by which individuals pursue opportunities without regard to resources they currently control?
a) Startup management b) Entrepreneurship
c) Financial analysis d) Feasibility planning

4) Which one of the following is the process of entrepreneurs developing new products that over time make current products obsolete?
a) New business model b) Anatomization
c) None of the given options d) Creative destruction

5) The term Entrepreneur is derived from the _____ word.
a) English b) Tamil
c) Hindi d) French

6) The person who creates an enterprise is called _____.
   a) Entrepreneur
   b) Managers
   c) Leaders
   d) Owners

7) An entrepreneur is someone who?
   a) Organize a business
   b) Manages a business
   c) Takes risks
   d) All of the above

8) What is the role of creativity in entrepreneurship?
   a) It helps in generating new ideas and solutions
   b) It hinders the problem-solving process
   c) It is not relevant to entrepreneurship
   d) It only applies to artistic ventures

9) What is the relationship between innovation and entrepreneurship?
   a) Innovation is the process of bringing new ideas to the market, which is essential for entrepreneurship
   b) Innovation and entrepreneurship are unrelated concepts
   c) Innovation is only relevant for technology-based businesses
   d) Entrepreneurship focuses on tradition, while innovation focuses on change

10) Which of the following is NOT a characteristic of women entrepreneurs?
   a) Risk-taking
   b) Perseverance
   c) Lack of confidence
   d) Creativity

11) What is a major challenge faced by women entrepreneurs in India?
   a) Access to education
   b) Social and cultural barriers
   c) Lack of family support
   d) All of the above

12) Which organization focuses on promoting women entrepreneurship in India?
   a) FICCI Ladies Organization (FLO)
   b) National Alliance of Young Entrepreneurs (NAYE)
   c) District Industries Centres (DIC)
   d) Small Industries Service Institute (SISI)

13) What is the role of the government in promoting entrepreneurship?
   a) Creating a supportive policy environment
   b) Providing financial assistance
   c) Offering training and development programs
   d) All of the above

14) What is the purpose of a District Industries Centre (DIC)?
   a) To provide support and guidance to entrepreneurs at the district level
   b) To promote large-scale industries
   c) To regulate international trade
   d) To conduct research on economic development

Entrepreneurship (BTN01713)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All question are compulsory.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Attempt Any Two. **14**

a) Explain the different types of entrepreneurs based on their motivation and entrepreneurial activity, with relevant examples.

b) Discuss the qualities of a successful entrepreneur. How do these qualities contribute to overcoming challenges and achieving business goals?

c) Explain the concept of 'Creativity and Innovation' in the context of entrepreneurship. How can these be fostered?

Q.3 Attempt Any Two. **14**

a) Discuss the role of various agencies like DIC, SISI, and EDII in supporting entrepreneurship development.

b) What are the different forms of financial support available to entrepreneurs? Explain the role of commercial banks and other financial institutions.

c) Explain the importance of preparing a comprehensive business plan for a new venture. What are the key elements to include?

SECTION – II

Q.4 Attempt Any Two. **14**

a) Explain the process of estimating the cost of a project. What are the different cost components and methods of cost estimation?

b) Discuss the significance of financial ratios in analyzing the performance of a business. Explain any three important financial ratios with examples.

c) What are the different stages involved in the project implementation process? Explain the key activities in each stage.

Q.5 Write a note on Any Two. **14**

a) Discuss the importance of 'Market Study' and 'Sales Promotion' for businesses. How can these contribute to business success?

b) Explain the concept of 'Risk and Risk Analysis'. What are the different types of risks, and how can they be managed?

c) Discuss the importance of effective communication skills for entrepreneurs. What are the barriers to effective communication, and how can they be overcome?

Fourth. Y. (B.Tech.) (Civil Engineering) (Sem- I) (New) (CBCS)
Examination: March/April – 2026
Entrepreneurship (BTN01713)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All question are compulsory.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Attempt Any Two. **14**

a) Explain the different types of entrepreneurs based on their motivation and entrepreneurial activity, with relevant examples.

b) Discuss the qualities of a successful entrepreneur. How do these qualities contribute to overcoming challenges and achieving business goals?

c) Explain the concept of 'Creativity and Innovation' in the context of entrepreneurship. How can these be fostered?

Q.3 Attempt Any Two. **14**

a) Discuss the role of various agencies like DIC, SISI, and EDII in supporting entrepreneurship development.

b) What are the different forms of financial support available to entrepreneurs? Explain the role of commercial banks and other financial institutions.

c) Explain the importance of preparing a comprehensive business plan for a new venture. What are the key elements to include?

SECTION – II

Q.4 Attempt Any Two. **14**

a) Explain the process of estimating the cost of a project. What are the different cost components and methods of cost estimation?

b) Discuss the significance of financial ratios in analyzing the performance of a business. Explain any three important financial ratios with examples.

c) What are the different stages involved in the project implementation process? Explain the key activities in each stage.

Q.5 Write a note on Any Two. **14**

a) Discuss the importance of 'Market Study' and 'Sales Promotion' for businesses. How can these contribute to business success?

b) Explain the concept of 'Risk and Risk Analysis'. What are the different types of risks, and how can they be managed?

c) Discuss the importance of effective communication skills for entrepreneurs. What are the barriers to effective communication, and how can they be overcome?

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Question. **14**

1) What is a major challenge faced by women entrepreneurs in India?
a) Access to education
b) Social and cultural barriers
c) Lack of family support
d) All of the above

2) Which organization focuses on promoting women entrepreneurship in India?
a) FICCI Ladies Organization (FLO)
b) National Alliance of Young Entrepreneurs (NAYE)
c) District Industries Centres (DIC)
d) Small Industries Service Institute (SISI)

3) What is the role of the government in promoting entrepreneurship?
a) Creating a supportive policy environment
b) Providing financial assistance
c) Offering training and development programs
d) All of the above

4) What is the purpose of a District Industries Centre (DIC)?
a) To provide support and guidance to entrepreneurs at the district level
b) To promote large-scale industries
c) To regulate international trade
d) To conduct research on economic development

5) Venture capital is concerned with _____.
a) New project having potential for higher profit
b) New project of high technology
c) New project having high risk
d) All the above

6) Why should an entrepreneur do a feasibility study for starting a new venture _____.
   a) To identify possible sources of funds
   b) To see if there are possible barriers to success
   c) To estimate the expected sales
   d) To explore potential customers

7) What is the process by which individuals pursue opportunities without regard to resources they currently control?
   a) Startup management
   b) Entrepreneurship
   c) Financial analysis
   d) Feasibility planning

8) Which one of the following is the process of entrepreneurs developing new products that over time make current products obsolete?
   a) New business model
   b) Anatomization
   c) None of the given options
   d) Creative destruction

9) The term Entrepreneur is derived from the _____ word.
   a) English
   b) Tamil
   c) Hindi
   d) French

10) The person who creates an enterprise is called _____.
   a) Entrepreneur
   b) Managers
   c) Leaders
   d) Owners

11) An entrepreneur is someone who?
   a) Organize a business
   b) Manages a business
   c) Takes risks
   d) All of the above

12) What is the role of creativity in entrepreneurship?
   a) It helps in generating new ideas and solutions
   b) It hinders the problem-solving process
   c) It is not relevant to entrepreneurship
   d) It only applies to artistic ventures

13) What is the relationship between innovation and entrepreneurship?
   a) Innovation is the process of bringing new ideas to the market, which is essential for entrepreneurship
   b) Innovation and entrepreneurship are unrelated concepts
   c) Innovation is only relevant for technology-based businesses
   d) Entrepreneurship focuses on tradition, while innovation focuses on change

14) Which of the following is NOT a characteristic of women entrepreneurs?
   a) Risk-taking
   b) Perseverance
   c) Lack of confidence
   d) Creativity

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) What is the primary component of a hydro power project?
a) Solar Panels b) Turbine
c) Wind Turbine d) Geothermal Pump

2) Which type of power station primarily uses fossil fuels?
a) Nuclear Power Station b) Hydro Power Station
c) Thermal Power Station d) Wind Power Station

3) Which of the following is a renewable source of energy?
a) Coal b) Natural Gas
c) Solar Energy d) Nuclear Energy

4) In a pumped storage hydroelectric scheme, water is _____.
a) Only used once
b) Stored in a reservoir and used to generate electricity when needed
c) Constantly flowing downriver
d) Used for irrigation only

5) What does the load factor indicate?
a) The ratio of maximum demand to average demand
b) The total energy produced in a year
c) The efficiency of a power plant
d) The proportion of time a plant operates at full capacity

6) What is the primary function of a trash rack in an intake structure?
   a) To regulate water flow
   b) To filter debris and prevent blockages
   c) To control the water level in a reservoir
   d) To measure water quality

7) What is the primary advantage of hydro power plants?
   a) High carbon emissions
   b) Low operating costs and renewable energy source
   c) Dependency on fossil fuels
   d) None of the Above

8) What is "firm power"?
   a) Power that can be guaranteed to be available at all times
   b) Power generated from renewable sources only
   c) The total capacity of a power plant
   d) Power that varies with demand

9) What is the basic equation used to estimate hydro power potential?
   a) $P = IV$
   b) $P = \eta \times \rho \times g \times Q \times H$
   c) $P = E/t$
   d) $P = mgh$

10) What is the primary purpose of a pumped storage plant?
   a) To provide constant power generation
   b) To store energy by moving water between two reservoirs
   c) To filter and purify water
   d) To generate electricity from wind

11) What is a significant disadvantage of pumped storage plants?
   a) High initial capital costs
   b) Low efficiency compared to conventional plants
   c) Limited energy storage capability
   d) Dependency on weather conditions

12) What is the primary environmental concern associated with tidal power stations?
   a) Air pollution
   b) Noise pollution
   c) Disruption of marine life and habitats
   d) High water consumption

13) Which of the following is a disadvantage of tidal power stations?
   a) They are environmentally friendly
   b) They can disrupt local ecosystems
   c) They have predictable energy output
   d) They are renewable energy sources

14) What is the primary principle of operation for tidal power stations?

a) Solar energy conversion
b) Kinetic and potential energy of tides
c) Wind energy harnessing
d) Geothermal energy extraction

Examination: March/April – 2026
Water Power Engineering (BTN01715)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary.
4) Draw neat, labeled diagrams wherever necessary.
5) Use of only non-programmable calculators is allowed.

Section – I

Q.2 Attempt Any Four of the following questions. **16**

a) What are the different classifications of sources in India?

b) What factors should be considered when estimating hydro power potential in India?

c) State the function of hydro power schemes and draw the general layout of various hydropower scheme.

d) Common load shared by two stations base load plant with 20 MW capacity and other being standby plant with 25 MW capacity. The yearly output for base load station is 120×10^6 KWh, and for standby station is 10.5×10^6 KWh. The peak load taken by standby station is 20 MW which works for 2500 hrs during the year. The base load station takes peak load as 25.5 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) Calculate the power factor for a utility to supply a maximum 1500 kW of real power, when the reactive power at that time is 1200 kVAR.

Q.3 Attempt Any Two of the following questions. **12**

a) A penstock pipe, 700 m long, takes off from a reservoir and feeds water to turbine, the level of which is 210 m below the reservoir water level. The first 225 m length of the penstock has a cross section area of 5 m^2 and the rest has an area of 3 m^2. The steady state discharge is 09m^3/sec. If the turbine gates are closed completely in 4.5 seconds at a uniform rate, what would be the water hammer pressure developed? (from Allieri chart $= Z^2 = 1.32$)

b) Explain in brief with diagram the following:
i) Forebay
ii) Intake structure
iii) Tail Race

c) What is water hammer in a pipe line? Derive the expression for the water hammer pressure in case of rigid pipe and elastic pipe.

d) A penstock, with an internal diameter of 1.30m, supplies water at a head equivalent to 17.6kg/cm^2. There is a possibility of 20% increase in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be 1150 kg/cm^2 and 80%, respectively. Calculate the approximate wall thickness of the penstock required.

Section – II

Q.4 Attempt any four of the following questions. **16**

a) Classify the different types of surge tank? Explain any one with sketch.

b) What do you understand by 'pumped storage' plant? What are the advantages and disadvantages of this power plant?

c) A Pelton wheel having a mean bucket diameter of 1.2m is running at 1000rpm. The net head on Pelton wheel is 840m. if the side clearance angle is 15° and discharge through nozzle is 0.12m^3/s. (Take Cv = 1) Determine,

i) Power available at the nozzle.
ii) Hydraulic efficiency of turbine.

d) Power house is equipped with 4 units of vertical shaft Pelton turbines to be coupled with 69000 kVA, 3 phase. 50 hertz generators. The generation is provided with 10 pairs of poles. The gross design head is 505 m and transmission efficiency of head race tunnel and penstocks together is to be 94 percent.
The four units together will provide for a power of 256000 KW at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98.
Find:

i) the design discharge for the turbine,
ii) jet dia. and no. of jets,
iii) the nozzle tip diameter
iv) the pitch circle dia. of the wheel
v) the specific speed and
vi) number of buckets on the wheel

e) Can you compare the different types of intake structures and their applications?

Q.5 Attempt Any Two of the following questions. **12**

a) What are the important types of turbines? Enlist the factors on which choice of turbine depends.

b) Describe the tidal cycle and explain how it affects the feasibility of tidal power generation, including its limitations.

c) At a hydroelectric power station Kaplan turbine is used which has following data,
Operating head = 23.5m
output power at this head = 120 MW,
discharge = 625 m3/sec
speed = 68 rpm,
Runner tip to tip diameter = 9.5 m
Hub diameter = 4.5m
Number of blades = 6,
calculate the speed ratio, flow ratio, and the overall efficiency.

b) Describe the tidal cycle and explain how it affects the feasibility of tidal power generation, including its limitations.

c) At a hydroelectric power station Kaplan turbine is used which has following data,
Operating head = 23.5m
output power at this head = 120 MW,
discharge = 625 m3/sec
speed = 68 rpm,
Runner tip to tip diameter = 9.5 m
Hub diameter = 4.5m
Number of blades = 6,
calculate the speed ratio, flow ratio, and the overall efficiency.

Water Power Engineering (BTN01715)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary.
5) Use of only non-programmable calculators is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options. 14

1) What is a significant disadvantage of pumped storage plants?
a) High initial capital costs
b) Low efficiency compared to conventional plants
c) Limited energy storage capability
d) Dependency on weather conditions

2) What is the primary environmental concern associated with tidal power stations?
a) Air pollution
b) Noise pollution
c) Disruption of marine life and habitats
d) High water consumption

3) Which of the following is a disadvantage of tidal power stations?
a) They are environmentally friendly
b) They can disrupt local ecosystems
c) They have predictable energy output
d) They are renewable energy sources

4) What is the primary principle of operation for tidal power stations?
a) Solar energy conversion
b) Kinetic and potential energy of tides
c) Wind energy harnessing
d) Geothermal energy extraction

5) What is the primary component of a hydro power project?
a) Solar Panels
b) Turbine
c) Wind Turbine
d) Geothermal Pump

6) Which type of power station primarily uses fossil fuels?
a) Nuclear Power Station
b) Hydro Power Station
c) Thermal Power Station
d) Wind Power Station

7) Which of the following is a renewable source of energy?
a) Coal
b) Natural Gas
c) Solar Energy
d) Nuclear Energy

8) In a pumped storage hydroelectric scheme, water is _____.
a) Only used once
b) Stored in a reservoir and used to generate electricity when needed
c) Constantly flowing downriver
d) Used for irrigation only

9) What does the load factor indicate?
a) The ratio of maximum demand to average demand
b) The total energy produced in a year
c) The efficiency of a power plant
d) The proportion of time a plant operates at full capacity

10) What is the primary function of a trash rack in an intake structure?
a) To regulate water flow
b) To filter debris and prevent blockages
c) To control the water level in a reservoir
d) To measure water quality

11) What is the primary advantage of hydro power plants?
a) High carbon emissions
b) Low operating costs and renewable energy source
c) Dependency on fossil fuels
d) None of the Above

12) What is "firm power"?
a) Power that can be guaranteed to be available at all times
b) Power generated from renewable sources only
c) The total capacity of a power plant
d) Power that varies with demand

13) What is the basic equation used to estimate hydro power potential?
a) $P = IV$
b) $P = \eta \times \rho \times g \times Q \times H$
c) $P = E/t$
d) $P = mgh$

14) What is the primary purpose of a pumped storage plant?

a) To provide constant power generation
b) To store energy by moving water between two reservoirs
c) To filter and purify water
d) To generate electricity from wind

Set R

Fourth. Y. (B.Tech.) (Civil Engineering) (Sem- I) (New) (CBCS)
Examination: March/April – 2026
Water Power Engineering (BTN01715)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary.
4) Draw neat, labeled diagrams wherever necessary.
5) Use of only non-programmable calculators is allowed.

Section – I

Q.2 Attempt Any Four of the following questions. **16**

a) What are the different classifications of sources in India?

b) What factors should be considered when estimating hydro power potential in India?

c) State the function of hydro power schemes and draw the general layout of various hydropower scheme.

d) Common load shared by two stations base load plant with 20 MW capacity and other being standby plant with 25 MW capacity. The yearly output for base load station is 120×10^6 KWh, and for standby station is 10.5×10^6 KWh. The peak load taken by standby station is 20 MW which works for 2500 hrs during the year. The base load station takes peak load as 25.5 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) Calculate the power factor for a utility to supply a maximum 1500 kW of real power, when the reactive power at that time is 1200 kVAR.

Q.3 Attempt Any Two of the following questions. **12**

a) A penstock pipe, 700 m long, takes off from a reservoir and feeds water to turbine, the level of which is 210 m below the reservoir water level. The first 225 m length of the penstock has a cross section area of 5 m^2 and the rest has an area of 3 m^2. The steady state discharge is 09m^3/sec. If the turbine gates are closed completely in 4.5 seconds at a uniform rate, what would be the water hammer pressure developed? (from Allieri chart $= Z^2 = 1.32$)

b) Explain in brief with diagram the following:
i) Forebay
ii) Intake structure
iii) Tail Race

c) What is water hammer in a pipe line? Derive the expression for the water hammer pressure in case of rigid pipe and elastic pipe.

d) A penstock, with an internal diameter of 1.30m, supplies water at a head equivalent to 17.6kg/cm^2. There is a possibility of 20% increase in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be 1150 kg/cm^2 and 80%, respectively. Calculate the approximate wall thickness of the penstock required.

Section – II

Q.4 Attempt any four of the following questions. **16**

a) Classify the different types of surge tank? Explain any one with sketch.

b) What do you understand by 'pumped storage' plant? What are the advantages and disadvantages of this power plant?

c) A Pelton wheel having a mean bucket diameter of 1.2m is running at 1000rpm. The net head on Pelton wheel is 840m. if the side clearance angle is 15° and discharge through nozzle is 0.12m^3/s. (Take Cv = 1) Determine,

i) Power available at the nozzle.
ii) Hydraulic efficiency of turbine.

d) Power house is equipped with 4 units of vertical shaft Pelton turbines to be coupled with 69000 kVA, 3 phase. 50 hertz generators. The generation is provided with 10 pairs of poles. The gross design head is 505 m and transmission efficiency of head race tunnel and penstocks together is to be 94 percent.
The four units together will provide for a power of 256000 KW at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98.
Find:

i) the design discharge for the turbine,
ii) jet dia. and no. of jets,
iii) the nozzle tip diameter
iv) the pitch circle dia. of the wheel
v) the specific speed and
vi) number of buckets on the wheel

e) Can you compare the different types of intake structures and their applications?

Q.5 Attempt Any Two of the following questions. **12**

a) What are the important types of turbines? Enlist the factors on which choice of turbine depends.

b) Describe the tidal cycle and explain how it affects the feasibility of tidal power generation, including its limitations.

c) At a hydroelectric power station Kaplan turbine is used which has following data,
Operating head = 23.5m
output power at this head = 120 MW,
discharge = 625 m3/sec
speed = 68 rpm,
Runner tip to tip diameter = 9.5 m
Hub diameter = 4.5m
Number of blades = 6,
calculate the speed ratio, flow ratio, and the overall efficiency.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) _____ is commonly found carcinogenic indoor pollutant.
a) Ozone b) Radon
c) Both a) and b) d) Uranium

2) In cyclone gas flow reverses from _____ part.
a) Vortex finder b) Conical
c) Cylindrical d) Outlet

3) In ESP particulates are separated by virtue of _____ action.
a) Gravitational acceleration b) centrifugal
c) Electrostatic d) diffusion

4) Velocity of gas flow in gravity settler should be less than _____ m/s for excellent results.
a) 0.3 b) 0.5
c) 3.1 d) 10

5) _____ prevents upward movement of air pollutants if it exists in atmosphere.
a) DALR b) Wind
c) Clouds d) An inversion

6) In tray type gravity settler, trays are fixed to _____ the efficiency.
a) Decrease b) Increase
c) Keep Constant d) None of above

7) Photochemical smog commonly occurs in _____ area.
a) Urban
b) Motorized
c) Both a) and b)
d) None of these

8) Bags in bag house filter are _____ m in length.
a) 12-40
b) 10-15
c) 15-20
d) 2-10

9) As per NAAQS (2009), standard for PM_{10} for industrial area considering annual average is _____ micrograms/m^3.
a) 60
b) 100
c) 8
d) 800

10) The depletion of ozone in outer atmosphere may result in increased _____.
a) Heart attack cases
b) Skin cancer cases
c) Asthma cases
d) None of these

11) Concentration of pollutants in stack emissions can be measured by _____.
a) High volume sampler
b) Stack monitoring kit
c) Thermometer
d) Hygrometer

12) Formation and destruction of ozone in the atmosphere can be explained by _____ reactions.
a) Hofmann
b) Chapman
c) Dobson
d) Hudson

13) Noise pollution is created if sound is in excess to _____.
a) 70−75 dB
b) 50−60 dB
c) 80−99 dB
d) 40−65 dB

14) Day time noise standard prescribed for residential areas in India is _____.
a) 75 dB
b) 65 dB
c) 50 dB
d) 55 dB

Instructions: 1) Q. No. 2 & Q. No. 6 are compulsory and attempt any two questions from the remaining questions from each section.
2) Figure to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 **a)** What are different zones of atmosphere? Explain with the help of neat graph. **05**

b) Explain Air pollution meaning as per BIS. Discuss importance of air quality study. **05**

Q.3 **a)** Discuss effect of SO2 in presence of SPM on human health with the help of tabular format. **05**

b) What is meant by radiation inversion and subsidence inversion? Explain with sketch. **04**

Q.4 **a)** Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

b) A factory uses 150000 litre of fuel oil per month. The exhaust gases from factory contain the following quantities of pollutant per ML per year: **05**

i) Particulate matter= 3 tonnes
ii) Sulphur dioxide= 59.7 tonnes
iii) Hydrocarbons= 0.37 tonnes
iv) Carbon monoxide= 0.52 tonnes

Determine the safe height of chimney required for safe dispersion of pollutants.

Q.5 **a)** Enlist components of stack monitoring kit. Explain with neat diagram what is sampling train? **04**

b) A conventional cyclone with diameter 1 m handles $3m^3$/sec of air carrying particles of density 1900 kg/m^3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.85\times10^{-5}$ kg/m.sec. (Note - treat it as a standard cyclone). **05**

Section – II

Q.6 **a)** Explain with the help of neat sketch 'standard cyclone'. **05**

b) A settling chamber is designed for removing 90 μ dia. Particles with 100% efficiency. The particulate matter density is 1300 kg/m3. Depth and width of chamber is 2.2 m each. Determine: **05**

i) Length of chamber required without trays.

ii) Length of chamber with 10 trays.

Q.7 **a)** An ESP with overall spacing of 0.24 cm and mean gas velocity 1.4 m/s has collector plate area of 5500 m^2 gives efficiency of 96% in treating 200 m3/s of gas. To achieve 98% and 99% efficiency. What should be plate area required? **05**

b) Explain working of ESP with neat sketch. **04**

Q.8 **a)** Write 'absorption' as a gaseous control technique. **04**

b) Explain decibel scale with sample sound level and frequency of sound waves. **05**

Q.9 **Write short notes. (Any Three)** **09**

a) National ambient quality standards for noise.

b) Sources of noise.

c) Instrumentation Requirements in noise.

d) The Air act, 1981

Examination: March/April – 2026
Air and Noise Pollution and Control (BTN01716)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable whenever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Concentration of pollutants in stack emissions can be measured by _____.
a) High volume sampler b) Stack monitoring kit
c) Thermometer d) Hygrometer

2) Formation and destruction of ozone in the atmosphere can be explained by _____ reactions.
a) Hofmann b) Chapman
c) Dobson d) Hudson

3) Noise pollution is created if sound is in excess to _____.
a) 70−75 dB b) 50−60 dB
c) 80−99 dB d) 40−65 dB

4) Day time noise standard prescribed for residential areas in India is _____.
a) 75 dB b) 65 dB
c) 50 dB d) 55 dB

5) _____ is commonly found carcinogenic indoor pollutant.
a) Ozone b) Radon
c) Both a) and b) d) Uranium

6) In cyclone gas flow reverses from _____ part.
a) Vortex finder b) Conical
c) Cylindrical d) Outlet

7) In ESP particulates are separated by virtue of _____ action.
a) Gravitational acceleration b) centrifugal
c) Electrostatic d) diffusion

8) Velocity of gas flow in gravity settler should be less than _____ m/s for excellent results.
a) 0.3 b) 0.5
c) 3.1 d) 10

9) _____ prevents upward movement of air pollutants if it exists in atmosphere.
a) DALR b) Wind
c) Clouds d) An inversion

10) In tray type gravity settler, trays are fixed to _____ the efficiency.
a) Decrease b) Increase
c) Keep Constant d) None of above

11) Photochemical smog commonly occurs in _____ area.
a) Urban b) Motorized
c) Both a) and b) d) None of these

12) Bags in bag house filter are _____ m in length.
a) 12-40 b) 10-15
c) 15-20 d) 2-10

13) As per NAAQS (2009), standard for PM_{10} for industrial area considering annual average is _____ micrograms/m^3.
a) 60 b) 100
c) 8 d) 800

14) The depletion of ozone in outer atmosphere may result in increased _____.
a) Heart attack cases b) Skin cancer cases
c) Asthma cases d) None of these

Examination: March/April – 2026
Air and Noise Pollution and Control (BTN01716)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 2 & Q. No. 6 are compulsory and attempt any two questions from the remaining questions from each section.
2) Figure to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 **a)** What are different zones of atmosphere? Explain with the help of neat graph. **05**

b) Explain Air pollution meaning as per BIS. Discuss importance of air quality study. **05**

Q.3 **a)** Discuss effect of SO2 in presence of SPM on human health with the help of tabular format. **05**

b) What is meant by radiation inversion and subsidence inversion? Explain with sketch. **04**

Q.4 **a)** Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

b) A factory uses 150000 litre of fuel oil per month. The exhaust gases from factory contain the following quantities of pollutant per ML per year: **05**

i) Particulate matter= 3 tonnes
ii) Sulphur dioxide= 59.7 tonnes
iii) Hydrocarbons= 0.37 tonnes
iv) Carbon monoxide= 0.52 tonnes

Determine the safe height of chimney required for safe dispersion of pollutants.

Q.5 **a)** Enlist components of stack monitoring kit. Explain with neat diagram what is sampling train? **04**

b) A conventional cyclone with diameter 1 m handles $3m^3$/sec of air carrying particles of density 1900 kg/m^3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.85\times10^{-5}$ kg/m.sec. (Note - treat it as a standard cyclone). **05**

Section – II

Q.6 **a)** Explain with the help of neat sketch 'standard cyclone'. **05**

b) A settling chamber is designed for removing 90 μ dia. Particles with 100% efficiency. The particulate matter density is 1300 kg/m3. Depth and width of chamber is 2.2 m each. Determine: **05**

i) Length of chamber required without trays.

ii) Length of chamber with 10 trays.

Q.7 **a)** An ESP with overall spacing of 0.24 cm and mean gas velocity 1.4 m/s has collector plate area of 5500 m^2 gives efficiency of 96% in treating 200 m3/s of gas. To achieve 98% and 99% efficiency. What should be plate area required? **05**

b) Explain working of ESP with neat sketch. **04**

Q.8 **a)** Write 'absorption' as a gaseous control technique. **04**

b) Explain decibel scale with sample sound level and frequency of sound waves. **05**

Q.9 **Write short notes. (Any Three)** **09**

a) National ambient quality standards for noise.

b) Sources of noise.

c) Instrumentation Requirements in noise.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) What is the primary purpose of insurance in disaster risk management?
a) To create financial burdens for individuals
b) To transfer and manage the financial risks associated with disasters
c) To discourage risk reduction efforts
d) To ignore the impact of disasters

2) Which of the following best describes *Rehabilitation* in disaster management?
a) Rebuilding only the physical infrastructure
b) Temporary arrangement for relief work
c) Long-term process to restore normal life and livelihood
d) Providing early warning systems

3) The National Disaster Management Authority (NDMA) is headed by _____.
a) Prime Minister of India b) President of India
c) Governor of States d) Chief Minister of States

4) Disaster Management includes _____.
a) Mitigation b) Reconstruction
c) Rehabilitation d) All of the Above

5) Which traditional construction material is known for its earthquake resistance?
a) Bamboo b) Mud bricks
c) Timber d) Concrete

6) Fiscal discipline refers to _____.
   a) Strict control over public spending
   b) Generous spending on public projects
   c) Reducing taxes without considering the budget
   d) Unrestricted borrowing for development projects

7) What is the primary goal of socio-economic rehabilitation?
   a) Preservation of cultural heritage
   b) Restoration of physical health
   c) Restoration of economic and social well-being
   d) Implementation of new policies

8) In the aftermath of a natural disaster, which aspect of socio-economic rehabilitation is crucial for long-term resilience?
   a) Short-term financial aid
   b) Infrastructure reconstruction
   c) Community empowerment
   d) Technological advancements

9) Which phase of disaster management involves restoring the affected community to a stable and sustainable state?
   a) Response
   b) Preparedness
   c) Recovery
   d) Mitigation

10) How can microfinance initiatives contribute to livelihood restoration?
   a) By creating dependency on external aid
   b) By promoting unequal distribution of resources
   c) By providing financial support for small businesses and entrepreneurs
   d) By discouraging local entrepreneurship

11) The *recovery phase* in disaster management primarily aims at _____.
   a) Conducting rescue operations
   b) Rebuilding and restoring normal life
   c) Providing early warning systems
   d) Conducting mock drills

12) What is a primary concern regarding drinking water during a disaster?
   a) Over hydration
   b) Contamination
   c) Lack of taste
   d) Excessive fluoride content

13) What is the purpose of a shear wall in earthquake-resistant house?
   a) To resist wind loads
   b) To provide insulation
   c) To enhance aesthetics
   d) To resist lateral forces during earthquakes

14) Community-Based Disaster Management (CBDM) mainly emphasizes _____.

a) External expert-driven response
b) Top-down decision-making
c) Empowering local communities to manage disasters
d) Ignoring traditional knowledge

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The *recovery phase* in disaster management primarily aims at _____.
a) Conducting rescue operations
b) Rebuilding and restoring normal life
c) Providing early warning systems
d) Conducting mock drills

2) What is a primary concern regarding drinking water during a disaster?
a) Over hydration b) Contamination
c) Lack of taste d) Excessive fluoride content

3) What is the purpose of a shear wall in earthquake-resistant house?
a) To resist wind loads
b) To provide insulation
c) To enhance aesthetics
d) To resist lateral forces during earthquakes

4) Community-Based Disaster Management (CBDM) mainly emphasizes _____.
a) External expert-driven response
b) Top-down decision-making
c) Empowering local communities to manage disasters
d) Ignoring traditional knowledge

5) What is the primary purpose of insurance in disaster risk management?
a) To create financial burdens for individuals
b) To transfer and manage the financial risks associated with disasters
c) To discourage risk reduction efforts
d) To ignore the impact of disasters

6) Which of the following best describes *Rehabilitation* in disaster management?
   a) Rebuilding only the physical infrastructure
   b) Temporary arrangement for relief work
   c) Long-term process to restore normal life and livelihood
   d) Providing early warning systems

7) The National Disaster Management Authority (NDMA) is headed by _____.
   a) Prime Minister of India
   b) President of India
   c) Governor of States
   d) Chief Minister of States

8) Disaster Management includes _____.
   a) Mitigation
   b) Reconstruction
   c) Rehabilitation
   d) All of the Above

9) Which traditional construction material is known for its earthquake resistance?
   a) Bamboo
   b) Mud bricks
   c) Timber
   d) Concrete

10) Fiscal discipline refers to _____.
   a) Strict control over public spending
   b) Generous spending on public projects
   c) Reducing taxes without considering the budget
   d) Unrestricted borrowing for development projects

11) What is the primary goal of socio-economic rehabilitation?
   a) Preservation of cultural heritage
   b) Restoration of physical health
   c) Restoration of economic and social well-being
   d) Implementation of new policies

12) In the aftermath of a natural disaster, which aspect of socio-economic rehabilitation is crucial for long-term resilience?

Fourth. Y. (B.Tech.) (Civil Engineering) (Sem- I) (New) (CBCS)
Examination: March/April – 2026
Recovery, Rehabilitation and Reconstruction (BTN01717)

Day & Date: Monday, 11-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Fiscal discipline refers to _____.
a) Strict control over public spending
b) Generous spending on public projects
c) Reducing taxes without considering the budget
d) Unrestricted borrowing for development projects

2) What is the primary goal of socio-economic rehabilitation?
a) Preservation of cultural heritage
b) Restoration of physical health
c) Restoration of economic and social well-being
d) Implementation of new policies

3) In the aftermath of a natural disaster, which aspect of socio-economic rehabilitation is crucial for long-term resilience?
a) Short-term financial aid b) Infrastructure reconstruction
c) Community empowerment d) Technological advancements

4) Which phase of disaster management involves restoring the affected community to a stable and sustainable state?
a) Response b) Preparedness
c) Recovery d) Mitigation

5) How can microfinance initiatives contribute to livelihood restoration?
a) By creating dependency on external aid
b) By promoting unequal distribution of resources
c) By providing financial support for small businesses and entrepreneurs
d) By discouraging local entrepreneurship

6) The *recovery phase* in disaster management primarily aims at _____.
   a) Conducting rescue operations
   b) Rebuilding and restoring normal life
   c) Providing early warning systems
   d) Conducting mock drills

7) What is a primary concern regarding drinking water during a disaster?
   a) Over hydration
   b) Contamination
   c) Lack of taste
   d) Excessive fluoride content

8) What is the purpose of a shear wall in earthquake-resistant house?
   a) To resist wind loads
   b) To provide insulation
   c) To enhance aesthetics
   d) To resist lateral forces during earthquakes

9) Community-Based Disaster Management (CBDM) mainly emphasizes _____.
   a) External expert-driven response
   b) Top-down decision-making
   c) Empowering local communities to manage disasters
   d) Ignoring traditional knowledge

10) What is the primary purpose of insurance in disaster risk management?
   a) To create financial burdens for individuals
   b) To transfer and manage the financial risks associated with disasters
   c) To discourage risk reduction efforts
   d) To ignore the impact of disasters

11) Which of the following best describes *Rehabilitation* in disaster management?
   a) Rebuilding only the physical infrastructure
   b) Temporary arrangement for relief work
   c) Long-term process to restore normal life and livelihood
   d) Providing early warning systems

12) The National Disaster Management Authority (NDMA) is headed by _____.
   a) Prime Minister of India
   b) President of India
   c) Governor of States
   d) Chief Minister of States

13) Disaster Management includes _____.
   a) Mitigation
   b) Reconstruction
   c) Rehabilitation
   d) All of the Above

14) Which traditional construction material is known for its earthquake resistance?

a) Bamboo
b) Mud bricks
c) Timber
d) Concrete

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable data wherever needed and mention it clearly.
5) Draw neat sketches wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Solve following Multiple Choice Questions. 14

1) _____ of the following are components of bridges.
a) Pier b) Abutment
c) Foundation d) All of these

2) Factors affecting Selection of Type of Bridge and Bridge Site _____.
a) The nature and bed conditions of river or stream
b) Hydraulic data collected at the site
c) The climatic condition of the area
d) All of these

3) Types of Bridge Bearings are _____.
a) Fixed Bearings b) Elastomeric Bearings
c) Pot Bearings d) All of these

4) Types of grade separated structures are _____.
a) Overpass b) Under pass
c) Flyover d) All of these

5) Types of Bridge foundations are _____.
a) Caisson Foundation b) Pile foundation
c) Pier Foundation d) All of these

6) Steps involved in the Construction of Diaphragm Walls are _____.
a) Excavation Preparation b) Slurry Trench
c) Concrete Pouring d) All of these

7) Pipe jacking involves moving _____ to the ground.
a) Box b) Pipe
c) both a) and b) d) All of these

8) Launching girders for bridges involves the following steps _____.
   a) Planning and Design
   b) Fabrication
   c) Transportation to the Site
   d) All of these

9) Offshore platforms are _____.
   a) Structure built in the lake
   b) Structure built on the sea
   c) Structure built in the pond
   d) All of these

10) Material handling is _____.
   a) Process of change of material
   b) Process of transporting, lifting, and placing various construction materials and equipment
   c) Process of finding Quality of Construction Material
   d) Process of finding Quantity of Construction Material

11) Erecting lightweight components on tall structures in bridges requires _____.
   a) Engineering and Design
   b) Assembly and Connection
   c) Specialized Equipment
   d) All of these

12) _____ of the following is not type of well foundations.
   a) Box Caisson
   b) Open Caisson
   c) Ring Caisson
   d) Pneumatic Caisson

13) Ground improvement techniques are _____.
   a) Compaction
   b) Grouting
   c) Deep Soil Mixing
   d) All of these

14) What is the basis for PERT analysis?
   a) An optimistic time
   b) A pessimistic period of time
   c) The date that is most likely
   d) All options mentioned above

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) Which of the following is a fundamental principle of sustainable development?
a) Focusing solely on economic growth
b) Ignoring environmental concerns for rapid development
c) Ensuring that development meets the needs of the present without compromising the ability of future generations to meet their own needs
d) Prioritizing technology over social equity

2) The Clean Development Mechanism (CDM) aims to _____.
a) Reduce carbon emissions in developed countries only
b) Facilitate the transfer of technology to developing countries to help them meet sustainable development goals
c) Promote economic growth without regard to environmental Impacts
d) Increase the use of fossil fuels in developing countries

3) Which of the following best describes the Nexus between technology and sustainable development?
a) Technology only hinders the achievement of sustainability
b) Technology can provide innovative solutions to achieve sustainability goals
c) Technology is irrelevant in sustainable development
d) Technology focuses solely on economic advancement

4) Which of the following is one of the 5R concepts in solid waste management?
a) Recycle
b) Release
c) Reject
d) Recapture

5) What is the greenhouse effect?
   a) The cooling of the Earth due to greenhouse gases
   b) The process by which greenhouse gases trap heat in the atmosphere
   c) The natural process of eliminating waste materials
   d) The process of recycling atmospheric gases

6) How do carbon credits work in reducing greenhouse gas emissions?
   a) By allowing companies to trade physical carbon emissions
   b) By allowing companies to purchase credits to offset their emissions
   c) By reducing the cost of carbon-based products
   d) By removing carbon from the atmosphere

7) What is the primary goal of carbon trading?
   a) To reduce the overall cost of environmental protection
   b) To incentivize companies to reduce their carbon footprint through market-based mechanisms
   c) To promote the use of fossil fuels
   d) To eliminate the need for governmental environmental regulations

8) What does the concept of a circular economy focus on?
   a) Maximizing profit through resource exploitation
   b) Ensuring continuous consumption of natural resources
   c) Minimizing waste by reusing and recycling products and materials
   d) Reducing production costs by outsourcing materials

9) Bio-mimicking in environmental management refers to _____.
   a) Imitating biological systems to solve engineering problems
   b) Using synthetic materials to mimic natural processes
   c) Reproducing artificial ecosystems for research
   d) Emulating animal behavior to optimize processes

10) What is the primary principle behind the functioning of a fuel cell?
   a) Conversion of chemical energy directly into electricity
   b) Conversion of thermal energy into mechanical energy
   c) Conversion of nuclear energy into electricity
   d) Conversion of electrical energy into chemical energy

11) Which of the following is a major advantage of wind energy?
   a) It produces greenhouse gases
   b) It is highly dependent on fuel availability
   c) It is a renewable and clean source of energy
   d) It is more expensive than fossil fuels

12) What is the primary source of energy for small hydro plants?
   a) Wind
   b) Ocean tides
   c) Water flow from rivers or streams
   d) Geothermal heat

13) What does Green Engineering focus on?

a) Enhancing traditional industrial methods without considering environmental impacts
b) Integrating environmental principles into engineering design and processes
c) Increasing the carbon footprint of manufacturing processes
d) Reducing the use of renewable resources in industrial production

14) A sustainable city is characterized by _____.

a) Heavy reliance on fossil fuels
b) A large population with limited green spaces
c) Efficient use of resources, green spaces, and clean energy systems
d) Minimal public transportation options

Set **P**

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2026
Sustainable Engineering & Technology (BTN01719)

Day & Date: Monday, 11-05-2026 Max. Marks:56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 is compulsory in section I, and solve any two questions from the remaining. Q. No. 6 is compulsory in section II, and solve any two questions from the remaining
2) Figures to the right indicate full marks.
3) Assume suitable data whenever necessary and state it clearly.
4) Use of non- programmable calculator is allowed.

SECTION – I

Q.2	**a)**	What is sustainable development, and how does it contribute to achieving global well-being?	**05**
	b)	Describe the relationship between technology and sustainable development, providing examples of how technology can, support sustainability.	**05**
Q.3	**a)**	What are the Millennium Development Goals (MDGs), and how do they relate to the Sustainable Development Goals (SDGs)?	**05**
	b)	Describe the 5R concepts in solid waste management and provide examples of their application.	**04**
Q.4	**a)**	Discuss the causes and impacts of global warming on the environment and human societies.	**05**
	b)	Explain the greenhouse effect and its role in climate change.	**04**
Q.5	**a)**	Describe the mechanism of carbon credits and how they contribute to reducing global carbon emissions.	**05**
	b)	How does carbon trading function, and what role does it play in achieving emission reduction targets?	**04**

SECTION – II

Q.6	**a)**	Describe the process of bio-mimicking and how it is applied in environmental management.	**05**
	b)	What is an Environmental Impact Assessment (EIA), and why is it essential in planning new projects?	**05**
Q.7	**a)**	What are fuel cells, and how do they contribute to the production of clean energy?	**05**
	b)	Discuss the advantages and challenges of utilizing wind energy as a renewable energy source.	**04**
Q.8	**a)**	What are small hydro plants, and how do they help in the generation of renewable energy?	**05**
	b)	Describe the principles of sustainable urbanization and how they contribute to environmental and social sustainability.	**04**
Q.9	**a)**	What are the key features of sustainable cities, and how can they be designed to support both the environment and the community?	**05**
	b)	How can sustainable transport systems reduce the carbon footprint of urban areas and improve public health?	**04**

Seat No.	

Set **Q**

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2026
Sustainable Engineering & Technology (BTN01719)

Day & Date: Monday, 11-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) What does the concept of a circular economy focus on?
a) Maximizing profit through resource exploitation
b) Ensuring continuous consumption of natural resources
c) Minimizing waste by reusing and recycling products and materials
d) Reducing production costs by outsourcing materials

2) Bio-mimicking in environmental management refers to _____.
a) Imitating biological systems to solve engineering problems
b) Using synthetic materials to mimic natural processes
c) Reproducing artificial ecosystems for research
d) Emulating animal behavior to optimize processes

3) What is the primary principle behind the functioning of a fuel cell?
a) Conversion of chemical energy directly into electricity
b) Conversion of thermal energy into mechanical energy
c) Conversion of nuclear energy into electricity
d) Conversion of electrical energy into chemical energy

4) Which of the following is a major advantage of wind energy?
a) It produces greenhouse gases
b) It is highly dependent on fuel availability
c) It is a renewable and clean source of energy
d) It is more expensive than fossil fuels

5) What is the primary source of energy for small hydro plants?
a) Wind
b) Ocean tides
c) Water flow from rivers or streams
d) Geothermal heat

6) What does Green Engineering focus on?
   a) Enhancing traditional industrial methods without considering environmental impacts
   b) Integrating environmental principles into engineering design and processes
   c) Increasing the carbon footprint of manufacturing processes
   d) Reducing the use of renewable resources in industrial production

7) A sustainable city is characterized by _____.
   a) Heavy reliance on fossil fuels
   b) A large population with limited green spaces
   c) Efficient use of resources, green spaces, and clean energy systems
   d) Minimal public transportation options

8) Which of the following is a fundamental principle of sustainable development?
   a) Focusing solely on economic growth
   b) Ignoring environmental concerns for rapid development
   c) Ensuring that development meets the needs of the present without compromising the ability of future generations to meet their own needs
   d) Prioritizing technology over social equity

9) The Clean Development Mechanism (CDM) aims to _____.
   a) Reduce carbon emissions in developed countries only
   b) Facilitate the transfer of technology to developing countries to help them meet sustainable development goals
   c) Promote economic growth without regard to environmental Impacts
   d) Increase the use of fossil fuels in developing countries

10) Which of the following best describes the Nexus between technology and sustainable development?
   a) Technology only hinders the achievement of sustainability
   b) Technology can provide innovative solutions to achieve sustainability goals
   c) Technology is irrelevant in sustainable development
   d) Technology focuses solely on economic advancement

11) Which of the following is one of the 5R concepts in solid waste management?
   a) Recycle
   b) Release
   c) Reject
   d) Recapture

12) What is the greenhouse effect?
   a) The cooling of the Earth due to greenhouse gases
   b) The process by which greenhouse gases trap heat in the atmosphere
   c) The natural process of eliminating waste materials
   d) The process of recycling atmospheric gases

13) How do carbon credits work in reducing greenhouse gas emissions?
   a) By allowing companies to trade physical carbon emissions
   b) By allowing companies to purchase credits to offset their emissions
   c) By reducing the cost of carbon-based products
   d) By removing carbon from the atmosphere

14) What is the primary goal of carbon trading?
   a) To reduce the overall cost of environmental protection
   b) To incentivize companies to reduce their carbon footprint through market-based mechanisms
   c) To promote the use of fossil fuels
   d) To eliminate the need for governmental environmental regulations

Examination: March/April – 2026
Civil Engineering System Analysis and Design (BTN01720)

Day & Date: Monday, 11-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data whenever necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) _____ is set of components that work together for overall objectives.
a) System b) Goals
c) Objective d) None of these

2) _____ is termed as performance measure, simply an objective that stated in measurable terms.
a) Measure of Effectiveness b) Dimension
c) Planning d) None

3) Which of the following is not property of desired MOE?
a) Appropriateness b) Measurability
c) Realistic d) Cost Saving

4) The super systems are _____.
a) Higher level systems b) Lower level systems
c) Both d) None of these

5) _____ models describe the amount of money needed to undertake specific action.
a) Demand b) Cost
c) Real d) Supply

6) Which of the following is tool for task of description?
a) Probability b) Statistics
c) Economics d) All of the above

7) _____ models are that use the mathematics of decision making to choose a course of action, design or policy.
a) Prescriptive b) Descriptive
c) Analog d) Real

8) _____ provides basis for predicting the need for proposed civil system.
a) Planning
b) Need Assessment
c) Controlling
d) None

9) A _____ may be defined as deficiency, an unfulfilled requirement, lack of product that is necessary.
a) Supply
b) Need
c) None
d) All of these

10) Which of the following is the stakeholder of system?
a) Users
b) Community
c) System Owner
d) All

11) From _____ perspective, the system inputs considered in system planning could have short term, moderate term & long term effects.
a) Temporal
b) Operational
c) Phase
d) None

12) Which of the following is classification of design?
a) Selection Design
b) Configuration Design
c) Both of the above
d) None of the above

13) In Preliminary Design, analysis & evaluation of design is done on _____ stage.
a) Detailed
b) Conceptual
c) Multiple
d) Preliminary

14) In _____ design, analysis & evaluation of alternative designs is done in details.
a) Conceptual
b) Preliminary
c) Detailed
d) None

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Civil Engineering System Analysis and Design (BTN01720)

Day & Date: Monday, 11-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

SECTION – I

Q.2 Solve Any Four of following. **20**

a) Explain various classifications of system.

b) Explain concept of process of system development.

c) Classify different models with examples.

d) Explain examples of tasks at each phase of civil system development.

e) Explain hierarchy of desired outcomes: Values, Goals, Objectives.

f) Explain different types of outcomes in system.

g) Explain Monetary & non-monetary outcomes.

Q.3 Write Any Two of the following. **08**

a) Explain concept of system theory.

b) Write a short note on system evaluation.

c) Explain Tools used for task of system description.

d) Explain role of operations research & decision making in system development.

SECTION – II

Q.4 Solve Any Four of following. **20**

a) Explain mechanisms of user target with example.

b) Explain dimensions of system planning.

c) Explain principles of system planning.

d) Explain concept of need assessment. Also explain types of needs.

e) Explain different types of system design.

f) Write applications of system design.

Q.5 Write Any Two of following. **08**

a) Explain process of system design in detail.

b) Explain process of system planning.

c) Explain different barriers in system planning.

1) _____ provides basis for predicting the need for proposed civil system.
a) Planning b) Need Assessment
c) Controlling d) None

2) A _____ may be defined as deficiency, an unfulfilled requirement, lack of product that is necessary.
a) Supply b) Need
c) None d) All of these

3) Which of the following is the stakeholder of system?
a) Users b) Community
c) System Owner d) All

4) From _____ perspective, the system inputs considered in system planning could have short term, moderate term & long term effects.
a) Temporal b) Operational
c) Phase d) None

5) Which of the following is classification of design?
a) Selection Design b) Configuration Design
c) Both of the above d) None of the above

6) In Preliminary Design, analysis & evaluation of design is done on _____ stage.
a) Detailed b) Conceptual
c) Multiple d) Preliminary

7) In _____ design, analysis & evaluation of alternative designs is done in details.
a) Conceptual b) Preliminary
c) Detailed d) None

8) _____ is set of components that work together for overall objectives.
a) System b) Goals
c) Objective d) None of these

9) _____ is termed as performance measure, simply an objective that stated in measurable terms.
a) Measure of Effectiveness b) Dimension
c) Planning d) None

10) Which of the following is not property of desired MOE?
a) Appropriateness b) Measurability
c) Realistic d) Cost Saving

11) The super systems are _____.
a) Higher level systems b) Lower level systems
c) Both d) None of these

12) _____ models describe the amount of money needed to undertake specific action.
a) Demand b) Cost
c) Real d) Supply

13) Which of the following is tool for task of description?
a) Probability b) Statistics
c) Economics d) All of the above

14) _____ models are that use the mathematics of decision making to choose a course of action, design or policy.
a) Prescriptive b) Descriptive
c) Analog d) Real

Set **Q**

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Civil Engineering System Analysis and Design (BTN01720)

Day & Date: Monday, 11-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Make suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

SECTION – I

Q.2 Solve Any Four of following. **20**

a) Explain various classifications of system.

b) Explain concept of process of system development.

c) Classify different models with examples.

d) Explain examples of tasks at each phase of civil system development.

e) Explain hierarchy of desired outcomes: Values, Goals, Objectives.

f) Explain different types of outcomes in system.

g) Explain Monetary & non-monetary outcomes.

Q.3 Write Any Two of the following. **08**

a) Explain concept of system theory.

b) Write a short note on system evaluation.

c) Explain Tools used for task of system description.

d) Explain role of operations research & decision making in system development.

SECTION – II

Q.4 Solve Any Four of following. **20**

a) Explain mechanisms of user target with example.

b) Explain dimensions of system planning.

c) Explain principles of system planning.

d) Explain concept of need assessment. Also explain types of needs.

e) Explain different types of system design.

f) Write applications of system design.

Q.5 Write Any Two of following. **08**

a) Explain process of system design in detail.

b) Explain process of system planning.

c) Explain different barriers in system planning.

Set R

Fourth. Y. (B.Tech.) (Civil Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Civil Engineering System Analysis and Design (BTN01720)

Day & Date: Monday, 11-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data whenever necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) From _____ perspective, the system inputs considered in system planning could have short term, moderate term & long term effects.
a) Temporal b) Operational
c) Phase d) None

2) Which of the following is classification of design?
a) Selection Design b) Configuration Design
c) Both of the above d) None of the above

3) In Preliminary Design, analysis & evaluation of design is done on _____ stage.
a) Detailed b) Conceptual
c) Multiple d) Preliminary

4) In _____ design, analysis & evaluation of alternative designs is done in details.
a) Conceptual b) Preliminary
c) Detailed d) None

5) _____ is set of components that work together for overall objectives.
a) System b) Goals
c) Objective d) None of these

6) _____ is termed as performance measure, simply an objective that stated in measurable terms.
a) Measure of Effectiveness b) Dimension
c) Planning d) None

7) Which of the following is not property of desired MOE?
a) Appropriateness b) Measurability
c) Realistic d) Cost Saving

8) The super systems are _____.
a) Higher level systems b) Lower level systems
c) Both d) None of these

9) _____ models describe the amount of money needed to undertake specific action.
a) Demand b) Cost
c) Real d) Supply

10) Which of the following is tool for task of description?
a) Probability b) Statistics
c) Economics d) All of the above

11) _____ models are that use the mathematics of decision making to choose a course of action, design or policy.
a) Prescriptive b) Descriptive
c) Analog d) Real

12) _____ provides basis for predicting the need for proposed civil system.
a) Planning b) Need Assessment
c) Controlling d) None

13) A _____ may be defined as deficiency, an unfulfilled requirement, lack of product that is necessary.
a) Supply b) Need
c) None d) All of these

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct alternatives from the options. 20

1) Which of the following is not true with respect to ensure a safety design?
a) The maximum requirement is that a design must comply with the applicable laws.
b) An acceptable design must meet the standard of "accepted engineering practice."
c) Alternative designs that are potentially safer must be explored.
d) Engineer must attempt to foresee potential misuses of the product by the consumer and must design to avoid these problems

2) In _____, a neutral third party assists the disputing parties in reaching a settlement of their dispute.
a) Infiltration b) Arbitration
c) Mediation d) Negotiation

3) Which of the following stakeholder has the responsibility of prescribing norms to ensure safety of the citizens?
a) Government b) Professional Societies
c) Standardization Bodies d) All of these

4) What does a trademark protect?
a) An invention
b) Logos, names and brands
c) The look, shape and feel of a product
d) A secret formula

5) How long do patents usually last for?
a) 10 years b) 20 years
c) 40 years d) 60 years

6) Safety provisions in Indian Factory Act does not cover _____.
a) Fencing of machinery b) Precaution against fire
c) Lunch rooms d) Protection eyes

7) Which of the following matter are not referred to arbitration?
a) Civil matters b) Matrimonial matters
c) Banking matters d) Property matters

8) What is an ethical dilemma?
a) an issue caused by not following guidelines
b) conflict between what's right and what's wrong
c) same as a professional dilemma
d) moral conflict between values

9) _____ is the concept that describe the beliefs of an individual or culture.
a) Values b) Attitude
c) Behaviour d) Personality

10) In the _____ right conduct for an individual is regarded as whatever directly benefits oneself.
a) pre-conventional level b) post-conventional level
c) conventional level d) Final level

11) An agreement not enforceable by law is said to be _____.
a) A contract b) Void
c) A voidable contract d) A void contract

12) We use which among the following technique in business organizations and firms for protecting the IT assets?
a) Ethical hacking b) Unethical hacking
c) Fixing bugs d) Internal data-breach

13) A contract consists of _____.
a) Mutual promises or agreement enforceable by law
b) Agreement not enforceable by law
c) Involuntary obligations
d) None of these

14) Which of the following is not true with respect to Titanic disaster?
a) Adequate Life boats
b) Ship sailed at high speed in the night
c) It had hit against an ice berg
d) The ship tore into two parts due to hitting against iceberg

15) Which professional body certifies engineers in India?
a) Indian Roads Congress (IRC)
b) Indian Institute of Architects (IIA)
c) Institution of Engineers (India)
d) Engineers Council of India (ECI)

16) Contractors in the construction sector are primarily governed by _____.
a) Regulatory Acts, standards, and contracts
b) Clients' preferences
c) International standards
d) Manufacturer's guidelines

17) Which of the following is an example of a standardization body in India?
a) Ministry of Housing and Urban Affairs
b) Bureau of Indian Standards (BIS)
c) National Institute of Urban Affairs (NIUA)
d) Indian Roads Congress (IRC)

18) What is the primary responsibility of consultants in the construction industry?
a) Designing the project
b) Certifying the quality of materials
c) Providing professional expertise, governed by bodies like CEAI
d) Overseeing construction work

19) Which of the following is NOT a feature of a valid contract?
a) Offer and acceptance
b) Legal consideration
c) Freedom of privacy in contract
d) Illegal objectives

20) Prime contracts and subcontracts differ in _____.
a) The method of negotiation
b) The legal authority to execute
c) The nature of obligations between parties
d) The type of dispute resolution used

17) Which of the following matter are not referred to arbitration?

a) Civil matters
b) Matrimonial matters
c) Banking matters
d) Property matters

18) What is an ethical dilemma?

a) an issue caused by not following guidelines
b) conflict between what's right and what's wrong
c) same as a professional dilemma
d) moral conflict between values

19) _____ is the concept that describe the beliefs of an individual or culture.

a) Values
b) Attitude
c) Behaviour
d) Personality

20) In the _____ right conduct for an individual is regarded as whatever directly benefits oneself.

a) pre-conventional level
b) post-conventional level
c) conventional level
d) Final level

Set **R**

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Professional Practice, Law & Ethics (BTN01801)

Day & Date: Thursday, 14-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) Solve any two questions from Section I.
2) Solve any two questions from Section II.
3) Figures to the right indicate full marks.
4) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2 **a)** What role does contract documentation play in ensuring the enforcement of contract terms? **10**

b) State and explain Professional bodies certifying and offering platform for Civil engineers. **10**

Q.3 **a)** Define the terms: - **10**
i) Professional Ethics ii) contract variations
iii) Whistleblowing iv) Significance of Notice to Proceed

b) State Code of Ethics as defined in the website of Institution of Engineers. **10**

Q.4 **a)** Describe principle of contract management, also discuss Indian Contract Act, 1972. **10**

b) What legal provisions apply when one party in a joint venture defaults on their obligations? **10**

Section – II

Q.5 **a)** Discuss the role of confidentiality in arbitration. How is it maintained, and why is it important? **10**

b) Distinguish between Conciliation, Negotiation, Mediation and Arbitration. **10**

Q.6 **a)** What challenges do civil engineers face with respect to labour management and how can they overcome them? **10**

b) Discuss how the provisions of the Workmen's Compensation Act protect workers on construction sites. **10**

Q.7 **a)** Discuss the process for initiating legal action for infringement of copyrights, patents, and trademarks in India. **10**

b) Explain Copyright in India including Historical evolution of Copy Rights Act, 1957. **10**

Seat No.		Set	S

Examination: March/April – 2026
Professional Practice, Law & Ethics (BTN01801)

Day & Date: Thursday, 14-05-2026 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicate full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct alternatives from the options. 20

1) Contractors in the construction sector are primarily governed by _____.
a) Regulatory Acts, standards, and contracts
b) Clients' preferences
c) International standards
d) Manufacturer's guidelines

2) Which of the following is an example of a standardization body in India?
a) Ministry of Housing and Urban Affairs
b) Bureau of Indian Standards (BIS)
c) National Institute of Urban Affairs (NIUA)
d) Indian Roads Congress (IRC)

3) What is the primary responsibility of consultants in the construction industry?
a) Designing the project
b) Certifying the quality of materials
c) Providing professional expertise, governed by bodies like CEAI
d) Overseeing construction work

4) Which of the following is NOT a feature of a valid contract?
a) Offer and acceptance
b) Legal consideration
c) Freedom of privacy in contract
d) Illegal objectives

5) Prime contracts and subcontracts differ in _____.
   a) The method of negotiation
   b) The legal authority to execute
   c) The nature of obligations between parties
   d) The type of dispute resolution used

6) Which of the following is not true with respect to ensure a safety design?
   a) The maximum requirement is that a design must comply with the applicable laws.
   b) An acceptable design must meet the standard of “accepted engineering practice.”
   c) Alternative designs that are potentially safer must be explored.
   d) Engineer must attempt to foresee potential misuses of the product by the consumer and must design to avoid these problems

7) In _____, a neutral third party assists the disputing parties in reaching a settlement of their dispute.
   a) Infiltration
   b) Arbitration
   c) Mediation
   d) Negotiation

8) Which of the following stakeholder has the responsibility of prescribing norms to ensure safety of the citizens?
   a) Government
   b) Professional Societies
   c) Standardization Bodies
   d) All of these

9) What does a trademark protect?
   a) An invention
   b) Logos, names and brands
   c) The look, shape and feel of a product
   d) A secret formula

10) How long do patents usually last for?
   a) 10 years
   b) 20 years
   c) 40 years
   d) 60 years

11) Safety provisions in Indian Factory Act does not cover _____.
   a) Fencing of machinery
   b) Precaution against fire
   c) Lunch rooms
   d) Protection eyes

12) Which of the following matter are not referred to arbitration?
   a) Civil matters
   b) Matrimonial matters
   c) Banking matters
   d) Property matters

13) What is an ethical dilemma?
a) an issue caused by not following guidelines
b) conflict between what's right and what's wrong
c) same as a professional dilemma
d) moral conflict between values

14) _____ is the concept that describe the beliefs of an individual or culture.
a) Values
b) Attitude
c) Behaviour
d) Personality

15) In the _____ right conduct for an individual is regarded as whatever directly benefits oneself.
a) pre-conventional level
b) post-conventional level
c) conventional level
d) Final level

16) An agreement not enforceable by law is said to be _____.
a) A contract
b) Void
c) A voidable contract
d) A void contract

17) We use which among the following technique in business organizations and firms for protecting the IT assets?
a) Ethical hacking
b) Unethical hacking
c) Fixing bugs
d) Internal data-breach

18) A contract consists of _____.
a) Mutual promises or agreement enforceable by law
b) Agreement not enforceable by law
c) Involuntary obligations
d) None of these

19) Which of the following is not true with respect to Titanic disaster?
a) Adequate Life boats
b) Ship sailed at high speed in the night
c) It had hit against an ice berg
d) The ship tore into two parts due to hitting against iceberg

20) Which professional body certifies engineers in India?
a) Indian Roads Congress (IRC)
b) Indian Institute of Architects (IIA)
c) Institution of Engineers (India)
d) Engineers Council of India (ECI)

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) After finishing concrete surface must be kept _____.
a) Dry b) First dry it and then wet it
c) First wet it and then dry it d) Wet

2) Cracks in the concrete are bonded by the injection of ____ bonding components under pressure.
a) epoxy b) ether
c) acetylene d) resin

3) Factors which contribute to corrosion of reinforcement in concrete are _____.
a) formation of cracks in concrete
b) permeability of concrete and mortar
c) use of admixtures and pozzolonas
d) relative humidity

4) Remove a whole building or part of building in control way is known as _____.
a) restoration b) demolition
c) retrofitting d) maintenance

5) One of the testing equipment used for inspection is _____.
a) Strain gauge b) Measuring jar
c) Test tubes d) None of these

6) The method of deposition of concrete by jetting it with high velocity is called _____.
a) Dry mixing concrete b) shotcrete
c) motor replacement d) None of the above

7) _____ is/are Mechanical methods of demolishing.
a) Wrecking Ball b) Pusher Arm
c) Wire Rope Pulling d) All of the above

8) Activities which are repeated at relatively fixed intervals of time is known as _____.
a) Preventive Maintenance b) Special Maintenance
c) Routine Maintenance d) Emergency Maintenance

9) Special maintenance includes _____.
a) Provision of water proofing treatment on the roof
b) repair of internal roads and pavements
c) replacement water supply & sanitary units
d) All of the above

10) Rehabilitation is the _____ of an individual with a disability into society.
a) Re integration b) Removal
c) Addition d) None of the above

11) Who is responsible for the combination of the polymer particles?
a) monomer b) nanomer
c) tetramer d) crystal

12) Honey combing in concrete is caused due to _____.
a) Inadequate compaction b) Chemical reaction
c) Shock waves d) Lack of curing

13) Epoxy resins have _____.
a) poor mechanical strength b) poor thermal strength
c) low tensile strength d) none of the above

14) Which NDT test work on the principle of rebound of the elastic mass?
a) Hammer test b) Ultrasonic test
c) Chloride test d) None of the above

15) A fire detector cannot detect _____.
a) Radiation b) Heat
c) Light d) Smoke

16) pH Value of fresh concrete around _____.
a) 8 b) 9
c) 10 d) 12.5

17) Low velocity in ultrasonic pulse velocity testing indicates _____.

a) good concrete
b) fairly good concrete
c) poor concrete
d) very poor concrete

18) Which of the following is not a measure for the prevention of cracks?

a) Choice of material
b) Design of building
c) Construction techniques and practices
d) Aggregate with low coefficient of thermal expansion

19) Curing should be done for a minimum period of _____ days.

a) 7 to 10
b) 10 to 12
c) 15 to 20
d) 20 to 25

20) Which of the instrument is used for grouting _____.

a) Heating
b) Grout pump
c) Compressor
d) All of the above

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Solve. (Any Two) **12**

a) Write a note on methods of repairs of cracks in concrete.

b) Explain Strength-durability relationship in details.

c) Write a note on polymer modified concrete.

Q.3 Solve. (Any Two) **16**

a) Explain underpinning and shoring.

b) Explain Ferrocement concrete.

c) Define Corrosion inhibitor & Give some examples for corrosion inhibitors?

Q.4 Solve. (Any Three) **12**

a) What are the uses of Polymer concrete?

b) Define - Repair, Maintenance.

c) How deterioration occurs due to corrosion?

d) How can use prevent the effect of freezing and thawing in concrete?

Section – II

Q.5 Solve. (Any Two) **16**

a) Give a brief note preliminary investigation before demolition of a structure.

b) Give a short note on epoxy coatings.

c) Describe with neat sketch the repair techniques when the structure is subjected to cracking & corrosion problem.

Q.6 Solve. (Any Two) **12**

a) Write a note on repairs in underwater structures.

b) Write short notes on demolition by hand.

c) Explain the retrofitting techniques used in repair of columns & slabs.

Q.7 Solve. (Any Three) **12**

a) Write short notes on overlay.

b) Write short notes on nibblers.

c) Write short notes on blanketing.

d) Write short notes on balling machine.

a) Provision of water proofing treatment on the roof
b) repair of internal roads and pavements
c) replacement water supply & sanitary units
d) All of the above

15) Rehabilitation is the _____ of an individual with a disability into society.
a) Re integration b) Removal
c) Addition d) None of the above

16) Who is responsible for the combination of the polymer particles?
a) monomer b) nanomer
c) tetramer d) crystal

17) Honey combing in concrete is caused due to _____.

a) Inadequate compaction
b) Chemical reaction
c) Shock waves
d) Lack of curing

18) Epoxy resins have _____.

a) poor mechanical strength
b) poor thermal strength
c) low tensile strength
d) none of the above

19) Which NDT test work on the principle of rebound of the elastic mass?

a) Hammer test
b) Ultrasonic test
c) Chloride test
d) None of the above

20) A fire detector cannot detect _____.

a) Radiation
b) Heat
c) Light
d) Smoke

Set S

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Repairs & Rehabilitation of Structures (BTN01803)

Day & Date: Monday, 18-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Solve. (Any Two) **12**

a) Write a note on methods of repairs of cracks in concrete.

b) Explain Strength-durability relationship in details.

c) Write a note on polymer modified concrete.

Q.3 Solve. (Any Two) **16**

a) Explain underpinning and shoring.

b) Explain Ferrocement concrete.

c) Define Corrosion inhibitor & Give some examples for corrosion inhibitors?

Q.4 Solve. (Any Three) **12**

a) What are the uses of Polymer concrete?

b) Define - Repair, Maintenance.

c) How deterioration occurs due to corrosion?

d) How can use prevent the effect of freezing and thawing in concrete?

Section – II

Q.5 Solve. (Any Two) **16**

a) Give a brief note preliminary investigation before demolition of a structure.

b) Give a short note on epoxy coatings.

c) Describe with neat sketch the repair techniques when the structure is subjected to cracking & corrosion problem.

Q.6 Solve. (Any Two) **12**

a) Write a note on repairs in underwater structures.

b) Write short notes on demolition by hand.

c) Explain the retrofitting techniques used in repair of columns & slabs.

Q.7 Solve. (Any Three) **12**

a) Write short notes on overlay.

b) Write short notes on nibblers.

c) Write short notes on blanketing.

d) Write short notes on balling machine.

Disaster Management (BTN01808)

Day & Date: Monday, 18-05-2026 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct Answer. **20**

1) What is the primary difference between environmental hazards and environmental disasters? **02**
a) Magnitude of impact
b) Frequency of occurrence
c) Duration of the event
d) Geographic location

2) The tectonic condition that often leads to landslides is _____. **01**
a) Divergent plate boundaries
b) Convergent plate boundaries
c) Transform faults
d) None of these

3) Which of the following is NOT a characteristic of earthquake hazards? **01**
a) Seismic waves
b) Volcanic eruptions
c) Seismic zones
d) Vulnerability assessment

4) The type of cyclone most common in India is _____. **02**
a) Tornado
b) Tropical cyclone
c) Extratropical cyclone
d) Dust storm

5) What are the three stages of disaster management? **01**
a) Preparedness, Response, Recovery
b) Prevention, Preparedness, Recovery
c) Preparedness, Mitigation, Response
d) Response, Recovery, Rehabilitation

6) Which of the following is an approach to mitigate earthquake damage? **01**

a) Zoning regulations b) Cloud seeding
c) Reforestation d) Dredging

7) What is one measure of adjustment to natural hazards? **02**

a) Immediate relief measures
b) Predictability of disasters
c) Land use zoning
d) Disaster-resistant construction

8) The process of retrofitting is a part of which disaster stage? **01**

a) Preparedness b) Mitigation
c) Rehabilitation d) Warning

9) Disaster Mitigation What role do GIS and GPS applications play in disaster mitigation? **01**

a) Monitoring disaster recovery efforts
b) Providing real-time information during disasters
c) Identifying vulnerable populations
d) Assessing environmental damage

10) Disaster-resistant house construction focuses on: _____. **02**

a) Energy efficiency
b) Resilience against hazards
c) Cost reduction
d) Urban aesthetics

11) Which of the following is a characteristic of volcanic eruptions? **01**

a) Seismic waves b) Lava flow
c) Landslides d) Tornadoes

12) The primary objective of immediate relief measures is to _____. **01**

a) Prevent future disasters
b) Restore normalcy quickly
c) Conduct research
d) Implement long-term strategies

13) Which national agency is primarily responsible for coordinating disaster response efforts in India? **02**

a) Indian Red Cross Society
b) National Institute of Disaster Management
c) National Civil Defense Organization
d) Ministry of Environment, Forest and Climate Change

14) Which of the following is an example of a natural hazard adjustment measure? **02**

a) Evacuation planning b) Urbanization
c) Agricultural expansion d) Deforestation

MCQ/Objective Type Questions

Duration: 30 Minutes Marks :20

Q.1 Choose the correct Answer. 20

1) _____ is generally used to summarize specific expert opinions to develop parameter weight for different water quality index.
a) Streeter Phelps method b) Le Chatelier's method
c) Delphi method d) Newton method

2) Ground water models are used to predict the effect of hydrological changes on the behavior of _____.
a) Soil water zone b) Aquifer
c) Capillary zone d) Intermediate zone

3) The density of ambient water at room temperature 20-25oC is _____.
a) 1.98 g/cm3 b) 1 g/cm3
c) 0.99 g/cm3 d) 0.5 g/cm3

4) Water quality index is one of the most used tools to describe _____.
a) Water quality b) Salinity
c) Physical characteristics d) BOD level

5) _____ are used to make predictions and conclusions based on how two random variables are connected.
a) Casual Models b) Simple Models
c) Statistical models d) Stochastic Models

6) The diffusion of pollutants by turbulence related to temperature, stratification and wind field leads to _____.
a) Stability class b) Smog
c) Biological change in air d) Physical change in air

7) _____ refers to a disposal pattern of gaseous pollutants in atmosphere depending upon wind condition, atmospheric stability and vertical temperature gradient.

a) Plume behaviour
b) Dispersion
c) Air Emission
d) Lapse rate

8) _____ take the pollutant concentration to distribute in both horizontal and vertical aspects.

a) Atmospheric model
b) Transport model
c) Gaussian model
d) Diffusion model

9) _____ is a movement of particles from high concentration to low concentration, resulting in equal distribution of substances.

a) Diffusion
b) Dispersion
c) Emission
d) Transportation

10) _____ is a biological process in which certain bacteria are capable of converting atmospheric nitrogen to ammonia.

a) Denitrification
b) Ammonification
c) Nitrogen fixation
d) Assimilation

11) The behaviour and dispersion of plume entirely depend on _____.

a) Adiabatic Lapse Rate
b) Environmental Lapse Rate
c) Sub Adiabatic Lapse Rate
d) Standard Temperature Lapse Rate

12) _____ Concentration such as CO and SO_2 forecast due to their relative inertness.

a) Non-reactive models
b) Emission Standards
c) Meteorology
d) Ambient air

13) _____ is a difference in wind speed or direction over short distance in Atmosphere.

a) Atmospheric stability
b) Temperature gradient
c) Wind shear
d) Solar radiation

14) _____ is typically used for predicting pollutant levels under “worst scenarios”.

a) Long term modelling
b) Short term modelling
c) Intermediate modelling
d) Substandard modelling

15) The atmospheric stability is related to the variation with altitude of _____.

a) Temperature
b) Pressure
c) Humidity
d) All of above

16) _____ is an application of conservation of mass to the analysis of physical system.

a) Mass balance
b) Rate Constants
c) Conservation of mass
d) Law of mass action

17) The monitoring and evaluation of ambient air quality is first important steps in _____air pollution.

a) Rapid mixing
b) Refraction
c) Agglomeration
d) Controlling

18) WQI concept is based on the factor _____.

a) Parameter selection for measurement
b) Transformation and raw data parameter
c) Aggregation of sub index values
d) All of above

19) The object of ambient water quality programs is to ensure water quality monitoring _____.

a) Toxic Control
b) Quality assurance and quality control
c) Standard quantity
d) Pollution control

20) _____ equation is used as water quality model to describe decrease of DO content in a river along a certain distance by degradation of BOD.

a) Delphi method
b) Streeter Phelps
c) Le Chatelier's
d) Darcy

Water and Air Quality Modelling (BTN01809)

Day & Date: Monday, 18-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no.2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from remaining.
3) Figures to the right indicate full marks.
4) Use of non-programable calculator is allowed.
5) Assume suitable data where needed and mention it clearly.

Section – I

Q.2	**a)**	Explain 4 main types of Statistical model.	**07**
	b)	Explain 5 major air pollutants and their health effects.	**07**
Q.3	**a)**	Explain the purpose of water quality model.	**07**
	b)	What factors affect the intensity of Oxygen sag curve?	**06**
Q.4	**a)**	What are limitations of ground water model?	**07**
	b)	How can meteorology help in controlling air pollutants?	**06**
Q.5	**a)**	Explain with neat sketch how Oxygen Sag Curve is created.	**07**
	b)	Write Short Notes on. i) Benefits of Model Making ii) Casual Model	**06**

Section – II

Q.6	**a)**	Explain the features of Gaussian Plume Model.	**07**
	b)	Explain the merits of Water Quality Index.	**07**
Q.7	**a)**	Explain Fixed box model with respect to wind blowing parallel to longer direction X.	**07**
	b)	Explain the advantages of Delphi model.	**06**

Q.8	**a)**	Explain Extreme value Theory for predicting Violations of Air Quality Standards.	**07**

Set Q

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
Water and Air Quality Modelling (BTN01809)

Day & Date: Monday, 18-05-2026 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks :20

Q.1 Choose the correct Answer. 20

1) The diffusion of pollutants by turbulence related to temperature, stratification and wind field leads to _____.
a) Stability class b) Smog
c) Biological change in air d) Physical change in air

2) _____ refers to a disposal pattern of gaseous pollutants in atmosphere depending upon wind condition, atmospheric stability and vertical temperature gradient.
a) Plume behaviour b) Dispersion
c) Air Emission d) Lapse rate

3) _____ take the pollutant concentration to distribute in both horizontal and vertical aspects.
a) Atmospheric model b) Transport model
c) Gaussian model d) Diffusion model

4) _____ is a movement of particles from high concentration to low concentration, resulting in equal distribution of substances.
a) Diffusion b) Dispersion
c) Emission d) Transportation

5) _____ is a biological process in which certain bacteria are capable of converting atmospheric nitrogen to ammonia.
a) Denitrification b) Ammonification
c) Nitrogen fixation d) Assimilation

6) The behaviour and dispersion of plume entirely depend on _____.
a) Adiabatic Lapse Rate
b) Environmental Lapse Rate
c) Sub Adiabatic Lapse Rate
d) Standard Temperature Lapse Rate

7) _____ Concentration such as CO and SO_2 forecast due to their relative inertness.
a) Non-reactive models
b) Emission Standards
c) Meteorology
d) Ambient air

8) _____ is a difference in wind speed or direction over short distance in Atmosphere.
a) Atmospheric stability
b) Temperature gradient
c) Wind shear
d) Solar radiation

9) _____ is typically used for predicting pollutant levels under “worst scenarios”.
a) Long term modelling
b) Short term modelling
c) Intermediate modelling
d) Substandard modelling

10) The atmospheric stability is related to the variation with altitude of _____.
a) Temperature
b) Pressure
c) Humidity
d) All of above

11) _____ is an application of conservation of mass to the analysis of physical system.
a) Mass balance
b) Rate Constants
c) Conservation of mass
d) Law of mass action

12) The monitoring and evaluation of ambient air quality is first important steps in _____air pollution.
a) Rapid mixing
b) Refraction
c) Agglomeration
d) Controlling

13) WQI concept is based on the factor _____.
a) Parameter selection for measurement
b) Transformation and raw data parameter
c) Aggregation of sub index values
d) All of above

14) The object of ambient water quality programs is to ensure water quality monitoring _____.
a) Toxic Control
b) Quality assurance and quality control
c) Standard quantity
d) Pollution control

15) _____ equation is used as water quality model to describe decrease of DO content in a river along a certain distance by degradation of BOD.

a) Delphi method
b) Streeter Phelps
c) Le Chatelier's
d) Darcy

16) _____ is generally used to summarize specific expert opinions to develop parameter weight for different water quality index.

a) Streeter Phelps method
b) Le Chatelier's method
c) Delphi method
d) Newton method

17) Ground water models are used to predict the effect of hydrological changes on the behavior of _____.

a) Soil water zone
b) Aquifer
c) Capillary zone
d) Intermediate zone

18) The density of ambient water at room temperature 20-25oC is _____.

a) 1.98 g/cm3
b) 1 g/cm3
c) 0.99 g/cm3
d) 0.5 g/cm3

19) Water quality index is one of the most used tools to describe _____.

a) Water quality
b) Salinity
c) Physical characteristics
d) BOD level

20) _____ are used to make predictions and conclusions based on how two random variables are connected.

a) Casual Models
b) Simple Models
c) Statistical models
d) Stochastic Models

Set Q

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Water and Air Quality Modelling (BTN01809)

Day & Date: Monday, 18-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no.2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from remaining.
3) Figures to the right indicate full marks.
4) Use of non-programable calculator is allowed.
5) Assume suitable data where needed and mention it clearly.

Section – I

Q.2 **a)** Explain 4 main types of Statistical model. **07**

b) Explain 5 major air pollutants and their health effects. **07**

Q.3 **a)** Explain the purpose of water quality model. **07**

b) What factors affect the intensity of Oxygen sag curve? **06**

Q.4 **a)** What are limitations of ground water model? **07**

b) How can meteorology help in controlling air pollutants? **06**

Q.5 **a)** Explain with neat sketch how Oxygen Sag Curve is created. **07**

b) Write Short Notes on. **06**
i) Benefits of Model Making
ii) Casual Model

Section – II

Q.6 **a)** Explain the features of Gaussian Plume Model. **07**

b) Explain the merits of Water Quality Index. **07**

Q.7 **a)** Explain Fixed box model with respect to wind blowing parallel to longer direction X. **07**

b) Explain the advantages of Delphi model. **06**

Q.8	**a)**	Explain Extreme value Theory for predicting Violations of Air Quality Standards.	**07**
	b)	What are the six categories of National Air Quality Index?	**06**
Q.9	**a)**	Explain theory of diffusion model and how it is useful in decision making.	**07**
	b)	Write Short Notes on: i) Air Quality Index ii) Fixed Box Model	**06**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct Answer. **20**

1) The specific surface (m^2/kg) of silica fume _____.
a) 370 b) 15000-30000
c) 45000 d) 420

2) What is the content of Al_2O_3 in fly ash?
a) 30-60% b) 1-7%
c) Up to 30% d) 15-30%

3) Silica fume is usually added during _____.
a) Before concrete production at a concrete plant
b) After concrete production at a concrete plant
c) Concrete production at a concrete plant
d) Curing

4) What is the content of unburnt fuel in fly ash?
a) 30-60% b) 15-30%
c) Up to 30% d) 1-7%

5) Concrete containing silica fume can have very _____ strength and can be very _____.
a) low, durable b) high, durable
c) low, brittle d) high, brittle

6) Glass fiber is made up from _____ individual filaments.
a) 100-200 b) 200-400
c) 500 d) >50

7) What is the thickness of the steel fiber after silting in mm?
a) 0.25 b) 0.3-0.5
c) 0.155-0.41 d) 0.25-0.90

8) In polymer impregnated concrete the moisture content of the aggregate shall not exceed from _____.
a) 0.1%-0.5% b) 1%-55
c) 10%-50% d) 15%

9) Higher resin dosage is recommended when using _____.
a) Coarse aggregate b) Fine aggregates
c) All in aggregates d) More cement

10) The addition of glass fibers are in the range of _____.
a) 0-6% b) 10%
c) 15-20% d) 20%-25%

11) Which test used for fiber reinforced concrete?
a) Slump test b) Compacting factor test
c) Flow table test d) Vee-Bee test

12) In fibre reinforced concrete, aspect ratio is the ratio of _____.
a) Fibre length/Diameter b) Fibre Diameter/length
c) Both a & b d) None of these

13) For concreting of heavily reinforced sections without vibration, the workability of concrete expressed as compacting factor should be _____.
a) 0.75-0.80 b) 0.80-0.85
c) 0.85-0.92 d) Above 0.92

14) Bulk density of the silica fume varies from _____.
a) 130-600 kg/m^3 b) 650 kg/mm^3
c) 75-150 kg/mm^3 d) 750 kg/mm^3

15) Which material is most commonly used as reinforcement in ferrocement structures?
a) Aluminum mesh b) Steel wire mesh
c) Plastic mesh d) Copper mesh

16) One of the major mechanical properties of ferrocement is _____.
a) Low tensile strength
b) Brittle behavior
c) High crack resistance and ductility
d) Poor durability

17) The primary reason for improved strength in HSC microstructure is _____.
a) Increased water-cement ratio
b) Reduced porosity and denser C-S-H gel
c) Larger aggregate size only
d) Use of more sand

18) Which material is commonly used in HSC to improve particle packing and strength?
a) Lime
b) Silica fume
c) Gypsum
d) Clay

19) In manufacturing HSC, the water-cement ratio is generally _____.
a) Above 0.60
b) Between 0.50-0.60
c) Very low, often below 0.35
d) Equal to 1.0

20) Ultra-High Strength Concrete (UHSC) generally has compressive strength above _____.
a) 40 MPa
b) 80 MPa
c) 120 MPa
d) 20 MPa

Seat No.	

Set **P**

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Concrete composites (BTN01810)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 Answer the following. (Any Two) **16**

a) Explain the concept of Fiber Reinforced Concrete (FRC) and discuss its need, advantages, and limitations in modem construction.

b) Describe the different types of fibers used in Fiber Reinforced Concrete and explain the properties of constituent materials required for effective FRC.

c) Describe the constituent materials used in ferrocement along with their required properties.

Q.3 Answer the following. (Any Four) **24**

a) Describe the properties of freshly mixed Fiber Reinforced Concrete and explain how fibers influence workability, segregation, and bleeding characteristics.

b) Explain the behavior of Fiber Reinforced Concrete under compression, tension, and flexure.

c) Discuss the practical applications of Fiber Reinforced Concrete in pavements, industrial floors, tunnels, precast elements, seismic-resistant structures.

d) Discuss various construction techniques of ferrocement and curing procedures.

e) Describe the role of wire mesh reinforcement in ferrocement and explain how mesh layers, spacing, and orientation affect structural performance.

f) What are the merits and demerits of ferrocement as a structural material compared to conventional reinforced concrete?

Section – II

Q.4 Answer the following. (Any Two) **16**

a) Explain silica fume and explain its origin, production process, and significance as a supplementary cementitious material in concrete technology.

b) Explain the chemical properties and composition of silica fume, explain the role of amorphous silicon dioxide (SiO_2) in improving concrete characteristics.

c) Explain the microstructure of High Strength Concrete. Discuss the factors affecting the strength development of HSC.

Q.5 Answer the following. (Any Four) **24**

a) Explain how silica fume improves the durability properties of concrete.

b) Discuss the advantages and limitations of using silica fume in concrete.

c) Define polymer concrete and explain its concept, need, and advantages over conventional cement concrete.

d) Discuss the properties of constituent materials used in polymer concrete.

e) Explain the mechanical and durability properties of High Strength Concrete and Ultra High Strength Concrete.

f) Define High Performance Concrete (HPC) and discuss its requirements, essential properties, and major design considerations.

a) 130-600 kg/m^3 b) 650 kg/mm^3
c) 75-150 kg/mm^3 d) 750 kg/mm^3

10) Which material is most commonly used as reinforcement in ferrocement structures?
a) Aluminum mesh b) Steel wire mesh
c) Plastic mesh d) Copper mesh

11) One of the major mechanical properties of ferrocement is _____.
a) Low tensile strength
b) Brittle behavior
c) High crack resistance and ductility
d) Poor durability

12) The primary reason for improved strength in HSC microstructure is _____.
a) Increased water-cement ratio
b) Reduced porosity and denser C-S-H gel
c) Larger aggregate size only
d) Use of more sand

13) Which material is commonly used in HSC to improve particle packing and strength?
a) Lime b) Silica fume
c) Gypsum d) Clay

14) In manufacturing HSC, the water-cement ratio is generally _____.
a) Above 0.60 b) Between 0.50-0.60
c) Very low, often below 0.35 d) Equal to 1.0

15) Ultra-High Strength Concrete (UHSC) generally has compressive strength above _____.
a) 40 MPa b) 80 MPa
c) 120 MPa d) 20 MPa

16) The specific surface (m^2/kg) of silica fume _____.
a) 370 b) 15000-30000
c) 45000 d) 420

17) What is the content of Al_2O_3 in fly ash?
a) 30-60% b) 1-7%
c) Up to 30% d) 15-30%

18) Silica fume is usually added during _____.
a) Before concrete production at a concrete plant
b) After concrete production at a concrete plant
c) Concrete production at a concrete plant
d) Curing

19) What is the content of unburnt fuel in fly ash?
a) 30-60%
b) 15-30%
c) Up to 30%
d) 1-7%

20) Concrete containing silica fume can have very _____ strength and can be very _____.
a) low, durable
b) high, durable
c) low, brittle
d) high, brittle

Set **Q**

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Concrete composites (BTN01810)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 Answer the following. (Any Two) **16**

a) Explain the concept of Fiber Reinforced Concrete (FRC) and discuss its need, advantages, and limitations in modem construction.

b) Describe the different types of fibers used in Fiber Reinforced Concrete and explain the properties of constituent materials required for effective FRC.

c) Describe the constituent materials used in ferrocement along with their required properties.

Q.3 Answer the following. (Any Four) **24**

a) Describe the properties of freshly mixed Fiber Reinforced Concrete and explain how fibers influence workability, segregation, and bleeding characteristics.

b) Explain the behavior of Fiber Reinforced Concrete under compression, tension, and flexure.

c) Discuss the practical applications of Fiber Reinforced Concrete in pavements, industrial floors, tunnels, precast elements, seismic-resistant structures.

d) Discuss various construction techniques of ferrocement and curing procedures.

e) Describe the role of wire mesh reinforcement in ferrocement and explain how mesh layers, spacing, and orientation affect structural performance.

f) What are the merits and demerits of ferrocement as a structural material compared to conventional reinforced concrete?

Section – II

Q.4 Answer the following. (Any Two) **16**

a) Explain silica fume and explain its origin, production process, and significance as a supplementary cementitious material in concrete technology.

b) Explain the chemical properties and composition of silica fume, explain the role of amorphous silicon dioxide (SiO_2) in improving concrete characteristics.

c) Explain the microstructure of High Strength Concrete. Discuss the factors affecting the strength development of HSC.

Q.5 Answer the following. (Any Four) **24**

a) Explain how silica fume improves the durability properties of concrete.

b) Discuss the advantages and limitations of using silica fume in concrete.

c) Define polymer concrete and explain its concept, need, and advantages over conventional cement concrete.

d) Discuss the properties of constituent materials used in polymer concrete.

e) Explain the mechanical and durability properties of High Strength Concrete and Ultra High Strength Concrete.

f) Define High Performance Concrete (HPC) and discuss its requirements, essential properties, and major design considerations.

Set R

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Concrete composites (BTN01810)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct Answer. **20**

1) Which test used for fiber reinforced concrete?
a) Slump test b) Compacting factor test
c) Flow table test d) Vee-Bee test

2) In fibre reinforced concrete, aspect ratio is the ratio of _____.
a) Fibre length/Diameter b) Fibre Diameter/length
c) Both a & b d) None of these

3) For concreting of heavily reinforced sections without vibration, the workability of concrete expressed as compacting factor should be _____.
a) 0.75-0.80 b) 0.80-0.85
c) 0.85-0.92 d) Above 0.92

4) Bulk density of the silica fume varies from _____.
a) 130-600 kg/m^3 b) 650 kg/mm^3
c) 75-150 kg/mm^3 d) 750 kg/mm^3

5) Which material is most commonly used as reinforcement in ferrocement structures?
a) Aluminum mesh b) Steel wire mesh
c) Plastic mesh d) Copper mesh

6) One of the major mechanical properties of ferrocement is _____.
a) Low tensile strength
b) Brittle behavior
c) High crack resistance and ductility
d) Poor durability

7) The primary reason for improved strength in HSC microstructure is _____.
a) Increased water-cement ratio
b) Reduced porosity and denser C-S-H gel
c) Larger aggregate size only
d) Use of more sand

8) Which material is commonly used in HSC to improve particle packing and strength?
a) Lime
b) Silica fume
c) Gypsum
d) Clay

9) In manufacturing HSC, the water-cement ratio is generally _____.
a) Above 0.60
b) Between 0.50-0.60
c) Very low, often below 0.35
d) Equal to 1.0

10) Ultra-High Strength Concrete (UHSC) generally has compressive strength above _____.
a) 40 MPa
b) 80 MPa
c) 120 MPa
d) 20 MPa

11) The specific surface (m^2/kg) of silica fume _____.
a) 370
b) 15000-30000
c) 45000
d) 420

12) What is the content of Al_2O_3 in fly ash?
a) 30-60%
b) 1-7%
c) Up to 30%
d) 15-30%

13) Silica fume is usually added during _____.
a) Before concrete production at a concrete plant
b) After concrete production at a concrete plant
c) Concrete production at a concrete plant
d) Curing

14) What is the content of unburnt fuel in fly ash?
a) 30-60%
b) 15-30%
c) Up to 30%
d) 1-7%

15) Concrete containing silica fume can have very _____ strength and can be very _____.
a) low, durable
b) high, durable
c) low, brittle
d) high, brittle

16) Glass fiber is made up from _____ individual filaments.
a) 100-200
b) 200-400
c) 500
d) >50

17) What is the thickness of the steel fiber after silting in mm?

a) 0.25 b) 0.3-0.5
c) 0.155-0.41 d) 0.25-0.90

18) In polymer impregnated concrete the moisture content of the aggregate shall not exceed from _____.

a) 0.1%-0.5% b) 1%-55
c) 10%-50% d) 15%

19) Higher resin dosage is recommended when using _____.

a) Coarse aggregate b) Fine aggregates
c) All in aggregates d) More cement

20) The addition of glass fibers are in the range of _____.

a) 0-6% b) 10%
c) 15-20% d) 20%-25%

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct alternatives from the given options. 20

1) Which factor is NOT considered in the environmental impact assessment of rural road projects?
a) Soil erosion b) Air pollution
c) Noise pollution d) Population growth

2) Which agency is typically responsible for the maintenance of rural roads?
a) Municipalities b) National highway authority
c) Rural development authority d) Local communities

3) Which technique is used for strengthening the subgrade of rural roads?
a) Geotextiles b) Compaction
c) Stabilization d) Reinforcement

4) In geometric design, what does the "grade" refer to?
a) The width of the roadway
b) The slope of the roadway
c) The curvature of the roadway
d) The alignment of the roadway

5) Which geometric design element ensures that drivers have adequate visibility of the road ahead?
a) Sight distance b) Super-elevation
c) Horizontal curve d) Vertical curve

6) What is the primary purpose of a vertical curve in geometric design?
   a) To provide a transition between different grades
   b) To control the alignment of the roadway
   c) To increase the super-elevation on curves
   d) To accommodate pedestrian crossings

7) Cobblestone pavements are characterized by_____.
   a) High maintenance requirements
   b) Low initial cost
   c) Smooth surface
   d) Rapid construction

8) Which of the following materials is commonly used as a sub-base in rural road pavements?
   a) Sand
   b) Gravel
   c) Concrete
   d) Bitumen

9) Which type of material is suitable for stabilizing weak subgrade soils in rural road construction?
   a) Geotextiles
   b) Fly ash
   c) Lime
   d) Asphalt emulsion

10) Which type of pavement material is commonly used in rural roads due to its availability and cost-effectiveness?
   a) Concrete
   b) Asphalt
   c) Brick
   d) Gravel

11) What is the purpose of providing drainage in pavement design for rural roads?
   a) To reduce noise pollution
   b) To prevent erosion
   c) To enhance aesthetics
   d) To improve ride comfort

12) Which method is commonly used for pavement thickness design in rural roads?
   a) American Association of State Highway and Transportation Officials (AASHTO) method
   b) Mechanistic-Empirical (ME) method
   c) British Standards (BS) method
   d) Asphalt Institute method

13) Which factor is NOT considered in the AASHTO pavement design method?
   a) Traffic load
   b) Soil bearing capacity
   c) Climate conditions
   d) Pavement material availability

14) Which layer of a typical rural road construction provides structural support and distributes traffic loads?

a) Subgrade
b) Base course
c) Sub-base
d) Surface course

15) What is the purpose of compaction during road construction?

a) To increase construction cost
b) To reduce the road's strength
c) To improve soil stability and density
d) To accelerate road degradation

16) Which of the following factors does NOT influence the choice of road pavement thickness in rural areas?

a) Soil type
b) Traffic load
c) Roadside vegetation
d) Climate conditions

17) Which type of drainage is essential to prevent waterlogging and prolong the lifespan of rural roads?

a) Surface drainage
b) Subsurface drainage
c) Vegetative drainage
d) Atmospheric drainage

18) Which of the following is a common maintenance activity for rural roads?

a) Painting murals on road surfaces
b) Installing solar panels along the roadside
c) Filling potholes
d) Erecting statues along the roadside

19) What is the purpose of routine maintenance of rural roads?

a) To increase traffic congestion
b) To decrease road safety
c) To extend the lifespan of the road
d) To promote environmental degradation

20) Which of the following materials is commonly used for road surfacing in rural areas?

a) Glass
b) Rubber
c) Asphalt
d) Plastic

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Draw neat sketches wherever necessary.
4) Assume suitable data wherever needed and mention it clearly.

SECTION – I

Q.2 Solve the following. (Any Two)

a) Explain Recent developments on rural roads in India. **10**

b) Explain the concept of 'Network Planning in Rural Roads'. **10**

c) 4-Lane expressway having design speed of 120 kmph and radius of 250 m and passing through plain and rolling terrain. Calculate length of transition curve for the cases: **10**
i) Rate of change of centrifugal acceleration
ii) Rate of change of super-elevation

Q.3 Solve the following. (Any Two)

a) Explain location surveys for rural roads. **10**

b) Explain Survey for marginal materials and aggregates/ low grade materials, artificial aggregates, waste materials, new materials and stabilizers. **10**

c) Explain the concept of Special Pavement in detail. **10**

SECTION – II

Q.4 Solve the following. (Any Two)

a) What are the various pavement components Design of flexible pavement as per IRC. **10**

b) Explain the design of semi-rigid pavement in detail in rural roads. **10**

c) Explain Construction of roller compacted concrete. **10**

Q.5 Solve the following. (Any Two)

a) Explain Specifications and tests for quality control as per IRC. **10**

b) Explain maintenance of special pavements. **10**

c) Explain the concept of 'Rehabilitation'. **10**

d) Local communities

18) Which technique is used for strengthening the subgrade of rural roads?
a) Geotextiles
b) Compaction
c) Stabilization
d) Reinforcement

19) In geometric design, what does the “grade” refer to?
a) The width of the roadway
b) The slope of the roadway
c) The curvature of the roadway
d) The alignment of the roadway

20) Which geometric design element ensures that drivers have adequate visibility of the road ahead?
a) Sight distance
b) Super-elevation
c) Horizontal curve
d) Vertical curve

Seat No.	

Set **Q**

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Rural Roads (BTN01812)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Draw neat sketches wherever necessary.
4) Assume suitable data wherever needed and mention it clearly.

SECTION – I

Q.2 Solve the following. (Any Two)

a) Explain Recent developments on rural roads in India. **10**

b) Explain the concept of 'Network Planning in Rural Roads'. **10**

c) 4-Lane expressway having design speed of 120 kmph and radius of 250 m and passing through plain and rolling terrain. Calculate length of transition curve for the cases: **10**
i) Rate of change of centrifugal acceleration
ii) Rate of change of super-elevation

Q.3 Solve the following. (Any Two)

a) Explain location surveys for rural roads. **10**

b) Explain Survey for marginal materials and aggregates/ low grade materials, artificial aggregates, waste materials, new materials and stabilizers. **10**

c) Explain the concept of Special Pavement in detail. **10**

SECTION – II

Q.4 Solve the following. (Any Two)

a) What are the various pavement components Design of flexible pavement as per IRC. **10**

b) Explain the design of semi-rigid pavement in detail in rural roads. **10**

c) Explain Construction of roller compacted concrete. **10**

Q.5 Solve the following. (Any Two)

a) Explain Specifications and tests for quality control as per IRC. **10**

b) Explain maintenance of special pavements. **10**

c) Explain the concept of 'Rehabilitation'. **10**

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Rural Roads (BTN01812)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct alternatives from the given options. 20

1) What is the purpose of providing drainage in pavement design for rural roads?
a) To reduce noise pollution b) To prevent erosion
c) To enhance aesthetics d) To improve ride comfort

2) Which method is commonly used for pavement thickness design in rural roads?
a) American Association of State Highway and Transportation Officials (AASHTO) method
b) Mechanistic-Empirical (ME) method
c) British Standards (BS) method
d) Asphalt Institute method

3) Which factor is NOT considered in the AASHTO pavement design method?
a) Traffic load
b) Soil bearing capacity
c) Climate conditions
d) Pavement material availability

4) Which layer of a typical rural road construction provides structural support and distributes traffic loads?
a) Subgrade b) Base course
c) Sub-base d) Surface course

5) What is the purpose of compaction during road construction?
a) To increase construction cost
b) To reduce the road's strength
c) To improve soil stability and density
d) To accelerate road degradation

6) Which of the following factors does NOT influence the choice of road pavement thickness in rural areas?
a) Soil type
b) Traffic load
c) Roadside vegetation
d) Climate conditions

7) Which type of drainage is essential to prevent waterlogging and prolong the lifespan of rural roads?
a) Surface drainage
b) Subsurface drainage
c) Vegetative drainage
d) Atmospheric drainage

8) Which of the following is a common maintenance activity for rural roads?
a) Painting murals on road surfaces
b) Installing solar panels along the roadside
c) Filling potholes
d) Erecting statues along the roadside

9) What is the purpose of routine maintenance of rural roads?
a) To increase traffic congestion
b) To decrease road safety
c) To extend the lifespan of the road
d) To promote environmental degradation

10) Which of the following materials is commonly used for road surfacing in rural areas?
a) Glass
b) Rubber
c) Asphalt
d) Plastic

11) Which factor is NOT considered in the environmental impact assessment of rural road projects?
a) Soil erosion
b) Air pollution
c) Noise pollution
d) Population growth

12) Which agency is typically responsible for the maintenance of rural roads?
a) Municipalities
b) National highway authority
c) Rural development authority
d) Local communities

13) Which technique is used for strengthening the subgrade of rural roads?
a) Geotextiles
b) Compaction
c) Stabilization
d) Reinforcement

14) In geometric design, what does the “grade” refer to?
a) The width of the roadway
b) The slope of the roadway
c) The curvature of the roadway
d) The alignment of the roadway

15) Which geometric design element ensures that drivers have adequate visibility of the road ahead?
a) Sight distance
b) Super-elevation
c) Horizontal curve
d) Vertical curve

16) What is the primary purpose of a vertical curve in geometric design?
a) To provide a transition between different grades
b) To control the alignment of the roadway
c) To increase the super-elevation on curves
d) To accommodate pedestrian crossings

17) Cobblestone pavements are characterized by_____.
a) High maintenance requirements
b) Low initial cost
c) Smooth surface
d) Rapid construction

18) Which of the following materials is commonly used as a sub-base in rural road pavements?
a) Sand
b) Gravel
c) Concrete
d) Bitumen

19) Which type of material is suitable for stabilizing weak subgrade soils in rural road construction?
a) Geotextiles
b) Fly ash
c) Lime
d) Asphalt emulsion

20) Which type of pavement material is commonly used in rural roads due to its availability and cost-effectiveness?
a) Concrete
b) Asphalt
c) Brick
d) Gravel

3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 20

Q.1 Choose the correct alternatives from the given options. 20

1) A key difference between data and information is _____.
a) Data is processed; information is raw
b) Data is meaningful, information is not
c) Data is raw, information is processed and meaningful
d) There is no difference

2) What does the acronym ERP stand for in a business context?
a) Employee Resource Planning
b) Enterprise Resource Planning
c) External Resource Protocol
d) Efficiency Reporting Program

3) TQM & ISO both focuses on _____.
a) Customer b) Employee
c) Supplier d) All of the above

4) ISO 9000 seeks standardization in terms of _____.
a) products b) production procedures
c) supplier's specification d) procedures to manage quality

5) The person who ensures that systems are developed on time, within budget, and with acceptable quality is a _____.
a) systems designer b) project manager
c) systems owner d) systems builder

6) An _____ is a set of processes and procedures that transform data into information and knowledge.
a) information system b) Knowledge system
c) Database system d) Computer system

7) The focal point of all quality control should be _____.
a) Price focus b) Cost Focus
c) Customer Focus d) Manufacturing Focus

8) _____ are used in six sigma.
a) black belt b) green belt
c) both black belt and green belt d) none of the above

9) _____ is any business-related exchange such as payments to employees, sales to customers, or payments to suppliers.
a) Data b) E-commerce
c) A transaction d) Input

10) _____ is a standard that companies compare themselves to and strive to be that good.
a) Production b) Benchmarking
c) Structuring d) Formatting

11) Meaning of 'Seiso' in 5s technique is _____.
a) Short b) Shine
c) Structured d) Straighten

12) Which of the following is NOT a core principle of Total Quality Management (TQM)?
a) Continuous improvement b) Customer focus
c) Defect detection d) Employee involvement

13) MIS structure is based on _____.
a) Management Activity b) Population
c) Both a) and b) d) None

14) The objective of ISO-9000 family of Quality management is _____.
a) Customer satisfaction b) Employee satisfaction
c) Skill enhancement d) Environmental issues

15) A fundamental attribute of TQM is _____.
a) Drawing control charts
b) Top management's direct involvement
c) Meeting ISO 9000 audit
d) All of above

16) The information of MIS comes from the _____.
a) Internal source
b) External source
c) Both internal and external source
d) None of the above

17) Which of the following is NOT one of the 8 Principles of Quality Management (ISO 9001)?

a) Customer focus
b) Leadership
c) Process approach
d) Financial auditing

18) An MIS designed for long-term goals and forecasting (e.g., “Should we expand into a new city?”) is operating at the _____.

a) Strategic planning level
b) Management control level
c) Operational control level
d) Transaction processing level

19) In construction, ‘honeycombing’ in concrete is a common defect primarily caused by _____.

a) Improper vibration/compaction
b) Excess water in the mix
c) Poor quality of aggregate
d) Cold joints

20) A Decision Support System (DSS) is primarily designed to _____.

a) Process daily transactions
b) Help managers make non-routine, semi-structured decisions
c) Generate pre-defined, scheduled reports
d) Replace the need for a human manager

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Attempt the following. (Any Four) **40**

a) Differentiate between Quality Control and Quality Assurance.

b) What is “Kaizen”? Explain with 7-key concepts & 5s Methodology.

c) Explain all 8 Principles of Quality Management.

d) Discuss common defects in construction (e.g., in concrete and plastering). What measures can be taken to prevent these defects and what are the general procedures for their rectification?

e) What is Supply Chain Management (SCM)? Explain its role and significance as a tool in TQM for a large-scale construction project.

f) Explain Quality manual along with its Importance, contents & documentation.

SECTION – II

Q.3 Answer the following. (Any Four) **40**

a) Define data and information. What are the major differences between them? Explain with the help of suitable Example.

b) Explain Decision Support System with ‘purpose’ & components.

c) Elaborate ‘ERP’ with benefits, limitation & ERP module with diagrammatical explanation.

d) Discuss the key components of information systems technology (Hardware, Software, and Communications Technology) and their relevance in a modern MIS for a construction firm.

e) What are Information Resources? Explain how a construction firm can identify and manage its key information resources effectively.

f) What is “Management Information System (MIS)”? Explain in brief objective and function MIS.

b) production procedures
c) supplier’s specification
d) procedures to manage quality

15) The person who ensures that systems are developed on time, within budget, and with acceptable quality is a _____.
a) systems designer
b) project manager
c) systems owner
d) systems builder

16) An _____ is a set of processes and procedures that transform data into information and knowledge.

a) information system
b) Knowledge system
c) Database system
d) Computer system

17) The focal point of all quality control should be _____.

a) Price focus
b) Cost Focus
c) Customer Focus
d) Manufacturing Focus

18) _____ are used in six sigma.

a) black belt
b) green belt
c) both black belt and green belt
d) none of the above

19) _____ is any business-related exchange such as payments to employees, sales to customers, or payments to suppliers.

a) Data
b) E-commerce
c) A transaction
d) Input

20) _____ is a standard that companies compare themselves to and strive to be that good.

a) Production
b) Benchmarking
c) Structuring
d) Formatting

Set **R**

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
TQM and MIS in Civil Engineering (BTN01813)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 80
Time: 03:00 PM To 06:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Attempt the following. (Any Four) **40**

a) Differentiate between Quality Control and Quality Assurance.

b) What is “Kaizen”? Explain with 7-key concepts & 5s Methodology.

c) Explain all 8 Principles of Quality Management.

d) Discuss common defects in construction (e.g., in concrete and plastering). What measures can be taken to prevent these defects and what are the general procedures for their rectification?

e) What is Supply Chain Management (SCM)? Explain its role and significance as a tool in TQM for a large-scale construction project.

f) Explain Quality manual along with its Importance, contents & documentation.

SECTION – II

Q.3 Answer the following. (Any Four) **40**

a) Define data and information. What are the major differences between them? Explain with the help of suitable Example.

b) Explain Decision Support System with ‘purpose’ & components.

c) Elaborate ‘ERP’ with benefits, limitation & ERP module with diagrammatical explanation.

d) Discuss the key components of information systems technology (Hardware, Software, and Communications Technology) and their relevance in a modern MIS for a construction firm.

e) What are Information Resources? Explain how a construction firm can identify and manage its key information resources effectively.

f) What is “Management Information System (MIS)”? Explain in brief objective and function MIS.

Seat No.	

Set **S**

Fourth Y. (B.Tech.) (Civil Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
TQM and MIS in Civil Engineering (BTN01813)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:20

Q.1 Choose the correct alternatives from the given options. 20

1) The information of MIS comes from the _____.
a) Internal source
b) External source
c) Both internal and external source
d) None of the above

2) Which of the following is NOT one of the 8 Principles of Quality Management (ISO 9001)?
a) Customer focus b) Leadership
c) Process approach d) Financial auditing

3) An MIS designed for long-term goals and forecasting (e.g., "Should we expand into a new city?") is operating at the _____.
a) Strategic planning level
b) Management control level
c) Operational control level
d) Transaction processing level

4) In construction, 'honeycombing' in concrete is a common defect primarily caused by _____.
a) Improper vibration/compaction
b) Excess water in the mix
c) Poor quality of aggregate
d) Cold joints

5) A Decision Support System (DSS) is primarily designed to _____.
a) Process daily transactions
b) Help managers make non-routine, semi-structured decisions
c) Generate pre-defined, scheduled reports
d) Replace the need for a human manager

6) A key difference between data and information is _____.
a) Data is processed; information is raw
b) Data is meaningful, information is not
c) Data is raw, information is processed and meaningful
d) There is no difference

7) What does the acronym ERP stand for in a business context?
a) Employee Resource Planning
b) Enterprise Resource Planning
c) External Resource Protocol
d) Efficiency Reporting Program

8) TQM & ISO both focuses on _____.
a) Customer
b) Employee
c) Supplier
d) All of the above

9) ISO 9000 seeks standardization in terms of _____.
a) products
b) production procedures
c) supplier's specification
d) procedures to manage quality

10) The person who ensures that systems are developed on time, within budget, and with acceptable quality is a _____.
a) systems designer
b) project manager
c) systems owner
d) systems builder

11) An _____ is a set of processes and procedures that transform data into information and knowledge.
a) information system
b) Knowledge system
c) Database system
d) Computer system

12) The focal point of all quality control should be _____.
a) Price focus
b) Cost Focus
c) Customer Focus
d) Manufacturing Focus

13) _____ are used in six sigma.
a) black belt
b) green belt
c) both black belt and green belt
d) none of the above

14) _____ is any business-related exchange such as payments to employees, sales to customers, or payments to suppliers.
a) Data
b) E-commerce
c) A transaction
d) Input

15) _____ is a standard that companies compare themselves to and strive to be that good.

a) Production
b) Benchmarking
c) Structuring
d) Formatting

16) Meaning of 'Seiso' in 5s technique is _____.

a) Short
b) Shine
c) Structured
d) Straighten

17) Which of the following is NOT a core principle of Total Quality Management (TQM)?

a) Continuous improvement
b) Customer focus
c) Defect detection
d) Employee involvement

18) MIS structure is based on _____.

a) Management Activity
b) Population
c) Both a) and b)
d) None

19) The objective of ISO-9000 family of Quality management is _____.

a) Customer satisfaction
b) Employee satisfaction
c) Skill enhancement
d) Environmental issues

20) A fundamental attribute of TQM is _____.

a) Drawing control charts
b) Top management's direct involvement
c) Meeting ISO 9000 audit
d) All of above

Examination: March/April – 2026
Planning for Sustainable Development (BTN01814)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 100
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no. 1 is compulsory in section I, and solve any four questions from the remaining.
2) Question no. 7 is compulsory in section II, and solve any four questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.

SECTION – I

Q.1 Discuss the relationship between environmental degradation and poverty. How does one exacerbate the other? **10**

Q.2 What are the main principles of sustainable development? Explain their importance in policymaking and resource management. **10**

Q.3 Describe any two alternative approaches to sustainable development. How do these differ from mainstream strategies? **10**

Q.4 Examine any two important current issues in sustainable development. How do these challenges impact global sustainability efforts? **10**

Q.5 Discuss innovative approaches in environmental management. How do they enhance efficiency and reduce environmental impacts? **10**

Q.6 What are the main barriers to innovation for sustainable development? How can these barriers be overcome? **10**

SECTION – II

Q.7 Explain the relevance of institutional theory in sustainable development. How do institutions influence environmental governance? **10**

Q.8 What institutional barriers impede the implementation of sustainable development practices? How can these be addressed? **10**

Q.9 What are the key principles of governance for sustainable development? Why are they essential for effective environmental management? **10**

Q.10 How does technology contribute to capacity development for innovation? Discuss its impact on education, collaboration, and problem-solving. **10**

Q.11 What is the role of research in addressing sustainability challenges? How can research methods contribute to innovative solutions? **10**

Q.12 Compare and contrast qualitative and quantitative research methods in the context of sustainable development. When is each approach more suitable? **10**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer from the given options. 14

1) A drill is held in following while drilling on lathe machine.
a) Headstock b) Tailstock
c) Tool Post d) Carriage

2) Which of the following operations are performed on a lathe machine?
a) Turning b) Parting-off
c) Tapping d) All of the above

3) Which of the following operations can be performed by a drilling machine?
a) Drilling b) Countersinking
c) Reaming d) All of the above

4) The boring is an operation which _____.
a) Finish the drilled hole b) Enlarge pre drilled hole
c) Internal thread d) Form external thread

5) Whitworth Quick Return mechanism is used in _____.
a) Milling machine b) Broaching machine
c) Shaper d) Grinding machine

6) Which of the following is used for machining larger jobs?
a) Shaper b) Planer
c) Both a and b d) None of the above

7) Gear shaving is the process of _____.
a) Gear finishing b) Gear parting
c) Gear generation d) None of the above

8) In simple indexing, one complete rotation of spindle makes _____ rotation of index crank.

a) 20 b) 30
c) 40 d) 24

9) Up milling is also called as _____.

a) Climb milling b) Form milling
c) Conventional milling d) None of these

10) Which of the following is finishing process?

a) Lapping b) Superfinishing
c) Honing d) All of these

11) Which of the following material cannot be machined by EDM?

a) Cast Iron b) Steel
c) Glass d) None of these

12) In which of the following methods, an electrolyte is used?

a) EDM b) AWJM
c) ECM d) USM

13) In honing process, tool is _____.

a) Reciprocating b) Rotating
c) Both a) and b) d) None of these

14) Loss in the sharpness of grinding wheel due to the presence of chips in gaps of grains is termed as _____.

a) Loading b) Glazing
c) Truing d) Dressing

Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Use of scientific calculator is allowed**.**
2) Figures to right indicate full marks.
3) Assume additional suitable data if necessary and state it clearly.

Section – I

Q.2 **a)** Draw neat sketch of centre lathe and explain its parts. **05**

b) The pitch or a lead screw is 6 mm. and the pitch or the thread to be cut is 1 mm. Find change gears. **05**

c) Explain Slotting Machine. **04**

Q.3 **a)** Explain working and construction of pillar type drilling machine. **05**

b) Explain working and construction of horizontal boring machine with neat sketch. **05**

c) Compare between shaper and planer. **04**

Q.4 **a)** Explain the construction & working of standard double housing planer with neat sketch. **05**

b) Write short note on any three: **09**
i) Specification of Lathe machine
ii) Taper turning by a taper attachment
iii) Job holding devices used on drilling machine
iv) Broaching

Section – II

Q.5 **a)** Compare up milling and down milling process. **05**

b) Index work piece for 83 divisions using dividing head by differential indexing method. Use **05**
Indexing plate 1: 15, 16, 17, 18, 19, 20
Indexing plate 2: 21, 23, 27, 29, 31, 33
Indexing plate 3: 37, 39, 41, 43, 47, 49
Change gears: 24, 24, 28, 32, 40, 44, 48, 56, 64, 72, 86, 100, 140

c) Explain lapping process. **04**

Q.6	**a)**	Explain with neat sketch cylindrical center type grinder.	**05**
	b)	Explain with neat sketch construction and working of AJWM machine.	**05**
	c)	Explain need and significance of unconventional machining.	**04**

12) Which of the following operations can be performed by a drilling machine?
a) Drilling b) Countersinking
c) Reaming d) All of the above

13) The boring is an operation which _____.
a) Finish the drilled hole b) Enlarge pre drilled hole
c) Internal thread d) Form external thread

14) Whitworth Quick Return mechanism is used in _____.
a) Milling machine b) Broaching machine
c) Shaper d) Grinding machine

Seat No.	

Set **S**

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April - 2026
Advance Manufacturing Technology (MECHPCC-07)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Use of scientific calculator is allowed**.**
2) Figures to right indicate full marks.
3) Assume additional suitable data if necessary and state it clearly.

Section – I

Q.2 **a)** Draw neat sketch of centre lathe and explain its parts. **05**

b) The pitch or a lead screw is 6 mm. and the pitch or the thread to be cut is 1 mm. Find change gears. **05**

c) Explain Slotting Machine. **04**

Q.3 **a)** Explain working and construction of pillar type drilling machine. **05**

b) Explain working and construction of horizontal boring machine with neat sketch. **05**

c) Compare between shaper and planer. **04**

Q.4 **a)** Explain the construction & working of standard double housing planer with neat sketch. **05**

b) Write short note on any three: **09**
i) Specification of Lathe machine
ii) Taper turning by a taper attachment
iii) Job holding devices used on drilling machine
iv) Broaching

Section – II

Q.5 **a)** Compare up milling and down milling process. **05**

b) Index work piece for 83 divisions using dividing head by differential indexing method. Use **05**
Indexing plate 1: 15, 16, 17, 18, 19, 20
Indexing plate 2: 21, 23, 27, 29, 31, 33
Indexing plate 3: 37, 39, 41, 43, 47, 49
Change gears: 24, 24, 28, 32, 40, 44, 48, 56, 64, 72, 86, 100, 140

c) Explain lapping process. **04**

Q.6	**a)**	Explain with neat sketch cylindrical center type grinder.	**05**
	b)	Explain with neat sketch construction and working of AJWM machine.	**05**
	c)	Explain need and significance of unconventional machining.	**04**
Q.7	**a)**	Explain with neat sketch construction and working principal of EDM machine.	**05**
	b)	Write short note on any three i) Compound indexing ii) Glazing iii) Honning iv) Gear Shaving	**09**

Set P

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Design of Machine Elements (MECHPCC-08)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make necessary assumptions, if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct Answer. 14

1) A shaft designed for 200 MPa allowable stress and 600 MPa yield stress has FoS = _____.
a) 2.0 b) 3.0
c) 3.5 d) 4.0

2) A uniform section in casting helps to ____.
a) Reduce turbulence b) Minimize internal stress
c) Improve fatigue d) Prevent inclusions

3) Factor of safety mainly depends on ____.
a) Loading & material b) Cost
c) Color d) Aesthetics

4) For $\sigma u = 600\ \text{MPa}, \sigma e = 250\ \text{MPa}, \sigma m = 100\ \text{MPa}, \sigma a = ?$
a) 130 b) 140
c) 160 d) 200 MPa

5) Fatigue cracks usually start at ____.
a) Centre b) Tensile surface
c) Compressive zone d) Grain boundary

6) Notch increases fatigue risk because it ____.
a) Raises strain b) Adds conductivity
c) Reduces modulus d) Changes stress

7) Flat belt: $T_1/T_2 = 3, v = 10\ \text{m/s}, T_2 = 300\ \text{N}$, Power = ?
a) 2.5 kW b) 3.0 kW
c) 4.5 kW d) 6.0 kW

8) Belt transmits maximum power when _____.
a) Tc = Tmax
b) Tc = Tmax/3
c) Ti = Tmax
d) v minimum

9) Solid shaft torque is given by _____.
a) $\pi/16\ \tau D^3$
b) $\pi/32\ \tau D^3$
c) $\pi/16\ \tau D^4$
d) $\pi/32\ \tau D^4$

10) According to the ASME code, equivalent torque is _____.
a) $\sqrt{(M^2 + T^2)}$
b) $\sqrt{(M^2 + T^2/2)}$
c) $\sqrt{(M^2 + T^2/0.75)}$
d) $\sqrt{(M^2 + T^2/4)}$

11) The purpose of a key way is to _____.
a) increase stiffness
b) transfer torque
c) increase fatigue strength
d) act as relief groove

12) Deflection of a helical spring under load W is proportional to _____.
a) Wd^3/D^3
b) WD^3/d^4
c) D/Wd^3
d) d^4/D^3

13) The Wahl factor accounts for ____.
a) Curvature & shear
b) Torsion only
c) Axial only
d) Pitch error

14) An eccentrically loaded weld joint has maximum stress at _____.
a) Centroid
b) Farthest weld throat
c) Fillet edge
d) Bolt line

Set **P**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Design of Machine Elements (MECHPCC-08)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each Section.
2) Figures to the right indicate full marks.
3) Make necessary assumptions, if required and mention it clearly.

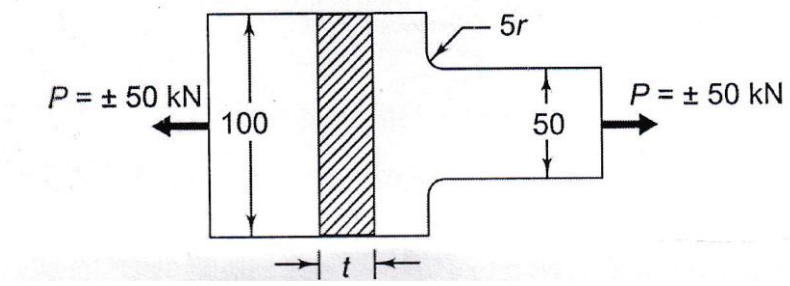
Section – I

Q.2 **a)** Elaborate theories of failures in the design of machine elements. **07**

b) Brief selection factors of the factor of safety, along with its significance. **07**

Q.3 **a)** Explain the following terms in connection with the design of machine members subjected to various loads: **07**
a. Endurance limit, b. Surface finish factor, c. Size factor, d. Notch sensitivity, e. Fatigue failure, f. Mean stress, g. Amplitude stress

b) A component machined from a plate made of steel 45C8 (Sut = 630 N/mm^2) is shown in Fig. It is subjected to a completely reversed axial force of 50 kN. The expected reliability is 90% and the factor of safety is 2. The size factor is 0.85. Determine the plate thickness t for infinite life, if the notch sensitivity factor is 0.8. Take Ka = 0.76 Kb = 0.85 For 90% reliability, Kc = 0.897, Kt = 2.27 **07**



Q.4 **a)** It is required to select a flat belt drive for a compressor running at 720 rpm, which is driven by a 25 kW, 1440 rpm motor. Space is available for a center distance of 3 m. The belt is open-type. Take Fa = 1.02. Make suitable assumption if necessary. **08**

b) Elaborate on the selection process of V Belt from the manufacturer's catalog in detail. **06**

Section – II

Q.5 **a)** Elaborate ASME Code in the design of Shaft. **03**

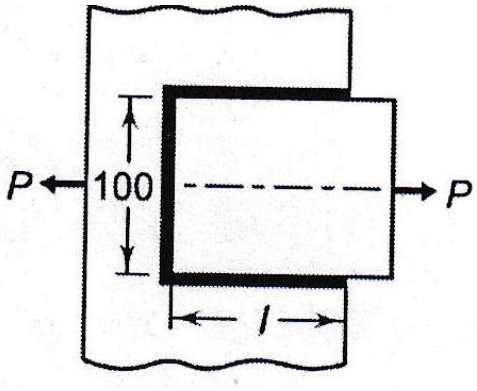
b) Elaborate on Equivalent Torsional Moment and Equivalent Bending Moment with a mathematical expression. **04**

c) A shaft is transmitting 7.51 kW of power at 1441 rpm to a flat belt pulley supported with a key at the center between two bearings 325 mm apart. The belt tension acting is 2.51 kN at the tight side & 1.1 kN at the slack side. The shaft is made of plain carbon steel (Sut = 450 MPa). Determine the diameter of the shaft using shear stress theory. Use ASME code, take Kb=1.5 & Kt=1.0. Design shaft using ASME Code. **07**

Q.6 **a)** Define the following related to spring i) Solid length ii) Free length iii) Spring index iv) Spring rate v) Pitch vi) Active coils. **06**

b) It is required to design a helical compression spring subjected to a maximum force of 1250 N. The deflection of the spring corresponding to the maximum force should be approximately 30 mm. The spring index can be taken as 6. The spring is made of patented and cold-drawn steel wire. The ultimate tensile strength and modulus of rigidity of the spring material are 1090 and 81 370 N/mm^2, respectively. The permissible shear stress for the spring wire should be taken as 50% of the ultimate tensile strength. Design the spring and calculate: (i) wire diameter; (ii) mean coil diameter; (iii) number of active coils; (iv) total number of coils (v) free length of the spring; and (vi) pitch of the coil. Draw a neat sketch of the spring showing various dimensions **08**

Q.7 **a)** A steel plate, 100 mm wide and 10 mm thick, is joined with another steel plate by means of single transverse and double parallel fillet welds, as shown in Fig. The strength of the welded joint should be equal to the strength of the plates to be joined. The permissible tensile and shear stresses for the weld material and the plates are 70 and 50 N/mm^2, respectively. Find the length of each parallel fillet weld. Assume the tensile force acting on the plates as static. **07**



b) Explain the design procedure for an axially loaded unsymmetrical welded joint. **04**

c) Elaborate Types of butt weld with applications. **03**

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Design of Machine Elements (MECHPCC-08)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make necessary assumptions, if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct Answer. **14**

1) Notch increases fatigue risk because it ____.
a) Raises strain b) Adds conductivity
c) Reduces modulus d) Changes stress

2) Flat belt: $T_1/T_2 = 3, v = 10\ m/s, T_2 = 300\ N$, Power = ?
a) 2.5 kW b) 3.0 kW
c) 4.5 kW d) 6.0 kW

3) Belt transmits maximum power when _____.
a) Tc = Tmax b) Tc = Tmax/3
c) Ti = Tmax d) v minimum

4) Solid shaft torque is given by _____.
a) $\pi/16\ \tau D^3$ b) $\pi/32\ \tau D^3$
c) $\pi/16\ \tau D^4$ d) $\pi/32\ \tau D^4$

5) According to the ASME code, equivalent torque is _____.
a) $\sqrt{(M^2 + T^2)}$ b) $\sqrt{(M^2 + T^2/2)}$
c) $\sqrt{(M^2 + T^2/0.75)}$ d) $\sqrt{(M^2 + T^2/4)}$

6) The purpose of a key way is to _____.
a) increase stiffness b) transfer torque
c) increase fatigue strength d) act as relief groove

7) Deflection of a helical spring under load W is proportional to _____.
a) Wd^3/D^3 b) WD^3/d^4
c) D/Wd^3 d) d^4/D^3

8) The Wahl factor accounts for ____.
a) Curvature & shear
b) Torsion only
c) Axial only
d) Pitch error

9) An eccentrically loaded weld joint has maximum stress at _____.
a) Centroid
b) Farthest weld throat
c) Fillet edge
d) Bolt line

10) A shaft designed for 200 MPa allowable stress and 600 MPa yield stress has FoS = _____.
a) 2.0
b) 3.0
c) 3.5
d) 4.0

11) A uniform section in casting helps to ____.
a) Reduce turbulence
b) Minimize internal stress
c) Improve fatigue
d) Prevent inclusions

12) Factor of safety mainly depends on ____.
a) Loading & material
b) Cost
c) Color
d) Aesthetics

13) For $\sigma u = 600\ \text{MPa}, \sigma e = 250\ \text{MPa}, \sigma m = 100\ \text{MPa}, \sigma a = ?$
a) 130
b) 140
c) 160
d) 200 MPa

14) Fatigue cracks usually start at ____.
a) Centre
b) Tensile surface
c) Compressive zone
d) Grain boundary

Seat No.	

Set **S**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Design of Machine Elements (MECHPCC-08)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each Section.
2) Figures to the right indicate full marks.
3) Make necessary assumptions, if required and mention it clearly.

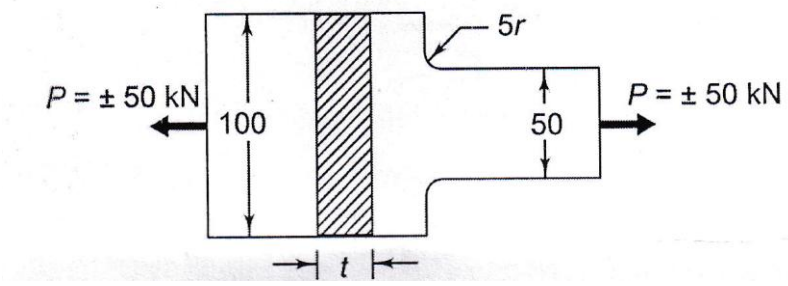
Section – I

Q.2 **a)** Elaborate theories of failures in the design of machine elements. **07**

b) Brief selection factors of the factor of safety, along with its significance. **07**

Q.3 **a)** Explain the following terms in connection with the design of machine members subjected to various loads: **07**
a. Endurance limit, b. Surface finish factor, c. Size factor, d. Notch sensitivity, e. Fatigue failure, f. Mean stress, g. Amplitude stress

b) A component machined from a plate made of steel 45C8 (Sut = 630 N/mm^2) is shown in Fig. It is subjected to a completely reversed axial force of 50 kN. The expected reliability is 90% and the factor of safety is 2. The size factor is 0.85. Determine the plate thickness t for infinite life, if the notch sensitivity factor is 0.8. Take Ka = 0.76 Kb = 0.85 For 90% reliability, Kc = 0.897, Kt = 2.27 **07**



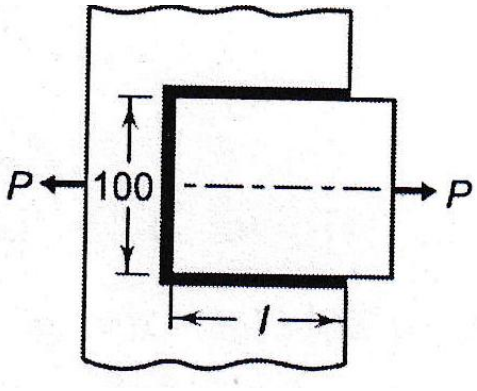
Q.4 **a)** It is required to select a flat belt drive for a compressor running at 720 rpm, which is driven by a 25 kW, 1440 rpm motor. Space is available for a center distance of 3 m. The belt is open-type. Take Fa = 1.02. Make suitable assumption if necessary. **08**

b) Elaborate on the selection process of V Belt from the manufacturer's catalog in detail. **06**

Section – II

Q.5	**a)**	Elaborate ASME Code in the design of Shaft.	**03**
	b)	Elaborate on Equivalent Torsional Moment and Equivalent Bending Moment with a mathematical expression.	**04**
	c)	A shaft is transmitting 7.51 kW of power at 1441 rpm to a flat belt pulley supported with a key at the center between two bearings 325 mm apart. The belt tension acting is 2.51 kN at the tight side & 1.1 kN at the slack side. The shaft is made of plain carbon steel (Sut = 450 MPa). Determine the diameter of the shaft using shear stress theory. Use ASME code, take Kb=1.5 & Kt=1.0. Design shaft using ASME Code.	**07**
Q.6	**a)**	Define the following related to spring i) Solid length ii) Free length iii) Spring index iv) Spring rate v) Pitch vi) Active coils.	**06**
	b)	It is required to design a helical compression spring subjected to a maximum force of 1250 N. The deflection of the spring corresponding to the maximum force should be approximately 30 mm. The spring index can be taken as 6. The spring is made of patented and cold-drawn steel wire. The ultimate tensile strength and modulus of rigidity of the spring material are 1090 and 81 370 N/mm^2, respectively. The permissible shear stress for the spring wire should be taken as 50% of the ultimate tensile strength. Design the spring and calculate: (i) wire diameter; (ii) mean coil diameter; (iii) number of active coils; (iv) total number of coils (v) free length of the spring; and (vi) pitch of the coil. Draw a neat sketch of the spring showing various dimensions	**08**

Q.7 **a)** A steel plate, 100 mm wide and 10 mm thick, is joined with another steel plate by means of single transverse and double parallel fillet welds, as shown in Fig. The strength of the welded joint should be equal to the strength of the plates to be joined. The permissible tensile and shear stresses for the weld material and the plates are 70 and 50 N/mm^2, respectively. Find the length of each parallel fillet weld. Assume the tensile force acting on the plates as static. **07**



b) Explain the design procedure for an axially loaded unsymmetrical welded joint. **04**

c) Elaborate Types of butt weld with applications. **03**

Arc of contact factor (F_d)

α (Deg.)	120	130	140	150	160	170	180	190	200
F_d	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Eutectic means complete solubility in _____.
a) Liquid state b) Solid state
c) Liquid & solid state d) Neither liquid nor solid

2) Malleablizing treatment is carried out on _____.
a) SG Iron b) Grey Iron
c) White Iron d) None of above

3) Eutectoid reaction occurs at _____.
a) 600°C b) 723°C
c) 1147°C d) 1443°C

4) Cast iron is used for machine beds because of its high _____.
a) Tensile strength b) Endurance strength
c) Damping capacity d) Compressive strength

5) Which of the following alloys is precipitation hardened?
a) Brass b) Tin Bronze
c) Al-4.5%Cu d) Silicon bronze

6) Which of the following alloy is given modification treatment?
a) Al-Cu alloy b) Cu-Sn alloy
c) Al-Si alloy d) Cu-Al alloy

7) Main alloying element in stainless steel?
a) Chromium b) Nickel
c) Copper d) Zinc

8) Which of the following steel is non hardenable by HT?
a) OHNS
b) 304 Stainless Steel
c) HCHC Steel
d) High Carbon Steel

9) Nitriding treatment is carried out by heating the steel in the range of _____
a) 200°C - 300°C
b) 500°C - 550°C
c) 900°C - 925°C
d) 900°C - 950°C

10) Slow cooling of austenite below the eutectoid temperature results in the formation of which microstructure?
a) Pearlite
b) Bainite
c) Martensite
d) Cementite

11) Which of the following components are manufactured by P/M technique?
a) Carbide cutting tool
b) Friction Materials
c) Porous Bearings
d) All of these

12) The Stress-Strain curve is related to _____test/phenomenon.
a) Creep Test
b) Fatigue Test
c) Tensile test
d) Impact test

13) During manufacturing of Self-lubricating bearing, which of the following is an important step?
a) Sizing
b) Heat treatment
c) Inspection
d) Impregnation

14) To detect internal cracks in steel forgings at higher depth which NDT is employed?
a) DP test
b) MP test
c) Ultrasonic test
d) All above

3) Make suitable assumptions if required and state them clearly.

SECTION – I

Q.2 Solve the Following.

a) Give brief classification of Metallic materials. **04**

b) Explain Plain carbon steels with types, properties, composition, microstructure and applications. **05**

c) Draw an Eutectic Type phase diagram and explain micro-structural changes during cooling with suitable example. **05**

Q.3 Solve the Following.

a) What is Stainless Steel? Give types, compositions, properties & application. **04**

b) Draw the neat sketch for Nodular Cast Iron & Grey Cast Iron micro-structure. **04**

c) Draw the complete Iron-Iron Carbide (Fe-Fe3C) equilibrium diagram. Label all the constituents and temperatures correctly with all three transformation reactions. **06**

Q.4 Solve the Following.

a) Draw & explain Cu-Zn equilibrium diagram. **04**

b) Write a short note on Babbitts or White metal alloy with its properties, composition, microstructure and applications. **04**

c) Discuss Composite materials with its types, advantages, and applications. **06**

SECTION – II

Q.5 Solve the Following.

a) Explain the process of Induction hardening with a neat sketch & its advantages, disadvantages and applications. **06**

b) Superimpose following Heat treatment processes on TTT diagram. (Any Four) **08**

i) Conventional Hardening
ii) Martempering
iii) Patenting
iv) Isoforming
v) Austempering

Q.6 a) Differentiate between Austempering and Martempering. **04**

b) Explain in Tensile test procedure with help of a neat sketch and Draw Stress-Strain curve for Ductile and Brittle materials. **04**

c) Explain the setup for the Ultrasonic test pointing out its advantages, limitations and applications. **06**

Q.7 Solve the Following.

a) Illustrate manufacturing of Cemented Carbide Cutting Tool by using Powder Metallurgy technique with help of Flow chart. **07**

b) Discuss Creep testing procedure and its outcome (Creep Curve) with the help of a neat sketch. **04**

c) List out different types of powder manufacturing and explain with neat sketch at least one method of powder manufacturing. **03**

b) MP test
c) Ultrasonic test
d) All above

10) Eutectic means complete solubility in _____.
a) Liquid state
b) Solid state
c) Liquid & solid state
d) Neither liquid nor solid

11) Malleablizing treatment is carried out on _____.
a) SG Iron
b) Grey Iron
c) White Iron
d) None of above

12) Eutectoid reaction occurs at _____.
a) 600°C
b) 723°C
c) 1147°C
d) 1443°C

13) Cast iron is used for machine beds because of its high _____.
a) Tensile strength
b) Endurance strength
c) Damping capacity
d) Compressive strength

14) Which of the following alloys is precipitation hardened?
a) Brass
b) Tin Bronze
c) Al-4.5%Cu
d) Silicon bronze

Seat No.	

Set S

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Metallurgy (MECHPCC-09)

Day & Date: Thursday, 07-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions if required and state them clearly.

SECTION – I

Q.2 Solve the Following.

a) Give brief classification of Metallic materials. **04**

b) Explain Plain carbon steels with types, properties, composition, microstructure and applications. **05**

c) Draw an Eutectic Type phase diagram and explain micro-structural changes during cooling with suitable example. **05**

Q.3 Solve the Following.

a) What is Stainless Steel? Give types, compositions, properties & application. **04**

b) Draw the neat sketch for Nodular Cast Iron & Grey Cast Iron micro-structure. **04**

c) Draw the complete Iron-Iron Carbide (Fe-Fe3C) equilibrium diagram. Label all the constituents and temperatures correctly with all three transformation reactions. **06**

Q.4 Solve the Following.

a) Draw & explain Cu-Zn equilibrium diagram. **04**

b) Write a short note on Babbitts or White metal alloy with its properties, composition, microstructure and applications. **04**

c) Discuss Composite materials with its types, advantages, and applications. **06**

SECTION – II

Q.5 Solve the Following.

a) Explain the process of Induction hardening with a neat sketch & its advantages, disadvantages and applications. **06**

b) Superimpose following Heat treatment processes on TTT diagram. (Any Four) **08**

i) Conventional Hardening
ii) Martempering
iii) Patenting
iv) Isoforming
v) Austempering

Q.6 a) Differentiate between Austempering and Martempering. **04**

b) Explain in Tensile test procedure with help of a neat sketch and Draw Stress-Strain curve for Ductile and Brittle materials. **04**

c) Explain the setup for the Ultrasonic test pointing out its advantages, limitations and applications. **06**

Q.7 Solve the Following.

a) Illustrate manufacturing of Cemented Carbide Cutting Tool by using Powder Metallurgy technique with help of Flow chart. **07**

b) Discuss Creep testing procedure and its outcome (Creep Curve) with the help of a neat sketch. **04**

c) List out different types of powder manufacturing and explain with neat sketch at least one method of powder manufacturing. **03**

Examination: March/April – 2026
Metrology and Quality Control (MECHPEC-01A)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data whenever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) The PDCA cycle stands for _____.
a) Plan, Do, Check, Act
b) Process, Design, Control, Apply
c) Plan, Design, Create, Analyze
d) Produce, Deliver, Control, Audit

2) Double sampling plan involves _____.
a) Two-stage decision-making b) Inspecting entire lot
c) Random rejection d) Checking only one item

3) In 100% inspection, all items are _____.
a) Randomly tested b) Fully checked
c) Checked only in batches d) Checked by sampling

4) The accuracy of a comparator depends on _____?
a) Calibration b) Operator skill
c) Environmental conditions d) All of the above

5) The least count of a standard Vernier caliper is generally?
a) 1 mm b) 0.5 mm
c) 0.02 mm d) 0.2 mm

6) Sine bar works on the principle of _____.
a) Hooke'slaw
b) Trigonometry of right triangle (sine function)
c) Differential principle
d) Geometric tolerancing

7) Which characteristic is critical when selecting a measuring instrument?
a) Accuracy, precision, sensitivity
b) Brand name only
c) Cost alone
d) Size of the instrument

8) The 80/20 rule in quality management means _____.
a) 80% of quality depends on 20% of employees
b) 80% of problems come from 20% of causes
c) 80% of customers generate 20% of revenue
d) 20% of defects are critical

9) C-chart is used for _____.
a) Number of defects per unit
b) Process mean
c) Range variation
d) Standard deviation

10) The main importance of metrology in manufacturing is _____.
a) To reduce machine costs
b) To improve measurement accuracy and product quality
c) To increase marketing
d) To reduce electricity consumption

11) Accuracy refers to _____.
a) Closeness of measurement to the true value
b) Repeatability of readings
c) Ability to detect small changes
d) Reliability of instrument

12) Six Sigma focuses on _____.
a) Increasing Raw material Use
b) Increasing machine speed
c) Reducing manpower
d) Reducing variability and defects

13) Comparators in metrology are mainly used for _____.
a) Direct length measurement
b) Comparing dimensions with a standard
c) Surface roughness measurement
d) Calibrating sine bars

14) The primary principle of TQM is _____.
a) Profit maximization
b) Customer focus and continuous improvement
c) Cost reduction only
d) Minimizing inspections

Examination: March/April – 2026
Metrology and Quality Control (MECHPEC-01A)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any Two questions from each section.
2) Figure on right indicates full marks.
3) Assume suitable data, diagrams if required.
4) Use of scientific calculator is allowed.

Section – I

Q.2 Solve. **14**

a) Define Metrology. Explain its importance, scope, and applications in manufacturing industries with suitable examples.

b) What are Slip gauges? Explain the concept of Wringing and their importance in calibration.

Q.3 Solve. **14**

a) Explain the construction and working principle of a Vernier Caliper with neat sketches. Discuss its least count and applications.

b) Explain the working principle of a Sine bar. How is it used for accurate angle measurement? Give one example.

Q.4 Write a short note. (Any Two) **14**

a) Mechanical Comparator: Dial indicator

b) Types of Measurement errors

c) Element of Gear Measurement with Measurement of Runout, Pitch

d) Characteristic of Measuring instruments: Precision, accuracy, and sensitivity

Section – II

Q.5 Solve. **14**

a) Define Quality Control and Quality Assurance. Differentiate between them with suitable examples.

b) List types of Charts used in Statistical Quality Control. Explain the various steps in construction of $\overline{X} - R$ control charts.

Q.6 Solve. **14**

a) Define Total Quality Management (TQM). How does it differ from traditional quality control approaches?

b) Compare 100% inspection with sampling inspection. Discuss their advantages, disadvantages, and applications.

Q.7 Solve (Any Two) **14**

a) Explain the concept of Six Sigma and the DMAIC approach used in process improvement.

b) What is the PDCA cycle? Explain each step with an example of its application in industry.

c) Write a short note:
1) Cause & Effect (Ishikawa) diagram
2) Histogram

d) 10 Samples of size 05 have been collected with following observation.

Sr.no.	1	2	3	4	5	6	7	8	9	10

c) Steam engine d) None of above

2) Spark plug is used in _____.
a) C.I.Engine b) S.I.Engine
c) Steam engine d) None of Above

3) Brake specific fuel consumption is defined as _____.
a) fuel consumption per hour
b) fuel consumption per km
c) fuel consumption per hour per brake power
d) fuel consumption per BHP

4) One of the major exhaust emissions from CI Engine compared to SI Engine is _____.
a) Oxides of nitrogen b) Particulates
c) Unburnt hydrocarbons d) CO and CO2

5) In which of the following engine supercharging is essential?
a) S.I.Engine b) C.I.Engine
c) Aircraft engine d) Marine engine

6) Supercharging air compressor is driven by _____.
a) Engine itself b) Exhaust gas turbine
c) Separate electric motor d) none of the above

7) Venturi in the carburetor results in _____.
a) increase in air velocity b) decrease in air velocity
c) decrease of fuel flow d) increase of manifold pressure

8) During idling, the fuel-air mixture in SI engines should be _____.
a) lean b) rich
c) stoichiometric d) may be rich or lean

9) Octane number of isooctane is _____.
a) 30 b) 60
c) 0 d) 100

10) In two stroke engine cycle is completed in _____.
a) 2 revolution of crankshaft b) 1 revolution of crankshaft
c) 3 revolution of crankshaft d) 4 revolution of crankshaft

11) Material used for piston is _____.
a) steel b) cast iron
c) white metal d) leaded bronze

12) Increasing the compression ratio in SI engines the knocking tendency _____.
a) Increases b) Not affected
c) Decreases d) None of the above

13) Brake power is measured by _____.
a) Morse test b) Burette test
c) Dynamometers d) Motoring test

14) Spark advance is usually specified in terms of _____.
a) engine speed in rev/min b) degrees of crank rotation
c) time in seconds d) none of the above

T.Y. (B.Tech.) (Mechanical Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Internal Combustion Engines (MECHPEC-01B)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each Section.
2) Figures to the right indicate full marks.
3) Use of Scientific calculator is allowed.
4) Assume additional suitable data if necessary and state it clearly.
5) Use university graph paper & semi-log paper if required.

SECTION – I

Q.2 **a)** Compare S.I.Engine with C.I.Engine. **05**

b) Explain assumption made in air standard cycle and draw air standard Otto cycle on P-V plane. **05**

c) Draw ideal and actual valve timing diagram of four stroke petrol engine. **04**

Q.3 **a)** The venturi of simple carburetor has throat diameter of 20 mm and co-efficient of air flow is 0.8. The fuel orifice has a diameter of 1.14 mm and co-efficient of fuel flow is 0.65. The petrol surface is 5 mm below the throat. Find, **05**

1) The air fuel ratio for pressure drop of 0.08 bar when the nozzle lip is neglected
2) The air fuel ratio when the nozzle lip is taken in to account. Take density of air and fuel as 1.2 and 750 kg/m^3 respectively.

b) Classify fuel injection system used in Cl engines. Draw and explain any one type of fuel injection systems used in CI engines. **04**

c) Explain the working of MPFI system and its importance. **05**

Q.4 **a)** Compare supercharger with turbocharger. **05**

b) Explain difference in thermodynamic cycle between naturally aspirated engine and supercharged engine. **04**

c) Explain limitations of supercharging for S.I. and C.I. Engines. **05**

SECTION – II

Q.5 **a)** Explain briefly combustion phenomenon in CI engines. **05**

b) Explain **04**
1) Octane Number
2) Cetane Number

c) Explain knocking in SI engines. Explain various factors influencing knocking in S.I. engine. **05**

Q.6 **a)** What are the major pollutants found in the S.I. and C.I engine emissions. **05**

b) What is EGR? How does it help in reducing NOx emissions? **05**

c) Explain need of additives in fuels also enlist the names of additives used in SI and Cl engine fuels with their benefits. **04**

Q.7 **a)** A 6-cylinder gasoline engine operates on 4 stroke cycle. Bore of cylinder is 80mm and stroke 100mm. Clearance volume per cylinder is 70 CC. At 4000 RPM, Fuel consumption is 20kg/hr and the torque developed is 150Nm. Calculate: - **05**

1) BP
2) Brake mean effective pressure
3) Brake thermal efficiency

If CV of the fuel is 43000kJ/kg, find relative efficiency on brake power basis, assuming engine works on Constant volume cycle and adiabatic index for air =1.4.

b) Explain with neat sketch catalytic converter. **05**

c) Explain Heat Balance Sheet in detail. **04**

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) During idling, the fuel-air mixture in SI engines should be _____.
a) lean b) rich
c) stoichiometric d) may be rich or lean

2) Octane number of isooctane is _____.
a) 30 b) 60
c) 0 d) 100

3) In two stroke engine cycle is completed in _____.
a) 2 revolution of crankshaft b) 1 revolution of crankshaft
c) 3 revolution of crankshaft d) 4 revolution of crankshaft

4) Material used for piston is _____.
a) steel b) cast iron
c) white metal d) leaded bronze

5) Increasing the compression ratio in SI engines the knocking tendency _____.
a) Increases b) Not affected
c) Decreases d) None of the above

6) Brake power is measured by _____.
a) Morse test b) Burette test
c) Dynamometers d) Motoring test

7) Spark advance is usually specified in terms of _____.
a) engine speed in rev/min b) degrees of crank rotation
c) time in seconds d) none of the above

8) In which of the following engine CRDI is used _____.
a) S.I.Engine b) C.I.Engine
c) Steam engine d) None of above

9) Spark plug is used in _____.
a) C.I.Engine b) S.I.Engine
c) Steam engine d) None of Above

10) Brake specific fuel consumption is defined as _____.
a) fuel consumption per hour
b) fuel consumption per km
c) fuel consumption per hour per brake power
d) fuel consumption per BHP

11) One of the major exhaust emissions from CI Engine compared to SI Engine is _____.
a) Oxides of nitrogen b) Particulates
c) Unburnt hydrocarbons d) CO and CO2

12) In which of the following engine supercharging is essential?
a) S.I.Engine b) C.I.Engine
c) Aircraft engine d) Marine engine

13) Supercharging air compressor is driven by _____.
a) Engine itself b) Exhaust gas turbine

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Which of the following is a closed-loop system example?
a) Electric bulb
b) Washing machine with automatic control
c) Toaster
d) Manual hand pump

2) Transfer function is defined in terms of _____.
a) Output/Input b) Input/Output
c) Voltage/Power d) Torque/Current

3) Which sensor is used for distance measurement using sound waves?
a) Optical sensor b) Ultrasonic sensor
c) Temperature sensor d) Flow sensor

4) Stepper motors are mainly used where _____.
a) Continuous motion is required
b) Precise position control is required
c) Weight measurement
d) Temperature sensing

5) Piezoelectric actuators convert _____.
a) Electrical → Mechanical motion
b) Mechanical → Thermal
c) Magnetic → Electrical
d) Chemical → Heat

6) A microcontroller includes _____.
- a) CPU + Memory + I/O ports
- b) Only CPU
- c) CPU + Keyboard
- d) Memory + Hard disk

7) ATmega328P belongs to _____.
- a) 8085 family
- b) 8051 family
- c) Arduino Uno
- d) ARM processors

8) RS232 is used for _____.
- a) Mechanical motion
- b) Serial communication
- c) Power transmission
- d) Temperature control

9) OP-AMP stands for _____.
- a) Operational Amplifier
- b) Optical Amplifier
- c) Overload Amplifier
- d) Oscillating Amplifier

10) Which programming language is most common in PLC?
- a) Python
- d) Ladder Diagram
- c) COBOL
- d) Java

11) PLC is used mainly for _____.
- a) Web browsing
- b) Industrial automation
- c) Education
- d) Gaming

12) Shift register in PLC is used for _____.
- a) Counting speed
- b) Shifting data bit by bit
- c) Heat transfer
- d) Vibration control

13) SCADA stands for _____.
- a) System Control and Data Acquisition
- b) Supervisory Control and Data Acquisition
- c) Super Central Acquisition Device Automation
- d) Standard Control Analysis Data Application

14) Industry 4.0 mainly focuses on _____.
- a) Manual manufacturing
- b) Traditional machinery
- c) Smart automation & IoT
- d) Steam power technology

Examination: March/April – 2026
Mechatronics systems (MECHPEC-01D)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figure on fight indicates full marks.
3) Assume suitable data, diagrams if required.
4) Use of nonprogrammable calculators is allowed.

Section – I

Q.2 Answer the following questions. (Any Two) **14**

a) Explain with neat block diagrams:
i) Open-loop control system
ii) Closed-loop control system
Also differentiate between them.

b) Classify sensors and explain any four sensors (displacement, temperature, optical, ultrasonic) with principle, construction & applications.

c) Compare microprocessor and microcontroller. Explain 8085 architecture with a neat block diagram.

Q.3 Answer the following questions. (Any Two) **14**

a) Define mechatronics. Explain the key elements of a mechatronics system with suitable examples.

b) Explain the construction, working, characteristics and applications of the following actuators:
i) Stepper Motor
ii) Hydraulic Actuator

c) Explain the features of Arduino Uno (ATmega328P) and write a basic program to interface any one sensor/actuator with Arduino.

Section – II

Q.4 Answer the following questions. (Any Two) **14**

a) Describe the following interfacing elements with neat diagrams and applications:
i) Motor Drivers
ii) Optocouplers
iii) Relays

b) Explain PLC architecture with a neat block diagram. Also explain the scan cycle and I/O processing.

c) What is SCADA? Explain its architecture, working and advantages in industrial automation.

Q.5 Answer the following questions. (Any Two) **14**

a) Explain ADC and DAC with working principles, block diagrams and applications in mechatronic systems.

b) Write ladder diagrams for the following and explain the logic:
i) Traffic light sequencing
ii) Temperature control system

c) Explain Industry 4.0 and IoT. Discuss their role in smart manufacturing with suitable examples.

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) RS232 is used for _____.
a) Mechanical motion b) Serial communication
c) Power transmission d) Temperature control

2) OP-AMP stands for _____.
a) Operational Amplifier b) Optical Amplifier
c) Overload Amplifier d) Oscillating Amplifier

3) Which programming language is most common in PLC?
a) Python d) Ladder Diagram
c) COBOL d) Java

4) PLC is used mainly for _____.
a) Web browsing b) Industrial automation
c) Education d) Gaming

5) Shift register in PLC is used for _____.
a) Counting speed b) Shifting data bit by bit
c) Heat transfer d) Vibration control

6) SCADA stands for _____.
a) System Control and Data Acquisition
b) Supervisory Control and Data Acquisition
c) Super Central Acquisition Device Automation
d) Standard Control Analysis Data Application

7) Industry 4.0 mainly focuses on _____.
a) Manual manufacturing b) Traditional machinery
c) Smart automation & IoT d) Steam power technology

8) Which of the following is a closed-loop system example?
a) Electric bulb
b) Washing machine with automatic control
c) Toaster
d) Manual hand pump

9) Transfer function is defined in terms of _____.
a) Output/Input b) Input/Output
c) Voltage/Power d) Torque/Current

10) Which sensor is used for distance measurement using sound waves?
a) Optical sensor b) Ultrasonic sensor
c) Temperature sensor d) Flow sensor

11) Stepper motors are mainly used where _____.
a) Continuous motion is required
b) Precise position control is required
c) Weight measurement
d) Temperature sensing

12) Piezoelectric actuators convert _____.
a) Electrical → Mechanical motion
b) Mechanical → Thermal
c) Magnetic → Electrical
d) Chemical → Heat

13) A microcontroller includes _____.
a) CPU + Memory + I/O ports
b) Only CPU
c) CPU + Keyboard
d) Memory + Hard disk

14) ATmega328P belongs to _____.
a) 8085 family b) 8051 family
c) Arduino Uno d) ARM processors

Set Q

T.Y. (B.Tech.) (Mechanical Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Mechatronics systems (MECHPEC-01D)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figure on fight indicates full marks.
3) Assume suitable data, diagrams if required.
4) Use of nonprogrammable calculators is allowed.

Section – I

Q.2 Answer the following questions. (Any Two) **14**

a) Explain with neat block diagrams:
i) Open-loop control system
ii) Closed-loop control system
Also differentiate between them.

b) Classify sensors and explain any four sensors (displacement, temperature, optical, ultrasonic) with principle, construction & applications.

c) Compare microprocessor and microcontroller. Explain 8085 architecture with a neat block diagram.

Q.3 Answer the following questions. (Any Two) **14**

a) Define mechatronics. Explain the key elements of a mechatronics system with suitable examples.

b) Explain the construction, working, characteristics and applications of the following actuators:
i) Stepper Motor
ii) Hydraulic Actuator

c) Explain the features of Arduino Uno (ATmega328P) and write a basic program to interface any one sensor/actuator with Arduino.

Section – II

Q.4 Answer the following questions. (Any Two) **14**

a) Describe the following interfacing elements with neat diagrams and applications:
i) Motor Drivers
ii) Optocouplers
iii) Relays

b) Explain PLC architecture with a neat block diagram. Also explain the scan cycle and I/O processing.

c) What is SCADA? Explain its architecture, working and advantages in industrial automation.

Q.5 Answer the following questions. (Any Two) **14**

a) Explain ADC and DAC with working principles, block diagrams and applications in mechatronic systems.

b) Write ladder diagrams for the following and explain the logic:
i) Traffic light sequencing
ii) Temperature control system

c) Explain Industry 4.0 and IoT. Discuss their role in smart manufacturing with suitable examples.

Set R

T. Y. (B.Tech.) (Mechanical Engineering) (Sem - I) (New) (CBCS)
Examination: March/April – 2026
Mechatronics Systems (MECHPEC-01D)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data whenever needed & mention it clearly.
5) Use of nonprogrammable calculators is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) PLC is used mainly for _____.
a) Web browsing b) Industrial automation
c) Education d) Gaming

2) Shift register in PLC is used for _____.
a) Counting speed b) Shifting data bit by bit
c) Heat transfer d) Vibration control

3) SCADA stands for _____.
a) System Control and Data Acquisition
b) Supervisory Control and Data Acquisition
c) Super Central Acquisition Device Automation
d) Standard Control Analysis Data Application

4) Industry 4.0 mainly focuses on _____.
a) Manual manufacturing b) Traditional machinery
c) Smart automation & IoT d) Steam power technology

5) Which of the following is a closed-loop system example?
a) Electric bulb
b) Washing machine with automatic control
c) Toaster
d) Manual hand pump

6) Transfer function is defined in terms of _____.
a) Output/Input b) Input/Output
c) Voltage/Power d) Torque/Current

7) Which sensor is used for distance measurement using sound waves?
a) Optical sensor
b) Ultrasonic sensor
c) Temperature sensor
d) Flow sensor

8) Stepper motors are mainly used where _____.
a) Continuous motion is required
b) Precise position control is required
c) Weight measurement
d) Temperature sensing

9) Piezoelectric actuators convert _____.
a) Electrical → Mechanical motion
b) Mechanical → Thermal
c) Magnetic → Electrical
d) Chemical → Heat

10) A microcontroller includes _____.
a) CPU + Memory + I/O ports
b) Only CPU
c) CPU + Keyboard
d) Memory + Hard disk

11) ATmega328P belongs to _____.
a) 8085 family
b) 8051 family
c) Arduino Uno
d) ARM processors

Creativity and Design Thinking (AEC-02)

Day & Date: Tuesday, 12-05-2026 Max. Marks: 50
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Mention Question Paper Set (P/Q/R/S) on Top of Page.
4) Use of non-programmable calculators is allowed.

Answer

Q.1 Multiple Choice Questions.

1) Innovation mainly focuses on _____.
a) Generating ideas only b) Implementing creative ideas
c) Copying others d) Marketing

2) Creativity and Innovation together lead to _____.
a) Routine performance b) Problem discovery
c) Practical novelty d) Mechanical repetition

3) A characteristic of a creative person is _____.
a) Rigidity b) Curiosity
c) Fearfulness d) Passivity

4) Which of the following represents a major *barrier* to creativity?
a) Time pressure b) Risk-taking
c) Playfulness d) Flexibility

5) The “Ideate” stage in design thinking focuses on _____.
a) Understanding users b) Generating solutions
c) Testing ideas d) Building prototypes

6) Design thinking is fundamentally _____.
a) User-centered b) Manager-centered
c) Engineer-centered d) Cost-centered

7) Which of these helps to *overcome* creative blocks?
a) Collaboration b) Fear of mistakes
c) Over-planning d) Isolation

8) A design thinker empathizes to _____.
a) Know customer feelings and needs
b) Find product cost
c) Estimate profit
d) Collect market data

9) The *Define* phase results in _____.
a) Problem statement b) Prototype
c) Survey d) Marketing plan

10) Barriers to creativity can be removed through _____.
a) Open communication b) Discouragement
c) Repetition d) Judgmental thinking

11) The last phase of design thinking is _____.
a) Prototype b) Test
c) Ideate d) Define

12) Which term best describes the ability to see connections between unrelated ideas?
a) Fluency b) Flexibility
c) Originality d) Association

13) One of the benefits of design thinking is _____.
a) Focusing on user-friendly solutions
b) Ignoring customers
c) Cost reduction only
d) Quick fixes

14) Divergent and convergent thinking together ensure _____.
a) Balance between idea generation and selection
b) Faster production
c) Market analysis
d) Less creativity

15) In brainstorming, criticism should be ____.
a) Encouraged b) Postponed
c) Ignored d) Repeated

16) SCAMPER is mainly used for _____.
a) Modifying existing ideas b) Market study
c) Testing materials d) Estimating cost

17) In mind mapping, central themes are _____.
a) Placed at center with branches outward
b) At the edges
c) Hidden
d) Random

18) TRIZ encourages _____.
a) Systematic innovation through contradictions
b) Copying existing patents
c) Brainstorm blocking
d) Linear analysis

19) Which is a creative ideation technique?
a) Storyboarding b) Checklist creation
c) Prototype testing d) Quality audit

20) Concept sketching helps _____.
a) Express ideas visually b) Replace written reports
c) Perform tests d) Manage finance

21) In SCAMPER, "C" stands for _____.
a) Combine b) Copy
c) Create d) Classify

22) The purpose of divergent thinking is to _____.
a) Explore many possibilities b) Select one answer
c) Limit imagination d) Finalize design

23) Which of the following tools is best suited for *organizing ideas?*
a) Mind map b) Pie chart
c) Spreadsheet d) Histogram

24) "Storytelling" in concept development helps designers _____.
a) Communicate user experiences effectively
b) Draw detailed schematics
c) Analyze budget
d) Fix prototypes

25) The last step of concept development is _____.
a) Visualization of ideas b) Brainstorming
c) TRIZ analysis d) Market feedback

26) Prototyping in design helps _____.
a) Convert abstract ideas into tangible models
b) Replace manufacturing
c) Finalize budgets
d) Avoid testing

27) Which prototype type is *cheapest* and fastest?
a) Low-fidelity b) High-fidelity
c) Final d) Medium

28) High-fidelity prototypes allow _____.
a) User interaction and realism
b) Concept only
c) Paper sketching
d) Cost saving only

29) The iterative approach focuses on _____.
a) Refining design through repeated feedback
b) Making single model
c) Reducing creativity
d) Avoiding testing

30) The first step in rapid prototyping is _____.
a) 3D CAD modeling b) Final assembly
c) Testing d) Polishing

31) Which tool is commonly used in rapid prototyping?
a) 3D printer b) Spreadsheet
c) CNC lathe d) Mind map

32) User testing is most crucial in which stage?
a) Prototype evaluation b) Ideation
c) Definition d) Empathize

33) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

34) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

35) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

36) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

37) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

38) The goal of sustainable design is _____.
a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

39) Which phase is crucial for sustainability decisions?
a) Design stage b) Disposal
c) Marketing d) Sales

40) Product life-cycle assessment includes _____.
a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

41) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

42) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

43) "Design for reuse" aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

44) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

45) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

46) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

47) Case studies in sustainable design show _____.
a) Application of eco-friendly materials
b) Ignoring user needs
c) Over-production
d) Energy waste

48) The most important sustainability factor in manufacturing is _____.
a) Resource efficiency
b) Advertisement
c) Branding
d) Design color

49) Which practice promotes a circular economy?
a) Recycling and remanufacturing
b) Landfilling
c) Burning waste
d) Exporting scrap

50) Sustainable engineering mainly targets _____.
a) Balance between economy, society, and environment
b) Maximizing output only
c) Technological monopoly
d) Short-term gains

13) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

14) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

15) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

16) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

17) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

18) The goal of sustainable design is _____.
a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

19) Which phase is crucial for sustainability decisions?
a) Design stage b) Disposal
c) Marketing d) Sales

20) Product life-cycle assessment includes _____.
a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

21) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

22) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

23) "Design for reuse" aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

24) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

25) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

26) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

27) Case studies in sustainable design show _____.
a) Application of eco-friendly materials

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Creativity and Design Thinking (AEC-02)

Day & Date: Tuesday, 12-05-2026 Max. Marks: 50
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Mention Question Paper Set (P/Q/R/S) on Top of Page.
4) Use of non-programmable calculators is allowed.

Answer

Q.1 Multiple Choice Questions.

1) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

2) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

3) "Design for reuse" aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

4) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

5) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

6) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

7) Case studies in sustainable design show _____.
a) Application of eco-friendly materials
b) Ignoring user needs
c) Over-production
d) Energy waste

8) The most important sustainability factor in manufacturing is _____.
a) Resource efficiency b) Advertisement
c) Branding d) Design color

9) Which practice promotes a circular economy?
a) Recycling and remanufacturing
b) Landfilling
c) Burning waste
d) Exporting scrap

10) Sustainable engineering mainly targets _____.
a) Balance between economy, society, and environment
b) Maximizing output only
c) Technological monopoly
d) Short-term gains

11) Innovation mainly focuses on _____.
a) Generating ideas only b) Implementing creative ideas
c) Copying others d) Marketing

12) Creativity and Innovation together lead to _____.
a) Routine performance b) Problem discovery
c) Practical novelty d) Mechanical repetition

13) A characteristic of a creative person is _____.
a) Rigidity b) Curiosity
c) Fearfulness d) Passivity

14) Which of the following represents a major *barrier* to creativity?
a) Time pressure b) Risk-taking
c) Playfulness d) Flexibility

15) The “Ideate” stage in design thinking focuses on _____.
a) Understanding users b) Generating solutions
c) Testing ideas d) Building prototypes

16) Design thinking is fundamentally _____.
a) User-centered b) Manager-centered
c) Engineer-centered d) Cost-centered

17) Which of these helps to *overcome* creative blocks?
a) Collaboration b) Fear of mistakes
c) Over-planning d) Isolation

18) A design thinker empathizes to _____.
a) Know customer feelings and needs
b) Find product cost
c) Estimate profit
d) Collect market data

19) The *Define* phase results in _____.
a) Problem statement b) Prototype
c) Survey d) Marketing plan

20) Barriers to creativity can be removed through _____.
a) Open communication b) Discouragement
c) Repetition d) Judgmental thinking

21) The last phase of design thinking is _____.
a) Prototype b) Test
c) Ideate d) Define

22) Which term best describes the ability to see connections between unrelated ideas?
a) Fluency b) Flexibility
c) Originality d) Association

23) One of the benefits of design thinking is _____.
a) Focusing on user-friendly solutions
b) Ignoring customers
c) Cost reduction only
d) Quick fixes

24) Divergent and convergent thinking together ensure _____.
a) Balance between idea generation and selection
b) Faster production
c) Market analysis
d) Less creativity

25) In brainstorming, criticism should be ____.
a) Encouraged b) Postponed
c) Ignored d) Repeated

26) SCAMPER is mainly used for _____.
a) Modifying existing ideas b) Market study
c) Testing materials d) Estimating cost

27) In mind mapping, central themes are _____.
a) Placed at center with branches outward
b) At the edges
c) Hidden
d) Random

28) TRIZ encourages _____.
a) Systematic innovation through contradictions
b) Copying existing patents
c) Brainstorm blocking
d) Linear analysis

29) Which is a creative ideation technique?
a) Storyboarding b) Checklist creation
c) Prototype testing d) Quality audit

30) Concept sketching helps _____.
a) Express ideas visually b) Replace written reports
c) Perform tests d) Manage finance

31) In SCAMPER, "C" stands for _____.
a) Combine b) Copy
c) Create d) Classify

32) The purpose of divergent thinking is to _____.
a) Explore many possibilities b) Select one answer
c) Limit imagination d) Finalize design

33) Which of the following tools is best suited for *organizing ideas?*
a) Mind map b) Pie chart
c) Spreadsheet d) Histogram

34) "Storytelling" in concept development helps designers _____.
a) Communicate user experiences effectively
b) Draw detailed schematics
c) Analyze budget
d) Fix prototypes

35) The last step of concept development is _____.
a) Visualization of ideas b) Brainstorming
c) TRIZ analysis d) Market feedback

36) Prototyping in design helps _____.
a) Convert abstract ideas into tangible models
b) Replace manufacturing
c) Finalize budgets
d) Avoid testing

37) Which prototype type is *cheapest* and fastest?
a) Low-fidelity b) High-fidelity
c) Final d) Medium

38) High-fidelity prototypes allow _____.
a) User interaction and realism
b) Concept only
c) Paper sketching
d) Cost saving only

39) The iterative approach focuses on _____.
a) Refining design through repeated feedback
b) Making single model
c) Reducing creativity
d) Avoiding testing

40) The first step in rapid prototyping is _____.
a) 3D CAD modeling b) Final assembly
c) Testing d) Polishing

41) Which tool is commonly used in rapid prototyping?
a) 3D printer b) Spreadsheet
c) CNC lathe d) Mind map

42) User testing is most crucial in which stage?
a) Prototype evaluation b) Ideation
c) Definition d) Empathize

43) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

44) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

45) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

46) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

47) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

48) The goal of sustainable design is _____.

a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

49) Which phase is crucial for sustainability decisions?

a) Design stage b) Disposal
c) Marketing d) Sales

50) Product life-cycle assessment includes _____.

a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

14) “Storytelling” in concept development helps designers _____.
a) Communicate user experiences effectively
b) Draw detailed schematics
c) Analyze budget
d) Fix prototypes

15) The last step of concept development is _____.
a) Visualization of ideas b) Brainstorming
c) TRIZ analysis d) Market feedback

16) Prototyping in design helps _____.
a) Convert abstract ideas into tangible models
b) Replace manufacturing
c) Finalize budgets
d) Avoid testing

17) Which prototype type is *cheapest* and fastest?
a) Low-fidelity b) High-fidelity
c) Final d) Medium

18) High-fidelity prototypes allow _____.
a) User interaction and realism
b) Concept only
c) Paper sketching
d) Cost saving only

19) The iterative approach focuses on _____.
a) Refining design through repeated feedback
b) Making single model
c) Reducing creativity
d) Avoiding testing

20) The first step in rapid prototyping is _____.
a) 3D CAD modeling b) Final assembly
c) Testing d) Polishing

21) Which tool is commonly used in rapid prototyping?
a) 3D printer b) Spreadsheet
c) CNC lathe d) Mind map

22) User testing is most crucial in which stage?
a) Prototype evaluation b) Ideation
c) Definition d) Empathize

23) A real-life application of creative design is _____.
a) Smart wearable devices b) Paper waste
c) Redundant designs d) Manual data entry

24) Brainstorming during prototype improvement helps _____.
a) Generate alternative solutions
b) Restrict ideas
c) Delay work
d) Stop iteration

25) Which of the following prototypes allows early visualization?
a) Sketch model b) CAD simulation
c) Clay model d) Flowchart

26) Customer-driven design ensures _____.
a) Meeting user needs b) Reducing quality
c) Ignoring testing d) Increasing cost

27) The final output of iterative design is _____.
a) Optimized product meeting specifications
b) Initial draft
c) Prototype sketch
d) Raw material

28) The goal of sustainable design is _____.
a) Minimize negative environmental impact
b) Increase short-term gain
c) Use non-renewable resources
d) Ignore life cycle

29) Which phase is crucial for sustainability decisions?
a) Design stage b) Disposal
c) Marketing d) Sales

30) Product life-cycle assessment includes _____.
a) Raw material to end-of-life impact
b) Only production cost
c) Marketing only
d) Storage cost

31) A product designed for durability supports _____.
a) Longevity principle b) Obsolescence
c) Short-term use d) High waste

32) Eco-friendly design considers _____.
a) Material selection and energy efficiency
b) Only packaging
c) Advertisement
d) Color

33) “Design for reuse” aims to _____.
a) Extend product life b) Destroy waste
c) Limit recycling d) Increase cost

34) Agile development in design allows _____.
a) Rapid response to change b) Strict stepwise control
c) No feedback d) Delayed iterations

35) Spiral model combines _____.
a) Prototyping and risk management
b) Linear and agile stages
c) Testing and marketing
d) Sales and production

36) The staged (waterfall) model is _____.
a) Sequential b) Iterative
c) Flexible d) Rapid

37) Case studies in sustainable design show _____.
a) Application of eco-friendly materials
b) Ignoring user needs
c) Over-production
d) Energy waste

38) The most important sustainability factor in manufacturing is _____.
a) Resource efficiency b) Advertisement
c) Branding d) Design color

39) Which practice promotes a circular economy?
a) Recycling and remanufacturing
b) Landfilling
c) Burning waste
d) Exporting scrap

40) Sustainable engineering mainly targets _____.
a) Balance between economy, society, and environment
b) Maximizing output only
c) Technological monopoly
d) Short-term gains

41) Innovation mainly focuses on _____.
a) Generating ideas only b) Implementing creative ideas

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required & state it clearly.
5) Use of nonprogrammable calculators is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 MCQ/ Objective Type Questions: 14

1) If a battery is charged at a 1C rate, how long will it take to fully charge?
a) 1 hour b) 2 hours
c) 30 minutes d) 10 hours

2) If a battery is discharged to 40% of its total capacity, what is its Depth of Discharge (DoD)?
a) 60% b) 40%
c) 100% d) 20%

3) _____ avoids the direct contact of the positive and negative plate in a lithium-ion battery?
a) Electrolyte b) Separator
c) Load d) Rectifier

4) Which is the electrolyte used in Li-ion battery?
a) Lead dioxide b) Lithium-based gel
c) Sulfur dioxide d) Cobalt

5) Which of these battery technologies has the highest theoretical energy density?
a) Lithium-Sulphur b) Li-Polymer
c) Lithium-air d) Sodium-ion

6) Li-metal batteries use which material as the anode?
a) Graphite b) Silicon
c) Pure lithium d) Copper oxide

7) Which of the following battery types is known for its solid electrolyte instead of liquid?

a) Lithium-ion
b) Li-Polymer
c) Solid-state Lithium
d) Lithium-air

8) What is the primary need for designing a battery pack in electric vehicles?

a) To reduce weight
b) To increase the speed
c) To store and manage electrical energy safely and efficiently
d) To reduce emissions

9) Which of the following is the first step in the battery pack development process?

a) Mechanical enclosure design
b) Cell selection and configuration
c) BMS integration
d) Thermal management

10) Which of the following is NOT a method of active thermal management in battery packs?

a) Liquid cooling
b) Forced air convection
c) Phase change material
d) Peltier cooling

11) Which cooling technique involves submerging battery components directly into a dielectric fluid?

a) Liquid cooling
b) Forced air convection
c) Immersion cooling
d) Heat sink convection

12) Which of the following correctly distinguishes an On-board charger from an Off-board charger?

a) On-board charger is faster than off-board charger
b) On-board charger is integrated inside the vehicle, while off-board charger is external
c) Off-board charger is located inside the vehicle
d) On-board charger only supports fast charging

13) Which of the following is an example of a fast charging standard commonly used in EVs?

a) CHAdeMO
b) Type-1
c) Type-2
d) IEC 60309

14) What is the primary function of thermal design in a battery pack?

a) Improve battery weight
b) Increase voltage output
c) Maintain optimal operating temperature
d) Reduce internal resistance

Set P

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Honors in Electric Vehicle Engineering
Battery Technology and Charging Infrastructure (Mech Hon - 03B)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt two questions from each section.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Attempt the following.

a) Discuss the key parameters for selecting an EV battery. **05**

b) Explain the chemistry of Lithium Iron Phosphate (LFP) batteries. **05**

c) Explain Lithium-Polymer battery with a neat sketch. **04**

Q.3 Attempt the following.

a) Explain Li-ion battery chemistry with a neat sketch. **05**

b) Compare Lithium-Sulfur and Sodium-Ion batteries based on structure, electrode materials, electrolyte, and applications. **05**

c) Define the following terms related to battery performance and characteristics: **04**

i) State of Charge (SoC)
ii) C-Rate
iii) Specific Energy Density
iv) Energy Capacity

Q.4 Attempt the following.

a) Discuss the relationship between Battery Life-Cycles and EV Battery Life. **05**

b) Discuss the different types of Li-ion batteries. **05**

c) Discuss Solid-State Lithium Batteries with the help of a neat sketch. **04**

SECTION – II

Q.5 Attempt the following.

a)	Explain the need of a battery pack in electric vehicles.	**05**
b)	Explain the battery thermal management system.	**05**
c)	Discuss charging protocols used for EV chargers.	**04**

Q.6 Attempt the following.

a)	Explain Battery Pack Development Process.	**05**
b)	Write note on battery Swapping.	**05**
c)	Explain why thermal management of battery packs is important.	**04**

Q.7 Attempt the following.

a)	Compare active and passive thermal management techniques used in battery systems.	**05**
b)	Discuss AC and DC charging in detail.	**05**
c)	Describe the role of electrical design in battery pack performance.	**04**

d) Cobalt

9) Which of these battery technologies has the highest theoretical energy density?

a) Lithium-Sulphur
b) Li-Polymer
c) Lithium-air
d) Sodium-ion

10) Li-metal batteries use which material as the anode?

a) Graphite
b) Silicon
c) Pure lithium
d) Copper oxide

11) Which of the following battery types is known for its solid electrolyte instead of liquid?

a) Lithium-ion
b) Li-Polymer
c) Solid-state Lithium
d) Lithium-air

12) What is the primary need for designing a battery pack in electric vehicles?

a) To reduce weight
b) To increase the speed
c) To store and manage electrical energy safely and efficiently
d) To reduce emissions

13) Which of the following is the first step in the battery pack development process?

a) Mechanical enclosure design
b) Cell selection and configuration
c) BMS integration
d) Thermal management

14) Which of the following is NOT a method of active thermal management in battery packs?

a) Liquid cooling
b) Forced air convection
c) Phase change material
d) Peltier cooling

Set | R

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New) (CBCS)
Examination: March/April – 2026
Honors in Electric Vehicle Engineering
Battery Technology and Charging Infrastructure (Mech Hon - 03B)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt two questions from each section.
2) Figures to the right indicate full marks.

SECTION – I

Q.2 Attempt the following.

a) Discuss the key parameters for selecting an EV battery. **05**

b) Explain the chemistry of Lithium Iron Phosphate (LFP) batteries. **05**

c) Explain Lithium-Polymer battery with a neat sketch. **04**

Q.3 Attempt the following.

a) Explain Li-ion battery chemistry with a neat sketch. **05**

b) Compare Lithium-Sulfur and Sodium-Ion batteries based on structure, electrode materials, electrolyte, and applications. **05**

c) Define the following terms related to battery performance and characteristics: **04**

i) State of Charge (SoC)
ii) C-Rate
iii) Specific Energy Density
iv) Energy Capacity

Q.4 Attempt the following.

a) Discuss the relationship between Battery Life-Cycles and EV Battery Life. **05**

b) Discuss the different types of Li-ion batteries. **05**

c) Discuss Solid-State Lithium Batteries with the help of a neat sketch. **04**

SECTION – II

Q.5 Attempt the following.

a)	Explain the need of a battery pack in electric vehicles.	**05**
b)	Explain the battery thermal management system.	**05**
c)	Discuss charging protocols used for EV chargers.	**04**

Q.6 Attempt the following.

a)	Explain Battery Pack Development Process.	**05**
b)	Write note on battery Swapping.	**05**
c)	Explain why thermal management of battery packs is important.	**04**

Q.7 Attempt the following.

a)	Compare active and passive thermal management techniques used in battery systems.	**05**
b)	Discuss AC and DC charging in detail.	**05**
c)	Describe the role of electrical design in battery pack performance.	**04**

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required & state it clearly.
5) Use of nonprogrammable calculators is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 MCQ/ Objective Type Questions: 14

1) Li-metal batteries use which material as the anode?
a) Graphite b) Silicon
c) Pure lithium d) Copper oxide

2) Which of the following battery types is known for its solid electrolyte instead of liquid?
a) Lithium-ion b) Li-Polymer
c) Solid-state Lithium d) Lithium-air

3) What is the primary need for designing a battery pack in electric vehicles?
a) To reduce weight
b) To increase the speed
c) To store and manage electrical energy safely and efficiently
d) To reduce emissions

4) Which of the following is the first step in the battery pack development process?
a) Mechanical enclosure design
b) Cell selection and configuration
c) BMS integration
d) Thermal management

5) Which of the following is NOT a method of active thermal management in battery packs?
a) Liquid cooling b) Forced air convection
c) Phase change material d) Peltier cooling

6) Which cooling technique involves submerging battery components directly into a dielectric fluid?

a) Liquid cooling
b) Forced air convection
c) Immersion cooling
d) Heat sink convection

7) Which of the following correctly distinguishes an On-board charger from an Off-board charger?

a) On-board charger is faster than off-board charger
b) On-board charger is integrated inside the vehicle, while off-board charger is external
c) Off-board charger is located inside the vehicle
d) On-board charger only supports fast charging

8) Which of the following is an example of a fast charging standard commonly used in EVs?

a) CHAdeMO
b) Type-1
c) Type-2
d) IEC 60309

9) What is the primary function of thermal design in a battery pack?

a) Improve battery weight
b) Increase voltage output
c) Maintain optimal operating temperature
d) Reduce internal resistance

10) If a battery is charged at a 1C rate, how long will it take to fully charge?

a) 1 hour
b) 2 hours
c) 30 minutes
d) 10 hours

11) If a battery is discharged to 40% of its total capacity, what is its Depth of Discharge (DoD)?

a) 60%
b) 40%
c) 100%
d) 20%

12) _____ avoids the direct contact of the positive and negative plate in a lithium-ion battery?

a) Electrolyte
b) Separator
c) Load
d) Rectifier

13) Which is the electrolyte used in Li-ion battery?

a) Lead dioxide
b) Lithium-based gel
c) Sulfur dioxide
d) Cobalt

14) Which of these battery technologies has the highest theoretical energy density?

a) Lithium-Sulphur
b) Li-Polymer
c) Lithium-air
d) Sodium-ion

3) Figures to the right indicates full marks.
4) Make a suitable assumption whenever necessary & state it clearly

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options: 14

1) Stress concentration is due to _____.
a) variation is material property
b) variation of load
c) variation of factor of safety
d) variation in cross sectional area

2) Cotter joint is used to transmit _____.
a) Axial tensile load b) Axial shear load
c) Bending stress d) Torsional stress

3) Levers are subjected to _____.
a) Twisting moment b) Bending moment
c) Direct axial load d) Both a & b

4) Stress concentration in static loading is more serious in _____.
a) Ductile material
b) Brittle material
c) Equally serious in both cases
d) Depends on other factor

5) The width of the pulley should be _____.
a) equal to the width of belt
b) less than width of belt
c) greater than width of belt
d) None of the above

6) When the speed of belt increases, _____.
a) the coefficient of friction between the belt and pulley increases
b) the coefficient of friction between the belt and pulley decreases
c) the power transmitted will decrease
d) the power transmitted will increase

7) As per ASME code for shaft design, permissible shear stress for the shaft with key way is reduced by _____.
a) 20% b) 25%
c) 18% d) 30 %

8) The type of stresses developed in the key is/are _____.
a) shear stress alone
b) bearing stress alone
c) both shear and bearing stresses
d) shearing, bearing and bending stresses

9) Permissible twist in cam shaft is _____.
a) 1^0 b) 2.5^0
c) 0.25^0 d) 3^0

10) When a helical compression spring is subjected to an axial compressive load, the stress induced in the wire is _____.
a) tensile stress b) compressive stress
c) shear stress d) bending stress

11) Which of the following spring is used in mechanical wrist watch?
a) Helical compression spring b) Spiral spring
c) Torsion spring d) Leaf spring

12) A screw is specified by its _____.
a) major diameter b) minor diameter
c) pitch diameter d) pitch

13) In transverse fillet welded joint, the size of weld is equal to _____.
a) $0.5 \times$ Throat of weld b) Throat of weld
c) $\sqrt{2} \times$ Throat of weld d) $2 \times$ Throat of weld

14) The transverse fillet welded joints are designed for _____.
a) tensile strength b) compressive strength
c) bending strength d) shear strength

Set **P**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April - 2026
Design of Machine Elements (BTN02501)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Figure to the right indicate full marks.
3) Make suitable assumptions wherever necessary and state it clearly.
4) Draw neat diagram wherever necessary.

Section – I

Q.2 **a)** Explain basic procedure of machine design. **06**

b) A cotter joint is used to connected two roads. The inside diameter of socket is 50 mm and outside diameter of the socket collar is 100 mm. The rods are subjected to a tensile load of 50 kN. The cotter is made of steel 30C8 (Syt = 400 N/mm^2) and the factor of safety is 4. The width of the cotter is five times of thickness. Calculate the width and thickness of the cotter on the basis of shear failure. **08**

Q.3 **a)** With the help of S-N curve, explain endurance limit and its significance in design. **07**

b) Draw and explain modified Goodman diagram. **07**

Q.4 **a)** What are the advantages of belt drive. **04**

b) A flat belt is used to drive reciprocating compressor running at 720 rpm which is driven by a 25 kW, 1440 rpm motor. The required center distance is 3 m. Select an open type, flat belt. Assume initial belt velocity as 18 m/s and use following Data: **10**

i) Load correction factor = 1.3
ii) Standard pully dia. 250, 280, 315, 355, 400, 450, 500
iii) Arc of contact factor (Fd)

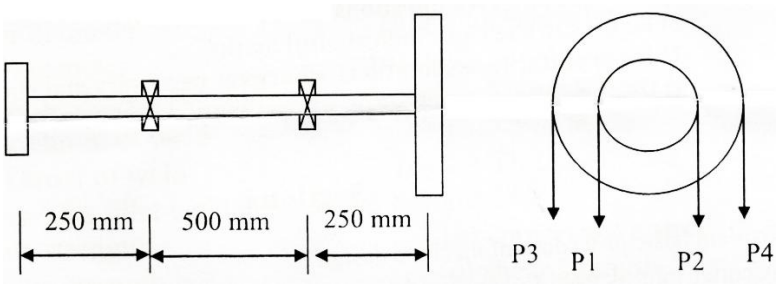
α_s	170	180
Fd	1.04	1.00

iv) Power rating per mm width per ply at 180^0 arc of contact and 5.08 m/s belt speed is 0.0118KW.

Section – II

Q.5 **a)** What are the design considerations in Forging? **06**

b) A shaft receives power of 7.5 KW from a motor and transmits it to a compressor at 360 rpm as shown in fig. Belt tensions act vertically downward and ratio of tension in tight side to lose side is 2.5:1. Yield strength of shaft material is 380 N/mm^2. Determine shaft diameter on strength basis. **08**



Q.6 **a)** What are the different types of springs? Explain with neat sketch leaf spring. **06**

b) Outside diameter of a helical spring is 75 mm and made from a wire of 6 mm diameter. If the permissible shear stress is 350 MPa and modulus of rigidity 84 MPa, find the axial load which the spring can carry and the deflection per active turn. **08**

Q.7 **a)** Compare welded and bolted joints. **04**

b) Four identical bolts, two at A and two at B, as shown in Fig are used to attach bracket to the wall. Assuming that the bracket is held against the wall and prevented from tilting about the point C by all four bolts and using an allowable tensile stress in the bolts as 35 N/mm^2, determine the size of the bolts on the basis of maximum shear stress theory. **10**

Day & Date: Saturday, 02-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make a suitable assumption whenever necessary & state it clearly

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options: 14

1) When the speed of belt increases, _____.
a) the coefficient of friction between the belt and pulley increases
b) the coefficient of friction between the belt and pulley decreases
c) the power transmitted will decrease
d) the power transmitted will increase

2) As per ASME code for shaft design, permissible shear stress for the shaft with key way is reduced by _____.
a) 20% b) 25%
c) 18% d) 30 %

3) The type of stresses developed in the key is/are _____.
a) shear stress alone
b) bearing stress alone
c) both shear and bearing stresses
d) shearing, bearing and bending stresses

4) Permissible twist in cam shaft is _____.
a) 1^0 b) 2.5^0
c) 0.25^0 d) 3^0

5) When a helical compression spring is subjected to an axial compressive load, the stress induced in the wire is _____.
a) tensile stress b) compressive stress
c) shear stress d) bending stress

6) Which of the following spring is used in mechanical wrist watch?
a) Helical compression spring
b) Spiral spring
c) Torsion spring
d) Leaf spring

7) A screw is specified by its _____.
a) major diameter
b) minor diameter
c) pitch diameter
d) pitch

8) In transverse fillet welded joint, the size of weld is equal to _____.
a) $0.5 \times$ Throat of weld
b) Throat of weld
c) $\sqrt{2} \times$ Throat of weld
d) $2 \times$ Throat of weld

9) The transverse fillet welded joints are designed for _____.
a) tensile strength
b) compressive strength
c) bending strength
d) shear strength

10) Stress concentration is due to _____.
a) variation is material property
b) variation of load
c) variation of factor of safety
d) variation in cross sectional area

11) Cotter joint is used to transmit _____.
a) Axial tensile load
b) Axial shear load
c) Bending stress
d) Torsional stress

12) Levers are subjected to _____.
a) Twisting moment
b) Bending moment
c) Direct axial load
d) Both a & b

13) Stress concentration in static loading is more serious in _____.
a) Ductile material
b) Brittle material
c) Equally serious in both cases
d) Depends on other factor

14) The width of the pulley should be _____.
a) equal to the width of belt
b) less than width of belt
c) greater than width of belt
d) None of the above

Seat No.	

Set | S

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April - 2026
Design of Machine Elements (BTN02501)

Day & Date: Saturday, 02-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Figure to the right indicate full marks.
3) Make suitable assumptions wherever necessary and state it clearly.
4) Draw neat diagram wherever necessary.

Section – I

Q.2 **a)** Explain basic procedure of machine design. **06**

b) A cotter joint is used to connected two roads. The inside diameter of socket is 50 mm and outside diameter of the socket collar is 100 mm. The rods are subjected to a tensile load of 50 kN. The cotter is made of steel 30C8 (Syt = 400 N/mm^2) and the factor of safety is 4. The width of the cotter is five times of thickness. Calculate the width and thickness of the cotter on the basis of shear failure. **08**

Q.3 **a)** With the help of S-N curve, explain endurance limit and its significance in design. **07**

b) Draw and explain modified Goodman diagram. **07**

Q.4 **a)** What are the advantages of belt drive. **04**

b) A flat belt is used to drive reciprocating compressor running at 720 rpm which is driven by a 25 kW, 1440 rpm motor. The required center distance is 3 m. Select an open type, flat belt. Assume initial belt velocity as 18 m/s and use following Data: **10**

i) Load correction factor = 1.3
ii) Standard pully dia. 250, 280, 315, 355, 400, 450, 500
iii) Arc of contact factor (Fd)

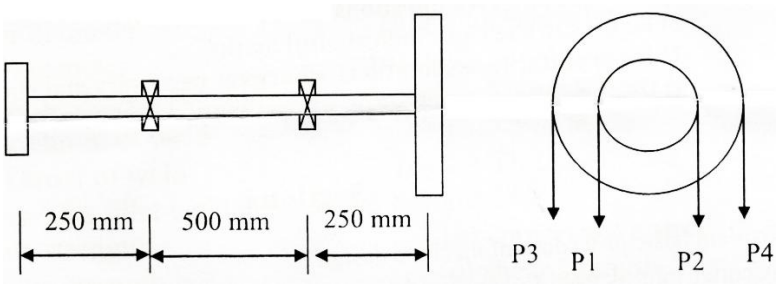
α_s	170	180
Fd	1.04	1.00

iv) Power rating per mm width per ply at 180^0 arc of contact and 5.08 m/s belt speed is 0.0118KW.

Section – II

Q.5 **a)** What are the design considerations in Forging? **06**

b) A shaft receives power of 7.5 KW from a motor and transmits it to a compressor at 360 rpm as shown in fig. Belt tensions act vertically downward and ratio of tension in tight side to lose side is 2.5:1. Yield strength of shaft material is 380 N/mm^2. Determine shaft diameter on strength basis. **08**



Q.6 **a)** What are the different types of springs? Explain with neat sketch leaf spring. **06**

b) Outside diameter of a helical spring is 75 mm and made from a wire of 6 mm diameter. If the permissible shear stress is 350 MPa and modulus of rigidity 84 MPa, find the axial load which the spring can carry and the deflection per active turn. **08**

Q.7 **a)** Compare welded and bolted joints. **04**

b) Four identical bolts, two at A and two at B, as shown in Fig are used to attach bracket to the wall. Assuming that the bracket is held against the wall and prevented from tilting about the point C by all four bolts and using an allowable tensile stress in the bolts as 35 N/mm^2, determine the size of the bolts on the basis of maximum shear stress theory. **10**

Examination: March/April – 2026
CAD-CAM-CAE (BTN02502)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Draw neat diagrams whenever necessary.
5) Assume suitable data if required.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) The points that govern the shape of the curve in modelling are called as _____.
a) Control points b) Origins
c) End points d) Set point

2) More job variety can be well accommodated in case of _____.
a) Rigid automation b) Flexible automation
c) Continuous flow process d) None of these

3) Multiple pallets are used in CNC machine tools, basically for _____.
a) Increasing the cost of machine
b) Ease of handling the job
c) Increasing machine utilization
d) All of these

4) Moving an object across the screen parallel to its initial position is called as _____.
a) Movement b) Rotation
c) Translation d) Shifting

5) Miscellaneous command for coolant off in CNC is _____.
a) M09 b) M10
c) M11 d) M08

6) Volumetric and mass properties of an object can be easily obtained in case of _____.
a) Wireframe modelling b) Surface-modelling
c) Solid modelling d) All of these

7) In any curve representation, the shape associated with control points is called as _____.

a) Linear curve b) Rectangle
c) Line d) Control polygon

8) The concept of part families is used in _____.

a) JIT b) MRP
c) GT d) ERP

9) Which one of the following is an input device?

a) CPU b) Drum plotter
c) Joystick d) Monitor

10) In NC systems, MDI stands for _____.

a) Manual Data Integration b) Manual Data Interface
c) Manual Data Inspection d) Manual Data Input

11) Convex Hull is the property of Bezier curve.

a) True b) False

12) Satellite communications may be used in case of _____.

a) NC b) Stand-alone CNC
c) DNC d) All of these

13) From amongst the following, CNC lathe has _____.

a) X and V axis b) V and Z axis
c) X, V and Z axis d) X and Z axis

14) Preparatory code for incremental programming is _____.

a) G80 b) G70
c) G90 d) G91

Examination: March/April – 2026
CAD-CAM-CAE (BTN02502)

Day & Date: Tuesday, 05-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from Q.No.2, Q.No.3 & Q.No.4.
2) Q.No.5 is compulsory.
3) Solve any one question from Q.No.6 and Q.No.7.
4) Assume suitable data if required.
5) Draw neat diagram wherever necessary.
6) Figures to the right indicate full marks.

Section – I

Q.2 Solve any two Questions.

a) What is CAD/CAM discuss in detail product life cycle **05**

b) Explain with neat sketch, software configuration in CAD. **04**

c) What do you mean by geometric transformation? Explain any three. **05**

Q.3 a) A line PQ with end points P(2,3) & Q(7,8) is to be rotated about origin by 30° in clockwise direction determine the coordinates of the end points for the rotated line. **08**

b) Explain Group technology (GT). Discuss the advantages and disadvantages. **06**

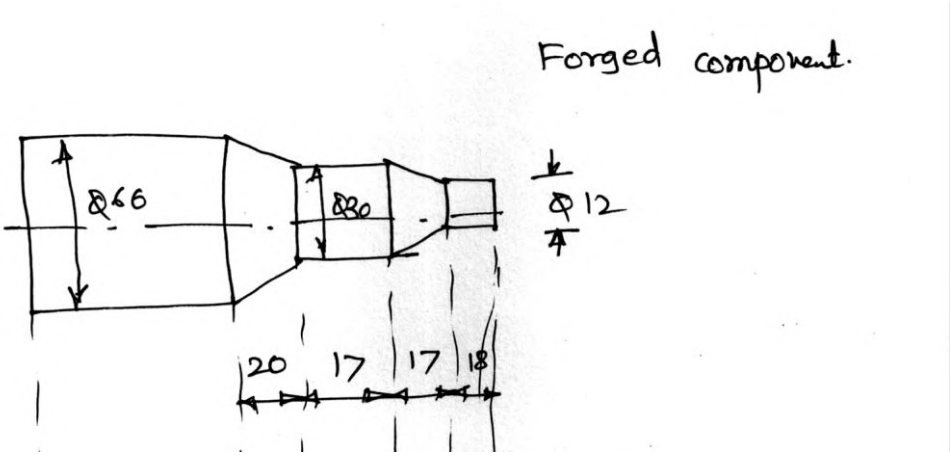
Q.4 a) What is RPT? Explain basic steps follows in the Rapid Prototype Technique (RPT) manufacturing. **05**

b) Write short note on Computer Aided Process Planning (CAPP) and Computer Integrated Manufacturing (CIM). **05**

c) Explain Boundary representation with neat sketch. **04**

Section – II

Q.5 **a)** Write a manual part program for finishing a forged component as shown in fig. Assume the speed and feed on the turning center are 600r.p.m and 0.65mm/rev. respectively. Assume 1 mm material is to be removed radially from external diameter. **10**



b) Explain work zero and machine zero system for NC machine. **04**

Q.6 **a)** Describe adaptive control system used in CNC system. Explain its types. **05**

b) Explain the axis designation for CNC lathe & milling. **04**

c) Write advantages and disadvantages of CNC system over NC system. **05**

Q.7 Write a short note (Any Three) **14**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Isomorphous means complete solubility in _____.
a) Liquid state b) Solid state
c) Liquid & solid state d) Neither liquid nor solid state

2) Which of the following cast iron has highest tensile strength?
a) White iron b) Grey iron
c) SG iron d) Mottled iron

3) Which of the following are proeutectoid constituents present in steels between "A3 and A1 temperatures?
a) Ferrite b) Austenite
c) Cementite d) Pearlite

4) Which of the following steels are oil hardened?
a) HCHC steels b) HSLA Steel
c) Hadfield 'Mn' steel d) HSS steel

5) Which of the following steel cannot be hardened by heat treatment?
a) Austenitic stainless steel b) Ferritic stainless steel
c) Maraging Steel d) HCHC Steel

6) Which of the following are solid solutions?
a) Alpha in Brass b) Delta in iron
c) Delta in Bronze d) Martensite

7) Which of the following alloy is precipitation hardened?
a) Brass b) Tin bronze
c) Duralumin d) Aluminum bronze

8) Which of the following treatment is based on isothermal transformation of austenite?

a) Annealing
b) Normalizing
c) Patenting
d) Tempering

9) Nitriding treatment is carried out by heating the steel in the range of _____°C.

a) 200 - 300°C
b) 500 - 550°C
c) 650 - 700°C
d) Above A3 temp of steel

10) Powders of metal like Zn, Sn are manufactured by _____ method.

a) atomization
b) Electro deposition
c) Reduction
d) Condensation of metal vapours

11) During manufacturing of self-lubricated bearing, which of the following is the important step?

a) Sizing
b) Heat Treatment
c) Inspection
d) Impregnation

12) To produce tungsten powder which of the following method is employed?

a) Reduction method
b) Carbonyl method
c) Electro deposition
d) Atomization

13) Which hardness test is recommended to measure hardness of Razor blade?

a) Rockwell
b) Brinell
c) Shore's scleroscope
d) Vicker's

14) S-N curve is related to test/phenomenon _____.

a) Creep
b) Fatigue
c) Tensile test
d) Impact test

Seat No.	

Set **P**

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Metallurgy (BTN02503)

Day & Date: Thursday, 07-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each Section.
2) Figures to the right indicate full marks.
3) Assume suitable data if required.
4) Use of scientific calculator is allowed.

SECTION – I

Q.2	**a)**	Explain Gibbs phase rule & its significance in metallurgical systems.	**07**
	b)	What are tool steels? What properties are essential in tool steel? Explain in detail composition, properties & application of HSS.	**07**
Q.3	**a)**	Explain classification of metallic materials.	**07**
	b)	Draw Fe-Fe3C diagram. Label all the phases & temperatures correctly.	**07**
Q.4	**a)**	Explain the effect of Ni, Cr, Mo and Tungsten on properties of steel.	**07**
	b)	Compare between Brasses and Bronzes.	**07**

SECTION – II

Q.5	**a)**	Draw TTT diagram for eutectoid steel & label all phases and temperature.	**07**
	b)	Enlist various methods of hardening.	**07**
Q.6	**a)**	What is the heat treatment? State objectives of annealing & types of annealing.	**07**
	b)	Explain various methods for powder compaction.	**07**
Q.7	**a)**	Enlist various methods for powder manufacturing in powder metallurgy.	**07**
	b)	Explain set up for ultrasonic test pointing out its advantages, limitation and application.	**07**

Set Q

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Metallurgy (BTN02503)

Day & Date: Thursday, 07-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) Which of the following treatment is based on isothermal transformation of austenite?
a) Annealing b) Normalizing
c) Patenting d) Tempering

2) Nitriding treatment is carried out by heating the steel in the range of _____°C.
a) 200 - 300°C b) 500 - 550°C
c) 650 - 700°C d) Above A3 temp of steel

3) Powders of metal like Zn, Sn are manufactured by _____ method.
a) atomization
b) Electro deposition
c) Reduction
d) Condensation of metal vapours

4) During manufacturing of self-lubricated bearing, which of the following is the important step?
a) Sizing b) Heat Treatment
c) Inspection d) Impregnation

5) To produce tungsten powder which of the following method is employed?
a) Reduction method b) Carbonyl method
c) Electro deposition d) Atomization

6) Which hardness test is recommended to measure hardness of Razor blade?
a) Rockwell b) Brinell
c) Shore's scleroscope d) Vicker's

7) S-N curve is related to test/phenomenon _____.
a) Creep b) Fatigue
c) Tensile test d) Impact test

8) Isomorphous means complete solubility in _____.
a) Liquid state b) Solid state
c) Liquid & solid state d) Neither liquid nor solid state

9) Which of the following cast iron has highest tensile strength?
a) White iron b) Grey iron
c) SG iron d) Mottled iron

10) Which of the following are proeutectoid constituents present in steels between “A3 and A1 temperatures?
a) Ferrite b) Austenite
c) Cementite d) Pearlite

11) Which of the following steels are oil hardened?
a) HCHC steels b) HSLA Steel
c) Hadfield ‘Mn’ steel d) HSS steel

12) Which of the following steel cannot be hardened by heat treatment?
a) Austenitic stainless steel b) Ferritic stainless steel
c) Maraging Steel d) HCHC Steel

13) Which of the following are solid solutions?
a) Alpha in Brass b) Delta in iron
c) Delta in Bronze d) Martensite

14) Which of the following alloy is precipitation hardened?
a) Brass b) Tin bronze
c) Duralumin d) Aluminum bronze

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct option. **14**

1) The study of measurement of the dimensions and other physical characteristics is dealt in _____.
a) Material handling b) Time study
c) Anthropometry d) Work sampling

2) Travel chart indicate _____.
a) Frequency of movement b) Ideal time of man & machine
c) Manual movement d) Repetitive movement

3) In MTM unit of time measurement is _____.
a) TMU b) Minutes
c) Centiminutes d) Hour

4) Which type of layout is used in ship building & air craft industry?
a) Product type layout b) Process type layout
c) Fixed type layout d) Group layout

5) Flow Process chart is used in _____.
a) Work sampling b) Method study
c) String diagram d) Micromotion study

6) Selection of material handling equipment is an important decision as it affects _____ of handling system.
a) Cost b) Efficiency
c) Both cost and efficiency d) None of the above

7) Merit rating is useful for _____.
a) Industrial safety b) Machine allowance
c) Job evaluation d) Rewarding the person

8) In method study the symbol O (Circle) represents _____.
a) Delay b) Inspection
c) Operation d) Storage

9) Father of time study was _____.
a) F. B. Gilbert b) F. W. Taylor
c) H. L. Gantt d) Maynord

10) The assessment of the requirements of a job is known as _____.
a) Job evaluation b) Job grading
c) Job analysis d) Job assessment

11) Micro motion study is used in _____.
a) Flow process chart b) Activity chart
c) SIMO chart d) MTM

12) Group incentive scheme is suitable for _____.
a) Lathe operator b) Trainee engineer
c) Computer operator d) Assembly fitters

13) Basic fatigue allowance is _____.
a) 6% b) 7%
c) 4% d) 2%

14) Productivity of an enterprise refers to which of the following?
a) The ratio of gross income to gross expenditure
b) Rate of growth of capital
c) Yearly gross income
d) Turnover in specified period

Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks.
3) Use of calculator is allowed.
4) Assume additional suitable data, if necessary and mention it clearly.

Section – I

Q.2 **a)** What are the various types displays? Explain design consideration for operating the controls. **07**

b) Define Accident? Explain causes of accidents in short. **07**

Q.3 **a)** Write a short note on: **07**
i) String Diagram
ii) Two Handed Process Chart

b) Explain the steps of Method Study. What are the objectives of Method Study? **07**

Q.4 **a)** Define Productivity. Explain various factors affecting on Productivity. **07**

b) Explain the following: **07**
i) Gilbert Contribution
ii) F.W. Taylor Contribution

Section – II

Q.5 **a)** Write a short note on Performance Rating. What are the advantages? **07**

b) The element times (in minutes) for 4 cycle of an operation using a stop watch are presented below : **07**

Element	Cycle time in minutes			
	1	**2**	**3**	**4**
1	1.5	1.5	1.3	1.4
2	2.6	2.6	2.5	2.6
3	3.3	3.4	3.4	3.3
4	1.1	1.2	1.2	1.1
5	0.51	0.52	0.50	0.52

Calculate standard time for the operation if,

i) Element 2 and 4 are the machine element.
ii) For the other elements, the operator is rated at 100%.
iii) Total allowances are 14 % of the normal time.

Q.6 **a)** Write a short note on Selection of Material Handling Equipment's. **07**

b) Explain with neat sketch: **07**

1) Process Layout
2) Product Layout

Q.7 **a)** Define Job Evaluation. What are the objectives? Explain any one method in detail. **07**

b) Explain in brief about Job Analysis, Job Description and Job Specification. **07**

a) Work sampling b) Method study
c) String diagram d) Micromotion study

10) Selection of material handling equipment is an important decision as it affects _____ of handling system.
a) Cost b) Efficiency
c) Both cost and efficiency d) None of the above

11) Merit rating is useful for _____.
a) Industrial safety b) Machine allowance
c) Job evaluation d) Rewarding the person

12) In method study the symbol O (Circle) represents _____.
a) Delay b) Inspection
c) Operation d) Storage

13) Father of time study was _____.
a) F. B. Gilbert b) F. W. Taylor
c) H. L. Gantt d) Maynord

14) The assessment of the requirements of a job is known as _____.
a) Job evaluation b) Job grading
c) Job analysis d) Job assessment

Seat No.	

Set **R**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Industrial Engineering (BTN02504)

Day & Date: Saturday, 09-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks.
3) Use of calculator is allowed.
4) Assume additional suitable data, if necessary and mention it clearly.

Section – I

Q.2 **a)** What are the various types displays? Explain design consideration for operating the controls. **07**

b) Define Accident? Explain causes of accidents in short. **07**

Q.3 **a)** Write a short note on: **07**
i) String Diagram
ii) Two Handed Process Chart

b) Explain the steps of Method Study. What are the objectives of Method Study? **07**

Q.4 **a)** Define Productivity. Explain various factors affecting on Productivity. **07**

b) Explain the following: **07**
i) Gilbert Contribution
ii) F.W. Taylor Contribution

Section – II

Q.5 **a)** Write a short note on Performance Rating. What are the advantages? **07**

b) The element times (in minutes) for 4 cycle of an operation using a stop watch are presented below : **07**

Element	Cycle time in minutes			
	1	**2**	**3**	**4**
1	1.5	1.5	1.3	1.4
2	2.6	2.6	2.5	2.6
3	3.3	3.4	3.4	3.3
4	1.1	1.2	1.2	1.1
5	0.51	0.52	0.50	0.52

Calculate standard time for the operation if,

i) Element 2 and 4 are the machine element.
ii) For the other elements, the operator is rated at 100%.
iii) Total allowances are 14 % of the normal time.

Q.6 **a)** Write a short note on Selection of Material Handling Equipment's. **07**

b) Explain with neat sketch: **07**

1) Process Layout
2) Product Layout

Q.7 **a)** Define Job Evaluation. What are the objectives? Explain any one method in detail. **07**

b) Explain in brief about Job Analysis, Job Description and Job Specification. **07**

Industrial Engineering (BTN02504)

Day & Date: Saturday, 09-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose correct option. **14**

1) Selection of material handling equipment is an important decision as it affects _____ of handling system.
a) Cost b) Efficiency
c) Both cost and efficiency d) None of the above

2) Merit rating is useful for _____.
a) Industrial safety b) Machine allowance
c) Job evaluation d) Rewarding the person

3) In method study the symbol O (Circle) represents _____.
a) Delay b) Inspection
c) Operation d) Storage

4) Father of time study was _____.
a) F. B. Gilbert b) F. W. Taylor
c) H. L. Gantt d) Maynord

5) The assessment of the requirements of a job is known as _____.
a) Job evaluation b) Job grading
c) Job analysis d) Job assessment

6) Micro motion study is used in _____.
a) Flow process chart b) Activity chart
c) SIMO chart d) MTM

7) Group incentive scheme is suitable for _____.
a) Lathe operator b) Trainee engineer
c) Computer operator d) Assembly fitters

8) Basic fatigue allowance is _____.
a) 6% b) 7%
c) 4% d) 2%

9) Productivity of an enterprise refers to which of the following?
a) The ratio of gross income to gross expenditure
b) Rate of growth of capital
c) Yearly gross income
d) Turnover in specified period

10) The study of measurement of the dimensions and other physical characteristics is dealt in _____.
a) Material handling b) Time study
c) Anthropometry d) Work sampling

11) Travel chart indicate _____.
a) Frequency of movement b) Ideal time of man & machine
c) Manual movement d) Repetitive movement

12) In MTM unit of time measurement is _____.
a) TMU b) Minutes
c) Centiminutes d) Hour

13) Which type of layout is used in ship building & air craft industry?
a) Product type layout b) Process type layout
c) Fixed type layout d) Group layout

14) Flow Process chart is used in _____.
a) Work sampling b) Method study
c) String diagram d) Micromotion study

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Attempt the following single correct answer type questions. 14

1) Main purpose of punch holder plate _____. **01**
a) To guide punch
b) To press fit punch
c) Put on punch
d) To accommodate all punch

2) Blank size D in deep drawing is calculated based on _____. **01**
a) Radius on die
b) Product diameter and height
c) Die thickness
d) None of the above

3) Fixtures are used in connection with _____. **01**
a) drilling operation b) reaming operation
c) tapping operation d) milling operation

4) V-blocks (Vee locators) are used for clamping as well as locating when faces are inclined upto _____. **01**
a) 30° b) 12°
c) 9° d) 3°

5) $VT^n = C$ in this equation the value of n depends upon _____. **01**
a) Work material b) Tool material
c) Working conditions d) Type of chip produced

6) The cutting fluid mostly used for machining alloy steel is _____. **01**
a) water b) soluble oil
c) dry d) sulphurised mineral oil

7) Continuous chips are formed during machining of _____. **02**

a) medium carbon steel
b) brass
c) M.S.
d) Low carbon steel

8) Negative rakes are used for _____. **02**

a) Carbide tool
b) Heavy loads
c) Harder materials
d) Al - alloy

9) Jig and fixture are used for _____. **02**

a) Mass production
b) Increase machining accuracy
c) Only for batch production
d) None of these

10) A washer car be produced _____. **02**

a) Simple die
b) Progressive die

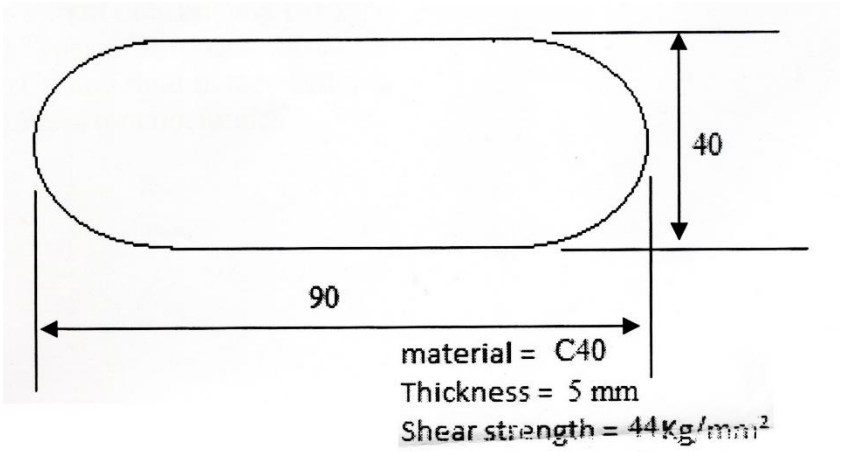
3) Figures to right indicate full marks.
4) Make suitable assumptions if required and state it clearly.

SECTION – I

Q.2 Design press tool for the component shown in fig-I with following details. **14**

a) Cutting force
b) Punch and die size
c) Strip layout and % material utilization
d) Die clearance

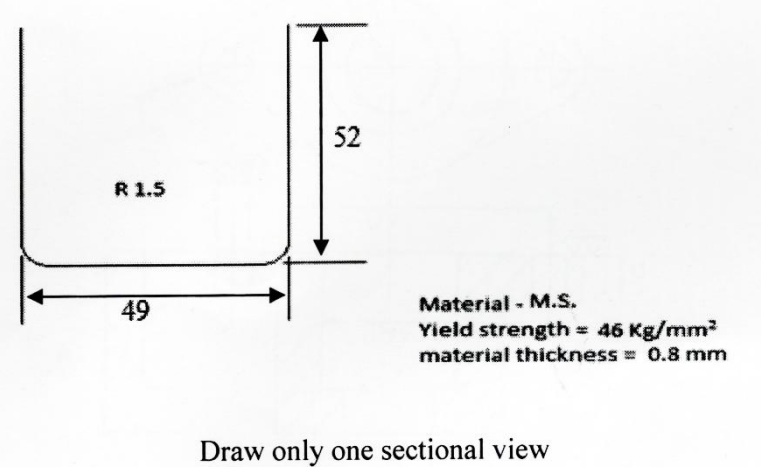


Draw only one sectional View

OR

Design a drawing tool for the component shown in fig- II and determine the following.

a) Blank size
b) No of draws
c) Ratio of draw
d) Die and punch clearance
e) Drawing force
f) Blanking holding force
g) Press capacity



Draw only one sectional view

Q.3 **a)** With neat sketch explain in brief about merchant circle. **04**

b) Prove that tan $\beta = \frac{r\cos\alpha}{1-r\sin\alpha}$ **03**

where $\beta =$ shear angle

$r =$ chip thickness ratio

$\propto =$ rake angle

Q.4 **a)** Define tool life. List factors affecting tool life explain in brief about tool failure criteria. **04**

d) Define the term machine-ability and list the factors on which machine-ability depends. **03**

Q.5 **Write a short note. (Any Two)** **07**

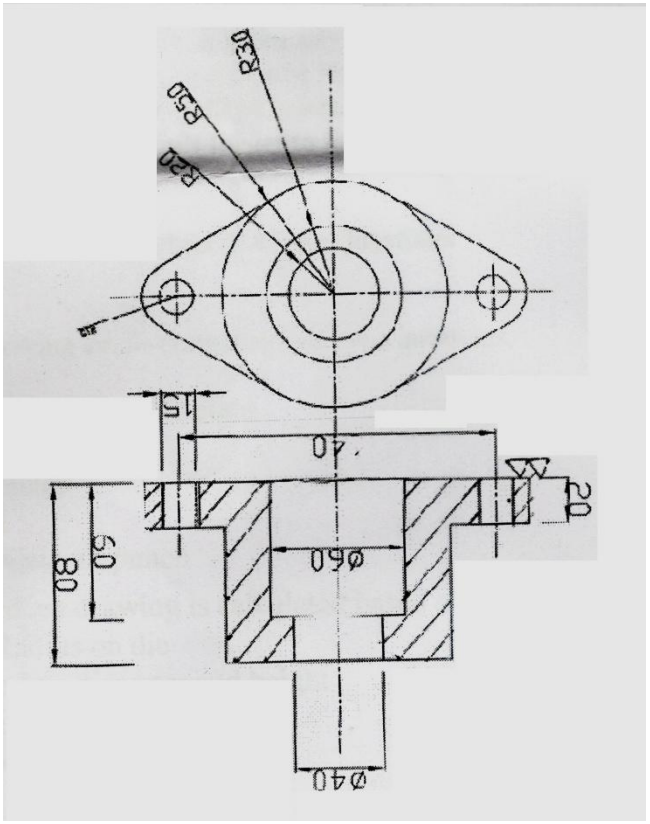
a) Types of strippers

b) Cutting fluid in metal cutting

c) Press tool operations

SECTION – II

Q.6 **a)** Design and draw drilling jig for drilling two holes of diameters 15 mm draw only one sectional view. **14**



OR

b) Design and draw milling fixture for ∗ ∇∇ marked surface as shown in above Fig.

Q.7 **a)** With neat sketch explain in brief about plane milling cutter Nomenclature and Geometry. **03**

b) Explain in brief about ASA and ORS system in metal cutting. **04**

Q.8 **a)** What is cost, how we can estimate cost and explain in brief about determination of sales prize? **04**

b) What do you know about EOQ explain with neat sketch? **03**

Day & Date: Tuesday, 12-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Use of nonprogrammable calculator is allowed.
5) Assume suitable data if required & state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 MCQ/Objective Type Questions: 14

1) The hydraulic system is _____.
a) less precise than pneumatic system
b) more precise than pneumatic system
c) both hydraulic and pneumatic systems are same on basis of precision
d) None of the above

2) Cushioning effect is concerned with _____.
a) Hydraulic system b) Pneumatic system
c) Both a) & b) d) None of the above

3) Quick exhaust valve is used for _____.
a) Single acting cylinder b) Double acting cylinder
c) Single/Double acting cylinder d) None of these

4) Which type of hydraulic cylinder has one piston connected to piston rod extended on both the sides of the cylinder?
a) telescopic cylinder b) tandem cylinder
c) both a) and b) d) None of the above

5) What is the difference between pressure relief valve and pressure reducing valve?
a) pressure reducing valve is connected between pump and tank line while pressure relief valve is connected between DCV and branch circuit
b) pressure relief valve is always normally opened
c) pressure reducing valve is connected between DCV and branch circuit while pressure relief valve is connected between pump and tank
d) None of these

6) In the hydraulic circuit, hydraulic cylinders can be operated sequentially using _____.

a) flow control valve
b) check valve
c) pressure relief valve
d) sequence valve

7) For controlling speed of forward stroke of the piston of pneumatic cylinder _____ should be preferred.

a) meter in circuit
b) meter out circuit
c) time delay circuit
d) None of these

8) The pressure sequence valve used in the pneumatic circuit is _____.

a) combination of adjustable pressure reducing valve and flow control valve
b) combination of adjustable pressure reducing valve and check valve
c) combination of the non-adjustable pressure relief valve and directional control valve
d) combination of the adjustable pressure relief valve and directional control valve

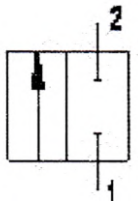
9) What is the function of a flow control valve?

a) flow control valve changes the direction of oil flow
b) flow control valve can adjust the flow rate of hydraulic oil
c) Both a) and b)
d) None of the above

10) Metallic seals are suitable for _____.

a) High pressure
b) High temperature
c) Extremely low temperature
d) All of the above

11) What is the name of the pneumatic valves?



a) Directional control valve
b) Roller valve
c) Pressure valve
d) Flow control valve

12) Which of the following is an element of time delay valve?

a) flow control valve
b) direction control valve
c) both a) and b)
d) None of the above

13) The air lubricator used to _____.

a) reduce wear on moving parts
b) reduce frictional losses
c) protect equipment from corrosion
d) all of the mentioned

14) Which of the following is a non-positive displacement pump?

a) Gear pump
b) Vane pump
c) Centrifugal pump
d) Reciprocating pump

Seat No.	

Set **P**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Industrial Hydraulics & Pneumatics (BTN02516)

Day & Date: Tuesday, 12-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any Two questions from each section.
2) Figures to the right indicate full marks.
3) Assume additional suitable data if necessary and state it clearly.
4) Use of nonprogrammable calculator is allowed.

SECTION – I

Q.2	**a)**	Name any five basic components required in a hydraulic system and mention their functions.	**05**
	b)	State different types of accumulators. Explain weight loaded and spring loaded accumulators.	**05**
	c)	Illustrate with a neat sketch regenerative circuit.	**04**
Q.3	**a)**	With graphical symbol, explain construction and working the 4/3 direction control valve.	**05**
	b)	Differentiate between meter in and meter out circuit.	**05**
	c)	Classify actuators and explain any one type of hydraulic actuator in detail.	**04**
Q.4	**a)**	Explain with neat sketch sequencing circuit of double acting cylinder.	**05**
	b)	Explain construction and working of pilot operated pressure relief valve.	**05**
	c)	Draw the ISO symbol of the following: i) Pilot operated check valve ii) 4/2 DCV	**04**

SECTION – II

Q.5	**a)**	Differentiate features of hydraulic and pneumatic systems with mechanical systems.	**05**
	b)	Explain with neat sketch clamping circuit in pneumatics.	**05**
	c)	Explain pressure reducing valve with neat sketch.	**04**
Q.6	**a)**	How air compressor are classified. Discuss its selection criteria.	**05**
	b)	State types of rotary actuators. Explain in detail vane motor.	**05**
	c)	Explain Advantages & applications of pneumatic system.	**04**
Q.7	**a)**	Explain with neat sketch FRL unit used in pneumatic system.	**05**
	b)	Write a note on pneumatic power tools.	**05**
	c)	Illustrate with neat sketch time delay circuit.	**04**

Seat No.	

Set **Q**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

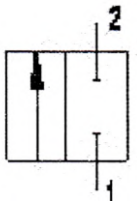
Q.1 MCQ/Objective Type Questions: 14

1) The pressure sequence valve used in the pneumatic circuit is _____.
a) combination of adjustable pressure reducing valve and flow control valve
b) combination of adjustable pressure reducing valve and check valve
c) combination of the non-adjustable pressure relief valve and directional control valve
d) combination of the adjustable pressure relief valve and directional control valve

2) What is the function of a flow control valve?
a) flow control valve changes the direction of oil flow
b) flow control valve can adjust the flow rate of hydraulic oil
c) Both a) and b)
d) None of the above

3) Metallic seals are suitable for _____.
a) High pressure b) High temperature
c) Extremely low temperature d) All of the above

4) What is the name of the pneumatic valves?



a) Directional control valve b) Roller valve
c) Pressure valve d) Flow control valve

5) Which of the following is an element of time delay valve?
a) flow control valve
b) direction control valve
c) both a) and b)
d) None of the above

6) The air lubricator used to _____.
a) reduce wear on moving parts
b) reduce frictional losses
c) protect equipment from corrosion
d) all of the mentioned

7) Which of the following is a non-positive displacement pump?
a) Gear pump
b) Vane pump
c) Centrifugal pump
d) Reciprocating pump

8) The hydraulic system is _____.
a) less precise than pneumatic system
b) more precise than pneumatic system
c) both hydraulic and pneumatic systems are same on basis of precision
d) None of the above

9) Cushioning effect is concerned with _____.
a) Hydraulic system
b) Pneumatic system
c) Both a) & b)
d) None of the above

10) Quick exhaust valve is used for _____.
a) Single acting cylinder
b) Double acting cylinder
c) Single/Double acting cylinder
d) None of these

11) Which type of hydraulic cylinder has one piston connected to piston rod extended on both the sides of the cylinder?
a) telescopic cylinder
b) tandem cylinder
c) both a) and b)
d) None of the above

12) What is the difference between pressure relief valve and pressure reducing valve?
a) pressure reducing valve is connected between pump and tank line while pressure relief valve is connected between DCV and branch circuit
b) pressure relief valve is always normally opened
c) pressure reducing valve is connected between DCV and branch circuit while pressure relief valve is connected between pump and tank
d) None of these

13) In the hydraulic circuit, hydraulic cylinders can be operated sequentially using _____.
a) flow control valve
b) check valve
c) pressure relief valve
d) sequence valve

14) For controlling speed of forward stroke of the piston of pneumatic cylinder _____ should be preferred.

a) meter in circuit
b) meter out circuit
c) time delay circuit
d) None of these

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 MCQ/Objective Type Questions: 14

1) In the hydraulic circuit, hydraulic cylinders can be operated sequentially using _____.
a) flow control valve b) check valve
c) pressure relief valve d) sequence valve

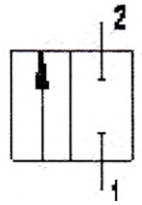
2) For controlling speed of forward stroke of the piston of pneumatic cylinder _____ should be preferred.
a) meter in circuit b) meter out circuit
c) time delay circuit d) None of these

3) The pressure sequence valve used in the pneumatic circuit is _____.
a) combination of adjustable pressure reducing valve and flow control valve
b) combination of adjustable pressure reducing valve and check valve
c) combination of the non-adjustable pressure relief valve and directional control valve
d) combination of the adjustable pressure relief valve and directional control valve

4) What is the function of a flow control valve?
a) flow control valve changes the direction of oil flow
b) flow control valve can adjust the flow rate of hydraulic oil
c) Both a) and b)
d) None of the above

5) Metallic seals are suitable for _____.
a) High pressure b) High temperature
c) Extremely low temperature d) All of the above

6) What is the name of the pneumatic valves?



a) Directional control valve
b) Roller valve
c) Pressure valve
d) Flow control valve

7) Which of the following is an element of time delay valve?

a) flow control valve
b) direction control valve
c) both a) and b)
d) None of the above

8) The air lubricator used to _____.

a) reduce wear on moving parts
b) reduce frictional losses
c) protect equipment from corrosion
d) all of the mentioned

9) Which of the following is a non-positive displacement pump?

a) Gear pump
b) Vane pump
c) Centrifugal pump
d) Reciprocating pump

10) The hydraulic system is _____.

a) less precise than pneumatic system
b) more precise than pneumatic system
c) both hydraulic and pneumatic systems are same on basis of precision
d) None of the above

11) Cushioning effect is concerned with _____.

a) Hydraulic system
b) Pneumatic system
c) Both a) & b)
d) None of the above

4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative. **14**

1) An image which contains about 256 different intensity levels between black and white is a _____ image.
a) Color b) Binary
c) Grayscale d) Monochrome

2) The two most commonly used image sensors in modern cameras are _____.
a) CCD and CDI b) CCD and CMOS
c) CMOS and CDI d) RGB and HSV

3) Zero crossing of gradient represents location of corner in an image.
a) True b) False

4) Silhouette is obtained with back light source.
a) True b) False

5) Which of the following operation involves plotting an image histogram?
a) Corner detection b) Thresholding
c) Region growing d) None of the above

6) The process in which small part of image is compared with large image and located in large image, is called _____.
a) pattern recognition b) template matching
c) region growing d) split and merge technique

7) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera
c) Vidicon Camera d) None of the above

8) Bin picking application of robot involves _____.
a) Identification and Servoing
b) Identification and inspection
c) Inspection and Servoing
d) None of the above

9) Seam tracking in continuous arc welding is an example of _____.
a) Visual servoing and navigation
b) Inspection
c) Identification
d) Inspection and identification

10) The application in which the purpose of machine vision system is to recognize and classify an object is called _____.
a) Inspection
b) Identification
c) Visual servoing and navigation
d) None of the above

11) Which of the following is a robot programming language _____.
a) SAIL b) MAIL
c) RAIL d) TAIL

12) An image which contains two distinct intensity levels between black and white is a _____ image.
a) Colour b) Grayscale
c) Binary d) Monochrome

13) The process of _____ is a technique which relates the location of pixels in the image array to the points in the scene.
a) Camera calibration b) Camera orientation
c) Camera adaptation d) Camera adjustment

14) The acronym AGV stands for _____.
a) Automatic Guided Vehicle b) Automated Guided Vehicle
c) Automated Gliding Vehicle d) Automatic Gliding Vehicle

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from Section I and Section II.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.
4) Use of non-programmable scientific calculator is allowed.

Section – I

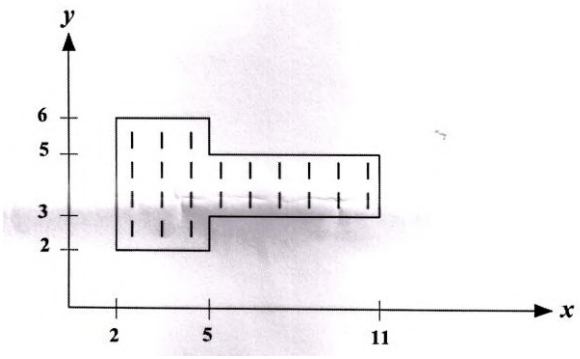
Q.2 **a)** With block diagram of Machine Vision system, state the objective of machine vision system. **07**

b) Explain with neat sketch successive approximation type AD converter. **07**

Q.3 **a)** Define an edge in an image and explain the process of edge detection. **07**

b) Discuss in detail image thresholding. **07**

Q.4 **a)** Determine the area, minimum aspect ratio, the diameter, perimeter, centroid and thinness measures of the image. **10**



b) Why do we need image processing? Explain. **04**

Section – II

Q.5 **a)** Explain the working of Harris corner detector. **07**

b) Draw neat sketch of CMOS image sensor and explain its working. **07**

Q.6 **a)** Explain in detail camera calibration. **07**

b) Explain in brief offline programming, teachthrough method and walkthrough method. **07**

Q.7 Write a short note on. (Any Three) **14**

a) Inspection application of machine vision in robotics.

b) Visual servoing and navigation application of machine vision in robotics.

c) Template matching

d) Image representation

5) An image which contains two distinct intensity levels between black and white is a _____ image.
a) Colour b) Grayscale
c) Binary d) Monochrome

6) The process of _____ is a technique which relates the location of pixels in the image array to the points in the scene.
a) Camera calibration b) Camera orientation
c) Camera adaptation d) Camera adjustment

7) The acronym AGV stands for _____.
a) Automatic Guided Vehicle b) Automated Guided Vehicle
c) Automated Gliding Vehicle d) Automatic Gliding Vehicle

8) An image which contains about 256 different intensity levels between black and white is a _____ image.
a) Color b) Binary
c) Grayscale d) Monochrome

9) The two most commonly used image sensors in modern cameras are _____.
a) CCD and CDI b) CCD and CMOS
c) CMOS and CDI d) RGB and HSV

10) Zero crossing of gradient represents location of corner in an image.
a) True b) False

11) Silhouette is obtained with back light source.
a) True b) False

12) Which of the following operation involves plotting an image histogram?
a) Corner detection b) Thresholding
c) Region growing d) None of the above

13) The process in which small part of image is compared with large image and located in large image, is called _____.
a) pattern recognition b) template matching
c) region growing d) split and merge technique

14) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera
c) Vidicon Camera d) None of the above

Set **Q**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Machine Vision (BTN02518)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from Section I and Section II.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.
4) Use of non-programmable scientific calculator is allowed.

Section – I

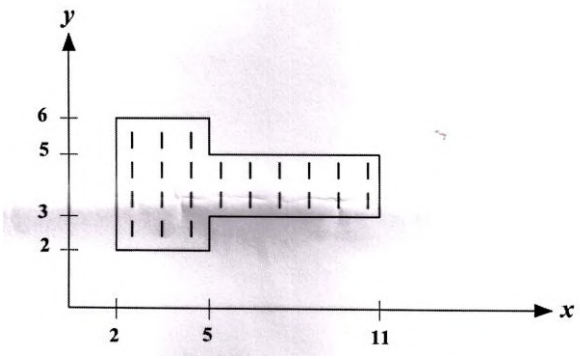
Q.2 **a)** With block diagram of Machine Vision system, state the objective of machine vision system. **07**

b) Explain with neat sketch successive approximation type AD converter. **07**

Q.3 **a)** Define an edge in an image and explain the process of edge detection. **07**

b) Discuss in detail image thresholding. **07**

Q.4 **a)** Determine the area, minimum aspect ratio, the diameter, perimeter, centroid and thinness measures of the image. **10**



b) Why do we need image processing? Explain. **04**

Section – II

Q.5 **a)** Explain the working of Harris corner detector. **07**

b) Draw neat sketch of CMOS image sensor and explain its working. **07**

Q.6 **a)** Explain in detail camera calibration. **07**

b) Explain in brief offline programming, teachthrough method and walkthrough method. **07**

Q.7 **Write a short note on. (Any Three)** **14**

a) Inspection application of machine vision in robotics.

b) Visual servoing and navigation application of machine vision in robotics.

c) Template matching

d) Image representation

Set R

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Machine Vision (BTN02518)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative. **14**

1) Which of the following is a robot programming language _____.
a) SAIL b) MAIL
c) RAIL d) TAIL

2) An image which contains two distinct intensity levels between black and white is a _____ image.
a) Colour b) Grayscale
c) Binary d) Monochrome

3) The process of _____ is a technique which relates the location of pixels in the image array to the points in the scene.
a) Camera calibration b) Camera orientation
c) Camera adaptation d) Camera adjustment

4) The acronym AGV stands for _____.
a) Automatic Guided Vehicle b) Automated Guided Vehicle
c) Automated Gliding Vehicle d) Automatic Gliding Vehicle

5) An image which contains about 256 different intensity levels between black and white is a _____ image.
a) Color b) Binary
c) Grayscale d) Monochrome

6) The two most commonly used image sensors in modern cameras are _____.
a) CCD and CDI b) CCD and CMOS
c) CMOS and CDI d) RGB and HSV

7) Zero crossing of gradient represents location of corner in an image.
a) True b) False

8) Silhouette is obtained with back light source.
a) True b) False

9) Which of the following operation involves plotting an image histogram?
a) Corner detection b) Thresholding
c) Region growing d) None of the above

10) The process in which small part of image is compared with large image and located in large image, is called _____.
a) pattern recognition b) template matching
c) region growing d) split and merge technique

11) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera
c) Vidicon Camera d) None of the above

12) Bin picking application of robot involves _____.
a) Identification and Servoing
b) Identification and inspection
c) Inspection and Servoing
d) None of the above

13) Seam tracking in continuous arc welding is an example of _____.
a) Visual servoing and navigation
b) Inspection
c) Identification
d) Inspection and identification

14) The application in which the purpose of machine vision system is to recognize and classify an object is called _____.
a) Inspection
b) Identification
c) Visual servoing and navigation
d) None of the above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following is not Liquid-based RP system?
a) Stereolithography Apparatus (SLA)
b) Laminated Object Manufacturing (LOM)
c) Solid Ground Curing (SGC)
d) Solid Object Ultraviolet-Laser Printer (SOUP)

2) From following, the alternative name for RP is _____.
a) Additive Manufacturing b) Layer Manufacturing
c) Direct CAD Manufacturing d) All of the above

3) Which of the following is not subtractive process?
a) Milling b) Stereo-lithography
c) Sawing d) EDM

4) Which of the following aspects is mainly concerned with molding the final shape around the basic skeleton?
a) Functional aspect b) Operational aspect
c) Aesthetic aspect d) None of these

5) The STL files translate the part geometry from a CAD system to _____.
a) CNC machine b) CMM machine
c) RP machine d) CAPP machine

6) Which of the following addresses the need to design a product for safety?
a) Soft-Hard Review b) Effect Analysis
c) Experimental design d) None of these

7) The process of obtaining a geometric CAD model from 3D points acquired by scanning/digitizing existing parts/products is best known as _____.

a) Forward Engineering
b) Backward Engineering
c) Reverse Engineering
d) Product Engineering

8) In the entire reverse engineering process for product design, which one is the first step?

a) CAD model updating
b) CAD modeling
c) Data pre-processing
d) Data capturing

9) Which of the following RP system is not developed by 3D systems?

a) Selective Laser Sintering (SLS)
b) Multi-Jet Modeling System (MJM)
c) Paper Lamination Technology (PLT)
d) Stereolithography Apparatus (SLA)

10) Which of the following is used as base material in Stereolithography (SLA) process?

a) Thermoplastics, Metals powders
b) Thermoplastics, Eutectic metals
c) Photopolymer
d) Titanium alloys

11) What is the third step in Reverse Engineering?

a) Digitization of the object
b) Creation of CAD model
c) Prototype
d) None of these

12) Which of the following advantage does not possess by the rapid prototyping process over the traditional prototyping process?

a) It consumes less time
b) Gives better quality
c) Reduces product launch time
d) It's cheaper

13) Which of the following is the last step of the rapid prototyping process?

a) 3D Modeling
b) Data Conversion
c) Building
d) Postprocessing

14) Which of the following is the first step of the rapid prototyping process?

a) 3D Modeling
b) Data Conversion

7) Which of the following advantage does not possess by the rapid prototyping process over the traditional prototyping process?
a) It consumes less time
b) Gives better quality
c) Reduces product launch time
d) It's cheaper

8) Which of the following is the last step of the rapid prototyping process?
a) 3D Modeling
b) Data Conversion
c) Building
d) Postprocessing

9) Which of the following is the first step of the rapid prototyping process?
a) 3D Modeling
b) Data Conversion
c) Building
d) Postprocessing

10) Which of the following is not Liquid-based RP system?
a) Stereolithography Apparatus (SLA)
b) Laminated Object Manufacturing (LOM)
c) Solid Ground Curing (SGC)
d) Solid Object Ultraviolet-Laser Printer (SOUP)

11) From following, the alternative name for RP is _____.
a) Additive Manufacturing
b) Layer Manufacturing
c) Direct CAD Manufacturing
d) All of the above

12) Which of the following is not subtractive process?
a) Milling
b) Stereo-lithography
c) Sawing
d) EDM

13) Which of the following aspects is mainly concerned with molding the final shape around the basic skeleton?
a) Functional aspect
b) Operational aspect
c) Aesthetic aspect
d) None of these

14) The STL files translate the part geometry from a CAD system to _____.
a) CNC machine
b) CMM machine
c) RP machine
d) CAPP machine

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
3D Printing Material (BTN02519)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section – I, Q. 2 is compulsory and attempt any two questions from the remaining questions.
2) In Section – II, Q. 6 is compulsory and attempt any two questions from the remaining questions.
3) Figures to the right indicate full marks.
4) Assume suitable data if required.
5) Use of scientific calculator is allowed.

Section – I

Q.2 Discuss various forms of raw material used in 3D Printing. **10**

Q.3 Enlist the different techniques to generate the powder. And explain with neat sketch Gas Atomization process. **09**

Q.4 Describe different application of 3D printing in the field of Medical, Aerospace and Automobile in detail. **09**

Q.5 What is meant by Performance Requirements in 3D printing? Discuss the significance of Performance Requirements to Material Requirements in 3D printing with example. **09**

Section – II

Q.6 Explain the product design concept with respect to 3D printing. **10**

Q.7 Compare Conventional Manufacturing Vs Additive Manufacturing. **09**

Q.8 Enlist different thermo plastic materials used in 3D Printer. Explain in detail applications and characteristics of any 2 materials. **09**

Q.9 Enlist different metal and alloy materials used in 3D Printer. Explain in detail applications and characteristics of any 03 metal and alloy materials. **09**

Energy Conservation, Management and Audit (BTN02520)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The world's first 100% solar powered airport located at _____.
a) Cochin, Kerala b) Bengaluru, Karnataka
c) Chennai, Tamil Nadu d) Mumbai, Maharashtra

2) Which country has the largest share of the global coal reserves?
a) Russia b) China
c) USA d) India

3) Select the important factor for the site selection of a thermal power plant.
a) Distance from the populated area
b) Availability of fuel
c) Availability' of water
d) Cost of plant

4) Which of the following is highest contributor to the air pollution?
a) Carbon Monoxide b) Hydro Carbons
c) Sulphur Oxides d) Particulates

5) Kilowatt-hour (kWh) is a unit of?
a) Current b) Power
c) Energy d) Resistance

6) Recovery of waste heat from hot fluid to fluid is called _____.
a) thermo compressor b) waste heat recovery boiler
c) heat Pump d) economizer

7) Energy consumption per un _____.
a) Energy Ratio b) Energy intensity
c) Per capita consumption d) None

8) "The judicious and effective use of energy to maximize profits and enhance Competitive positions". This can be the definition of _____.
   a) Energy conservation
   b) Energy management
   c) Energy policy
   d) Energy Audit

9) Primary or final energy consumption means _____.
   a) Total energy demand of the country
   b) Energy demand for commercial purpose
   c) Energy demand for industrial purpose
   d) Energy demand of residential and municipal

10) Sunlight, air, soil, and water are examples of _____.
   a) Renewable resources
   b) Non- renewable resources
   c) Conventional resources
   d) Non-natural resources

11) Which of the following is not part of energy monitoring _____.
   a) data recording
   b) data analysis
   c) data reporting
   d) energy efficiency equipment financing

12) Which of the following is a disadvantage of most of the renewable energy Sources?
   a) Unreliable supply
   b) Highly polluting
   c) High waste disposal cost
   d) High running cost

13) Which is not a Primary energy resources _____.
   a) Petroleum products
   b) Electrical Energy
   c) Geothermal Energy
   d) Biomass like wood

14) Name the Act, which is proposed to bring the qualitative transformation of the electricity sector _____.
   a) Regulatory Commission Act 1998
   b) Indian Electricity Act 1910
   c) Supply Act 1948
   d) Electricity Act 2003

Instructions: 1) Attempt any two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if required.

Section – I

Q.2 Solve.

a) Why renewable energy is important? Discuss the relevance of renewable energy for national energy security policy. **07**

b) Describe Current energy scenario - World. **07**

Q.3 Solve.

a) Importance Energy Audit in Indian Industry. **07**

b) Why Pre-audit and Post-audit is important during Energy audit? **07**

Q.4 Answer the following questions. (Any Four) **14**

a) Write Standard Energy Audit Report Format.

b) Discuss Responsibilities of Energy Auditor.

c) Describe Current energy scenario - India.

d) Explain Preliminary Energy Audit.

e) Write a short note on Energy action Planning.

Section – II

Q.5 Solve.

a) Explain in detail direct method and indirect method for binding out boiler efficiency. **07**

b) Explain Energy Conservation opportunities in HVAC and Furnace. **07**

Q.6 Solve.

a) Explain Different Financial Analysis Techniques. **07**

b) What are the direct and indirect benefits of waste heat recovery? **07**

Q.7 Write Short Notes. (Any Four) **14**

a) Explain Energy Performance Assessment of pump.

b) List the energy saving opportunities in pumping system.

c) Time Value of Money.

d) Simple Payback Period.

e) Explain Energy Conservation opportunities in Steam System.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) In February 2019, the union Cabinet cleared RS 10,000- crore Programme under _____ Scheme.
a) FAME-II b) ARAI
c) NACP d) VRDE

2) For EV Specific energy limits _____.
a) Vehicle Specific Power b) Vehicle Cost
c) Vehicle Efficiency d) Vehicle Range

3) Gradeability is defined as the maximum angle that the vehicle can overcome in the whole speed range _____.
a) Grade b) raise
c) slope d) plan

4) In series hybrid vehicle is coupled with the internal combustion Engine to produce electricity for propulsion _____.
a) Diesel engine b) hydrogen engine
c) generator d) gas engine

5) Hybrid Vehicle converts energy that is normally lost through braking into electrical energy. What is the term is used for this recycling of energy?
a) Perpetual Motion b) Regenerative Braking
c) Kinetic Conversion d) Hybrid Alchemy

6) The frame of an induction motor is made of _____.
a) Silicon steel b) Aluminum
c) Stainless steel d) Cast iron

7) Which of the following is not type of hybrid vehicle?
a) Plug in Hybrid
b) Parallel Hybrid
c) Series Hybrid
d) Natural Gas for Vehicle

8) Which of the following has not effected in speed torque control of traction motor?
a) Voltage
b) Flux
c) Torque
d) none of these

9) Which one of the following methods would give a lower than the actual value of regulation of the alternator?
a) EMF method
b) ASA method
c) ZPF method
d) MMF method

10) Which starting method is the best method in Induction motor?
a) Reactance starting
b) Direct online starting
c) Star-Delta starting
d) Autotransformer starting

11) Which of the following motor can be referred as a universal motor?
a) Permanent magnet motor
b) DC shunt motor
c) DC series motor
d) DC compound motor

12) Type-A chopper is used for obtaining which type of mode?
a) Reverse motoring mode
b) Motoring mode
c) Reverse regenerative braking mode
d) Regenerative braking mode

13) Calculate the synchronous speed of three phase Induction Motor with four poles and 50Hz operating Supply _____.
a) 1000 rpm
b) 1200 rpm
c) 1500 rpm
d) 2000 rpm

14) Braking and Idling Losses are _____ in Urban driving even higher in more congested driving.
a) Extremely High
b) Extremely Low
c) Both a) & b)
d) Neither a) or b)

a) Permanent magnet motor b) DC shunt motor
c) DC series motor d) DC compound motor

5) Type-A chopper is used for obtaining which type of mode?
a) Reverse motoring mode
b) Motoring mode
c) Reverse regenerative braking mode
d) Regenerative braking mode

6) Calculate the synchronous speed of three phase Induction Motor with four poles and 50Hz operating Supply _____.
a) 1000 rpm b) 1200 rpm
c) 1500 rpm d) 2000 rpm

7) Braking and Idling Losses are _____ in Urban driving even higher in more congested driving.
a) Extremely High b) Extremely Low
c) Both a) & b) d) Neither a) or b)

8) In February 2019, the union Cabinet cleared RS 10,000- crore Programme under _____ Scheme.
a) FAME-II b) ARAI
c) NACP d) VRDE

9) For EV Specific energy limits _____.
a) Vehicle Specific Power b) Vehicle Cost
c) Vehicle Efficiency d) Vehicle Range

10) Gradeability is defined as the maximum angle that the vehicle can overcome in the whole speed range _____.
a) Grade b) raise
c) slope d) plan

11) In series hybrid vehicle is coupled with the internal combustion Engine to produce electricity for propulsion _____.
a) Diesel engine b) hydrogen engine
c) generator d) gas engine

12) Hybrid Vehicle converts energy that is normally lost through braking into electrical energy. What is the term is used for this recycling of energy?
a) Perpetual Motion b) Regenerative Braking
c) Kinetic Conversion d) Hybrid Alchemy

13) The frame of an induction motor is made of _____.
a) Silicon steel b) Aluminum
c) Stainless steel d) Cast iron

14) Which of the following is not type of hybrid vehicle?
a) Plug in Hybrid b) Parallel Hybrid
c) Series Hybrid d) Natural Gas for Vehicle

Set **Q**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Introduction to Electric and Hybrid Electric Vehicles (BTN02521)

Day & Date: Thursday, 14-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from section I & II.
2) Figures to the right indicate full marks.

Section – I

Q.2 **a)** Explain in short the history related scenarios for getting disappeared after short success in 1920 and resurge for Electric Vehicles. **08**

b) Distinguish between the fast charging and slow charging. **06**

Q.3 **a)** Explain the tractive effort and transmissoin requirements in Electric Vehicles. **08**

b) Discuss the Traction Motor Characteristics. **06**

Q.4 **a)** Explain with neat sketch of Plug-In Hybrid Electric Vehicle. **08**

b) Explain Parallel Hybrid Electric Drive train with neat Sketch. **06**

Section – II

Q.5 **a)** What is BLDC Motor? State advantages & disadvantages of BLDC Motors. **08**

b) Describe with neat sketch construction & working of DC Motor. **06**

Q.6 **a)** Explain the working principle and working of VFDs with a neat diagram, state the different advantages and limitations of VFDs. **08**

b) Discuss the principle operation of chopper also state the nature of output of current and voltage through waveform. **06**

Q.7 **a)** Define the following: **08**
i) Drive Cycle
ii) Energy efficiency
iii) Idling
iv) Deceleration

b) Explain the need of drive cycle and discuss about standard drive Cycle. **06**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - I) (New/Old) (CBCS) Examination: March/April – 2026
Introduction to Electric and Hybrid Electric Vehicles (BTN02521)

Day & Date: Thursday, 14-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) Which of the following motor can be referred as a universal motor?
a) Permanent magnet motor b) DC shunt motor
c) DC series motor d) DC compound motor

2) Type-A chopper is used for obtaining which type of mode?
a) Reverse motoring mode
b) Motoring mode
c) Reverse regenerative braking mode
d) Regenerative braking mode

3) Calculate the synchronous speed of three phase Induction Motor with four poles and 50Hz operating Supply _____.
a) 1000 rpm b) 1200 rpm
c) 1500 rpm d) 2000 rpm

4) Braking and Idling Losses are _____ in Urban driving even higher in more congested driving.
a) Extremely High b) Extremely Low
c) Both a) & b) d) Neither a) or b)

5) In February 2019, the union Cabinet cleared RS 10,000- crore Programme under _____ Scheme.
a) FAME-II b) ARAI
c) NACP d) VRDE

6) For EV Specific energy limits _____.
a) Vehicle Specific Power b) Vehicle Cost
c) Vehicle Efficiency d) Vehicle Range

7) Gradeability is defined as the maximum angle that the vehicle can overcome in the whole speed range _____.

a) Grade b) raise

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose the correct alternatives from the options. 10

1) Professional ethics primarily refers to _____.
a) Personal hobbies
b) Standards of behavior expected in a profession
c) Religious gridlines
d) Social media etiquette

2) Professional values are important because they _____.
a) Reduce work quality
b) Promote trust and credibility
c) Slow down productivity
d) Encourage personal gain

3) One of the basic desires of every human being is to be always ____.
a) Happy b) Sad
c) Laugh d) Earn money

4) _____ is defined as the duty, obligation or even authority.
a) Work b) Responsibility
c) Democracy d) Authority

5) The participation of human beings is seen in two forms _____.
a) Prosperity & Work b) Behavior & Wealth
c) Behavior & Work d) Values & Understanding

6) Courage is the tendency to accept and face _____.
a) Self confidence
b) Physical courage
c) Risks and difficult tasks in rational ways
d) Social courage

7) Which value promotes treating everyone fairly?

a) Favoritism
b) Respect
c) Equality
d) Corruption

8) Which of the following best defines empathy?

a) Feeling superior to others
b) Understanding other's feelings
c) Ignoring emotional cues
d) Forcing opinions on people

9) Which of the following is a core professional value?

a) Integrity
b) Dishonesty
c) Bias
d) Manipulation

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) Which type of gear has teeth parallel to the axis?
a) Helical b) Bevel
c) Spur d) Worm

2) The primary failure mode in spur gears due to repeated loading is _____.
a) Corrosion b) Fatigue
c) Wear d) Plastic deformation

3) Helical gears are preferred over spur gears because they _____.
a) Are cheaper b) Run smoothly
c) Have no thrust d) Are easier to manufacture

4) Helical gears produce which additional force component?
a) Radial b) Tangential
c) Axial d) Centrifugal

5) Worm gears are mainly used for _____.
a) High speed transmission b) Parallel shafts
c) Large speed reduction d) Low torque

6) In worm gear drives, efficiency decreases due to _____.
a) Impact loading b) Friction
c) Misalignment d) Vibration

7) Bevel gears are used to transmit motion between _____.
a) Parallel shafts b) Intersecting shafts
c) Skew shafts d) Flexible shafts

8) The pitch surface of bevel gears is _____.
a) Cylindrical b) Conical
c) Flat d) Spherical

9) Rolling contact bearings reduce friction by _____.
a) Sliding b) Rolling action
c) Lubrication only d) Magnetic effect

10) In a bearing no. 6310, the digit 6 designates _____.
a) Bore size b) Series of bearing
c) Type of bearing d) None of these

11) In uniform wear theory of clutch, the assumption is _____.
a) Pressure is constant b) Wear rate is constant
c) Temperature is constant d) Speed is constant

12) Bearing life is commonly expressed in terms of _____.
a) Time b) Speed
c) Number of revolutions d) Load cycles

13) Which property of bearing material allows it to accommodate small dirt particles without causing damage?
a) Hardness b) Embeddability
c) Fatigue strength d) Toughness

14) Which type of brake is commonly used in automobiles?
a) Band brake b) Disc brake
c) Cone brake d) Block brake

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Transmission System Design (MECHPCC-10)

Day & Date: Friday, 15-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each Section I & II.
2) Figures to the right indicate full marks.
4) Assume suitable data if necessary and mention it clearly.

SECTION – I

Q.2 **a)** **Define the following** **03**
i) Beam strength of gear tooth
ii) Wear strength of gear tooth
iii) Gear ratio

b) What are the various types of gear tooth failures? State their causes and remedies. **04**

c) A 20° full-depth involute spur gears used to transmit 12 kW power from an electric motor running at 1440 rpm to machine running at 500 rpm. The number of teeth on pinion is 25. The pinion as well as the gear is made of alloy steel (Sut = 800 N/mm^2). The velocity factor is to be used to account for dynamic load. The service factor and factor of safety are 1.25 and 1.5 respectively. The face width of the gear is 10 times module. The gears are to be case hardened to 500 BHN. Design pair of gears. Assume velocity as 5 m/s. **07**

$Cv = 6/(6 + v), Y$ for 25 teeth $= 0.3393$

Q.3 **a)** Give the expression for virtual number of teeth for helical gears. **04**

b) Differentiate between spur gear and helical gear on the basis of design equations. **03**

c) A pair of parallel helical gears consists of a 20 teeth pinion meshing with a 100 teeth gear. The pinion rotates at 1440 rpm. The normal pressure angle is 20°, while the helix angle is 25°. The face width is 40 mm and the normal module is 4 mm. The pinion as well as the gear is made of steel 40C8 (Sut = 600 N/mm^2) and heat treated to a surface hardness of 300 BHN. The service factor and the factor of safety are 1.5 and 2 respectively. Assume that the velocity factor accounts for the dynamic load and calculate the power transmitting capacity of gears. Y27 = 0.3475 **07**

Q.4 **a)** A worm gear box with an effective surface area of 1.5 m^2 is operating in still air with a heat transfer coefficient of 16 W/m^2 °C. The temperature rise of the lubricating oil above the atmospheric temperature is limited to 50°C. The worm gears are designated as, $1/40/10/7$. The worm shaft is rotating at 1440 rpm and the normal pressure angle is 20°. Calculate power transmitting capacity based on the thermal considerations. Assume $\mu = 0.020$. **07**

b) A pair of worm and worm wheel is designated as $2/52/10/4$. The worm is transmitting 5 kW power at 1000 r.p.m. to the worm shaft. The coefficient of friction is 0.035 and the normal pressure angle is 20°. Calculate the tangential, axial and radial components of the resultant gear force acting on the worm and worm wheel. **07**

SECTION – II

Q.5 **a)** Explain the terminology for bevel gears. **04**

b) Explain the working principle of hydrodynamic bearing. **03**

c) A pair of straight bevel gears, mounted on shafts which are intersecting at right angles, consists of a 24 teeth pinion meshing with a 32 teeth gear. The pinion shaft is connected to an electric motor developing 12.5 kW rated power at 1440 rpm. The starting torque of the motor is 150% of the rated torque. The pressure angle is 20°. Both gears are made of case hardened steel (Sut = 750 N/mm^2). The teeth on gears are generated and finished by grinding and lapping processes to meet the requirements of Class-3 Grade. The factor of safety in the preliminary stages of gear design is 2. In the initial stages of gear design, assume that velocity factor accounts for the dynamic load and that the pitch line velocity is 7.5 m/s. Estimate the module based on beam strength and calculate the main dimensions. **07**

Q.6 **a)** Explain the step-by-step procedure for selecting a rolling contact bearing from a manufacturer's catalogue. **07**

b) A ball bearing is operating on a work cycle consisting of three parts - a radial load of 3500 N at 1440 rpm for one quarter cycle, a radial load of 5500 N at 720 rpm for one half cycle, and radial load of 3000 N at 1440 rpm for the remaining cycle. The expected life of the bearing is 12000 hrs. Calculate the dynamic load carrying capacity of the bearing. **07**

Q.7 **a)** A plate clutch consists of one pair of contacting surfaces. The inner and outer diameters of the friction disk are 100 and 200 mm respectively. The coefficient of friction is 0.2 and the permissible intensity of pressure is 1 N/mm^2. Assuming uniform-wear theory, calculate the power-transmitting capacity of the clutch at 1000 rpm. **07**

b) A solid cast iron disk, 1 m in diameter and 0.25 m thick, is used as a flywheel. It is rotating at 400 rpm. It is brought to rest in 1.5 s by means of a brake. 7200 kg/m3- density of cast iron. **07**

Calculate:

i) The energy absorbed by the brake; and

ii) The torque capacity of the brake

Set **Q**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Transmission System Design (MECHPCC-10)

Day & Date: Friday, 15-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. **14**

1) The pitch surface of bevel gears is _____.
a) Cylindrical b) Conical
c) Flat d) Spherical

2) Rolling contact bearings reduce friction by _____.
a) Sliding b) Rolling action
c) Lubrication only d) Magnetic effect

3) In a bearing no. 6310, the digit 6 designates _____.
a) Bore size b) Series of bearing
c) Type of bearing d) None of these

4) In uniform wear theory of clutch, the assumption is _____.
a) Pressure is constant b) Wear rate is constant
c) Temperature is constant d) Speed is constant

5) Bearing life is commonly expressed in terms of _____.
a) Time b) Speed
c) Number of revolutions d) Load cycles

6) Which property of bearing material allows it to accommodate small dirt particles without causing damage?
a) Hardness b) Embeddability
c) Fatigue strength d) Toughness

7) Which type of brake is commonly used in automobiles?
a) Band brake b) Disc brake
c) Cone brake d) Block brake

8) Which type of gear has teeth parallel to the axis?
a) Helical b) Bevel
c) Spur d) Worm

9) The primary failure mode in spur gears due to repeated loading is _____.
a) Corrosion b) Fatigue
c) Wear d) Plastic deformation

10) Helical gears are preferred over spur gears because they _____.
a) Are cheaper b) Run smoothly
c) Have no thrust d) Are easier to manufacture

11) Helical gears produce which additional force component?
a) Radial b) Tangential
c) Axial d) Centrifugal

12) Worm gears are mainly used for _____.
a) High speed transmission b) Parallel shafts
c) Large speed reduction d) Low torque

13) In worm gear drives, efficiency decreases due to _____.
a) Impact loading b) Friction
c) Misalignment d) Vibration

14) Bevel gears are used to transmit motion between _____.
a) Parallel shafts b) Intersecting shafts
c) Skew shafts d) Flexible shafts

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct Answer. 14

1) In uniform wear theory of clutch, the assumption is _____.
a) Pressure is constant b) Wear rate is constant
c) Temperature is constant d) Speed is constant

2) Bearing life is commonly expressed in terms of _____.
a) Time b) Speed
c) Number of revolutions d) Load cycles

3) Which property of bearing material allows it to accommodate small dirt particles without causing damage?
a) Hardness b) Embeddability
c) Fatigue strength d) Toughness

4) Which type of brake is commonly used in automobiles?
a) Band brake b) Disc brake
c) Cone brake d) Block brake

5) Which type of gear has teeth parallel to the axis?
a) Helical b) Bevel
c) Spur d) Worm

6) The primary failure mode in spur gears due to repeated loading is _____.
a) Corrosion b) Fatigue
c) Wear d) Plastic deformation

7) Helical gears are preferred over spur gears because they _____.
a) Are cheaper b) Run smoothly
c) Have no thrust d) Are easier to manufacture

8) Helical gears produce which additional force component?
a) Radial b) Tangential
c) Axial d) Centrifugal

9) Worm gears are mainly used for _____.
a) High speed transmission b) Parallel shafts
c) Large speed reduction d) Low torque

10) In worm gear drives, efficiency decreases due to _____.
a) Impact loading b) Friction
c) Misalignment d) Vibration

11) Bevel gears are used to transmit motion between _____.

Examination: March/April – 2026
Heat Transfer (MECHPCC-11)

Day & Date: Monday, 18-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Steady state heat transfer means _____.
a) Temperature remains constant with time
b) Temperature increases with time
c) Temperature decreases with time
d) None

2) The unit of thermal conductivity is _____.
a) W/mK b) W/m^2K
c) W/kgK d) J/mK

3) A body that reflects entire radiation incident on it is_____.
a) Black body b) Grey body
c) White body d) Transparent body

4) At thermal equilibrium, absorptivity is _____ emissivity.
a) greater than b) less than
c) equal to d) zero

5) Which number is important in forced convection?
a) Mach number b) Reynolds number
c) Grashof number d) Weber number

6) Use of fins is recommended to _____.
a) decrease heat transfer
b) increase heat transfer
c) maintain constant heat transfer
d) None

7) Convective heat transfer follows _____.
a) Fourier's law b) Newton's law of cooling
c) Stefan-Boltzmann law d) None

8) Dropwise condensation occurs on _____.
a) Smooth clean surface b) Oily surface
c) Rough surface d) None

9) In a finned heat exchanger, why does heat transfer efficiency decrease if the number of fins becomes excessively large?
a) Because more fins always reduce the surface area available for heat transfer
b) Because closely spaced fins restrict airflow and reduce convective heat transfer
c) Because fins stop conducting heat once their number exceeds a certain limit
d) Because additional fins increase radiation losses significantly

10) An automobile radiator is a _____.
a) Parallel flow heat exchanger b) Counter flow heat exchanger
c) Cross flow heat exchanger d) Regenerator

11) The relation between absorptivity (α), reflectivity (ρ) and transmissivity (T) is _____.
a) $\alpha + \rho + \mathrm{T} = 1$ b) $\alpha - \rho + \mathrm{T} = 1$
c) $\alpha + \rho - \mathrm{T} = 1$ d) $\alpha - \rho - \mathrm{T} = 1$

12) Grashof number is associated with _____.
a) Forced convection b) Natural convection
c) Radiation d) Conduction

13) The critical radius of insulation for a cylinder is _____.
a) k/h b) h/k
c) 2k/h d) k/2h

14) Thermal diffusivity has units of _____.
a) m^2/s b) W/mK
c) J/kgK d) W/m^2K

Seat No.	

Set **P**

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Heat Transfer (MECHPCC-11)

Day & Date: Monday, 18-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

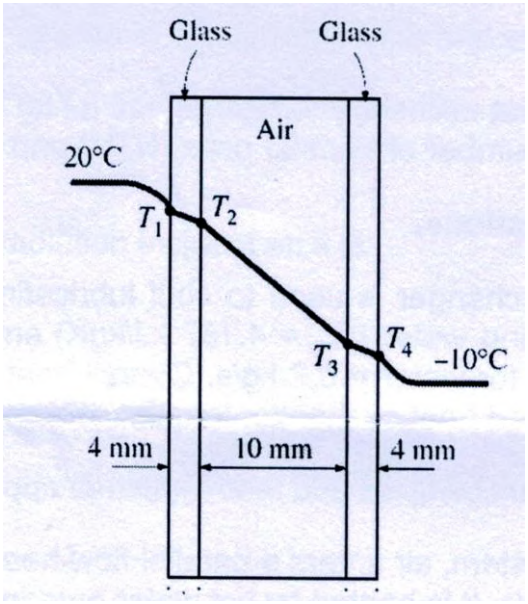
Instructions: 1) Attempt any two questions from each Section I & II.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.
4) Use of non-programmable calculators is allowed.

SECTION – I

Q.2 Attempt the following questions. **05**

a) Derive expression for temperature distribution in a one-dimensional steady-state conduction through a plane wall.

b) Consider a 1-m-high and 1.5-m-wide double-pane window consisting of two 4-mm-thick layers of glass (k = 0.78 W/m°C) separated by a 10-mm-wide stagnant air space (k = 0.026 W/m°C). Determine the steady rate of heat transfer. The temperature of its inner surface for a day during which the room is maintained at 20°C while the temperature outdoors is 10°C. Take the convection heat transfer coefficients on the inner and outer surfaces of the window to be h_1 = 10 W/m^2°C and h_2 = 40 W/m^2°C. **05**



c) Describe the modes of heat transfer along with an example for each mode. **04**

Q.3 Attempt the following questions.

a) Explain critical radius of insulation. **04**

b) Determine the number of aluminum pin fins (k = 200 W/mK) required to achieve a total heat transfer rate of 10 W from a surface maintained at 100°C. Each pin has a length of 3 cm and a diameter of 0.25 cm, and is exposed to a surrounding medium at 30°C with a convection heat transfer coefficient of 35 W/m^2°C. **05**

c) An insulated steam pipe of 160 mm inner diameter and 180 mm outer diameter is covered with insulation of 40 mm thickness and carries steam at 200°C. k_{pipe} = 29 W/m°C and $k_{insulation}$ = 0.23 W/m°C h_i = 11.6 W/m^2°C and h_0 = 23.2 W/m^2°C. If the temperature of the air surrounding the pipe is 25°C, calculate the rate of heat loss to the surrounding from the pipe of 5 m length. Also find the interface temperatures also. **05**

Q.4 Attempt the following questions.

a) State Stefan-Boltzmann law and define emissive power and emissivity. **04**

b) Calculate the net radiant heat exchange per area for two large parallel plates at temperatures of 900°C and 500°C respectively. Emissivities for hot and cold plates are 0.45 and 0.65 respectively. **05**

c) State Plank's Law of radiation and hence derive Wein's displacement law. **05**

SECTION – II

Q.5 Attempt the following questions.

a) Explain thermal boundary layer concept and its significance in heat transfer. **04**

b) Using dimensional analysis, show that: $Nu = f(Re, Pr)$ **05**

c) A vertical plate measuring 0.5 m high and 0.3 m wide is maintained at a uniform surface temperature of 100 °C. The surrounding air is at 25 °C. Assume the plate is exposed to natural convection on one side. Calculate the average heat transfer coefficient and the heat transfer rate from the plate. Use air properties as - k = 0.028 W/mK, $\nu = 2.2 \times 10^{-5}$ m^2/s, $P_r = 0.71$. Use the following correlation: **05**

$$Nu = 0.1\,(Gr.Pr)^{1/3}$$

Q.6 Attempt the following questions.

a) Describe filmwise and dropwise condensation with comparison. **04**

b) Explain pool boiling curve and different regimes of boiling. **05**

c) Derive expression for heat exchanger effectiveness (ε) for parallel flow heat exchanger, in terms of number of transfer units (NTU) and capacity ratio R. **05**

Q.7 Attempt the following questions.

a) A Counter flow heat exchanger is used to cool lubricating oil (C_{ph} = 2.13 kJ/kgK) from 100°C to 60°C using water (C_{pc} = 4.187 kJ/kgK) entering at 30°C. Mass flow rates: for oil = 0.1 kg/s, for water = 0.2 kg/s. Overall heat transfer coefficient = 380 W/m^{2}K. Calculate required heat exchanger area. **05**

b) Describe types of heat exchangers and their industrial applications. **04**

c) In an air-conditioning system, air enters a parallel-flow heat exchanger at 10 °C with a mass flow rate of 3 kg/s. It is heated by hot water entering at 95 °C with a mass flow rate of 1 kg/s. The specific heats are: $C_{p,air}$ = 1005 J/kgK, $C_{p,water}$ = 4187 J/kgK. The overall heat transfer coefficient times area is UA = 2000 W/K. Using the NTU-effectiveness method, determine: **05**

i) The effectiveness of the heat exchanger
ii) The heat transfer rate
iii) The outlet temperatures of both the air and the water streams

5) Use of non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Dropwise condensation occurs on _____.
a) Smooth clean surface b) Oily surface
c) Rough surface d) None

2) In a finned heat exchanger, why does heat transfer efficiency decrease if the number of fins becomes excessively large?
a) Because more fins always reduce the surface area available for heat transfer
b) Because closely spaced fins restrict airflow and reduce convective heat transfer
c) Because fins stop conducting heat once their number exceeds a certain limit
d) Because additional fins increase radiation losses significantly

3) An automobile radiator is a _____.
a) Parallel flow heat exchanger b) Counter flow heat exchanger
c) Cross flow heat exchanger d) Regenerator

4) The relation between absorptivity (α), reflectivity (ρ) and transmissivity (T) is _____.
a) $\alpha + \rho + \mathrm{T} = 1$ b) $\alpha - \rho + \mathrm{T} = 1$
c) $\alpha + \rho - \mathrm{T} = 1$ d) $\alpha - \rho - \mathrm{T} = 1$

5) Grashof number is associated with _____.
a) Forced convection b) Natural convection
c) Radiation d) Conduction

6) The critical radius of insulation for a cylinder is _____.
a) k/h b) h/k
c) 2k/h d) k/2h

7) Thermal diffusivity has units of _____.
a) m^2/s b) W/mK
c) J/kgK d) W/m^2K

8) Steady state heat transfer means _____.
a) Temperature remains constant with time
b) Temperature increases with time
c) Temperature decreases with time
d) None

9) The unit of thermal conductivity is _____.
a) W/mK b) W/m^2K
c) W/kgK d) J/mK

10) A body that reflects entire radiation incident on it is_____.
a) Black body b) Grey body
c) White body d) Transparent body

11) At thermal equilibrium, absorptivity is _____ emissivity.
a) greater than b) less than
c) equal to d) zero

12) Which number is important in forced convection?
a) Mach number b) Reynolds number
c) Grashof number d) Weber number

13) Use of fins is recommended to _____.
a) decrease heat transfer

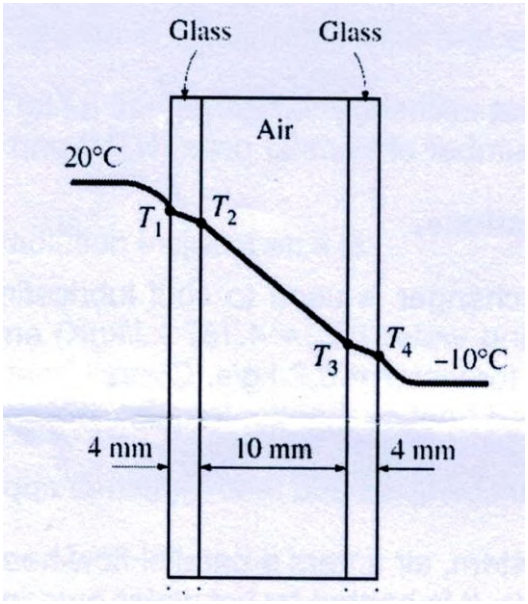
SECTION – I

Q.2 Attempt the following questions. **05**

a) Derive expression for temperature distribution in a one-dimensional steady-state conduction through a plane wall.

b) Consider a 1-m-high and 1.5-m-wide double-pane window consisting of two 4-mm-thick layers of glass (k = 0.78 W/m°C) separated by a 10-mm-wide stagnant air space (k = 0.026 W/m°C). Determine the steady rate of heat transfer. The temperature of its inner surface for a day during which the room is maintained at 20°C while the temperature outdoors is 10°C. Take the convection heat transfer coefficients on the inner and outer surfaces of the window to be h_1 = 10 W/m^2°C and h_2 = 40 W/m^2°C. **05**



c) Describe the modes of heat transfer along with an example for each mode. **04**

Q.3 Attempt the following questions.

a) Explain critical radius of insulation. **04**

b) Determine the number of aluminum pin fins (k = 200 W/mK) required to achieve a total heat transfer rate of 10 W from a surface maintained at 100°C. Each pin has a length of 3 cm and a diameter of 0.25 cm, and is exposed to a surrounding medium at 30°C with a convection heat transfer coefficient of 35 W/m^2°C. **05**

c) An insulated steam pipe of 160 mm inner diameter and 180 mm outer diameter is covered with insulation of 40 mm thickness and carries steam at 200°C. k_{pipe} = 29 W/m°C and $k_{insulation}$ = 0.23 W/m°C h_i = 11.6 W/m^2°C and h_0 = 23.2 W/m^2°C. If the temperature of the air surrounding the pipe is 25°C, calculate the rate of heat loss to the surrounding from the pipe of 5 m length. Also find the interface temperatures also. **05**

Q.4 Attempt the following questions.

a) State Stefan-Boltzmann law and define emissive power and emissivity. **04**

b) Calculate the net radiant heat exchange per area for two large parallel plates at temperatures of 900°C and 500°C respectively. Emissivities for hot and cold plates are 0.45 and 0.65 respectively. **05**

c) State Plank's Law of radiation and hence derive Wein's displacement law. **05**

SECTION – II

Q.5 Attempt the following questions.

a) Explain thermal boundary layer concept and its significance in heat transfer. **04**

b) Using dimensional analysis, show that: $Nu = f(Re, Pr)$ **05**

c) A vertical plate measuring 0.5 m high and 0.3 m wide is maintained at a uniform surface temperature of 100 °C. The surrounding air is at 25 °C. Assume the plate is exposed to natural convection on one side. Calculate the average heat transfer coefficient and the heat transfer rate from the plate. Use air properties as - k = 0.028 W/mK, $\nu = 2.2 \times 10^{-5}$ m^2/s, $P_r = 0.71$. Use the following correlation: **05**

$$Nu = 0.1\,(Gr.Pr)^{1/3}$$

Q.6 Attempt the following questions.

a) Describe filmwise and dropwise condensation with comparison. **04**

b) Explain pool boiling curve and different regimes of boiling. **05**

c) Derive expression for heat exchanger effectiveness (ε) for parallel flow heat exchanger, in terms of number of transfer units (NTU) and capacity ratio R. **05**

Q.7 Attempt the following questions.

a) A Counter flow heat exchanger is used to cool lubricating oil (C_{ph} = 2.13 kJ/kgK) from 100°C to 60°C using water (C_{pc} = 4.187 kJ/kgK) entering at 30°C. Mass flow rates: for oil = 0.1 kg/s, for water = 0.2 kg/s. Overall heat transfer coefficient = 380 W/m^{2}K. Calculate required heat exchanger area. **05**

b) Describe types of heat exchangers and their industrial applications. **04**

c) In an air-conditioning system, air enters a parallel-flow heat exchanger at 10 °C with a mass flow rate of 3 kg/s. It is heated by hot water entering at 95 °C with a mass flow rate of 1 kg/s. The specific heats are: $C_{p,air}$ = 1005 J/kgK, $C_{p,water}$ = 4187 J/kgK. The overall heat transfer coefficient times area is UA = 2000 W/K. Using the NTU-effectiveness method, determine: **05**

i) The effectiveness of the heat exchanger
ii) The heat transfer rate
iii) The outlet temperatures of both the air and the water streams

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Use of fins is recommended to _____.
a) decrease heat transfer
b) increase heat transfer
c) maintain constant heat transfer
d) None

2) Convective heat transfer follows _____.
a) Fourier's law b) Newton's law of cooling
c) Stefan-Boltzmann law d) None

3) Dropwise condensation occurs on _____.
a) Smooth clean surface b) Oily surface
c) Rough surface d) None

4) In a finned heat exchanger, why does heat transfer efficiency decrease if the number of fins becomes excessively large?
a) Because more fins always reduce the surface area available for heat transfer
b) Because closely spaced fins restrict airflow and reduce convective heat transfer
c) Because fins stop conducting heat once their number exceeds a certain limit
d) Because additional fins increase radiation losses significantly

5) An automobile radiator is a _____.
a) Parallel flow heat exchanger b) Counter flow heat exchanger
c) Cross flow heat exchanger d) Regenerator

6) The relation between absorptivity (α), reflectivity (ρ) and transmissivity (τ) is _____.

a) $\alpha + \rho + \tau = 1$ b) $\alpha - \rho + \tau = 1$
c) $\alpha + \rho - \tau = 1$ d) $\alpha - \rho - \tau = 1$

7) Grashof number is associated with _____.

a) Forced convection b) Natural convection
c) Radiation d) Conduction

8) The critical radius of insulation for a cylinder is _____.

a) k/h b) h/k
c) 2k/h d) k/2h

9) Thermal diffusivity has units of _____.

a) m^2/s b) W/mK
c) J/kgK d) W/m^2K

10) Steady state heat transfer means _____.

a) Temperature remains constant with time
b) Temperature increases with time
c) Temperature decreases with time
d) None

11) The unit of thermal conductivity is _____.

a) W/mK b) W/m^2K
c) W/kgK d) J/mK

12) A body that reflects entire radiation incident on it is_____.

a) Black body b) Grey body
c) White body d) Transparent body

13) At thermal equilibrium, absorptivity is _____ emissivity.

a) greater than b) less than
c) equal to d) zero

14) Which number is important in forced convection?

a) Mach number b) Reynolds number
c) Grashof number d) Weber number

Examination: March/April – 2026
Heat Transfer (MECHPCC-11)

Day & Date: Monday, 18-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

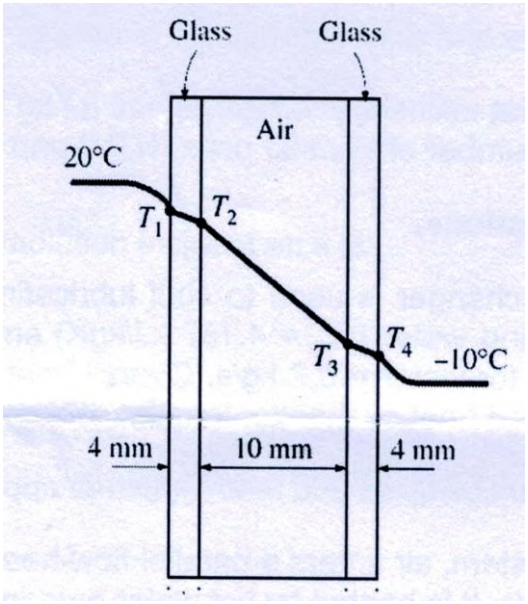
Instructions: 1) Attempt any two questions from each Section I & II.
2) Figures to the right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.
4) Use of non-programmable calculators is allowed.

SECTION – I

Q.2 Attempt the following questions. **05**

a) Derive expression for temperature distribution in a one-dimensional steady-state conduction through a plane wall.

b) Consider a 1-m-high and 1.5-m-wide double-pane window consisting of two 4-mm-thick layers of glass (k = 0.78 W/m°C) separated by a 10-mm-wide stagnant air space (k = 0.026 W/m°C). Determine the steady rate of heat transfer. The temperature of its inner surface for a day during which the room is maintained at 20°C while the temperature outdoors is 10°C. Take the convection heat transfer coefficients on the inner and outer surfaces of the window to be h_1 = 10 W/m^2°C and h_2 = 40 W/m^2°C. **05**



c) Describe the modes of heat transfer along with an example for each mode. **04**

Q.3 Attempt the following questions.

a) Explain critical radius of insulation. **04**

b) Determine the number of aluminum pin fins (k = 200 W/mK) required to achieve a total heat transfer rate of 10 W from a surface maintained at 100°C. Each pin has a length of 3 cm and a diameter of 0.25 cm, and is exposed to a surrounding medium at 30°C with a convection heat transfer coefficient of 35 W/m^2°C. **05**

c) An insulated steam pipe of 160 mm inner diameter and 180 mm outer diameter is covered with insulation of 40 mm thickness and carries steam at 200°C. k_{pipe} = 29 W/m°C and $k_{insulation}$ = 0.23 W/m°C h_i = 11.6 W/m^2°C and h_0 = 23.2 W/m^2°C. If the temperature of the air surrounding the pipe is 25°C, calculate the rate of heat loss to the surrounding from the pipe of 5 m length. Also find the interface temperatures also. **05**

Q.4 Attempt the following questions.

a) State Stefan-Boltzmann law and define emissive power and emissivity. **04**

b) Calculate the net radiant heat exchange per area for two large parallel plates at temperatures of 900°C and 500°C respectively. Emissivities for hot and cold plates are 0.45 and 0.65 respectively. **05**

c) State Plank's Law of radiation and hence derive Wein's displacement law. **05**

SECTION – II

Q.5 Attempt the following questions.

a) Explain thermal boundary layer concept and its significance in heat transfer. **04**

b) Using dimensional analysis, show that: $Nu = f(Re, Pr)$ **05**

c) A vertical plate measuring 0.5 m high and 0.3 m wide is maintained at a uniform surface temperature of 100 °C. The surrounding air is at 25 °C. Assume the plate is exposed to natural convection on one side. Calculate the average heat transfer coefficient and the heat transfer rate from the plate. Use air properties as - k = 0.028 W/mK, $\nu = 2.2 \times 10^{-5}$ m^2/s, $P_r = 0.71$. Use the following correlation: **05**

$$Nu = 0.1\,(Gr.Pr)^{1/3}$$

Q.6 Attempt the following questions.

a) Describe filmwise and dropwise condensation with comparison. **04**

b) Explain pool boiling curve and different regimes of boiling. **05**

c) Derive expression for heat exchanger effectiveness (ε) for parallel flow heat exchanger, in terms of number of transfer units (NTU) and capacity ratio R. **05**

Q.7 Attempt the following questions.

a) A Counter flow heat exchanger is used to cool lubricating oil (C_{ph} = 2.13 kJ/kgK) from 100°C to 60°C using water (C_{pc} = 4.187 kJ/kgK) entering at 30°C. Mass flow rates: for oil = 0.1 kg/s, for water = 0.2 kg/s. Overall heat transfer coefficient = 380 W/m^{2}K. Calculate required heat exchanger area. **05**

b) Describe types of heat exchangers and their industrial applications. **04**

c) In an air-conditioning system, air enters a parallel-flow heat exchanger at 10 °C with a mass flow rate of 3 kg/s. It is heated by hot water entering at 95 °C with a mass flow rate of 1 kg/s. The specific heats are: $C_{p,air}$ = 1005 J/kgK, $C_{p,water}$ = 4187 J/kgK. The overall heat transfer coefficient times area is UA = 2000 W/K. Using the NTU-effectiveness method, determine: **05**

i) The effectiveness of the heat exchanger
ii) The heat transfer rate
iii) The outlet temperatures of both the air and the water streams

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS)
Examination: March/April – 2026
Instrumentation and Control Engineering (MECHPCC-12)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top on page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) The largest change in the measurand which produces no instrument response is called _____.
a) dead zone b) dynamic error
c) fidelity d) threshold

2) Spring of a transducer deflects 0.4 mm when subjected to a force of 8 KN. Find the sensitivity _____.
a) 0.05 mm/KN b) 20 KN/mm
c) 0.32 mm/KN d) 0.005 mm/KN

3) Unit of thermoelectric power is _____.
a) mV/°C b) °C / mV
c) mA /°C d) °C / m

4) Which thermocouple type is usually preferred in the cryogenic range?
a) J type b) K type
c) T type d) S type

5) A permanent magnet is used in _____ tachometer.
a) inductive pickup b) capacitive pickup
c) mechanical d) photoelectric pickup

6) Hot wire anemometer is a variable _____ transducer.
a) resistance b) inductance
c) capacitance d) frequency

7) Which condition is essential in the operation of Mcleod gauge?
a) isobaric b) adiabatic
c) isothermal d) isochoric

8) A comparator is an essential feature of _____.
a) manual system b) open loop system
c) any system d) feedback control system

9) In block diagram algebra, series blocks are _____.
a) added b) integrated
c) multiplied d) subtracted

10) Which of the following cannot be used alone?
a) P – action b) D – action
c) I – action d) ON/OFF action

11) 'Centroid' of asymptotes is a point which _____.
a) may be real or complex
b) is real but may or may not lie on the root locus
c) is real and always lies on the root locus
d) is always imaginary

12) The part of R.L. in the right half plane represents the _____ system.
a) unstable b) marginally stable
c) stable d) oscillatory

13) At the phase cross-over frequency, the phase angle is _____.
a) -90° b) 90°
c) -180° d) 180°

14) If a system has two poles at the origin, then the phase angle contribution by them is _____.
a) 180° b) -180°
c) -90° d) 90°

T.Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
Instrumentation and Control Engineering (MECHPCC-12)

Day & Date: Wednesday, 20-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicates full marks.
3) Assume additional suitable data if necessary and state if clearly.
4) Use of Scientific calculator is allowed.
5) Use university graph paper & semi-log paper if required.

Section – I

Q.2 **a)** Explain with a block diagram, 'Generalised Measurement System'. **08**

b) Explain for thermocouples, law of intermediate temperature. **06**

Q.3 **a)** Explain with a neat sketch working of 'Hot Wire Anemometer.' **06**

b) Explain in brief **04**
i) threshold
ii) dead time

c) Differentiate between 'R.T.D.' and 'Thermistor'. **04**

Q.4 **a)** Explain the working principle of flashing light Stroboscope. **06**

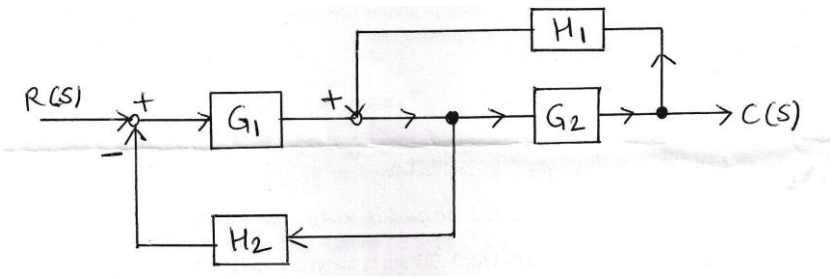
b) Explain with a neat sketch 'Pirani Gauge'. **04**

c) Describe various standards of measurement. **04**

Section – II

Q.5 **a)** Explain a closed loop control system with a suitable example. **04**

b) Reduce the following block diagram to get T.F. C(S) / R(S). **06**



c) State the general predictions to identify the break-away points on the real axis in root locus. **04**

Q.6 **a)** For a control system represented by, **10**

$$G(S)H(S) = \frac{K(S+1)(S+5)}{S^2+8S+25}$$

Sketch the complete Root Locus and comment on the system stability.

b) Explain with a graph, P+D controller. What do you mean by 'Derivative Time'? **04**

Q.7 **a)** For a unity feedback control system given by, **10**

$$G(S) = \frac{200}{S(S+2)(S+20)}$$

Sketch the Bode Plots and comment on the system stability

b) Explain the following terms. **04**

i) gain crossover frequency
ii) phase crossover frequency

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Merchant's circle diagram (MCD) in machining deals with _____.
a) cutting force components
b) cutting tool geometry
c) mechanism of chip formation
d) cutting temperature

2) Forces due to metal cutting are measured by _____.
a) Rotameter b) Dynamometer
c) Tachometer d) Micrometer

3) The point angle is HSS twist drill is _____.
a) 60 b) 120
c) 118 d) 128

4) Chip thickness ratio is _____.
a) always less than 1.0 b) equal to or less than 1.0
c) more than 1.0 d) None of these

5) In cutting tools, crater wear develops at _____.
a) the auxiliary b) the tool nose
c) the rake surface d) the principal flank

6) Which of the following tools are generally manufactured by Powder metallurgy?
a) High carbon steel b) Cemented carbides
c) Abrasives d) Low carbon steel

7) Drill jigs are used to hold the workpiece when _____.
a) counterboring and countersinking
b) spot facing and tapping
c) drilling and reaming
d) all of these

8) A body which is free in space has _____ freedom of rotations.
a) 2 b) 3
c) 6 d) 0

9) In press operation, For Blanking _____.
a) Punch Size = Component size – Clearance
b) Die size = Component size
c) Option a) & b) are correct
d) Option a) & b) are not correct

10) Which of the following forming processes is suitable for making utensils and cup shaped objects?
a) Deep drawing b) Wire drawing
c) Forging d) Rolling

11) Punching a number of holes in a sheet is known as _____.
a) Parting b) Perforating
c) Notching d) Lancing

12) Depreciation is a process of _____.
a) Allocation of Cost b) Reduction in Liability
c) Valuation of Assets d) Increasing Asset Value

13) Break-even analysis is used in “Make or Buy” decision.
a) True b) False
c) Partially false d) None of the above

14) A fixture does NOT _____.
a) Hold the workpiece b) Guide the tool
c) Locate the workpiece d) Provide support

Set **P**

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
Tool engineering (MECHPEC – 02B)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

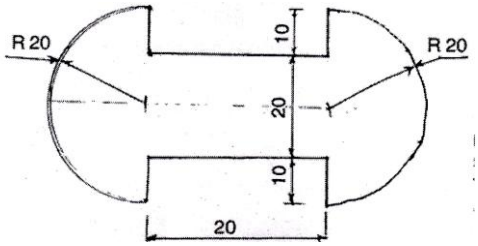
Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Assume suitable data, diagrams if required.
4) Use of scientific calculator is allowed.

SECTION – I

Q.2 a) Design a press tool for the component shown in figure below giving following details. **14**

i) Cutting force
ii) Clearance between punch and die
iii) Stripping force and no of bolts and bolt size need for die clamping
iv) Strip layout and % material utilization

Material: MS, Thickness: 3 mm, Shear Strength: 350 N/mm^2
All dimensions shown in the figure are in “mm”

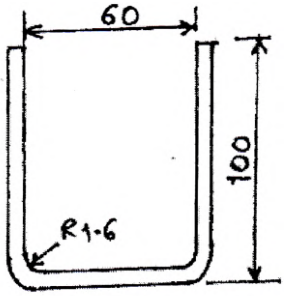


Also draw one sectional view of assembly of press tool and part name.

OR

b) Design a draw tool for given component Fig-II also calculate the following (draw one sectional view of assembly)

i) Blank size
ii) No of draws
iii) draw ratio
iv) drawing force
v) Blank force
vi) die and punch clearance



Material: MS, Yield Stress: 250 N/mm^2,
Thickness: 2 mm
All dimensions in the figure are in "mm"

Draw only ONE sectional View along with part list.

Q.3 **a)** What is tool dynamometer explain it. **03**

b) In an orthogonal cutting operation following data have been observed: **04**
Uncut chip thickness, t = 0.127 mm width of cut, b = 6.35 mm
Cutting speed V = 2m/s Rake angle, $\alpha = 10°$ Cutting force Fc = 567 N
Thrust force FT = 227 N Chip thickness tc = 0.228 mm
Determine: Shear angle

Q.4 **a)** What are the cutting tool materials. Explain it. **03**

b) Explain nomenclature of twist drill. **04**

Q.5 Write a short note. (Any Two) **07**

a) Tool Signature

b) Heat generation during machining & coolants

c) Tool Wear

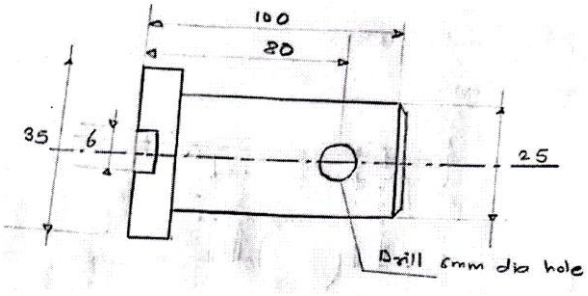
d) Machinability

SECTION – II

Q.6 **a)** Design a drill jig for a component shown in figure below for 6 mm diameter hole. **14**

OR

b) Design a milling fixture for a component shown in figure below for slot of 6 mm on head.



Q.7 **a)** A fixture costing Rs.2,000/-, the old fixture which originally cost Rs. 1,400/- has scrap value of Rs. 500/. The new fixture will save 20 paise/piece and % of overhead charged to this fixture is 30%. Taking M = 3%, T = 24%, I = 16% and amortization is 1.5 years. Calculate no. of pieces which must be produced to break even. So that, the fixture may pay for insert in one year. **04**

b) Explain in brief about geometry of plain milling cutter. **03**

Q.8 **a)** Draw tool geometry of a single point cutting tool and explain the same. **04**

b) Types of jig bush **03**

Q.9 **Write a short note. (Any Two)** **07**

a) Types of press tool operations

b) Difference between jig & fixture

c) Fool Proofing of jig or fixture

SLR-QH-349

Set Q

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
Tool engineering (MECHPEC – 02B)

Day & Date: Friday, 22-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) A body which is free in space has _____ freedom of rotations.
a) 2 b) 3
c) 6 d) 0

2) In press operation, For Blanking _____.
a) Punch Size = Component size – Clearance
b) Die size = Component size
c) Option a) & b) are correct
d) Option a) & b) are not correct

3) Which of the following forming processes is suitable for making utensils and cup shaped objects?
a) Deep drawing b) Wire drawing
c) Forging d) Rolling

4) Punching a number of holes in a sheet is known as _____.
a) Parting b) Perforating
c) Notching d) Lancing

5) Depreciation is a process of _____.
a) Allocation of Cost b) Reduction in Liability
c) Valuation of Assets d) Increasing Asset Value

6) Break-even analysis is used in "Make or Buy" decision.
a) True b) False
c) Partially false d) None of the above

7) A fixture does NOT _____.
a) Hold the workpiece b) Guide the tool
c) Locate the workpiece d) Provide support

8) Merchant's circle diagram (MCD) in machining deals with _____.
a) cutting force components
b) cutting tool geometry
c) mechanism of chip formation
d) cutting temperature

9) Forces due to metal cutting are measured by _____.
a) Rotameter b) Dynamometer
c) Tachometer d) Micrometer

10) The point angle is HSS twist drill is _____.
a) 60 b) 120
c) 118 d) 128

11) Chip thickness ratio is _____.
a) always less than 1.0 b) equal to or less than 1.0
c) more than 1.0 d) None of these

12) In cutting tools, crater wear develops at _____.
a) the auxiliary b) the tool nose
c) the rake surface d) the principal flank

13) Which of the following tools are generally manufactured by Powder metallurgy?
a) High carbon steel b) Cemented carbides
c) Abrasives d) Low carbon steel

14) Drill jigs are used to hold the workpiece when _____.
a) counterboring and countersinking
b) spot facing and tapping
c) drilling and reaming
d) all of these

4) Assume suitable data whenever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) A car with front engine rear wheel drive (FR) is climbing a steep slope. Which component mainly ensures torque multiplication for climbing?
a) Differential b) Propeller shaft
c) Gearbox d) Clutch

2) A vehicle shifts from FWD to AWD for off-road driving. What is the primary advantage gained?
a) Reduced fuel consumption
b) Lower vehicle weight
c) Higher top speed
d) Improved traction on uneven surfaces

3) If a vehicle body is made from aluminum instead of steel, what is the most likely performance impact?
a) Improved fuel efficiency due to reduced weight
b) Increased rolling resistance
c) Increased gradient resistance
d) Reduced acceleration

4) For a vehicle climbing a gradient, which parameter directly determines its ability to climb?
a) Air resistance b) Gradeability
c) Wheelbase d) Suspension stiffness

5) In a multi-plate clutch system, why are multiple plates used instead of a single plate?
   a) To reduce torque capacity
   b) To increase frictional surface area
   c) To reduce weight
   d) To simplify construction

6) In a synchromesh gearbox, what is the main purpose of synchronizers?
   a) Increase torque
   b) Match speeds of gears before engagement
   c) Reduce engine speed
   d) Increase fuel efficiency

7) For true rolling condition in steering, which condition must be satisfied?
   a) All wheels rotate at same speed
   b) All wheels have same diameter
   c) All wheels must roll about a common instantaneous center
   d) Wheels must be identical

8) If camber angle is excessively positive, what is the likely consequence?
   a) Even tyre wear
   b) Increased inner tyre wear
   c) Increased outer tyre wear
   d) No tyre wear

9) During sudden braking, dynamic weight transfer shifts load _____.
   a) From front to rear
   b) To sides only
   c) Equally distributed
   d) From rear to front

10) In an independent suspension system, what is the main advantage compared to rigid axle?
   a) Better ride comfort due to independent wheel movement
   b) Increased unsprung mass
   c) Reduced stability
   d) Increased tyre wear

11) A vehicle with rear engine rear wheel drive (RR) shows oversteering at high speeds. What is the primary reason?
   a) Excess load on front axle
   b) Excess load on rear axle reducing stability
   c) Low engine power
   d) High air resistance

12) Why is dynamic weight transfer important during braking?
   a) It increases engine power
   b) It affects braking efficiency and stability
   c) It reduces fuel consumption
   d) It increases speed

13) If tractive effort is less than total resistance, what will happen?

a) Vehicle accelerates
b) Vehicle decelerates
c) Vehicle maintains speed
d) Vehicle stops immediately

14) If aerodynamic drag is reduced by streamlining the body, what is the expected outcome?

a) Increase in rolling resistance
b) Decrease in fuel efficiency
c) Reduction in power required at high speed
d) Increase in gradient resistance

Seat No.	

Set **P**

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
Automobile Engineering (MECHPEC – 02C)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any Two questions from each section.
2) Figure on fight indicates full marks.
3) Assume suitable data, diagrams if required.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 **a)** Explain AWD Layout with its merits and demerits. **05**

b) Explain resistance to vehicle motion, Air, Rolling and Gradient resistance. **05**

c) Explain Hotch Kiss Drive layout. **04**

Q.3 **a)** Explain multi plate clutch for its construction and working. **05**

b) Explain synchromesh mesh gear box for its construction and working. **05**

c) Classify automobile body types with its features, and example. **04**

Q.4 **a)** The coefficient of rolling resistance for a truck weighing 8500 kg is 0.02 and coefficient of air resistance is 0.026 in the formula $R = KrW + KaAV^2$, N, where A is frontal area in m^2 and V is speed of truck in km/hr. The transmission efficiency in top gear of 5:1 is 85% and that in second gear of 18:1 is 75%. The frontal area is (L × B) (1500 cm × 2500 cm). If the truck has maximum speed of 76 km/hr in top gear, **08**
calculate:
i) Engine BP required
ii) the engine speed if the driving wheels have an effective diameter of 0.850 m.
iii) the maximum grade the truck can negotiate at the above engine speed in second gear and
iv) the maximum draw bar pull available on level at above engine speed in second gear.

b) Explain final drive and differential gear box for its construction and working. **06**

Section – II

Q.5 **a)** Explain steering geometry for front steering wheels. **04**
A vehicle has the following data: Wheelbase L = 2.5 m, Track width W = 1.5 m, Pivot center distance 1.35 m, Inner wheel angle θ =30°. Determine the outer wheel

b) Angle for correct steering. Verify the Ackermann steering condition is satisfied. **06**
Calculate the turning radii of all four wheels (inner front, outer front, inner rear, outer rear)

c) Explain the concept of understeer and oversteer. **04**

Q.6 **a)** Explain construction and working of dram and disk brake system. **05**

b) Explain Mac Pherson Strut independent suspension system. **05**

c) Explain air suspension system and its advantages. **04**

Q.7 **a)** Explain the difference between dependent and independent suspension system. **04**

b) Explain Anti-lock Braking System (ABS) and its working principle. **04**

c) A car weight 15 kN and wheel base 3m, the center of gravity is 1.5m in front of real axle and 0.8m above ground level. The car is having brakes on all four wheels. The coefficient of adhesion between the road and wheels is 0.5. If the car is moving up on the road having gradient 1:10, **06**
Calculate:

i) Load distribution between front and rear axle.
ii) Distance at which the car can stopped while going up at speed of 60km/hr, when only rear brakes are applied.

Set **Q**

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
Automobile Engineering (MECHPEC – 02C)

Day & Date: Friday, 22-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data whenever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Multiple Choice Questions. **14**

1) If camber angle is excessively positive, what is the likely consequence?
a) Even tyre wear b) Increased inner tyre wear
c) Increased outer tyre wear d) No tyre wear

2) During sudden braking, dynamic weight transfer shifts load _____.
a) From front to rear b) To sides only
c) Equally distributed d) From rear to front

3) In an independent suspension system, what is the main advantage compared to rigid axle?
a) Better ride comfort due to independent wheel movement
b) Increased unsprung mass
c) Reduced stability
d) Increased tyre wear

4) A vehicle with rear engine rear wheel drive (RR) shows oversteering at high speeds. What is the primary reason?
a) Excess load on front axle
b) Excess load on rear axle reducing stability
c) Low engine power
d) High air resistance

5) Why is dynamic weight transfer important during braking?
a) It increases engine power
b) It affects braking efficiency and stability
c) It reduces fuel consumption
d) It increases speed

6) If tractive effort is less than total resistance, what will happen?
a) Vehicle accelerates
b) Vehicle decelerates
c) Vehicle maintains speed
d) Vehicle stops immediately

7) If aerodynamic drag is reduced by streamlining the body, what is the expected outcome?
a) Increase in rolling resistance
b) Decrease in fuel efficiency
c) Reduction in power required at high speed
d) Increase in gradient resistance

8) A car with front engine rear wheel drive (FR) is climbing a steep slope. Which component mainly ensures torque multiplication for climbing?
a) Differential
b) Propeller shaft
c) Gearbox
d) Clutch

9) A vehicle shifts from FWD to AWD for off-road driving. What is the primary advantage gained?
a) Reduced fuel consumption
b) Lower vehicle weight
c) Higher top speed
d) Improved traction on uneven surfaces

10) If a vehicle body is made from aluminum instead of steel, what is the most likely performance impact?
a) Improved fuel efficiency due to reduced weight
b) Increased rolling resistance
c) Increased gradient resistance
d) Reduced acceleration

11) For a vehicle climbing a gradient, which parameter directly determines its ability to climb?
a) Air resistance
b) Gradeability
c) Wheelbase
d) Suspension stiffness

12) In a multi-plate clutch system, why are multiple plates used instead of a single plate?
a) To reduce torque capacity
b) To increase frictional surface area
c) To reduce weight
d) To simplify construction

13) In a synchromesh gearbox, what is the main purpose of synchronizers?
a) Increase torque
b) Match speeds of gears before engagement
c) Reduce engine speed
d) Increase fuel efficiency

14) For true rolling condition in steering, which condition must be satisfied?

a) All wheels rotate at same speed
b) All wheels have same diameter
c) All wheels must roll about a common instantaneous center
d) Wheels must be identical

Seat No.	

Set **Q**

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
Automobile Engineering (MECHPEC – 02C)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any Two questions from each section.
2) Figure on fight indicates full marks.
3) Assume suitable data, diagrams if required.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 **a)** Explain AWD Layout with its merits and demerits. **05**

b) Explain resistance to vehicle motion, Air, Rolling and Gradient resistance. **05**

c) Explain Hotch Kiss Drive layout. **04**

Q.3 **a)** Explain multi plate clutch for its construction and working. **05**

b) Explain synchromesh mesh gear box for its construction and working. **05**

c) Classify automobile body types with its features, and example. **04**

Q.4 **a)** The coefficient of rolling resistance for a truck weighing 8500 kg is 0.02 and coefficient of air resistance is 0.026 in the formula $R = KrW + KaAV^2$, N, where A is frontal area in m^2 and V is speed of truck in km/hr. The transmission efficiency in top gear of 5:1 is 85% and that in second gear of 18:1 is 75%. The frontal area is (L × B) (1500 cm × 2500 cm). If the truck has maximum speed of 76 km/hr in top gear, **08**
calculate:
i) Engine BP required
ii) the engine speed if the driving wheels have an effective diameter of 0.850 m.
iii) the maximum grade the truck can negotiate at the above engine speed in second gear and
iv) the maximum draw bar pull available on level at above engine speed in second gear.

b) Explain final drive and differential gear box for its construction and working. **06**

Section – II

Q.5	**a)**	Explain steering geometry for front steering wheels. A vehicle has the following data: Wheelbase L = 2.5 m, Track width W = 1.5 m, Pivot center distance 1.35 m, Inner wheel angle θ =30°. Determine the outer wheel	**04**
	b)	Angle for correct steering. Verify the Ackermann steering condition is satisfied. Calculate the turning radii of all four wheels (inner front, outer front, inner rear, outer rear)	**06**
	c)	Explain the concept of understeer and oversteer.	**04**
Q.6	**a)**	Explain construction and working of dram and disk brake system.	**05**
	b)	Explain Mac Pherson Strut independent suspension system.	**05**
	c)	Explain air suspension system and its advantages.	**04**
Q.7	**a)**	Explain the difference between dependent and independent suspension system.	**04**
	b)	Explain Anti-lock Braking System (ABS) and its working principle.	**04**
	c)	A car weight 15 kN and wheel base 3m, the center of gravity is 1.5m in front of real axle and 0.8m above ground level. The car is having brakes on all four wheels. The coefficient of adhesion between the road and wheels is 0.5. If the car is moving up on the road having gradient 1:10, Calculate: i) Load distribution between front and rear axle. ii) Distance at which the car can stopped while going up at speed of 60km/hr, when only rear brakes are applied.	**06**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Which of the following is not a part of CAD hardware?
a) Graphical display terminal b) Keyboards
c) Computer program d) Peripheral equipment

2) Integration of all business functions of enterprise is _____.
a) CIM b) CAD CAM
c) CAE d) None of these

3) Which geometric transformation does not change the basic dimensions of the graphics objects transformed?
a) Scaling b) Transition
c) Rotation d) Both b) and c)

4) IGES is _____.
a) Neutral file format b) Data format
c) Operating system d) All of the above

5) For the modeling of sheet metal parts of a car body, which one of the following may be generally recommended?
a) Wireframe modeling b) Surface modeling
c) Solid modeling d) None of these

6) FANUC is the name of _____.
a) CNC tool b) CNC controller
c) CNC job holding device d) None of these

7) Which curve exhibits better local control?
a) Bezier b) Benazir
c) B-spline d) All of these

8) Among these which is Drawing interchange file format.
a) DXF b) UCS
c) CAD d) None of these

9) The process of building the structure matrix [K] from the element stiffness matrices [K]e is called, _____.
a) assembly b) decomposition
c) interpolation d) Extrapolation

10) APT stands for _____.
a) Automatically programmed tool
b) Auto power tool
c) Automatically punched tape
d) All

11) CAPP involves use of computer in _____.
a) Planning the processes b) Determine cutting conditions
c) Setting time standards d) All of these

12) In case of closed loop control system _____ is used.
a) Servo motors b) Stepper motors
c) DC motors d) All of these

13) The predefined sequence of movement of machine parts in CNC, stored in MCU is called as _____.
a) Machine cycles b) Operation cycles
c) Canned cycles d) None of these

14) The equipment used for the measurement of tool-offsets is called as _____.
a) Vernier b) Micrometer
c) CMM d) Tool presetter

Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any Two questions from the Section - I.
2) Question No.5 compulsory and from the remaining attempt any one from Section - II.
3) Figure on fight indicates full marks.
4) Draw neat diagram where necessary.
5) Use of non-programmable scientific calculator is allowed.

Section – I

Q.2 Solve following Questions.

a) Describe Product Lifecycle Management (PLM) and explain how CAD, CAM, and CAE tools support effective PLM implementation. **07**

b) What do you mean by standardization in graphic software? Explain in brief GKS, PHIGS and IGES. **07**

Q.3 Solve following Questions.

a) Perform a counter clockwise 30° rotation of triangle EFG with E (4, 3), F (10, 3) and G (4, 7) about vertex point E. **08**

b) Discuss the role of GT in CAPP. Hence, discuss the importance of CAPP in industry. **06**

Q.4 Write a short notes. (Any Three) **14**

a) List of latest FEA Software's & their applications in Domain.

b) Computer Integrated Manufacturing (CIM).

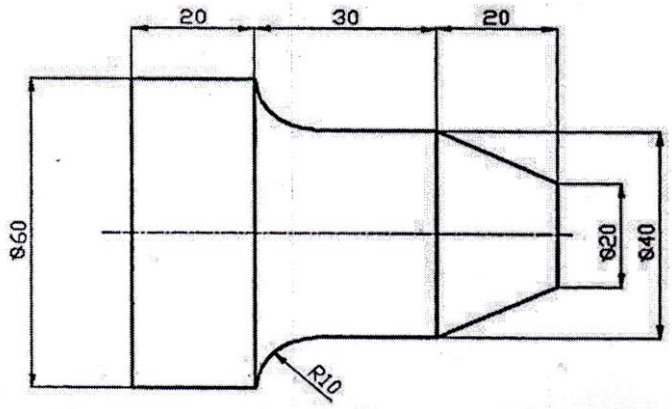
c) Automations.

d) Properties of Bezier curves.

Section – II

Q.5 Solve following Questions.

a) With reference to component drawing given below prepare CNC part program using G & M codes Prepare: **10**
Assume suitable Job zero/Machine zero/home position of tool etc. and state it clearly.
Tool material: H.S.S Work Material: M.S.
Spindle speed: 2000 rpm Feed rate: 400 mm/min
All dimensions are in mm.



b) Explain tool length and cutter radius compensation in part programming. **04**

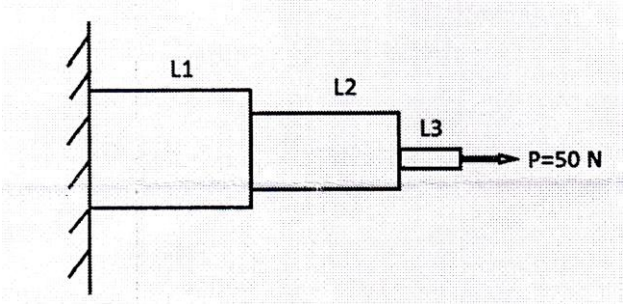
Q.6 Solve following Questions.

a) What is CNC? Write advantages and disadvantages of CNC system over NC system. **07**

b) Elaborate the steps in NC manufacturing. **07**

Q.7 Solve following Questions.

a) Determine the nodal displacement, stresses, and strains in stepped bar **08**



Where, $A_1 = 50\ mm^2$ $A_2 = 20\ mm^2$ $A_3 = 10mm^2$ $L_1 = L_2 = L_3 = 10\ mm$
$E = 200\ GPa$

b) Describe general steps of the FEM. **06**

c) Rotation d) Both b) and c)

11) IGES is _____.
a) Neutral file format b) Data format
c) Operating system d) All of the above

12) For the modeling of sheet metal parts of a car body, which one of the following may be generally recommended?
a) Wireframe modeling b) Surface modeling
c) Solid modeling d) None of these

13) FANUC is the name of _____.
a) CNC tool b) CNC controller
c) CNC job holding device d) None of these

14) Which curve exhibits better local control?
a) Bezier b) Benazir
c) B-spline d) All of these

Set Q

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
CAD-CAM-CAE (MECHPEC – 02D)

Day & Date: Friday, 22-05-2026 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any Two questions from the Section - I.
2) Question No.5 compulsory and from the remaining attempt any one from Section - II.
3) Figure on fight indicates full marks.
4) Draw neat diagram where necessary.
5) Use of non-programmable scientific calculator is allowed.

Section – I

Q.2 Solve following Questions.

a) Describe Product Lifecycle Management (PLM) and explain how CAD, CAM, and CAE tools support effective PLM implementation. **07**

b) What do you mean by standardization in graphic software? Explain in brief GKS, PHIGS and IGES. **07**

Q.3 Solve following Questions.

a) Perform a counter clockwise 30° rotation of triangle EFG with E (4, 3), F (10, 3) and G (4, 7) about vertex point E. **08**

b) Discuss the role of GT in CAPP. Hence, discuss the importance of CAPP in industry. **06**

Q.4 Write a short notes. (Any Three) **14**

a) List of latest FEA Software's & their applications in Domain.

b) Computer Integrated Manufacturing (CIM).

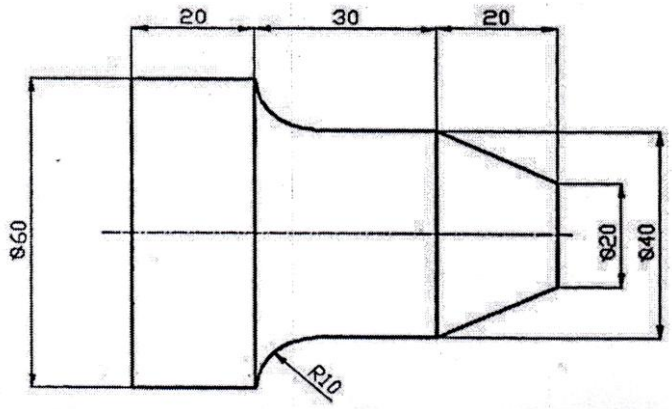
c) Automations.

d) Properties of Bezier curves.

Section – II

Q.5 Solve following Questions.

a) With reference to component drawing given below prepare CNC part program using G & M codes Prepare: **10**
Assume suitable Job zero/Machine zero/home position of tool etc. and state it clearly.
Tool material: H.S.S Work Material: M.S.
Spindle speed: 2000 rpm Feed rate: 400 mm/min
All dimensions are in mm.



b) Explain tool length and cutter radius compensation in part programming. **04**

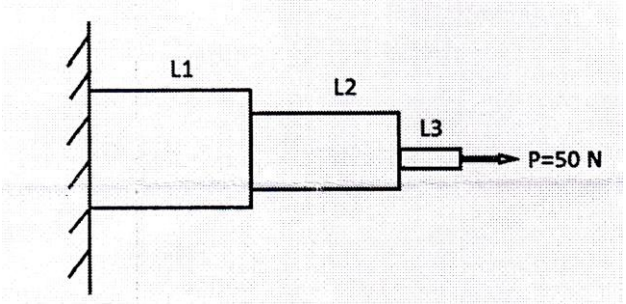
Q.6 Solve following Questions.

a) What is CNC? Write advantages and disadvantages of CNC system over NC system. **07**

b) Elaborate the steps in NC manufacturing. **07**

Q.7 Solve following Questions.

a) Determine the nodal displacement, stresses, and strains in stepped bar **08**



Where, $A_1 = 50\ mm^2$ $A_2 = 20\ mm^2$ $A_3 = 10mm^2$ $L_1 = L_2 = L_3 = 10\ mm$
$E = 200\ GPa$

b) Describe general steps of the FEM. **06**

Seat No.	

Set R

T. Y. (B.Tech.) (Mechanical Engineering) (Semester - II) (New) (CBCS) Examination: March/April – 2026
CAD-CAM-CAE (MECHPEC – 02D)

Day & Date: Friday, 22-05-2026 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in Answer Book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) CAPP involves use of computer in _____.
a) Planning the processes b) Determine cutting conditions
c) Setting time standards d) All of these

2) In case of closed loop control system _____ is used.
a) Servo motors b) Stepper motors
c) DC motors d) All of these

3) The predefined sequence of movement of machine parts in CNC, stored in MCU is called as _____.
a) Machine cycles b) Operation cycles
c) Canned cycles d) None of these

4) The equipment used for the measurement of tool-offsets is called as _____.
a) Vernier b) Micrometer
c) CMM d) Tool presetter

5) Which of the following is not a part of CAD hardware?
a) Graphical display terminal b) Keyboards
c) Computer program d) Peripheral equipment

6) Integration of all business functions of enterprise is _____.
a) CIM b) CAD CAM
c) CAE d) None of these

7) Which geometric transformation does not change the basic dimensions of the graphics objects transformed?
a) Scaling b) Transition
c) Rotation d) Both b) and c)

8) IGES is _____.
a) Neutral file format b) Data format
c) Operating system d) All of the above

9) For the modeling of sheet metal parts of a car body, which one of the following may be generally recommended?
a) Wireframe modeling b) Surface modeling
c) Solid modeling d) None of these

10) FANUC is the name of _____.
a) CNC tool b) CNC controller
c) CNC job holding device d) None of these

11) Which curve exhibits better local control?
a) Bezier b) Benazir
c) B-spline d) All of these

12) Among these which is Drawing interchange file format.
a) DXF b) UCS
c) CAD d) None of these

13) The process of building the structure matrix [K] from the element stiffness matrices [K]e is called, _____.
a) assembly b) decomposition
c) interpolation d) Extrapolation

14) APT stands for _____.
a) Automatically programmed tool
b) Auto power tool
c) Automatically punched tape
d) All

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) In an _____ element the value of the field variable remains unchanged in the circumferential direction.
a) 1D and 2D b) beam
c) solid d) axisymmetric

2) In thermal analysis problems the primary field variable is _____.
a) temperature b) heat flux
c) stress d) displacement

3) Formula for Galerkin method is _____.
a) $f(x)R(x)dx = 0$ b) $\int R(x)dx = 0$
c) $R(x) = 0$ d) $\int \mathrm{R}^2(x)dx = 0$

4) Multiplex elements are those elements which _____.
a) have higher order interpolation polynomials
b) have sides parallel to coordinate system
c) have sides parallel to coordinate system and use higher order interpolation polynomials
