T.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Steel Structures (BTN01501)

Day & Date: Tuesday, 26-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.
5) Draw the appropriate sketches wherever necessary.
5) Use of IS 800-2007 and IS 875 are allowed, but not allowed for MCQ (Q.No.1)

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. 14

1) What is the value of constant 'k' to calculate throat thickness in fillet weld if the angle between fusion faces is 110°?
a) 0.6 b) 0.65
c) 0.55 d) 0.75

2) As per IS 800 purlins are designed as a _____.
a) Simply supported beams b) Cantilever beams
c) Continuous beams d) Compression member

3) Sag rod are designed as _____.
a) Compression member b) Tension member
c) Laterally supported beam d) Laterally unsupported beam

4) The self- weight of a roof truss $(\mathrm{N/m^2})$ may be obtained by _____.
a) $(\mathrm{L}+5)5$ b) $(\mathrm{L}/3+5)10$
c) $(\mathrm{L}-5)5$ d) $(\mathrm{L}/3-5)10$

5) Steel is an alloy which mainly contains _____.
a) iron and silica b) iron and sulfur
c) iron and carbon d) iron and sodium

6) The slenderness ratio of lacing flat is limited to _____.
a) 350 b) 145
c) 180 d) 250

7) The thickness of base plate is determined from the _____.
a) Flexural strength of plate
b) Shear strength of plate
c) Bearing strength of concrete pedestal
d) Punching criteria

8) The effective length of a battened column is _____.
a) increased by 10 %
b) increased by 20 %
c) 0.8 times actual length of column
d) 0.8 times the unsupported length of column

9) The partial safety factor for the material of bolts is _____.
a) 1.0 b) 1.1
c) 1.15 d) 1.25

10) Which of the following is the mode of failure in fillet weld material?
a) Tension b) Shear
c) Bearing d) Crushing

11) The shape factor in plastic method of analysis depends upon _____.
a) Yield stress of the material b) Hinge length
c) Geometry of the section d) Redistribution of moments

12) Which of the following is not a serviceability criteria?
a) Deflection b) Ponding
c) Vibration d) Fatigue

13) For the block shear failure of a tension member, the failure occurs along a path through the connection involving _____.
a) Tension on the two perpendicular planes
b) Shear on the two perpendicular planes
c) Tension on one plane and shear on the other perpendicular plane
d) Tension on the plane of connection and compression on the other perpendicular plane

14) Which of the following section will be preferred for a column?
a) ISLB b) ISMB
c) ISWB d) ISHB

Set P

T.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Steel Structures (BTN01501)

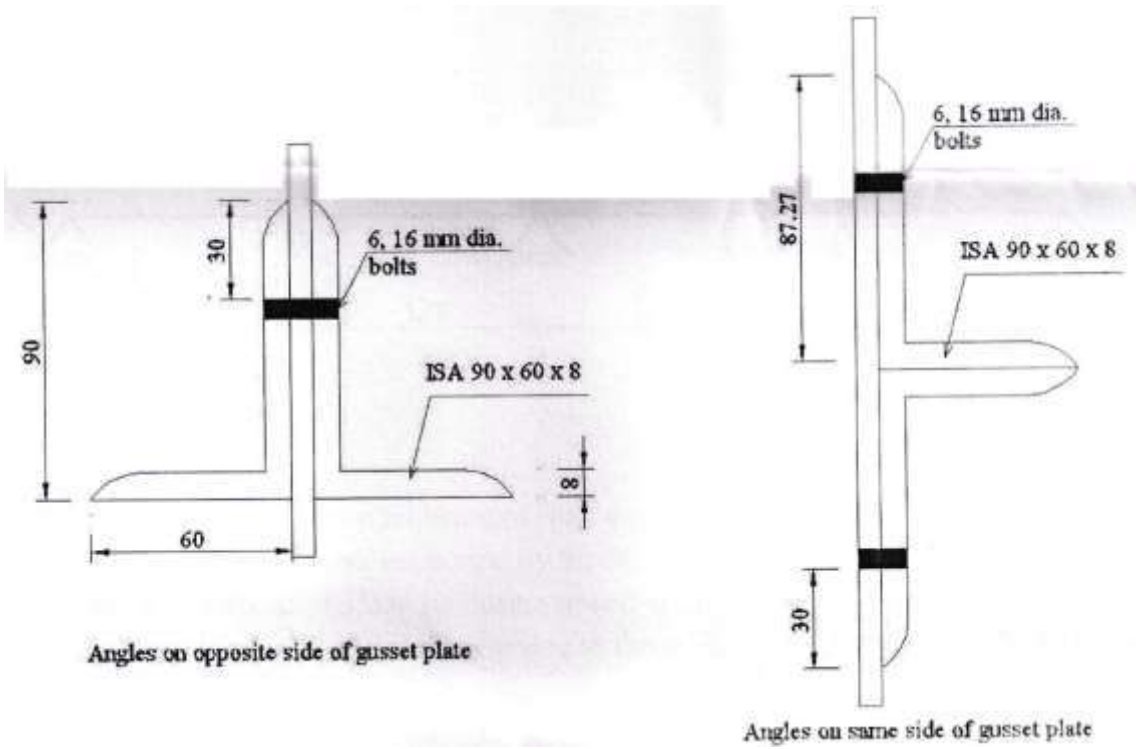
Day & Date: Tuesday, 26-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 and Q.6 are compulsory and solve any 2 questions from each section.
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary and mention it clearly.
4) Draw the appropriate sketches wherever necessary.
5) Use of IS 800-2007 and IS 875 are allowed, but not allowed for Q.1 (MCQ)

Section – I

Q.2 **a)** Explain the limit state of strength and limit state of serviceability. **05**
b) Explain complete, partial and over complete collapse. **05**

Q.3 Determine the tensile capacity of the section shown in figure for following data **09**
Diameter of bolt = 16 mm
Number of bolts = 6
Pitch of bolt = 40 mm
Edge distance of bolts = 30 mm
Grade of bolt = 4.6
Grade of Steel Fe 410



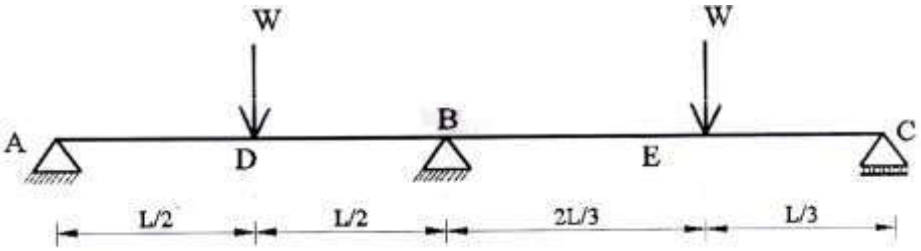
a) Angles are placed on the opposite side of 12 mm thick gusset plate (tack bolted)
b) Angles are placed on the same side of 12 mm thick gusset plate (tack bolted)
c) Angle are not tack bolted

Q.4 Design a double angle discontinuous strut to carry a factored load of 230 kN, the effective length of the strut is 2.4 m. Design the welded connection. **09**

Q.5 Design a built-up laced steel column 7 m long to carry a factored axial load of 900kN. The column is restrained in position but not restrained at against rotation at both the ends. Provide a single lacing system with bolted connections. The design should confirm to specifications of IS 800-2007, Design the column with two channels placed back-to-back. Also design a suitable single lacing system. **09**

Section – II

Q.6 Find out the collapse load for a continuous beam, shown in figure. The beam is of uniform cross section. **10**



Q.7 A simply supported steel beam of span 4 m effective span is laterally supported throughout. The loads supported by the beam comprise of uniformly distributed service live load of 35kN. (inclusive of self-weight) Adopting Fe410 grade steel, design the simply supported beam according to the specifications of IS 800-2007. **09**

Q.8 Design an I section purlin for industrial building supporting GI sheet roof for the following data. **09**

Spacing of trusses = 5.0m
Span of truss = 12 m
Spacing of purlins = 1.5 m
Inclination of main rafter to horizontal = 30°
Weight of GI sheets = 130 N/m^2
Wind load = 2.0 kN/m^2
Grade of steel Fe 410

Q.9 A column ISHB 350 @ 661.2 N/m carries an axial compressive factored load of 1500kN. Design a suitable welded gusset base. The base rests on M20 grade concrete pedestal. **09**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. 14

1) If solid portion is twice that of void portion in a given mass of soil, then porosity for this soil is _____
a) 0.33 b) 0.66
c) 0.50 d) 0.25

2) Which of following factors affect the permeability of soil?
a) Shape of soil particle b) Size of soil particle
c) both a and b d) None of these

3) Plasticity index is defined as the range of water content between _____.
a) liquid and plastic limit b) plastic limit and semi solid limit
c) semi-solid limit and liquid limit d) liquid limit and solid limit

4) A flow net may be utilised for the determination of _____.
a) Exit gradient b) Seepage
c) Hydrostatic pressure d) all the above

5) Which test is suitable to find permeability of sandy soil?
a) Constant head b) Falling head
c) Both d) None

6) The vertical pressure at every point on the surface of pressure bulb is _____.
a) Same
b) Different
c) More just below of load applied
d) None of these

7) Height of fall of rammer in modified compaction test is _____.
a) 250mm b) 310mm
c) 400mm d) 450mm

8) The Y intercept of strength envelope line on shear stress axis is called _____.
a) cohesion b) angle of internal friction
c) stress d) angle of friction

9) A sample of saturated soil has 30% water content and the specific gravity of soil grains is 2.6. The dry density of the soil mass in g/cm^3, is _____.

a) 1.46 b) 1.82
c) 1.91 d) None of these

10) A soil has a bulk density of 22 kN/m^3 and water content 10%. The dry density of soil is _____.

a) 18.6 kN/m^3 b) 20.0 kN/m^3
c) 22.0 kN/m^3 d) 23.2 kN/m^3

11) For 30% degree of consolidation of soil the time factor is _____.

a) 0.0706 b) 0.0523
c) 0.0042 d) 0.0061

12) Coefficient of consolidation for clays normally _____.

a) Decreases with increase in liquid limit
b) Increases with increase in liquid limit
c) First increases and then decreases with increase in liquid limit
d) Remains constant at all liquid limits

13) For a retaining wall of height 6 m with cohesionless backfill of $\varphi = 35°$ the distance of resultant earth pressure above the base of wall is _____.

a) 0.5 m b) 4.0 m
c) 2 m d) 3.0 m

14) The coefficient of passive earth pressure for a backfill having $\varphi = 35°$, as per Rankine's theory is _____.

a) 0.27 b) 0.33
c) 1.67 d) 3.69

T.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Geotechnical Engineering (BTN01502)

Day & Date: Thursday, 28-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 is compulsory and Q. No. 6 is compulsory.
2) Attempts any two questions from the remaining questions of each section.
3) Support your answer with illustrative sketches where-ever possible.
4) Assume suitable data if required.
5) Write units for the calculated quantities.

Section – I

Q.2 Answer any four questions. **08**

a) Define density index and percentage air voids.
b) What are the different drainage conditions used in shear test on soil? Which drainage condition is called as quick test?
c) Draw IS soil classification plasticity chart with symbol for soil group.
d) Write any two characteristics of flownet.
e) Define Darcy's law of flow of water through soil.

Q.3 a) Derive the relation between G, Υ, e and S with usual notations. **05**

b) A soil specimen has water content 10% and bulk unit weight 20KN/m^3. If specific gravity is 2.70 find dry unit weight, voids ratio, degree of saturation, porosity, air content. **05**

Q.4 a) What is permeability of soil? Explain any four factors affecting permeability of soil. **05**

b) Calculate the coefficient of permeability of a soil sample 6 cm in height and 50 cm^2 in cross sectional area, if a quantity of water equal to 420 ml passed down in 10 minutes under an effective constant head of 40 cm. On oven drying the test specimen has mass of 498 gm, calculate seepage velocity. Take G = 2.65. **05**

Q.5 a) What is failure envelope in shear strength of soil? Draw failure envelope and explain shear strength parameters for: **05**
1) Purely cohesive soil
2) Sandy soil
3) Partially cohesive soil

b) Following results were obtained in direct box shear test on sandy clay **05**

Normal Load	180N	380N	800N
Shear force at failure	200N	260N	360N

The size of box is 60 mm x 60 mm. Determine shear strength parameter of soil. If the same sample is tested in tri axial compression test with a cell pressure of 80 kN/m^2. Find the deviation stress at which the failure is expected.

Section – II

Q.6 Answer any four questions. **08**

a) Define Maximun dry density and optimum moisture.

b) Draw compaction curve for standard proctor test and modified proctor test on same scale and label it.

c) Define compression index and coefficient of compressibility.

d) Write any four analogy between spring model and saturated soil (consolidation).

e) Draw pressure distribution diagram for purely cohesive soil in active earth pressure.

Q.7 a) What are the different factors affecting compaction of soil? **05**

b) A Proctor density test gave following data **05**

Water content w%	9.5	11.3	13.2	15.7	18.0	20.2
Dry density Kg/M^3	1584	1650	1704	1698	1656	1597

1) Plot Compaction curve and find OMC and MDD
2) Plot zero air void line

Q.8 a) With a neat sketch explain procedure to calculate pre-consolidation pressure. **05**

b) A 1 cm thick laboratory soil sample reaches 50% consolidation in 30 seconds under double drainage conditions. Find how much time will it require for a 10 m thick layer in the field to reach the same degree of consolidation if **05**

1) It has drainage face on one side only
2) It has drainage face on both side

Q.9 a) Explain different types of earth pressure with neat sketch. **05**

b) A rigid vertical retaining wall 6 m high has a dry backfill of cohesionless soil. The properties are $\gamma = 16\text{kN/m}^3, \varphi = 25°$. The backfill is subjected to uniform surcharge pressure of 10 KN/m^2. Determine total active earth force and its point of application. **05**

T.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Geotechnical Engineering (BTN01502)

Day & Date: Thursday, 28-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. 14

1) The Y intercept of strength envelope line on shear stress axis is called _____.
a) cohesion b) angle of internal friction
c) stress d) angle of friction

2) A sample of saturated soil has 30% water content and the specific gravity of soil grains is 2.6. The dry density of the soil mass in g/cm^3, is _____.
a) 1.46 b) 1.82
c) 1.91 d) None of these

3) A soil has a bulk density of 22 kN/m^3 and water content 10%. The dry density of soil is _____.
a) 18.6 kN/m^3 b) 20.0 kN/m^3
c) 22.0 kN/m^3 d) 23.2 kN/m^3

4) For 30% degree of consolidation of soil the time factor is _____.
a) 0.0706 b) 0.0523
c) 0.0042 d) 0.0061

5) Coefficient of consolidation for clays normally _____.
a) Decreases with increase in liquid limit
b) Increases with increase in liquid limit
c) First increases and then decreases with increase in liquid limit
d) Remains constant at all liquid limits

6) For a retaining wall of height 6 m with cohesionless backfill of $\varphi = 35°$ the distance of resultant earth pressure above the base of wall is _____.
a) 0.5 m b) 4.0 m
c) 2 m d) 3.0 m

7) The coefficient of passive earth pressure for a backfill having $\varphi = 35°$, as per Rankine's theory is _____.
a) 0.27 b) 0.33
c) 1.67 d) 3.69

8) If solid portion is twice that of void portion in a given mass of soil, then porosity for this soil is _____

a) 0.33 b) 0.66
c) 0.50 d) 0.25

9) Which of following factors affect the permeability of soil?

a) Shape of soil particle b) Size of soil particle
c) both a and b d) None of these

10) Plasticity index is defined as the range of water content between _____.

a) liquid and plastic limit b) plastic limit and semi solid limit
c) semi-solid limit and liquid limit d) liquid limit and solid limit

11) A flow net may be utilised for the determination of _____.

a) Exit gradient b) Seepage
c) Hydrostatic pressure d) all the above

12) Which test is suitable to find permeability of sandy soil?

a) Constant head b) Falling head
c) Both d) None

13) The vertical pressure at every point on the surface of pressure bulb is _____.

a) Same
b) Different
c) More just below of load applied
d) None of these

14) Height of fall of rammer in modified compaction test is _____.

a) 250mm b) 310mm
c) 400mm d) 450mm

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Match List-I (class of road with List-II (width of c/w) and select the correct answer using the codes:

List – I	List-II
A. Single lane	1. 7.5m
B. Two lane without raised Kerbs	2. 3.5m per lane
C. Two lane with raised Kerbs	3. 3.75m
D. Multilane pavement	4. 7.0m

Codes:

	A	B	C	D
a)	2	3	4	1
b)	4	1	2	3
c)	3	4	1	2
d)	2	1	4	3

2) Penetration value of Bitumen is expressed in _____.
a) cm b) N/mm^2
c) $1/10^{th}$ mm d) cm^2

3) Consider _____.
1) Creation of Central Road Fund
2) National Highway Act
3) Formation of Indian Road Congress
4) Creation of Highway Research Board
The correct chronological order of these events is
a) 4, 3, 2, 1 b) 2, 1, 3, 4
c) 1, 3, 2, 4 d) 2, 3, 1,4

4) Grade compensation at the horizontal curve is given by _____.
a) $\frac{30+V}{V}$ b) $\frac{30+S}{S}$
c) $\frac{30+R}{R}$ d) $\frac{30+e}{R}$

5) What is the stopping sight distance for a design speed of 65kmph assuming the coefficient of friction as 0.36 and total reaction time of drivers as 2.5 secs?

a) 91.34m b) 92.34m
c) 93.34m d) 94.34m

6) What is the standard aggregate load considered in calculation of CBR at 2.5mm and 5.0mm penetration level?

a) 1370kg and 2000kg b) 2055kg and 1300kg
c) 1380kg and 2088kg d) 1370 and 2055kg

7) Which of the following represents the hardest grade of bitumen?

a) 30/40 b) 60/70
c) 80/100 d) 100/120

8) Aggregate abrasion value indicates which of the following property?

a) Durability b) Toughness
c) Hardness d) Strength

9) Match the tests with their objectives:

	Test Name		**Objective**
A	Los Angeles Abrasion test	1	Consistency Limits and Indices
B	Impact test	2	MDD and OMC of Soil
C	Compaction test	3	Toughness property of aggregate
D	LL and PI test	4	Hardness property of Aggregate

Select the correct answer.

	A	**B**	**C**	**D**
a)	1	2	3	4
b)	1	4	3	2
c)	4	3	2	1
d)	2	3	4	1

10) Select the correct order of flexible pavement construction (From bottom to top) _____.

a) Bituminous Concrete, Dense Bituminous Macadam, Wet Mix Macadam, Granular Subbase and Subgrade
b) Subgrade, Granular Subbase, Bituminous Concrete, Dense Bituminous Macadam and Wet Mix Macadam
c) Dense Bituminous Macadam, Bituminous Concrete, Granular Subbase Wet Mix Macadam, and Subgrade
d) Subgrade, Granular Subbase, Wet Mix Macadam, Dense Bituminous Macadam and Bituminous Concrete

11) The location of Fatigue and Rutting cracking considered in the design of flexible pavement is _____.

a) At top of the Bituminous layer and the top of the Wet Mix Macadam
b) At bottom of the Bituminous layer and the top of the Wet Mix Macadam
c) At bottom of the Bituminous layer and the top of the Subgrade
d) At top of the Bituminous layer and the top of the Subgrade

12) The removal of the blasted debris from the tunnel interior to a good distance is called _____.

a) Drifting
b) Pumping
c) Mucking
d) Shifting

13) Forepoling method is generally adopted for tunneling in _____.

a) Soft ground
b) Hard Rock
c) Running ground
d) All the above

14) The ideal shape of the tunnel which suits sewers and water-carrying purposes is _____.

a) rectangular section
b) Circular section
c) Horse Shoe
d) Arched Roof

Set P

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Highway and Tunnel Engineering (BTN01503)

Day & Date: Saturday,30-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section - I Q. 2 is compulsory; and solve any one question from remaining questions from Q.no. 3 and Q. no.4.
2) In Section - II Q. 5 is compulsory; and solve any one question from remaining from questions from Q.no. 6 and Q. no.7.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 Solve any two questions. **10**

a) Explain the various factors to be considered in deciding the highway alignment.

b) Draw a typical cross section of Two Lane National Highway in cutting and embankment indicating width of road, camber, roadway and land.

c) Derive the expression for finding the stopping sight distance at the sloping ground.

Q.3 Solve any three questions. **18**

a) A radius of 500 m has to be provided at a locality due to site restrictions on a National Highway with design speed 100 kmph. Design the super elevation. Should there be any restriction in speed? Assume Suitable data.

b) On a two-way traffic road, the speed of overtaking and overtaken vehicles is 65kmph and 40kmph respectively. If the average acceleration 0.92m/sec^2. Determine the overtaking sight distance indicating the details of overtaking operations with sketch. Assume t=2.0sec.

c) An expressway four lane divided, passing through a flat terrain has a horizontal curve of radius equal to ruling minimum radius and design speed is 120kmph. Assume design coefficient of lateral friction=0.15, length of the vehicle wheel base=6.1m. Calculate the following elements of the curve,
1) Ruling minimum radius (considering f=0.15 & e=0.07)
2) Super elevation
3) Extra Widening (considering n=4)
4) Length of transition curve using IRC equation. Assume Suitable data.

d) Calculate the stopping distance on a highway for a vehicle moving at 80kmph on a
1) Level Road
2) On a road having 1 in 100 descending grade. Consider t=2.5 sec and f=0.35

Q.4 Solve any three questions. **18**

a) What are the objectives of the preliminary survey in highway alignment? Enumerate the details to be collected in it.

b) Derive the equation for finding the road curve widening with a neat sketch.

c) List the various objects of providing a horizontal transition curve? Also, explain the various shapes of the transition curve.

d) How do you find CBR value in a laboratory? Explain the test procedure with neat sketch.

Section – II

Q.5 Solve any two questions. **10**

a) Differentiate between flexible & rigid pavement (Draw a neat sketch of both the pavements)

b) Find ESWL at depths of 50mm, 200mm and 400mm for a dual wheel carrying 2044 kN each. The centre-to-centre tyre spacing is 200mm and distance between the walls of the two tyres is 100mm. Use (log) equation to calculate ESWL.

c) Write a short on applications of softening point & Ductility test on bitumen.

Q.6 Solve any three questions. **18**

a) Write a note on the surface and sub-surface drainage system for the highway.

b) Calculate the stresses at the interior, edge, and corner region of cement concrete pavement using Westergaard's analysis. Use the following data: Wheel Load P=5100kg, Modulus of elasticity of cement concrete E=3x10^5 kg/cm^2, pavement thickness, h=18cm, Poisson's ratio, $\mu = 0.15$, Modulus of subgrade reaction, K=6.0kg/cm^3, Radius of contact area, a=15cm. Consider Radius of relative stiffness, $l = 70.6cm$ and equivalent radius of resisting section, b =14cm.

c) State methods of tunneling in soft rock. Explain with sketch any one method in detail.

d) Describe drainage in tunneling.

Q.7 Solve any three questions. **18**

a) State the objectives of tunnel lining and discuss different materials used in tunnel lining.

b) With a neat sketch explain objects of providing
1) contraction joints
2) construction joints
3) expansion joints
4) longitudinal joints

c) With a neat sketch, explain the method of determining the aggregate-bituminous mixes proportioning by Rothfutch's method.

d) Explain the specification and construction procedure of Wet Mix Macadam.

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Highway and Tunnel Engineering (BTN01503)

Day & Date: Saturday,30-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Aggregate abrasion value indicates which of the following property?
a) Durability b) Toughness
c) Hardness d) Strength

2) Match the tests with their objectives:

	Test Name		Objective
A	Los Angeles Abrasion test	1	Consistency Limits and Indices
B	Impact test	2	MDD and OMC of Soil
C	Compaction test	3	Toughness property of aggregate
D	LL and PI test	4	Hardness property of Aggregate

Select the correct answer.

	A	B	C	D
a)	1	2	3	4
b)	1	4	3	2
c)	4	3	2	1
d)	2	3	4	1

3) Select the correct order of flexible pavement construction (From bottom to top) _____.
a) Bituminous Concrete, Dense Bituminous Macadam, Wet Mix Macadam, Granular Subbase and Subgrade
b) Subgrade, Granular Subbase, Bituminous Concrete, Dense Bituminous Macadam and Wet Mix Macadam
c) Dense Bituminous Macadam, Bituminous Concrete, Granular Subbase Wet Mix Macadam, and Subgrade
d) Subgrade, Granular Subbase, Wet Mix Macadam, Dense Bituminous Macadam and Bituminous Concrete

4) The location of Fatigue and Rutting cracking considered in the design of flexible pavement is _____.

a) At top of the Bituminous layer and the top of the Wet Mix Macadam
b) At bottom of the Bituminous layer and the top of the Wet Mix Macadam
c) At bottom of the Bituminous layer and the top of the Subgrade
d) At top of the Bituminous layer and the top of the Subgrade

5) The removal of the blasted debris from the tunnel interior to a good distance is called _____.

a) Drifting b) Pumping
c) Mucking d) Shifting

6) Forepoling method is generally adopted for tunneling in _____.

a) Soft ground b) Hard Rock
c) Running ground d) All the above

7) The ideal shape of the tunnel which suits sewers and water-carrying purposes is _____.

a) rectangular section b) Circular section
c) Horse Shoe d) Arched Roof

8) Match List-I (class of road with List-II (width of c/w) and select the correct answer using the codes:

List – I	List-II
A. Single lane	1. 7.5m
B. Two lane without raised Kerbs	2. 3.5m per lane
C. Two lane with raised Kerbs	3. 3.75m
D. Multilane pavement	4. 7.0m

Codes:

	A	**B**	**C**	**D**
a)	2	3	4	1
b)	4	1	2	3
c)	3	4	1	2
d)	2	1	4	3

9) Penetration value of Bitumen is expressed in _____.

a) cm b) N/mm^2
c) $1/10^{th}$ mm d) cm^2

10) Consider _____.

1) Creation of Central Road Fund
2) National Highway Act
3) Formation of Indian Road Congress
4) Creation of Highway Research Board

The correct chronological order of these events is

a) 4, 3, 2, 1 b) 2, 1, 3, 4
c) 1, 3, 2, 4 d) 2, 3, 1,4

11) Grade compensation at the horizontal curve is given by _____.

a) $\frac{30+V}{V}$ b) $\frac{30+S}{S}$
c) $\frac{30+R}{R}$ d) $\frac{30+e}{R}$

12) What is the stopping sight distance for a design speed of 65kmph assuming the coefficient of friction as 0.36 and total reaction time of drivers as 2.5 secs?

a) 91.34m b) 92.34m
c) 93.34m d) 94.34m

13) What is the standard aggregate load considered in calculation of CBR at 2.5mm and 5.0mm penetration level?

a) 1370kg and 2000kg b) 2055kg and 1300kg
c) 1380kg and 2088kg d) 1370 and 2055kg

14) Which of the following represents the hardest grade of bitumen?

a) 30/40 b) 60/70
c) 80/100 d) 100/120

D	LL and PI test	4	Hardness property of Aggregate

Select the correct answer.

	A	**B**	**C**	**D**
a)	1	2	3	4
b)	1	4	3	2
c)	4	3	2	1
d)	2	3	4	1

5) Select the correct order of flexible pavement construction (From bottom to top) _____.

a) Bituminous Concrete, Dense Bituminous Macadam, Wet Mix Macadam, Granular Subbase and Subgrade
b) Subgrade, Granular Subbase, Bituminous Concrete, Dense Bituminous Macadam and Wet Mix Macadam
c) Dense Bituminous Macadam, Bituminous Concrete, Granular Subbase Wet Mix Macadam, and Subgrade
d) Subgrade, Granular Subbase, Wet Mix Macadam, Dense Bituminous Macadam and Bituminous Concrete

6) The location of Fatigue and Rutting cracking considered in the design of flexible pavement is _____.

a) At top of the Bituminous layer and the top of the Wet Mix Macadam
b) At bottom of the Bituminous layer and the top of the Wet Mix Macadam
c) At bottom of the Bituminous layer and the top of the Subgrade
d) At top of the Bituminous layer and the top of the Subgrade

7) The removal of the blasted debris from the tunnel interior to a good distance is called _____.

a) Drifting b) Pumping
c) Mucking d) Shifting

8) Forepoling method is generally adopted for tunneling in _____.

a) Soft ground b) Hard Rock
c) Running ground d) All the above

9) The ideal shape of the tunnel which suits sewers and water-carrying purposes is _____.

a) rectangular section b) Circular section
c) Horse Shoe d) Arched Roof

10) Match List-I (class of road with List-II (width of c/w) and select the correct answer using the codes:

List – I	List-II
A. Single lane	1. 7.5m
B. Two lane without raised Kerbs	2. 3.5m per lane
C. Two lane with raised Kerbs	3. 3.75m
D. Multilane pavement	4. 7.0m

Codes:

	A	**B**	**C**	**D**
a)	2	3	4	1
b)	4	1	2	3
c)	3	4	1	2
d)	2	1	4	3

11) Penetration value of Bitumen is expressed in _____.

a) cm b) N/mm^2
c) $1/10^{th}$ mm d) cm^2

12) Consider _____.

1) Creation of Central Road Fund
2) National Highway Act
3) Formation of Indian Road Congress
4) Creation of Highway Research Board

The correct chronological order of these events is

a) 4, 3, 2, 1 b) 2, 1, 3, 4
c) 1, 3, 2, 4 d) 2, 3, 1,4

13) Grade compensation at the horizontal curve is given by _____.

a) $\frac{30+V}{V}$ b) $\frac{30+S}{S}$
c) $\frac{30+R}{R}$ d) $\frac{30+e}{R}$

14) What is the stopping sight distance for a design speed of 65kmph assuming the coefficient of friction as 0.36 and total reaction time of drivers as 2.5 secs?

a) 91.34m b) 92.34m
c) 93.34m d) 94.34m

Seat No.		Set	S

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Highway and Tunnel Engineering (BTN01503)

Day & Date: Saturday,30-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section - I Q. 2 is compulsory; and solve any one question from remaining questions from Q.no. 3 and Q. no.4.
2) In Section - II Q. 5 is compulsory; and solve any one question from remaining from questions from Q.no. 6 and Q. no.7.
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 Solve any two questions. **10**

a) Explain the various factors to be considered in deciding the highway alignment.

b) Draw a typical cross section of Two Lane National Highway in cutting and embankment indicating width of road, camber, roadway and land.

c) Derive the expression for finding the stopping sight distance at the sloping ground.

Q.3 Solve any three questions. **18**

a) A radius of 500 m has to be provided at a locality due to site restrictions on a National Highway with design speed 100 kmph. Design the super elevation. Should there be any restriction in speed? Assume Suitable data.

b) On a two-way traffic road, the speed of overtaking and overtaken vehicles is 65kmph and 40kmph respectively. If the average acceleration 0.92m/sec^2. Determine the overtaking sight distance indicating the details of overtaking operations with sketch. Assume t=2.0sec.

c) An expressway four lane divided, passing through a flat terrain has a horizontal curve of radius equal to ruling minimum radius and design speed is 120kmph. Assume design coefficient of lateral friction=0.15, length of the vehicle wheel base=6.1m. Calculate the following elements of the curve,
1) Ruling minimum radius (considering f=0.15 & e=0.07)
2) Super elevation
3) Extra Widening (considering n=4)
4) Length of transition curve using IRC equation. Assume Suitable data.

d) Calculate the stopping distance on a highway for a vehicle moving at 80kmph on a
1) Level Road
2) On a road having 1 in 100 descending grade. Consider t=2.5 sec and f=0.35

Q.4 Solve any three questions. **18**

a) What are the objectives of the preliminary survey in highway alignment? Enumerate the details to be collected in it.

b) Derive the equation for finding the road curve widening with a neat sketch.

c) List the various objects of providing a horizontal transition curve? Also, explain the various shapes of the transition curve.

d) How do you find CBR value in a laboratory? Explain the test procedure with neat sketch.

Section – II

Q.5 Solve any two questions. **10**

a) Differentiate between flexible & rigid pavement (Draw a neat sketch of both the pavements)

b) Find ESWL at depths of 50mm, 200mm and 400mm for a dual wheel carrying 2044 kN each. The centre-to-centre tyre spacing is 200mm and distance between the walls of the two tyres is 100mm. Use (log) equation to calculate ESWL.

c) Write a short on applications of softening point & Ductility test on bitumen.

Q.6 Solve any three questions. **18**

a) Write a note on the surface and sub-surface drainage system for the highway.

b) Calculate the stresses at the interior, edge, and corner region of cement concrete pavement using Westergaard's analysis. Use the following data: Wheel Load P=5100kg, Modulus of elasticity of cement concrete E=3x10^5 kg/cm^2, pavement thickness, h=18cm, Poisson's ratio, $\mu = 0.15$, Modulus of subgrade reaction, K=6.0kg/cm^3, Radius of contact area, a=15cm. Consider Radius of relative stiffness, $l = 70.6cm$ and equivalent radius of resisting section, b =14cm.

c) State methods of tunneling in soft rock. Explain with sketch any one method in detail.

d) Describe drainage in tunneling.

Q.7 Solve any three questions. **18**

a) State the objectives of tunnel lining and discuss different materials used in tunnel lining.

b) With a neat sketch explain objects of providing
1) contraction joints
2) construction joints
3) expansion joints
4) longitudinal joints

c) With a neat sketch, explain the method of determining the aggregate-bituminous mixes proportioning by Rothfutch's method.

d) Explain the specification and construction procedure of Wet Mix Macadam.

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Monday, 01-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 MCQ /Objective type question paper **14**

1) The circulation of water from the earth's surface to the atmosphere, and vice versa, is called:
a) hydrologic cycle
b) runoff cycle
c) precipitation cycle
d) all of the above.

2) Infiltration capacity:
a) is a constant factor
b) changes with time
c) changes with location
d) changes both with time as well as location.

3) Synthetic unit hydrograph is a unit hydrograph of a basin, and is derived from:
a) the existing unit hydrograph of smaller duration for the basin
b) the existing unit hydrograph of a nearly basin
c) the existing unit hydrograph of a meteorologically homogeneous basin
d) the analysis of the rainfall runoff data of the basin

4) Time of concentration is the:
a) time of which the rain remains concentrated on a basin
b) time of maximum possible precipitation that may ever concentrate and fall over a given basin
c) time taken by the rain water to flow to an existing defined drain in a basin
d) the maximum time taken by the rain water to reach the outlet of the basin.

5) The probable maximum flood is the one:
a) which can occur only at rare occasions, such as the maximum observed flood on record
b) which can not occur at all under any weather conditions
c) which can occur only under the worst weather conditions
d) none of them

6) In mean section method
a) the elemental strip is taken between two verticals
b) mean depth is taken as the average of the depths in the two verticals
c) width of the strip is distance *b* between the two verticals
d) All of these

7) Darcy's law is valid, when the flow is:
a) laminar b) turbulent
c) both (a) and (b) d) none of them

8) The line joining the static water levels in several wells, excavated through a confined aquifer, is known as the:
a) cone of depression b) piezometric surface
c) perched water table d) hypsometric curve

9) The National water policy (2002), of India, gives the top priority to:
a) drinking water b) hydro power
c) irrigation water d) none of the above

10) Jack well is used for
a) accommodating pumping unit
b) to collect water form river
c) both a and b
d) none of these

11) The water requirement in terms of delta is maximum for
a) Rice b) Tobacco
c) Potatoes d) Sugarcane

12) The efficiency of water conveyance does not depend upon
a) climatic conditions
b) geometry bf the conveyance system
c) nature of the boundary of the conveyance system
d) method of application of water.

13) Factors affecting watershed management
a) Shape and size of watershed
b) Precipitation occurring in watershed
c) Land use patterns
d) All of these

14) Post construction measure for control of sedimentation in reservoir includes
a) construction of dam in stages
b) selection of suitable site for reservoir
c) Construction of check dams
d) Removal of post flood water

Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Monday, 01-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 a) Define precipitation, what are the different forms of precipitation? **05**

b) Given below are the ordinates of a 3-h unit hydrograph for a Catchment. Calculate the ordinates of the 6-h UH. **05**

Duration (h)	0	3	6	9	12	15	18	21	24	27
Ordinates of 3-h UH (m3/s)	0	40	50	70	90	110	95	94	20	0

Q.3 a) What do you mean by runoff? How it is generated? Explain the different factors affecting runoff. **04**

b) The following data were collected during stream gauging operation in a river. Compute the discharge. **05**

Distance from left water edge (m)	0	1.5	3.0	4.5	6.0	7.5	9.0
Depth (m)	0	1.3	2.5	1.7	1.0	0.4	0.0
Velocity at 0.2 d (m/s)	0	0.6	0.9	0.7	0.6	0.4	0.0
Velocity at 0.8 d (m/s)	0	0.4	0.6	0.5	0.4	0.3	0.0

Q.4 a) Enlist different methods of stream gauging and explain the area-velocity method of stream gauging. **04**

b) A well with radius of 0.35 m, completely penetrates into confined aquifer of thickness 40 m and hydraulic conductivity 8.2 x 10-4 m/s. What is the maximum yield expected from this well, if the drawdown in the well is not to exceed 4 m. The radius of influence may be taken as 280 m **05**

Q.5 **a)** Discuss various types of aquifers with reference to ground water availability **04**

b) The isohyets due to storm in a catchment were drawn and the area of the catchment bounded by isohyets was tabulated as below. Estimate the mean precipitation due to storm. **05**

Isohyets (cm)	Area km^2
Station - 12	30
12-10	140
10-8	80
8-6	180
6-4	20

Section – II

Q.6 **a)** Write a detailed note on 'National Perspective Plan' of National Water Development Academy for Inter-basin transfer of water in India. **05**

b) Enlist the main features of a lift irrigation scheme located at the bank of river. Discuss the economic feasibility of lift irrigation. **05**

Q.7 **a)** Explain the main components of sprinkler irrigation system with sketches. **04**

b) The root zone of an irrigation soil has dry weight of 15 kN/m^3 and a field capacity of 30%. The root zone depth of crop having, permanent wilting coefficient 8% is 0.8 m. determine (1) Depth of moisture in root zone at field capacity (2) depth of moisture in root zone at permanent wilting point (3) Depth of water available. **05**

Q.8 **a)** What is meant by 'Duty' and 'Delta' of canal water? Derive the relationship between Duty and Delta. **04**

b) What are the different methods of canal water revenue Assessment? Explain any one with its advantages and disadvantages. **05**

Q.9 **a)** What are the different structures constructed in watershed to retain soil and conserve water? Discuss briefly. **03**

b) The irrigation canal has GCA of 90000 hectares out of which 90% is culturable, the intensity of irrigation for Kharif season is 35% and for Rabbi season 55%. Find the discharge required at the head of the canal. If the duty at its head is 850 hectare/cumec for Kharif and 1800 hectares/cumec for Rabbi season. **06**

Velocity at 0.8 d (m/s)	0	0.4	0.6	0.5	0.4	0.3	0.0

Q.4 a) Enlist different methods of stream gauging and explain the area-velocity method of stream gauging. **04**

b) A well with radius of 0.35 m, completely penetrates into confined aquifer of thickness 40 m and hydraulic conductivity 8.2 x 10-4 m/s. What is the maximum yield expected from this well, if the drawdown in the well is not to exceed 4 m. The radius of influence may be taken as 280 m **05**

Q.5 **a)** Discuss various types of aquifers with reference to ground water availability **04**

b) The isohyets due to storm in a catchment were drawn and the area of the catchment bounded by isohyets was tabulated as below. Estimate the mean precipitation due to storm. **05**

Isohyets (cm)	Area km^2
Station - 12	30
12-10	140
10-8	80
8-6	180
6-4	20

Section – II

Q.6 **a)** Write a detailed note on 'National Perspective Plan' of National Water Development Academy for Inter-basin transfer of water in India. **05**

b) Enlist the main features of a lift irrigation scheme located at the bank of river. Discuss the economic feasibility of lift irrigation. **05**

Q.7 **a)** Explain the main components of sprinkler irrigation system with sketches. **04**

b) The root zone of an irrigation soil has dry weight of 15 kN/m^3 and a field capacity of 30%. The root zone depth of crop having, permanent wilting coefficient 8% is 0.8 m. determine (1) Depth of moisture in root zone at field capacity (2) depth of moisture in root zone at permanent wilting point (3) Depth of water available. **05**

Q.8 **a)** What is meant by 'Duty' and 'Delta' of canal water? Derive the relationship between Duty and Delta. **04**

b) What are the different methods of canal water revenue Assessment? Explain any one with its advantages and disadvantages. **05**

Q.9 **a)** What are the different structures constructed in watershed to retain soil and conserve water? Discuss briefly. **03**

b) The irrigation canal has GCA of 90000 hectares out of which 90% is culturable, the intensity of irrigation for Kharif season is 35% and for Rabbi season 55%. Find the discharge required at the head of the canal. If the duty at its head is 850 hectare/cumec for Kharif and 1800 hectares/cumec for Rabbi season. **06**

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Monday, 01-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 MCQ /Objective type question paper **14**

1) In mean section method
a) the elemental strip is taken between two verticals
b) mean depth is taken as the average of the depths in the two verticals
c) width of the strip is distance *b* between the two verticals
d) All of these

2) Darcy's law is valid, when the flow is:
a) laminar b) turbulent
c) both (a) and (b) d) none of them

3) The line joining the static water levels in several wells, excavated through a confined aquifer, is known as the:
a) cone of depression b) piezometric surface
c) perched water table d) hypsometric curve

4) The National water policy (2002), of India, gives the top priority to:
a) drinking water b) hydro power
c) irrigation water d) none of the above

5) Jack well is used for
a) accommodating pumping unit
b) to collect water form river
c) both a and b
d) none of these

6) The water requirement in terms of delta is maximum for
a) Rice b) Tobacco
c) Potatoes d) Sugarcane

7) The efficiency of water conveyance does not depend upon
a) climatic conditions
b) geometry bf the conveyance system
c) nature of the boundary of the conveyance system
d) method of application of water.

8) Factors affecting watershed management
   a) Shape and size of watershed
   b) Precipitation occurring in watershed
   c) Land use patterns
   d) All of these

9) Post construction measure for control of sedimentation in reservoir includes
   a) construction of dam in stages
   b) selection of suitable site for reservoir
   c) Construction of check dams
   d) Removal of post flood water

10) The circulation of water from the earth's surface to the atmosphere, and vice versa, is called:
   a) hydrologic cycle
   b) runoff cycle
   c) precipitation cycle
   d) all of the above.

11) Infiltration capacity:
   a) is a constant factor
   b) changes with time
   c) changes with location
   d) changes both with time as well as location.

12) Synthetic unit hydrograph is a unit hydrograph of a basin, and is derived from:
   a) the existing unit hydrograph of smaller duration for the basin
   b) the existing unit hydrograph of a nearly basin
   c) the existing unit hydrograph of a meteorologically homogeneous basin
   d) the analysis of the rainfall runoff data of the basin

13) Time of concentration is the:
   a) time of which the rain remains concentrated on a basin
   b) time of maximum possible precipitation that may ever concentrate and fall over a given basin
   c) time taken by the rain water to flow to an existing defined drain in a basin
   d) the maximum time taken by the rain water to reach the outlet of the basin.

14) The probable maximum flood is the one:
   a) which can occur only at rare occasions, such as the maximum observed flood on record
   b) which can not occur at all under any weather conditions
   c) which can occur only under the worst weather conditions
   d) none of them

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydrology and Water Resources Engineering (BTN01504)

Day & Date: Monday, 01-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 a) Define precipitation, what are the different forms of precipitation? **05**

b) Given below are the ordinates of a 3-h unit hydrograph for a Catchment. Calculate the ordinates of the 6-h UH. **05**

Duration (h)	0	3	6	9	12	15	18	21	24	27
Ordinates of 3-h UH (m3/s)	0	40	50	70	90	110	95	94	20	0

Q.3 a) What do you mean by runoff? How it is generated? Explain the different factors affecting runoff. **04**

b) The following data were collected during stream gauging operation in a river. Compute the discharge. **05**

Distance from left water edge (m)	0	1.5	3.0	4.5	6.0	7.5	9.0
Depth (m)	0	1.3	2.5	1.7	1.0	0.4	0.0
Velocity at 0.2 d (m/s)	0	0.6	0.9	0.7	0.6	0.4	0.0
Velocity at 0.8 d (m/s)	0	0.4	0.6	0.5	0.4	0.3	0.0

Q.4 a) Enlist different methods of stream gauging and explain the area-velocity method of stream gauging. **04**

b) A well with radius of 0.35 m, completely penetrates into confined aquifer of thickness 40 m and hydraulic conductivity 8.2 x 10-4 m/s. What is the maximum yield expected from this well, if the drawdown in the well is not to exceed 4 m. The radius of influence may be taken as 280 m **05**

Q.5 **a)** Discuss various types of aquifers with reference to ground water availability **04**

b) The isohyets due to storm in a catchment were drawn and the area of the catchment bounded by isohyets was tabulated as below. Estimate the mean precipitation due to storm. **05**

Isohyets (cm)	Area km^2
Station - 12	30
12-10	140
10-8	80
8-6	180
6-4	20

Section – II

Q.6 **a)** Write a detailed note on 'National Perspective Plan' of National Water Development Academy for Inter-basin transfer of water in India. **05**

b) Enlist the main features of a lift irrigation scheme located at the bank of river. Discuss the economic feasibility of lift irrigation. **05**

Q.7 **a)** Explain the main components of sprinkler irrigation system with sketches. **04**

b) The root zone of an irrigation soil has dry weight of 15 kN/m^3 and a field capacity of 30%. The root zone depth of crop having, permanent wilting coefficient 8% is 0.8 m. determine (1) Depth of moisture in root zone at field capacity (2) depth of moisture in root zone at permanent wilting point (3) Depth of water available. **05**

Q.8 **a)** What is meant by 'Duty' and 'Delta' of canal water? Derive the relationship between Duty and Delta. **04**

b) What are the different methods of canal water revenue Assessment? Explain any one with its advantages and disadvantages. **05**

Q.9 **a)** What are the different structures constructed in watershed to retain soil and conserve water? Discuss briefly. **03**

b) The irrigation canal has GCA of 90000 hectares out of which 90% is culturable, the intensity of irrigation for Kharif season is 35% and for Rabbi season 55%. Find the discharge required at the head of the canal. If the duty at its head is 850 hectare/cumec for Kharif and 1800 hectares/cumec for Rabbi season. **06**

Design of Concrete Structures I (BTN01505)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) In Limit state method of concrete structure, the strain distribution is assumed to be **01**
a) Linear b) Non linear
c) Parabolic d) Parabolic and rectangular

2) If Xu/d is greater than the limiting value, then section is designed as _____. **01**
a) Under-reinforced section b) Over-reinforced section
c) Redesign d) Balanced section

3) For steel of grade Fe500, the value of Xumax/d is _____. **01**
a) 0.48 b) 0.46
c) 0.53 d) 0.43

4) The basic value of span to depth ratio for span up to 10 m for simply supported beam is _____. **01**
a) 20 b) 26
c) 7 d) 16

5) The neutral axis of a T-beam exists _____. **01**
a) Within the flange b) At the bottom edge of the slab
c) Below the slab d) All the above

6) The lateral ties are provided in columns _____. **01**
a) To decrease shear strength b) To resist axial force
c) To resist lateral buckling d) None of these

7) The effective width in L beam is _____. **01**
a) $(l_0/12) + b_w + 3\ D_f$ b) $(l_0/12) + 3b_w + \ D_f$
c) $(l_0/6) + b_w + 6\ D_f$ d) $(l_0/12) + b_w + 6D_f$

8) The basic value of span to depth ratio for span up 10 m for continuous beam is ____. **01**
a) 7 b) 20
c) 26 d) 16

9) The load carrying capacity of a helically reinforced column as compared to that of a tied column is about _____. **01**

a) 6 % less b) 5 % less
c) 6 % more d) 5% more

10) The minimum eccentricity of the axially loaded column is _____. **01**

a) 20 mm b) 10 mm
c) 16 mm d) 12 mm

11) The equivalent flexural moment Meq is calculated by using _____. **01**

a) Meq = Mu + Tu {(1+D/b)/1.5} b) Meq = Mu + Tu {(1+D/b)/1.7}
c) Meq = Mu + Tu {(1-D/b)/1.7} d) Meq = Mu + Tu {(1+b/D)/1.7}

12) Lifting of corners of the slab is prevented by providing ____ reinforcement. **01**

a) shear b) longitudinal
c) transverse d) torsion

13) The width of a rectangular beam is 300 mm and the effective depth is 420 mm. The concrete grade is M 20 and the grade of reinforcing steel is Fe 415. The position of neutral axis from compression side is ____. **02**

a) 205 mm b) 222 mm
c) 193 mm d) 201 mm

Design of Concrete Structures I (BTN01505)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question No. 2 and 6 is compulsory.
2) Solve any two questions from each section.
3) Use of IS456:2000 original and nonprogrammable calculator is allowed.
4) Figure to the right indicates full marks.
5) Assume additional suitable data if necessary and state it clearly.
6) Draw neat sketch of reinforcement details.

Section – I

Q.2 A beam 300 mm x 450mm effective is subjected to a factored moment of 190kNm. Determine the area of steel required. Use M20concrete and Fe415steel. Assume d'=50mm. **08**

Q.3 A T beam floor system has 100mm thick slab supported on beams. The width of beam is 300mm & effective depth is 580mm.The beam is reinforced with 8 bars of 20mm diameter. The beams are spaced at 3m center to center. The effective span of beam is 3.6m. Use M_{20} concrete and Fe_{415}steel. **10**

Q.4 Design a reinforced concrete slab for a room of clear dimension 3.2m x 4.2m. The slab is supported on walls of width 230 mm. The slab is carrying a live load of 4kN/m^2 & floor finish load 1kN/m^2. Use M20 concrete and Fe415steel. The corners of the slab are held down. **10**

Q.5 A rectangular reinforced concrete beam is required to carry a udl of 30 kN including self-weight of beam. The effective span of beam is 5m. Design the beam. Use M30concrete and Fe415 steel. **10**

Section – II

Q.6 Design a short RCC column to carry axial load of 1400 kN. It is 3.5 m long effectively held in position and direction. Use M20 concrete and Fe500 steel. **08**

Q.7 Design a rectangular beam, continuous over three column supports with effective Span 3.5m each. The beam is subjected to an imposed load of 10 kN/m and live load of 14 kN/m. UseM25 concrete and Fe500steel. **10**

Q.8 Determine reinforcement required for a beam size 300mm x 500mm subjected to factored bending moment of 130kNm, factored shear force 100kN and factored torsional moment of 20kNm.Use M20concrete and Fe415 steel. **10**

Q.9 a) Design a circular column of diameter 400 mm with helical reinforcement subjected to a load of 1500 kN. The column has unsupported length of 3m and is effectively held in position and restrained against rotation at both ends. Use M_{25} concrete and Fe_{415} steel. **07**

b) Write the condition in which IS code method is applicable for design of continues beam. **03**

Q.3 A T beam floor system has 100mm thick slab supported on beams. The width of beam is 300mm & effective depth is 580mm.The beam is reinforced with 8 bars of 20mm diameter. The beams are spaced at 3m center to center. The effective span of beam is 3.6m. Use M_{20} concrete and Fe_{415}steel. **10**

Q.4 Design a reinforced concrete slab for a room of clear dimension 3.2m x 4.2m. The slab is supported on walls of width 230 mm. The slab is carrying a live load of 4kN/m^2 & floor finish load 1kN/m^2. Use M20 concrete and Fe415steel. The corners of the slab are held down. **10**

Q.5 A rectangular reinforced concrete beam is required to carry a udl of 30 kN including self-weight of beam. The effective span of beam is 5m. Design the beam. Use M30concrete and Fe415 steel. **10**

Section – II

Q.6 Design a short RCC column to carry axial load of 1400 kN. It is 3.5 m long effectively held in position and direction. Use M20 concrete and Fe500 steel. **08**

Q.7 Design a rectangular beam, continuous over three column supports with effective Span 3.5m each. The beam is subjected to an imposed load of 10 kN/m and live load of 14 kN/m. UseM25 concrete and Fe500steel. **10**

Q.8 Determine reinforcement required for a beam size 300mm x 500mm subjected to factored bending moment of 130kNm, factored shear force 100kN and factored torsional moment of 20kNm.Use M20concrete and Fe415 steel. **10**

Q.9 a) Design a circular column of diameter 400 mm with helical reinforcement subjected to a load of 1500 kN. The column has unsupported length of 3m and is effectively held in position and restrained against rotation at both ends. Use M_{25} concrete and Fe_{415} steel. **07**

b) Write the condition in which IS code method is applicable for design of continues beam. **03**

T.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Concrete Structures I (BTN01505)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) The basic value of span to depth ratio for span up 10 m for continuous beam is ____. **01**
a) 7 b) 20
c) 26 d) 16

2) The load carrying capacity of a helically reinforced column as compared to that of a tied column is about _____. **01**
a) 6 % less b) 5 % less
c) 6 % more d) 5% more

3) The minimum eccentricity of the axially loaded column is _____. **01**
a) 20 mm b) 10 mm
c) 16 mm d) 12 mm

4) The equivalent flexural moment Meq is calculated by using _____. **01**
a) Meq = Mu + Tu {(1+D/b)/1.5} b) Meq = Mu + Tu {(1+D/b)/1.7}
c) Meq = Mu + Tu {(1-D/b)/1.7} d) Meq = Mu + Tu {(1+b/D)/1.7}

5) Lifting of corners of the slab is prevented by providing ____ reinforcement. **01**
a) shear b) longitudinal
c) transverse d) torsion

6) In Limit state method of concrete structure, the strain distribution is assumed to be **01**
a) Linear b) Non linear
c) Parabolic d) Parabolic and rectangular

7) If Xu/d is greater than the limiting value, then section is designed as _____. **01**
a) Under-reinforced section b) Over-reinforced section
c) Redesign d) Balanced section

8) For steel of grade Fe500, the value of Xumax/d is _____. **01**
a) 0.48 b) 0.46
c) 0.53 d) 0.43

9) The basic value of span to depth ratio for span up to 10 m for simply supported beam is _____. **01**

a) 20 b) 26
c) 7 d) 16

10) The neutral axis of a T-beam exists _____. **01**

a) Within the flange b) At the bottom edge of the slab
c) Below the slab d) All the above

11) The lateral ties are provided in columns _____. **01**

a) To decrease shear strength b) To resist axial force
c) To resist lateral buckling d) None of these

12) The effective width in L beam is _____. **01**

a) $(l_0/12) + b_w + 3\ D_f$ b) $(l_0/12) + 3b_w + \ D_f$
c) $(l_0/6) + b_w + 6\ D_f$ d) $(l_0/12) + b_w + 6D_f$

13) The width of a rectangular beam is 300 mm and the effective depth is 420 mm. The concrete grade is M 20 and the grade of reinforcing steel is Fe 415. The position of neutral axis from compression side is ____. **02**

a) 205 mm b) 222 mm
c) 193 mm d) 201 mm

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) What is the quantity of wastewater required if water supply is 300 lpcd?
a) 260 lpcd b) 240 lpcd
c) 235 lpcd d) 250 lpcd

2) Which of the following is correct sequence?
a) Screening > Distribution > Aeration > Landfill
b) Screening > Sedimentation > Aeration > Landfill
c) Sedimentation > Aeration > Screening > Landfill
d) Aeration > Sedimentation > Landfill > Distribution

3) Which of the following are not the sources of wastewater?
a) Plume b) MSW
c) Industrial water d) All of the above

4) In composting method by trenching, trenches of _____m length are excavated.
a) 4 – 10 b) 7 – 12
c) 10 – 20 d) Above 20

5) Controlled tipping method of disposal of refuse requires an area of _____ m^2/c/yr.
a) 0.1 – 0.3 b) 0.3 – 0.5
c) 0.5 – 1.0 d) 1.0 – 1.2

6) Which type of pollutant does Ozone belong to?
a) Primary b) Secondary
c) Natural d) None of the above

7) The Fumigation plume from the stacks is observed in _____ type of atmosphere.
a) Stable b) Unstable
c) Inversion d) Neutral

8) As per CPCB, the COD limit is _____.
a) 1000 mg/lt b) 800 mg/lt
c) 250 mg/lt d) 300 mg/lt

9) Which of the standards govern the discharge of wastewater into streams?
a) IS 10500:2016
b) Schedule IV of Environmental (Protection) Rules, 1986
c) Schedule I of IUCN
d) Schedule II of WHO

10) Which of the following is/are the sources of Air Pollution?
a) Burning of Wood for Cooking
b) Vehicular Emission
c) Chimney Smoke from Industries
d) All of the above

11) What is Garbage?
a) Domestic waste
b) Wastewater from Landfill
c) Both a) & b)
d) None of the above

12) What is Leachate?
a) rubbish or waste, especially domestic refuse
b) wastewater from Landfill
c) Both a) & b)
d) None of the above

13) What is the sequence for Solid Waste treatment & Disposal?
a) Segregation > Collection > Waste to energy > Landfill
b) Waste to energy > Landfill > Segregation > Collection
c) Landfill > Segregation > Collection > Waste to energy
d) None of the above

14) The dilution method of sewage disposal is most preferred when _____.
a) The sewage arriving at outfall point is septic
b) There are non-forward currents
c) Discharge in water body is not low
d) All of the above

Environmental Engineering - II (BTN01506)

Day & Date: Friday, 05-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section - I, and solve any two questions from the remaining. Question no. 6 is compulsory in section - II, and solve any two questions from the remaining.
2) Figures to right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 **a)** Draw complete and neat sketch of Activated Sludge treatment plant and discuss each part. **07**

b) Define the following with equations: **03**
i) Mean Cell Residence Time
ii) F/M ratio

Q.3 **a)** Design a completely mixed ASP for following data: **06**
i) Wastewater flow = 20 MLd
ii) Influent BOD = 200 mg/Lit
iii) Effluent BOD = 25 mg/Lit
iv) MLSS = 2000 mg/Lit
v) F/M = 0.2
vi) SVI = 80 ml/gm
vii) Sludge age = 10 days
Assume any missing data appropriately.

b) What is Chemical Oxygen Demand? Differentiate between Chemical Oxygen Demand and Biochemical Oxygen Demand. **03**

Q.4 **a)** Determine Ultimate BOD & BOD_3. If the BOD_5 is 200 mg/lt at 20°C. assuming the deoxygenation constant as 0.25/day. **06**

b) Explain Moving Bed Biofilm Reactor with a neat diagram. **03**

Q.5 **a)** Explain Trickling filter with the help of a diagram. **06**

b) Differentiate between Vermicomposting and Indore Method of composting. **03**

Section – II

Q.6 **a)** Discuss the oxygen sag analysis with the help of a diagram. **04**

b) A stream, saturated with DO has flow of 1.3 m^3/s, BOD of 4 mg/L and rate constant of 0.25 per day. It receives an effluent discharge of 0.35 m^3/s. Having BOD 20 mg/L, DO 5 mg/L and rate constant 0.13 per day. The average velocity of flow of the stream is 0.15 m/s. Calculate the DO deficit at point 20 km & 40 km downstream. Assume that the temperature is 20°C throughout and BOD is measured at 5 days. Take saturation DO at 20 °C as 9.17 mg/L. **06**

Q.7 **a)** Illustrate the functioning of Bangalore method of composting with the help of a diagram. **05**

b) Explain the concept of number of trip for solid waste with the help of a diagram. **04**

Q.8 **a)** With the help of a diagram, explain Electrostatic Precipitator. **05**

b) Discuss the sources of Air pollution with the help of a diagram. **04**

Q.9 Discuss the following: **09**

a) Cyclone Precipitator

b) Sludge drying Bed

Day & Date: Friday, 05-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Which type of pollutant does Ozone belong to?
a) Primary b) Secondary
c) Natural d) None of the above

2) The Fumigation plume from the stacks is observed in _____ type of atmosphere.
a) Stable b) Unstable
c) Inversion d) Neutral

3) As per CPCB, the COD limit is _____.
a) 1000 mg/lt b) 800 mg/lt
c) 250 mg/lt d) 300 mg/lt

4) Which of the standards govern the discharge of wastewater into streams?
a) IS 10500:2016
b) Schedule IV of Environmental (Protection) Rules, 1986
c) Schedule I of IUCN
d) Schedule II of WHO

5) Which of the following is/are the sources of Air Pollution?
a) Burning of Wood for Cooking
b) Vehicular Emission
c) Chimney Smoke from Industries
d) All of the above

6) What is Garbage?
a) Domestic waste b) Wastewater from Landfill
c) Both a) & b) d) None of the above

7) What is Leachate?
a) rubbish or waste, especially domestic refuse
b) wastewater from Landfill
c) Both a) & b)
d) None of the above

8) What is the sequence for Solid Waste treatment & Disposal?
a) Segregation > Collection > Waste to energy > Landfill
b) Waste to energy > Landfill > Segregation > Collection
c) Landfill > Segregation > Collection > Waste to energy
d) None of the above

9) The dilution method of sewage disposal is most preferred when _____.
a) The sewage arriving at outfall point is septic
b) There are non-forward currents
c) Discharge in water body is not low
d) All of the above

10) What is the quantity of wastewater required if water supply is 300 lpcd?
a) 260 lpcd b) 240 lpcd
c) 235 lpcd d) 250 lpcd

11) Which of the following is correct sequence?
a) Screening > Distribution > Aeration > Landfill
b) Screening > Sedimentation > Aeration > Landfill
c) Sedimentation > Aeration > Screening > Landfill
d) Aeration > Sedimentation > Landfill > Distribution

12) Which of the following are not the sources of wastewater?
a) Plume b) MSW
c) Industrial water d) All of the above

13) In composting method by trenching, trenches of _____m length are excavated.
a) 4 – 10 b) 7 – 12
c) 10 – 20 d) Above 20

14) Controlled tipping method of disposal of refuse requires an area of _____ m^2/c/yr.
a) 0.1 – 0.3 b) 0.3 – 0.5
c) 0.5 – 1.0 d) 1.0 – 1.2

SLR-GF-6

Seat No.		Set	S

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Environmental Engineering - II (BTN01506)

Day & Date: Friday, 05-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section - I, and solve any two questions from the remaining. Question no. 6 is compulsory in section - II, and solve any two questions from the remaining.
2) Figures to right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 **a)** Draw complete and neat sketch of Activated Sludge treatment plant and discuss each part. **07**

b) Define the following with equations: **03**
i) Mean Cell Residence Time
ii) F/M ratio

Q.3 **a)** Design a completely mixed ASP for following data: **06**
i) Wastewater flow = 20 MLd
ii) Influent BOD = 200 mg/Lit
iii) Effluent BOD = 25 mg/Lit
iv) MLSS = 2000 mg/Lit
v) F/M = 0.2
vi) SVI = 80 ml/gm
vii) Sludge age = 10 days
Assume any missing data appropriately.

b) What is Chemical Oxygen Demand? Differentiate between Chemical Oxygen Demand and Biochemical Oxygen Demand. **03**

Q.4 **a)** Determine Ultimate BOD & BOD_3. If the BOD_5 is 200 mg/lt at 20°C. assuming the deoxygenation constant as 0.25/day. **06**

b) Explain Moving Bed Biofilm Reactor with a neat diagram. **03**

Q.5 **a)** Explain Trickling filter with the help of a diagram. **06**

b) Differentiate between Vermicomposting and Indore Method of composting. **03**

Section – II

Q.6 **a)** Discuss the oxygen sag analysis with the help of a diagram. **04**

b) A stream, saturated with DO has flow of 1.3 m^3/s, BOD of 4 mg/L and rate constant of 0.25 per day. It receives an effluent discharge of 0.35 m^3/s. Having BOD 20 mg/L, DO 5 mg/L and rate constant 0.13 per day. The average velocity of flow of the stream is 0.15 m/s. Calculate the DO deficit at point 20 km & 40 km downstream. Assume that the temperature is 20°C throughout and BOD is measured at 5 days. Take saturation DO at 20 °C as 9.17 mg/L. **06**

Q.7 **a)** Illustrate the functioning of Bangalore method of composting with the help of a diagram. **05**

b) Explain the concept of number of trip for solid waste with the help of a diagram. **04**

Q.8 **a)** With the help of a diagram, explain Electrostatic Precipitator. **05**

b) Discuss the sources of Air pollution with the help of a diagram. **04**

Q.9 Discuss the following: **09**

a) Cyclone Precipitator

b) Sludge drying Bed

c) SBR

Risk Assessment and Vulnerability Analysis (BTN01514)

Day & Date: Sunday,07-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Production and use of harmful chemicals is under ban in _____ countries.
a) Developing countries b) Developed countries
c) Third world countries d) All of these

2) Which of the following groups of people is more vulnerable in the event of disaster?
a) Men, boys, old people b) Men, women, boys
c) Women, children, old people d) None of the above

3) The extent to which a community, structure, services or geographic area is likely to be damaged or disrupted by the impact of particular hazard is termed as _____.
a) Capacity b) Vulnerability
c) Risk d) Hazard assessment

4) Vulnerability analysis comes in which part of the Disaster Management Cycle _____.
a) Mitigation b) Preparedness
c) Response d) Recovery

5) Disaster Management includes: _____.
a) Mitigation b) Reconstruction
c) Rehabilitation d) All of the above

6) Which of the following is considered as objective of disaster management?
a) Dispose dead bodies
b) Supplying of essential commodities
c) Rehabilitation of disaster victims
d) All of these

7) The role of which agency is important in disaster prevention.
a) Media b) Police
c) Government officials d) Public

8) The major effects of floods are _____.
a) Physical damage b) Loss of biodiversity
c) Scarcity of water supply d) All of the above

9) Disaster management is aimed at _____.
a) Resettling people in the closest unaffected urban area
b) Collection of valuable data for future management objectives
c) Strengthening sewage and drinking water treatment facilities to resist the impact of a future disaster
d) Restoring a communities services, facilities and residences to pre-disaster levels

10) The most essential item that the disaster-stricken populations must be provided with is _____.
a) Shelter material
b) Drinking water
c) Fuel
d) All of the above

11) Urbanization usually results in an increase in flood frequency because _____.
a) Less water is able to runoff in streams
b) Less water is able to infiltrate into the ground, so instead is discharged rapidly into streams
c) More water is used by humans and then discharged to streams
d) Rainfall is greater in urban areas than in rural areas

12) By what measures can we significantly reduce the impact of disasters on our people?
a) Better planning
b) Preparedness awareness
c) Mitigation measures
d) All the above

13) Engineering disaster is simply referred to those disasters when it is caused by an engineering failure like _____.
a) Design flaws or materials failures
b) Insufficient knowledge or underestimations
c) Carelessness or negligence
d) All the above

14) Disaster Management Team should include?
a) Awareness generation team
b) First aid team
c) Search and Rescue team
d) All of the above

Risk Assessment and Vulnerability Analysis (BTN01514)

Day & Date: Sunday,07-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two Questions from Section – I.
2) Solve any two Questions from Section – II.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

Section – I

Q.2 **a)** What are the different elements of Risk? Explain in detail. **07**
b) Define: **07**
i) Risk
ii) Vulnerability
iii) Hazards
iv) Disasters

Q.3 **a)** Explain various problems involved in the risk assessment process. **07**
b) Explain participatory risk assessment methods. **07**

Q.4 **a)** Explain different social and economic factors of vulnerability. **07**
b) Explain vulnerability in the city and different risks in urban areas. **07**

Section – II

Q.5 **a)** Explain social infrastructure required for vulnerability reduction. **07**
b) Explain hazard resistant design and construction. **07**

Q.6 **a)** Explain the role of education and training in Health management of disasters. **07**
b) Explain the role of information and communication technology in health response. **07**

Q.7 **a)** Explain uses of remote sensing techniques in disaster preparedness. **07**
b) Explain uses of aerial photography and disaster mapping techniques in disaster preparedness. **07**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Pradhan Mantri Gram Sadak Yojana in under the authority of which ministry?
a) National Highway Authority of India
b) Ministry of Urban Development
c) Ministry of Rural Development
d) Indian Road Congress

2) Pradhan Mantri Gram Sadak Yojna (PMGSY), launched in the year 2000, aims to provide rural connectivity with _____.
a) Fair-weather roads b) All-weather roads
c) State Highway d) Major District Road

3) The raising of outer edge of the pavement with respect to the inner edge is called, _____.
a) Kerb b) Superelevation
c) Camber d) Crown

4) Select the correct order of road alignment surveys conducted in the field _____.
a) Final location and Detailed survey, Determination of final center line, Preliminary and Reconnaissance survey
b) Preliminary survey, Final location and Detailed survey, Determination of final center line, and Reconnaissance survey
c) Reconnaissance survey, Preliminary survey, Determination of final center line and Final location and Detailed survey
d) Determination of final center line, Final location and Detailed survey, Preliminary and Reconnaissance survey

5) Transition Curve is introduced in _____.
a) Horizontal curve
b) Between horizontal curve and circular curve
c) circular curve
d) Vertical curve

6) The most suitable soil material for highway embankments is _____.
a) granular soil b) organic soil
c) silt d) clay

7) The investigation of embankment should be carried out for _____.
a) twice the height of embankment
b) thrice the height of embankment
c) exact height of embankment
d) half height of embankment

8) If the height of embankment increases _____.
a) Slope stability increases b) Slope stability remains constant
c) Slope has to reduce d) Slope needs to be flattered

9) What is the most common natural problem found in embankment?
a) settlement b) stability of foundation
c) soil erosion d) stability of slope

10) The removal and diversion of surface water from the roadway is called _____.
a) surface drainage b) subsurface drainage
c) camber d) cross slope

11) The process of removing and controlling excess surface and sub soil water within the roadway is _____.
a) Highway engineering b) Highway maintenance
c) Highway drainage d) All of the above

12) The standard axle load considered for flexible pavement design is _____.
a) 50kN b) 60kN
c) 70kN d) 80kN

13) All rural roads should be designed for a minimum sub-grade CBR of _____.
a) 2% b) 3%
c) 4% d) 5%

14) The laden weight of commercial vehicles considered in the pavement design is _____.
a) more than 1 tone b) more than 2 tone
c) more than 3 tone d) more than 4 tone

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Planning and Design of Rural Roads (BTN01515)

Day & Date: Sunday, 07-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** Explain the necessity and object of highway planning. **05**
b) Explain the governing factors for route selection of highway alignment. **05**

Q.3 **a)** Derive an equation for finding the superelevation required if the design coefficient of lateral friction is "f" with neat sketch. **04**
b) The radius of a horizontal circular curve is 100 m. The design speed is 50kmph and the design coefficient of lateral friction is 0.15. **05**
i) Calculate the superelevation required if full lateral friction is assumed to develop.
ii) Calculate the coefficient of friction needed if no superelevation is provided.

Q.4 **a)** Calculate the safe stopping distance on a level road stretch for design speed of 50kmph for **05**
i) two-way traffic on a two-lane road
ii) two-way traffic on a single lane road
Assume coefficient of friction as 0.37 and reaction time of driver as 2.5sec.
b) Calculate the extra widening required for a pavement of width 7 m on a horizontal curve of radius 200 m if the longest wheel base of vehicle expected on the road is 6.5 m Design speed is 65 kmph. **04**

Q.5 **a)** Explain in detail concept of road network planning. **04**
b) Explain the principle of soil-cement stabilization process in detail. **05**

Section – II

Q.6 **a)** Explain the construction process of soil-cement base course construction with its specification. **05**
b) Explain factors affecting the properties of soil-lime stabilization. **05**

Q.7 **a)** Discuss the importance of highway drainage. **04**
b) What are the requirements of a good highway drainage system? **05**

Q.8	**a)**	What are the objects of highway maintenance?	**04**
	b)	Classify different types of highway maintenance works and mention the function of each.	**05**
Q.9	**a)**	Briefly outline the advantages and limitations of flexible pavements.	**05**
	b)	Write a brief note on i) Roller compacted concrete ii) Dry lean concrete (DLC)	**04**

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Planning and Design of Rural Roads (BTN01515)

Day & Date: Sunday, 07-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) If the height of embankment increases _____.
a) Slope stability increases b) Slope stability remains constant
c) Slope has to reduce d) Slope needs to be flattered

2) What is the most common natural problem found in embankment?
a) settlement b) stability of foundation
c) soil erosion d) stability of slope

3) The removal and diversion of surface water from the roadway is called _____.
a) surface drainage b) subsurface drainage
c) camber d) cross slope

4) The process of removing and controlling excess surface and sub soil water within the roadway is _____.
a) Highway engineering b) Highway maintenance
c) Highway drainage d) All of the above

5) The standard axle load considered for flexible pavement design is _____.
a) 50kN b) 60kN
c) 70kN d) 80kN

6) All rural roads should be designed for a minimum sub-grade CBR of _____.
a) 2% b) 3%
c) 4% d) 5%

7) The laden weight of commercial vehicles considered in the pavement design is _____.
a) more than 1 tone b) more than 2 tone
c) more than 3 tone d) more than 4 tone

8) Pradhan Mantri Gram Sadak Yojana in under the authority of which ministry?
a) National Highway Authority of India
b) Ministry of Urban Development
c) Ministry of Rural Development
d) Indian Road Congress

9) Pradhan Mantri Gram Sadak Yojna (PMGSY), launched in the year 2000, aims to provide rural connectivity with _____.

a) Fair-weather roads
b) All-weather roads
c) State Highway
d) Major District Road

10) The raising of outer edge of the pavement with respect to the inner edge is called, _____.

a) Kerb
b) Superelevation
c) Camber
d) Crown

11) Select the correct order of road alignment surveys conducted in the field _____.

a) Final location and Detailed survey, Determination of final center line, Preliminary and Reconnaissance survey
b) Preliminary survey, Final location and Detailed survey, Determination of final center line, and Reconnaissance survey
c) Reconnaissance survey, Preliminary survey, Determination of final center line and Final location and Detailed survey
d) Determination of final center line, Final location and Detailed survey, Preliminary and Reconnaissance survey

12) Transition Curve is introduced in _____.

a) Horizontal curve
b) Between horizontal curve and circular curve
c) circular curve
d) Vertical curve

13) The most suitable soil material for highway embankments is _____.

a) granular soil
b) organic soil
c) silt
d) clay

14) The investigation of embankment should be carried out for _____.

a) twice the height of embankment
b) thrice the height of embankment
c) exact height of embankment
d) half height of embankment

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Where is India's first green building located?
a) ITC Green Centre, Gurgaon
b) Suzlon earth, Pune
c) Wipro Technologies, Gurgaon
d) CII - Sohrabji Green Business Centre, Hyderabad

2) _____ is one such compression structure which ensures the conservation of natural resources.
a) Funicular shells b) Composite panels
c) Composite beam d) None of the above

3) _____ is the embodied energy to be calculated for individual building materials.
a) Cradle to gate b) Cradle to site
c) Cradle to grave d) None of the Above

4) _____ is the ancient time technology which saves material and labour cost.
a) Filler materials b) Composite panels
c) Composite beam d) None of the above

5) Factors affecting the performance of green material/product is/are _____.
a) Surrounding buildings b) Population
c) Vehicles d) All of the above

6) Resource efficiency can be achieved by utilizing materials to _____.
a) Recycled content b) Reusable content
c) Reusable packaging d) None of the above

7) The energy necessary to demolish and dispose off a building over its lifetime is _____.
a) Initial embodied energy b) Recurring embodied energy
c) Demolition energy d) None of the above

8) The cradle to grave embodied energy life cycle does include _____ required to utilize the final product.

a) Initial embodied energy
b) Operational energy
c) Demolition energy
d) All of the above

9) Flyash- cement bricks are composed of _____ cement.

a) 50% - 70%
b) 40% - 60%
c) 60% - 80%
d) 70% - 90%

10) Glass is _____ recyclable.

a) 100%
b) 75%
c) 50%
d) 25%

11) Internal waterproofing lining in disposable coffee cup is made by _____.

a) Polyester
b) PVC
c) Polyethylene
d) None of the above

12) Which of the following is not the factor while selecting the car?

a) CO_2 rating
b) Fuel type
c) Model
d) None of the above

13) Higher the cost of car, lesser the emission of _____.

a) CO
b) CO_2
c) SO_x
d) NO_x

14) The cement concrete, from which entrained air and excess water are removed after placing it in position, is called _____.

a) Vacuum concrete
b) Light Weight Concrete
c) Prestressed concrete
d) Sawdust concrete

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The cradle to grave embodied energy life cycle does include _____ required to utilize the final product.
a) Initial embodied energy b) Operational energy
c) Demolition energy d) All of the above

2) Flyash- cement bricks are composed of _____ cement.
a) 50% - 70% b) 40% - 60%
c) 60% - 80% d) 70% - 90%

3) Glass is _____ recyclable.
a) 100% b) 75%
c) 50% d) 25%

4) Internal waterproofing lining in disposable coffee cup is made by _____.
a) Polyester b) PVC
c) Polyethylene d) None of the above

5) Which of the following is not the factor while selecting the car?
a) CO_2 rating b) Fuel type
c) Model d) None of the above

6) Higher the cost of car, lesser the emission of _____.
a) CO b) CO_2
c) SO_x d) NO_x

7) The cement concrete, from which entrained air and excess water are removed after placing it in position, is called _____.
a) Vacuum concrete b) Light Weight Concrete
c) Prestressed concrete d) Sawdust concrete

8) Where is India's first green building located?
a) ITC Green Centre, Gurgaon
b) Suzlon earth, Pune
c) Wipro Technologies, Gurgaon
d) CII - Sohrabji Green Business Centre, Hyderabad

9) _____ is one such compression structure which ensures the conservation of natural resources.

a) Funicular shells b) Composite panels
c) Composite beam d) None of the above

10) _____ is the embodied energy to be calculated for individual building materials.

a) Cradle to gate b) Cradle to site
c) Cradle to grave d) None of the Above

11) _____ is the ancient time technology which saves material and labour cost.

a) Filler materials b) Composite panels
c) Composite beam d) None of the above

12) Factors affecting the performance of green material/product is/are _____.

a) Surrounding buildings b) Population
c) Vehicles d) All of the above

13) Resource efficiency can be achieved by utilizing materials to _____.

a) Recycled content b) Reusable content
c) Reusable packaging d) None of the above

14) The energy necessary to demolish and dispose off a building over its lifetime is _____.

a) Initial embodied energy b) Recurring embodied energy
c) Demolition energy d) None of the above

Set Q

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Construction Materials: Sustainability and Usability (BTN01516)

Day & Date: Sunday, 07-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.
5) Use of non-programmable calculator is allowed.

Section – I

Q.2	**a)**	Explain the properties & advantages of filler materials	**05**
	b)	Explain properties of eco-friendly materials in detail.	**05**
Q.3	**a)**	Explain numerous activities that affects the carbon footprints of individuals.	**05**
	b)	Discuss process of selection of bamboo in the construction of green building.	**04**
Q.4	**a)**	How Resource efficiency can be accomplished by utilizing green material?	**05**
	b)	Explain compressed Stabilized Earth Blocks in detail.	**04**
Q.5	**Write Short notes on:**		
	a)	Disposable coffee cups	**05**
	b)	Embodied energy	**04**

Section – II

Q.6	**a)**	Explain various methodologies in material substitution for eco-efficient design residential building.	**05**
	b)	Explain various Plastic recycling process in detail.	**05**
Q.7	**a)**	Differentiate Recycle and Reuse of solid waste.	**05**
	b)	Explain Composite panel and its advantages in green building.	**04**
Q.8	**a)**	Differentiate between thermoplastics and thermoset plastics with suitable examples.	**05**
	b)	Provide numerous techniques for designing green concrete materials for 1BHK house having build-up area of 16 $m^{2.}$	**04**
Q.9	**a)**	Explain factors effecting material selection strategy for choosing a Car.	**05**
	b)	Define recycling of waste. Provide advantages of recycling of waste with a practical example.	**04**

Day & Date: Sunday, 07-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Internal waterproofing lining in disposable coffee cup is made by _____.
a) Polyester b) PVC
c) Polyethylene d) None of the above

2) Which of the following is not the factor while selecting the car?
a) CO_2 rating b) Fuel type
c) Model d) None of the above

3) Higher the cost of car, lesser the emission of _____.
a) CO b) CO_2
c) SO_x d) NO_x

4) The cement concrete, from which entrained air and excess water are removed after placing it in position, is called _____.
a) Vacuum concrete b) Light Weight Concrete
c) Prestressed concrete d) Sawdust concrete

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Which one of the following is a challenge to innovation in the current business environment?
a) Resistance to change b) Able Workforce
c) Confident leadership d) None of the above

2) The first step of innovation management is _____.
a) Selection of Ideas b) Collection of Ideas
c) Experimentation with ideas d) Developing business model

3) A strategy to develop capabilities in the company value chain is called _____.
a) Value resource b) Substitute resource
c) Strategic resource d) Resource modelling

4) Future markets and innovation should be looked upon with a perspective of _____.
a) Needs b) Available resources
c) Multi dimensionality d) All the above

5) What is meant by scaling up in entrepreneurial process?
a) The business is growing
b) The business can hold its weight
c) The business can be franchised
d) The business can be scaled back

6) Which of the following is auto generated intellectual property rights?
a) Industrial design b) Patent
c) Copyright d) All IPRs are auto generated

7) Intellectual capital includes: _____.
a) Knowledge and skills of employees
b) The relationship firm has developed with both customer and suppliers
c) Software, business methods, manuals, reports, publications and databases
d) All of the above

8) What are the pillars of Self- Reliant India movement?
a) Infra-structure b) Economy
c) Demography d) All the above

9) What is a business model?
a) It is a planned activity, designed for profit in marketplace
b) It is a planned activity, designed for established business
c) It is a planned activity, for generating new jobs
d) None of the above

10) Which among the following are the qualities required in an entrepreneur?
a) Creativity and Thinking Ability b) Aptitude for Human Relations
c) Communication Skills d) All of the above

11) "The process whereby new and improved products, processes, materials, and services are developed and transferred to a new plant or market where they are appropriate" is the definition of given by Robenstein.
a) Marketing b) Financial Management
c) Innovation d) Entrepreneurship

12) What is the central purpose for any economic exchange?
a) Creation of Value b) Flow of knowledge
c) To allocate resources d) None of the above

13) What are the elements in the four-action framework of Blue Ocean Strategy?
a) Eliminate, Reduce, Reuse and Recycle
b) Eliminate, Reduce, Raise and Create
c) Eliminate, Recreate, Recycle and Reuse
d) Reduce, Reuse, Recycle and Recreate

14) How can an organization reconstruct market boundaries according to the Blue Ocean Strategy?
a) Looking across alternative industries
b) Looking across strategic groups within industries
c) Looking across the chain of buyers
d) All of the above

b) When he expects a positive outcome
c) When he thinks he does not have control over the situation
d) When he has a good social support network

7) Aches, shallow breathing and sweating, frequent colds are _____.
a) Physical symptoms of stress
b) Behavioral symptoms of stress
c) Emotional symptoms of stress
d) Cognitive symptoms of stress

8) What thoughts come to the mind when you're under negative stress?
a) You think that you can cope with the situation
b) You think that you cannot cope with the situation
c) You think that everything will get fine eventually
d) You think that you will get help immediately

9) Which of the following are the physical symptoms of anxiety?
a) Racing heart
b) Sweaty palms
c) Flushed cheeks
d) All of the above

10) Which of the following is true about 'deep breathing relaxation technique'?
a) It can be self-taught
b) It releases tension from the body and clears your mind
c) You have to do this under-water
d) Only 'a' & 'b' are true

Stress and Coping (BTN01511)

Day & Date: Tuesday 09-01-2024 Max. Marks: 50
Time: 10:00 AM To 12:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed & mention it clearly.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose amongst the alternatives. **10**

1) Which of the following statements is true?
a) The stress response is nonspecific
b) Different kinds of stressors produce exactly the same response
c) Different people respond to the same stressor differently
d) All of the above

2) When is a person more likely to have difficulty in coping with a stressful situation?
a) When he is over the age of fifty
b) When he expects a positive outcome
c) When he thinks he does not have control over the situation
d) When he has a good social support network

3) Aches, shallow breathing and sweating, frequent colds are _____.
a) Physical symptoms of stress
b) Behavioral symptoms of stress
c) Emotional symptoms of stress
d) Cognitive symptoms of stress

4) What thoughts come to the mind when you're under negative stress?
a) You think that you can cope with the situation
b) You think that you cannot cope with the situation
c) You think that everything will get fine eventually
d) You think that you will get help immediately

5) Which of the following are the physical symptoms of anxiety?
a) Racing heart b) Sweaty palms
c) Flushed cheeks d) All of the above

6) Which of the following is true about 'deep breathing relaxation technique'?
a) It can be self-taught
b) It releases tension from the body and clears your mind
c) You have to do this under-water
d) Only 'a' & 'b' are true

7) Which of the following are stress busters?
a) Trying to find something funny in a difficult situation
b) Developing a support network
c) Taking a mindful walk
d) All of the above

8) When danger or stress is perceived/experienced, this response occurs in the body _____.
a) Exhaustion
b) Adaption
c) Fight-or-flight
d) Resistance

9) Which factors improve coping?
a) Social support
b) Optimism
c) Perceived control
d) All of the above

10) Which of the following statements is true?
a) Moodiness is a cognitive symptom of stress
b) Moodiness is an emotional symptom of stress
c) Poor judgment is an emotional symptom of stress
d) Agitation is cognitive symptom of stress

MCQ/Objective Type Questions

Duration: 20 Minutes Marks: 10

Q.1 Choose the correct alternatives from the options. 10

1) Many complex social problems exist in the _____.
a) Industry/ Business b) Society
c) Home d) None of the above

2) Ethics is the word that refers to _____.
a) Human tendency b) Morals, values and beliefs
c) Only values d) Psychology

3) Work ethics is defined as a _____.
a) Motivation
b) Set of attitudes concerned with the value of work
c) Attitude
d) Values

4) What is Integrity?
a) Unity of thought b) Word and deed
c) Open mindedness d) All of these

5) Ethical issues that can affect an engineer's professional and personal life are termed as _____.
a) Macro ethics b) Micro ethics
c) Morals d) Rights

6) One of the basic desires of every human being is to be always _____.
a) Happy b) Sad
c) Laugh d) Earn Money

7) Value and skills should go hand in hand _____.
a) True b) False
c) Cannot tell d) Wrong question

8) _____ are the basic Human aspirations.
a) Money b) Relationship without money
c) Physical facility d) Continuous happiness

9) Human values are essential for _____.

a) living in harmony with self, each other and nature
b) making life easier and happy
c) living with family and friends
d) making money to fulfill desires

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. 14

1) For tube sampler External Diameter 51 mm and Internal Diameter 48 mm what is area ratio?
a) 12.9% b) 15.3%
c) 10.6% d) 14.5%

2) If RQD is 26% then quality of the rock is _____
a) Poor b) Fair
c) Good d) Excellent

3) The maximum pressure which a soil can carry without shear failure, is called _____.
a) Safe bearing capacity b) Net Safe bearing capacity
c) Ultimate bearing capacity d) Net Ultimate bearing capacity

4) Terzaghi's bearing capacity factors Nc, Nq and Nr are functions of _____
a) Cohesion only
b) Angle of internal friction only
c) Both Cohesion and angle of internal friction
d) None

5) On wetting, cohesive soils _____
a) Loose permeability b) Gain shear strength
c) Loose elasticity d) Decrease their shear strength

6) The plate-load test gives _____
a) ultimate bearing capacity b) Safe bearing capacity
c) Net ultimate bearing capacity d) All

7) Square spread footing is preferred rather than other shape because _____
a) It is simple in construction b) It looks good
c) Its bearing capacity is more d) None

8) Common material used for sheet pile is _____
a) Steel b) Concrete
c) Timber d) none

9) Which footing consists of two spread footing connected with beam?
a) Spread footing
b) Mat footing
c) Continuous footing
d) Cantilever footing

10) Factor of safety used to calculate load carrying capacity by dynamic formulae is _____
a) 6
b) 2.5
c) 3
d) 2

11) Efficiency of a pile group consisting of three piles by using Felds rule is _____
a) 93.75
b) 81.25
c) 87.5
d) None

12) The degree of disturbance for a soil sample is usually expressed by _____
a) Void ratio
b) Area ratio
c) Recovery ratio
d) Consolidation ratio

13) In a cantilever-sheet pile wall, the rotation is about _____
a) The bottom of the wall
b) The dredge level
c) Above the bottom but below the dredge level
d) The top of the wall

14) For a base failure of a slope, depth factor _____
a) Df = 1
b) Df < 1
c) Df > 1
d) None

Seat No.	

Set **P**

T. Y. (B. Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Foundation Engineering (BTN01601)

Day & Date: Monday, 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory. Solve any two from remaining questions from section-I
2) Q.6 is compulsory. Solve any two from remaining questions from section-II
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Write in detail about 'Wash Boring' with neat sketch. **04**

b) Determine the ultimate bearing capacity of square footing of 1.5 m size, at a depth of 1.5 m, in a pure clay with an unconfined strength of $150\ \mathrm{KN/m^2}$. $\phi = 0°$ and $\gamma = 17\ \mathrm{KN/m^3}$, Take $\mathrm{Nc} = 5.7, \mathrm{Nq} = 1.0$, and $\mathrm{N}\gamma = 0$ **06**

Q.3 **a)** Discuss the effect of water table on bearing capacity of foundation. **03**

b) Immediate settlement of a square footing of dimensions 1.2 m × 1.2 m carrying a load intensity of 220 KN/m^2 is 30 mm. What would be the immediate settlement of a footing measuring 3 m × 3 m carrying a load intensity of 160 KN/m^2. The subsoil conditions are identical in both the footing. **06**

Q.4 **a)** Explain the procedure of Plate load test with neat sketches. **03**

b) A sampler has inner diameter of 68 mm with its thickness 4 mm and cutting edge of sampler has outer diameter of 81 mm with its thickness 8 mm. Determine area ratio for the sampler, inside clearance and outside clearance. Draw sketch of the sampler. **06**

Q.5 **a)** Explain sand drain technique of ground improvement. **03**

b) Determine the allowable gross load and net allowable load of square footing of 2m side and with a depth of foundation 1.0 m. use Terzaghi's bearing capacity theory and assume local Shear failure, take factor of safety 3.0, the soil at the site has $\gamma = 18\ \mathrm{KN/m^3}, \mathrm{C} = 15\ \mathrm{KN/m^2}$ and $(\phi) = 25°$, Take $\mathrm{Nc} = 14.8, \mathrm{Nq} = 5.6$, and $\mathrm{N}\gamma = 3.2$ **06**

Section – II

Q.6 **a)** Write a short note on raft foundation. **04**

b) Design a combined trapezoidal footing by using following data. **06**
External column load is 800 KN Internal column load is 600 KN centre to centre spacing between columns is 3.8 m. Size of each column = 400mm × 400mm. Both column flush with footing and SBC of soil 350 KN/m^2

Q.7 **a)** Write a short note on Construction of under reamed pile. **03**

b) A group of 9 piles arranged in square pattern with diameter and length of each pile as 25cm and 10m respectively is used as foundation in soft clay. Unconfined compressive strength of clay is 120 KN/m^2 and pile spacing as 100cm centre to centre find capacity of pile group. Assume bearing capacity factor Nc=9, adhesive factor as 0.75 and factor of safety 2.5. **06**

Q.8 **a)** Sketch the pressure distribution diagram for following cases. **03**

i) Cantilever sheet pile in cohesive soil
ii) Cantilever sheet pile in cohesionless soil
iii) Anchored sheet pile in partially cohesive soil (free earth).

b) Determine depth of embedment for an anchored sheet pile using following data: **06**

Height of wall – 7 m Soil above and below dredge line granular $\gamma = 20\ \mathrm{kN/m^3}$ $c = 0$ and $\phi = 33°$ Anchor rods are placed at a depth of 1 m below ground level.

Q.9 **a)** Write a note on 'Taylor's Stability Number'. **03**

b) A 40° cutting slope is excavated to a depth of 8 m in a deep layer of saturated clay of unit weight 19 KN/m^3, the relevant shear strength parameters are cu = 65 kPa. Determine the factor of safety for the trial failure surface specified in **06**

T. Y. (B. Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Foundation Engineering (BTN01601)

Day & Date: Monday, 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q.2 is compulsory. Solve any two from remaining questions from section-I
2) Q.6 is compulsory. Solve any two from remaining questions from section-II
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Write in detail about 'Wash Boring' with neat sketch. **04**

b) Determine the ultimate bearing capacity of square footing of 1.5 m size, at a depth of 1.5 m, in a pure clay with an unconfined strength of $150\ \mathrm{KN/m^2}$. $\phi = 0°$ and $\gamma = 17\ \mathrm{KN/m^3}$, Take $\mathrm{Nc} = 5.7, \mathrm{Nq} = 1.0$, and $\mathrm{N\gamma} = 0$ **06**

Q.3 **a)** Discuss the effect of water table on bearing capacity of foundation. **03**

b) Immediate settlement of a square footing of dimensions 1.2 m × 1.2 m carrying a load intensity of 220 KN/m^2 is 30 mm. What would be the immediate settlement of a footing measuring 3 m × 3 m carrying a load intensity of 160 KN/m^2. The subsoil conditions are identical in both the footing. **06**

Q.4 **a)** Explain the procedure of Plate load test with neat sketches. **03**

b) A sampler has inner diameter of 68 mm with its thickness 4 mm and cutting edge of sampler has outer diameter of 81 mm with its thickness 8 mm. Determine area ratio for the sampler, inside clearance and outside clearance. Draw sketch of the sampler. **06**

Q.5 **a)** Explain sand drain technique of ground improvement. **03**

b) Determine the allowable gross load and net allowable load of square footing of 2m side and with a depth of foundation 1.0 m. use Terzaghi's bearing capacity theory and assume local Shear failure, take factor of safety 3.0, the soil at the site has $\gamma = 18\ \mathrm{KN/m^3}, \mathrm{C} = 15\ \mathrm{KN/m^2}$ and $(\phi) = 25°$, Take $\mathrm{Nc} = 14.8, \mathrm{Nq} = 5.6$, and $\mathrm{N\gamma} = 3.2$ **06**

Section – II

Q.6 **a)** Write a short note on raft foundation. **04**

b) Design a combined trapezoidal footing by using following data. **06**
External column load is 800 KN Internal column load is 600 KN centre to centre spacing between columns is 3.8 m. Size of each column = 400mm × 400mm. Both column flush with footing and SBC of soil 350 KN/m^2

Q.7 **a)** Write a short note on Construction of under reamed pile. **03**

b) A group of 9 piles arranged in square pattern with diameter and length of each pile as 25cm and 10m respectively is used as foundation in soft clay. Unconfined compressive strength of clay is 120 KN/m^2 and pile spacing as 100cm centre to centre find capacity of pile group. Assume bearing capacity factor Nc=9, adhesive factor as 0.75 and factor of safety 2.5. **06**

Q.8 **a)** Sketch the pressure distribution diagram for following cases. **03**

i) Cantilever sheet pile in cohesive soil
ii) Cantilever sheet pile in cohesionless soil
iii) Anchored sheet pile in partially cohesive soil (free earth).

b) Determine depth of embedment for an anchored sheet pile using following data: **06**

Height of wall – 7 m Soil above and below dredge line granular $\gamma = 20\ \mathrm{kN/m^3}$ $c = 0$ and $\phi = 33°$ Anchor rods are placed at a depth of 1 m below ground level.

Q.9 **a)** Write a note on 'Taylor's Stability Number'. **03**

b) A 40° cutting slope is excavated to a depth of 8 m in a deep layer of saturated clay of unit weight 19 KN/m^3, the relevant shear strength parameters are cu = 65 kPa. Determine the factor of safety for the trial failure surface specified in **06**

T. Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Foundation Engineering (BTN01601)

Day & Date: Monday, 18-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. 14

1) Efficiency of a pile group consisting of three piles by using Felds rule is _____
a) 93.75 b) 81.25
c) 87.5 d) None

2) The degree of disturbance for a soil sample is usually expressed by _____
a) Void ratio b) Area ratio
c) Recovery ratio d) Consolidation ratio

3) In a cantilever-sheet pile wall, the rotation is about _____
a) The bottom of the wall
b) The dredge level
c) Above the bottom but below the dredge level
d) The top of the wall

4) For a base failure of a slope, depth factor _____
a) Df = 1 b) Df < 1
c) Df > 1 d) None

5) For tube sampler External Diameter 51 mm and Internal Diameter 48 mm what is area ratio?
a) 12.9% b) 15.3%
c) 10.6% d) 14.5%

6) If RQD is 26% then quality of the rock is _____
a) Poor b) Fair
c) Good d) Excellent

7) The maximum pressure which a soil can carry without shear failure, is called _____.
a) Safe bearing capacity b) Net Safe bearing capacity
c) Ultimate bearing capacity d) Net Ultimate bearing capacity

8) Terzaghi's bearing capacity factors Nc, Nq and Nr are functions of _____
a) Cohesion only
b) Angle of internal friction only
c) Both Cohesion and angle of internal friction
d) None

9) On wetting, cohesive soils _____
a) Loose permeability b) Gain shear strength
c) Loose elasticity d) Decrease their shear strength

10) The plate-load test gives _____
a) ultimate bearing capacity b) Safe bearing capacity
c) Net ultimate bearing capacity d) All

11) Square spread footing is preferred rather than other shape because _____
a) It is simple in construction b) It looks good
c) Its bearing capacity is more d) None

12) Common material used for sheet pile is _____
a) Steel b) Concrete
c) Timber d) none

13) Which footing consists of two spread footing connected with beam?
a) Spread footing b) Mat footing
c) Continuous footing d) Cantilever footing

14) Factor of safety used to calculate load carrying capacity by dynamic formulae is _____
a) 6 b) 2.5
c) 3 d) 2

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) For a flood control reservoir, the effective storage is equal to _____.
a) useful storage + valley storage
b) useful storage + surcharge storage - valley storage
c) useful storage + surcharge storage + valley storage
d) useful storage - valley storage

2) Pick up the incorrect statement:
a) surface run off equals run off minus base flow
b) the water that seeps into the ground reservoir is called infiltration
c) the annual yield of a drainage basin in depth, when multiplied by the basin area, gives us the yearly available water volume
d) the coarser sand and silt get deposited near the face of the dam, and the finer one away from it
e) none of the above

3) The vertical downward earthquake acceleration, $\alpha_y = 0.1$ g, acting on a gravity dam, will _____.
a) increase the resisting weight of the dam by 10%
b) decrease the resisting weight of the dam by 10%
c) increase the uplift by 10%
d) none of the above

4) Arch dams are suitable in locations where the canyon slope factor (length of arch at top/height of dam) is: _____.
a) less than 8 b) greater than 16
c) between 8 and 16 d) none of these

5) The most preferred type of an earthen dam section is the one, in which the: _____.
a) entire embankment is made of one type of soil
b) inner embankment is made of highly porous soil, surrounded by the outer shell of highly impervious soil, both separated by transition filter material of mediocre permeability
c) inner embankment is made of highly impervious soil surrounded by the outer shell of highly pervious soil, both separated by transition filter material of mediocre permeability
d) none of the above

6) The only provision among the following, which can help control the seepage through the body of an earthen dam and, thus, to keep the phreatic line well within the dam width, is: _____.
a) upstream impervious cut off
b) drain trench along the downstream toe
c) relief wells
d) chimney drain

7) The critical exit gradient suggested in Khosla's theory of design of weirs and barrages, is _____.
a) less for more porous soils
b) more for more porous soils
c) equal for all kinds of soils
d) none of them

8) Point out the correct meaning of 'piping', as applied to the design of barrages: _____.
a) It refers to a network of pipes laid below the hydraulic structure to remove the seeping water
b) It refers to the process of undermining of foundation and creation of hollows therein
c) It refers to the uplift force caused by seeping water on the floor of the hydraulic structure
d) None of the above

9) When a channel is protected on the bed and sides with some protective material, and there is no possibility of change in its cross-section and longitudinal slope, then the channel is said to be in : _____.
a) initial regime
b) final regime
c) permanent regime
d) true regime

10) An irrigational canal, freely flowing under a drainage channel, is specifically called a: _____
a) canal junction
b) canal crossing
c) canal siphon
d) super passage

11) Which one of the followings does not contribute to water logging?
a) inadequate drainage
b) seepage from unlined canals
c) frequent flooding
d) excessive tapping of ground water

12) In a meandering river, the ratio of 'actual channel length' to 'direct axial length', is called: _____.
a) Tortuosity
b) Inverse of Tortuosity
c) Cut off ratio
d) None of these

13) A hydropower plant, developed at the site of a drop in an irrigation canal, is of the type _____.

a) runoff river plant
b) storage plant
c) pumped storage plant
d) tidal plant

14) Pump storage schemes are used to improve _____.

a) The power factor
b) The load factor
c) The plant capacity factor as well as the load factor of the power system
d) The diversity factor

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydraulic Structures & Water Power Engineering (BTN01602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

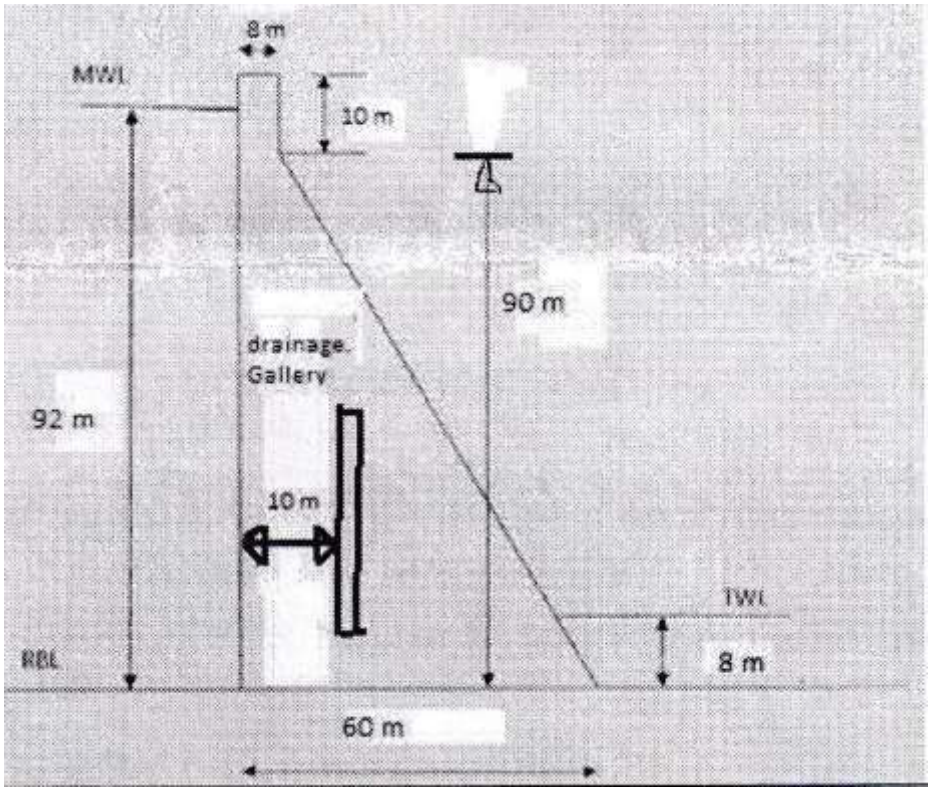
Instructions: 1) Question no. 3 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** Enlist the factors on which rate of silting of an impounding reservoir depends. What is trap efficiency of reservoir? **05**

b) What is mean by spillway? Explain in detail how spillways are selected for particular dam. **04**

Q.3 Figure shows a section of a gravity dam (non overflow section) built of concrete. Calculate the maximum vertical stress at the heel and toe of the dam, when water level at maximum water level. Assume unit weight of concrete as 23.5 kN/m^3. Neglect earthquake forces. **10**



Q.4 **a)** What are the precautions that would you take while constructing an earthen dam? Explain the Swedish slip circle method of analyzing stability of earth dam slope. **05**

b) A saddle syphon spillway ha following data. **04**
FRL 485m, level of center of syphon at outlet 479.6 m, HFL 485.9 m, Highest flood discharge 700 m^3/sec. If the dimensions of the throat of syphon are width 4.2 m and height 1.9 m. Determine number of syphon units required to pass the flood safely. The syphon has to discharge freely into air. Assume Cd as 0.65.

Q.5 **a)** Enlist different types of reservoirs losses and explain methods of controlling them. **05**

b) Explain with neat sketches different methods to control seepage through the body of earthen dam. **04**

Section – II

Q.6 **a)** Write a short note on Khosla's theory and his concept of flow net for seepage flow below the foundation of weirs on permeable foundations. **05**

b) What are the different possible water losses through canal? What are the methods adopted for reducing such losses? **05**

Q.7 **a)** Define the terms **03**
1) Firm Power
2) Load factor
3) Installed capacity of a power house

b) What is mean by river training? What are the objectives served by it? Enumerate different types of river training works and explain any one with neat sketches. **06**

Q.8 **a)** Explain the phenomenon of piping and undercutting for structures on permeable foundations. **03**

b) What are the different types of cross drainage works? Explain them with neat sketches. **06**

Q.9 **a)** What are the principal causes of water logging in a canal irrigated tract? **03**

b) A runoff river plant has installed capacity of 1600 kW and operates at 32% load factor when it serves as a peak load station. What should be the minimum discharge in the stream so that it may serve as a peak base station? The plant efficiency may be taken as 85% when working under a head of 27 m. Also calculate the maximum load factor of plant when discharge in stream is 33 m^3/s. **06**

b) the water that seeps into the ground reservoir is called infiltration
c) the annual yield of a drainage basin in depth, when multiplied by the basin area, gives us the yearly available water volume
d) the coarser sand and silt get deposited near the face of the dam, and the finer one away from it
e) none of the above

10) The vertical downward earthquake acceleration, $\alpha_y = 0.1$ g, acting on a gravity dam, will _____.
a) increase the resisting weight of the dam by 10%
b) decrease the resisting weight of the dam by 10%
c) increase the uplift by 10%
d) none of the above

11) Arch dams are suitable in locations where the canyon slope factor (length of arch at top/height of dam) is: _____.
a) less than 8 b) greater than 16
c) between 8 and 16 d) none of these

12) The most preferred type of an earthen dam section is the one, in which the: _____.
a) entire embankment is made of one type of soil
b) inner embankment is made of highly porous soil, surrounded by the outer shell of highly impervious soil, both separated by transition filter material of mediocre permeability
c) inner embankment is made of highly impervious soil surrounded by the outer shell of highly pervious soil, both separated by transition filter material of mediocre permeability
d) none of the above

13) The only provision among the following, which can help control the seepage through the body of an earthen dam and, thus, to keep the phreatic line well within the dam width, is: _____.
a) upstream impervious cut off
b) drain trench along the downstream toe
c) relief wells
d) chimney drain

14) The critical exit gradient suggested in Khosla's theory of design of weirs and barrages, is _____.

a) less for more porous soils
b) more for more porous soils
c) equal for all kinds of soils
d) none of them

Set **Q**

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydraulic Structures & Water Power Engineering (BTN01602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

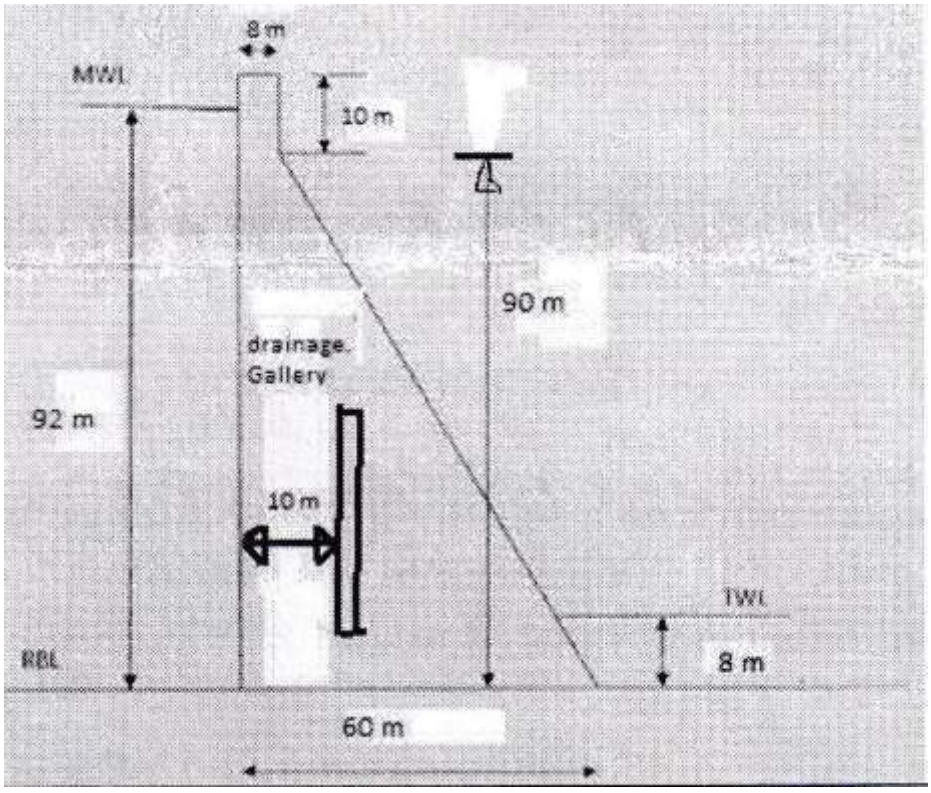
Instructions: 1) Question no. 3 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** Enlist the factors on which rate of silting of an impounding reservoir depends. What is trap efficiency of reservoir? **05**

b) What is mean by spillway? Explain in detail how spillways are selected for particular dam. **04**

Q.3 Figure shows a section of a gravity dam (non overflow section) built of concrete. Calculate the maximum vertical stress at the heel and toe of the dam, when water level at maximum water level. Assume unit weight of concrete as 23.5 kN/m^3. Neglect earthquake forces. **10**



Q.4 **a)** What are the precautions that would you take while constructing an earthen dam? Explain the Swedish slip circle method of analyzing stability of earth dam slope. **05**

b) A saddle syphon spillway ha following data. **04**
FRL 485m, level of center of syphon at outlet 479.6 m, HFL 485.9 m, Highest flood discharge 700 m^3/sec. If the dimensions of the throat of syphon are width 4.2 m and height 1.9 m. Determine number of syphon units required to pass the flood safely. The syphon has to discharge freely into air. Assume Cd as 0.65.

Q.5 **a)** Enlist different types of reservoirs losses and explain methods of controlling them. **05**

b) Explain with neat sketches different methods to control seepage through the body of earthen dam. **04**

Section – II

Q.6 **a)** Write a short note on Khosla's theory and his concept of flow net for seepage flow below the foundation of weirs on permeable foundations. **05**

b) What are the different possible water losses through canal? What are the methods adopted for reducing such losses? **05**

Q.7 **a)** Define the terms **03**
1) Firm Power
2) Load factor
3) Installed capacity of a power house

b) What is mean by river training? What are the objectives served by it? Enumerate different types of river training works and explain any one with neat sketches. **06**

Q.8 **a)** Explain the phenomenon of piping and undercutting for structures on permeable foundations. **03**

b) What are the different types of cross drainage works? Explain them with neat sketches. **06**

Q.9 **a)** What are the principal causes of water logging in a canal irrigated tract? **03**

b) A runoff river plant has installed capacity of 1600 kW and operates at 32% load factor when it serves as a peak load station. What should be the minimum discharge in the stream so that it may serve as a peak base station? The plant efficiency may be taken as 85% when working under a head of 27 m. Also calculate the maximum load factor of plant when discharge in stream is 33 m^3/s. **06**

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydraulic Structures & Water Power Engineering (BTN01602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Which one of the followings does not contribute to water logging?
a) inadequate drainage
b) seepage from unlined canals
c) frequent flooding
d) excessive tapping of ground water

2) In a meandering river, the ratio of 'actual channel length' to 'direct axial length', is called: _____.
a) Tortuosity b) Inverse of Tortuosity
c) Cut off ratio d) None of these

3) A hydropower plant, developed at the site of a drop in an irrigation canal, is of the type _____.
a) runoff river plant b) storage plant
c) pumped storage plant d) tidal plant

4) Pump storage schemes are used to improve _____.
a) The power factor
b) The load factor
c) The plant capacity factor as well as the load factor of the power system
d) The diversity factor

5) For a flood control reservoir, the effective storage is equal to _____.
a) useful storage + valley storage
b) useful storage + surcharge storage - valley storage
c) useful storage + surcharge storage + valley storage
d) useful storage - valley storage

6) Pick up the incorrect statement:
a) surface run off equals run off minus base flow
b) the water that seeps into the ground reservoir is called infiltration
c) the annual yield of a drainage basin in depth, when multiplied by the basin area, gives us the yearly available water volume
d) the coarser sand and silt get deposited near the face of the dam, and the finer one away from it
e) none of the above

7) The vertical downward earthquake acceleration, $\alpha_y = 0.1$ g, acting on a gravity dam, will _____.
a) increase the resisting weight of the dam by 10%
b) decrease the resisting weight of the dam by 10%
c) increase the uplift by 10%
d) none of the above

8) Arch dams are suitable in locations where the canyon slope factor (length of arch at top/height of dam) is: _____.
a) less than 8 b) greater than 16
c) between 8 and 16 d) none of these

9) The most preferred type of an earthen dam section is the one, in which the: _____.
a) entire embankment is made of one type of soil
b) inner embankment is made of highly porous soil, surrounded by the outer shell of highly impervious soil, both separated by transition filter material of mediocre permeability
c) inner embankment is made of highly impervious soil surrounded by the outer shell of highly pervious soil, both separated by transition filter material of mediocre permeability
d) none of the above

10) The only provision among the following, which can help control the seepage through the body of an earthen dam and, thus, to keep the phreatic line well within the dam width, is: _____.
a) upstream impervious cut off
b) drain trench along the downstream toe
c) relief wells
d) chimney drain

11) The critical exit gradient suggested in Khosla's theory of design of weirs and barrages, is _____.
a) less for more porous soils b) more for more porous soils
c) equal for all kinds of soils d) none of them

12) Point out the correct meaning of 'piping', as applied to the design of barrages: _____.
a) It refers to a network of pipes laid below the hydraulic structure to remove the seeping water
b) It refers to the process of undermining of foundation and creation of hollows therein
c) It refers to the uplift force caused by seeping water on the floor of the hydraulic structure
d) None of the above

13) When a channel is protected on the bed and sides with some protective material, and there is no possibility of change in its cross-section and longitudinal slope, then the channel is said to be in : _____.

a) initial regime
b) final regime
c) permanent regime
d) true regime

14) An irrigational canal, freely flowing under a drainage channel, is specifically called a: _____

a) canal junction
b) canal crossing
c) canal siphon
d) super passage

3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Culvert is the type of bridge whose span is _____.
a) Between 6m-60m b) Above 60m
c) Less than 6m d) None of these

2) For small bridges, with open foundations, the economical span is approximately equal to _____times height of Pier.
a) 2.0 b) 1.2
c) 1.0 d) 1.5

3) Total load in case of IRC 70R tracked loading is _____.
a) 700 kN b) 710 kN
c) 1000 kN d) 554 kN

4) For spans greater than 9m, impact factor for Tracked vehicle is _____.
a) 10% b) 20%
c) 25% d) 15%

5) The ground contact length of the track of IRC class AA loading is _____.
a) 3.6m b) 4.57m
c) 3.5m d) None of these

6) Impact force for IRC class A & B is given by _____.
a) $I_f = \frac{AB}{B+L}$ b) $I_f = \frac{B+L}{A}$
c) $I_f = \frac{A}{B+L}$ d) None of these

7) Total load of class AA wheeled is _____.
a) 700kN b) 400kN
c) 554kN d) 332kN

8) Braking force is assumed to act along the line parallel to roadway & _____ above it.
a) 1.2m b) 1.5m
c) 1.8m d) 2.0m

9) Solid deck slab is adopted for spans _____.
a) more than 8m
b) more than 20m
c) less than 8m
d) between 10-25m

10) The pier cap or abutment cap should be of minimum _____ concrete.
a) M20 grade
b) M25 grade
c) M30 grade
d) None one of these

11) Following is not the function of the pier cap or abutment cap _____.
a) Provides immediate bearing surface for the support of the super structure at pier and abutment location.
b) Disperses the strip load from bearing to the substructure evenly.
c) Prevent rain water from dripping down the sides and ends of the pier
d) Resist all horizontal forces acting on bridges

12) In case of urban site, suitable pier is _____.
a) Cellular pier
b) Trestle pier
c) Inboard pier
d) Hammerhead pier

13) Fixed bearing allow _____.
a) Rotation only
b) Translation only
c) Both rotational as well as translation
d) Restrict rotation as well as translation

14) Two span girder requires _____.
a) Fixed bearing at central support & expansion bearing at the two abutment
b) Fixed bearing at all supports
c) Expansion bearing on all supports
d) Expansion bearing at central support & Fixed bearing at the two abutment

Design of Bridges (BTN01610)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Find the design bending moment of Two lane bridge solid deck slab for following data: **10**
a) Effective span – 7 m
b) Carriage way width – 7.5 m
c) Kerb – 600 × 275 on both side
d) Live load – IRC Class A (Two lane)
e) Wearing coat – 100 mm thick
f) Use M-25 concrete and Fe-415 steel
g) Use α = 2.82

Q.3 Answer the following.
a) What are the basic components of bridge structure? Explain with the help of sketch with their functions. **05**
b) What is economical span? Derive the equation for the same. **04**

Q.4 A RCC T beam type bridge having deck slab of 225 mm thick, wearing coat of 90 mm thick, three longitudinal girders and five cross girders. Determine the Design bending moment for all the longitudinal girders. Use following additional data. **09**
a) Carriage way width – 7.5 m
b) Span of bridge – 14 m
c) Live Load – IRC class AA Tracked
d) Kerb – 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder – 300 mm
f) Longitudinal Girder spacing – 280 mm
g) Use M-30 concrete and Fe-415 steel

Q.5 Design a slab panel having size of 3 m × 3.5 m. Consider IRC class AA tracked loading. Consider thickness of slab as 200 mm and wearing coat thickness as 80 mm. Use M-25 concrete and Fe-415 steel. Pigeuad's coefficient for DL are, m_1 = 0.049, m_2 =0.015 and Pigeuad's coefficient for LL are, m_1 = 0.085, m_2 = 0.024 **09**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.7 m, Height of pier up to springing level - 7 m, C/C distance of bearing - 1.2 m, Side batter 1:12, HFL - 1.5 m below the bearing level, Span of bridge - 8 m, carriage way width - 7.5 m, Reaction due to D.L. from each span = 2000 kN, Reaction due to L.L. from each span = 600 kN, Braking force - 140 kN, wind pressure on pier - 2.4 kN/m^2. Material of pier = M20 concrete.

Estimate the maximum and minimum stress developed at the base of the pier due to critical combination of various loads for dry condition and Flood condition.

Q.7 Verify the suitability of abutment as shown in the fig 7.1 Use following data **09**
Density of soil - 19 kN/m^3, Friction angle of soil (∅) = 31°
Coefficient of friction - 0.6, Live load reaction at bearing - 350 kN, DL reaction from super structure - 2000 kN

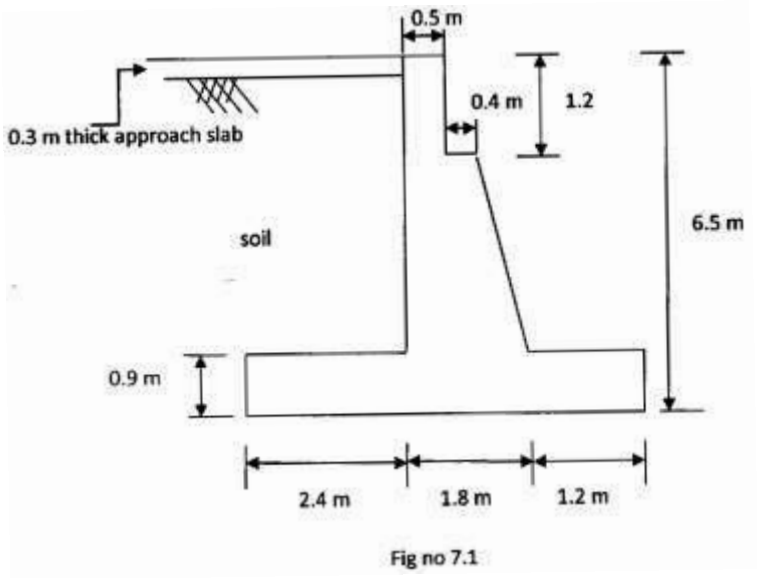

Fig no 7.1

Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 195 kN
Vertical load (dynamic) = 100 kN
Horizontal force = 95 kN
Modulus of rigidity of elastomer - 1 N/mm^2
Coefficient of friction = 0.35

b) Write a note on types of expansion joints. **04**

Q.9 **Write a note on following (Any three)** **09**

a) Cantilever method of construction
b) Functions of bearing
c) Approach slab
d) Reinforced earth retaining wall
e) Types of bridge inspection

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Braking force is assumed to act along the line parallel to roadway & _____ above it.
a) 1.2m b) 1.5m
c) 1.8m d) 2.0m

2) Solid deck slab is adopted for spans _____.
a) more than 8m b) more than 20m
c) less than 8m d) between 10-25m

3) The pier cap or abutment cap should be of minimum _____ concrete.
a) M20 grade b) M25 grade
c) M30 grade d) None one of these

4) Following is not the function of the pier cap or abutment cap _____.
a) Provides immediate bearing surface for the support of the super structure at pier and abutment location.
b) Disperses the strip load from bearing to the substructure evenly.
c) Prevent rain water from dripping down the sides and ends of the pier
d) Resist all horizontal forces acting on bridges

5) In case of urban site, suitable pier is _____.
a) Cellular pier b) Trestle pier
c) Inboard pier d) Hammerhead pier

6) Fixed bearing allow _____.
a) Rotation only
b) Translation only
c) Both rotational as well as translation
d) Restrict rotation as well as translation

7) Two span girder requires _____.
a) Fixed bearing at central support & expansion bearing at the two abutment
b) Fixed bearing at all supports
c) Expansion bearing on all supports
d) Expansion bearing at central support & Fixed bearing at the two abutment

8) Culvert is the type of bridge whose span is _____.
a) Between 6m-60m b) Above 60m
c) Less than 6m d) None of these

9) For small bridges, with open foundations, the economical span is approximately equal to _____times height of Pier.
a) 2.0 b) 1.2
c) 1.0 d) 1.5

10) Total load in case of IRC 70R tracked loading is _____.
a) 700 kN b) 710 kN
c) 1000 kN d) 554 kN

11) For spans greater than 9m, impact factor for Tracked vehicle is _____.
a) 10% b) 20%
c) 25% d) 15%

12) The ground contact length of the track of IRC class AA loading is _____.
a) 3.6m b) 4.57m
c) 3.5m d) None of these

13) Impact force for IRC class A & B is given by _____.
a) $I_f = \frac{AB}{B+L}$ b) $I_f = \frac{B+L}{A}$
c) $I_f = \frac{A}{B+L}$ d) None of these

14) Total load of class AA wheeled is _____.
a) 700kN b) 400kN
c) 554kN d) 332kN

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Bridges (BTN01610)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Find the design bending moment of Two lane bridge solid deck slab for following data: **10**
a) Effective span – 7 m
b) Carriage way width – 7.5 m
c) Kerb – 600 × 275 on both side
d) Live load – IRC Class A (Two lane)
e) Wearing coat – 100 mm thick
f) Use M-25 concrete and Fe-415 steel
g) Use α = 2.82

Q.3 Answer the following.
a) What are the basic components of bridge structure? Explain with the help of sketch with their functions. **05**
b) What is economical span? Derive the equation for the same. **04**

Q.4 A RCC T beam type bridge having deck slab of 225 mm thick, wearing coat of 90 mm thick, three longitudinal girders and five cross girders. Determine the Design bending moment for all the longitudinal girders. Use following additional data. **09**
a) Carriage way width – 7.5 m
b) Span of bridge – 14 m
c) Live Load – IRC class AA Tracked
d) Kerb – 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder – 300 mm
f) Longitudinal Girder spacing – 280 mm
g) Use M-30 concrete and Fe-415 steel

Q.5 Design a slab panel having size of 3 m × 3.5 m. Consider IRC class AA tracked loading. Consider thickness of slab as 200 mm and wearing coat thickness as 80 mm. Use M-25 concrete and Fe-415 steel. Pigeuad's coefficient for DL are, m_1 = 0.049, m_2 =0.015 and Pigeuad's coefficient for LL are, m_1 = 0.085, m_2 = 0.024 **09**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.7 m, Height of pier up to springing level - 7 m, C/C distance of bearing - 1.2 m, Side batter 1:12, HFL - 1.5 m below the bearing level, Span of bridge - 8 m, carriage way width - 7.5 m, Reaction due to D.L. from each span = 2000 kN, Reaction due to L.L. from each span = 600 kN, Braking force - 140 kN, wind pressure on pier - 2.4 kN/m^2. Material of pier = M20 concrete.

Estimate the maximum and minimum stress developed at the base of the pier due to critical combination of various loads for dry condition and Flood condition.

Q.7 Verify the suitability of abutment as shown in the fig 7.1 Use following data **09**
Density of soil - 19 kN/m^3, Friction angle of soil (∅) = 31°
Coefficient of friction - 0.6, Live load reaction at bearing - 350 kN, DL reaction from super structure - 2000 kN

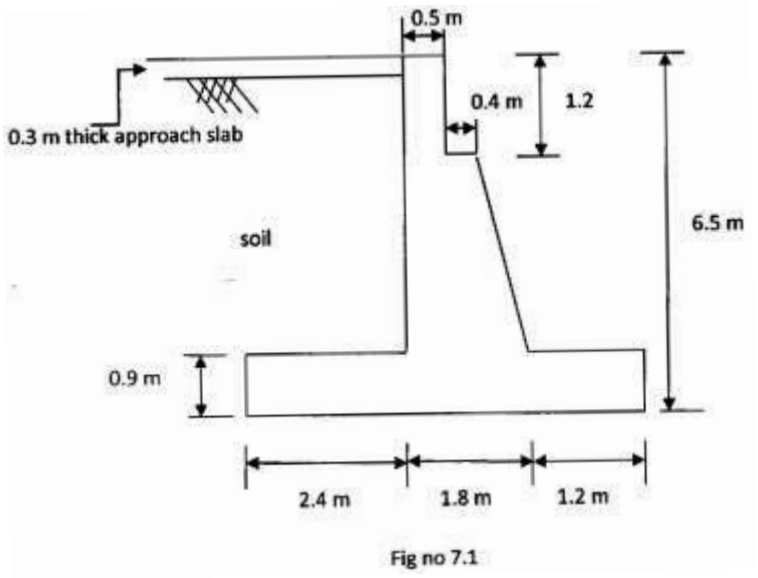

Fig no 7.1

Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 195 kN
Vertical load (dynamic) = 100 kN
Horizontal force = 95 kN
Modulus of rigidity of elastomer - 1 N/mm^2
Coefficient of friction = 0.35

b) Write a note on types of expansion joints. **04**

Q.9 **Write a note on following (Any three)** **09**

a) Cantilever method of construction
b) Functions of bearing
c) Approach slab
d) Reinforced earth retaining wall
e) Types of bridge inspection

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Bridges (BTN01610)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Following is not the function of the pier cap or abutment cap _____.
a) Provides immediate bearing surface for the support of the super structure at pier and abutment location.
b) Disperses the strip load from bearing to the substructure evenly.
c) Prevent rain water from dripping down the sides and ends of the pier
d) Resist all horizontal forces acting on bridges

2) In case of urban site, suitable pier is _____.
a) Cellular pier b) Trestle pier
c) Inboard pier d) Hammerhead pier

3) Fixed bearing allow _____.
a) Rotation only
b) Translation only
c) Both rotational as well as translation
d) Restrict rotation as well as translation

4) Two span girder requires _____.
a) Fixed bearing at central support & expansion bearing at the two abutment
b) Fixed bearing at all supports
c) Expansion bearing on all supports
d) Expansion bearing at central support & Fixed bearing at the two abutment

5) Culvert is the type of bridge whose span is _____.
a) Between 6m-60m b) Above 60m
c) Less than 6m d) None of these

6) For small bridges, with open foundations, the economical span is approximately equal to _____times height of Pier.
a) 2.0 b) 1.2
c) 1.0 d) 1.5

7) Total load in case of IRC 70R tracked loading is _____.
a) 700 kN b) 710 kN
c) 1000 kN d) 554 kN

8) For spans greater than 9m, impact factor for Tracked vehicle is _____.
a) 10% b) 20%
c) 25% d) 15%

9) The ground contact length of the track of IRC class AA loading is _____.
a) 3.6m b) 4.57m
c) 3.5m d) None of these

10) Impact force for IRC class A & B is given by _____.
a) $I_f = \frac{AB}{B+L}$ b) $I_f = \frac{B+L}{A}$
c) $I_f = \frac{A}{B+L}$ d) None of these

11) Total load of class AA wheeled is _____.
a) 700kN b) 400kN
c) 554kN d) 332kN

12) Braking force is assumed to act along the line parallel to roadway & _____ above it.
a) 1.2m b) 1.5m
c) 1.8m d) 2.0m

13) Solid deck slab is adopted for spans _____.
a) more than 8m b) more than 20m
c) less than 8m d) between 10-25m

14) The pier cap or abutment cap should be of minimum _____ concrete.
a) M20 grade b) M25 grade
c) M30 grade d) None one of these

Section – I

Q.2 Find the design bending moment of Two lane bridge solid deck slab for following data: **10**
a) Effective span – 7 m
b) Carriage way width – 7.5 m
c) Kerb – 600 × 275 on both side
d) Live load – IRC Class A (Two lane)
e) Wearing coat – 100 mm thick
f) Use M-25 concrete and Fe-415 steel
g) Use α = 2.82

Q.3 Answer the following.
a) What are the basic components of bridge structure? Explain with the help of sketch with their functions. **05**
b) What is economical span? Derive the equation for the same. **04**

Q.4 A RCC T beam type bridge having deck slab of 225 mm thick, wearing coat of 90 mm thick, three longitudinal girders and five cross girders. Determine the Design bending moment for all the longitudinal girders. Use following additional data. **09**
a) Carriage way width – 7.5 m
b) Span of bridge – 14 m
c) Live Load – IRC class AA Tracked
d) Kerb – 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder – 300 mm
f) Longitudinal Girder spacing – 280 mm
g) Use M-30 concrete and Fe-415 steel

Q.5 Design a slab panel having size of 3 m × 3.5 m. Consider IRC class AA tracked loading. Consider thickness of slab as 200 mm and wearing coat thickness as 80 mm. Use M-25 concrete and Fe-415 steel. Pigeuad's coefficient for DL are, m_1 = 0.049, m_2 =0.015 and Pigeuad's coefficient for LL are, m_1 = 0.085, m_2 = 0.024 **09**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.7 m, Height of pier up to springing level - 7 m, C/C distance of bearing - 1.2 m, Side batter 1:12, HFL - 1.5 m below the bearing level, Span of bridge - 8 m, carriage way width - 7.5 m, Reaction due to D.L. from each span = 2000 kN, Reaction due to L.L. from each span = 600 kN, Braking force - 140 kN, wind pressure on pier - 2.4 kN/m^2. Material of pier = M20 concrete.

Estimate the maximum and minimum stress developed at the base of the pier due to critical combination of various loads for dry condition and Flood condition.

Q.7 Verify the suitability of abutment as shown in the fig 7.1 Use following data **09**
Density of soil - 19 kN/m^3, Friction angle of soil (∅) = 31°
Coefficient of friction - 0.6, Live load reaction at bearing - 350 kN, DL reaction from super structure - 2000 kN

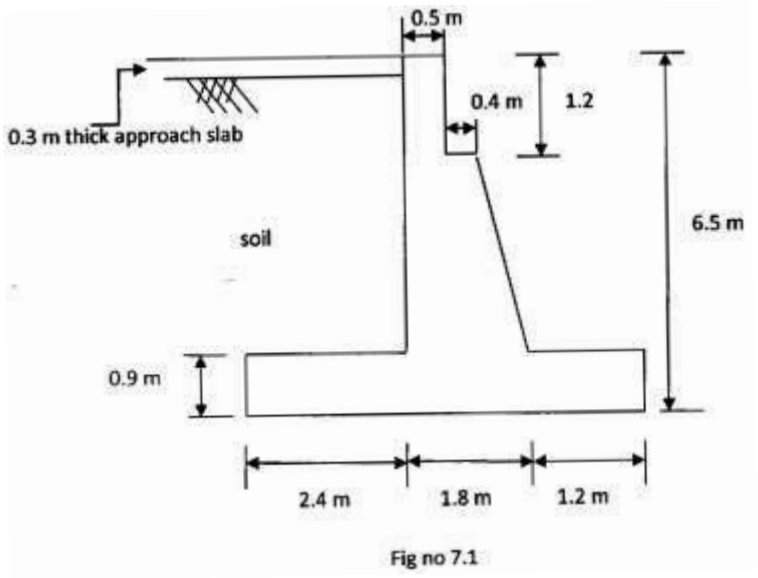

Fig no 7.1

Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 195 kN
Vertical load (dynamic) = 100 kN
Horizontal force = 95 kN
Modulus of rigidity of elastomer - 1 N/mm^2
Coefficient of friction = 0.35

b) Write a note on types of expansion joints. **04**

Q.9 **Write a note on following (Any three)** **09**

a) Cantilever method of construction
b) Functions of bearing
c) Approach slab
d) Reinforced earth retaining wall

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Impact force for IRC class A & B is given by _____.
a) $I_f = \frac{AB}{B+L}$ b) $I_f = \frac{B+L}{A}$
c) $I_f = \frac{A}{B+L}$ d) None of these

2) Total load of class AA wheeled is _____.
a) 700kN b) 400kN
c) 554kN d) 332kN

3) Braking force is assumed to act along the line parallel to roadway & _____ above it.
a) 1.2m b) 1.5m
c) 1.8m d) 2.0m

4) Solid deck slab is adopted for spans _____.
a) more than 8m b) more than 20m
c) less than 8m d) between 10-25m

5) The pier cap or abutment cap should be of minimum _____ concrete.
a) M20 grade b) M25 grade
c) M30 grade d) None one of these

6) Following is not the function of the pier cap or abutment cap _____.
a) Provides immediate bearing surface for the support of the super structure at pier and abutment location.
b) Disperses the strip load from bearing to the substructure evenly.
c) Prevent rain water from dripping down the sides and ends of the pier
d) Resist all horizontal forces acting on bridges

7) In case of urban site, suitable pier is _____.
a) Cellular pier b) Trestle pier
c) Inboard pier d) Hammerhead pier

8) Fixed bearing allow _____.
a) Rotation only
b) Translation only
c) Both rotational as well as translation
d) Restrict rotation as well as translation

9) Two span girder requires _____.
a) Fixed bearing at central support & expansion bearing at the two abutment
b) Fixed bearing at all supports
c) Expansion bearing on all supports
d) Expansion bearing at central support & Fixed bearing at the two abutment

2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) In the ESWL concept, the total stress due to the dual wheels at any depth greater than 2S, the ESWL is considered to be equivalent to the magnitude of, _____.
a) P b) 2P
c) 0.5P d) 4P

2) In the three-layer elastic system of pavement design, what are Layer-1, 2, and 3 (From top to Bottom)?
a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB
b) Layer-1- WMM and GSB, Layer-2-BC and DBM and Layer-3-Subgrade
c) Layer-1-Subgrade, Layer-2- WMM and GSB and Layer-3-BC and DBM
d) Layer-1-BC and DBM, Layer-2- WMM and GSB, Layer-3-Subgrade

3) What is the full form of EWLF?
a) Equivalent Weight Load Factor
b) Equivalent Wheel Load Factor
c) Equivalent Weight Larger Factor
d) Equal Weight Load Factor

4) Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.
a) Tensile strain at the bottom of the subgrade and vertical compressive strain on top of the bituminous layer
b) Tensile strain at the top of the subgrade and vertical compressive strain on the bottom of the bituminous layer
c) Tensile strain at the bottom of the bituminous layer and vertical compressive strain on top of the subgrade
d) Vertical compressive strain at the bottom of the subgrade and Tensile strain at the bottom of the bituminous layer

5) The vehicle carries a rear single axle weight of 16 tonnes, what is the EWLF? (Use the fourth power rule and consider standard axle weight as 8.16 tonne)

a) 15.78 b) 14.78
c) 13.78 d) 12.78

6) Two Layer elastic layer is developed by _____.

a) Boussinesq b) Burmister
c) Telford d) John Macadam

7) In two-layer layer elastic theory E2 is considered an elastic modulus of subgrade and what is E1?

a) Elastic modulus of Granular sub-base layer
b) Elastic modulus of the base layer
c) Elastic modulus of Surface course
d) Elastic Modulus of entire flexible pavement of thickness 'h'

8) Identify the correct order of concrete pavement layers in the correct order from bottom to top.

a) GSB, Subgrade, DLC, PQC, and 125-micron Polyethylene sheet
b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
c) DLC, PQC, 125-micron Polyethylene sheet, GSB, and Subgrade
d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC

9) In rigid pavement, the longitudinal joint is provided when:

a) The width of the pavement exceeds 10m
b) The width of the pavement exceeds 4.5m
c) The width of the pavement exceeds 7m
d) The width of the pavement exceeds 15m

10) Identify the three critical locations in rigid pavement _____.

a) Edge, Interior, Center b) Edge, Interior, Diagonal
c) Edge, Interior, Corner d) Edge, Interior, Middle Third

11) The modulus of the subgrade reaction is given by _____.

a) $K = \frac{P}{\Delta}$ b) $K = P \times \Delta$
c) $K = P + \Delta$ d) $K = \Delta$

12) In concrete pavement, Dry Lean Concrete (DLC) is provided at _____.

a) Top of Subgrade
b) Top of Granular Sub Base
c) Below the subgrade
d) Top of Pavement Quality Concrete (PQC)

13) What is the equivalent radius of the resisting section of a 20cm thick slab, given that the radius of the contact area is 15cm?

a) 14.07cm b) 15.07cm
c) 16.07cm d) 17.07cm

14) The tie bars are placed at _____.

a) Longitudinal joints b) Contraction Joints
c) Expansion Joints d) Construction Joints

SLR-GF-23

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Pavement Design (BTN01613)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicates full marks.
3) Assume any missing data suitably and mention it clearly.

Section – I

Q.2 Answer Any Two questions. **14**

a) Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain the function of all layers.

b) What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16tonne.
i) LCV with a rear axle load of 2.0t
ii) HCV with a rear axle load of 15.5t

c) A flexible pavement of thickness 48cm is laid over a subgrade. A circular load of 16cm with a uniform contact pressure of 6.5kg/cm^2 is applied. Assume the elastic modulus of the subgrade as well as the pavement layer to be 900kg/cm^2. Assuming a homogenous elastic single-layer system determine the deflection of the pavement surface under the center of the load. Use the Deflection Factor chart given in Fig-I**.**

Q.4 Answer Any Two questions **14**

a) Draw a neat sketch of rigid pavement and show component parts of all layers. Briefly explain the function of all layers.

b) Find ESWL at depths of 50mm, 200mm, and 400mm for a dual wheel carrying 2044 kN each. The center-to-center tyre spacing is 200mm and the distance between the walls of the two tyres is 100mm. Use (log) equation to calculate ESWL.

c) Plate bearing tests were conducted using a 30cm diameter plate on soil subgrade and over a base course of thickness 45cm. The pressure yielded at 0.5cm deflection on the subgrade and base course was 1.25kg/cm^2 and 8kg/cm^2 respectively. Design the thickness requirement of flexible pavement for a wheel load of 5100kg with tyre pressure of 8.0kg/cm^2 for an allowable deflection of 0.5cm using the Burmister two-layer deflection factor chart shown in Fig-II.

Section – II

Q.5 Answer Any Two questions. **14**

a) What is the objective of providing dowel bars and tie bars in rigid pavement?

b) With a diagram explain the working principle of Benkelman beam for measurement of pavement deflection.

c) C.C. Pavement is constructed using the following data:

i) Modulus of elasticity 3.3 x 10^5 kg/cm^2
ii) Poisson's ratio = 0.15
iii) Thickness of CC pavement = 18 cm
iv) Modulus of subgrade reaction - 25kg/cm^3
v) Wheel load = 4100 kg
vi) Radius of loaded area = 12 cm

Calculate stresses at the Interior, Edge, and corner by Westergaard's method.

Q.6 Answer Any Two questions **14**

a) Determine the warping stresses at the interior, edge, and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m intervals and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction K is 6.9kg/cm^3 and the radius of the loaded area is 15cm. Assume the temperature differential during the day to be 0.6°C per cm slab thickness (for warping stress at interior and edge) and a maximum temperature differential of 0.4°C per cm slab thickness during the night (for warping stress at the corner). Assume e = 10x10^{-6} per °C, E = 3x10^5 kg/cm^2, μ = 0.15. Use the Bradbury chart given in Figure III.

b) Write a short note (Any Two)

i) Factors affecting flexible pavement design
ii) Layered systems concepts of Pavement Design
iii) Factors Affecting Rigid Pavement Design
iv) Principles of Rigid Pavement Design as per IRC-58-2015

c) The rebound deflection values determined at 15 spots are given below. Determine the values of:

i) mean deflection
ii) standard deviation and
iii) characteristic deflection for an important highway with heavy traffic

Rebound deflection values in mm: 1.40, 1.32, 1.25, 1.35, 1.48, 1.60, 1.65, 1.55, 1.45, 1.40, 1.36, 1.46, 1.50, 1.52, 1.45

Set **Q**

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Pavement Design (BTN01613)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Identify the correct order of concrete pavement layers in the correct order from bottom to top.
a) GSB, Subgrade, DLC, PQC, and 125-micron Polyethylene sheet
b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
c) DLC, PQC, 125-micron Polyethylene sheet, GSB, and Subgrade
d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC

2) In rigid pavement, the longitudinal joint is provided when:
a) The width of the pavement exceeds 10m
b) The width of the pavement exceeds 4.5m
c) The width of the pavement exceeds 7m
d) The width of the pavement exceeds 15m

3) Identify the three critical locations in rigid pavement _____.
a) Edge, Interior, Center b) Edge, Interior, Diagonal
c) Edge, Interior, Corner d) Edge, Interior, Middle Third

4) The modulus of the subgrade reaction is given by _____.
a) $K = \frac{P}{\Delta}$ b) $K = P \times \Delta$
c) $K = P + \Delta$ d) $K = \Delta$

5) In concrete pavement, Dry Lean Concrete (DLC) is provided at _____.
a) Top of Subgrade
b) Top of Granular Sub Base
c) Below the subgrade
d) Top of Pavement Quality Concrete (PQC)

6) What is the equivalent radius of the resisting section of a 20cm thick slab, given that the radius of the contact area is 15cm?
a) 14.07cm b) 15.07cm
c) 16.07cm d) 17.07cm

7) The tie bars are placed at _____.
a) Longitudinal joints b) Contraction Joints
c) Expansion Joints d) Construction Joints

8) In the ESWL concept, the total stress due to the dual wheels at any depth greater than 2S, the ESWL is considered to be equivalent to the magnitude of, _____.
a) P b) 2P
c) 0.5P d) 4P

9) In the three-layer elastic system of pavement design, what are Layer-1, 2, and 3 (From top to Bottom)?
a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB
b) Layer-1- WMM and GSB, Layer-2-BC and DBM and Layer-3-Subgrade
c) Layer-1-Subgrade, Layer-2- WMM and GSB and Layer-3-BC and DBM
d) Layer-1-BC and DBM, Layer-2- WMM and GSB, Layer-3-Subgrade

10) What is the full form of EWLF?
a) Equivalent Weight Load Factor
b) Equivalent Wheel Load Factor
c) Equivalent Weight Larger Factor
d) Equal Weight Load Factor

11) Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.
a) Tensile strain at the bottom of the subgrade and vertical compressive strain on top of the bituminous layer
b) Tensile strain at the top of the subgrade and vertical compressive strain on the bottom of the bituminous layer
c) Tensile strain at the bottom of the bituminous layer and vertical compressive strain on top of the subgrade
d) Vertical compressive strain at the bottom of the subgrade and Tensile strain at the bottom of the bituminous layer

12) The vehicle carries a rear single axle weight of 16 tonnes, what is the EWLF? (Use the fourth power rule and consider standard axle weight as 8.16 tonne)
a) 15.78 b) 14.78
c) 13.78 d) 12.78

13) Two Layer elastic layer is developed by _____.
a) Boussinesq b) Burmister
c) Telford d) John Macadam

14) In two-layer layer elastic theory E2 is considered an elastic modulus of subgrade and what is E1?
a) Elastic modulus of Granular sub-base layer
b) Elastic modulus of the base layer
c) Elastic modulus of Surface course
d) Elastic Modulus of entire flexible pavement of thickness ‘h’

Set Q

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Pavement Design (BTN01613)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicates full marks.
3) Assume any missing data suitably and mention it clearly.

Section – I

Q.2 Answer Any Two questions. **14**

a) Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain the function of all layers.

b) What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16tonne.
i) LCV with a rear axle load of 2.0t
ii) HCV with a rear axle load of 15.5t

c) A flexible pavement of thickness 48cm is laid over a subgrade. A circular load of 16cm with a uniform contact pressure of 6.5kg/cm^2 is applied. Assume the elastic modulus of the subgrade as well as the pavement layer to be 900kg/cm^2. Assuming a homogenous elastic single-layer system determine the deflection of the pavement surface under the center of the load. Use the Deflection Factor chart given in Fig-I**.**

Q.4 Answer Any Two questions **14**

a) Draw a neat sketch of rigid pavement and show component parts of all layers. Briefly explain the function of all layers.

b) Find ESWL at depths of 50mm, 200mm, and 400mm for a dual wheel carrying 2044 kN each. The center-to-center tyre spacing is 200mm and the distance between the walls of the two tyres is 100mm. Use (log) equation to calculate ESWL.

c) Plate bearing tests were conducted using a 30cm diameter plate on soil subgrade and over a base course of thickness 45cm. The pressure yielded at 0.5cm deflection on the subgrade and base course was 1.25kg/cm^2 and 8kg/cm^2 respectively. Design the thickness requirement of flexible pavement for a wheel load of 5100kg with tyre pressure of 8.0kg/cm^2 for an allowable deflection of 0.5cm using the Burmister two-layer deflection factor chart shown in Fig-II.

Section – II

Q.5 Answer Any Two questions. **14**

a) What is the objective of providing dowel bars and tie bars in rigid pavement?

b) With a diagram explain the working principle of Benkelman beam for measurement of pavement deflection.

c) C.C. Pavement is constructed using the following data:

i) Modulus of elasticity 3.3 x 10^5 kg/cm^2
ii) Poisson's ratio = 0.15
iii) Thickness of CC pavement = 18 cm
iv) Modulus of subgrade reaction - 25kg/cm^3
v) Wheel load = 4100 kg
vi) Radius of loaded area = 12 cm

Calculate stresses at the Interior, Edge, and corner by Westergaard's method.

Q.6 Answer Any Two questions **14**

a) Determine the warping stresses at the interior, edge, and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m intervals and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction K is 6.9kg/cm^3 and the radius of the loaded area is 15cm. Assume the temperature differential during the day to be 0.6°C per cm slab thickness (for warping stress at interior and edge) and a maximum temperature differential of 0.4°C per cm slab thickness during the night (for warping stress at the corner). Assume e = 10x10^{-6} per °C, E = 3x10^5 kg/cm^2, μ = 0.15. Use the Bradbury chart given in Figure III.

b) Write a short note (Any Two)

i) Factors affecting flexible pavement design
ii) Layered systems concepts of Pavement Design
iii) Factors Affecting Rigid Pavement Design
iv) Principles of Rigid Pavement Design as per IRC-58-2015

c) The rebound deflection values determined at 15 spots are given below. Determine the values of:

i) mean deflection

c) Expansion Joints d) Construction Joints

5) In the ESWL concept, the total stress due to the dual wheels at any depth greater than 2S, the ESWL is considered to be equivalent to the magnitude of, _____.
a) P b) 2P
c) 0.5P d) 4P

6) In the three-layer elastic system of pavement design, what are Layer-1, 2, and 3 (From top to Bottom)?
a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB
b) Layer-1- WMM and GSB, Layer-2-BC and DBM and Layer-3-Subgrade
c) Layer-1-Subgrade, Layer-2- WMM and GSB and Layer-3-BC and DBM
d) Layer-1-BC and DBM, Layer-2- WMM and GSB, Layer-3-Subgrade

7) What is the full form of EWLF?
a) Equivalent Weight Load Factor
b) Equivalent Wheel Load Factor
c) Equivalent Weight Larger Factor
d) Equal Weight Load Factor

8) Identify the correct statement regarding the locations of critical strains in the design of flexible pavement.
a) Tensile strain at the bottom of the subgrade and vertical compressive strain on top of the bituminous layer
b) Tensile strain at the top of the subgrade and vertical compressive strain on the bottom of the bituminous layer
c) Tensile strain at the bottom of the bituminous layer and vertical compressive strain on top of the subgrade
d) Vertical compressive strain at the bottom of the subgrade and Tensile strain at the bottom of the bituminous layer

9) The vehicle carries a rear single axle weight of 16 tonnes, what is the EWLF? (Use the fourth power rule and consider standard axle weight as 8.16 tonne)
a) 15.78 b) 14.78
c) 13.78 d) 12.78

10) Two Layer elastic layer is developed by _____.
a) Boussinesq b) Burmister
c) Telford d) John Macadam

11) In two-layer layer elastic theory E2 is considered an elastic modulus of subgrade and what is E1?
a) Elastic modulus of Granular sub-base layer
b) Elastic modulus of the base layer
c) Elastic modulus of Surface course
d) Elastic Modulus of entire flexible pavement of thickness ‘h’

12) Identify the correct order of concrete pavement layers in the correct order from bottom to top.
a) GSB, Subgrade, DLC, PQC, and 125-micron Polyethylene sheet
b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
c) DLC, PQC, 125-micron Polyethylene sheet, GSB, and Subgrade
d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC

13) In rigid pavement, the longitudinal joint is provided when:
a) The width of the pavement exceeds 10m
b) The width of the pavement exceeds 4.5m
c) The width of the pavement exceeds 7m
d) The width of the pavement exceeds 15m

14) Identify the three critical locations in rigid pavement _____.
a) Edge, Interior, Center b) Edge, Interior, Diagonal
c) Edge, Interior, Corner d) Edge, Interior, Middle Third

Q.5 Answer Any Two questions. **14**

a) What is the objective of providing dowel bars and tie bars in rigid pavement?

b) With a diagram explain the working principle of Benkelman beam for measurement of pavement deflection.

c) C.C. Pavement is constructed using the following data:

i) Modulus of elasticity 3.3 x 10^5 kg/cm^2
ii) Poisson's ratio = 0.15
iii) Thickness of CC pavement = 18 cm
iv) Modulus of subgrade reaction - 25kg/cm^3
v) Wheel load = 4100 kg
vi) Radius of loaded area = 12 cm

Calculate stresses at the Interior, Edge, and corner by Westergaard's method.

Q.6 Answer Any Two questions **14**

a) Determine the warping stresses at the interior, edge, and corner of a 25cm thick cement concrete pavement with transverse joints at 5.0m intervals and longitudinal joints at 3.6m intervals. The modulus of subgrade reaction K is 6.9kg/cm^3 and the radius of the loaded area is 15cm. Assume the temperature differential during the day to be 0.6°C per cm slab thickness (for warping stress at interior and edge) and a maximum temperature differential of 0.4°C per cm slab thickness during the night (for warping stress at the corner). Assume e = $10x10^{-6}$ per °C, E = $3x10^5$ kg/cm^2, μ = 0.15. Use the Bradbury chart given in Figure III.

b) Write a short note (Any Two)

i) Factors affecting flexible pavement design
ii) Layered systems concepts of Pavement Design
iii) Factors Affecting Rigid Pavement Design
iv) Principles of Rigid Pavement Design as per IRC-58-2015

c) The rebound deflection values determined at 15 spots are given below. Determine the values of:

i) mean deflection
ii) standard deviation and
iii) characteristic deflection for an important highway with heavy traffic

Rebound deflection values in mm: 1.40, 1.32, 1.25, 1.35, 1.48, 1.60, 1.65, 1.55, 1.45, 1.40, 1.36, 1.46, 1.50, 1.52, 1.45

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Advanced Concrete Technology (BTN01616)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Efflorescence in cement is caused due to an excess of _____.
a) Alumina b) Alkalis
c) Silica d) None of these

2) Which of the following cement is used in sewage and water treatment plants?
a) Sulphate Resisting Cement b) Quick Setting Cement
c) Low Heat Cement d) Rapid Hardening Cement

3) What percentage of aggregates are required in concrete in terms of volume?
a) 75-85% b) 60-75%
c) 70% d) 50%

4) An example of non-destructive testing _____.
a) Ultrasonic test b) Compression test
c) Both (a) and (b) d) Neither (a) nor (b)

5) Fineness of cement is done by the sieve _____.
a) 600u b) 300u
c) 150u d) 90u

6) The workability of concrete by slump test is expressed as _____.
a) mm b) mm^2
c) mm^3 d) Unit less

7) Vicat's apparatus is used for _____.
a) Consistency test b) Fineness test
c) Strength test d) Soundness test

8) _____ cement content to avoid shrinkage cracking due to temperature cycle in mass concrete.
a) Minimum b) Nominal
c) 0.5 d) Maximum

9) Quality control helps to minimize the risks of overdesign that _____ the overall cost.

a) increases b) decrease
c) half the d) None of the above

10) Quality control of RMC can include following areas _____.

a) Forward control b) Retrospective control
c) a and b d) None of the above

11) Reduction in cement consumption by _____ % is possible in RMC due to better handling & proper mixing.

a) 5-10% b) 20-30%
c) 3-5% d) 10-12%

12) A lower W/C ratio leads to _____.

a) Higher strength & durability
b) Higher strength but lower durability
c) Lower strength but higher durability
d) Lower strength & durability

13) Testing of hard concrete can be done by _____.

a) Schmidt's Rebound hammer b) Penetration Techniques
c) Dynamic Method d) All the above

14) Pozzolana cement is used with confidence for construction of _____.

a) dams b) massive foundations
c) abutments d) All the above

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Advanced Concrete Technology (BTN01616)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 Solve any two questions. **08**
- **a)** Explain briefly heat of hydration process occurred in the cement.
- **b)** Write history of cement in detail.
- **c)** Explain in detail blended cement.

Q.3 Solve any two questions. **10**
- **a)** Explain the effect using admixture in the concrete.
- **b)** Define Admixture and explain the different types of admixture in detail.
- **c)** Explain in detail fly ash, rise husk ash, silica fume.

Q.4 Solve any two questions. **10**
- **a)** Define workability and factors affecting workability.
- **b)** Explain the term segregation, bleeding, cohesion of concrete, hardness of concrete.
- **c)** Explain the effect of impermeability and particle size on concrete.

Q.5 Solve any one question. **10**
- **a)** Write a short note on special concrete explain each in details.
  - i) High performance concrete
  - ii) High strength concrete
  - iii) Fibre reinforced concrete
  - iv) Light weight concrete
- **b)** Write a short note on:
  - i) High volume fly ash concrete
  - ii) Self-compacting concrete
  - iii) Recycled concrete
  - iv) High density concrete
  - v) Radiation shielding concrete

Section – II

Q.6 Solve any two questions. **08**
- **a)** Short note on Ferrocement Concrete.
- **b)** Short note on Sprayed Concrete.
- **c)** Explain in detail Mass Concrete.

Q.7 Solve any two questions. **10**

a) Draw a neat schematic diagram of RMC Plant.

b) Short note on Ready Mix Concrete and its applications to the construction industries.

c) Explain in details different type of RMC Plants.

Q.8 Solve any two questions. **10**

a) Short note on Quality assurance.

b) Write short note on a repair technique of concrete.

c) Why and when NDT Test are performed, explain with its application.

Q.9 Solve any one question. **10**

a) Explain types of concrete vibrators. Also state the advantages and disadvantages of revibration of Concrete.

b) What is mix design? Write down design steps of concrete mix design using IS 10262:2009 methods.

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Draw neat sketches wherever necessary.
5) Use of non-programmable calculator is permitted.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) If the Froude's number is 10 then the jump is known as _____.
a) Steady b) Oscillating
c) Undular d) Strong

2) Specific force represents the sum of pressure force and _____.
a) Datum head
b) Momentum flux per unit weight
c) Momentum flux and datum head
d) None

3) The ratio of inertia force and gravitational force is called as _____.
a) Reynolds number b) Stokes number
c) Froude's number d) Euler's number

4) The ratio of Hydraulic radius and Hydraulic depth is ½ and the top width of the channel is 6m, calculate the hydraulic depth of the channel.
a) 1m b) 2m
c) 3m d) 4m

5) River plains are made up of _____.
a) Black soil b) Red soil
c) Alluvium d) None

6) Which geometric parameter determines the efficiency of the channel?
a) Hydraulic depth b) Hydraulic radius
c) Section factor d) Normal depth

7) The mean velocity in Lacey's regime channel is proportional to _____.
a) $11\ R^{1/2}S_0^{1/2}$ b) $10.8\ D^{2/3}S_0^{1/3}$
c) $11\ DS_0$ d) None

8) The momentum correction factor, β is given as _____.
a) $1/\mathrm{V}^2\mathrm{A}\int.\mathrm{V}^3.\mathrm{dA}$ b) $1/\mathrm{VA}\int.\mathrm{V}.\mathrm{dA}$
c) $1/\mathrm{V}^3\mathrm{A}\int.\mathrm{V}^2.\mathrm{dA}$ d) $1/\mathrm{V}^2\mathrm{A}\int.\mathrm{V}^2.\mathrm{dA}$

9) What type of force is completely responsible for the bed load movement?
a) Forces of Turbulence b) Drag Force
c) Capillary Force d) Gravity Force

10) Extreme condition of meanders is called as _____.
a) Leavee b) Spurs
c) Cut-off d) Island

11) Which category of river training work deals with flood control?
a) Training for Sediment b) Low Water Training
c) Training for Depth d) Training for Discharge

12) The Lacey's equation for a regime channel consists of a set of 'x' independent equation relating to flow, where 'x' is equal to _____.
a) 1 b) 3
c) 5 d) 8

13) The similarity between the motion of model and prototype is _____.
a) Dynamic similarity b) Potential similarity
c) Kinematic similarity d) Design similarity

14) Which among the following is not a criteria to achieve similitude?
a) Geometric similarity b) Kinematic similarity
c) Dynamic similarity d) Conditional similarity

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Draw neat sketches wherever necessary.
4) Use of non-programmable calculator is permitted.

Section – I

Q.2 Attempt any four. **16**

a) Derive the modified Gradually Varied Flow equation. Draw a neat sketch show all details.

b) Define kinetic energy correction factor (α) and momentum correction factor (β)

c) A 3.2 m wide rectangular channel conveys 14 m^3/s of water with velocity 5.0 m/s. state is there formation of hydraulic jump if yes calculate height, length and strength of Jump and what is loss of energy per kg of water.

d) Find the rate of and conveyance for a rectangular channel 7.2m wide for uniform flow at depth of 2.8 m. The channel is having bed slope as 1/1000. Take n = 0.015.

e) Define Hydraulic jump and classify it on the basis of Froude's number.

Q.3 Attempt any two. **12**

a) What is specific energy curve? Draw a neat sketch and show all details.

b) A discharge of 700 m^3/s flows down a spillway and then passes on a 70 m. Wide concrete apron (n = 0.015) the velocity of water at the toe of spillway is 8.5 m/s. A tail water depth of 4.20 m the channel below causes a hydraulic jump on the horizontal apron. Determine
1) Depth before the jump
2) Length of jump
3) Energy loss in jump
4) Specific force at the toe

c) What do you understand by most economical channel section? Derive most economical trapezoidal channel section.

Section – II

Q.4 Attempt any four **16**

a) Explain
   1) Regime channel
   2) Meandering of river

b) Enlist methods of River gauging and explain any one of it.

c) Derive 'Froude's model law' for model and state giving examples where it can be used?

d) What do you understand by River training works? What are its types?

e) A model of water meter is tested in 100 mm diameter pipe. The discharge was 60 lit/sec and pressure difference is 0.15 N/mm^2. What will be the discharge in pipe of 500 mm diameter pipe and what will be the pressure.

Q.5 Attempt any TWO **12**

a) Draw a neat sketch of current meter and explain its working in details.

b) Write procedure for Kennedy's theory for the design of channel.

c) Design a regime channel by using Lacey's theory from the data, discharge = $60 m^3/s$ and silt factor = 1.14

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Open Channel flow & River Hydraulics (BTN01617)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Draw neat sketches wherever necessary.
5) Use of non-programmable calculator is permitted.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. **14**

1) The momentum correction factor, β is given as _____.
a) $1/V^2A\int.V^3.dA$ b) $1/VA\int.V.dA$
c) $1/V^3A\int.V^2.dA$ d) $1/V^2A\int.V^2.dA$

2) What type of force is completely responsible for the bed load movement?
a) Forces of Turbulence b) Drag Force
c) Capillary Force d) Gravity Force

3) Extreme condition of meanders is called as _____.
a) Leavee b) Spurs
c) Cut-off d) Island

4) Which category of river training work deals with flood control?
a) Training for Sediment b) Low Water Training
c) Training for Depth d) Training for Discharge

5) The Lacey's equation for a regime channel consists of a set of 'x' independent equation relating to flow, where 'x' is equal to _____.
a) 1 b) 3
c) 5 d) 8

6) The similarity between the motion of model and prototype is _____.
a) Dynamic similarity b) Potential similarity
c) Kinematic similarity d) Design similarity

7) Which among the following is not a criteria to achieve similitude?
a) Geometric similarity b) Kinematic similarity
c) Dynamic similarity d) Conditional similarity

8) If the Froude's number is 10 then the jump is known as _____.
a) Steady b) Oscillating
c) Undular d) Strong

9) Specific force represents the sum of pressure force and _____.
a) Datum head
b) Momentum flux per unit weight
c) Momentum flux and datum head
d) None

10) The ratio of inertia force and gravitational force is called as _____.
a) Reynolds number b) Stokes number
c) Froude's number d) Euler's number

11) The ratio of Hydraulic radius and Hydraulic depth is ½ and the top width of the channel is 6m, calculate the hydraulic depth of the channel.
a) 1m b) 2m
c) 3m d) 4m

12) River plains are made up of _____.
a) Black soil b) Red soil
c) Alluvium d) None

13) Which geometric parameter determines the efficiency of the channel?
a) Hydraulic depth b) Hydraulic radius
c) Section factor d) Normal depth

14) The mean velocity in Lacey's regime channel is proportional to _____.
a) $11\ \mathrm{R}^{1/2}\mathrm{S}_0^{1/2}$ b) $10.8\ \mathrm{D}^{2/3}\mathrm{S}_0^{1/3}$
c) $11\ \mathrm{DS}_0$ d) None

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) According to CPCB the major criteria considered for selection of technologies are _____.
a) Waste quantity b) Chemical analysis
c) Lead content d) Mercury content

2) E- Waste Handling rule was enacted in year _____.
a) 2011 b) 2012
c) 2015 d) 2018

3) The goal of Hazardous Waste Management Unit is _____.
a) Protect health and environment by risks of HW
b) Chemical Analysis
c) Import
d) Export

4) M R F's term in SWM is used for _____.
a) Major relief funds b) Material recovery facilities
c) Minimum raw food d) None of the above

5) Characteristics of hazardous waste includes _____.
a) Ignitibility b) Reactivity
c) Both of the above d) None of the above

6) Separation, processing of solid waste are used to reduce _____.
a) Volume of S.W. b) Weight of S.W.
c) Both a) and b) d) None of these

7) What is the normal storage time of incinerable hazardous waste at the incinerator site?
a) 4 months b) 5 months
c) 6 months d) 7 months

8) Hazard identification mainly focus on _____.
a) Chemical Analysis
b) Chemical source and concentration
c) Chemical exposure
d) Chemical pathway

9) Which of the following is the most important variable in the construction of soil liners?

a) Type of compaction b) Permeability
c) Flammability d) Ignitability

10) Who is responsible for safe disposal of the generated hazardous waste_____.

a) Generator b) Receiver
c) Waste facility d) TSDF

11) Biomedical wastes and management rules was implemented in year _____.

a) 1980 b) 1998
c) 2000 d) 2016

12) The pyrolysis process of SWM is _____ in nature.

a) Endothermic b) Exothermic
c) Herothermic d) None of the above

13) Removing all wastes from the waste management unit and decontaminate or remove all equipment is known as _____ closure.

a) Partial b) Full
c) Clean d) Decontaminate

14) What is the first stage of risk assessment?

a) Exposure assessment b) Hazard identification
c) Toxicity study d) Risk characterization

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 from section I and Q. No. 6 from section II is compulsory. Solve any two from remaining questions each from Section I and Section II.
2) Figures to right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 a) Estimate the moisture content of solid waste sample of 100 kg using the following data. **05**

Sr. No.	Component	% by mass	Moisture content (%)
1	Food waste	12	70
2	Paper	38	07
3	Cardboards	05	05
4	Plastic	10	08
5	Grass	12	56
6	Wood	08	04
7	Metals	15	05

b) Write a note on waste minimization and resource recovery. **05**

Q.3 a) Explain the importance of Planning and Organization in Solid Waste Management. **05**
b) Explain the General Provision of Law for specific categories of waste collected by Municipal Authorities. **04**

Q.4 a) Explain the TCLP procedure in detail. **05**
b) Explain methodology of incineration with the help of flow sheet diagram. **04**

Q.5 a) Explain SWM rules in detail. **05**
b) Explain Chemical characteristics of solid waste in detail. **04**

Section – II

Q.6 a) Explain various types of hazards using practical examples. **05**
b) Explain the geomorphological hazards. **05**

Q.7 a) Analyse the risk assessment plan in case of earthquake. **05**
b) Discus various qualitative assessments of damage. **04**

Q.8	**a)**	Explain treatment methods of biomedical waste.	**05**
	b)	Elucidate characteristics of hazardous waste using examples.	**04**
Q.9	**a)**	Explain biological degradation phases in the Landfill.	**05**
	b)	With the help of neat diagram, explain the working of engineering landfill.	**04**

Seat No.	

Set **R**

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Solid and Hazardous Waste Management (BTN01618)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Biomedical wastes and management rules was implemented in year _____.
a) 1980 b) 1998
c) 2000 d) 2016

2) The pyrolysis process of SWM is _____ in nature.
a) Endothermic b) Exothermic
c) Herothermic d) None of the above

3) Removing all wastes from the waste management unit and decontaminate or remove all equipment is known as _____ closure.
a) Partial b) Full
c) Clean d) Decontaminate

4) What is the first stage of risk assessment?
a) Exposure assessment b) Hazard identification
c) Toxicity study d) Risk characterization

5) According to CPCB the major criteria considered for selection of technologies are _____.
a) Waste quantity b) Chemical analysis
c) Lead content d) Mercury content

6) E- Waste Handling rule was enacted in year _____.
a) 2011 b) 2012
c) 2015 d) 2018

7) The goal of Hazardous Waste Management Unit is _____.
a) Protect health and environment by risks of HW
b) Chemical Analysis
c) Import
d) Export

8) M R F's term in SWM is used for _____.
a) Major relief funds b) Material recovery facilities
c) Minimum raw food d) None of the above

9) Characteristics of hazardous waste includes _____.
a) Ignitibility b) Reactivity
c) Both of the above d) None of the above

10) Separation, processing of solid waste are used to reduce _____.
a) Volume of S.W. b) Weight of S.W.
c) Both a) and b) d) None of these

11) What is the normal storage time of incinerable hazardous waste at the incinerator site?
a) 4 months b) 5 months
c) 6 months d) 7 months

12) Hazard identification mainly focus on _____.
a) Chemical Analysis
b) Chemical source and concentration
c) Chemical exposure
d) Chemical pathway

13) Which of the following is the most important variable in the construction of soil liners?
a) Type of compaction b) Permeability
c) Flammability d) Ignitability

14) Who is responsible for safe disposal of the generated hazardous waste_____.
a) Generator b) Receiver
c) Waste facility d) TSDF

Day & Date: Thursday, 21-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book page no 03 (Starting page of the Answer Book)
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Write the correct option for each question.
5) While solving MCQ, IS 456-2000, IS 3370 and IS 1343 are not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) If longitudinally spanning stairs are casted along with their landings, the maximum bending moment per metre width, is taken as _____. 01
a) $wl^2/4$ b) $wl^2/8$
c) $wl^2/10$ d) $wl^2/12$

2) In stair case design find weight of steps per meter run if thickness of slab is 280 mm, Riser of 150 mm and tread of 300 mm and unit weight of concrete is 2500 kg/m^3 _____. 01
a) 3.48 kN/m b) 1.88 kN/m
c) 3.75 kN/m d) 7.55 kN/m

3) What will be the size of footing required. If a square column carries a load of 600 kN use M-20 grade of Concrete and Fe-415 grade of steel. SBC of soil is 180 kN/m^2 _____. 01
a) 6.66 m^2 b) 5.28 m^2
c) 3.33 m^2 d) 3.67 m^2

4) All are the component of retaining wall except? 01
a) Toe Slab b) Heel Slab
c) Stem d) Surcharge

5) In water tank, for Fe_{500} the permissible tensile stress is _____. 01
a) 130 N/mm^2 b) 150 N/mm^2
c) 125 N/mm^2 d) 190 N/mm^2

6) In design of P.S.C. beam section, the no. of fundamental stress conditions to be considered are _____. 01
a) Two b) Four
c) Zero d) Three

7) Which one of the following is categorised as a long-term loss of prestress in a pre-stressed concrete member? 01

a) Loss due to elastic shortening
b) Loss due to relaxation of strands
c) Loss due to friction
d) Loss due to anchorage slip

8) After pre-stressing process is completed, a loss of stress is due to _____. 01

a) Shrinkage of concrete b) Creep of Concrete
c) Elastic shortening of concrete d) All of above

9) Find the area and the depth of foundation required for a column carrying on axial load of 1250 kN. The safe bearing capacity of the soil is 120 kN/m^2. The soil at the sight weighs 18 kN/m^3 and has an angle of repose of 30°. 02

a) 12.46 m^2, 0.75 m b) 10 m^2, 0.6 m
c) 11.46 m^2, 0.74 m d) 11m^2, 0.8 m

10) A concrete beam of rectangular cross section 200 mm × 400 mm is prestressed with a force of 400 kN at an eccentricity of 100 mm. The maximum compressive stress in the concrete is _____. 02

a) 12.5 MPa b) 7.5 MPa
c) 5 MPa d) 2.5 MPa

11) A rectangular beam 250 mm × 600 mm is prestresses by 4 bars 14 mm diameter high tension steel wires located at 200 mm from suffix of the beam. Effective stress in steel wires is 700 MPa. What is the maximum bending moment (due to DL + LL) that can be applied so that no tension developed at the soffit? 02

a) 80 kN-m b) 81.6 kN-m
c) 85 kN-m d) 90 kN-m

SLR-GF-30

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Concrete Structures II (BTN01603)

Day & Date: Thursday, 21-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 and Q. No. 6 are compulsory.
2) Solve any two from Q. No. 3 to Q. No. 5 from Section I and Q. No. 7 to Q. No. 9 from Section II.
3) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.
4) Draw neat sketches where required and assume suitable data if required and state it clearly.

Section – I

Q.2 Design the dog-legged type staircase for a residential building using following data: floor to floor height = 3.2 m, No. of flight per floor = 2, size of steps = 150 mm riser and 250 mm tread, live load is 3 kN/m^2 and assume width of stair is 1.05 m. Use M20 concrete and Fe500 steel. The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. **08**

Q.3 Design a rectangular footing for column axially loaded of size 400 mm × 400 mm carrying 1250 kN load. The SBC of soil is 180 kN/m^2. Use M20 concrete and Fe415 steel. Sketch the details of reinforcement. **10**

Q.4 Design the stem slab of a cantilever retaining wall, if the overall height is 5.2 m. SBC of soil is 180 kN/m^2, angle of repose of the soil is 300 and unit weight of soil 18 kN/m^3, width of the slab base is 3.1 m, toe projection is 0.6 m. Use M25 concrete and Fe500 steel. **10**

Q.5 Design a square water tank having size 5m × 4m × 3.2m, resting on firm ground is free at top, bottom as well as vertical edges are fixed, with following details: depth of water 3.2 m, assume free board of 250 mm and solve by IS code method. Use M25 concrete and Fe415 steel. **10**

Section – II

Q.6 A prestressed concrete beam 400 mm × 650 mm in section has a span 8 m and is subjected to a uniformly distributed load of 8 kN/m including the self wt. of the beam. The external load on the beam consists of a concentrated load of 190 kN at mid span. The prestressing tendons are located at 150 mm form bottom of the section. Calculate the extreme stress in concrete for the mid span. The effective prestressing force is 1275 kN. Solve by following methods: Stress concept method, Strain concept method, load balancing concept. **08**

Q.7 A post tensioned concrete beam 250 mm × 450 mm has a span of 12m. The beam is prestressed by steel wires of area 375 mm^2 provided at a uniform eccentricity of 60 mm with an initial prestress of 1200 N/mm^2. Determine the percentage loss of stress in the wires. Take Es = 210 kN/mm^2, Ec = 35 kN/mm^2, Shrinkage of concrete = 215×10^{-6}, Ultimate creep strain = 22×10^{-6} mm/mm per N/mm^2, shrinkage of concrete = 215×10^{-6}.
Relaxation of steel stress = 5% of the initial stress. Anchorage Slip = 1.25 mm, Friction coefficient for wave effect K = 0.00015 m. **10**

Q.8 Design PSC I section beam for the following span = 15m, superimposed load of 35 kN/m, cube strength of concrete at 28 days is 35 kN/m^2, safe stress in concrete at transfer = 0.5 fck, allowable tensile stress in concrete is $0.129\sqrt{(fck)}$, safe stress in steel is 60% of ultimate stress, total loss of stress 18%, ultimate stress in steel 1450 MPa. **10**

Q.9 A prestressed concrete beam 250 wide and 700 mm deep is subjected to an effective prestressing force of 1390 kN along the longitudinal centroidal axis. The cable may be assumed to be symmetrically placed over mild steel anchor plate in an area 125 mm×325 mm. Design the end block by IS code method. **10**

Q.6 A prestressed concrete beam 400 mm × 650 mm in section has a span 8 m and is subjected to a uniformly distributed load of 8 kN/m including the self wt. of the beam. The external load on the beam consists of a concentrated load of 190 kN at mid span. The prestressing tendons are located at 150 mm form bottom of the section. Calculate the extreme stress in concrete for the mid span. The effective prestressing force is 1275 kN. Solve by following methods: Stress concept method, Strain concept method, load balancing concept. **08**

Q.7 A post tensioned concrete beam 250 mm × 450 mm has a span of 12m. The beam is prestressed by steel wires of area 375 mm^2 provided at a uniform eccentricity of 60 mm with an initial prestress of 1200 N/mm^2. Determine the percentage loss of stress in the wires. Take Es = 210 kN/mm^2, Ec = 35 kN/mm^2, Shrinkage of concrete = 215×10^{-6}, Ultimate creep strain = 22×10^{-6} mm/mm per N/mm^2, shrinkage of concrete = 215×10^{-6}.
Relaxation of steel stress = 5% of the initial stress. Anchorage Slip = 1.25 mm, Friction coefficient for wave effect K = 0.00015 m. **10**

Q.8 Design PSC I section beam for the following span = 15m, superimposed load of 35 kN/m, cube strength of concrete at 28 days is 35 kN/m^2, safe stress in concrete at transfer = 0.5 fck, allowable tensile stress in concrete is $0.129\sqrt{(fck)}$, safe stress in steel is 60% of ultimate stress, total loss of stress 18%, ultimate stress in steel 1450 MPa. **10**

Q.9 A prestressed concrete beam 250 wide and 700 mm deep is subjected to an effective prestressing force of 1390 kN along the longitudinal centroidal axis. The cable may be assumed to be symmetrically placed over mild steel anchor plate in an area 125 mm×325 mm. Design the end block by IS code method. **10**

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Concrete Structures II (BTN01603)

Day & Date: Thursday, 21-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book page no 03 (Starting page of the Answer Book)
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Write the correct option for each question.
5) While solving MCQ, IS 456-2000, IS 3370 and IS 1343 are not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. **14**

1) What will be the size of footing required. If a square column carries a load of 600 kN use M-20 grade of Concrete and Fe-415 grade of steel. SBC of soil is 180 kN/m^2 _____. 01
a) 6.66 m^2 b) 5.28 m^2
c) 3.33 m^2 d) 3.67 m^2

2) All are the component of retaining wall except? 01
a) Toe Slab b) Heel Slab
c) Stem d) Surcharge

3) In water tank, for Fe_{500} the permissible tensile stress is _____. 01
a) 130 N/mm^2 b) 150 N/mm^2
c) 125 N/mm^2 d) 190 N/mm^2

4) In design of P.S.C. beam section, the no. of fundamental stress conditions to be considered are _____. 01
a) Two b) Four
c) Zero d) Three

5) Which one of the following is categorised as a long-term loss of prestress in a pre-stressed concrete member? 01
a) Loss due to elastic shortening
b) Loss due to relaxation of strands
c) Loss due to friction
d) Loss due to anchorage slip

6) After pre-stressing process is completed, a loss of stress is due to _____. 01
a) Shrinkage of concrete b) Creep of Concrete
c) Elastic shortening of concrete d) All of above

7) If longitudinally spanning stairs are casted along with their landings, the maximum bending moment per metre width, is taken as _____. 01

a) $wl^2/4$ b) $wl^2/8$
c) $wl^2/10$ d) $wl^2/12$

8) In stair case design find weight of steps per meter run if thickness of slab is 280 mm, Riser of 150 mm and tread of 300 mm and unit weight of concrete is 2500 kg/m^3 _____. 01

a) 3.48 kN/m b) 1.88 kN/m
c) 3.75 kN/m d) 7.55 kN/m

9) A rectangular beam 250 mm × 600 mm is prestresses by 4 bars 14 mm diameter high tension steel wires located at 200 mm from suffix of the beam. Effective stress in steel wires is 700 MPa. What is the maximum bending moment (due to DL + LL) that can be applied so that no tension developed at the soffit? 02

a) 80 kN-m b) 81.6 kN-m
c) 85 kN-m d) 90 kN-m

10) Find the area and the depth of foundation required for a column carrying on axial load of 1250 kN. The safe bearing capacity of the soil is 120 kN/m^2. The soil at the sight weighs 18 kN/m^3 and has an angle of repose of 30°. 02

a) 12.46 m^2, 0.75 m b) 10 m^2, 0.6 m
c) 11.46 m^2, 0.74 m d) 11m^2, 0.8 m

11) A concrete beam of rectangular cross section 200 mm × 400 mm is prestressed with a force of 400 kN at an eccentricity of 100 mm. The maximum compressive stress in the concrete is _____. 02

a) 12.5 MPa b) 7.5 MPa
c) 5 MPa d) 2.5 MPa

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Concrete Structures II (BTN01603)

Day & Date: Thursday, 21-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 and Q. No. 6 are compulsory.
2) Solve any two from Q. No. 3 to Q. No. 5 from Section I and Q. No. 7 to Q. No. 9 from Section II.
3) Use of IS 456, IS 1343 and IS 3370 part IV and non-programmable calculator is allowed.
4) Draw neat sketches where required and assume suitable data if required and state it clearly.

Section – I

Q.2 Design the dog-legged type staircase for a residential building using following data: floor to floor height = 3.2 m, No. of flight per floor = 2, size of steps = 150 mm riser and 250 mm tread, live load is 3 kN/m^2 and assume width of stair is 1.05 m. Use M20 concrete and Fe500 steel. The stair is supported at top and bottom risers by beam spanning parallel with risers at the landing slab on either side. **08**

Q.3 Design a rectangular footing for column axially loaded of size 400 mm × 400 mm carrying 1250 kN load. The SBC of soil is 180 kN/m^2. Use M20 concrete and Fe415 steel. Sketch the details of reinforcement. **10**

Q.4 Design the stem slab of a cantilever retaining wall, if the overall height is 5.2 m. SBC of soil is 180 kN/m^2, angle of repose of the soil is 300 and unit weight of soil 18 kN/m^3, width of the slab base is 3.1 m, toe projection is 0.6 m. Use M25 concrete and Fe500 steel. **10**

Q.5 Design a square water tank having size 5m × 4m × 3.2m, resting on firm ground is free at top, bottom as well as vertical edges are fixed, with following details: depth of water 3.2 m, assume free board of 250 mm and solve by IS code method. Use M25 concrete and Fe415 steel. **10**

Section – II

Q.6 A prestressed concrete beam 400 mm × 650 mm in section has a span 8 m and is subjected to a uniformly distributed load of 8 kN/m including the self wt. of the beam. The external load on the beam consists of a concentrated load of 190 kN at mid span. The prestressing tendons are located at 150 mm form bottom of the section. Calculate the extreme stress in concrete for the mid span. The effective prestressing force is 1275 kN. Solve by following methods: Stress concept method, Strain concept method, load balancing concept. **08**

Q.7 A post tensioned concrete beam 250 mm × 450 mm has a span of 12m. The beam is prestressed by steel wires of area 375 mm^2 provided at a uniform eccentricity of 60 mm with an initial prestress of 1200 N/mm^2. Determine the percentage loss of stress in the wires. Take Es = 210 kN/mm^2, Ec = 35 kN/mm^2, Shrinkage of concrete = 215×10^{-6}, Ultimate creep strain = 22×10^{-6} mm/mm per N/mm^2, shrinkage of concrete = 215×10^{-6}.
Relaxation of steel stress = 5% of the initial stress. Anchorage Slip = 1.25 mm, Friction coefficient for wave effect K = 0.00015 m. **10**

Q.8 Design PSC I section beam for the following span = 15m, superimposed load of 35 kN/m, cube strength of concrete at 28 days is 35 kN/m^2, safe stress in concrete at transfer = 0.5 fck, allowable tensile stress in concrete is $0.129\sqrt{(fck)}$, safe stress in steel is 60% of ultimate stress, total loss of stress 18%, ultimate stress in steel 1450 MPa. **10**

Q.9 A prestressed concrete beam 250 wide and 700 mm deep is subjected to an effective prestressing force of 1390 kN along the longitudinal centroidal axis. The cable may be assumed to be symmetrically placed over mild steel anchor plate in an area 125 mm×325 mm. Design the end block by IS code method. **10**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Functional organization is invented by _____.
a) Gilberth b) Peter Drucker
c) Fayol d) Taylor

2) An LPP is said to be _____ if has no solution that satisfies all the constraints.
a) Feasible b) Bounded
c) Infeasible d) None of these

3) Simplex method is the method used for _____.
a) value analysis b) network analysis
c) linear programming d) queuing theory

4) Transportation problem can be solved if _____.
a) No. of rows = no. of columns b) No. of rows $\geq$ no. of columns
c) No. of rows $\leq$ no. of columns d) All of these

5) Hungarian trial and error method is suitable for solving _____.
a) Transportation problem b) Assignment problem
c) Games theory d) Simplex method

6) Decision making under Certainty is _____.
a) Deterministic b) Probabilistic
c) Uncertain d) None of these

7) Games without a saddle point require players to play _____.
a) Pure strategy b) Mixed strategy
c) Market strategy d) none

8) In ABC analysis high monitoring and control is required for _____.
a) A class items b) B class items
c) C class items d) All of these

9) The cost of keeping items in inventory is called _____.

a) Set up cost b) Holding cost
c) Shortage cost d) None of these

10) EOQ model helps to find _____.

a) Optimum size of order b) Time interval between order
c) Both a) and b) d) None of these

11) What is at the heart of any ERP system?

a) Information b) Employees
c) Customers d) Database

12) Break even analysis consists of _____.

a) fixed expenses b) variable cost
c) sales revenue d) All of these

13) Average Chart and Range Chart is used for _____.

a) Attributes b) Variables
c) Both (a) and (b) d) None

14) _____ is a tool for monitoring how lean principles are working in an organization.

a) Poka-yoke b) Andon
c) Gemba d) Lean Audit

2) Figures to the right indicates full marks.
3) Assume suitable data wherever necessary & mention it clearly.
4) Use of Non-Programmable calculator is allowed.

Section – I

Q.2 Attempt below question.

a) Enlist and write a note on the "Function of Management". **04**

b) A firm produces two products. These products are processed on three different machines. The time required to manufacture one of each of the three products and the daily capacity of three machines is given in the table below: **04**

Machines	Timer Per unit (minutes)		Machines capacity (minute/day)
M1	3	4	410
M2	4	3	430
M3	2	5	440

Formulate the above data in LPP which is required to determine the daily number of units to be manufactured for each product. The profit per units for product 1 and 2 is Rs. 50/- and Rs. 55/- respectively.

Q.3 Attempt below question.

a) Use Graphic Method to solve the following LPP. **05**

$\text{Max.} Z = 10x_1 + 15x_2$

Subject to

$2x_1 + x_2 \leq 26$

$2x_1 + 4x_2 \leq 56$

$x_1 - x_2 \geq -5$

$x_1, x_2 \geq 0$

b) Find the initial basic feasible solution by North West Cost Method. **04**

	W1	W2	W3	W4	Supply
F1	19	30	50	10	7
F2	70	30	40	60	9
F3	40	8	70	20	18
Demand	5	8	7	14	

Q.4 Attempt below question.

a) A company is bringing out a new product in market with three strategy of production line like full, partial and minimal. The state of nature may be Good demand, fair demand and poor demand with following payoff of profit as shown in table below: **03**

State of Nature (Demand)	Production Lines		
	Full	Partial	Minimal
Good	90	80	60
Fair	60	55	50
Poor	-35	-20	0

Take optimal decision under each of the following decision rules:

1) Maximax
2) Maximin
3) Laplace

b) Construct the dual to the primal problem: **04**

$\text{Max.} Z = 30x_1 + 50x_2$

Subject to

$20x_1 + 60x_2 \leq 500$

$30x_1 + 20x_2 \leq 350$

$50x_1 - 30x_2 \leq 100$

$x_1, x_2 \geq 0$

c) Write a brief note on "Lean Construction Concept in Construction Sector". **04**

Section – II

Q.5 Attempt above question.

a) Explain in brief about "Inventory and cost associated with Inventory" along with objective of Inventory management? **05**

b) A construction company consumes 4000 bags of cement per month. Price per bag of cement is Rs. 320/-. Inventory cost is Rs. 30/- and procurement cost per order is Rs. 500/- Find economic order quantity and number of order to be placed per month? **04**

Q.6 Attempt above question.

a) Write a brief note on "ERP" system and its use in Civil construction sector. **04**

c) Explain in brief with various technical terms of "Economic Order Quantity" with neat sketch? **06**

Q.7 Attempt above question.

a) Explain in brief "Statistical Quality Control Technique in construction sector" **04**

b) Construct R Control Chart using following data as given below: **05**
$A_2 = 0.58$, $D_2 = 0$ and $D_3 = 2.11$.

	Sample Observation				
Sample No.	I	II	III	IV	V
1	42	65	75	81	87
2	42	45	68	70	90
3	19	24	80	81	81
4	36	54	69	77	84

3) Assume suitable data wherever necessary & mention it clearly.
4) Use of Non-Programmable calculator is allowed.

Section – I

Q.2 Attempt below question.

a) Enlist and write a note on the "Function of Management". **04**

b) A firm produces two products. These products are processed on three different machines. The time required to manufacture one of each of the three products and the daily capacity of three machines is given in the table below: **04**

Machines	Timer Per unit (minutes)		Machines capacity (minute/day)
M1	3	4	410
M2	4	3	430
M3	2	5	440

Formulate the above data in LPP which is required to determine the daily number of units to be manufactured for each product. The profit per units for product 1 and 2 is Rs. 50/- and Rs. 55/- respectively.

Q.3 Attempt below question.

a) Use Graphic Method to solve the following LPP. **05**

$\text{Max.} Z = 10x_1 + 15x_2$

Subject to

$2x_1 + x_2 \leq 26$

$2x_1 + 4x_2 \leq 56$

$x_1 - x_2 \geq -5$

$x_1, x_2 \geq 0$

b) Find the initial basic feasible solution by North West Cost Method. **04**

	W1	W2	W3	W4	Supply
F1	19	30	50	10	7
F2	70	30	40	60	9
F3	40	8	70	20	18
Demand	5	8	7	14	

Q.4 Attempt below question.

a) A company is bringing out a new product in market with three strategy of production line like full, partial and minimal. The state of nature may be Good demand, fair demand and poor demand with following payoff of profit as shown in table below: **03**

State of Nature (Demand)	Production Lines		
	Full	Partial	Minimal
Good	90	80	60
Fair	60	55	50
Poor	-35	-20	0

Take optimal decision under each of the following decision rules:

1) Maximax
2) Maximin
3) Laplace

b) Construct the dual to the primal problem: **04**

$\text{Max.} Z = 30x_1 + 50x_2$

Subject to

$20x_1 + 60x_2 \leq 500$

$30x_1 + 20x_2 \leq 350$

$50x_1 - 30x_2 \leq 100$

$x_1, x_2 \geq 0$

c) Write a brief note on "Lean Construction Concept in Construction Sector". **04**

Section – II

Q.5 Attempt above question.

a) Explain in brief about "Inventory and cost associated with Inventory" along with objective of Inventory management? **05**

b) A construction company consumes 4000 bags of cement per month. Price per bag of cement is Rs. 320/-. Inventory cost is Rs. 30/- and procurement cost per order is Rs. 500/- Find economic order quantity and number of order to be placed per month? **04**

Q.6 Attempt above question.

a) Write a brief note on "ERP" system and its use in Civil construction sector. **04**

c) Explain in brief with various technical terms of "Economic Order Quantity" with neat sketch? **06**

Q.7 Attempt above question.

a) Explain in brief "Statistical Quality Control Technique in construction sector" **04**

b) Construct R Control Chart using following data as given below: **05**
$A_2 = 0.58$, $D_2 = 0$ and $D_3 = 2.11$.

	Sample Observation				
Sample No.	I	II	III	IV	V
1	42	65	75	81	87
2	42	45	68	70	90
3	19	24	80	81	81
4	36	54	69	77	84

Principles of Management and Quantitative Techniques (BTN01604)

Day & Date: Friday, 22-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to mention question paper set (P/Q/R/S) on top of page.
3) Assume suitable data wherever necessary & mention it clearly.
4) Use of Non-Programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) What is at the heart of any ERP system?
a) Information b) Employees
c) Customers d) Database

2) Break even analysis consists of _____.
a) fixed expenses b) variable cost
c) sales revenue d) All of these

3) Average Chart and Range Chart is used for _____.
a) Attributes b) Variables
c) Both (a) and (b) d) None

4) _____ is a tool for monitoring how lean principles are working in an organization.
a) Poka-yoke b) Andon
c) Gemba d) Lean Audit

5) Functional organization is invented by _____.
a) Gilberth b) Peter Drucker
c) Fayol d) Taylor

6) An LPP is said to be _____ if has no solution that satisfies all the constraints.
a) Feasible b) Bounded
c) Infeasible d) None of these

7) Simplex method is the method used for _____.
a) value analysis b) network analysis
c) linear programming d) queuing theory

8) Transportation problem can be solved if _____.
a) No. of rows = no. of columns b) No. of rows $\geq$ no. of columns
c) No. of rows $\leq$ no. of columns d) All of these

9) Hungarian trial and error method is suitable for solving _____.
a) Transportation problem b) Assignment problem
c) Games theory d) Simplex method

10) Decision making under Certainty is _____.

a) Deterministic b) Probabilistic
c) Uncertain d) None of these

11) Games without a saddle point require players to play _____.

a) Pure strategy b) Mixed strategy
c) Market strategy d) none

12) In ABC analysis high monitoring and control is required for _____.

a) A class items b) B class items
c) C class items d) All of these

13) The cost of keeping items in inventory is called _____.

a) Set up cost b) Holding cost
c) Shortage cost d) None of these

14) EOQ model helps to find _____.

a) Optimum size of order b) Time interval between order
c) Both a) and b) d) None of these

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) In 52kg rail, 52kg means:
a) It is the weight of the sleeper per meter
b) It is the weight of the rail per meter
c) It is the rail number laid under the PSC sleeper
d) It is the sleeper number for flat-footed rail

2) For a sleeper density of (n+5), the number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is:
a) 975 b) 918
c) 900 d) 880

3) Pandrol clips or Elastic Clips are used for _____.
a) Holding the rails to the concrete sleepers
b) Fixing the Double-headed rails to the wooden sleepers
c) Fixing the Bull-headed rails to the wooden sleepers
d) Fixing the Flat-footed rails to the cast iron sleepers

4) The grade compensation of a 4° curve on a Broad-Gauge railway track is ____.
a) 0.20% b) 0.16%
c) 0.12% d) 0.08%

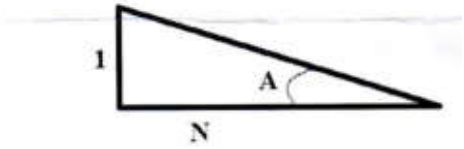
5) The groove rubber pad is fixed between _____.
a) Sleeper and Ballast b) Ballast and rail
c) Rail and Sleeper d) Rail and wheel

6) Cant deficiency occurs when a vehicle travels around a curve at?
a) Equilibrium speed
b) Speeds higher than the equilibrium speed
c) Speed lower than equilibrium speed
d) Booked speed

7) What is the curve resistance for a 50 tonnes train on a BG track on a 4° curve?

a) 0.05 tonne
b) 0.06 tonne
c) 0.08 tonne
d) 0.01 tonne

8) If A is the angle formed by two-gauge faces, the crossing number will be _____.



a) tanA
b) cotA
c) secA
d) cosA

9) When Semaphore and Warner are installed on the same post, then the stop indication is given when _____.

a) Both arms are horizontal
b) Semaphore arm lowered but Warner arm horizontal
c) Both Semaphore and Warner lowered
d) None of the above

10) At a certain station, the mean of the average temperature is 25°C and the mean of the maximum daily temperature is 40°C. What is the airport reference temperature (ART)?

a) 46.6°C
b) 45°C
c) 35°C
d) 30°C

11) The runway length after correcting for elevation and temperature is 2845m. If the effective gradient on the runway is 0.5%, then the revised runway length will be, _____.

a) 2845.5m
b) 2910.5m
c) 3030.5m
d) 3129.5m

12) The best direction of a runway is along the direction of:

a) Longest line on the wind rose diagram
b) Shortest line on the wind rose diagram
c) Line clear of wind rose diagram
d) None of these

13) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.

a) Dolphin
b) Wharf
c) Pier heads
d) Jetties

14) Which of the following structures protects the shore by trapping littoral drift?

a) Seawalls
b) Groynes
c) Revetments
d) Moles

Seat No.	

Set **P**

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Railway, Airport & Harbour Engineering (BTN01605)

Day & Date: Saturday, 23-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section - I, Q. No. 2 is compulsory and solve any TWO questions from remaining questions (Q. No. 3, 4 & 5).
2) In Section - II, Q. No. 6 is compulsory and solve any TWO questions from remaining questions (Q. No. 7, 8 & 9).
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

Section – I

Q.2 Answer any two questions. **14**

a) What do you understand by gauge? Mention the different gauges used on Indian Railways and their suitability.

b) Discuss the necessity and effects of coning of wheels and tilting of rails.

c) Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22 t each can pull on a straight level track at a speed of 80 km/h. Also, calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. Assume the coefficient of friction to be 0.2.

d) Write short Notes on any two
i) Hauling Capacity and Tractive Effort
ii) Equilibrium cant and cant deficiency
iii) Negative Superelevation
iv) Creep of rails

Q.3 Answer any two questions. **14**

a) Calculate the superelevation and the maximum permissible speed for a 2° BG transitioned curve on a high-speed route with a maximum sanctioned speed of 110 km/h. The speed for calculating the equilibrium superelevation as decided by the chief engineer is 80 km/h and the booked speed of goods trains is 50 km/h. Assume G = 1750mm and Radius = 875m.

b) A 5° curve diverges from a 3° main curve in the reverse direction in the layout of a B.G yard. If the speed on the branch line is restricted to 35 kmph. Determine the restricted speed on the mainline. Consider G = 1.676m C_d = 76mm and 30m chord length.

c) Briefly describe the locations and purposes of the following signals.
1) Warner 2) Outer 3) Home
4) Starter 5) Advance starter

d) Calculate all the necessary elements required to set out a 1 in 8.5 turnout taking off from a straight B.G track with its curve starting from the toe of the switch i.e., tangential to the gauge face of the outer main rail and passes through the theoretical nose of crossing. Adopt Method- I of turnout design. Consider heel divergence(d) = 11.4cm.

Section – II

Q.4 Answer any two questions. **14**

a) What are the imaginary surfaces? Explain any two imaginary surfaces with a neat sketch.

b) What is a wind rose diagram? What are its types and explain any one with neat sketch.

c) Summarize briefly the various runway geometries as recommended by ICAO.

d) The length of the runway under standard conditions is 1620m. The airport site has an elevation of 270m. Its reference temperature is 32.94°C. If the runway is to be constructed with an effective gradient of 0.20 percent, determine the corrected runway length. Check total correction for elevation plus temperature.

Q.5 Answer any two questions. **14**

a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle of turn is 35° and the maximum turn-off speed is 80 kmph. Assume the radius of the entrance curve = 731m, runway width = 45m, taxiway width = 22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m

b) Define breakwater and list the different types of breakwaters. Explain anyone with a sketch.

c) What are the fenders? Why are they used? Describe various types of fenders with sketches.

d) What are dolphins? Describe their types.

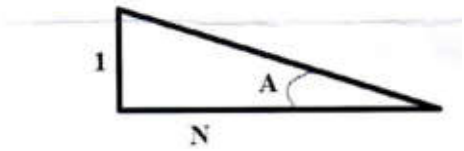
Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) If A is the angle formed by two-gauge faces, the crossing number will be _____.



a) tanA b) cotA
c) secA d) cosA

2) When Semaphore and Warner are installed on the same post, then the stop indication is given when _____.
a) Both arms are horizontal
b) Semaphore arm lowered but Warner arm horizontal
c) Both Semaphore and Warner lowered
d) None of the above

3) At a certain station, the mean of the average temperature is 25°C and the mean of the maximum daily temperature is 40°C. What is the airport reference temperature (ART)?
a) 46.6°C b) 45°C
c) 35°C d) 30°C

4) The runway length after correcting for elevation and temperature is 2845m. If the effective gradient on the runway is 0.5%, then the revised runway length will be, _____.
a) 2845.5m b) 2910.5m
c) 3030.5m d) 3129.5m

5) The best direction of a runway is along the direction of:
a) Longest line on the wind rose diagram
b) Shortest line on the wind rose diagram
c) Line clear of wind rose diagram
d) None of these

6) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.
a) Dolphin b) Wharf
c) Pier heads d) Jetties

7) Which of the following structures protects the shore by trapping littoral drift?
a) Seawalls b) Groynes
c) Revetments d) Moles

8) In 52kg rail, 52kg means:
a) It is the weight of the sleeper per meter
b) It is the weight of the rail per meter
c) It is the rail number laid under the PSC sleeper
d) It is the sleeper number for flat-footed rail

9) For a sleeper density of (n+5), the number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is:
a) 975 b) 918
c) 900 d) 880

10) Pandrol clips or Elastic Clips are used for _____.
a) Holding the rails to the concrete sleepers
b) Fixing the Double-headed rails to the wooden sleepers
c) Fixing the Bull-headed rails to the wooden sleepers
d) Fixing the Flat-footed rails to the cast iron sleepers

11) The grade compensation of a 4° curve on a Broad-Gauge railway track is ____.
a) 0.20% b) 0.16%
c) 0.12% d) 0.08%

12) The groove rubber pad is fixed between _____.
a) Sleeper and Ballast b) Ballast and rail
c) Rail and Sleeper d) Rail and wheel

13) Cant deficiency occurs when a vehicle travels around a curve at?
a) Equilibrium speed
b) Speeds higher than the equilibrium speed
c) Speed lower than equilibrium speed
d) Booked speed

14) What is the curve resistance for a 50 tonnes train on a BG track on a 4° curve?
a) 0.05 tonne b) 0.06 tonne
c) 0.08 tonne d) 0.01 tonne

Set **Q**

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Railway, Airport & Harbour Engineering (BTN01605)

Day & Date: Saturday, 23-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section - I, Q. No. 2 is compulsory and solve any TWO questions from remaining questions (Q. No. 3, 4 & 5).
2) In Section - II, Q. No. 6 is compulsory and solve any TWO questions from remaining questions (Q. No. 7, 8 & 9).
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

Section – I

Q.2 Answer any two questions. **14**

a) What do you understand by gauge? Mention the different gauges used on Indian Railways and their suitability.

b) Discuss the necessity and effects of coning of wheels and tilting of rails.

c) Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22 t each can pull on a straight level track at a speed of 80 km/h. Also, calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. Assume the coefficient of friction to be 0.2.

d) Write short Notes on any two
i) Hauling Capacity and Tractive Effort
ii) Equilibrium cant and cant deficiency
iii) Negative Superelevation
iv) Creep of rails

Q.3 Answer any two questions. **14**

a) Calculate the superelevation and the maximum permissible speed for a 2° BG transitioned curve on a high-speed route with a maximum sanctioned speed of 110 km/h. The speed for calculating the equilibrium superelevation as decided by the chief engineer is 80 km/h and the booked speed of goods trains is 50 km/h. Assume G = 1750mm and Radius = 875m.

b) A 5° curve diverges from a 3° main curve in the reverse direction in the layout of a B.G yard. If the speed on the branch line is restricted to 35 kmph. Determine the restricted speed on the mainline. Consider G = 1.676m C_d = 76mm and 30m chord length.

c) Briefly describe the locations and purposes of the following signals.
1) Warner 2) Outer 3) Home
4) Starter 5) Advance starter

d) Calculate all the necessary elements required to set out a 1 in 8.5 turnout taking off from a straight B.G track with its curve starting from the toe of the switch i.e., tangential to the gauge face of the outer main rail and passes through the theoretical nose of crossing. Adopt Method- I of turnout design. Consider heel divergence(d) = 11.4cm.

Section – II

Q.4 Answer any two questions. **14**

a) What are the imaginary surfaces? Explain any two imaginary surfaces with a neat sketch.

b) What is a wind rose diagram? What are its types and explain any one with neat sketch.

c) Summarize briefly the various runway geometries as recommended by ICAO.

d) The length of the runway under standard conditions is 1620m. The airport site has an elevation of 270m. Its reference temperature is 32.94°C. If the runway is to be constructed with an effective gradient of 0.20 percent, determine the corrected runway length. Check total correction for elevation plus temperature.

Q.5 Answer any two questions. **14**

a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle of turn is 35° and the maximum turn-off speed is 80 kmph. Assume the radius of the entrance curve = 731m, runway width = 45m, taxiway width = 22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m

b) Define breakwater and list the different types of breakwaters. Explain anyone with a sketch.

c) What are the fenders? Why are they used? Describe various types of fenders with sketches.

d) What are dolphins? Describe their types.

Seat No.

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Railway, Airport & Harbour Engineering (BTN01605)

Day & Date: Saturday, 23-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) The runway length after correcting for elevation and temperature is 2845m. If the effective gradient on the runway is 0.5%, then the revised runway length will be, _____.
a) 2845.5m b) 2910.5m
c) 3030.5m d) 3129.5m

2) The best direction of a runway is along the direction of:
a) Longest line on the wind rose diagram
b) Shortest line on the wind rose diagram
c) Line clear of wind rose diagram
d) None of these

3) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.
a) Dolphin b) Wharf
c) Pier heads d) Jetties

4) Which of the following structures protects the shore by trapping littoral drift?
a) Seawalls b) Groynes
c) Revetments d) Moles

5) In 52kg rail, 52kg means:
a) It is the weight of the sleeper per meter
b) It is the weight of the rail per meter
c) It is the rail number laid under the PSC sleeper
d) It is the sleeper number for flat-footed rail

6) For a sleeper density of (n+5), the number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is:
a) 975 b) 918
c) 900 d) 880

7) Pandrol clips or Elastic Clips are used for _____.
a) Holding the rails to the concrete sleepers
b) Fixing the Double-headed rails to the wooden sleepers
c) Fixing the Bull-headed rails to the wooden sleepers
d) Fixing the Flat-footed rails to the cast iron sleepers

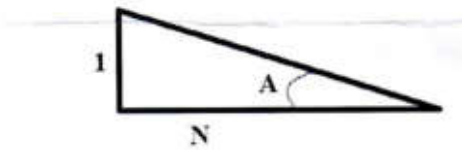
8) The grade compensation of a 4° curve on a Broad-Gauge railway track is ____.
a) 0.20% b) 0.16%
c) 0.12% d) 0.08%

9) The groove rubber pad is fixed between _____.
a) Sleeper and Ballast b) Ballast and rail
c) Rail and Sleeper d) Rail and wheel

10) Cant deficiency occurs when a vehicle travels around a curve at?
a) Equilibrium speed
b) Speeds higher than the equilibrium speed
c) Speed lower than equilibrium speed
d) Booked speed

11) What is the curve resistance for a 50 tonnes train on a BG track on a 4° curve?
a) 0.05 tonne b) 0.06 tonne
c) 0.08 tonne d) 0.01 tonne

12) If A is the angle formed by two-gauge faces, the crossing number will be _____.



a) tanA b) cotA
c) secA d) cosA

13) When Semaphore and Warner are installed on the same post, then the stop indication is given when _____.
a) Both arms are horizontal
b) Semaphore arm lowered but Warner arm horizontal
c) Both Semaphore and Warner lowered
d) None of the above

14) At a certain station, the mean of the average temperature is 25°C and the mean of the maximum daily temperature is 40°C. What is the airport reference temperature (ART)?
a) 46.6°C b) 45°C
c) 35°C d) 30°C

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) How many steps are there in the disaster recovery process?
a) 7 b) 4
c) 8 d) 5

2) Which one of the following is not a Natural Disaster?
a) Volcano eruption b) Flood
c) Blow-out d) Tsunami

3) Which one of the following is the nodal ministry at the center for coordinating disaster management activities for all-natural disasters except drought?
a) ministry of agricultural
b) ministry of home affairs
c) ministry of civil aviation
d) ministry of health and family welfare

4) Which of the following is NOT a phase of emergency management?
a) Resource b) Mitigation
c) Response d) Recovery

5) Find out the main objectives of the search and rescue team from the following.
I) rescue the survivors trapped under debris
II) provide first-aid service to the trapped survivors
III) hand over, recover and dispose of the deceased bodies
IV) listen to all sources of information
a) I, II and IV b) I, III and IV
c) II, III and IV d) I, II and III

6) Who among the following is the first to respond when a disaster strikes?
a) N.G.O. b) local administration
c) affected community members d) local community members

7) Who among the following is the most affected during the famine?
a) bank workers b) doctors
c) traders d) workers

8) Which one of the following is mainly considered manmade disaster?
a) Fire
b) Landslide
c) Drought
d) Erosion

9) Disaster management plan was launched by ministry of home affair in _____.
a) 2005
b) 2011
c) 2016
d) 2020

10) Arrange activities of disaster management cycle:
1) Emergency response activities
2) Response and recovery activities
3) Mitigation and preparedness
a) 3, 2, 1
b) 1, 3, 2
c) 1, 2, 3
d) 2, 3, 1

11) Preparedness are the measures taken before a disaster event that is aimed to minimize:
a) Loss of life
b) Disruption of critical services
c) Damage when disaster occurs
d) All of the above

12) National Institute of Disaster Management was inaugurated on _____.
a) September 23, 2002
b) August 14, 2001
c) October 16, 2003
d) August 14, 2004

13) Head office of the National Institute of Disaster Management is situated in India's city/ state?
a) Kolkata
b) New Delhi
c) Hyderabad
d) Manipur

14) Where is the Tsunami Warning Center located in India?
a) New Delhi
b) Hyderabad
c) Gujarat
d) Kolkata

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Disaster Preparedness and Response (BTN01620)

Day & Date: Sunday, 24-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from Section - I (Q2, Q3, Q4).
2) Solve any two questions from Section - II (Q5, Q6, Q7).
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed & mention it clearly.

Section – I

Q.2	**a)**	Define disaster preparedness and explain disaster preparedness measures.	**07**
	b)	Write a short note on disaster preparedness with special needs.	**07**
Q.3	**a)**	Explain concept and significance of disaster preparedness plan.	**07**
	b)	Explain basic essentials of disaster preparedness plan.	**07**
Q.4	**a)**	Explain the role of government in disaster preparedness.	**07**
	b)	Explain the role of education and communication in disaster preparedness.	**07**

Section – II

Q.5	**a)**	Explain identification, propositioning and deployment function in disaster response.	**07**
	b)	Explain resources management.	**07**
Q.6	**a)**	Explain disaster response plan.	**07**
	b)	Explain relief and recovery medical health response of different disasters.	**07**
Q.7	**a)**	Explain impact of media coverage and public communication on disaster preparedness.	**07**
	b)	Explain role of media in disaster mitigation.	**07**

Disaster Preparedness and Response (BTN01620)

Day & Date: Sunday, 24-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 Each question carries one mark.
2) Answer MCQ/Objective type question on page No. 3only. Don't forgot to mention, Q.P. set (P/Q/R/S) on Top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Preparedness are the measures taken before a disaster event that is aimed to minimize:
a) Loss of life
b) Disruption of critical services
c) Damage when disaster occurs
d) All of the above

2) National Institute of Disaster Management was inaugurated on _____.
a) September 23, 2002 b) August 14, 2001
c) October 16, 2003 d) August 14, 2004

3) Head office of the National Institute of Disaster Management is situated in India's city/ state?
a) Kolkata b) New Delhi
c) Hyderabad d) Manipur

4) Where is the Tsunami Warning Center located in India?
a) New Delhi b) Hyderabad
c) Gujarat d) Kolkata

5) How many steps are there in the disaster recovery process?
a) 7 b) 4
c) 8 d) 5

6) Which one of the following is not a Natural Disaster?
a) Volcano eruption b) Flood
c) Blow-out d) Tsunami

7) Which one of the following is the nodal ministry at the center for coordinating disaster management activities for all-natural disasters except drought?
a) ministry of agricultural
b) ministry of home affairs
c) ministry of civil aviation
d) ministry of health and family welfare

8) Which of the following is NOT a phase of emergency management?
a) Resource b) Mitigation
c) Response d) Recovery

9) Find out the main objectives of the search and rescue team from the following.

I) rescue the survivors trapped under debris
II) provide first-aid service to the trapped survivors
III) hand over, recover and dispose of the deceased bodies
IV) listen to all sources of information

a) I, II and IV
b) I, III and IV
c) II, III and IV
d) I, II and III

10) Who among the following is the first to respond when a disaster strikes?

a) N.G.O.
b) local administration
c) affected community members
d) local community members

11) Who among the following is the most affected during the famine?

a) bank workers
b) doctors
c) traders
d) workers

12) Which one of the following is mainly considered manmade disaster?

a) Fire
b) Landslide
c) Drought
d) Erosion

13) Disaster management plan was launched by ministry of home affair in _____.

a) 2005
b) 2011
c) 2016
d) 2020

14) Arrange activities of disaster management cycle:

1) Emergency response activities
2) Response and recovery activities
3) Mitigation and preparedness

a) 3, 2, 1
b) 1, 3, 2
c) 1, 2, 3
d) 2, 3, 1

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose correct alternative (One mark each) **14**

1) The index map shows _____.
a) Topography b) Soil
c) Area of the site d) Plan

2) Detailed size drawings are prepared in which sheet?
a) A1 b) A2
c) A3 d) A4

3) The report that includes all the works including soil, bridges, topography, material studies and drainage studies is called as _____.
a) Feasibility report b) Detailed project report
c) Survey report d) Primary report

4) Which of the following must be considered while conducting a road survey?
a) Density b) Alignment of the curves
c) Specific gravity d) Atmospheric condition

5) Which of the following indicates the objective of road survey?
a) Specific gravity b) Density
c) Pavement design d) Detailed layout of road way

6) Transition curve is introduced in _____.
a) Horizontal curve
b) Circular curve
c) Between horizontal curve and circular curve
d) Vertical curve

7) In India, the type of traffic assumed to design pavements is?
a) Low traffic b) Heavy traffic
c) Mixed traffic flow d) Very low traffic

8) EIA is defined as _____.
a) process of identifying, predicting, and evaluating the likely impacts of a proposed project or development to define mitigation actions to reduce negative impacts and to provide positive contributions to the natural environment and well-being
b) report written by government representatives on the planned development impacts of environment, socio- economic issues and culture
c) project life-cycle assessment
d) None of above

9) What is essential in an EIA?
a) that it allows decision makers to assess a project's impacts in all its phases
b) that it allows the public and other stakeholders to present their views and inputs on the planned development
c) that it contributes to and improve the project design, so that environmental as well as Socio economic measures are core parts of it
d) All of the above

10) EIA is study of probable change in socio economic and characteristics of environment due to proposed action.
a) biophysical b) geological
c) hydrological d) Potential

11) The DPR consists of how many components?
a) One b) Two
c) Three d) Four

12) The first step in the detail checklist of DPR is _____.
a) Executive summary b) Background
c) Roadway features d) General details of the project

13) Group index method of design of flexible pavement is _____.
a) A theoretical method
b) An empirical method based on physical properties of sub-grade soil
c) An empirical method based on strength characteristics of subgrade soil
d) A semi-empirical method

14) In highway construction, rolling starts from _____.
a) Sides and proceed to center
b) Center and proceed to sides
c) One side and proceed to another side
d) Any of the above

d) All of the above

5) EIA is study of probable change in socio economic and characteristics of environment due to proposed action.
a) biophysical b) geological
c) hydrological d) Potential

6) The DPR consists of how many components?
a) One b) Two
c) Three d) Four

7) The first step in the detail checklist of DPR is _____.
a) Executive summary b) Background
c) Roadway features d) General details of the project

8) Group index method of design of flexible pavement is _____.
a) A theoretical method
b) An empirical method based on physical properties of sub-grade soil
c) An empirical method based on strength characteristics of subgrade soil
d) A semi-empirical method

9) In highway construction, rolling starts from _____.
a) Sides and proceed to center
b) Center and proceed to sides
c) One side and proceed to another side
d) Any of the above

10) The index map shows _____.
a) Topography b) Soil
c) Area of the site d) Plan

11) Detailed size drawings are prepared in which sheet?
a) A1 b) A2
c) A3 d) A4

12) The report that includes all the works including soil, bridges, topography, material studies and drainage studies is called as _____.
a) Feasibility report b) Detailed project report
c) Survey report d) Primary report

13) Which of the following must be considered while conducting a road survey?
a) Density b) Alignment of the curves
c) Specific gravity d) Atmospheric condition

14) Which of the following indicates the objective of road survey?
a) Specific gravity b) Density
c) Pavement design d) Detailed layout of road way

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Roads and Highway Project Development (BTN01621)

Day & Date: Sunday, 24-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figure to the right indicate full marks.

Section – I

Q.2 Attempt the Following (Any Two). (7 Marks each) **14**

a) Write down salient features of ongoing Road project in India.
b) Define HR structure of construction industry. Write how to implement HR structure in project.
c) Explain Origin and Distinction Studies. What are the various uses of O & D Studies?

Q.3 Attempt the Following (Any Two) (7 Marks each) **14**

a) Write down material survey, which type of test conducted on highway material.
b) A vertical summit curve is formed when an ascending gradient of 3% another descending gradient of 5%. Find the length of summit curve to provide the required stopping sight distance for a design speed of 80 kmph. Take reaction time of driver is 2.5 sec and F=0.35.
c) Enumerate the various design factors controlling the vertical alignment of highways.

Section – II

Q.4 Attempt the Following (Any Two) (7 Marks each) **14**

a) Describe the various components of process of EIA.
b) Describe stepwise the procedure for environment appraisal.
c) Which type of drawing required for DPR Project explain any one in details.

Q.5 Attempt the Following (Any Two) (7 Marks each) **14**

a) Difference between - Technical and Financial Evaluation
b) Write stepwise procedure of construction of bituminous road.
c) What are the desirable properties of sub grade soil? Enumerate the identification and classification teste of soils.

Sustainable Materials and Green Buildings (BTN01622)

Day & Date: Sunday, 24-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Multiple Choice Questions **14**

1) Which of the following is not the pillar of sustainability?
a) Economy b) Environment
c) Ecology d) Society

2) Earth charter deals with _____.
a) Global consensus
b) Product of decade long, worldwide cross-cultural dialogue
c) Product of dialogue of common goals and shared values
d) All of these

3) Principles of sustainability doesn't include _____.
a) Balance & equity b) System thinking
c) Spiritual values d) None of these

4) Which of the following are parameters of good governance?
a) Accountability b) Participatory
c) Responsive d) All of these

5) Sustainability can't be achieved if _____.
a) Different societies work with unique mindset
b) Different societies work with different mindsets
c) Similar societies work with singular mindset
d) Similar societies work with different mindsets

6) _____ is the invisible part of Mushroom.
a) Mycelium b) Straw Bale
c) Both a & b d) None of these

7) Which of the following is not an economic benefit for a green building?
a) 20 - 30 % energy used b) 20 - 30 % less water used
c) Enhance asset value d) None of these

8) GRIHA has been prepared by _____.
a) USGBC b) TERI
c) LEED d) By own self

9) Which of the following green rating systems are currently working in India?
a) LEED
b) GRIHA
c) Both a and b
d) None of the above

10) Which of the following elements should be used optimum to make a green building?
a) Agni
b) Jal
c) Prithvi
d) All of the above

11) LEED gives rating in form of _____.
a) 1 star, 2 star, 3 star, 4 star, 5 star
b) Platinum, Gold, Silver
c) Both a and b
d) None of the above

12) Which of the following is not the purpose of a green building?
a) To reduce use of water
b) To minimize damage of the environment
c) Re-use of waste materials
d) None of the above

13) The principle of radiator of an engine cooling system is to _____.
a) Increase the air speed as it flows over the hot surface
b) Spread out the hot water over a large area
c) Acts as a reservoir for the water
d) Causes a heat flow by convection currents

14) What is the standard size of mini watershed?
a) 1 - 10 ha
b) 10 - 50 ha
c) 50 - 100 ha
d) 10 - 100 ha

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

1) Which of the following field in which optimization is used?
a) Finance b) Demand and Supply
c) Airline d) All of these

2) Optimization Algorithm are _____.
a) Single Variables Algorithm b) Multi-Variable Algorithm
c) Specialized Algorithm d) All of these

3) Which of the following is not Gradient based method?
a) Steep Descent Method b) Newton Raphson Method
c) Bisection Method d) Golden section Method

4) Bracketing methods are _____.
a) Extensive search method b) Bound phase Method
c) Both a and b d) None of these

5) Region Elimination Methods are _____.
a) Fibonacci search Method b) Golden section Method
c) Both a and b d) None of these.

6) Unidirectional Search is _____.
a) Converting multivariable problem to Single variable problem
b) Finding optimized solution
c) Both a and b
d) None of these

7) Which of the following is not direct search method?
a) Newton Method
b) Powell's Conjugate direction method
c) Box evolutionary search method
d) All of these

8) Optimization Algorithms are _____.
a) Stepwise Procedure b) Maximizing Problem
c) Minimizing Problem d) All of these

9) Number of search direction required in unidirectional search are _____.

a) One b) Two
c) Three d) Four

10) Number of search direction required in Powell's Conjugate Direction Method search are _____.

a) One b) Two
c) Three d) Four

11) Which of the following are specialized methods?

a) Integer Programming b) Geometric Programming
c) Simulated Annealing d) All of these

12) Types of integer programming are _____.

a) Linear Integer Programming
b) Non-Linear Integer Programming
c) Both a and b
d) None of these

13) Process involves in Genetic Algorithm are _____.

a) Mutation b) Crossover
c) Selection d) All of these

Q.2 Answer the following (Any Two) **12**

a) Formulate Optimization Problem in any field.
b) Describe 'Optimization Algorithm' in detail.
c) Explain various application of Optimization.

Q.3 Answer the following (Any Two) **08**

a) Optimize the given function.
$f(x) = x^2 + \frac{54}{x}$ Using Extensive search method.
$a = 0, b = 10, n = 50$

b) Optimize the given function
$f(x) = x^2 - 2x + 1$ Using Bisection method.
$a = 0, b = 5, \varepsilon = 10^{-3}$

c) Optimize the given function using 'Fibonacci Search Method.'
$f(x) = x^2 + \frac{64}{x}$
$F_0 = 1, F_1 = 1, F_2 = 2, F_3 = 3, F_4 = 5, F_5 = 8$
$a = 0, b = 5, n = 3, k = 2$

Q.4 Answer the following (Any Two) **08**

a) Optimize the given function using uni-directional search method.
$f(x) = (x_1 - 4)^2 + (x_2 - 5)^2$
$x^{(0)} = (1,0), \quad s = (1,1), \quad \varepsilon = 10^{-3}$

b) Optimize the given function using Steep-Descent Method.
$f(x) = x_1^2 - x_2 + 2$
$x^{(0)} = (1,1), \quad s = (1,0), \quad \varepsilon = 10^{-3}$

c) Optimize the given function using Powell's conjugate directional Method.
$f(x) = x_1^2 - 3x_1x_2 + x_2^2$
$x^{(0)} = (1,1), \quad s_1 = (1,0), \quad s_2 = (0,1), \quad \varepsilon = 10^{-3}$

Section – II

Q.5 Answer the following (Any Two) **12**

a) Optimize the given function using Integer programming.
$z = 10x + 6y$
Subject to constraints
$x + 2y \leq 16$
$5x + 3y \leq 45$
$x, y \geq 0$

b) Optimize the given function using 'Geometric Programming'.
$f(x) = x_1 - x_1 x_2 + x_2^2$

c) Optimize the given function using Simulated Annealing.
$f(x) = 500 - {x_2}^2 - 2x_1 x_2 - {x_1}^2$

$x^{(0)} = (1,1), \ \varepsilon = 10^{-3}$

Q.6 Answer the following (Any Two) **08**

a) Explain 'Genetic Algorithm' in Details.
b) Write computer programme for 'Simulated Annealing'.
c) What is difference between 'Genetic Algorithm' & 'Traditional Techniques'.

Q.7 Answer the following. (Any Two) **08**

a) Describe various 'Reanalysis' Techniques.
b) What is the concept of 'Multi-Level Optimization'?
c) Explain the concept 'Reduction in size of optimization problem' with example.

Set **Q**

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Engineering System Design Optimization (BTN01623)

Day & Date: Sunday, 24-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

1) Optimization Algorithms are _____.
a) Stepwise Procedure b) Maximizing Problem
c) Minimizing Problem d) All of these

2) Number of search direction required in unidirectional search are _____.
a) One b) Two
c) Three d) Four

3) Number of search direction required in Powell's Conjugate Direction Method search are _____.
a) One b) Two
c) Three d) Four

4) Which of the following are specialized methods?
a) Integer Programming b) Geometric Programming
c) Simulated Annealing d) All of these

5) Types of integer programming are _____.
a) Linear Integer Programming
b) Non-Linear Integer Programming
c) Both a and b
d) None of these

6) Process involves in Genetic Algorithm are _____.
a) Mutation b) Crossover
c) Selection d) All of these

7) Which of the following is not type of crossover?
a) One-point crossover b) Two-point crossover
c) Three-point crossover d) Uniform crossover

8) Which of the following field in which optimization is used?
a) Finance b) Demand and Supply
c) Airline d) All of these

9) Optimization Algorithm are _____.
a) Single Variables Algorithm b) Multi-Variable Algorithm
c) Specialized Algorithm d) All of these

10) Which of the following is not Gradient based method?
a) Steep Descent Method b) Newton Raphson Method
c) Bisection Method d) Golden section Method

11) Bracketing methods are _____.
a) Extensive search method b) Bound phase Method
c) Both a and b d) None of these

12) Region Elimination Methods are _____.
a) Fibonacci search Method b) Golden section Method
c) Both a and b d) None of these.

13) Unidirectional Search is _____.
a) Converting multivariable problem to Single variable problem
b) Finding optimized solution
c) Both a and b
d) None of these

14) Which of the following is not direct search method?
a) Newton Method
b) Powell's Conjugate direction method
c) Box evolutionary search method
d) All of these

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Auger boring is suitable for _____.
a) Hard rock b) Soft to stiff clay
c) Cohesionless soil d) All of the above

2) The weight of hammer in SPT _____.
a) 63 kg b) 64 kg
c) 65 kg d) 62 kg

3) Local shear failure generally occurs in _____.
a) Dense sand b) Dense clay
c) Medium sand d) None

4) The allowable soil pressure for foundation in cohesive soil is generally controlled by _____.
a) Settlements b) Bearing capacity
c) both (a) and (b) d) neither (a) nor (b)

5) Mineral present in expansive soil is _____.
a) Illite b) Montmorillonite
c) Kaolinite d) None

6) If geotextile are used as a reinforcement, then they should have _____.
a) Low modulus of deformation b) High modulus of deformation
c) Low coefficient of friction d) Low breaking strength

7) In case of plate load test seating load to be applied is _____.
a) 7 kPa b) 10 kPa
c) 5 kPa d) 8 kPa

8) Which type of footing is recommended when the property line is so close to one column that a spread footing would be eccentrically loaded when kept entirely within the property _____.
a) Combined footing b) Strap footing
c) Pile foundation d) Mat foundation

9) In the engineering news record formula for determining the safe load carrying capacity of pile the factor of safety used _____.

a) 1.5 b) 3
c) 4.5 d) 6

10) In friction circle method of slope stability analysis, if r defines the radius of the slip circle, the radius if friction circle is _____.

a) $r \sin \Phi$ b) $r \sec \Phi$
c) $r \cos \Phi$ d) $r \tan \Phi$

11) The type hammer used for driving piles are _____.

a) Drop hammer b) Diesel hammer
c) Vibratory hammer d) All of these

12) The group efficiency of driven piles in cohesive soil at a close spacing may be _____.

a) Equal to 100% b) Greater than 100%
c) Less than 100% d) None of the above

13) In stability analysis, the term mobilised shear strength is referred to as _____.

a) Shear strength b) Maximum shear stress
c) Applied shear stress d) None

14) If RQD of the sample is 47% then quality of this sample is _____.

a) Poor b) Good
c) Very good d) Fair

Foundation Engineering (197042601)

Day & Date: Monday, 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section I, Q. 2 is compulsory. Solve any two from remaining questions.
2) In Section II, Q. 6 is compulsory. Solve any two from remaining questions.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.

Section – I

Q.2 **a)** What do you mean by site investigation and write its purposes. **05**

b) The inner diameter of sampling of tube and that of cutting edge are 70mm & 68mm respectively. Their outer diameters are 72mm & 74mm respectively, calculate the **05**
1) Area ratio
2) Inside clearance
3) Outside clearance of the sampler

Q.3 **a)** Differentiate Ultimate bearing capacity and Safe bearing capacity of soil. **04**

b) A square footing located at a depth of 1.3 m below the ground has to carry a safe load of 800kN. Find the size of the following of the footing if the desired factor of safety is 3. The soil has following properties; Void ratio = 0.55; degree of saturation = 50%; Specific Gravity = 2.67; C = 8 kN/m^2; $\Phi = 30°$. Use Terzaghi's analysis. Take $N_c = 37.2, N_q = 22.5, N_\gamma = 19.7$ **05**

Q.4 **a)** Write a short note on General shear failure, Local shear failure. **04**

b) A strip footing 2 m wide carries a load intensity of 400 kN/m^2 at a depth of 1.2 m in sand. The saturated unit weight of sand is 19.3 kN/m^3 and unit weight above water table is 16.8 kN/m^3. The shear strength parameters are $c = 0, \Phi = 35°$. Determine the factor of safety with respect to shear failure for the following cases of location of water table. Use Terzaghi's analysis. $N_q = 41.4$, and $N_\gamma = 42.4$ **05**
a) Water table is 4m below G.L.
b) Water table is 1.2m below G.L.

Q.5 **a)** Explain in detail the Vibro-floatation methods for ground improvement technique. **05**

b) Explain different function of geotextile with suitable example. **04**

Section – II

Q.6 **a)** Calculate the factor of safety with respect to cohesion of a clay slope laid at 1 in 2 to a height of 10m, if the angle of internal friction $\phi = 10°$, $c = 25\ \mathrm{kN/m^2}$ and $\gamma = 19\ \mathrm{kN/m^3}$, What will be the critical height of the slope in this soil? Take (S_n=0.064). **05**

b) Design a combined footing having two square column C_1 - 450 × 450 mm & C_2 - 500 × 500 mm carrying 1000kN and 1200kN respectively. Both columns are 3.5 m away from each other. Column C_1 is 0.5m away from the property line the bearing capacity of soil is 200 mpa. **05**

Q.7 **a)** A group of 9 pile of 600mm diameter is arranged in a square pattern with center to center spacing of 1.2m. The piles are 10m long and are embedded in soft clay with cohesion of 30 kN/m^2. End bearing resistance may be neglected for the piles. Adhesion factor is 0.6. Determine the ultimate load capacity of the pile group. **05**

b) A wooden pile is being driven with a drop hammer weighing 20 kN and having a free fall of 1m, the penetration in the last blow is 5mm. Determine the load carrying capacity of the pile according to the Engineering news formula. **04**

Q.8 **a)** A 5m deep canal has sides slopes of 1:1. The properties of soils are $c = 20\mathrm{kN/m^2}, \phi = 10°\ e = 0.8, G = 2.8$. Taylors stability number is 0.108, determine the factor of safety with respect to cohesion, when the canal runs full. Also find the same in case of sudden drawdown if stability number for this condition is 0.137. **05**

b) Briefly explain the procedure of friction circle method to determine stability of slopes. **04**

Q.9 **a)** Draw a neat labeled sketch of a slope and enlist causes of failure of slope. **04**

b) Design a cantilever sheet pile which is having following details **05**

1) $\gamma = 16\ \mathrm{kN/m^3}$
2) $\phi = 30°$
3) Length of sheet pile 5.0 m

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Foundation Engineering (197042601)

Day & Date: Monday, 18-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Which type of footing is recommended when the property line is so close to one column that a spread footing would be eccentrically loaded when kept entirely within the property _____.
a) Combined footing b) Strap footing
c) Pile foundation d) Mat foundation

2) In the engineering news record formula for determining the safe load carrying capacity of pile the factor of safety used _____.
a) 1.5 b) 3
c) 4.5 d) 6

3) In friction circle method of slope stability analysis, if r defines the radius of the slip circle, the radius if friction circle is _____.
a) $r \sin \Phi$ b) $r \sec \Phi$
c) $r \cos \Phi$ d) $r \tan \Phi$

4) The type hammer used for driving piles are _____.
a) Drop hammer b) Diesel hammer
c) Vibratory hammer d) All of these

5) The group efficiency of driven piles in cohesive soil at a close spacing may be _____.
a) Equal to 100% b) Greater than 100%
c) Less than 100% d) None of the above

6) In stability analysis, the term mobilised shear strength is referred to as _____.
a) Shear strength b) Maximum shear stress
c) Applied shear stress d) None

7) If RQD of the sample is 47% then quality of this sample is _____.
a) Poor b) Good
c) Very good d) Fair

8) Auger boring is suitable for _____.
a) Hard rock b) Soft to stiff clay
c) Cohesionless soil d) All of the above

9) The weight of hammer in SPT _____.
a) 63 kg b) 64 kg
c) 65 kg d) 62 kg

10) Local shear failure generally occurs in _____.
a) Dense sand b) Dense clay
c) Medium sand d) None

11) The allowable soil pressure for foundation in cohesive soil is generally controlled by _____.
a) Settlements b) Bearing capacity
c) both (a) and (b) d) neither (a) nor (b)

12) Mineral present in expansive soil is _____.
a) Illite b) Montmorillonite
c) Kaolinite d) None

13) If geotextile are used as a reinforcement, then they should have _____.
a) Low modulus of deformation b) High modulus of deformation
c) Low coefficient of friction d) Low breaking strength

14) In case of plate load test seating load to be applied is _____.
a) 7 kPa b) 10 kPa
c) 5 kPa d) 8 kPa

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Foundation Engineering (197042601)

Day & Date: Monday, 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) In Section I, Q. 2 is compulsory. Solve any two from remaining questions.
2) In Section II, Q. 6 is compulsory. Solve any two from remaining questions.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.

Section – I

Q.2 **a)** What do you mean by site investigation and write its purposes. **05**

b) The inner diameter of sampling of tube and that of cutting edge are 70mm & 68mm respectively. Their outer diameters are 72mm & 74mm respectively, calculate the **05**
1) Area ratio
2) Inside clearance
3) Outside clearance of the sampler

Q.3 **a)** Differentiate Ultimate bearing capacity and Safe bearing capacity of soil. **04**

b) A square footing located at a depth of 1.3 m below the ground has to carry a safe load of 800kN. Find the size of the following of the footing if the desired factor of safety is 3. The soil has following properties; Void ratio = 0.55; degree of saturation = 50%; Specific Gravity = 2.67; C = 8 kN/m^2; $\Phi = 30°$. Use Terzaghi's analysis. Take $N_c = 37.2, N_q = 22.5, N_\gamma = 19.7$ **05**

Q.4 **a)** Write a short note on General shear failure, Local shear failure. **04**

b) A strip footing 2 m wide carries a load intensity of 400 kN/m^2 at a depth of 1.2 m in sand. The saturated unit weight of sand is 19.3 kN/m^3 and unit weight above water table is 16.8 kN/m^3. The shear strength parameters are $c = 0, \Phi = 35°$. Determine the factor of safety with respect to shear failure for the following cases of location of water table. Use Terzaghi's analysis. $N_q = 41.4$, and $N_\gamma = 42.4$ **05**
a) Water table is 4m below G.L.
b) Water table is 1.2m below G.L.

Q.5 **a)** Explain in detail the Vibro-floatation methods for ground improvement technique. **05**

b) Explain different function of geotextile with suitable example. **04**

Section – II

Q.6 **a)** Calculate the factor of safety with respect to cohesion of a clay slope laid at 1 in 2 to a height of 10m, if the angle of internal friction $\phi = 10°$, $c = 25\ \mathrm{kN/m^2}$ and $\gamma = 19\ \mathrm{kN/m^3}$, What will be the critical height of the slope in this soil? Take (S_n=0.064). **05**

b) Design a combined footing having two square column C_1 - 450 × 450 mm & C_2 - 500 × 500 mm carrying 1000kN and 1200kN respectively. Both columns are 3.5 m away from each other. Column C_1 is 0.5m away from the property line the bearing capacity of soil is 200 mpa. **05**

Q.7 **a)** A group of 9 pile of 600mm diameter is arranged in a square pattern with center to center spacing of 1.2m. The piles are 10m long and are embedded in soft clay with cohesion of 30 kN/m^2. End bearing resistance may be neglected for the piles. Adhesion factor is 0.6. Determine the ultimate load capacity of the pile group. **05**

b) A wooden pile is being driven with a drop hammer weighing 20 kN and having a free fall of 1m, the penetration in the last blow is 5mm. Determine the load carrying capacity of the pile according to the Engineering news formula. **04**

Q.8 **a)** A 5m deep canal has sides slopes of 1:1. The properties of soils are $c = 20\mathrm{kN/m^2}, \phi = 10°\ e = 0.8, G = 2.8$. Taylors stability number is 0.108, determine the factor of safety with respect to cohesion, when the canal runs full. Also find the same in case of sudden drawdown if stability number for this condition is 0.137. **05**

b) Briefly explain the procedure of friction circle method to determine stability of slopes. **04**

Q.9 **a)** Draw a neat labeled sketch of a slope and enlist causes of failure of slope. **04**

b) Design a cantilever sheet pile which is having following details **05**

1) $\gamma = 16\ \mathrm{kN/m^3}$
2) $\phi = 30°$
3) Length of sheet pile 5.0 m

Hydraulic Structures & Water Power Engineering (197042602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. **14**

1) While planning a water supply reservoir, as compared to an irrigation reservoir, the design yield may be kept: _____.
a) higher
b) lower
c) medium
d) lower or higher, as per designer's discretion.

2) The 'dead storage' in a dam reservoir is the available volume for collection of silt and sediment, between: _____.
a) bed level of the reservoir and minimum reservoir level
b) bed level of the reservoir and the maximum conservation level in the reservoir
c) bed level of the reservoir and the normal reservoir level
d) none of the above.

3) The vertical downward earthquake acceleration, α_y = 0.1 g, acting on a gravity dam, will _____.
a) increase the resisting weight of the dam by 10%
b) decrease the resisting weight of the dam by 10%
c) increase the uplift by 10%
d) none of the above

4) The type of an arch dam, which generally requires 'overhangs at abutments', is of: _____.
a) constant radius type b) variable radius type
c) constant angle type d) none of the above

5) The only provision among the following, which can help control the seepage through the body of an earthen dam and, thus, to keep the phreatic line well within the dam width, is:
a) upstream impervious cutoff
b) drain trench along the downstream toe
c) relief wells
d) chimney drain

6) Hydraulic jump is widely used for dissipation of energy in: _____.
a) ogee spillways b) trough spillways
c) side channel spillways d) all of these

7) In vertical stoney spillway gate, the rollers are placed between the: _____.
a) gate and the u/s groove guide b) gate and the d/s groove guide
c) either (a) or (b) d) none of them

8) Point out the incorrect statement in relation to the design of weirs and barrages: _____.
a) Bligh's safe hydraulic gradient is the same as the Khosla's safe exit gradient
b) the first streamline below a barrage section follows the bottom profile of the section
c) equipotential lines are the lines joining the points of equal residual seepage head
d) none of them

9) The gated regulator, which is constructed in the parent canal near the site of an off taking canal, is called a: _____.
a) canal head regulator b) distributary head regulator
c) cross regulator d) None of the above

10) The DBL of a canal and the HFI of a drain at their crossing point are, respectively, 212 m and 210 m. The adopted cross-drainage work here, will be a: _____.
a) super passage b) siphon
c) aqueduct d) siphon aqueduct

11) Water-logging of cropped land leads to reduced crop yields, due to: _____.
a) ill-aeration of root zone, causing lack of oxygen to plants
b) growth of water-loving plants interfering with the sown crop
c) surrounding of the root zone by the resultant saline water, which extracts the good water from plant roots by osmosis
d) all of the above

12) Denehey's spur is: _____.
a) a hockey shaped earthen spur
b) a *T*-shaped stone spur, as used in Australia
c) a *T*-shaped stone spur, as used in India
d) a type of balli spur, especially developed for Indian rivers

13) Identify the correct statement in regard to hydropower: _____.
a) hydropower stations are generally labour oriented
b) Gestation period for hydro-power plant is usually small
c) the hydro generators give high efficiency over a wide range of load
d) in a hydropower scheme, the firm power is usually high, as compared to total power

14) Pondage requirement in a hydropower plant includes the need: _____.
a) to balance the varying demand
b) to compensate for wastage and spillage
c) to balance short time fluctuations in the flow
d) all of these

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydraulic Structures & Water Power Engineering (197042602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 3 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 9 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary and state it clearly.

Section –I

Q.2 **a)** Enumerate different types of earthen dam and explain with neat sketches. **04**
b) What is use of jump height curve and tail water rating curves in dissipation of energy below the spillway, explain briefly. **05**

Q.3 **a)** Explain with neat sketch relief wells and chimney drains. **04**
b) The following are the details of straight gravity concrete dam. Foundation level, R.L. = 205.00 m, height of dam = 100 m, maximum u/s water surface elevation, R.L. = 302.00 m, top width 7 m, base width 75m, upstream face is vertical and downstream face is vertical up to R.L. 296.00 m. Assume no tail water and no gallery. Justify whether the dam is safe against sliding or not. Take unit weight of concrete as 24 kN/m^3 and coefficient of friction between dam and foundation as 0.8 **06**

Q.4 **a)** What is mean by low and high gravity dam? Explain with neat sketches. **04**
b) The amount of water flowing from certain catchment area at the proposed dam site is tabulated as below. Determine **05**
i) Minimum capacity of reservoir if the water is to be used to feed the turbines of hydropower plant at uniform rate and no water is to be spilled over.
ii) The minimum storage capacity of reservoir necessary to satisfy uniform demand calculated as above.

Month	Jan	Feb	Mar	Apr	May	Jun
Inflow $* 10^5 \mathrm{m}^3$	1.4	2.1	2.8	8.4	11.9	11.9
Month	July	Aug	Sept	Oct	Nov	Dec
Inflow $* 10^5 \mathrm{m}^3$	7.7	2.8	2.52	2.24	1.96	1.68

Q.5 **a)** Discuss briefly the techniques those are employed for computing the storage capacity of reservoir for different water surface elevations. **04**
b) Explain with neat sketches: side channel spillway and shaft spillway. **05**

Section – II

Q.6	**a)**	Explain the parameters those are considered while deciding suitability of K.T Weir.	**04**
	b)	Give the detailed classification of canals and explain losses through the canals.	**05**
Q.7	**a)**	Explain the following with neat sketches. 1) canal escape 2) canal outlet	**04**
	b)	What are the different drainage systems employed in irrigation tracts explain with neat sketches.	**05**
Q.8	**a)**	Distinguish clearly between low head Hydropower plants and high head hydropower plants.	**04**
	b)	What is mean by of river meandering? Explain High water, low water and mean water training.	**05**
Q.9	**a)**	What are the principal causes of failure of structures on permeable foundations? Explain the remedies to overcome them.	**04**
	b)	Three turbo generators each of capacity 10000 kW have been installed at a power station. During a certain period of load, the load on the plant varies from 12000 kW to 26000 kW. Determine: 1) Total installed capacity 2) Load factor 3) Plant factor and 4) Utilization factor	**06**

Set **Q**

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Hydraulic Structures & Water Power Engineering (197042602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. **14**

1) Point out the incorrect statement in relation to the design of weirs and barrages: _____.
a) Bligh's safe hydraulic gradient is the same as the Khosla's safe exit gradient
b) the first streamline below a barrage section follows the bottom profile of the section
c) equipotential lines are the lines joining the points of equal residual seepage head
d) none of them

2) The gated regulator, which is constructed in the parent canal near the site of an off taking canal, is called a: _____.
a) canal head regulator b) distributary head regulator
c) cross regulator d) None of the above

3) The DBL of a canal and the HFI of a drain at their crossing point are, respectively, 212 m and 210 m. The adopted cross-drainage work here, will be a: _____.
a) super passage b) siphon
c) aqueduct d) siphon aqueduct

4) Water-logging of cropped land leads to reduced crop yields, due to: _____.
a) ill-aeration of root zone, causing lack of oxygen to plants
b) growth of water-loving plants interfering with the sown crop
c) surrounding of the root zone by the resultant saline water, which extracts the good water from plant roots by osmosis
d) all of the above

5) Denehey's spur is: _____.
a) a hockey shaped earthen spur
b) a *T*-shaped stone spur, as used in Australia
c) a *T*-shaped stone spur, as used in India
d) a type of balli spur, especially developed for Indian rivers

6) Identify the correct statement in regard to hydropower: _____.
   a) hydropower stations are generally labour oriented
   b) Gestation period for hydro-power plant is usually small
   c) the hydro generators give high efficiency over a wide range of load
   d) in a hydropower scheme, the firm power is usually high, as compared to total power

7) Pondage requirement in a hydropower plant includes the need: _____.
   a) to balance the varying demand
   b) to compensate for wastage and spillage
   c) to balance short time fluctuations in the flow
   d) all of these

8) While planning a water supply reservoir, as compared to an irrigation reservoir, the design yield may be kept: _____.
   a) higher
   b) lower
   c) medium
   d) lower or higher, as per designer's discretion.

9) The 'dead storage' in a dam reservoir is the available volume for collection of silt and sediment, between: _____.
   a) bed level of the reservoir and minimum reservoir level
   b) bed level of the reservoir and the maximum conservation level in the reservoir
   c) bed level of the reservoir and the normal reservoir level
   d) none of the above.

10) The vertical downward earthquake acceleration, α_y = 0.1 g, acting on a gravity dam, will _____.
   a) increase the resisting weight of the dam by 10%
   b) decrease the resisting weight of the dam by 10%
   c) increase the uplift by 10%
   d) none of the above

11) The type of an arch dam, which generally requires 'overhangs at abutments', is of: _____.
   a) constant radius type b) variable radius type
   c) constant angle type d) none of the above

12) The only provision among the following, which can help control the seepage through the body of an earthen dam and, thus, to keep the phreatic line well within the dam width, is:
   a) upstream impervious cutoff
   b) drain trench along the downstream toe
   c) relief wells
   d) chimney drain

13) Hydraulic jump is widely used for dissipation of energy in: _____.
   a) ogee spillways b) trough spillways
   c) side channel spillways d) all of these

14) In vertical stoney spillway gate, the rollers are placed between the: _____.
   a) gate and the u/s groove guide b) gate and the d/s groove guide
   c) either (a) or (b) d) none of them

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Hydraulic jump is widely used for dissipation of energy in: _____.
a) ogee spillways b) trough spillways
c) side channel spillways d) all of these

2) In vertical stoney spillway gate, the rollers are placed between the: _____.
a) gate and the u/s groove guide b) gate and the d/s groove guide
c) either (a) or (b) d) none of them

3) Point out the incorrect statement in relation to the design of weirs and barrages: _____.
a) Bligh's safe hydraulic gradient is the same as the Khosla's safe exit gradient
b) the first streamline below a barrage section follows the bottom profile of the section
c) equipotential lines are the lines joining the points of equal residual seepage head
d) none of them

4) The gated regulator, which is constructed in the parent canal near the site of an off taking canal, is called a: _____.
a) canal head regulator b) distributary head regulator
c) cross regulator d) None of the above

5) The DBL of a canal and the HFI of a drain at their crossing point are, respectively, 212 m and 210 m. The adopted cross-drainage work here, will be a: _____.
a) super passage b) siphon
c) aqueduct d) siphon aqueduct

6) Water-logging of cropped land leads to reduced crop yields, due to: _____.
a) ill-aeration of root zone, causing lack of oxygen to plants
b) growth of water-loving plants interfering with the sown crop
c) surrounding of the root zone by the resultant saline water, which extracts the good water from plant roots by osmosis
d) all of the above

7) Denehey's spur is: _____.
a) a hockey shaped earthen spur
b) a *T*-shaped stone spur, as used in Australia
c) a *T*-shaped stone spur, as used in India
d) a type of balli spur, especially developed for Indian rivers

8) Identify the correct statement in regard to hydropower: _____.
a) hydropower stations are generally labour oriented
b) Gestation period for hydro-power plant is usually small
c) the hydro generators give high efficiency over a wide range of load
d) in a hydropower scheme, the firm power is usually high, as compared to total power

9) Pondage requirement in a hydropower plant includes the need: _____.
a) to balance the varying demand
b) to compensate for wastage and spillage
c) to balance short time fluctuations in the flow
d) all of these

10) While planning a water supply reservoir, as compared to an irrigation reservoir, the design yield may be kept: _____.
a) higher
b) lower
c) medium
d) lower or higher, as per designer's discretion.

11) The 'dead storage' in a dam reservoir is the available volume for collection of silt and sediment, between: _____.
a) bed level of the reservoir and minimum reservoir level
b) bed level of the reservoir and the maximum conservation level in the reservoir
c) bed level of the reservoir and the normal reservoir level
d) none of the above.

12) The vertical downward earthquake acceleration, α_y = 0.1 g, acting on a gravity dam, will _____.
a) increase the resisting weight of the dam by 10%
b) decrease the resisting weight of the dam by 10%
c) increase the uplift by 10%
d) none of the above

13) The type of an arch dam, which generally requires 'overhangs at abutments', is of: _____.
a) constant radius type
b) variable radius type
c) constant angle type
d) none of the above

14) The only provision among the following, which can help control the seepage through the body of an earthen dam and, thus, to keep the phreatic line well within the dam width, is:
a) upstream impervious cutoff

4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Flexible pavements transfer load mainly from _____.
a) Grain-to-grain contact of aggregate particles
b) Cohesion alone
c) The binder power of bituminous materials
d) The flexural strength of the surface courses

2) In the three-layer elastic system of pavement design, what are Layer-1, 2, and 3 (From top to Bottom)
a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB
b) Layer-1-WMM and GSB, Layer-2-BC and DBM and Layer-3-Subgrade
c) Layer-1-Subgrade, Layer-2-WMM and GSB and Layer-3-BC and DBM
d) Layer-1-BC and DBM, Layer-2-WMM and GSB, Layer-3-Subgrade

3) Two-layer theory of pavement design is developed by _____.
a) Foster b) Foster and Ahlvin
c) Burmister d) None of these

4) In ESWL concept, the stresses due to wheel load at any depth greater than 2S, is considered to be equivalent to a single wheel load of magnitude, _____.
a) 4P b) 3P
c) 6P d) 2P

5) The modulus of subgrade reaction (K) is determined from, _____.
a) CBR test b) Plate Bearing Test
c) Shear Test d) Triaxial Test

6) CSA means, _____.
a) Cumulative Standard Axles
b) Compressive Strength of aggregate
c) Compressive strength of Asphalt
d) None of these

7) The maximum spacing of contraction joints in rigid pavements is, _____.
a) 2.5m b) 3.5m
c) 4.5m d) 5.5m

8) Identify the correct order of concrete pavement layers in the correct order from bottom to top _____.
a) GSB, Subgrade, DLC, PQC, and 125-micron Polyethylene sheet
b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
c) DLC, PQC, 125-micron Polyethylene sheet, GSB, and Subgrade
d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC

9) Tie bars are placed along the: _____.
a) Contraction joint b) Construction joint
c) Expansion joint d) Longitudinal joint

10) What is the equivalent radius of the resisting section of a 20cm thick slab, given that the radius of the contact area wheel load is 15cm?
a) 13.07cm b) 14.07cm
c) 15.07cm d) 16.07cm

11) Pavement deflection is measured by _____.
a) Bump Integrator b) Benkelman Beam Equipment
c) Pavement Penetrometer d) CBR test

12) Modulus of subgrade reaction (K) is given by, _____.
a) $\mathrm{K} = \mathrm{p}/\Delta$ b) $\mathrm{K} = \Delta/\mathrm{p}$
c) $\mathrm{K} = \Delta.\,\mathrm{p}$ d) $\mathrm{K} = \mathrm{p}.\,\Delta.0.125$

13) The IRC code used for designing the rigid pavement is _____.
a) IRC - 37 b) IRC - 58
c) IRC - 38 d) IRC - 5

14) Critical loading positions in cement concrete pavements are: _____.
a) Interior, edge and middle b) Interior, edge and diagonal
c) Interior, edge and straight d) Interior, edge and corner

T.Y. (B. Tech) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Pavement Design (197042612)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Answer any two questions **14**

a) Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain the function of all layers.

b) Explain ESWL. Briefly explain the graphical method of determination of ESWL.

c) Explain the analysis of stresses in flexible pavement by single-layer system and two-layer system.

d) The traffic studies and axle load distribution studies carried out during project preparation indicated that there are
i) 5600 commercial vehicles per day with rear axle loads in the range of 2500 to 3500 kg and growth rate of 6.5% p.a. and
ii) 1900 heavy commercial vehicles with rear axle loads in the range of 11,000 to 13,000 kg and growth rate of 4.5% p.a. The road pavement is expected to be constructed in a period of 3.0 years after this study and the flexible pavement structure is to be designed for a design life of 15 years. Determine the CSA for design. Assume standard axle load as 8160 kg.

Q.3 Answer any two questions **14**

a) A flexible pavement of thickness 48 cm is laid over a subgrade. A circular load of 16 cm with a uniform contact pressure of 6.5 kg/cm^2 is applied. Assume the elastic modulus of the subgrade as well as the pavement layer to be 900 kg/cm^2. Use the Deflection Factor chart given in Fig-I. Assuming a homogenous elastic single-layer system determine the deflection of the pavement surface under the center of the load.

b) What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16 tonne.
1) LCV with a rear axle load of 2.0t
2) HCV with a rear axle load of 15.5t

c) Find ESWL at depths of 50 mm, 200 mm, and 400 mm for a dual wheel carrying 2044 kN each. The center-to-center tyre spacing is 200 mm and the distance between the walls of the two tyres is 100 mm. Use (log) equation to calculate ESWL.

d) Draw a neat sketch cross section of rigid pavement and explain the functions of each pavement layer in brief.

Section – II

Q.4 Answer any two questions. **14**

a) Explain the different joints provided in the concrete pavement with a neat sketch.

b) With a diagram explain the Benkelman beam's working principle for measuring pavement deflection.

c) C.C. Pavement is constructed using the following data:
1) Modulus of elasticity 3.3×10^5 kg/cm^2
2) Poisson's ratio = 0.15
3) Thickness of CC pavement = 18 cm
4) Modulus of subgrade reaction – 25 kg/cm^3
5) Wheel load = 4100 kg
6) Radius of loaded area = 12 cm

Calculate stresses at the Interior, Edge and corner by Westergaard's method

d) Write a short note on any two:
1) Factors affecting flexible pavement design
2) Two Layered systems concepts of Pavement Design
3) Factors Affecting Rigid Pavement Design
4) Warping stresses in rigid pavement

Q.5 Answer any two questions **14**

a) Determine the warping stresses at the interior, edge, and corner of a 25 cm thick cement concrete pavement with transverse joints at 5.0 m intervals and longitudinal joints at 3.6 m intervals. The modulus of subgrade reaction K is 6.9 kg/cm^3 and the radius of the loaded area is 15 cm. Assume the temperature differential during the day to be $0.6°C$ per cm slab thickness (for warping stress at interior and edge) and a maximum temperature differential of $0.4°C$ per cm slab thickness during the night (for warping stress at the corner).
Assume e = 10×10^{-6} per °C, E = 3×10^5 kg/cm^2, $\mu = 0.15$ Use the Bradbury chart given in Figure II.

b) The rebound deflection values determined at 15 spots are given below. Determine the values of
1) mean deflection
2) Standard deviation and
3) Characteristic deflection

Rebound deflection values in mm: 1.40, 1.32, 1.25, 1.35, 1.48, 1.60, 1.65, 1.55, 1.45, 1.40, 1.36, 1.46, 1.50, 1.52, 1.45.

c) The plate bearing tests were conducted with a 30 cm plate diameter on the soil subgrade and over a base course of the thickness of 45 cm. The pressures yielded at 0.5 cm deflection on the subgrade and base course were 1.25 kg/cm^2 and 8.0 kg/cm^2 respectively. Design the pavement section for 5100 kg wheel load with tyre pressure of 7 kg/cm^2 for an allowable deflection of 0.5 cm using Burmister's two-layer deflection factor chart (Use Figure-III).

d) Explain how warping stresses are formed in C.C. pavements. Describe the Westergaard's equations to calculate warping stresses at critical locations.

CIVIL ENGINEERING
Pavement Design (197042612)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Identify the correct order of concrete pavement layers in the correct order from bottom to top _____.
a) GSB, Subgrade, DLC, PQC, and 125-micron Polyethylene sheet
b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
c) DLC, PQC, 125-micron Polyethylene sheet, GSB, and Subgrade
d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC

2) Tie bars are placed along the: _____.
a) Contraction joint b) Construction joint
c) Expansion joint d) Longitudinal joint

3) What is the equivalent radius of the resisting section of a 20cm thick slab, given that the radius of the contact area wheel load is 15cm?
a) 13.07cm b) 14.07cm
c) 15.07cm d) 16.07cm

4) Pavement deflection is measured by _____.
a) Bump Integrator b) Benkelman Beam Equipment
c) Pavement Penetrometer d) CBR test

5) Modulus of subgrade reaction (K) is given by, _____.
a) $\mathrm{K} = \mathrm{p}/\Delta$ b) $\mathrm{K} = \Delta/\mathrm{p}$
c) $\mathrm{K} = \Delta.\mathrm{p}$ d) $\mathrm{K} = \mathrm{p}.\Delta.0.125$

6) The IRC code used for designing the rigid pavement is _____.
a) IRC - 37 b) IRC - 58
c) IRC - 38 d) IRC - 5

7) Critical loading positions in cement concrete pavements are: _____.
a) Interior, edge and middle b) Interior, edge and diagonal
c) Interior, edge and straight d) Interior, edge and corner

8) Flexible pavements transfer load mainly from _____.
a) Grain-to-grain contact of aggregate particles
b) Cohesion alone
c) The binder power of bituminous materials
d) The flexural strength of the surface courses

9) In the three-layer elastic system of pavement design, what are Layer-1, 2, and 3 (From top to Bottom)
a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB
b) Layer-1-WMM and GSB, Layer-2-BC and DBM and Layer-3-Subgrade
c) Layer-1-Subgrade, Layer-2-WMM and GSB and Layer-3-BC and DBM
d) Layer-1-BC and DBM, Layer-2-WMM and GSB, Layer-3-Subgrade

10) Two-layer theory of pavement design is developed by _____.
a) Foster
b) Foster and Ahlvin
c) Burmister
d) None of these

11) In ESWL concept, the stresses due to wheel load at any depth greater than 2S, is considered to be equivalent to a single wheel load of magnitude, _____.
a) 4P
b) 3P
c) 6P
d) 2P

12) The modulus of subgrade reaction (K) is determined from, _____.
a) CBR test
b) Plate Bearing Test
c) Shear Test
d) Triaxial Test

13) CSA means, _____.
a) Cumulative Standard Axles
b) Compressive Strength of aggregate
c) Compressive strength of Asphalt
d) None of these

14) The maximum spacing of contraction joints in rigid pavements is, _____.
a) 2.5m
b) 3.5m
c) 4.5m
d) 5.5m

Q.1 Choose the correct alternatives from the options. 14

1) CSA means, _____.
a) Cumulative Standard Axles
b) Compressive Strength of aggregate
c) Compressive strength of Asphalt
d) None of these

2) The maximum spacing of contraction joints in rigid pavements is, _____.
a) 2.5m b) 3.5m
c) 4.5m d) 5.5m

3) Identify the correct order of concrete pavement layers in the correct order from bottom to top _____.
a) GSB, Subgrade, DLC, PQC, and 125-micron Polyethylene sheet
b) 125-micron Polyethylene sheet, GSB, Subgrade, DLC and PQC
c) DLC, PQC, 125-micron Polyethylene sheet, GSB, and Subgrade
d) Subgrade, GSB, DLC, 125-micron Polyethylene sheet and PQC

4) Tie bars are placed along the: _____.
a) Contraction joint b) Construction joint
c) Expansion joint d) Longitudinal joint

5) What is the equivalent radius of the resisting section of a 20cm thick slab, given that the radius of the contact area wheel load is 15cm?
a) 13.07cm b) 14.07cm
c) 15.07cm d) 16.07cm

6) Pavement deflection is measured by _____.
a) Bump Integrator b) Benkelman Beam Equipment
c) Pavement Penetrometer d) CBR test

7) Modulus of subgrade reaction (K) is given by, _____.
a) $\mathrm{K} = \mathrm{p}/\Delta$ b) $\mathrm{K} = \Delta/\mathrm{p}$
c) $\mathrm{K} = \Delta.\mathrm{p}$ d) $\mathrm{K} = \mathrm{p}.\Delta.0.125$

8) The IRC code used for designing the rigid pavement is _____.
a) IRC - 37 b) IRC - 58
c) IRC - 38 d) IRC - 5

9) Critical loading positions in cement concrete pavements are: _____.
a) Interior, edge and middle b) Interior, edge and diagonal
c) Interior, edge and straight d) Interior, edge and corner

10) Flexible pavements transfer load mainly from _____.
a) Grain-to-grain contact of aggregate particles
b) Cohesion alone
c) The binder power of bituminous materials
d) The flexural strength of the surface courses

11) In the three-layer elastic system of pavement design, what are Layer-1, 2, and 3 (From top to Bottom)
a) Layer-1-Subgrade, Layer-2-BC and DBM and Layer-3-WMM and GSB
b) Layer-1-WMM and GSB, Layer-2-BC and DBM and Layer-3-Subgrade
c) Layer-1-Subgrade, Layer-2-WMM and GSB and Layer-3-BC and DBM
d) Layer-1-BC and DBM, Layer-2-WMM and GSB, Layer-3-Subgrade

12) Two-layer theory of pavement design is developed by _____.
a) Foster b) Foster and Ahlvin
c) Burmister d) None of these

13) In ESWL concept, the stresses due to wheel load at any depth greater than 2S, is considered to be equivalent to a single wheel load of magnitude, _____.
a) 4P b) 3P
c) 6P d) 2P

14) The modulus of subgrade reaction (K) is determined from, _____.
a) CBR test b) Plate Bearing Test
c) Shear Test d) Triaxial Test

Set S

T.Y. (B. Tech) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Pavement Design (197042612)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Answer any two questions **14**

a) Draw a neat sketch of flexible pavement and show component parts of all layers. Briefly explain the function of all layers.

b) Explain ESWL. Briefly explain the graphical method of determination of ESWL.

c) Explain the analysis of stresses in flexible pavement by single-layer system and two-layer system.

d) The traffic studies and axle load distribution studies carried out during project preparation indicated that there are
i) 5600 commercial vehicles per day with rear axle loads in the range of 2500 to 3500 kg and growth rate of 6.5% p.a. and
ii) 1900 heavy commercial vehicles with rear axle loads in the range of 11,000 to 13,000 kg and growth rate of 4.5% p.a. The road pavement is expected to be constructed in a period of 3.0 years after this study and the flexible pavement structure is to be designed for a design life of 15 years. Determine the CSA for design. Assume standard axle load as 8160 kg.

Q.3 Answer any two questions **14**

a) A flexible pavement of thickness 48 cm is laid over a subgrade. A circular load of 16 cm with a uniform contact pressure of 6.5 kg/cm^2 is applied. Assume the elastic modulus of the subgrade as well as the pavement layer to be 900 kg/cm^2. Use the Deflection Factor chart given in Fig-I. Assuming a homogenous elastic single-layer system determine the deflection of the pavement surface under the center of the load.

b) What is VDF? Determine the Equivalent Wheel Load Factor or VDF value of the following two axle loads in terms of the standard axle load of 8.16 tonne.
1) LCV with a rear axle load of 2.0t
2) HCV with a rear axle load of 15.5t

c) Find ESWL at depths of 50 mm, 200 mm, and 400 mm for a dual wheel carrying 2044 kN each. The center-to-center tyre spacing is 200 mm and the distance between the walls of the two tyres is 100 mm. Use (log) equation to calculate ESWL.

d) Draw a neat sketch cross section of rigid pavement and explain the functions of each pavement layer in brief.

Section – II

Q.4 Answer any two questions. **14**

a) Explain the different joints provided in the concrete pavement with a neat sketch.

b) With a diagram explain the Benkelman beam's working principle for measuring pavement deflection.

c) C.C. Pavement is constructed using the following data:
1) Modulus of elasticity 3.3×10^5 kg/cm^2
2) Poisson's ratio = 0.15
3) Thickness of CC pavement = 18 cm
4) Modulus of subgrade reaction – 25 kg/cm^3
5) Wheel load = 4100 kg
6) Radius of loaded area = 12 cm

Calculate stresses at the Interior, Edge and corner by Westergaard's method

d) Write a short note on any two:
1) Factors affecting flexible pavement design
2) Two Layered systems concepts of Pavement Design
3) Factors Affecting Rigid Pavement Design
4) Warping stresses in rigid pavement

Q.5 Answer any two questions **14**

a) Determine the warping stresses at the interior, edge, and corner of a 25 cm thick cement concrete pavement with transverse joints at 5.0 m intervals and longitudinal joints at 3.6 m intervals. The modulus of subgrade reaction K is 6.9 kg/cm^3 and the radius of the loaded area is 15 cm. Assume the temperature differential during the day to be $0.6°C$ per cm slab thickness (for warping stress at interior and edge) and a maximum temperature differential of $0.4°C$ per cm slab thickness during the night (for warping stress at the corner).
Assume e = 10×10^{-6} per °C, E = 3×10^5 kg/cm^2, $\mu = 0.15$ Use the Bradbury chart given in Figure II.

b) The rebound deflection values determined at 15 spots are given below. Determine the values of
1) mean deflection
2) Standard deviation and
3) Characteristic deflection

Rebound deflection values in mm: 1.40, 1.32, 1.25, 1.35, 1.48, 1.60, 1.65, 1.55, 1.45, 1.40, 1.36, 1.46, 1.50, 1.52, 1.45.

c) The plate bearing tests were conducted with a 30 cm plate diameter on the soil subgrade and over a base course of the thickness of 45 cm. The pressures yielded at 0.5 cm deflection on the subgrade and base course were 1.25 kg/cm^2 and 8.0 kg/cm^2 respectively. Design the pavement section for 5100 kg wheel load with tyre pressure of 7 kg/cm^2 for an allowable deflection of 0.5 cm using Burmister's two-layer deflection factor chart (Use Figure-III).

d) Explain how warping stresses are formed in C.C. pavements. Describe the Westergaard's equations to calculate warping stresses at critical locations.

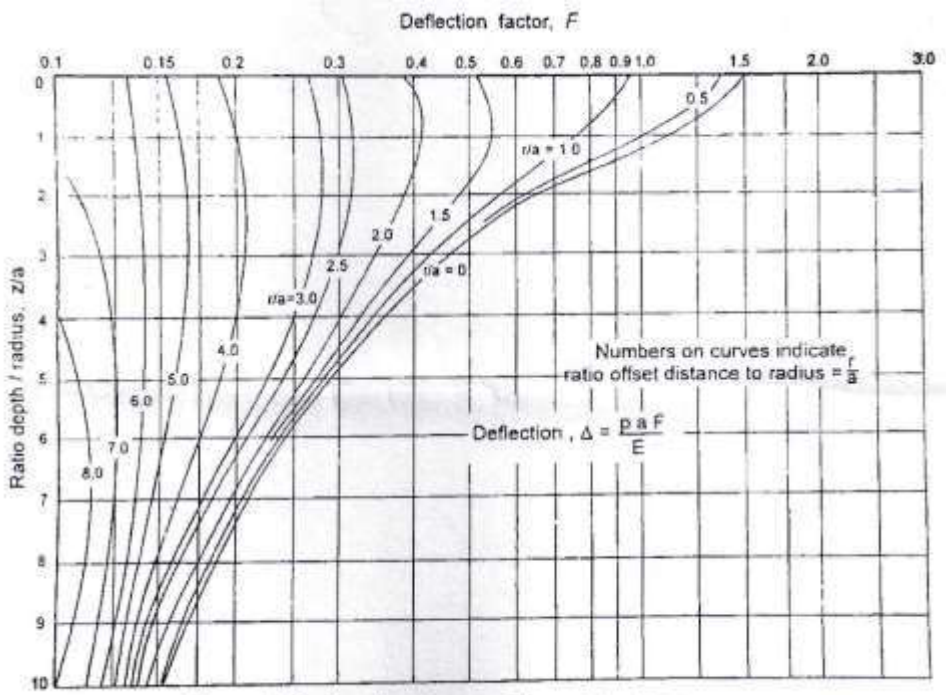

Figure-I-Deflection Factor Chart (Single Layer)

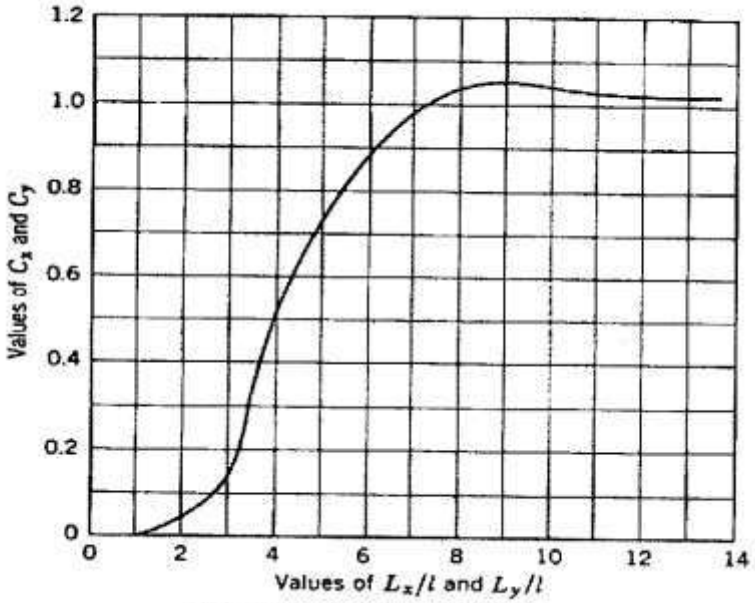

Figure-II-Bradbury Chart

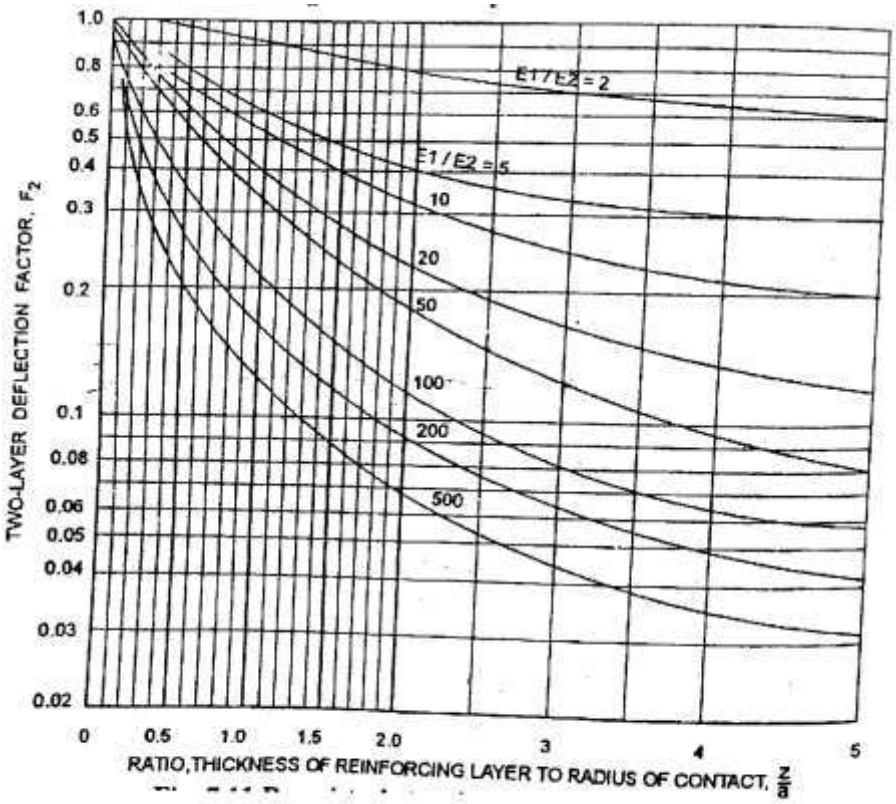

Figure-III-Burmister's Two-Layer deflection factors

Solid and Hazardous Waste Management (197042618)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The anaerobic method of mechanical composting is _____.
a) Indore method b) Manglore method
c) Banglore method d) None of the above

2) The final functional element in solid waste management system is _____.
a) Transfer & transportation b) Collection
c) Processing a recovery d) Disposal

3) Mechanical size reduction operation includes _____.
a) Shredding b) Grinding
c) Milling d) All of the above

4) Substances that emit ionizing radiation are defined as _____.
a) Hazardous waste b) Radioactive waste
c) Flammable waste d) Biological waste

5) The pyrolysis process of SWM is _____ in nature.
a) Endothermic b) Exothermic
c) Herothermic d) None of the above

6) Incineration of waste treatment involves _____ of solid wastes.
a) Combustion b) Steam
c) Hydrolysis d) Biodegradation

7) M R F's term in SWM is used for _____.
a) Major relief funds b) Material recovery facilities
c) Minimum raw food d) None of the above

8) _____ of hazardous waste plays a major role in designing combustion unit.
a) Calorific value b) Chemical value
c) Energy value d) Fuel value

9) Thermal treatment technologies are differentiated by _____.
a) Type of grate b) Chemicals
c) Energy d) Temperature

10) The _____ process determines whether exposure to a chemical can increase the incidence of adverse health effect.

a) Hazard identification
b) Exposure assessment
c) Toxicity assessment
d) Risk characterization

11) What is the main objective of risk assessment?

a) To evaluate hazard and minimize the risks
b) Remediation of contaminated sites
c) Hazard management
d) To know source of pollutants

12) In a multiple HW management facility, ceasing only one unit operation which others remain intact is known as _____ closure.

a) Complete
b) Partial
c) Half
d) Final

13) Removing all wastes from the waste management unit and decontaminate or remove all equipment is known as _____ closure.

a) Partial
b) Full
c) Clean
d) Decontaminate

14) What is the first stage of risk assessment?

a) Exposure assessment
b) Hazard identification
c) Toxicity study
d) Risk characterization

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 from section I and Q. No. 6 from section II is compulsory. Solve any two from remaining questions each from Section I and Section II.
2) Figures to right indicate full marks.
3) Make suitable assumptions, if required and state them clearly.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2 a) Estimate the moisture content of solid waste sample of 120 kg using the following data. **05**

Sr. no.	Component	% by mass	Moisture content (%)
1	Food waste	20	60
2	Paper	40	12
3	Cardboards	03	08
4	Plastic	09	02
5	Grass	08	48
6	Wood	07	03
7	Metals	17	04

b) Explain factors affecting composting process of solid waste. **05**

Q.3 a) Write a shot note on pyrolysis and its products. **05**
b) 2 Tonnes of weight solid waste having moisture content of 18% is subjected for incineration process. 13% of dry waste solid waste is burned tilled 600°C. 20% of remaining dry solid waste is burned between 600°C to 900°C. Calculate heat energy generated in the incineration process. **04**

Q.4 a) Explain proximate analysis and ultimate analysis of Solid waste. **05**
b) Explain methodology of incineration with the help of flow sheet diagram. **04**

Q.5 Write short notes on following (any three): **09**
a) Societal factor in SWM
b) Windrow composting
c) Chemical characteristics of solid waste
d) ISWM

Section – II

Q.6 a) With the help of examples, discuss the various types of hazards. **06**
b) Explain the geomorphological hazards. **04**

Q.7 a) Discuss the objectives and need of risk assessment. **05**
b) Discuss the tools of qualitative estimation of damages. **04**

Q.8	**a)**	List strategies for waste minimization and elaborate any two.	**05**
	b)	Illustrate the types of hazardous waste.	**04**
Q.9	**a)**	With the help of neat diagram, explain the working of landfill.	**05**
	b)	Discuss the procedure of leachate control.	**04**

b) Explain factors affecting composting process of solid waste. **05**

Q.3 **a)** Write a shot note on pyrolysis and its products. **05**
b) 2 Tonnes of weight solid waste having moisture content of 18% is subjected for incineration process. 13% of dry waste solid waste is burned tilled 600°C. 20% of remaining dry solid waste is burned between 600°C to 900°C. Calculate heat energy generated in the incineration process. **04**

Q.4 **a)** Explain proximate analysis and ultimate analysis of Solid waste. **05**
b) Explain methodology of incineration with the help of flow sheet diagram. **04**

Q.5 **Write short notes on following (any three):** **09**
a) Societal factor in SWM
b) Windrow composting
c) Chemical characteristics of solid waste
d) ISWM

Section – II

Q.6 **a)** With the help of examples, discuss the various types of hazards. **06**
b) Explain the geomorphological hazards. **04**

Q.7 **a)** Discuss the objectives and need of risk assessment. **05**
b) Discuss the tools of qualitative estimation of damages. **04**

Q.8	**a)**	List strategies for waste minimization and elaborate any two.	**05**
	b)	Illustrate the types of hazardous waste.	**04**
Q.9	**a)**	With the help of neat diagram, explain the working of landfill.	**05**
	b)	Discuss the procedure of leachate control.	**04**

T.Y. (B. Tech) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Open Channel Flow & River Hydraulics (197042623)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Draw neat sketches wherever necessary.
5) Use of non-programmable calculator is permitted.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) If the Froude's number is 2.4 then the jump is known as _____.
a) Steady b) Oscillating
c) Undular d) Weak

2) Specific force represents the sum of pressure force and _____.
a) Datum head
b) Momentum flux per unit weight
c) Momentum flux and datum head
d) None

3) The flow in open channel may be characterized as laminar when _____.
a) Re < 500 b) Re > 2000
c) Re > 4000 d) 500 < Re > 2000

4) In Gradually varied flow, if dy/dx is positive then dE/dx will be _____.
a) Zero b) Negative if y > yc
c) Positive if y > yc d) Always negative

5) River plains are made up of _____.
a) Black soil b) Red soil
c) Alluvium d) None

6) For the trapezoidal section _____.
a) Shape is of half hexagon
b) Depth of flow equal to half bed width
c) Side slope equal to 45°
d) None

7) The mean velocity in Lacey's regime channel is proportional to _____.
a) $11\ R^{1/2}S_0^{1/2}$ b) $10.8\ D^{2/3}S_0^{1/3}$
c) $11\ DS_0$ d) None

8) The momentum correction factor, β is given as _____.

a) $1/V^2A\int . V^3 . dA$ b) $1/VA\int . V . dA$

c) $1/V^3A\int . V^2 . dA$ d) $1/V^2A\int . V^2 . dA$

9) What type of force is completely responsible for the bed load movement?

a) Forces of Turbulence b) Drag Force

c) Capillary Force d) Gravity Force

10) Extreme condition of meanders is called as _____.

a) Leavee b) Spurs

c) Cut-off d) Island

11) River training work serves the following purposes _____.

a) Protect the river bed and banks

b) Direct the river flow in desired condition

c) Increase or decrease of the river discharge

d) Protect the surrounding land from flooding

12) The Lacey's equation for a regime channel consists of a set of 'x' independent equation relating to flow, where 'x' is equal to _____.

a) 1 b) 3

c) 5 d) 8

13) Mach number is the ratio between inertia force and _____.

a) Elastic force b) Surface tension force

c) Viscous force d) Pressure force

14) Hydraulic model and corresponding prototype should have _____.

a) Geometric similitude b) Kinematic similitude

c) Dynamic similitude d) All the above

Seat No.		Set	P

T.Y. (B. Tech) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Open Channel Flow & River Hydraulics (197042623)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.
3) Draw neat sketches wherever necessary.
4) Use of non-programmable calculator is permitted.

Section – I

Q.2 Attempt any four. **16**

a) Derive the modified Gradually Varied Flow equation. Draw a neat sketch and show all details.

b) The velocity distribution in rectangular channel of width 'B' and depth 'Yo' was approximated as $V = k_1\sqrt{y}$ where $k_1 =$ constant; calculate the average velocity for the cross-section and correction coefficient $'\alpha'$ & $'\beta'$.

c) A 3.0 m wide rectangular channel conveys 12 m^3/s of water with velocity 5.5 m/s. state is there formation of hydraulic jump if yes calculate height, length and strength of Jump and what is loss of energy per kg of water.

d) A flow of 6.50 m^3/s is passing at a depth of 1.6 m. through a rectangular channel of width 2.8 m. If $'\alpha'$ is 1.1 Determine specific energy of flow also determine the value of the depth alternative to the existing depth. If $'\alpha' = 1.0$ (assumed for alternate depth flow).

e) What do you understand by most economical channel section? Derive most economical rectangular channel section.

Q.3 Attempt any TWO **12**

a) Define kinetic energy correction factor (α) and momentum correction factor (β) and derive their expressions.

b) A discharge of 800 m^3/s flows down a spillway and then passes on a 60 m. Wide concrete apron (n = 0.014) the velocity of water at the toe of spillway is 8.0 m/s. A tail water depth of 4.00 m the channel below causes a hydraulic jump on the horizontal apron. Determine
1) Depth before the jump
2) Length of jump
3) Energy loss in jump
4) Specific force at the toe

c) Derive the most economical channel section for trapezoidal section and show that Half of top width = Length of one of sloping side and hydraulic mean depth.

Section – II

Q.4 Attempt any four. **16**

a) Write the objectives of river training work in detail.

b) Explain with neat sketch.
1) Levee
2) Guide banks

c) Derive 'Froude's model law' for model and state giving examples where it can be used.

d) Explain 'Similitude' and what are its types? and derive the equation for Froude's number.

e) A model of water meter is tested in 90 mm diameter pipe. The discharge was 50 lit/sec and pressure difference is 0.10 n/mm^2. What will be the discharge in pipe of 500 mm diameter pipe and what will be the pressure.

Q.5 Attempt any two. **12**

a) Draw a neat sketch of current meter and explain its working in details.

b) Write short notes on.
1) Reynolds's model law
2) Cut-off and spurs. (Draw neat sketch)

c) A spillway 7.2 m high and 150 m long discharges 2150 m^3/sec, under a head of 4.0 m. If 1:16 model of spill way is to be constructed, find the dimensions of model, head over the model and discharge through the model.

Design of Concrete Structures - I (197042603)

Day & Date: Thursday, 21-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book).
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) *Use of original IS 456-2000 and non-programmable calculator is allowed.*
4) Draw neat sketches of reinforcement details & assume suitable data if required and state it clearly.
5) Figures to the right indicates full marks.
6) IS 456:2000 is not allowed while solving MCQ in First 30 Minutes.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 MCQ (Choose the correct answer). 14

1) The maximum compressive strain in concrete in axial compression is taken as _____. 1
a) 0.001 b) 0.002
c) 0.003 d) 0.040

2) The effective span of member that is not built integrally with its supports shall be taken as _____. 1
a) Clear span plus effective depth of slab or beam
b) Center to center supports whichever is
c) a or b whichever is less
d) a or b whichever is more

3) The diameter of reinforcing bar shall not exceed _____ of the total thickness of the slab. 1
a) 1/6 b) 1/8
c) 1/3 d) 1/4

4) In two way restrained slab the middle strip being _____ times width. 1
a) $1/8$ b) ¾
c) ¼ d) ½

5) Where depth of beam exceeds 750 mm the side face reinforcement shall be provided along the two faces. The total area of such reinforcement shall not be less than _____ % of web area. 1
a) 0.1 b) 0.15
c) 0.2 d) 0.25

6) Minimum tension steel in RC beam needs to be provided to _____. 1
a) prevent sudden failure b) arrest crack width
c) control excessive deflection d) prevent surface hair cracks

7) For two-way slab for max. B.M. per unit width in a slab in shorter direction is _____. 1

a) $a_y w {l_x}^2$ b) $a_x w {l_y}^2$

c) $a_x w {l_x}^2$ d) $a_y w {l_y}^2$

8) The cross-sectional area of longitudinal reinforcement, shall not be less than _____ percent of the gross cross-sectional area of the column. 1

a) 0.8 b) 6

c) 0.4 d) 1

9) The ratio of recommended effective length to unsupported length of a column when effectively held in position in both ends, and restrained against rotation at both end is _____. 1

a) 0.65 b) 0.8

c) 1.0 d) 0.85

10) Effective width of flange for T beam is _____. 1

a) $(l_0/6) + b_w + 6\ D_f$ b) $(l_0/3) + b_w + 3\ D_f$

c) $(l_0/12) + b_w + 6\ D_f$ d) $(l_0/12) + 6b_w + D_f$

11) In a slab 12 mm diameter bars are to be provided at 150 mm center to center, due to non-availability the diameter of bars is to be changed to 16 mm the new spacing would be _____. 2

a) 266.66 mm b) 84.37 mm

c) 300 mm d) 450 mm

12) The factored load carrying capacity of a column of 300 mm × 600 mm size with minimum percentage of steel is (M20, Fe415). 2

a) 1840 kN b) 180 kN

c) 1829 kN d) 1505 kN

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Concrete Structures - I (197042603)

Day & Date: Thursday, 21-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question No. 2 and 6 are compulsory.
2) Solve Any Two from Q. No. 3 to Q. No. 5 in section I and Q. No. 7 to Q. No. 9 in section II.
3) Use of IS 456:2000 Original and non-programmable Calculator is allowed.
4) Draw neat sketch of reinforcement details & assume suitable data if required and state it clearly.

Section – I

Q.2 Design the simply supported rectangular beam 230 mm wide to carry a live load of 25 kN/m. The clear span of the beam is 4.25 m. Use M20 Concrete & Fe-500 steel. **08**

Q.3 A doubly reinforced beam section is 250 mm wide and 500 mm deep to the tensile reinforcement. It is reinforced with 2#18 mm Φ in compression zone and 4#25 mm Φ as tensile steel. An effective cover of 40 mm. Calculate the moment of resistance of the beam. Use M25 concrete and Fe-500 steel. **10**

Q.4 Design a RC slab for a room having inside dimensions 3 m $\times$ 7 m. The thickness of supporting wall is 300 mm. The live load on slab may be taken as 2.5 kN/m^2. Assume slab to be simply supported at ends. Use M20 concrete and Fe-415 steel. **10**

Q.5 A floor of 150 mm thick slab forming part of T-beam which are of 8 m span. The end bearing is 450 mm thick. Spacing of T beam is 3.5 m. the live load on the floor is 4 kN/m^2. Design an intermediate beam for flexure. Use M20 concrete and Fe-500 steel. **10**

Section – II

Q.6 Calculate area of steel required for a short RC column 400 mm $\times$ 400 mm in c/s to carry an axial load of 1550 kN. Use M25 Concrete & Fe-500 steel. **08**

Q.7 Design a rectangular beam of spans 7m each to carry a dead load of 14 kN/m and live load of 16 kN/m. The beam is continuous over more than 3 spans and is supported by columns. Use M20 concrete and Fe-500 steel. **10**

Q.8 Determine the reinforcement required for a beam of size 300 mm × 600 mm subjected to a factored bending moment 120 kN-m, a factored shear force 100 kN and a factored torsion moment of 60 kN-m. Use M25 concrete and Fe-415 steel. **10**

Q.9 Design a circular column to carry an axial load of 1500 kN. The column is 3.2 m long and in effectively held in at both ends, but not restrained against rotation. Use M25 concrete and Fe-500 steel. **10**

Day & Date: Friday, 22-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

1) The cost of keeping items in inventory is called _____.
a) Set up cost b) Holding cost
c) Shortage cost d) None of these

2) Lead time is the time between _____.
a) Order and actual delivery
b) Receipt of material and its consumption
c) Order and consumption
d) Dispatch and receipt

3) Hungarian trial and Error method is suitable for solving _____.
a) Transportation problem b) Decision tree
c) Two-person zero sum game d) Assignment problem

4) If λ is the arrival rate and μ is the rate of service then the average number of customers in the system will be _____.
a) $\lambda/(\mu-\lambda)$ b) $\lambda/(\mu\times(\mu-\lambda))$
c) $1/(\mu-\lambda)$ d) $1-(\mu/\lambda)$

5) If λ is the arrival rate and μ is the rate of service then the probability that queue system is idle _____.
a) $\lambda/(\mu-\lambda)$ b) $\lambda/(\mu\times(\mu-\lambda))$
c) $1/(\mu-\lambda)$ d) $1-(\lambda/\mu)$

6) Row wise and column wise difference between second lowest cell and lowest cell in VAM method is _____.
a) Set up cost b) Capital cost
c) Penalty d) Derived

7) Planning is _____.
a) Setting goals b) SWOT analysis
c) Selection of best alternative d) All of these

8) In decision tree problem Decision node is shown by _____.
a) Square b) Circle
c) Triangle d) Pentagon

9) _____ organization is also called as military organization.
a) Line and staff
b) Matrix
c) Line
d) Functional

10) Queuing theory is used to balance _____.
a) Cost of offering service
b) Cost due to delay in offering service
c) Both a & b
d) None of these

11) Graphical method to solve linear programming problem is commonly used when number of decision variables are _____.
a) Two
b) Three
c) Four
d) Five

12) Pure strategy games are those in which both players _____.
a) Play more than one strategy
b) Play with one strategy throughout
c) Play 3 strategies
d) Employ free strategies every time

13) Economic Order Quantity model helps to find _____.
a) Optimum lot size of order
b) Shortage value
c) High-cost lot size of order
d) Penalty rate

14) Identification of sources of defects in materials, components, machining processes, or men to fix responsibility of defectives thereby avoiding or minimising occurrence of defectives. This is the preventive function of quality and is commonly known as _____.
a) Assignment concept
b) Simplex techniques
c) Inventory control
d) Quality control

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Principles of Management and Quantitative Techniques (197042604)

Day & Date: Friday, 22-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to right indicates full marks.

Section – I

Q.2 Answer any three. (24 marks) **24**

a) Using Simplex method, Solve
Max $Z = 2X_1 + 4X_2 + X_3 + X_4$
Subject to, $X_1 + 3X_2 + X_4 \leq 4$
$2X_1 + X_2 \leq 3$
$-X_2 - 4X_3 - X_4 \geq -3$
$X_1, X_2, X_3, X_4 \geq 0$

b) Four different jobs can be done on 4 different machines. The set-up and takedown time cost are assumed to be prohibitively high for changeovers. The matrix below gives the cost in rupees for producing job i on machine j.

		Machines			
		M1	M2	M3	M4
Jobs	J1	51	77	49	55
	J2	32	34	59	68
	J3	37	44	70	54
	J4	55	55	58	55

c) Determine the decision under Maximin and Laplace criteria for the following process.

Alternatives	States of nature (product demand)			
	High (₹)	Moderate (₹)	Low (₹)	Nil (₹)
Expand	50,000	25,000	-25,000	-45,000
Construct	70,000	30,000	-40,000	-80,000
Subcontract	30,000	15,000	-1,000	-10,000

d) Discuss 14 Principles of modern Management.

e) Write a note on:
1) Waiting line theory
2) Transportation Model

Q.3 Write a note on any one. (04 marks) **04**

a) Monte Carlo simulation
b) Decision Tree

Section – II

Q.4 Answer any three. (24 marks) **24**

a) Write a detailed note on ABC analysis. Explain with a graph.

b) What is Break-Even Analysis? Explain with an example. How it is important for material management?

c) A cycle brand 'X' has demanded 9000 units per year. The cost of one procurement is Rs.100 and the holding cost per unit is Rs. 2.4 per year. The replacement is instantaneous and no shortage are allowed. Determine

1) Economic lot size
2) Number of orders per year
3) Time between orders
4) Total cost per year if the cost of one cycle is Rs. 300

d) What are quality control charts? What are the different pattern indications in quality control charts?

e) Write a short note on ERP System.

Q.5 Write a note on any one. **04**

a) Five major functional modules of ERP

b) Various types of inventory costs

Geosynthetics and Reinforced Soil Structures (197042624)

Day & Date: Saturday, 23-12-2023 Max. Marks: 50
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data, if required and state it clearly.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **10**

1) What is the function of geosynthetics clay liner?
a) Containment b) Separation
c) Filtration d) Drainage

2) What should be the normal stress to measure thickness of Geotextiles?
a) 5 kPa b) 2 kPa
c) 20 kPa d) 50 kPa

3) How many types of primary functions of geosynthetics are there?
a) 5 b) 4
c) 6 d) 7

4) To protect geosynthetic from UV exposure _____ is added to it.
a) Plastic b) Carbon Black
c) Benzene d) Cement

5) A planar, polymeric product consisting of a mesh or net-like regular open network of intersecting tensile-resistant elements, integrally connected at the junctions, is called _____.
a) Geotextile b) Geogrid
c) Geonet d) Geocell

6) MFI is acronym for _____.
a) Mount flow Instrument b) Money fix Installment
c) Metal flow Index d) Melt flow Index

7) Which of the following tests measures the toughness of road aggregates?
a) Crushing strength test b) Abrasion test
c) Impact test d) Shape test

8) The width of grips for performing the grab tensile strength is, _____.
a) 25 mm b) 10 mm
c) 15 mm d) 35 mm

9) Which of the following is not physical property of Geosynthetics?

a) Pullout resistance
b) Mass per unit area
c) Specific gravity
d) Thickness

10) What is the unit of trapezoidal tear strength?

a) Nm
b) N/m
c) N
d) None of these

Geosynthetics and Reinforced Soil Structures (197042624)

Day & Date: Saturday, 23-12-2023 Max. Marks: 40
Time: 10:00 AM To 01:00 PM

Instructions: 1) Figures to the right indicate full marks.
2) Assume suitable data, if required and state it clearly.

Q.2 Attempt any Eight questions. **40**

a) Explain physical properties and durability properties of Geosynthetics in detail.

b) List the various raw materials used in the manufacture of Geosynthetics and explain any one in detail.

c) What are the different construction factors that affect the performance of reinforced soil?

d) Write a note on Binquet and Lee's approach.

e) With a neat sketch cross plane permeability Tests.

f) With a neat sketch explain different components of modern landfill.

g) Explain construction method for reinforced soil retaining wall.

h) Explain in detail the circular slip method for slope stability.

i) Explain Giroud-Noiray approach for Geosynthetics pavement application.

j) What is erosion of soil? How it will be controlled by using Geosynthetics.

Geosynthetics and Reinforced Soil Structures (197042624)

Day & Date: Saturday, 23-12-2023 Max. Marks: 50
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 20 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data, if required and state it clearly.

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose the correct alternatives from the options and rewrite the sentences. **10**

1) MFI is acronym for _____.
a) Mount flow Instrument b) Money fix Installment
c) Metal flow Index d) Melt flow Index

2) Which of the following tests measures the toughness of road aggregates?
a) Crushing strength test b) Abrasion test
c) Impact test d) Shape test

3) The width of grips for performing the grab tensile strength is, _____.
a) 25 mm b) 10 mm
c) 15 mm d) 35 mm

4) Which of the following is not physical property of Geosynthetics?
a) Pullout resistance b) Mass per unit area
c) Specific gravity d) Thickness

5) What is the unit of trapezoidal tear strength?
a) Nm b) N/m
c) N d) None of these

6) What is the function of geosynthetics clay liner?
a) Containment b) Separation
c) Filtration d) Drainage

7) What should be the normal stress to measure thickness of Geotextiles?
a) 5 kPa b) 2 kPa
c) 20 kPa d) 50 kPa

8) How many types of primary functions of geosynthetics are there?
a) 5 b) 4
c) 6 d) 7

9) To protect geosynthetic from UV exposure _____ is added to it.
a) Plastic b) Carbon Black
c) Benzene d) Cement

10) A planar, polymeric product consisting of a mesh or net-like regular open network of intersecting tensile-resistant elements, integrally connected at the junctions, is called _____.

a) Geotextile
b) Geogrid
c) Geonet
d) Geocell

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Multiple Choice Questions. **10**

1) As per recommendations of I.R.C., traffic volume study is carried out for rural roads for 7 days continuously during _____.
a) Harvesting b) Lean season
c) Harvesting and lean season d) none of these

2) In highway construction, rolling starts from _____.
a) Sides and proceed to center
b) Centre and proceed to sides
c) One side and proceed to other side
d) Any of the above

3) The maximum spacing of contraction joints in rigid pavements-Rural roads is _____.
a) 2.5-4 m b) 10-25m
c) 15-25 m d) None of these

4) Most suitable material for highway embankment is _____.
a) Granular soil b) Organic clay
c) Silty soil d) Clayey soil

5) Which IRC code is used for the design of rigid pavements in rural areas?
a) IRC 58:2002 b) IRC SP 58:2004
c) IRC SP 62:2014 d) IRC 69:2002

6) Which IRC code is used for the design of Flexible pavements in rural areas?
a) IRC 58:2002 b) IRC SP 72:2007
c) IRC SP 62:2014 d) IRC 69:2002

7) If the traffic intensity is more than 100 vehicles per day, then width of carriageway for rural roads is taken as _____.
a) 0.5m b) 1m
c) 1.5m d) 3.75m

8) In case of Rural Roads, Traffic parameter is evaluated in terms of _____.
a) Number of Commercial Vehicles per Day (CVPD)
b) Number of two wheelers per day
c) Number of cycles per day
d) None of these

9) The maximum size of coarse aggregate shall not exceed by _____ in rural roads concrete pavements.
a) 50mm
b) 63mm
c) 25mm
d) 10mm

10) If the CBR value is less than 2, then quality of subgrade soil is _____.
a) Good
b) Extremely Good
c) Poor
d) Very Poor

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: **14**

1) After E. Deming, who is considered to have the greatest impact in quality management?
a) Kauro Ishikawa b) Joseph M. Juran
c) W.E. Deming d) Genichi Taguchi

2) The objective of ISO-9000 family of Quality management is _____.
a) Customer satisfaction b) Employee satisfaction
c) Skill enhancement d) Environmental issues

3) Total Quality Management (TQM) focuses on _____.
a) Employee b) Customer
c) Both (a) and (b) d) None of the above

4) TQM & ISO both focuses on _____
a) Customer b) Employee
c) Supplier d) All of above

5) A fundamental attribute of TQM is _____
a) Drawing control charts
b) Top management's direct involvement
c) Meeting ISO 9000 audit
d) All of above

6) Combination of Six Sigma and Lean manufacturing is known as _____.
a) Advanced Six Sigma b) Lean Six Sigma
c) Operational Six Sigma d) None of the above

7) The information of MIS comes from the _____.
a) Internal source
b) External source
c) Both internal and external source
d) None of the above

8) An information system that supports the planning and assessment needs of executive management is _____.
a) DSS b) ERP
c) MIS d) None of the above

9) The back bone of any organization is _____.
a) Information b) Employee
c) Management d) Capital

10) Which one is not Prerequisite of an effective MIS _____.
a) Database b) Support from staff
c) Both a) and b) d) None of these

11) A computer-based information system _____.
a) Require manually input b) No need manually input
c) Auto input d) None of these

12) The flow of information through MIS is _____.
a) Need Dependent b) Organization Dependent
c) Information Dependent d) Management Dependent

13) The basic component(s) of DSS is (are) _____.
a) Database b) Model base
c) DSS software system d) All of the above

14) _____technology includes computers hardware, software, database management systems and data communication system.
a) Information b) Computer
c) Marketing d) All of the above

T. Y. (B. Tech) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
TQM and MIS in Civil Engineering (197042627)

Day & Date: Saturday, 23-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figure to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
3) Use of non-programmable calculator is allowed.

Q.2 Attempt Any Four questions. **28**

a) What are the principles of TQM? Explain in brief function of 'Total Quality Management'.
b) What are the factors to be considered to have good quality control in construction project?
c) Explain in brief with objective and significance of "Total Quality Management".
d) What is "Quality Circle"? Explain the objective and function of "Quality Circle".?
e) Explain in brief "Supply Chain Management" as a tool in TQM.
f) What is "Statistical Quality Control"? Explain the various quality control chart used for quality assurance.

Q.3 Attempt Any Four question **28**

a) What is "Management Information System (MIS)"? Explain in brief objective and function MIS.
b) Explain in brief the Software and Hardware section of MIS.
c) Why MIS is having high need of management today?
d) Write a note on Data processing.
e) Define the term Database and its benefits to any sector.
f) Write a note on use of "Computer system in Civil engineering sector".

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) The Damp Proof Course (D.P.C.) is measured in _____.
a) Cub.m. b) Sq.m.
c) Meters d) None of these

2) The excavation exceeding 1.5 m in width and 10 sq.m., in plan area with a depth not exceeding 30 cm, is termed as _____.
a) Excavation b) Surface dressing
c) Cutting d) Surface excavation

3) In normal circumstances, minimum period before striking vertical formwork of columns, beams shall be _____.
a) 16-24 Hr. b) 7 days
c) 14 days d) 21 days

4) In rate analysis, salary of technical personnel engaged for the work are covered in _____.
a) Labour cost b) General overheads
c) Job overheads d) Contingencies

5) During the execution of project, structural modifications are required or addition work is added for construction. The estimate for additional work is called ____.
a) Preliminary estimate b) Supplementary estimate
c) Revised estimate d) Detailed estimate

6) We prepare revised estimate against the original estimate due to change in _____.
a) the rate of material or change in specification of materials
b) structural drawing
c) additional items
d) all the above

7) If rise and tread of a step is 0.15m and 0.25m respectively, then the volume (in cubic meter) of 9 number of steps of 1 m length be recorded in measurement sheet shall be _____.
a) 0.3375 b) 0.337
c) 0.34 d) 0.33

8) Earnest money is paid to enable the Government to ensure that a tenderer does not _____.
a) back out of his tender before its acceptance
b) refuse to execute the work after it has been awarded to him
c) compromise with quality of work
d) a or b

9) For labour component the escalation rise will be payable based on _____.
a) Increase in the minimum wages of unskilled male mazdoor
b) Increase in the actual wages of unskilled male mazdoor
c) Increase in the minimum wages of skilled male mazdoor
d) Increase in the actual wages of skilled male mazdoor

10) 'Money received today is more worth than money received in future' is based on which of the following term _____.
a) Time Value of money
b) Storage Value of Money
c) Time Machine
d) Cash Value of Machine

11) The net present value (NPV) is _____.
a) equal to the sum of the present values of all cash flows
b) equal to the sum of returns
c) equal to the sum of all cash flows
d) none of the above

12) The value at the end of utility of property but without dismantling is known as _____.
a) Scrap Value
b) Salvage value
c) Market value
d) Book value

13) Following is not the purpose of Valuation _____.
a) For submission to financial agency/bank while borrowing loan
b) For preparing tender documents
c) For income tax/wealth tax assessment
d) For compensation after the land acquisition

14) Valuation of the properties which perform non profitable community functions is done by _____.
a) Rental method
b) Land and building method
c) Direct comparison method
d) Profit based method

Estimating, Costing and Valuation (BTN01701)

Day & Date: Wednesday, 27-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. 2 is compulsory; answer any two from remaining questions from Sec - I
2) Q. 6 is compulsory; answer any two from remaining questions from Sec - II
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Calculate the quantity of reinforcement required in R.C.C. column and footing shown in attached drawing. **08**
b) Also prepare an Abstract sheet for these items by assuming suitable market rates. **04**

Q.3 **a)** Explain General and Detailed Specification. **04**
b) Write the detailed specifications for Water Bound Macadam. **04**

Q.4 **a)** What is the Rate analysis? Explain the factors affecting rate analysis. **04**
b) Carry out rate analysis for external plastering 20 mm thick in cement mortar 1:4. **04**

Q.5 **a)** Explain administrative approval and technical sanction to estimates. **04**
b) Write a thumb rule for Number of cement bags required for construction of building. **04**

Section – II

Q.6 **a)** Prepare a tender notice for the work of construction of a hospital of 120 beds capacity RCC structure of 12,000 Sq. ft built up area. Make suitable assumptions for required data. **08**
b) Write a short note on BOT projects with suitable example. **04**

Q.7 **a)** Explain following Acts **04**
i) Minimum Wages Act
ii) Workers Compensation Act
b) Write advantages and disadvantages of Item Rate Contract. **04**

Q.8 **a)** Explain different types of values - Market value, Potential value, Distress value. **04**
b) Compare following methods of calculating depreciation **04**
- Straight line method & declining balance method.

Q.9 **a)** Explain belting method of valuation. **04**
b) Calculate Years Purchase for a property with a useful life of 30 years if rate of interest is 5% per year. Assume rate of interest for sinking fund as 3%. **04**

2) Q. 6 is compulsory; answer any two from remaining questions from Sec - II
3) Figures to the right indicate full marks.
4) Assume additional data if required and mention it clearly.

Section – I

Q.2 **a)** Calculate the quantity of reinforcement required in R.C.C. column and footing shown in attached drawing. **08**
b) Also prepare an Abstract sheet for these items by assuming suitable market rates. **04**

Q.3 **a)** Explain General and Detailed Specification. **04**
b) Write the detailed specifications for Water Bound Macadam. **04**

Q.4 **a)** What is the Rate analysis? Explain the factors affecting rate analysis. **04**
b) Carry out rate analysis for external plastering 20 mm thick in cement mortar 1:4. **04**

Q.5 **a)** Explain administrative approval and technical sanction to estimates. **04**
b) Write a thumb rule for Number of cement bags required for construction of building. **04**

Section – II

Q.6 **a)** Prepare a tender notice for the work of construction of a hospital of 120 beds capacity RCC structure of 12,000 Sq. ft built up area. Make suitable assumptions for required data. **08**
b) Write a short note on BOT projects with suitable example. **04**

Q.7 **a)** Explain following Acts **04**
i) Minimum Wages Act
ii) Workers Compensation Act
b) Write advantages and disadvantages of Item Rate Contract. **04**

Q.8 **a)** Explain different types of values - Market value, Potential value, Distress value. **04**
b) Compare following methods of calculating depreciation **04**
- Straight line method & declining balance method.

Q.9 **a)** Explain belting method of valuation. **04**
b) Calculate Years Purchase for a property with a useful life of 30 years if rate of interest is 5% per year. Assume rate of interest for sinking fund as 3%. **04**

Fourth. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Estimating, Costing and Valuation (BTN01701)

Day & Date: Wednesday, 27-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume additional data if required and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. **14**

1) The net present value (NPV) is _____.
a) equal to the sum of the present values of all cash flows
b) equal to the sum of returns
c) equal to the sum of all cash flows
d) none of the above

2) The value at the end of utility of property but without dismantling is known as _____.
a) Scrap Value b) Salvage value
c) Market value d) Book value

3) Following is not the purpose of Valuation _____.
a) For submission to financial agency/bank while borrowing loan
b) For preparing tender documents
c) For income tax/wealth tax assessment
d) For compensation after the land acquisition

4) Valuation of the properties which perform non profitable community functions is done by _____.
a) Rental method
b) Land and building method
c) Direct comparison method
d) Profit based method

5) The Damp Proof Course (D.P.C.) is measured in _____.
a) Cub.m. b) Sq.m.
c) Meters d) None of these

6) The excavation exceeding 1.5 m in width and 10 sq.m., in plan area with a depth not exceeding 30 cm, is termed as _____.
a) Excavation b) Surface dressing
c) Cutting d) Surface excavation

7) In normal circumstances, minimum period before striking vertical formwork of columns, beams shall be _____.

a) 16-24 Hr. b) 7 days
c) 14 days d) 21 days

8) In rate analysis, salary of technical personnel engaged for the work are covered in _____.

a) Labour cost b) General overheads
c) Job overheads d) Contingencies

9) During the execution of project, structural modifications are required or addition work is added for construction. The estimate for additional work is called ____.

a) Preliminary estimate b) Supplementary estimate
c) Revised estimate d) Detailed estimate

10) We prepare revised estimate against the original estimate due to change in _____.

a) the rate of material or change in specification of materials
b) structural drawing
c) additional items
d) all the above

11) If rise and tread of a step is 0.15m and 0.25m respectively, then the volume (in cubic meter) of 9 number of steps of 1 m length be recorded in measurement sheet shall be _____.

a) 0.3375 b) 0.337
c) 0.34 d) 0.33

12) Earnest money is paid to enable the Government to ensure that a tenderer does not _____.

a) back out of his tender before its acceptance
b) refuse to execute the work after it has been awarded to him
c) compromise with quality of work
d) a or b

13) For labour component the escalation rise will be payable based on _____.

a) Increase in the minimum wages of unskilled male mazdoor
b) Increase in the actual wages of unskilled male mazdoor
c) Increase in the minimum wages of skilled male mazdoor
d) Increase in the actual wages of skilled male mazdoor

14) 'Money received today is more worth than money received in future' is based on which of the following term _____.

a) Time Value of money b) Storage Value of Money
c) Time Machine d) Cash Value of Machine

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct answer. **14**

1) Choose the correct option from following statements:
a) Earthquake causes landslide b) Landslide causes earthquake
c) a) and b) are wrong d) a) and b) both are correct

2) The response steadily decreases when the frequency ratio is _____.
a) < 1 b) > 1
c) = 1 d) = 2

3) In the equivalent static procedure, the natural period of the building is _____.
a) Computed by the free-vibration analysis
b) Estimated according to the formula in IS-1893
c) Assumed
d) As given in book

4) Special confining reinforcement is provided in the form of _____.
a) Longitudinal reinforcement b) Temperature reinforcement
c) Lateral reinforcement d) Shrinkage reinforcement

5) The transmissibility is zero at the frequency ratio (ω/ω_n) equal to _____.
a) 0.5 b) 1.0
c) $\sqrt{2}$ d) 2^2

6) The modal damping ratio is _____.
a) $C_n/(M_n\omega_n)$ b) $C_n/(2\omega_n)$
c) $C_n/(2M_n\omega_n)$ d) $2C_n/(M_n\omega_n)$

7) The acceleration response spectrum in IS-1893-2002 is for the damping of _____.
a) 2% b) 10%
c) 8% d) 5%

Fourth. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Earthquake Engineering (BTN01702)

Day & Date: Friday, 19-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries two marks.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Each MCQ carries two marks each.
5) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct answer. **14**

1) The response steadily decreases when the frequency ratio is _____.
a) < 1 b) > 1
c) = 1 d) = 2

2) In the equivalent static procedure, the natural period of the building is _____.
a) Computed by the free-vibration analysis
b) Estimated according to the formula in IS-1893
c) Assumed
d) As given in book

3) Special confining reinforcement is provided in the form of _____.
a) Longitudinal reinforcement b) Temperature reinforcement
c) Lateral reinforcement d) Shrinkage reinforcement

4) The transmissibility is zero at the frequency ratio (ω/ω_n) equal to _____.
a) 0.5 b) 1.0
c) $\sqrt{2}$ d) 2^2

5) The modal damping ratio is _____.
a) $C_n/(M_n\omega_n)$ b) $C_n/(2\omega_n)$
c) $C_n/(2M_n\omega_n)$ d) $2C_n/(M_n\omega_n)$

6) The acceleration response spectrum in IS-1893-2002 is for the damping of _____.
a) 2% b) 10%
c) 8% d) 5%

7) Choose the correct option from following statements:
a) Earthquake causes landslide b) Landslide causes earthquake
c) a) and b) are wrong d) a) and b) both are correct

Fourth. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Earthquake Engineering (BTN01702)

Day & Date: Friday, 19-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 3 & Q. 6 are compulsory. Attempt any two questions from the remaining of each section.
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Explain plate tectonics theory and its mechanism. **09**

Q.3 From first principle derive the governing differential equation for free vibration of undamped SDOF system. Obtain the general solution of this differential equation. Plot the graph if system is given initial displacement y_0. **10**

Q.4 Derive the governing differential equation of undamped forced vibration of a SDOF system subjected to harmonic loading. Also obtain the complete solution of differential equation and plot graph of magnification factor vs frequency ratio 'r'. **09**

Q.5 Explain the concept of Duhamel's integral for damped systems. Derive its expression. **09**

Section – II

Q.6 It is proposed to construct a R.C.C. three storied residential building having plan dimensions as shown in fig. 1 in zone III with following data. Determine the lateral forces and base shear. The all column sizes are 300 x 550 mm & beams sizes are 300 x 450 mm. The slab thickness is 120mm & thk. of walls is 230mm. The ht. of floor is 3.0 m & Live load is 3.5 kN/m^2. IS 13920 provisions are incorporated in the structure. The strata is Medium. **10**

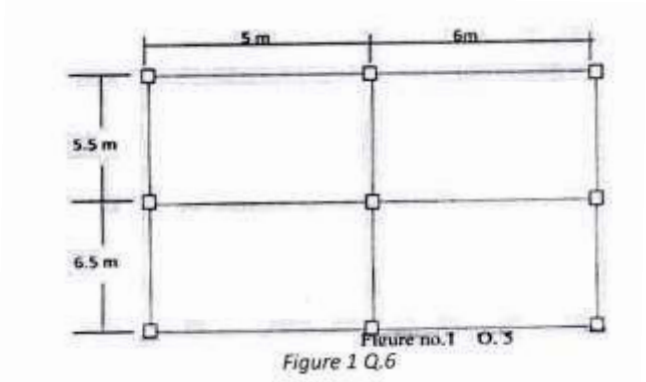

Figure 1 Q.6

Q.7 Describe the weak storey? How weak storey differs from soft storey? **09**

Q.8 Explain the significance of ductility in earthquake resistant buildings. **09**

Q.9 Describe the various earthquake resistant features that can be introduced in masonry building to make it earthquake resistant. **09**

Fourth Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Construction Management and Practices (BTN01703)

Day & Date: Saturday, 20-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct answer. **14**

1) The time span between the start and completion of a project represent
a) Project Span b) Project Duration
c) Project Lifecycle d) None of the above

2) _____ cranes are used for handling loads over a large rectangular area in factories, power stations, shipyards and workshops.
a) Mobile b) Derrick
c) Gantry d) Hydraulic

3) If for an activity optimistic time is 7 days, pessimistic time is 13 days and most likely time is 10 days, its standard deviation will be _____.
a) 10 b) 3.28
c) 10.77 d) 1

4) The area under the Beta distribution curve is divided into two equal parts by
a) Most likely time b) Optimistic time
c) Pessimistic time d) Expected time

5) If D is the duration, ES and EF are the earliest start and finish, LS and LF are latest start and latest finish time, then the following relation holds good
a) EF = ES + D b) D = EF – ES
c) LF = LS + D d) All of the above

6) Choose the best option that fits the following statement.
The _____ of time management tools depends on the _____ of the project.
a) Identity, Quality b) Utility, Complexity
c) Functionality, Creativity d) Equity, Quantity

7) A milestone chart
a) shows the interdependencies of various jobs
b) depicts the delay of jobs, if any
c) points outgoing ahead of schedule of jobs, if any
d) none of these

8) _____ are used to excavate below the ground on which the machine stands.
a) Hoes
b) Power Shovel
c) Trenchers
d) Rippers

9) What is the process of incorporating changes and rescheduling or re planning called?
a) Resource Allocation
b) Resource smoothing
c) Resource levelling
d) Updating

10) _____ cranes are used for handling loads over a large rectangular area in factories, power stations, shipyards and workshops.
a) Mobile
b) Derrick
c) Gantry
d) Hydraulic

11) The size of the bulldozer is indicated by the dimension of its _____.
a) Site
b) Tyre
c) Engine
d) Blades

12) _____ consists of a large bucket which is attached to a tractor.
a) Bulldozer
b) Scraper
c) Grader
d) Escalator

13) Hot-mix plant is used for
a) Cement concrete pavement Construction.
b) Bituminous pavement construction.
c) Water bound macadam construction.
d) All the above

14) Sheep foot roller is used for compacting
a) Granular soil
b) Non-plastic silts
c) Fine sands
d) Clay soil

Day & Date: Saturday, 20-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 Answer the following questions. **12**

Consider a project shown in the Table.

1) Draw CPM Network
2) Find critical path
3) Find duration of the project

Activity	Duration (days)
1-2	3
2-3	4
2-4	4
3-7	4
4-5	2
4-7	2
5-6	3
6-7	2

Q.3 Answer the following questions. **08**

a) What is WBS? Explain its importance in project management.
b) Explain the process of network compression in details with suitable example.

Q.4 Answer the following questions. **08**

a) Explain the process of resource allocation in detail.
b) Differentiate between Bar Chart and Milestone Chart.

Q.5 Answer the following questions. **08**

a) Write a short note on MS Project Software.
b) What is BIM? Also explain the output of BIM.

Section – II

Q.6 Write Short notes on **12**

a) Hoes
b) Compactors
c) Hot mix plant

Q.7 Explain in details. **08**

a) Safety measures on construction sites.
b) Safety against accidents.

Q.8 Explain in details. **08**

a) Write a short note on Prefabricated construction.
b) Write a short note on Mivan formwork.

Q.9 Explain in details. **08**

a) Explain the uses of floating equipment
b) Explain the types and uses of diaphragm walls.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

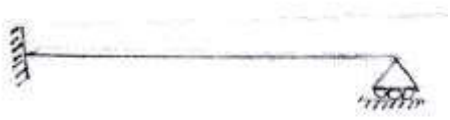
Q.1 Choose the correct option from the following. **14**

1) To draw qualitative ILD of indeterminate structure, which of the following concept is used. 01
a) Mullers Breslau's Principle
b) Kani's Method
c) Unit Load Method
d) Castigliano's First energy theorem

2) Degree of kinematic indeterminacy for the beam shown in fig. 01



a) 0 b) 2
c) 1 d) 3

3) In curved beams, normally the nature of stress distribution is _____. 01
a) Linear b) Circular
c) Parabolic d) Hyperbolic

4) A beam curved in plan is designed for _____? 01
a) bending moment and shear
b) bending moment and torsion
c) shear and torsion
d) bending moment, shear and torsion

5) Which of the following methods of structural analysis is a force method? 01

a) three moment equation b) slope deflection method
c) column analogy method d) moment distribution method

6) In the slope deflection equations, the deformations are considered to be caused by 01

a) Bending Moment b) Shear Force
c) Axial Force d) Torsional moment

7) Degree of kinematic indeterminacy of pin jointed plane frame is given by 01

a) 2j-r b) 3j-r
c) 2j+r d) j-2r

8) In the stiffness matrix of structural analysis, the quantity taken as redundant is _____. 01

a) Both rotation and deflection b) Rotation
c) Only Deflection d) none of the above

9) Select the correct statement 01

a) Flexibility matrix is a square symmetrical matrix
b) Stiffness matrix is a square symmetrical matrix
c) Both (A) and (B)
d) None of the above

10) The deformation of a spring produced by a unit load is called _____. 01

a) Stiffness b) Flexibility
c) Influence coefficient d) Unit strain

11) ILD for the shear force at the support of the cantilever beam is _____. 02

a)

b)

c) 
d)

12) Stiffness of the end A if the far end B is free is _____. 02

a) EI/L b) 2EI/L
c) 3EI/L d) 0

Fourth. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Advanced Structural Analysis (BTN01707)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.

Section – I

Q.2 Draw ILD for SF & BM @ point c of beam shown is fig. (1), Draw ordinate at 1m interval. **08**

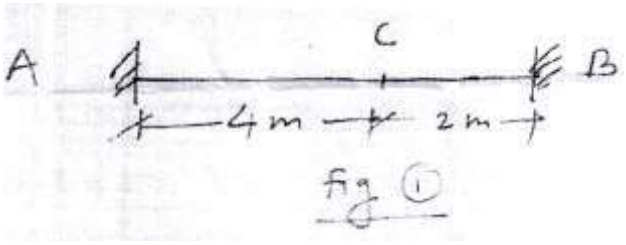

Fig (1)

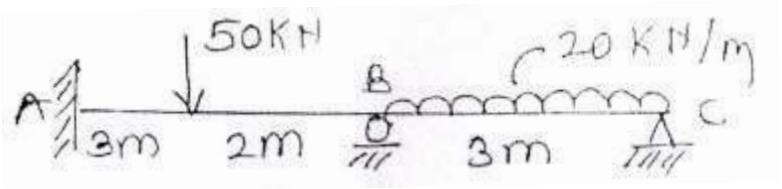
Q.3 A quarter circle beam of radius 'R' fixed at A and free at B. carrying a load P at free end. Draw SFD, BMD, TMD, also find vertical deflection of point B. **10**

Q.4 A long beam supported on elastic foundation is subjected to a concentrated clockwise moment 'Mo'. The beam is infinitely long on both the sides of concentrated moment. Draw SF and BM diagram. **10**

Q.5 Draw SF, BM, deflection diagram for a semi-infinite beam on elastic foundation winged at one end and subjected to UDL of 'W' over entire length. **10**

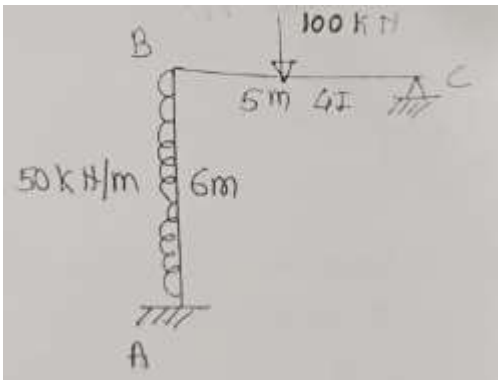
Section – II

Q.6 Analyze the beam shown in fig. by stiffness method. **08**



Q.7 A simply supported beam-column is subjected to an axial compressive force 'P' at both ends and an uniformly distributed load of 'w' throughout its span. Derive expression for maximum deflection and bending moment. **10**

Q.8 Analyze the frame shown in fig. by stiffness method. **10**



Q.9 Find the forces in all members of the truss show in fig. by using memberoriented stiffness method. Assume axial rigidity of all members is constant. **10**

Fourth. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Advanced Structural Analysis (BTN01707)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) In the slope deflection equations, the deformations are considered to be caused by 01
a) Bending Moment b) Shear Force
c) Axial Force d) Torsional moment

2) Degree of kinematic indeterminacy of pin jointed plane frame is given by 01
a) 2j-r b) 3j-r
c) 2j+r d) j-2r

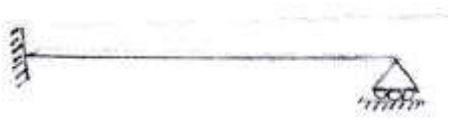
3) In the stiffness matrix of structural analysis, the quantity taken as redundant is _____. 01
a) Both rotation and deflection b) Rotation
c) Only Deflection d) none of the above

4) Select the correct statement 01
a) Flexibility matrix is a square symmetrical matrix
b) Stiffness matrix is a square symmetrical matrix
c) Both (A) and (B)
d) None of the above

5) The deformation of a spring produced by a unit load is called _____. 01
a) Stiffness b) Flexibility
c) Influence coefficient d) Unit strain

6) To draw qualitative ILD of indeterminate structure, which of the following concept is used. 01
a) Mullers Breslau's Principle
b) Kani's Method
c) Unit Load Method
d) Castigliano's First energy theorem

7) Degree of kinematic indeterminacy for the beam shown in fig. 01



a) 0 b) 2
c) 1 d) 3

8) In curved beams, normally the nature of stress distribution is _____. 01
a) Linear b) Circular
c) Parabolic d) Hyperbolic

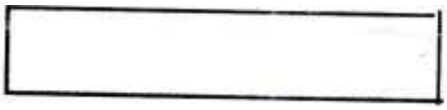
9) A beam curved in plan is designed for _____? 01
a) bending moment and shear
b) bending moment and torsion
c) shear and torsion
d) bending moment, shear and torsion

10) Which of the following methods of structural analysis is a force method? 01
a) three moment equation b) slope deflection method
c) column analogy method d) moment distribution method

11) ILD for the shear force at the support of the cantilever beam is _____. 02
a)

b)

c)



d)

12) Stiffness of the end A if the far end B is free is _____. 02

a) EI/L b) 2EI/L
c) 3EI/L d) 0

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) The traffic starts discharging from an approach at an intersection with the signal turning green. The constant headway considered from the fourth or fifth headway position is referred to as _____.
a) Discharge Headway b) Saturation Headway
c) Effective Headway d) Intersection Headway

2) The speed-density relationship in a mid-block section of a highway follows the Greenshield's model. If the free flow speed is V_f, and the jam density is K_j, the maximum flow observed in this section is _____.
a) $V_f * K_j$ b) $\frac{V_f * k_j}{2}$
c) $\frac{V_f * k_j}{4}$ d) $\frac{V_f * k_j}{8}$

3) If the space headway is 7m, then the jam density in vehicle/km is _____.
a) 142 b) 144
c) 145 d) 146

4) If the jam density is 145vehicles/km, and velocity is 60kph then the capacity flow is _____.
a) 2175 b) 2200
c) 2375 d) 2500

5) Level of Service A and F represents _____.
a) Forced Flow and Free Flow respectively
b) Free Flow and Forced Flow respectively
c) Both are free-flow
d) Both are Forced flow

6) As per IRC:67-2001, a traffic sign indicating the speed limit on a road should be of _____.
a) Circular shape with White Background and Red Border
b) Triangular shape with White Background and Red Border
c) Triangular shape with Red Background and White Border
d) Circular shape with Red Background and White Border

7) In signal design as per Indian Roads Congress specifications, if the sum of the ratios of normal flows to saturation flow of two directional traffic flows is 0.50 and the total lost time per cycle is 10 seconds, the optimum cycle length in seconds is _____.

a) 100 b) 80
c) 60 d) 40

8) Two broken yellow line marking at center of road indicates,

a) No passing allowed on both side
b) Passing allowed on one side
c) Passing allowed on both side
d) Passing allowed only for left side vehicle

9) Maximum number of vehicles can be parked with _____.

a) Parallel parking b) 30° angle parking
c) 45° angle parking d) 90° angle parking

10) When volume of the road reaches maximum flow or the capacity, the volume capacity ratio approaches to a value of, _____.

a) 1.0 b) 1.5
c) 0.0 d) 0.5

11) Speed regulations on roads is decided on the basis of _____.

a) 60^{th} percentile cumulative frequency
b) 85^{th} percentile cumulative frequency
c) 55^{th} percentile cumulative frequency
d) 98^{th} percentile cumulative frequency

12) The maximum number of vehicles observed in any five-minute period during the peak hour is 160. If the total flow in the peak hour is 1000 vehicles, the five-minute peak hour factor _____.

a) 0.44 b) 0.52
c) 0.55 d) 0.58

13) In a traffic lane at rotary, the traffic moving extreme left is 250 PCU, and in extreme right, it is 240 PCU, the sum of the weaving traffic crossing left and right is 500 PCU, so find the proportion of weaving traffic.

a) 0.5 b) 1.5
c) 2.5 d) 3.0

14) What is the full form of VMS?

a) Volatile Message Signs b) Variable Message Signs
c) Vehicle Message Signs d) Volume Message Signs

Fourth Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Traffic Engineering and Management (BTN01710)

Day & Date: Tuesday,16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section-I

Q.2 Answer any two questions. **14**

a) List the various objectives of traffic engineering.

b) From an in-out survey conducted for a parking area consisting of 40 bays, the initial count was found to be 25. **Table-1** gives the result of the survey. The number of vehicles coming in and out of the parking lot for a time interval of 5 minutes is as shown in the **Table-1** below. Find the accumulation, total parking load, average occupancy and efficiency of the parking lot.

Table -1-in -out survey data

In-out survey data		
Time	In	Out
5	3	2
10	2	4
15	4	2
20	5	4
25	7	3
30	8	2

In-out survey data		
Time	In	Out
35	2	7
40	4	2
45	6	4
50	4	1
55	3	3
60	2	5

c) Outline causes of accidents and suggest remedial measures for prevention.

d) Write a short note on any two

i) Level of Service
ii) Passenger Car Unit
iii) Collision and Condition Diagram
iv) O-D survey

Q.3 Answer any TWO questions. **14**

a) Explain the relationship between speed, travel time, volume, density and capacity?

b) Discuss the various types of on-street parking with their advantages and disadvantages.

c) Define the term capacity. Explain terms basic capacity, possible capacity and practical capacity.

d) A vehicle of 2000 kg skids a distance of 40 m before colliding with a stationary vehicle of 1000 kg weight. After the collision, both vehicles skid a distance of 12 m. Assuming a coefficient of friction of 0.5, determine the initial speed of the vehicle.

Section-II

Q.4 Answer any two questions. **14**

a) Explain general principles governing application of speed limits in Rural and Urban area.

b) With neat sketches show some of the important types of regulatory signs and mention the functions of each.

c) Write a short note on ITS applications in urban transport system.

d) A fixed type 2 - phase signal is to be provided at an intersection having a North - South and an East - West Road, where only straight ahead traffic is permitted. The design hour flows from the various arms and the saturation flows for these arms are given in the following table.

	North	South	East	West
Design hour flow(q) in PCU s/hour	800	400	750	600
Saturation flow (s) in PCU s /hour	2400	2000	3000	3000

Calculate the optimum cycle time and green times for the minimum overall delay. Use Webster's method. Assume time lost per phase due to starting delays as 2 seconds and value of amber period is 2 seconds. Sketch the timing diagram for each phase.

Q.5 Answer any TWO questions. **14**

a) If 'A' vehicle travelling on the major or preferential street and 'B' vehicle travelling on the minor street. Assume the speed of vehicle 'A' is 60 kmph and the distance to the obstacle from vehicle 'A' and 'B' are 15m and 20m respectively. Calculate the speed limit on the minor street by

i) National Safety Council Method

ii) AASTHO method

b) The width of a carriageway approaching an intersection is given as 15 m. The entry and exit width at the rotary are 10 m. The traffic approaching the intersection from the four sides is shown in Figure-1 below. Find the capacity of the rotary using the given data. Find the capacity of the Rotary. Assume suitable data wherever necessary and mention it clearly. Consider the Design speed as 30kmph. Consider weaving length=54m.

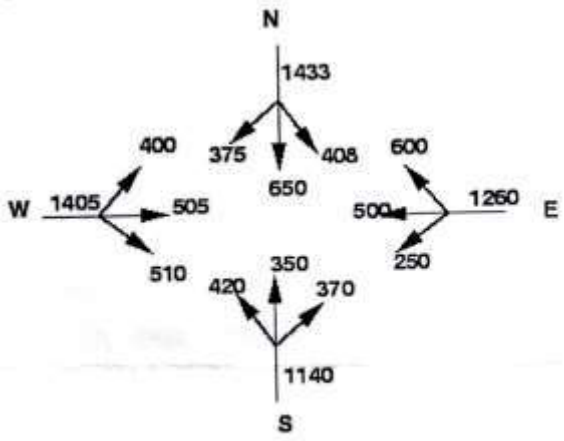

Fig-1-Traffic Approaching the Intersection

c) Explain with neat sketch.
   i) Roadway Delineators
   ii) Hazard Markers
   iii) Safety Barriers

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) Two broken yellow line marking at center of road indicates,
a) No passing allowed on both side
b) Passing allowed on one side
c) Passing allowed on both side
d) Passing allowed only for left side vehicle

2) Maximum number of vehicles can be parked with _____.
a) Parallel parking b) 30° angle parking
c) 45° angle parking d) 90° angle parking

3) When volume of the road reaches maximum flow or the capacity, the volume capacity ratio approaches to a value of, _____.
a) 1.0 b) 1.5
c) 0.0 d) 0.5

4) Speed regulations on roads is decided on the basis of _____.
a) 60^{th} percentile cumulative frequency
b) 85^{th} percentile cumulative frequency
c) 55^{th} percentile cumulative frequency
d) 98^{th} percentile cumulative frequency

5) The maximum number of vehicles observed in any five-minute period during the peak hour is 160. If the total flow in the peak hour is 1000 vehicles, the five-minute peak hour factor _____.
a) 0.44 b) 0.52
c) 0.55 d) 0.58

6) In a traffic lane at rotary, the traffic moving extreme left is 250 PCU, and in extreme right, it is 240 PCU, the sum of the weaving traffic crossing left and right is 500 PCU, so find the proportion of weaving traffic.
a) 0.5 b) 1.5
c) 2.5 d) 3.0

7) What is the full form of VMS?
a) Volatile Message Signs b) Variable Message Signs
c) Vehicle Message Signs d) Volume Message Signs

8) The traffic starts discharging from an approach at an intersection with the signal turning green. The constant headway considered from the fourth or fifth headway position is referred to as _____.

a) Discharge Headway
b) Saturation Headway
c) Effective Headway
d) Intersection Headway

9) The speed-density relationship in a mid-block section of a highway follows the Greenshield's model. If the free flow speed is V_f, and the jam density is K_j, the maximum flow observed in this section is _____.

a) $V_f * K_j$
b) $\frac{V_f * k_j}{2}$
c) $\frac{V_f * k_j}{4}$
d) $\frac{V_f * k_j}{8}$

10) If the space headway is 7m, then the jam density in vehicle/km is _____.

a) 142
b) 144
c) 145
d) 146

11) If the jam density is 145vehicles/km, and velocity is 60kph then the capacity flow is _____.

a) 2175
b) 2200
c) 2375
d) 2500

12) Level of Service A and F represents _____.

a) Forced Flow and Free Flow respectively
b) Free Flow and Forced Flow respectively
c) Both are free-flow
d) Both are Forced flow

13) As per IRC:67-2001, a traffic sign indicating the speed limit on a road should be of _____.

a) Circular shape with White Background and Red Border
b) Triangular shape with White Background and Red Border
c) Triangular shape with Red Background and White Border
d) Circular shape with Red Background and White Border

14) In signal design as per Indian Roads Congress specifications, if the sum of the ratios of normal flows to saturation flow of two directional traffic flows is 0.50 and the total lost time per cycle is 10 seconds, the optimum cycle length in seconds is _____.

a) 100

Fourth Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Traffic Engineering and Management (BTN01710)

Day & Date: Tuesday,16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section-I

Q.2 Answer any two questions. **14**

a) List the various objectives of traffic engineering.

b) From an in-out survey conducted for a parking area consisting of 40 bays, the initial count was found to be 25. **Table-1** gives the result of the survey. The number of vehicles coming in and out of the parking lot for a time interval of 5 minutes is as shown in the **Table-1** below. Find the accumulation, total parking load, average occupancy and efficiency of the parking lot.

Table -1-in -out survey data

In-out survey data		
Time	In	Out
5	3	2
10	2	4
15	4	2
20	5	4
25	7	3
30	8	2

In-out survey data		
Time	In	Out
35	2	7
40	4	2
45	6	4
50	4	1
55	3	3
60	2	5

c) Outline causes of accidents and suggest remedial measures for prevention.

d) Write a short note on any two

i) Level of Service
ii) Passenger Car Unit
iii) Collision and Condition Diagram
iv) O-D survey

Q.3 Answer any TWO questions. **14**

a) Explain the relationship between speed, travel time, volume, density and capacity?

b) Discuss the various types of on-street parking with their advantages and disadvantages.

c) Define the term capacity. Explain terms basic capacity, possible capacity and practical capacity.

d) A vehicle of 2000 kg skids a distance of 40 m before colliding with a stationary vehicle of 1000 kg weight. After the collision, both vehicles skid a distance of 12 m. Assuming a coefficient of friction of 0.5, determine the initial speed of the vehicle.

Section-II

Q.4 Answer any two questions. **14**

a) Explain general principles governing application of speed limits in Rural and Urban area.

b) With neat sketches show some of the important types of regulatory signs and mention the functions of each.

c) Write a short note on ITS applications in urban transport system.

d) A fixed type 2 - phase signal is to be provided at an intersection having a North - South and an East - West Road, where only straight ahead traffic is permitted. The design hour flows from the various arms and the saturation flows for these arms are given in the following table.

	North	South	East	West
Design hour flow(q) in PCU s/hour	800	400	750	600
Saturation flow (s) in PCU s /hour	2400	2000	3000	3000

Calculate the optimum cycle time and green times for the minimum overall delay. Use Webster's method. Assume time lost per phase due to starting delays as 2 seconds and value of amber period is 2 seconds. Sketch the timing diagram for each phase.

Q.5 Answer any TWO questions. **14**

a) If 'A' vehicle travelling on the major or preferential street and 'B' vehicle travelling on the minor street. Assume the speed of vehicle 'A' is 60 kmph and the distance to the obstacle from vehicle 'A' and 'B' are 15m and 20m respectively. Calculate the speed limit on the minor street by

i) National Safety Council Method

ii) AASTHO method

b) The width of a carriageway approaching an intersection is given as 15 m. The entry and exit width at the rotary are 10 m. The traffic approaching the intersection from the four sides is shown in Figure-1 below. Find the capacity of the rotary using the given data. Find the capacity of the Rotary. Assume suitable data wherever necessary and mention it clearly. Consider the Design speed as 30kmph. Consider weaving length=54m.

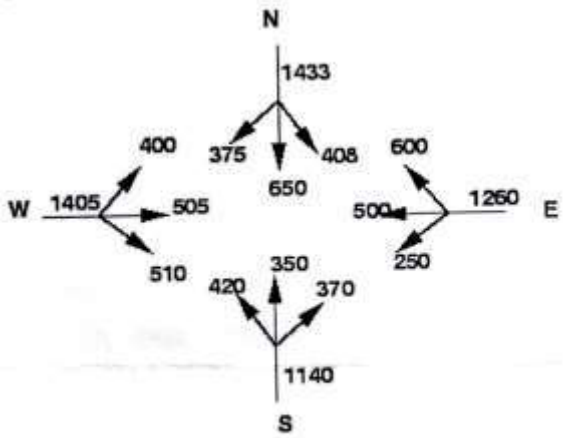

Fig-1-Traffic Approaching the Intersection

c) Explain with neat sketch.
   i) Roadway Delineators
   ii) Hazard Markers
   iii) Safety Barriers

Seat No.		Set	R

Fourth Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Traffic Engineering and Management (BTN01710)

Day & Date: Tuesday,16-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) Speed regulations on roads is decided on the basis of _____.
a) 60^{th} percentile cumulative frequency
b) 85^{th} percentile cumulative frequency
c) 55^{th} percentile cumulative frequency
d) 98^{th} percentile cumulative frequency

2) The maximum number of vehicles observed in any five-minute period during the peak hour is 160. If the total flow in the peak hour is 1000 vehicles, the five-minute peak hour factor _____.
a) 0.44 b) 0.52
c) 0.55 d) 0.58

3) In a traffic lane at rotary, the traffic moving extreme left is 250 PCU, and in extreme right, it is 240 PCU, the sum of the weaving traffic crossing left and right is 500 PCU, so find the proportion of weaving traffic.
a) 0.5 b) 1.5
c) 2.5 d) 3.0

4) What is the full form of VMS?
a) Volatile Message Signs b) Variable Message Signs
c) Vehicle Message Signs d) Volume Message Signs

5) The traffic starts discharging from an approach at an intersection with the signal turning green. The constant headway considered from the fourth or fifth headway position is referred to as _____.
a) Discharge Headway b) Saturation Headway
c) Effective Headway d) Intersection Headway

6) The speed-density relationship in a mid-block section of a highway follows the Greenshield's model. If the free flow speed is V_f, and the jam density is K_j, the maximum flow observed in this section is _____.
a) $V_f * K_j$ b) $\frac{V_f * k_j}{2}$
c) $\frac{V_f * k_j}{4}$ d) $\frac{V_f * k_j}{8}$

7) If the space headway is 7m, then the jam density in vehicle/km is _____.
a) 142 b) 144
c) 145 d) 146

8) If the jam density is 145vehicles/km, and velocity is 60kph then the capacity flow is _____.
a) 2175 b) 2200
c) 2375 d) 2500

9) Level of Service A and F represents _____.
a) Forced Flow and Free Flow respectively
b) Free Flow and Forced Flow respectively
c) Both are free-flow
d) Both are Forced flow

10) As per IRC:67-2001, a traffic sign indicating the speed limit on a road should be of _____.
a) Circular shape with White Background and Red Border
b) Triangular shape with White Background and Red Border
c) Triangular shape with Red Background and White Border
d) Circular shape with Red Background and White Border

11) In signal design as per Indian Roads Congress specifications, if the sum of the ratios of normal flows to saturation flow of two directional traffic flows is 0.50 and the total lost time per cycle is 10 seconds, the optimum cycle length in seconds is _____.
a) 100 b) 80
c) 60 d) 40

12) Two broken yellow line marking at center of road indicates,
a) No passing allowed on both side
b) Passing allowed on one side
c) Passing allowed on both side
d) Passing allowed only for left side vehicle

13) Maximum number of vehicles can be parked with _____.
a) Parallel parking b) 30° angle parking
c) 45° angle parking d) 90° angle parking

14) When volume of the road reaches maximum flow or the capacity, the volume capacity ratio approaches to a value of, _____.
a) 1.0 b) 1.5
c) 0.0 d) 0.5

CIVIL ENGINEERING
Traffic Engineering and Management (BTN01710)

Day & Date: Tuesday,16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section-I

Q.2 Answer any two questions. **14**

a) List the various objectives of traffic engineering.

b) From an in-out survey conducted for a parking area consisting of 40 bays, the initial count was found to be 25. **Table-1** gives the result of the survey. The number of vehicles coming in and out of the parking lot for a time interval of 5 minutes is as shown in the **Table-1** below. Find the accumulation, total parking load, average occupancy and efficiency of the parking lot.

Table -1-in -out survey data

In-out survey data			In-out survey data		
Time	In	Out	Time	In	Out
5	3	2	35	2	7
10	2	4	40	4	2
15	4	2	45	6	4
20	5	4	50	4	1
25	7	3	55	3	3
30	8	2	60	2	5

c) Outline causes of accidents and suggest remedial measures for prevention.

d) Write a short note on any two

i) Level of Service
ii) Passenger Car Unit
iii) Collision and Condition Diagram
iv) O-D survey

Q.3 Answer any TWO questions. **14**

a) Explain the relationship between speed, travel time, volume, density and capacity?

b) Discuss the various types of on-street parking with their advantages and disadvantages.

c) Define the term capacity. Explain terms basic capacity, possible capacity and practical capacity.

d) A vehicle of 2000 kg skids a distance of 40 m before colliding with a stationary vehicle of 1000 kg weight. After the collision, both vehicles skid a distance of 12 m. Assuming a coefficient of friction of 0.5, determine the initial speed of the vehicle.

Section-II

Q.4 Answer any two questions. **14**

a) Explain general principles governing application of speed limits in Rural and Urban area.

b) With neat sketches show some of the important types of regulatory signs and mention the functions of each.

c) Write a short note on ITS applications in urban transport system.

d) A fixed type 2 - phase signal is to be provided at an intersection having a North - South and an East - West Road, where only straight ahead traffic is permitted. The design hour flows from the various arms and the saturation flows for these arms are given in the following table.

	North	South	East	West
Design hour flow(q) in PCU s/hour	800	400	750	600
Saturation flow (s) in PCU s /hour	2400	2000	3000	3000

Calculate the optimum cycle time and green times for the minimum overall delay. Use Webster's method. Assume time lost per phase due to starting delays as 2 seconds and value of amber period is 2 seconds. Sketch the timing diagram for each phase.

Q.5 Answer any TWO questions. **14**

a) If 'A' vehicle travelling on the major or preferential street and 'B' vehicle travelling on the minor street. Assume the speed of vehicle 'A' is 60 kmph and the distance to the obstacle from vehicle 'A' and 'B' are 15m and 20m respectively. Calculate the speed limit on the minor street by

i) National Safety Council Method

ii) AASTHO method

b) The width of a carriageway approaching an intersection is given as 15 m. The entry and exit width at the rotary are 10 m. The traffic approaching the intersection from the four sides is shown in Figure-1 below. Find the capacity of the rotary using the given data. Find the capacity of the Rotary. Assume suitable data wherever necessary and mention it clearly. Consider the Design speed as 30kmph. Consider weaving length=54m.

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) As per IRC:67-2001, a traffic sign indicating the speed limit on a road should be of _____.
a) Circular shape with White Background and Red Border
b) Triangular shape with White Background and Red Border
c) Triangular shape with Red Background and White Border
d) Circular shape with Red Background and White Border

2) In signal design as per Indian Roads Congress specifications, if the sum of the ratios of normal flows to saturation flow of two directional traffic flows is 0.50 and the total lost time per cycle is 10 seconds, the optimum cycle length in seconds is _____.
a) 100 b) 80
c) 60 d) 40

3) Two broken yellow line marking at center of road indicates,
a) No passing allowed on both side
b) Passing allowed on one side
c) Passing allowed on both side
d) Passing allowed only for left side vehicle

4) Maximum number of vehicles can be parked with _____.
a) Parallel parking b) 30° angle parking
c) 45° angle parking d) 90° angle parking

5) When volume of the road reaches maximum flow or the capacity, the volume capacity ratio approaches to a value of, _____.
a) 1.0 b) 1.5
c) 0.0 d) 0.5

6) Speed regulations on roads is decided on the basis of _____.
a) 60^{th} percentile cumulative frequency
b) 85^{th} percentile cumulative frequency
c) 55^{th} percentile cumulative frequency
d) 98^{th} percentile cumulative frequency

7) The maximum number of vehicles observed in any five-minute period during the peak hour is 160. If the total flow in the peak hour is 1000 vehicles, the five-minute peak hour factor _____.

a) 0.44 b) 0.52
c) 0.55 d) 0.58

8) In a traffic lane at rotary, the traffic moving extreme left is 250 PCU, and in extreme right, it is 240 PCU, the sum of the weaving traffic crossing left and right is 500 PCU, so find the proportion of weaving traffic.

a) 0.5 b) 1.5
c) 2.5 d) 3.0

9) What is the full form of VMS?

a) Volatile Message Signs b) Variable Message Signs
c) Vehicle Message Signs d) Volume Message Signs

10) The traffic starts discharging from an approach at an intersection with the signal turning green. The constant headway considered from the fourth or fifth headway position is referred to as _____.

a) Discharge Headway b) Saturation Headway
c) Effective Headway d) Intersection Headway

11) The speed-density relationship in a mid-block section of a highway follows the Greenshield's model. If the free flow speed is V_f, and the jam density is K_j, the maximum flow observed in this section is _____.

a) $V_f * K_j$ b) $\frac{V_f * k_j}{2}$
c) $\frac{V_f * k_j}{4}$ d) $\frac{V_f * k_j}{8}$

12) If the space headway is 7m, then the jam density in vehicle/km is _____.

a) 142 b) 144
c) 145 d) 146

13) If the jam density is 145vehicles/km, and velocity is 60kph then the capacity flow is _____.

a) 2175 b) 2200
c) 2375 d) 2500

14) Level of Service A and F represents _____.

a) Forced Flow and Free Flow respectively
b) Free Flow and Forced Flow respectively
c) Both are free-flow
d) Both are Forced flow

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The shape of apertures in geonets is _____.
a) Square b) Circular
c) Triangular d) Diamond

2) The core of GCL is made of _____.
a) Bentonite clay b) cement
c) clay d) timber

3) The sum of flakiness index and elongation index should not exceed.
a) 15 b) 20
c) 30 d) 40

4) The materials used in the manufacturing of geosynthetics are primarily synthetic polymers generally derived from.
a) Rubber b) Fiberglass
c) Crude petroleum oils d) Jute

5) Indian standard for sampling of geosynthetic specimens is _____.
a) IS800 b) IS14706
c) IS456 d) IS2700

6) Which of the following tests measures the toughness of road aggregates?
a) Crushing strength test b) Abrasion test
c) Impact test d) Shape test

7) MFI is acronym for _____.
a) Mount flow Instrument b) Money fix Installment
c) Metal flow Index d) Melt flow Index

8) The width of grips for performing the grab tensile strength is, _____.
a) 25mm b) 10mm
c) 15mm d) 35mm

9) Which of the following is not physical property of Geosynthetics?
a) Pull out resistance b) Mass per unit area
c) Specific gravity d) Thickness

10) What is the unit of trapezoidal tear strength?
a) Nm
b) N/m
c) N/m^2
d) N

11) Why is the cover provided above the land fill?
a) to prevent the ingress of rain water
b) to prevent the release of odour
c) to prevent the bird menace.
d) all of the above

12) Leaking of leachate occurs from the land fill due to _____.
a) Shrinkage cracks in the clay liner
b) holes in the geo-membrane ayer
c) Imperfect sealing of joints.
d) All of the above.

13) How many types of primary functions of Geo-synthetics are there?
a) 5
b) 4
c) 3
d) 6

14) The structure of a Geo cell is _____.
a) 2D honeycombed
b) 2D floccular
c) 3D floccular
d) 3D honeycombed

Fourth. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Geo synthetics and soil structures (BTN01711)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.
5) Reinforce your answer with illustrative sketches where-ever possible
6) Do write units for the calculated quantities.

Section – I

Q.2 Answer any four questions: **08**
- **a)** Historical background of reinforced soil
- **b)** Assessment of construction induced damage
- **c)** Types of reinforced soil retaining walls
- **d)** Different slop stability analysis methods
- **e)** Apparent opening size

Q.3 **a)** Explain different types of geosynthetics. **05**
b) Explain the mechanical properties of geosynthetics in detail. **05**

Q.4 **a)** With a neat sketch explain procedure for inplane permeability. **05**
b) Enlist different techniques of testing strength properties of geosynthetics. **05**

Q.5 **a)** Explain in detail the BS-8006 method for describing reinforced soil retaining wall. **05**
b) Explain planar wedge method for slope analysis. **05**

Section – II

Q.6 Answer any four questions: **08**
- **a)** Erosion control on slopes using geosynthetics.
- **b)** Criteria for selection of geotextiles as filters.
- **c)** Reflection cracking.
- **d)** Components of modern landfills.
- **e)** Collection techniques for leachate.

Q.7 **a)** Explain in detail Binquet and Lees approach. **05**
b) Write a detailed note on applications of geosynthetics in drainage and filtration. **05**

Q.8	**a)**	Explain the use of geosynthetics for construction of heavy container yards and railway lines.	**05**
	b)	Explain Giroud-Noiray approach.	**05**
Q.9	**a)**	Explain geosynthetic clay liner as barrier.	**05**
	b)	Explain application geotextiles for drainage in landfills.	**05**

Fourth. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Geo synthetics and soil structures (BTN01711)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Why is the cover provided above the land fill?
a) to prevent the ingress of rain water
b) to prevent the release of odour
c) to prevent the bird menace.
d) all of the above

2) Leaking of leachate occurs from the land fill due to _____.
a) Shrinkage cracks in the clay liner
b) holes in the geo-membrane ayer
c) Imperfect sealing of joints.
d) All of the above.

3) How many types of primary functions of Geo-synthetics are there?
a) 5 b) 4
c) 3 d) 6

4) The structure of a Geo cell is _____.
a) 2D honeycombed b) 2D floccular
c) 3D floccular d) 3D honeycombed

5) The shape of apertures in geonets is _____.
a) Square b) Circular
c) Triangular d) Diamond

6) The core of GCL is made of _____.
a) Bentonite clay b) cement
c) clay d) timber

7) The sum of flakiness index and elongation index should not exceed.
a) 15 b) 20
c) 30 d) 40

8) The materials used in the manufacturing of geosynthetics are primarily synthetic polymers generally derived from.
a) Rubber b) Fiberglass
c) Crude petroleum oils d) Jute

9) Indian standard for sampling of geosynthetic specimens is _____.
a) IS800 b) IS14706
c) IS456 d) IS2700

10) Which of the following tests measures the toughness of road aggregates?
a) Crushing strength test b) Abrasion test
c) Impact test d) Shape test

11) MFI is acronym for _____.
a) Mount flow Instrument b) Money fix Installment
c) Metal flow Index d) Melt flow Index

12) The width of grips for performing the grab tensile strength is, _____.
a) 25mm b) 10mm
c) 15mm d) 35mm

13) Which of the following is not physical property of Geosynthetics?
a) Pull out resistance b) Mass per unit area
c) Specific gravity d) Thickness

14) What is the unit of trapezoidal tear strength?
a) Nm b) N/m
c) N/m^2 d) N

3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) Average chart & range chart are for _____.
a) Attributes b) Variables
c) Both d) None of these

2) Military organization is _____.
a) Line and Staff b) Matrix
c) Line d) Functional

3) Short Route problem is best example of _____.
a) Graphical Method b) Integer Programming
c) Dynamic Programming d) Game Theory

4) If rate of customer arrival is 15 person per hour and rate of service is 20 persons per hour then probability of system being idle is _____.
a) 0.5 b) 0.75
c) 1.0 d) 0.25

5) An LPP is said to be _____ if has no solution that satisfies all the constraints.
a) Feasible b) Bounded
c) Infeasible d) None of these

6) The topmost row in the simplex matrix is called _____.
a) Variable Row b) Objective Row
c) Constraint Row d) None

7) Games without a saddle point requires players to play _____.
a) Pure Strategy b) Mixed Strategy
c) Market Strategy d) None

8) Which of the following method will be minimum cost for IBFS in transportation problem?
a) NWCM b) LCM
c) VAM d) None

9) EMV technique is used for decision under _____.
a) Uncertainty b) Certainty
c) Risk d) All the above

10) The cost of keeping items in inventory stock is called _____.

a) Caring Cost b) Shortage cost
c) Procurement cost d) none of this

11) Economic Order Quantity model helps to find.

a) Optimum size of order b) Annual Requirement of Units
c) Both of these d) None of these

12) At the Break-Even Point _____.

a) Profit > Loss b) Profit < Loss
c) Profit = Loss d) None of these

13) Hungarian method is suitable for _____.

a) Assignment Problem b) Transportation Problem
c) Graphical Method d) Game Theory

14) In Decision Tree problem, Event Mode is shown by _____.

a) Circle b) Rectangle
c) Square d) Triangle

Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section-I

Q.2 Answer any three. **24**

a) Using Graphical method, Solve

Maximize $Z = 2X_1 + 3X_2$

Subject to, $X_1 + X_2 \leq 30;$
$X_1 - X_2 \geq 0;$
$X_2 \geq 3;$
$0 \leq X_1 \leq 20;$
$0 \leq X_2 \leq 2;$

Four different jobs can be done on 4 different machines. The set-up and takedown time cost are assumed to be prohibitively high for changeovers. The matrix below gives the cost in rupees for producing job i on machine j. Assign optimum job to machine so as processing cost should be minimum.

		Machines			
		M1	M2	M3	M4
Jobs	J1	51	77	49	55
	J2	32	34	59	68
	J3	37	44	70	54
	J4	55	55	58	55

b) Determine the decision under Maximin and Laplace criteria for the following process.

Alternatives	States of nature (product demand)			
	High (₹)	Moderate (₹)	Low (₹)	Nil (₹)
Expand	50,000	25,000	-25,000	-45,000
Construct	70,000	30,000	-40,000	-80,000
Subcontract	30,000	15,000	-1,000	-10,000

c) Discuss I detail 'Planning' & 'Organising' as a Functions of Management.

d) Explain the Waiting Line Theory with all its characteristics to single channel waiting line. Discuss with the graph showing waiting time cost, Cost of Services & Total Expected cost.

Q.3 Write a note on any one. **04**

a) Advantages of Simulation Technique.

b) Theory of Games.

Section-II

Q.4 Answer any three. **24**

a) What is Break-Even Analysis? Explain with an example. How it is important for material management?

b) Find The A-Class, B-Class And C-Class Material, for following and draw the Graph.

Item ID	Annual Consumption in unit	Unit Price in Rs
1	700	50
2	2400	30
3	150	100
4	60	220
5	3800	15
6	4000	5
7	6000	2
8	300	35
9	30	80
10	2900	4

c) Calculate the value of Economic Order Quantity, Reordering Period, No. of orders per year with the following Data,
Annual Usages=50 Units
Procurement Cost = 15 Rs. Per Order
Unit Cost = 100 Rs. /Item
Inventory Caring Cost = 10% of the unit cost

d) The following are the mean length & ranges of lengths of finished product from 10 samples of size 5. The specification limits for length are 200 ± 5 cm. Construct $\bar{x}$ and R chart and examine whether the process is under control & state your explanation.

Sample no.	1	2	3	4	5	6	7	8	9	10
Mean $\bar{x}$	201	198	202	200	203	204	199	196	199	201
Range R	5	0	7	3	4	7	2	8	5	6

e) Write a note on the ERP system.

Q.5 Write a note on any one. **04**

a) Dynamic Programming.

c) Infeasible d) None of these

10) The topmost row in the simplex matrix is called _____.

a) Variable Row b) Objective Row
c) Constraint Row d) None

11) Games without a saddle point requires players to play _____.

a) Pure Strategy b) Mixed Strategy
c) Market Strategy d) None

12) Which of the following method will be minimum cost for IBFS in transportation problem?

a) NWCM b) LCM
c) VAM d) None

13) EMV technique is used for decision under _____.

a) Uncertainty b) Certainty
c) Risk d) All the above

14) The cost of keeping items in inventory stock is called _____.

a) Caring Cost b) Shortage cost
c) Procurement cost d) none of this

Fourth Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Optimization Techniques (BTN01714)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section-I

Q.2 Answer any three. **24**

a) Using Graphical method, Solve

Maximize $Z = 2X_1 + 3X_2$

Subject to, $X_1 + X_2 \leq 30;$
$X_1 - X_2 \geq 0;$
$X_2 \geq 3;$
$0 \leq X_1 \leq 20;$
$0 \leq X_2 \leq 2;$

Four different jobs can be done on 4 different machines. The set-up and takedown time cost are assumed to be prohibitively high for changeovers. The matrix below gives the cost in rupees for producing job i on machine j. Assign optimum job to machine so as processing cost should be minimum.

		Machines			
		M1	M2	M3	M4
Jobs	J1	51	77	49	55
	J2	32	34	59	68
	J3	37	44	70	54
	J4	55	55	58	55

b) Determine the decision under Maximin and Laplace criteria for the following process.

Alternatives	States of nature (product demand)			
	High (₹)	Moderate (₹)	Low (₹)	Nil (₹)
Expand	50,000	25,000	-25,000	-45,000
Construct	70,000	30,000	-40,000	-80,000
Subcontract	30,000	15,000	-1,000	-10,000

c) Discuss I detail 'Planning' & 'Organising' as a Functions of Management.

d) Explain the Waiting Line Theory with all its characteristics to single channel waiting line. Discuss with the graph showing waiting time cost, Cost of Services & Total Expected cost.

Q.3 Write a note on any one. **04**

a) Advantages of Simulation Technique.

b) Theory of Games.

Section-II

Q.4 Answer any three. **24**

a) What is Break-Even Analysis? Explain with an example. How it is important for material management?

b) Find The A-Class, B-Class And C-Class Material, for following and draw the Graph.

Item ID	Annual Consumption in unit	Unit Price in Rs
1	700	50
2	2400	30
3	150	100
4	60	220
5	3800	15
6	4000	5
7	6000	2
8	300	35
9	30	80
10	2900	4

c) Calculate the value of Economic Order Quantity, Reordering Period, No. of orders per year with the following Data,
Annual Usages=50 Units
Procurement Cost = 15 Rs. Per Order
Unit Cost = 100 Rs. /Item
Inventory Caring Cost = 10% of the unit cost

d) The following are the mean length & ranges of lengths of finished product from 10 samples of size 5. The specification limits for length are 200 ± 5 cm. Construct $\bar{x}$ and R chart and examine whether the process is under control & state your explanation.

Sample no.	1	2	3	4	5	6	7	8	9	10
Mean $\bar{x}$	201	198	202	200	203	204	199	196	199	201
Range R	5	0	7	3	4	7	2	8	5	6

e) Write a note on the ERP system.

Q.5 Write a note on any one. **04**

a) Dynamic Programming.

b) ANN

Day & Date: Tuesday, 16-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternative from the options. **14**

1) The topmost row in the simplex matrix is called _____.
a) Variable Row b) Objective Row
c) Constraint Row d) None

2) Games without a saddle point requires players to play _____.
a) Pure Strategy b) Mixed Strategy
c) Market Strategy d) None

3) Which of the following method will be minimum cost for IBFS in transportation problem?
a) NWCM b) LCM
c) VAM d) None

4) EMV technique is used for decision under _____.
a) Uncertainty b) Certainty
c) Risk d) All the above

5) The cost of keeping items in inventory stock is called _____.
a) Caring Cost b) Shortage cost
c) Procurement cost d) none of this

6) Economic Order Quantity model helps to find.
a) Optimum size of order b) Annual Requirement of Units
c) Both of these d) None of these

7) At the Break-Even Point _____.
a) Profit > Loss b) Profit < Loss
c) Profit = Loss d) None of these

8) Hungarian method is suitable for _____.
a) Assignment Problem b) Transportation Problem
c) Graphical Method d) Game Theory

9) In Decision Tree problem, Event Mode is shown by _____.
a) Circle b) Rectangle
c) Square d) Triangle

10) Average chart & range chart are for _____.
a) Attributes b) Variables
c) Both d) None of these

11) Military organization is _____.
a) Line and Staff b) Matrix
c) Line d) Functional

12) Short Route problem is best example of _____.
a) Graphical Method b) Integer Programming
c) Dynamic Programming d) Game Theory

13) If rate of customer arrival is 15 person per hour and rate of service is 20 persons per hour then probability of system being idle is _____.
a) 0.5 b) 0.75
c) 1.0 d) 0.25

14) An LPP is said to be _____ if has no solution that satisfies all the constraints.
a) Feasible b) Bounded
c) Infeasible d) None of these

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The load factor for the peak day of the year determines the required _____.
a) Water storage b) Pondage
c) Generating capacity d) None

2) The draft tube is provided to _____.
a) reduce the effect of water hammer
b) raise the water surface of the stream to create an artificial head
c) increase the acting head on the water wheel
d) none of the above

3) What is time period for one tide to occur in a day?
a) 6h, 12.5 min b) 6h, 40.5 min
c) 6h, 0 min d) 6h, 25.6 min

4) Unit power in a turbine is _____.
a) $pH^{1/2}$ b) P/H
c) $P/H^{3/2}$ d) P/H^{3}

5) In Francis turbine runner, the number of blades is generally of the order of _____.
a) 1-2 b) 4-6
c) 6-8 d) 12-16

6) Minimum pressure occurs in fall flowing power tunnel at the time _____.
a) load rejection b) load acceptance
c) head race d) Tail race

7) The pumped storage power plant in India _____.
a) Bhakra Nangal (Punjab) b) Kadamparai (Tamilnadu)
c) Koyna (Maharashtra) d) Does not exist

8) Run of river plant is one which _____.
a) has a limited pondage b) has no pondage at all
c) is high head plant d) is a computer storage plant

9) Cavitations in turbine causes _____.

a) low efficiency b) damage of blade surface
c) vibration and noise d) all

10) Substructure of a powerhouse should provide space for _____.

a) turbine governors
b) generators for horizontal unit
c) switch board
d) low tension switches and other auxiliaries
e) all

11) Trap efficiency of reservoir indicate _____.

a) water trapped b) sediment retained
c) sediment in flow d) sediment out flow

12) Which of the following is not a requirement for site selection of hydroelectric power plant?

a) Availability of water b) Large catchment area
c) Rocky land d) Sedimentation

13) Which of following power plant has highest depreciation charges?

a) Nuclear plant b) Thermal plant
c) Diesel plant d) Hydroelectric plant

14) Pelton turbines are mostly _____.

a) Horizontal b) Vertical
c) Inclined d) None of the above

5) Figures to the right indicates full marks.

Section – I

Q.2 Attempt any four of the following questions. **16**

a) What are the type sources?

b) Discuss the Strength, weaknesses and future prospects of water power India.

c) What is the classification of hydropower plants. Explain any one in brief.

d) Common load shared by two stations base load plant with 25 MW capacity and other being standby plant with 30 MW capacity. The yearly output for base load station is 125×10^6 KWh, and for standby station is 10.5×10^6 KWh. The peak load taken by standby station is 15 MW which works for 2500 hrs during the year. The base load station takes peak load as 22.5 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) Calculate the power factor for a utility to supply a maximum 1500 kW of real power, when the reactive power at that time is 1125 kVAR.

Q.3 Attempt any two of the following questions. **12**

a) A penstock pipe, 800 m long, takes off from a reservoir and feeds water to turbine, the level of which is 220 m below the reservoir water level. The first 300 m length of the penstock has a cross section area of 6 m^2 and the rest has an area of 4 m^2. The steady state discharge is 10m3/sec. If the turbine gates are closed completely in seconds at a uniform rate, what would be the water hammer pressure developed? (from Allieri chart= Z2=1.32).

b) What do you understand by run-of-river plants? What are the parts and arrangements of such plants? Draw a neat sketch of such plant.

c) What is water hammer in a pipe line? Derive the expression for the water hammer pressure in case of rigid pipe and elastic pipe.

Section – II

Q.4 Attempt any four of the following questions. **16**

a) What are the important types of turbines? Enlist the factors on which choice of turbine depends.

b) What do you understand by 'pumped storage' plant? What are the advantages and disadvantages of this power plant?

c) What are the advantages of reaction turbine over the pelton wheel in respect of efficiency, size cost and maintenance?

d) Power house is equipped with 4 units of vertical shaft pelton turbines to be coupled with 70000 kVA, 3 phase. 50 hertz generators. The generation is provided with 10 pairs of poles. The gross design head is 505 m and transmission efficiency of head race tunnel and penstocks together is to be 94 percent.
The four units together will provide for a power of 256000 KW at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98.
Find-:
1) the design discharge for the turbine
2) jet dia. and no. of jets
3) the nozzle tip diameter
4) the pitch circle dia. of the wheel
5) the specific speed and
6) number of buckets on the wheel

e) What are the types of intake structures? Explain any one with neat sketch.

Q.5 Attempt any two of the following questions. **12**

a) What are the important types of turbines? Enlist the factors on which choice of turbine depends.

b) Describe how ocean tides one generated? With tidal cycle in view describe how hydropower can be generated? Also state the limitations of tidal power generation.

c) At a hydroelectric power station Kaplan turbine is used which has following data,

Operating head = 22.5m
output power at this head = 126 MW,
discharge = 615 m3/sec
speed = 68.2 rpm,
Runner tip to tip diameter = 9.3 m
Hub diameter = 4.3m
Number of blades = 6
Calculate the speed ratio, flow ratio, and the overall efficiency.

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov – 2023
CIVIL ENGINEERING
Water Power Engineering (BTN01715)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Assume suitable data if necessary.
3) Use of only non programmable calculator is allowed.
4) Draw neat labeled diagrams whenever necessary.
5) Figures to the right indicates full marks.

Section – I

Q.2 Attempt any four of the following questions. **16**

a) What are the type sources?

b) Discuss the Strength, weaknesses and future prospects of water power India.

c) What is the classification of hydropower plants. Explain any one in brief.

d) Common load shared by two stations base load plant with 25 MW capacity and other being standby plant with 30 MW capacity. The yearly output for base load station is 125×10^6 KWh, and for standby station is 10.5×10^6 KWh. The peak load taken by standby station is 15 MW which works for 2500 hrs during the year. The base load station takes peak load as 22.5 MW. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) Calculate the power factor for a utility to supply a maximum 1500 kW of real power, when the reactive power at that time is 1125 kVAR.

Q.3 Attempt any two of the following questions. **12**

a) A penstock pipe, 800 m long, takes off from a reservoir and feeds water to turbine, the level of which is 220 m below the reservoir water level. The first 300 m length of the penstock has a cross section area of 6 m^2 and the rest has an area of 4 m^2. The steady state discharge is 10m3/sec. If the turbine gates are closed completely in seconds at a uniform rate, what would be the water hammer pressure developed? (from Allieri chart= Z2=1.32).

b) What do you understand by run-of-river plants? What are the parts and arrangements of such plants? Draw a neat sketch of such plant.

c) What is water hammer in a pipe line? Derive the expression for the water hammer pressure in case of rigid pipe and elastic pipe.

Section – II

Q.4 Attempt any four of the following questions. **16**

a) What are the important types of turbines? Enlist the factors on which choice of turbine depends.

b) What do you understand by 'pumped storage' plant? What are the advantages and disadvantages of this power plant?

c) What are the advantages of reaction turbine over the pelton wheel in respect of efficiency, size cost and maintenance?

d) Power house is equipped with 4 units of vertical shaft pelton turbines to be coupled with 70000 kVA, 3 phase. 50 hertz generators. The generation is provided with 10 pairs of poles. The gross design head is 505 m and transmission efficiency of head race tunnel and penstocks together is to be 94 percent.
The four units together will provide for a power of 256000 KW at a guaranteed efficiency of 91 percent. The nozzle efficiency is 0.98.
Find-:
1) the design discharge for the turbine
2) jet dia. and no. of jets
3) the nozzle tip diameter
4) the pitch circle dia. of the wheel
5) the specific speed and
6) number of buckets on the wheel

e) What are the types of intake structures? Explain any one with neat sketch.

Q.5 Attempt any two of the following questions. **12**

a) What are the important types of turbines? Enlist the factors on which choice of turbine depends.

b) Describe how ocean tides one generated? With tidal cycle in view describe how hydropower can be generated? Also state the limitations of tidal power generation.

c) At a hydroelectric power station Kaplan turbine is used which has following data,

Operating head = 22.5m
output power at this head = 126 MW,
discharge = 615 m3/sec
speed = 68.2 rpm,
Runner tip to tip diameter = 9.3 m
Hub diameter = 4.3m
Number of blades = 6
Calculate the speed ratio, flow ratio, and the overall efficiency.

Fourth Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov – 2023
CIVIL ENGINEERING
Water Power Engineering (BTN01715)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary.
5) Draw neat labels diagrams whenever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Minimum pressure occurs in fall flowing power tunnel at the time _____.
a) load rejection b) load acceptance
c) head race d) Tail race

2) The pumped storage power plant in India _____.
a) Bhakra Nangal (Punjab) b) Kadamparai (Tamilnadu)
c) Koyna (Maharashtra) d) Does not exist

3) Run of river plant is one which _____.
a) has a limited pondage b) has no pondage at all
c) is high head plant d) is a computer storage plant

4) Cavitations in turbine causes _____.
a) low efficiency b) damage of blade surface
c) vibration and noise d) all

5) Substructure of a powerhouse should provide space for _____.
a) turbine governors
b) generators for horizontal unit
c) switch board
d) low tension switches and other auxiliaries
e) all

6) Trap efficiency of reservoir indicate _____.
a) water trapped b) sediment retained
c) sediment in flow d) sediment out flow

7) Which of the following is not a requirement for site selection of hydroelectric power plant?
a) Availability of water b) Large catchment area
c) Rocky land d) Sedimentation

8) Which of following power plant has highest depreciation charges?
a) Nuclear plant b) Thermal plant
c) Diesel plant d) Hydroelectric plant

9) Pelton turbines are mostly _____.
a) Horizontal b) Vertical
c) Inclined d) None of the above

10) The load factor for the peak day of the year determines the required _____.
a) Water storage b) Pondage
c) Generating capacity d) None

11) The draft tube is provided to _____.
a) reduce the effect of water hammer
b) raise the water surface of the stream to create an artificial head
c) increase the acting head on the water wheel
d) none of the above

12) What is time period for one tide to occur in a day?
a) 6h, 12.5 min b) 6h, 40.5 min
c) 6h, 0 min d) 6h, 25.6 min

13) Unit power in a turbine is _____.
a) $pH^{1/2}$ b) P/H
c) $P/H^{3/2}$ d) P/H^{3}

14) In Francis turbine runner, the number of blades is generally of the order of _____.
a) 1-2 b) 4-6
c) 6-8 d) 12-16

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Photochemical smog reduces _____ considerably.
a) Visibility b) Lapse rate
c) Odour d) Land pollution

2) _____ can remove ____.
a) Scrubers, Water soluble Gases
b) Gravity settler, Particulates
c) Adsorption tower, organic gases
d) All of above

3) Velocity of gas flow in gravity settler should be less than _____ m/s for excellent results.
a) 0.3 b) 0.5
c) 3.1 d) 10

4) If stack is having cross sectional area of 4 sq. m then number of traverse points shall be equal to _____.
a) 4 b) 12
c) 20 d) 30

5) Concentration of SPM in ambient air can be determined by using _____.
a) Stack monitoring kit
b) Auto exhaust analyzer
c) High volume sampler or respirable dust sampler
d) All of above

6) _____ are categorized under dry collectors.
a) Venturi scrubber b) Spray tower
c) Cyclonic scrubber d) Cyclone separator

7) Thickness of atmosphere is approximately _____ km.
a) 35 b) 11
c) 39 d) 500

8) Bags in bag house filter Are _____ mm in diameter.
a) 120-400 b) 10-20
c) 12-40 d) 1000-15000

9) Fugitive emissions consist of _____
a) Street dust
b) Dust from construction activities
c) Dust from farm cultivation
d) All of the above

10) According to EPA of USA, the following is not one of the six major pollutants?
a) Ozone b) Carbon monoxide
c) Nitrogen oxides d) Carbon di-oxide

11) Concentration of pollutants in stack emissions can be measured by _____.
a) High volume sampler b) Stack monitoring kit
c) Thermometer d) Hygrometer

12) As per NAAQS (old), standard for PM_{10} for eco-sensitive area considering annual average is _____ micrograms/m^3.
a) 60 b) 100
c) 8 d) 80

13) Noise pollution is created if sound is in excess to _____.
a) 70-75 dB b) 50-60 dB
c) 80-99 dB d) 40-65 dB

14) Day time noise standard prescribed for residential areas in India is _____.
a) 75 dB b) 65 dB
c) 50 dB d) 55 dB

Fourth. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov2023
CIVIL ENGINEERING
Air and Noise Pollution and Control (BTN01716)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 3 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 2, 4 & 5)
2) Question no. 7 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 6, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** What are different zones of atmosphere? Explain with the help of neat graph. **06**

b) Define air pollution based on composition of clean air. **03**

Q.3 **a)** Determine the effective stack height given by the following data: **06**
i) Physical stack height = 203 m
ii) Inside diameter of stack = 1.07 m
iii) Air temperature = 13 °C
iv) Barometric pressure = 1000 mbar
v) Stack gas velocity = 9.14 m/sec
vi) Stack gas temperature = 149°C
vii) Wind speed = 5m/sec.

b) For the following meteorological parameters give measuring unit and instrument used for measurement: **04**
i) Temperature
ii) Relative humidity
iii) Atmospheric pressure
iv) Wind Speed

Q.4 **a)** Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

b) A factory uses 1.5 million litres of fuel oil/month. The exhaust gases from factory contain the following quantities of pollutants/million litres/year. **05**
i) Particulate matter = 5 tonnes / year
ii) Sulphur dioxide = 21 tonnes *I* year

Q.5 **a)** What is standard cyclone? Explain with the help of neat sketch. **04**

b) A conventional cyclone with diameter 1 m handles 3m3/sec of air carrying particles of density 2000 kg/m3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.81 \times 10 - 5$ kg/m.sec. (Note - treat it as a standard cyclone) **05**

Section – II

Q.6 **a)** Explain with neat sketch working of spray tower. Also give advantages and disadvantages. **04**

b) It was decided to construct a fabric filter, using bags of 0.45 m diameter and 7.5 m long, for removing industrial stack gas containing particulates. The expected rate of airflow into the filter is 10 m3/s. If the filtering velocity is 2.0 m/min, compute the minimum number of bags (rounded to nearest higher integer) required for continuous cleaning operation. **05**

Q.7 **a)** An ESP with overall spacing of 0.23 cm and mean gas velocity 1.5 m/s has collector plate area of 6000 m^2 gives efficiency of 97% in treating 200 m3/s of gas. To achieve 98% and 99% efficiency. What should be plate are required? **05**

b) What is standard cyclone? Explain with the help of neat sketch. **05**

Q.8 **a)** Discuss in brief the sources of noise. **04**

b) Explain decibel scale with sample sound level and frequency of sound waves. **05**

Q.9 **Write short notes on any three following:** **09**

a) National ambient quality standards for noise

b) Effects of noise on health

c) Instrumentation Requirements in noise

i) Temperature
ii) Relative humidity
iii) Atmospheric pressure
iv) Wind Speed

Q.4 **a)** Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

b) A factory uses 1.5 million litres of fuel oil/month. The exhaust gases from factory contain the following quantities of pollutants/million litres/year. **05**
i) Particulate matter = 5 tonnes / year
ii) Sulphur dioxide = 21 tonnes *I* year

Q.5 **a)** What is standard cyclone? Explain with the help of neat sketch. **04**

b) A conventional cyclone with diameter 1 m handles 3m3/sec of air carrying particles of density 2000 kg/m3. Number of effective turns = 6. Determine cut size diameter (dpc) if $\mu = 1.81 \times 10 - 5$ kg/m.sec. (Note - treat it as a standard cyclone) **05**

Section – II

Q.6 **a)** Explain with neat sketch working of spray tower. Also give advantages and disadvantages. **04**

b) It was decided to construct a fabric filter, using bags of 0.45 m diameter and 7.5 m long, for removing industrial stack gas containing particulates. The expected rate of airflow into the filter is 10 m3/s. If the filtering velocity is 2.0 m/min, compute the minimum number of bags (rounded to nearest higher integer) required for continuous cleaning operation. **05**

Q.7 **a)** An ESP with overall spacing of 0.23 cm and mean gas velocity 1.5 m/s has collector plate area of 6000 m^2 gives efficiency of 97% in treating 200 m3/s of gas. To achieve 98% and 99% efficiency. What should be plate are required? **05**

b) What is standard cyclone? Explain with the help of neat sketch. **05**

Q.8 **a)** Discuss in brief the sources of noise. **04**

b) Explain decibel scale with sample sound level and frequency of sound waves. **05**

Q.9 **Write short notes on any three following:** **09**

a) National ambient quality standards for noise

b) Effects of noise on health

c) Instrumentation Requirements in noise

Seat No.		Set	S

Fourth. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov2023
CIVIL ENGINEERING
Air and Noise Pollution and Control (BTN01716)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each MCQ carry two marks.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) _____ are categorized under dry collectors.
a) Venturi scrubber b) Spray tower
c) Cyclonic scrubber d) Cyclone separator

2) Thickness of atmosphere is approximately _____ km.
a) 35 b) 11
c) 39 d) 500

3) Bags in bag house filter Are _____ mm in diameter.
a) 120-400 b) 10-20
c) 12-40 d) 1000-15000

4) Fugitive emissions consist of _____
a) Street dust
b) Dust from construction activities
c) Dust from farm cultivation
d) All of the above

5) According to EPA of USA, the following is not one of the six major pollutants?
a) Ozone b) Carbon monoxide
c) Nitrogen oxides d) Carbon di-oxide

6) Concentration of pollutants in stack emissions can be measured by _____.
a) High volume sampler b) Stack monitoring kit
c) Thermometer d) Hygrometer

7) As per NAAQS (old), standard for PM_{10} for eco-sensitive area considering annual average is _____ micrograms/m^3.
a) 60 b) 100
c) 8 d) 80

8) Noise pollution is created if sound is in excess to _____.
a) 70-75 dB b) 50-60 dB
c) 80-99 dB d) 40-65 dB

9) Day time noise standard prescribed for residential areas in India is _____.
a) 75 dB b) 65 dB
c) 50 dB d) 55 dB

10) Photochemical smog reduces _____ considerably.
a) Visibility b) Lapse rate
c) Odour d) Land pollution

11) ____ can remove ____.
a) Scrubers, Water soluble Gases
b) Gravity settler, Particulates
c) Adsorption tower, organic gases
d) All of above

12) Velocity of gas flow in gravity settler should be less than _____ m/s for excellent results.
a) 0.3 b) 0.5
c) 3.1 d) 10

13) If stack is having cross sectional area of 4 sq. m then number of traverse points shall be equal to _____.
a) 4 b) 12
c) 20 d) 30

14) Concentration of SPM in ambient air can be determined by using _____.
a) Stack monitoring kit
b) Auto exhaust analyzer
c) High volume sampler or respirable dust sampler
d) All of above

Air and Noise Pollution and Control (BTN01716)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 3 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 2, 4 & 5)
2) Question no. 7 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 6, 8 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** What are different zones of atmosphere? Explain with the help of neat graph. **06**

b) Define air pollution based on composition of clean air. **03**

Q.3 **a)** Determine the effective stack height given by the following data: **06**
i) Physical stack height = 203 m
ii) Inside diameter of stack = 1.07 m
iii) Air temperature = 13 °C
iv) Barometric pressure = 1000 mbar
v) Stack gas velocity = 9.14 m/sec
vi) Stack gas temperature = 149°C
vii) Wind speed = 5m/sec.

b) For the following meteorological parameters give measuring unit and instrument used for measurement: **04**
i) Temperature
ii) Relative humidity
iii) Atmospheric pressure
iv) Wind Speed

Q.4 **a)** Give Gaussian dispersion model equation used for prediction of concentration of air pollutants. **04**

b) A factory uses 1.5 million litres of fuel oil/month. The exhaust gases from factory contain the following quantities of pollutants/million litres/year. **05**
i) Particulate matter = 5 tonnes / year
ii) Sulphur dioxide = 21 tonnes *I* year

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) A Rs. 1000 investment that results in interest of Rs. 50 has a _____% return on investment.
a) 0.05 b) 5
c) 20 d) 50

2) _____ is a cost control method which involves multiplying the percentage of work completed on a project by the budget at the time of the project completion.
a) Planning the budget properly b) Using change control systems
c) Having time management d) Tracking earned value

3) _____ is a depreciation method wherein funds will accumulate for replacement purposes.
a) Straight-line depreciation
b) Double Declining Balance Depreciation
c) Quantity survey method
d) Sinking fund method

4) Which of the following equation is used to calculate the future value of the cash flow?
a) $NPV (1 - i)^n$ b) $NPV + (1 - i)^n$
c) $NPV (1 + i)^n$ d) $NPV / (1 + i)^n$

5) The internal rate of return is the discount rate for which the NPV is _____.
a) less than 1 b) +ve
c) -ve d) zero

6) While submitting a tender, the contractor is required to deposit some amount with the department as a guarantee of the tender known as _____.
a) Earnest money b) Bank guarantee
c) Security deposit d) Caution money

7) To make out an estimate for a work the following data are necessary - Drawing, Specification and _____.
a) materials b) rates
c) labours d) transportation

8) Workout the years purchase of the property if the rate of interest is 6% per annum _____.

a) 6 b) 16.67
c) 0.1667 d) 0.06

9) The value at the end of utility of property but without dismantling is known as _____.

a) Scrap Value b) Salvage value
c) Market value d) Book value

10) Definition of "Employee" under the Minimum Wages Act, 1948 includes _____.

a) Skilled labour - Clerical labour
b) Skilled and unskilled both labour - Manual labour
c) Skilled and unskilled both labour - Manual and clerical both labour
d) Unskilled labour - Manual labour

11) If the wall thickness is one and half brick thick, the brickwork is measured in _____.

a) Running m b) Sq.m
c) Cu.m d) None of the above

12) The minimum number of layers for compaction of 0.60 m deep plinth filling, shall be_____.

a) 1 b) 2
c) 3 d) 5

13) The lease is _____.

a) Transferable, heritable, revocable
b) Transferable, revocable, non-heritable
c) Transferable, heritable, non-revocable
d) Heritable, revocable, non- transferable

14) Years purchase in perpetuity for highest rate of interest 2.5% will be _____.

a) 2.5 b) 100
c) 40 d) 25

Set P

Fourth. Y. (B. Tech)(Sem - I)(New/Old)(CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Engineering Economics, Estimation & Costing (197042701)

Day & Date: Wednesday, 27-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. 2 and Q. 9 are compulsory.
2) Solve any two from remaining question from each section.
3) Figures to right indicate full marks.

Section – I

Q.2 Prepare the measurement sheet and Abstract Sheet to calculate following items from the attached Drawing. **12**
- Brickwork in superstructure

Q.3 **a)** A machine costs Rs. 3,00,000 with a salvage value of Rs. 50,000 at the end of its life of 10 years. If money is worth 6% annually, use Sinking Fund Method and determine the depreciation at the 6th year. **04**

b) Explain five methods of cost control. **04**

Q.4 Write the detailed specifications for **08**
a) Construction of Water Bound Macadam Methods
b) Earthwork for excavation

Q.5 Carry out Rate analysis for the following items. **08**
a) 230 mm thick Brickwork in superstructure in cement mortar 1:6
b) 20mm thick External plastering in (1:4) cement plaster mortar.

Section – II

Q.6 **a)** Explain four types of Contracts. **04**

b) Explain two envelope system. **04**

Q.7 **a)** Explain four methods of valuation of properties. **04**

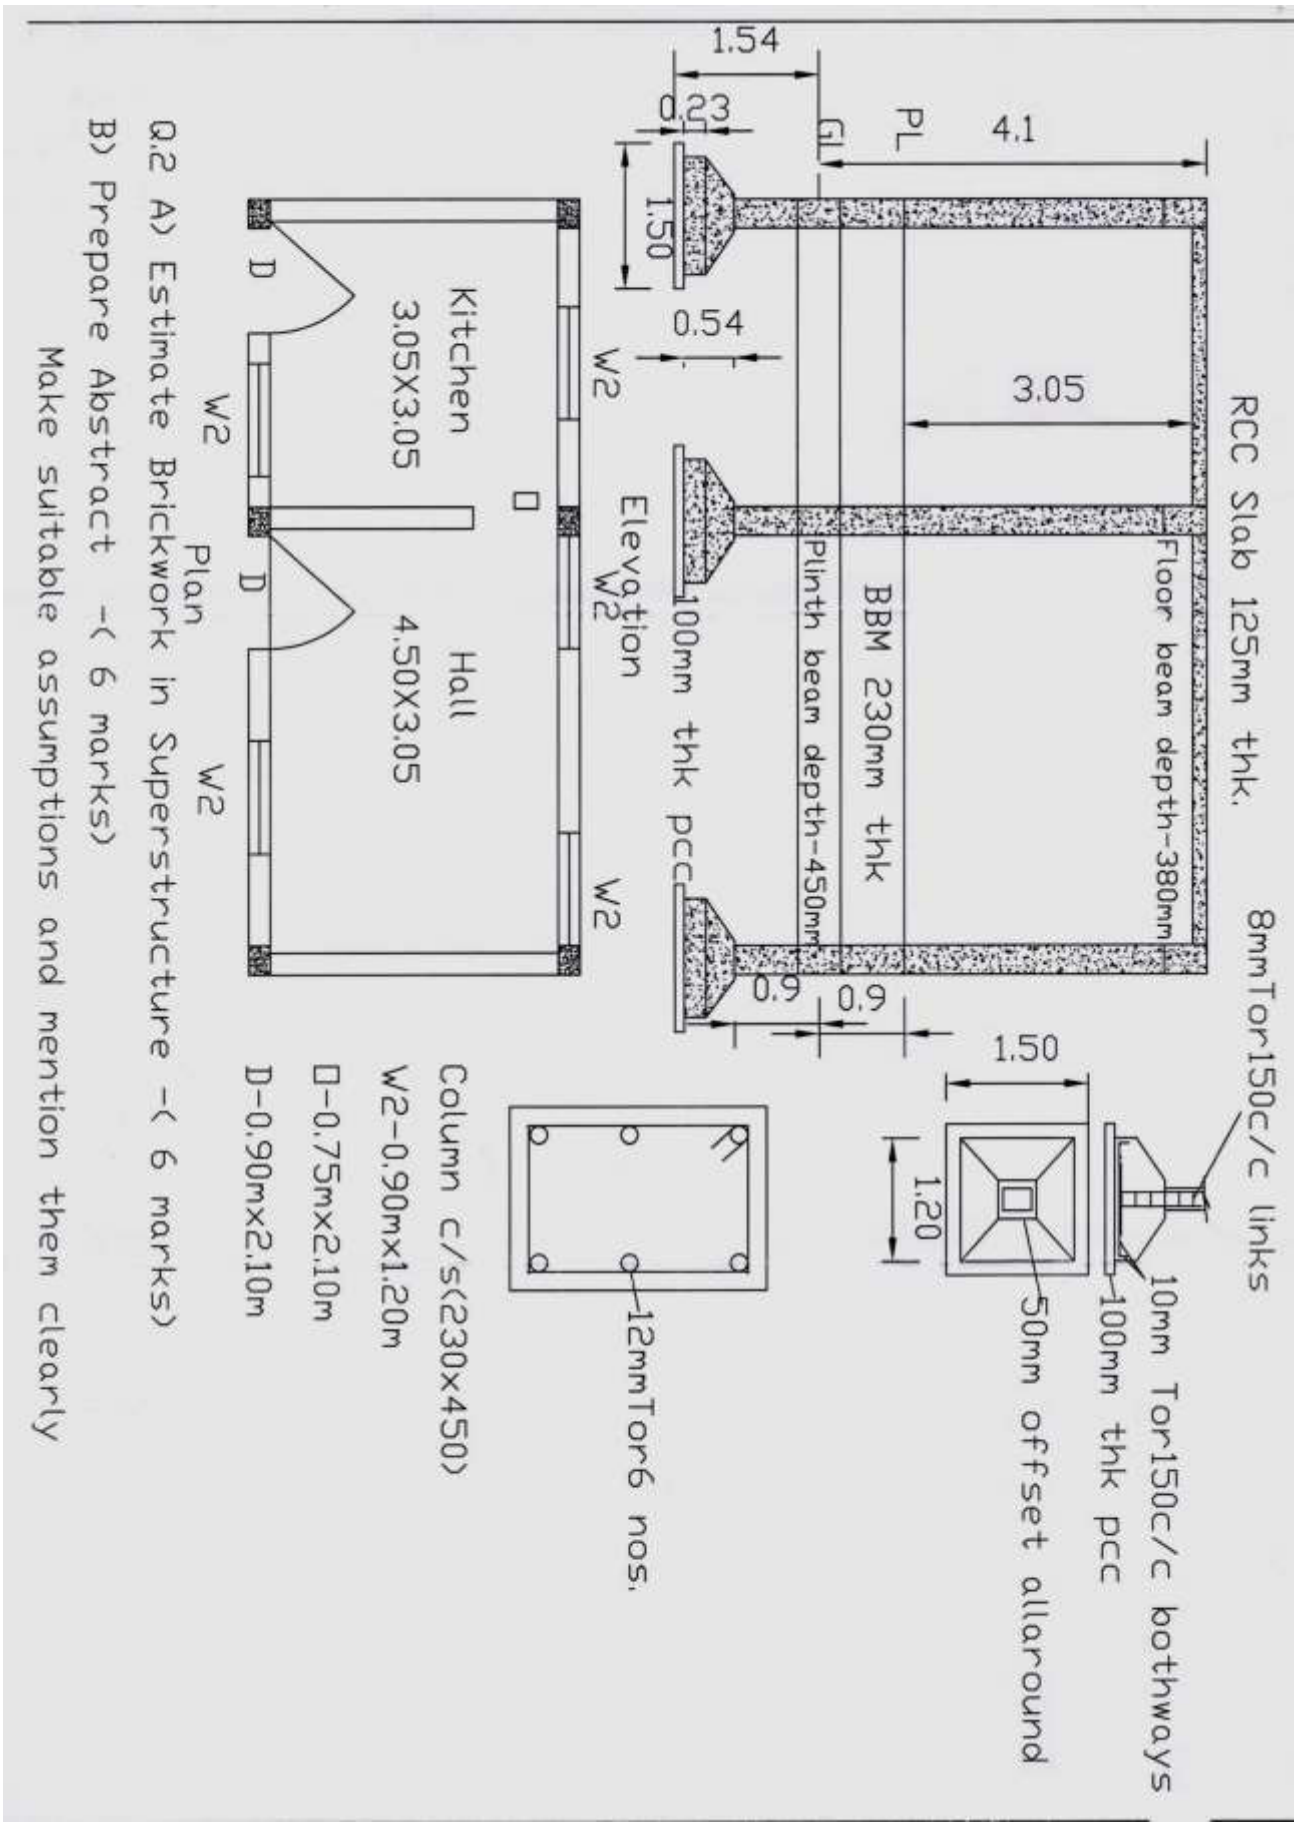
b) Differentiate between salvage value and scrap value. **04**

Q.8 **a)** Find the value of a four storied residential apartment with three flats per floor. Each flat is let out on a gross rent of Rs. 120000/year. The municipal tax is Rs. 8000/flat/year other outgoings are Lift maintenance, Salary of watchmen and sweepers, electricity charges all-inclusive Rs. 24000/flat/year. Calculate the value of one flat capitalizing the net annual rent at 8% in perpetuity with Years Purchase. **04**

b) Differentiate between free hold and lease hold property. **04**

Q.9 **a)** Work out fair market value of flat with carpet area 100 Sq.m. Rate of sale of similar newly constructed flat in vicinity is Rs. 1000 per Sq.m. Assume depreciation of 10%. Assume Rate of construction as Rs. 550 per Sq.m., and Rs. 450 per Sq.m. for land. **04**

b) Explain various factors affecting valuation of property. **08**



Q.2 A) Estimate Brickwork in Superstructure -(6 marks)

B) Prepare Abstract -(6 marks)

Make suitable assumptions and mention them clearly

c) Skilled and unskilled both labour - Manual and clerical both labour
d) Unskilled labour - Manual labour

6) If the wall thickness is one and half brick thick, the brickwork is measured in _____.
a) Running m b) Sq.m
c) Cu.m d) None of the above

7) The minimum number of layers for compaction of 0.60 m deep plinth filling, shall be_____.
a) 1 b) 2
c) 3 d) 5

8) The lease is _____.
a) Transferable, heritable, revocable
b) Transferable, revocable, non-heritable
c) Transferable, heritable, non-revocable
d) Heritable, revocable, non- transferable

9) Years purchase in perpetuity for highest rate of interest 2.5% will be _____.
a) 2.5 b) 100
c) 40 d) 25

10) A Rs. 1000 investment that results in interest of Rs. 50 has a _____% return on investment.
a) 0.05 b) 5
c) 20 d) 50

11) _____ is a cost control method which involves multiplying the percentage of work completed on a project by the budget at the time of the project completion.
a) Planning the budget properly b) Using change control systems
c) Having time management d) Tracking earned value

12) _____ is a depreciation method wherein funds will accumulate for replacement purposes.
a) Straight-line depreciation
b) Double Declining Balance Depreciation
c) Quantity survey method
d) Sinking fund method

13) Which of the following equation is used to calculate the future value of the cash flow?
a) $NPV (1 - i)^n$ b) $NPV + (1 - i)^n$
c) $NPV (1 + i)^n$ d) $NPV / (1 + i)^n$

14) The internal rate of return is the discount rate for which the NPV is _____.
a) less than 1 b) +ve
c) -ve d) zero

Set | S

Fourth. Y. (B. Tech)(Sem - I)(New/Old)(CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Engineering Economics, Estimation & Costing (197042701)

Day & Date: Wednesday, 27-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. 2 and Q. 9 are compulsory.
2) Solve any two from remaining question from each section.
3) Figures to right indicate full marks.

Section – I

Q.2 Prepare the measurement sheet and Abstract Sheet to calculate following items from the attached Drawing. **12**
- Brickwork in superstructure

Q.3 **a)** A machine costs Rs. 3,00,000 with a salvage value of Rs. 50,000 at the end of its life of 10 years. If money is worth 6% annually, use Sinking Fund Method and determine the depreciation at the 6th year. **04**
b) Explain five methods of cost control. **04**

Q.4 Write the detailed specifications for **08**
a) Construction of Water Bound Macadam Methods
b) Earthwork for excavation

Q.5 Carry out Rate analysis for the following items. **08**
a) 230 mm thick Brickwork in superstructure in cement mortar 1:6
b) 20mm thick External plastering in (1:4) cement plaster mortar.

Section – II

Q.6 **a)** Explain four types of Contracts. **04**
b) Explain two envelope system. **04**

Q.7 **a)** Explain four methods of valuation of properties. **04**
b) Differentiate between salvage value and scrap value. **04**

Q.8 **a)** Find the value of a four storied residential apartment with three flats per floor. Each flat is let out on a gross rent of Rs. 120000/year. The municipal tax is Rs. 8000/flat/year other outgoings are Lift maintenance, Salary of watchmen and sweepers, electricity charges all-inclusive Rs. 24000/flat/year. Calculate the value of one flat capitalizing the net annual rent at 8% in perpetuity with Years Purchase. **04**
b) Differentiate between free hold and lease hold property. **04**

Q.9 **a)** Work out fair market value of flat with carpet area 100 Sq.m. Rate of sale of similar newly constructed flat in vicinity is Rs. 1000 per Sq.m. Assume depreciation of 10%. Assume Rate of construction as Rs. 550 per Sq.m., and Rs. 450 per Sq.m. for land. **04**
b) Explain various factors affecting valuation of property. **08**

Q.2 A) Estimate Brickwork in Superstructure -(6 marks)

B) Prepare Abstract -(6 marks)

Make suitable assumptions and mention them clearly

Fourth. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2023
CIVIL ENGINEERING
Construction Engineering, Management & Construction Practices (197042702)

Day & Date: Friday, 19-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The time span between the start and completion of a project represents _____.
a) Project Span b) Project Duration
c) Project Lifecycle d) none of the above

2) _____ cranes are used for handling loads over a large rectangular area in factories, power stations, shipyards and workshops.
a) Mobile b) Derrick
c) Gantry d) Hydraulic

3) If for an activity optimistic time is 7 days, pessimistic time is 13 days and most likely time is 10 days, its standard deviation will be _____.
a) 10 b) 3.28
c) 10.77 d) 1

4) The area under the Beta distribution curve is divided into two equal parts by _____.
a) Most likely time b) Optimistic time
c) Pessimistic time d) Expected time

5) If D is the duration, ES and EF are the earliest start and finish, LS and LF are latest start and latest finish time, then the following relation holds good _____.
a) EF = ES + D b) D = EF – ES
c) LF = LS + D d) All of the above

6) Choose the best option that fits the following statement.
The _____ of time management tools depends on the _____ of the project.
a) Identity, Quality b) Utility, Complexity
c) Functionality, Creativity d) Equity, Quantity

7) A milestone chart _____.
a) shows the interdependencies of various jobs
b) depicts the delay of jobs, if any
c) points outgoing ahead of schedule of jobs, if any
d) none of these

8) Which of the following software is not used for Project Management?
a) Primavera b) Power Point
c) MS-Project d) MS-Excel

9) Project Management techniques involves _____.
a) Bar-Chart b) CPM
c) PERT d) All of these

10) PERT is used for _____.
a) Normal Projects b) Research projects
c) All Projects d) None of these

11) Resource levelling and smoothening are _____.
a) Same concept b) Different Concept
c) Both 'a' and 'b' d) None of these

12) Updating is nothing but taking _____.
a) Review of project b) Reducing the project duration
c) Allocating Resources d) None of these

13) Time estimates in PERT are _____.
a) Optimistic Time b) Pessimistic Time
c) Most Likely Time d) All of these

14) Which of the following software is mostly used for Project Management?
a) Primavera b) MS-Word
c) Power point d) MS-Excel

Fourth. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov - 2023
CIVIL ENGINEERING
Construction Engineering, Management & Construction Practices (197042702)

Day & Date: Friday, 19-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 2 is compulsory. Attempt any two questions from Q. No. 3 to 5
2) Q. No.6 is compulsory. Attempt any two questions from Q. No. 7 to 9
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2 **a)** The following table shows the list of activities and their durations. Calculate the project duration and critical path of the network. **08**

Activity	Duration	Depends on
A	2	-
B	4	A
C	3	A
D	6	B,C
E	7	B
F	3	D,E

b) Explain the concept of 'Work-Breakdown-Structure' (WBS) with suitable example. **04**

Q.3 **Explain** **08**
a) Explain the concept and process of crashing in detail.
b) Explain the concept of 'Resource Levelling' and 'Resource Smoothening' with any construction site example.

Q.4 **Explain** **08**
a) What are the various reports generated by MS-Project software?
b) What are the views available in MS-Project software?

Q.5 **Explain** **08**
a) What are the main differences between 'CPM and 'PERT'?
b) Explain three time estimates in PERT Technology.

Section – II

Q.6 Write short notes on. **12**

a) Hoes
b) Compactors
c) Hot mix plant

Q.7 Explain in detail. **08**

a) Safety measures on construction sites.
b) Safety against accidents.

Q.8 Explain in detail. **08**

a) Write a short note on Prefabricated construction.
b) Write a short note on Mivan formwork.

Q.9 Explain in detail. **08**

a) Explain the uses of floating equipment's.
b) Explain the types and uses of diaphragm walls.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: **14**

1) For the design of base slab in R.C.C water tank, minimum steel (for HYSD bars) required is _____ of gross cross sectional area. 01
a) 0.20% b) 0.24%
c) 0.25 % d) 0.12%

2) The horizontal portion of a step in stair case, is known as _____. 01
a) Rise b) Tread
c) Winder d) Flight

3) Total pressure on the vertical face of a retaining wall of height 'h' acts parallel to free surface and from the base at a distance of _____. 01
a) h/4 b) h/3
c) h/2 d) 2h/3

4) In design of isolated footing, the minimum percentage of steel (HYSD) provided should be _____. 01
a) 0.12% of overall cross sectional area
b) 0.8% of overall cross sectional area
c) (85/fy)% of overall cross sectional area
d) 1% of overall cross sectional area

5) For footing the minimum cover for the reinforcement shall be _____. 01
a) 30 mm b) 50 mm
c) 25 mm d) 40 mm

6) A prestressed concrete member is preferred because _____. 01
a) Its dimensions are not decided from the diagonal tensile stress
b) Large size of long beams carrying large shear force need not adopted
c) Removal of cracks in the member due to shrinkage
d) All of above

7) If the maximum dip of a parabolic tendon carrying tension 'p' is 'h' and the effective length of the pre-stressed beam is l, the upward uniform pressure will be _____. 01

a) $8hp/l$ b) $8hp/l^2$

c) $8hl/p$ d) $8hl/p^2$

8) 'P' is the pre-stressed force applied to the tendon of a rectangular pre-stressed beam whose area of cross section is 'A' and sectional modulus is 'Z'. The maximum stress in the beam, subjected to a maximum bending moment, is _____. 01

a) f = (P/A) + (Z/M) b) f = (A/P) + (M/Z)

c) f = (P/A) + (M/Z) d) f= (P/A) + (M/6Z)

9) After pre-stressing process is completed, a loss of stress is due to _____. 01

a) Shrinkage of concrete b) Elastic shortening of concrete

c) Creep of concrete d) All the above

10) The maximum upward deflection of prestressed concrete member is limited to _____. 01

a) Span/150 b) Span/250

c) Span/300 d) Span/320

11) The circular water tank having a capacity of 500000 litres and water depth is 4m including free board of 200 mm. calculate the diameter of tank. 02

a) 12.5 m b) 15.9 m

c) 12.61m d) 16.2 m

12) A concrete beam of rectangular cross section 200 mm x 400 mm is prestressed with a force of 400 kN at an eccentricity of 100 mm. The maximum compressive stress in the concrete is _____. 02

a) 12.5 MPa b) 7.5 MPa

c) 5 MPa d) 2.5 MPa

Fourth. Y. (B.Tech.) (Sem - I) (New) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Concrete Structures-II (197042703)

Day & Date: Saturday, 20-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Draw neat sketch's where required and assume suitable data if required
5) IS 456, IS 1343, IS 3370 Part IV and non-programmable calculator are allowed.

Section-I

Q.2 Design the dog-legged type staircase for a building in which vertical distance between the floors is 3.6 m. Assume 150 mm riser and 250 mm tread, width of stair is 1.2 m. Take live load as 3 kN/m^2. Use M_{25} concrete and Fe_{415} steel. The stair is supported by beams of width 230 mm at the end of outer edges of landing slabs. **08**

Q.3 Design the stem slab of a cantilever retaining wall, if the height of wall above the ground level is 3.5 m. Take SBC of soil as 200 kN/m^2, angle of internal friction is 30° and unit weight of soil 18 kN/m^2. Coefficient of friction between soil and concrete is 0.5. Use M_{25} concrete and Fe_{500} steel. **10**

Q.4 Design an isolated footing for a R.C. column carrying an axial load of 1050 kN, and having a size of 500 mm X 500 mm. The safe bearing capacity of is 250 kN/m^2. Use M_{25} concrete and Fe_{415} steel. **10**

Q.5 Design a circular water tank having capacity 4 lakh liters, rests on firm ground is free at top and bottom is fixed. The depth of water is 3.3m. Assume the free board of 0.3m. Use M30 grade of concrete and Fe_{415} steel. Solve by IS code method. **10**

Section-II

Q.6 A prestressed concrete beam 400 mm x 600 mm in section has a span of 6 m and is subjected to a uniformly distributed load of 16 kN/m including the self weight of the beam. The prestressing tendons are located at an eccentricity of 130 mm at mid span and zero at support. Determine the extreme stresses in concrete at the mid span section, if the prestressing force is 1000 kN. Use stress concept method and load balancing concept. **08**

Q.7 A prestressed concrete beam, 300mm x 400 mm in section and is provided with 40 wires of 3 mm diameter distributed uniformly over the section. Initially the wires are tensioned in the prestressing beds with a total pull of 600 kN. Determine the final stress in concrete and the percentage loss of stress in the wires. Take $E_s = 2.08 \times 10^5$ N/mm^2, $E_c = 3.2 \times 10^4$ N/mm^2, Ultimate creep strain = 32×10^{-6} mm/mm per N/mm^2 of stress, Shrinkage of concrete = 200×10^{-6}, Relaxation loss of stress in steel = 4.5% of initial stress. **10**

Q.8 A PSC beam 250 mm wide and 600 mm deep is subjected to an effective prestressing force of 1400 kN along the longitudinal centroidal axis. Take size of anchor plate as 200mm wide and 300 mm deep. Design the end block by Guyon's method. **10**

Q.9 A rectangular PSC beam has a span of 16m, supports a distributed load of 18 kN/m excluding self weight. Determine the suitable dimension of the beam section and calculate the area and position of tendons. Given the permissible stress in concrete 14 N/mm^2 and steel 1025 N/mm^2. **10**

Day & Date: Saturday, 20-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No.1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) While solving MCQ IS 456-2000, IS 3370 IV, IS 1343 are not allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: **14**

1) A prestressed concrete member is preferred because _____. 01
a) Its dimensions are not decided from the diagonal tensile stress
b) Large size of long beams carrying large shear force need not adopted
c) Removal of cracks in the member due to shrinkage
d) All of above

2) If the maximum dip of a parabolic tendon carrying tension 'p' is 'h' and the effective length of the pre-stressed beam is l, the upward uniform pressure will be _____. 01
a) $8hp/l$ b) $8hp/l^2$
c) $8hl/p$ d) $8hl/p^2$

3) 'P' is the pre-stressed force applied to the tendon of a rectangular pre-stressed beam whose area of cross section is 'A' and sectional modulus is 'Z'. The maximum stress in the beam, subjected to a maximum bending moment, is _____. 01
a) f = (P/A) + (Z/M) b) f = (A/P) + (M/Z)
c) f = (P/A) + (M/Z) d) f= (P/A) + (M/6Z)

4) After pre-stressing process is completed, a loss of stress is due to _____. 01
a) Shrinkage of concrete b) Elastic shortening of concrete
c) Creep of concrete d) All the above

5) The maximum upward deflection of prestressed concrete member is limited to _____. 01
a) Span/150 b) Span/250
c) Span/300 d) Span/320

6) For the design of base slab in R.C.C water tank, minimum steel (for HYSD bars) required is _____ of gross cross sectional area. 01
a) 0.20% b) 0.24%
c) 0.25 % d) 0.12%

7) The horizontal portion of a step in stair case, is known as _____. 01

a) Rise b) Tread
c) Winder d) Flight

8) Total pressure on the vertical face of a retaining wall of height 'h' acts parallel to free surface and from the base at a distance of _____. 01

a) h/4 b) h/3
c) h/2 d) 2h/3

9) In design of isolated footing, the minimum percentage of steel (HYSD) provided should be _____. 01

a) 0.12% of overall cross sectional area
b) 0.8% of overall cross sectional area
c) (85/fy)% of overall cross sectional area
d) 1% of overall cross sectional area

10) For footing the minimum cover for the reinforcement shall be _____. 01

a) 30 mm b) 50 mm
c) 25 mm d) 40 mm

11) The circular water tank having a capacity of 500000 litres and water depth is 4m including free board of 200 mm. calculate the diameter of tank. 02

a) 12.5 m b) 15.9 m
c) 12.61m d) 16.2 m

12) A concrete beam of rectangular cross section 200 mm x 400 mm is prestressed with a force of 400 kN at an eccentricity of 100 mm. The maximum compressive stress in the concrete is _____. 02

a) 12.5 MPa b) 7.5 MPa
c) 5 MPa d) 2.5 MPa

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: **14**

1) After pre-stressing process is completed, a loss of stress is due to _____. 01
a) Shrinkage of concrete b) Elastic shortening of concrete
c) Creep of concrete d) All the above

2) The maximum upward deflection of prestressed concrete member is limited to _____. 01
a) Span/150 b) Span/250
c) Span/300 d) Span/320

3) For the design of base slab in R.C.C water tank, minimum steel (for HYSD bars) required is _____ of gross cross sectional area. 01
a) 0.20% b) 0.24%
c) 0.25 % d) 0.12%

4) The horizontal portion of a step in stair case, is known as _____. 01
a) Rise b) Tread
c) Winder d) Flight

5) Total pressure on the vertical face of a retaining wall of height 'h' acts parallel to free surface and from the base at a distance of _____. 01
a) h/4 b) h/3
c) h/2 d) 2h/3

6) In design of isolated footing, the minimum percentage of steel (HYSD) provided should be _____. 01
a) 0.12% of overall cross sectional area
b) 0.8% of overall cross sectional area
c) (85/fy)% of overall cross sectional area
d) 1% of overall cross sectional area

7) For footing the minimum cover for the reinforcement shall be _____. 01
a) 30 mm b) 50 mm
c) 25 mm d) 40 mm

8) A prestressed concrete member is preferred because _____. 01

a) Its dimensions are not decided from the diagonal tensile stress
b) Large size of long beams carrying large shear force need not adopted
c) Removal of cracks in the member due to shrinkage
d) All of above

9) If the maximum dip of a parabolic tendon carrying tension 'p' is 'h' and the effective length of the pre-stressed beam is l, the upward uniform pressure will be _____. 01

a) $8hp/l$ b) $8hp/l^2$
c) $8hl/p$ d) $8hl/p^2$

10) 'P' is the pre-stressed force applied to the tendon of a rectangular pre-stressed beam whose area of cross section is 'A' and sectional modulus is 'Z'. The maximum stress in the beam, subjected to a maximum bending moment, is _____. 01

a) f = (P/A) + (Z/M) b) f = (A/P) + (M/Z)
c) f = (P/A) + (M/Z) d) f= (P/A) + (M/6Z)

11) The circular water tank having a capacity of 500000 litres and water depth is 4m including free board of 200 mm. calculate the diameter of tank. 02

a) 12.5 m b) 15.9 m
c) 12.61m d) 16.2 m

12) A concrete beam of rectangular cross section 200 mm x 400 mm is prestressed with a force of 400 kN at an eccentricity of 100 mm. The maximum compressive stress in the concrete is _____. 02

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: **14**

1) Total pressure on the vertical face of a retaining wall of height 'h' acts parallel to free surface and from the base at a distance of _____. 01
a) h/4 b) h/3
c) h/2 d) 2h/3

2) In design of isolated footing, the minimum percentage of steel (HYSD) provided should be _____. 01
a) 0.12% of overall cross sectional area
b) 0.8% of overall cross sectional area
c) (85/fy)% of overall cross sectional area
d) 1% of overall cross sectional area

3) For footing the minimum cover for the reinforcement shall be _____. 01
a) 30 mm b) 50 mm
c) 25 mm d) 40 mm

4) A prestressed concrete member is preferred because _____. 01
a) Its dimensions are not decided from the diagonal tensile stress
b) Large size of long beams carrying large shear force need not adopted
c) Removal of cracks in the member due to shrinkage
d) All of above

5) If the maximum dip of a parabolic tendon carrying tension 'p' is 'h' and the effective length of the pre-stressed beam is l, the upward uniform pressure will be _____. 01
a) $8hp/l$ b) $8hp/l^2$
c) $8hl/p$ d) $8hl/p^2$

6) 'P' is the pre-stressed force applied to the tendon of a rectangular pre-stressed beam whose area of cross section is 'A' and sectional modulus is 'Z'. The maximum stress in the beam, subjected to a maximum bending moment, is _____. 01
a) f = (P/A) + (Z/M) b) f = (A/P) + (M/Z)
c) f = (P/A) + (M/Z) d) f= (P/A) + (M/6Z)

7) After pre-stressing process is completed, a loss of stress is due to _____. 01

a) Shrinkage of concrete b) Elastic shortening of concrete
c) Creep of concrete d) All the above

8) The maximum upward deflection of prestressed concrete member is limited to _____. 01

a) Span/150 b) Span/250
c) Span/300 d) Span/320

9) For the design of base slab in R.C.C water tank, minimum steel (for HYSD bars) required is _____ of gross cross sectional area. 01

a) 0.20% b) 0.24%
c) 0.25 % d) 0.12%

10) The horizontal portion of a step in stair case, is known as _____. 01

a) Rise b) Tread
c) Winder d) Flight

11) The circular water tank having a capacity of 500000 litres and water depth is 4m including free board of 200 mm. calculate the diameter of tank. 02

a) 12.5 m b) 15.9 m
c) 12.61m d) 16.2 m

12) A concrete beam of rectangular cross section 200 mm x 400 mm is prestressed with a force of 400 kN at an eccentricity of 100 mm. The maximum compressive stress in the concrete is _____. 02

a) 12.5 MPa b) 7.5 MPa
c) 5 MPa d) 2.5 MPa

Q.2 Design the dog-legged type staircase for a building in which vertical distance between the floors is 3.6 m. Assume 150 mm riser and 250 mm tread, width of stair is 1.2 m. Take live load as 3 kN/m^2. Use M_{25} concrete and Fe_{415} steel. The stair is supported by beams of width 230 mm at the end of outer edges of landing slabs. **08**

Q.3 Design the stem slab of a cantilever retaining wall, if the height of wall above the ground level is 3.5 m. Take SBC of soil as 200 kN/m^2, angle of internal friction is 30° and unit weight of soil 18 kN/m^2. Coefficient of friction between soil and concrete is 0.5. Use M_{25} concrete and Fe_{500} steel. **10**

Q.4 Design an isolated footing for a R.C. column carrying an axial load of 1050 kN, and having a size of 500 mm X 500 mm. The safe bearing capacity of is 250 kN/m^2. Use M_{25} concrete and Fe_{415} steel. **10**

Q.5 Design a circular water tank having capacity 4 lakh liters, rests on firm ground is free at top and bottom is fixed. The depth of water is 3.3m. Assume the free board of 0.3m. Use M30 grade of concrete and Fe_{415} steel. Solve by IS code method. **10**

Section-II

Q.6 A prestressed concrete beam 400 mm x 600 mm in section has a span of 6 m and is subjected to a uniformly distributed load of 16 kN/m including the self weight of the beam. The prestressing tendons are located at an eccentricity of 130 mm at mid span and zero at support. Determine the extreme stresses in concrete at the mid span section, if the prestressing force is 1000 kN. Use stress concept method and load balancing concept. **08**

Q.7 A prestressed concrete beam, 300mm x 400 mm in section and is provided with 40 wires of 3 mm diameter distributed uniformly over the section. Initially the wires are tensioned in the prestressing beds with a total pull of 600 kN. Determine the final stress in concrete and the percentage loss of stress in the wires. Take $E_s = 2.08 \times 10^5$ N/mm^2, $E_c = 3.2 \times 10^4$ N/mm^2, Ultimate creep strain = 32×10^{-6} mm/mm per N/mm^2 of stress, Shrinkage of concrete = 200×10^{-6}, Relaxation loss of stress in steel = 4.5% of initial stress. **10**

Q.8 A PSC beam 250 mm wide and 600 mm deep is subjected to an effective prestressing force of 1400 kN along the longitudinal centroidal axis. Take size of anchor plate as 200mm wide and 300 mm deep. Design the end block by Guyon's method. **10**

Q.9 A rectangular PSC beam has a span of 16m, supports a distributed load of 18 kN/m excluding self weight. Determine the suitable dimension of the beam section and calculate the area and position of tendons. Given the permissible stress in concrete 14 N/mm^2 and steel 1025 N/mm^2. **10**

CIVIL ENGINEERING

Earthquake Engineering (197042704)

Day & Date: Tuesday, 16-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each MCQ carry two marks.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. (Two marks each) 14

1) The transmissibility is less than 1, when the frequency ratio is
a) < 0.5 b) 1.0
c) $> \sqrt{2}$ d) None of above

2) The transient motion _____
a) Lasts for the entire duration of excitation force
b) Lasts for a very short duration at the beginning
c) Lasts for a very short duration at the end
d) None of above

3) In columns, the laps for reinforcement are preferred at
a) The ends b) At the joint
c) At mid height d) Any place

4) A building structure suffers torsion under seismic action when
a) The centre of gravity does not coincide with the centre of rigidity
b) The centre of gravity does not coincide with the centre of stiffness
c) The centre of rigidity does not coincide with the centre of stiffness
d) The centre of gravity coincides with the centre of stiffness

5) _____ is the building structure which has least lateral force resistance.
a) Ordinary moment-resisting RCC frame
b) Special moment-resisting RCC frame
c) Shear wall structure
d) Masonry structure

6) The slenderness ratio of masonry is the ratio of
a) Length of wall to height of wall
b) Length of wall to thickness
c) Height of wall to area of cross-section
d) None of above

7) Special confining reinforcement is provided in the form of
a) Longitudinal reinforcement
b) Temperature reinforcement
c) Lateral reinforcement
d) Shrinkage reinforcement

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) The lost time due to starting delay on a traffic signal approach is noted to be 3 seconds, the actual green time is 25 seconds and the amber time is 3 seconds. How much is the effective green time?
a) 19 sec b) 25 sec
c) 27 sec d) 31 sec

2) Traffic hazard markers are used at_____.
a) Obstructions like guard rails and abutments
b) Horizontal curves
c) Hilly locations
d) Vertical gradients

3) Two broken yellow line marking at center of road indicates _____.
a) No passing allowed on both side
b) Passing allowed on one side
c) Passing allowed on both side
d) Passing allowed only for left side vehicle

4) Width of the vehicle affects the _____.
a) Capacity of the road and parking facility
b) Clearances to be provided under structures such as under bridges, etc.
c) Extra width of pavement and minimum turning radius
d) All the above

5) Enoscope technique is used to find out _____.
a) Spot Speed of the vehicle b) Delay of the vehicle
c) Traffic numbers d) Pedestrian counts

6) The area under the parking accumulation curve during a specified period is called _____.
a) Parking Load b) Parking Index
c) Parking Volume d) Parking Turn-over

7) The period of time required for one complete sequence of signal indications is called ____.

a) Phase b) Cycle
c) Amber d) Green

8) The time interval measured between the passage of successive vehicles from head-to-head is known as _____.

a) Headway distance b) Space headway
c) Time headway d) All of these

9) _____ signs are intended to guide the driver about intersecting routes, cities, facilities, towns and other important destinations.

a) Mandatory b) Informatory
c) Cautionary d) Warning

10) Match the Traffic parameters according to the respective definitions:

	Traffic Parameters		Definition
A	Density	1	The number of vehicles passing a specific reference point on a road section within a specified period of time
B	Flow	2	The number of vehicles occupying in a given length of roadway or a lane
C	Space Headway	3	The time between successive vehicles past a point
D	Time Headway	4	Distance between the front bumper of the leading vehicle and the front bumper of the following vehicle.

Select the correct answer from below codes:

	A	B	C	D
a)	1	2	3	4
b)	2	3	4	1
c)	2	1	4	3
d)	4	3	2	1

11) The 30^{th} hourly volume means _____.

a) Hourly volume that will be exceeded only 29 times in a year
b) Hourly volume that will be exceeded only 30 times in a year
c) Hourly volume that will be exceeded only 70 times in a year
d) All the above

12) If AADT is 4000vpd and the 30^{th} highest hourly volume for the year is 420 vph what is the K- factor for that facility?

a) 10.5% b) 12.5%
c) 15.5% d) 14.5%

13) The number of vehicles needs to be parked is 30, What is the total length of parking space required if 30°-angle parking is adopted?

a) 200m b) 150m
c) 300m d) 100m

14) Cumulative speed distribution curve is usually adopted for geometric design of highway. The percentile speed adopted for geometric design is _____.

a) 85^{th} percentile b) 90^{th} percentile
c) 98^{th} percentile d) 99.9^{th} percentile

11	1213	1213	3212	4778
12	5678	6678	7778	8888

Q.3 Answer the following questions (Any Two) **14**

a) What are the various types of traffic accidents? Derive the equation for finding out initial speed of the vehicle for collision of moving vehicle with parked vehicle.

b) A vehicle of 2000 kg skids a distance of 36 m before colliding with a stationary vehicle of 1500 kg weight. After collision both vehicle skid a distance of 14 m. Assuming coefficient of friction 0.5, determine the initial speed of the vehicle.

c) Explain the level of service concept in deciding the design capacity of a road.

d) Discuss the various types of on-street parking, their advantages and disadvantages.

Section – II

Q.4 Answer the following questions (Any Two) **14**

a) List the different types of regulatory signs and explain any four important regulatory signs with neat sketch.

b) Write a short note on ITS applications in urban transport system.

c) Write a note on regulations concerning to the speed limit in urban and rural areas.

d) The A and B are two vehicles, vehicle 'A' travelling on the major street and B travelling on the side street. The view at the intersection is restricted due to the presence of an obstruction as shown in Figure-1 below. Assume V_a=60Kmph, a=15m, b=20m. Calculate the speed limit on Minor Street by.

i) National Safety Council (NSC) method.

ii) American Automobile Association method (AAA). Assume reaction time of the driver=1.15sec.

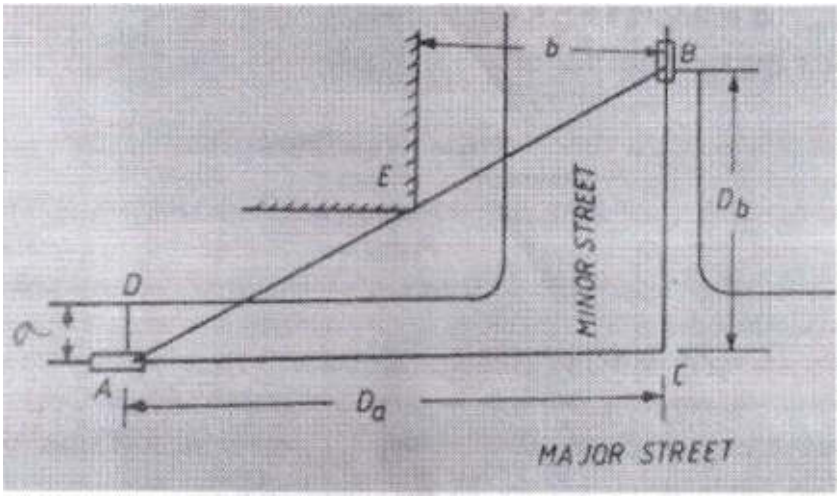

Figure-1-Basis of National Safety Council Method of Speed Zoning

Q.5 Answer the following questions (Any Two) **14**

a) Write the advantages and disadvantages of one-way street.

b) The average normal flow of traffic on cross roads 1 and 2 during design period are 440 and 280 PCU per hour; the saturation flow values on these roads are estimated as 1300 and 1100 PCU per hour respectively. The all-red time required for pedestrian crossing is 12 sec. Design two phase traffic signal with pedestrian crossing by Webster's method. Sketch the phase diagram.

c) What are the various types of traffic markings commonly used? Sketch the marking with showing dimensions for

i) Road centerline
ii) Pedestrian crossings
iii) Marking at signalized intersection
iv) Parallel and angle parking

d) The width of a carriageway approaching an intersection is given as 15. The entry and exit width at the rotary are 10m. The traffic approaching the intersection from the four sides is shown in the figure. Find the capacity of the rotary using the given data. Design speed=30kmph. Take suitable data from Tables 1 and 2 respectively.

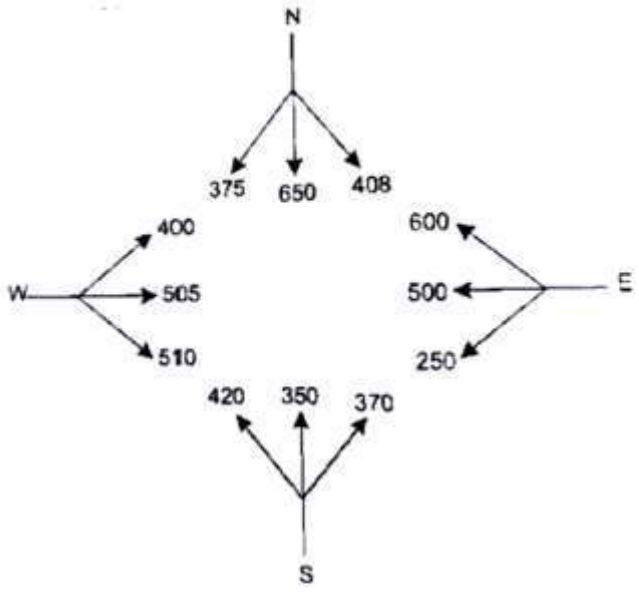

Fig-1-Traffic approaching the intersection

TABLE 1

Rotary Design Speed V (K.P.H.)	*Suggested Values of Radius at Entry (metres)*
40*	20—35
30**	15—25

Design Speed (K.P.H.)	*Minimum Weaving Length (metres)*

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) The time interval measured between the passage of successive vehicles from head-to-head is known as _____.

a) Headway distance b) Space headway
c) Time headway d) All of these

2) _____ signs are intended to guide the driver about intersecting routes, cities, facilities, towns and other important destinations.

a) Mandatory b) Informatory
c) Cautionary d) Warning

3) Match the Traffic parameters according to the respective definitions:

	Traffic Parameters		Definition
A	Density	1	The number of vehicles passing a specific reference point on a road section within a specified period of time
B	Flow	2	The number of vehicles occupying in a given length of roadway or a lane
C	Space Headway	3	The time between successive vehicles past a point
D	Time Headway	4	Distance between the front bumper of the leading vehicle and the front bumper of the following vehicle.

Select the correct answer from below codes:

	A	B	C	D
a)	1	2	3	4
b)	2	3	4	1
c)	2	1	4	3
d)	4	3	2	1

4) The 30th hourly volume means _____.
a) Hourly volume that will be exceeded only 29 times in a year
b) Hourly volume that will be exceeded only 30 times in a year
c) Hourly volume that will be exceeded only 70 times in a year
d) All the above

5) If AADT is 4000vpd and the 30th highest hourly volume for the year is 420 vph what is the K- factor for that facility?
a) 10.5% b) 12.5%
c) 15.5% d) 14.5%

6) The number of vehicles needs to be parked is 30, What is the total length of parking space required if 30°-angle parking is adopted?
a) 200m b) 150m
c) 300m d) 100m

7) Cumulative speed distribution curve is usually adopted for geometric design of highway. The percentile speed adopted for geometric design is _____.
a) 85th percentile b) 90th percentile
c) 98th percentile d) 99.9th percentile

8) The lost time due to starting delay on a traffic signal approach is noted to be 3 seconds, the actual green time is 25 seconds and the amber time is 3 seconds. How much is the effective green time?
a) 19 sec b) 25 sec
c) 27 sec d) 31 sec

9) Traffic hazard markers are used at_____.
a) Obstructions like guard rails and abutments
b) Horizontal curves
c) Hilly locations
d) Vertical gradients

10) Two broken yellow line marking at center of road indicates _____.
a) No passing allowed on both side
b) Passing allowed on one side
c) Passing allowed on both side
d) Passing allowed only for left side vehicle

11) Width of the vehicle affects the _____.
a) Capacity of the road and parking facility
b) Clearances to be provided under structures such as under bridges, etc.
c) Extra width of pavement and minimum turning radius
d) All the above

12) Enoscope technique is used to find out _____.
a) Spot Speed of the vehicle b) Delay of the vehicle
c) Traffic numbers d) Pedestrian counts

13) The area under the parking accumulation curve during a specified period is called _____.
a) Parking Load b) Parking Index
c) Parking Volume d) Parking Turn-over

14) The period of time required for one complete sequence of signal indications is called ____.
a) Phase b) Cycle
c) Amber d) Green

Set Q

Fourth Y. (B.Tech.) (Sem-I) (New/Old) (CBCS) Examination: Oct/Nov2023
CIVIL ENGINEERING
Traffic Engineering and Management (197042712)

Day & Date: Thursday, 18-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicates full marks.
3) Assume any missing data suitably and mention it clearly.

Section – I

Q.2 Answer the following questions (Any Two) **14**

a) What are the objects and scope of traffic engineering? Explain briefly.

b) Explain the term volume. Briefly explain the different methods of carrying out traffic volume studies.

c) Explain how the speed and delay studies are carried out. What are the various uses of speed and delay studies?

d) The parking survey data collected from a parking lot by license plate method is s shown in the Table-1 below. Find the average occupancy, average turnover, parking load, parking capacity and efficiency of the parking lot.

Table 1: License plate parking survey data

Bay	Time			
	0-15	15-30	30-45	45-60
1	1456	9813	-	5678
2	1945	1945	1945	1945
3	3473	5463	5463	5463
4	3741	3741	9758	4825
5	1884	1884	-	7594
6	-	7357	-	7893
7	-	4895	4895	4895
8	8932	8932	8932	-
9	7653	7653	8998	4821
10	7321	-	2789	2789
11	1213	1213	3212	4778
12	5678	6678	7778	8888

Q.3 Answer the following questions (Any Two) **14**

a) What are the various types of traffic accidents? Derive the equation for finding out initial speed of the vehicle for collision of moving vehicle with parked vehicle.

b) A vehicle of 2000 kg skids a distance of 36 m before colliding with a stationary vehicle of 1500 kg weight. After collision both vehicle skid a distance of 14 m. Assuming coefficient of friction 0.5, determine the initial speed of the vehicle.

c) Explain the level of service concept in deciding the design capacity of a road.

d) Discuss the various types of on-street parking, their advantages and disadvantages.

Section – II

Q.4 Answer the following questions (Any Two) **14**

a) List the different types of regulatory signs and explain any four important regulatory signs with neat sketch.

b) Write a short note on ITS applications in urban transport system.

c) Write a note on regulations concerning to the speed limit in urban and rural areas.

d) The A and B are two vehicles, vehicle 'A' travelling on the major street and B travelling on the side street. The view at the intersection is restricted due to the presence of an obstruction as shown in Figure-1 below. Assume V_a=60Kmph, a=15m, b=20m. Calculate the speed limit on Minor Street by.

i) National Safety Council (NSC) method.

ii) American Automobile Association method (AAA). Assume reaction time of the driver=1.15sec.

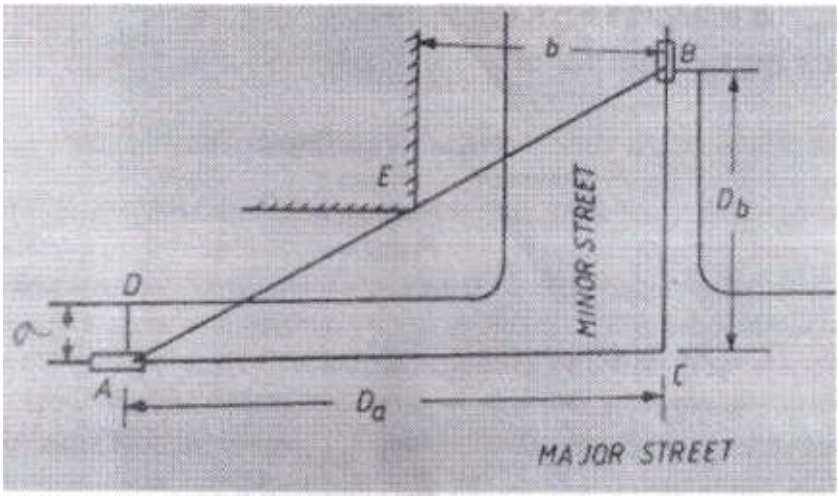

Figure-1-Basis of National Safety Council Method of Speed Zoning

Q.5 Answer the following questions (Any Two) **14**

a) Write the advantages and disadvantages of one-way street.

b) The average normal flow of traffic on cross roads 1 and 2 during design period are 440 and 280 PCU per hour; the saturation flow values on these roads are estimated as 1300 and 1100 PCU per hour respectively. The all-red time required for pedestrian crossing is 12 sec. Design two phase traffic signal with pedestrian crossing by Webster's method. Sketch the phase diagram.

c) What are the various types of traffic markings commonly used? Sketch the marking with showing dimensions for

i) Road centerline
ii) Pedestrian crossings
iii) Marking at signalized intersection
iv) Parallel and angle parking

d) The width of a carriageway approaching an intersection is given as 15. The entry and exit width at the rotary are 10m. The traffic approaching the intersection from the four sides is shown in the figure. Find the capacity of the rotary using the given data. Design speed=30kmph. Take suitable data from Tables 1 and 2 respectively.

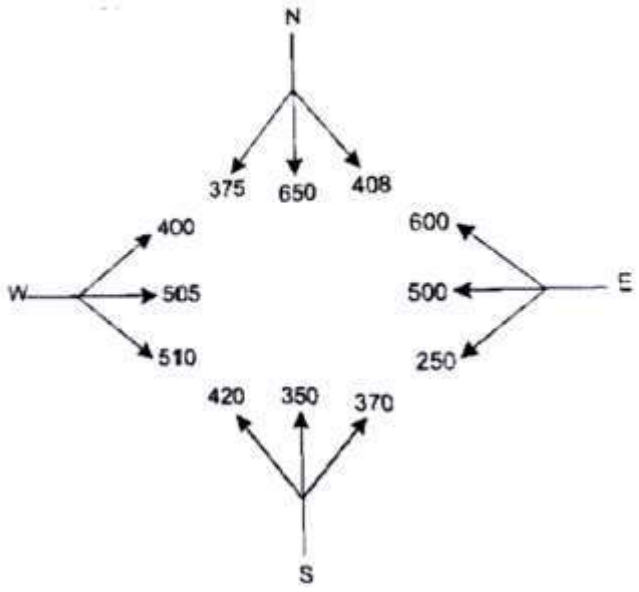

Fig-1-Traffic approaching the intersection

TABLE 1

Rotary Design Speed V (K.P.H.)	*Suggested Values of Radius at Entry (metres)*
40*	20—35
30**	15—25

Design Speed (K.P.H.)	*Minimum Weaving Length (metres)*
40	45
30	30

TABLE 2

Carriageway width of the approach road	*Radius at entry (m)*	*Width of carriageway at entry and exit (m)*
7 m (2 lanes)	25—35	6.5
10.5 m (3 lanes)		7.0
14 m (4 lanes)		8.0
21 m (6 lanes)		13.0
7 m (2 lanes)	15—25	7.0
10.5 m (3 lanes)		7.5
14 m (4 lanes)		10.0
21 m (6 lanes)		15.0

Day & Date: Thursday, 18-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume any missing data suitably and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) The 30th hourly volume means _____.
a) Hourly volume that will be exceeded only 29 times in a year
b) Hourly volume that will be exceeded only 30 times in a year
c) Hourly volume that will be exceeded only 70 times in a year
d) All the above

2) If AADT is 4000vpd and the 30th highest hourly volume for the year is 420 vph what is the K- factor for that facility?
a) 10.5% b) 12.5%
c) 15.5% d) 14.5%

3) The number of vehicles needs to be parked is 30, What is the total length of parking space required if 30°-angle parking is adopted?
a) 200m b) 150m
c) 300m d) 100m

4) Cumulative speed distribution curve is usually adopted for geometric design of highway. The percentile speed adopted for geometric design is _____.
a) 85th percentile b) 90th percentile
c) 98th percentile d) 99.9th percentile

5) The lost time due to starting delay on a traffic signal approach is noted to be 3 seconds, the actual green time is 25 seconds and the amber time is 3 seconds. How much is the effective green time?
a) 19 sec b) 25 sec
c) 27 sec d) 31 sec

6) Traffic hazard markers are used at_____.
a) Obstructions like guard rails and abutments
b) Horizontal curves
c) Hilly locations
d) Vertical gradients

7) Two broken yellow line marking at center of road indicates _____.
a) No passing allowed on both side
b) Passing allowed on one side
c) Passing allowed on both side
d) Passing allowed only for left side vehicle

8) Width of the vehicle affects the _____.
a) Capacity of the road and parking facility
b) Clearances to be provided under structures such as under bridges, etc.
c) Extra width of pavement and minimum turning radius
d) All the above

9) Enoscope technique is used to find out _____.
a) Spot Speed of the vehicle b) Delay of the vehicle
c) Traffic numbers d) Pedestrian counts

10) The area under the parking accumulation curve during a specified period is called _____.
a) Parking Load b) Parking Index
c) Parking Volume d) Parking Turn-over

11) The period of time required for one complete sequence of signal indications is called ____.
a) Phase b) Cycle
c) Amber d) Green

12) The time interval measured between the passage of successive vehicles from head-to-head is known as _____.
a) Headway distance b) Space headway
c) Time headway d) All of these

13) _____ signs are intended to guide the driver about intersecting routes, cities, facilities, towns and other important destinations.
a) Mandatory b) Informatory
c) Cautionary d) Warning

14) Match the Traffic parameters according to the respective definitions:

	Traffic Parameters		Definition
A	Density	1	The number of vehicles passing a specific reference point on a road section within a specified period of time
B	Flow	2	The number of vehicles occupying in a given length of roadway or a lane
C	Space Headway	3	The time between successive vehicles past a point
D	Time Headway	4	Distance between the front bumper of the leading vehicle and the front bumper of the following vehicle.

Select the correct answer from below codes:

	A	B	C	D
a)	1	2	3	4
b)	2	3	4	1
c)	2	1	4	3
d)	4	3	2	1

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) The maximum number of machines which can work in one block section is _____.
a) Four b) Six
c) Two d) Five

2) What is the minimum clean cushion required for TTM working?
a) 100 mm b) 200 mm
c) 300 mm d) 150 mm

3) What is the tamping tool depth below the bottom edge of sleeper in case of flat bottom sleepers?
a) 8-10 mm b) 15-20 mm
c) 5-8 mm d) 10-15 mm

4) What is the squeezing pressure in case of PRC sleeper?
a) 50-60 kg/cm b) 90-100 kg/cm^2
c) 60-70 kg/cm^2 d) 110-120 kg/cm^2

5) The progress of CSM tamping m/c per effective houris _____.
a) 800 sleepers b) 1600 sleepers
c) 1200 sleepers d) 2000 sleepers

6) General lift in design levelling should be: _____.
a) 25 mm
b) 15 mm
c) General lift in design levelling is not relevant
d) 20 mm

7) What is the permissible vertical wear in 52 kg. rails?
a) 6 mm b) 10 mm
c) 8 mm d) 12 mm

8) Minimum shoulder ballast in tangential track of LWR:
a) 300mm b) 350mm
c) 600mm d) 500m

9) LWR/CWR can be laid on vertical curve where algebraic difference between two grades is:
a) 2mm/m b) 4mm/m
c) 3mm/m d) 5mm/m

10) SEJ must not fall on curves having radius.
a) >3500m b) <3500m
c) 440m d) >440m

11) Minimum gap at SEJ in 52 kg. rail shall be:
a) 40mm b) 120mm
c) 60mm d) 190mm

12) Hot weather patrolling is to be introduced in LWR territory having sleepers other than.
a) When the rail temperature goes beyond tm+10
b) When the rail temperature goes beyond td+ 20
c) When the rail temperature goes beyond td+ 10
d) None of these

13) Maintenance operation in a LWR should be restricted to a temperature range of _____ degree centigrade.
a) td + 10 to td -30 b) td to td-20
c) 30 to 45 d) td+5 to td-25

14) Oiling in SEJ is must, once_____.
a) Daily b) Fortnightly
c) Weekly d) Monthly

Set P

Fourth Y. (B.Tech.) (Sem-I) (New/Old) (CBCS) Examination: Oct/Nov2023
CIVIL ENGINEERING
Advanced Railway Track (197042714)

Day & Date: Thursday, 18-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 8 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 6, 7 & 9)
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed and mention it clearly.

Section – I

Q.2	**a)**	Explain the following: i) On- Track Maintenance ii) Mobile Maintenance Unit iii) Sectional Gangs	**06**
	b)	With the help of diagram, illustrate the tamping procedure.	**04**
Q.3	**a)**	Explain Preliminary Works for Track Renewal.	**04**
	b)	Explain the renewal of Sleepers.	**05**
Q.4	**a)**	Elaborate the inspection of Level crossing.	**04**
	b)	Explain signs of Destressing in Group -I and Group- II Bridges.	**05**
Q.5	**a)**	Describe the chemical and mechanical composition of all types of steel used in Indian Railway tracks.	**05**
	b)	Explain the handling process of rails.	**04**

Section – II

Q.6	**a)**	Illustrate the reasons behind defects found in Rails.	**04**
	b)	Elaborate with the help of a diagram details of LWR.	**05**
Q.7	**a)**	With the help of diagram explain Alumina Thermite process.	**04**
	b)	Identify the various types of derailments and mention the aspects of derailments.	**05**

Q.8 **a)** Explain diamond crossing with help of diagram. **05**

b) A main line track on BG is having LWR of 60 kgs Laid at 45°C. The maximum rail temperature is 60°C and the minimum rail temperature is 15°C. Calculate the following: **05**

i) Tension in rail
ii) Compression in rail
iii) Tensile stress and
iv) Compressive stress

Q.9 **a)** Illustrate the requirement of Railway station. (at least six points) **04**

b) Explain the mechanism of derailment. **05**

CIVIL ENGINEERING
Advanced Railway Track (197042714)

Day & Date: Thursday, 18-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer.
Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) Minimum shoulder ballast in tangential track of LWR:
a) 300mm b) 350mm
c) 600mm d) 500m

2) LWR/CWR can be laid on vertical curve where algebraic difference between two grades is:
a) 2mm/m b) 4mm/m
c) 3mm/m d) 5mm/m

3) SEJ must not fall on curves having radius.
a) >3500m b) <3500m
c) 440m d) >440m

4) Minimum gap at SEJ in 52 kg. rail shall be:
a) 40mm b) 120mm
c) 60mm d) 190mm

5) Hot weather patrolling is to be introduced in LWR territory having sleepers other than.
a) When the rail temperature goes beyond tm+10
b) When the rail temperature goes beyond td+ 20
c) When the rail temperature goes beyond td+ 10
d) None of these

6) Maintenance operation in a LWR should be restricted to a temperature range of _____ degree centigrade.
a) td + 10 to td -30 b) td to td-20
c) 30 to 45 d) td+5 to td-25

7) Oiling in SEJ is must, once_____.
a) Daily b) Fortnightly
c) Weekly d) Monthly

8) The maximum number of machines which can work in one block section is _____.
a) Four b) Six
c) Two d) Five

9) What is the minimum clean cushion required for TTM working?
a) 100 mm b) 200 mm
c) 300 mm d) 150 mm

10) What is the tamping tool depth below the bottom edge of sleeper in case of flat bottom sleepers?
a) 8-10 mm b) 15-20 mm
c) 5-8 mm d) 10-15 mm

11) What is the squeezing pressure in case of PRC sleeper?
a) 50-60 kg/cm b) 90-100 kg/cm^2
c) 60-70 kg/cm^2 d) 110-120 kg/cm^2

12) The progress of CSM tamping m/c per effective houris _____.
a) 800 sleepers b) 1600 sleepers
c) 1200 sleepers d) 2000 sleepers

13) General lift in design levelling should be: _____.
a) 25 mm
b) 15 mm
c) General lift in design levelling is not relevant
d) 20 mm

14) What is the permissible vertical wear in 52 kg. rails?
a) 6 mm b) 10 mm

4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options **14**

1) _____ is a mathematical technique suitable for optimization of multistage decision problems.
a) Dynamic programming b) Queuing theory
c) Design of Experiments d) Game Theory

2) _____ includes testing and experimentation models as a iterative process.
a) System approach b) System Programming
c) Statistical analysis d) System analysis

3) System approach provides the _____ scheme that makes involvement accessible.
a) Life cycle planning b) Life cycle integration
c) Decision making d) integrated Training

4) _____ is a line of thought in management which Stresses the interactive nature and interdependence in an organization.
a) System analysis b) System approach
c) Quantitative methods d) System programming

5) _____ is a use of system analysis and simulation to minimize complex of ecological system.
a) Environmental modeling b) Reality & Real system
c) Ecological modeling d) Conceptual model

6) An integrated system combines and optimize waste collective system by effective sorting followed by one or more options.
a) Material recycling
b) Biological treatment
c) Thermal treatment and sanitary landfill
d) All of above

7) _____ represent the total number of individuals in a habitat and also its potential for long term survival.
a) Population size b) Population age
c) Population dispersion d) Population density

8) _____ are the interfaces between inflow and outflow.
a) Venturimetr b) Orifice
c) Connectors d) Junction box

9) The _____ model provides easy access to data for the formation and implementation to effective solid waste management.
a) Integrated waste model
b) Municipal waste management
c) Sustainable waste management
d) Environmental waste management

10) _____ is a mathematics with the application of scientific methods and techniques to decision making problems for optimal solutions.
a) Linear programming b) Statistical Methods
c) Statistical analysis d) Operation research

11) The _____ delivers the incoming flow rate and the concentration for sll components in wastewater model.
a) Inflow model b) Outflow model
c) Strategic flow model d) Dynamic flow model

12) _____ gives the concentration estimates within an order of magnitude for continuous releases over homogeneous terrain.
a) Source dispersion model b) Emission Model
c) Receptor model d) Gaussian plume model

13) _____ estimates temporal and spatial emission based on per unit of activity and meteorology.
a) Receptor model b) Emission model
c) Source dispersion model d) Plume Behavior

14) _____ helps to visualize and also helps to understand different terminologies associated with the solution of linear programming.
a) Graphical Method b) Simplex Method
c) Linear programming d) Stochastic programming

d) Environmental waste management

3) _____ is a mathematics with the application of scientific methods and techniques to decision making problems for optimal solutions.
a) Linear programming b) Statistical Methods
c) Statistical analysis d) Operation research

4) The _____ delivers the incoming flow rate and the concentration for sll components in wastewater model.
a) Inflow model b) Outflow model
c) Strategic flow model d) Dynamic flow model

5) _____ gives the concentration estimates within an order of magnitude for continuous releases over homogeneous terrain.
a) Source dispersion model b) Emission Model
c) Receptor model d) Gaussian plume model

6) _____ estimates temporal and spatial emission based on per unit of activity and meteorology.
a) Receptor model b) Emission model
c) Source dispersion model d) Plume Behavior

7) _____ helps to visualize and also helps to understand different terminologies associated with the solution of linear programming.
a) Graphical Method b) Simplex Method
c) Linear programming d) Stochastic programming

8) _____ is a mathematical technique suitable for optimization of multistage decision problems.
a) Dynamic programming b) Queuing theory
c) Design of Experiments d) Game Theory

9) _____ includes testing and experimentation models as a iterative process.
a) System approach b) System Programming
c) Statistical analysis d) System analysis

10) System approach provides the _____ scheme that makes involvement accessible.
a) Life cycle planning b) Life cycle integration
c) Decision making d) integrated Training

11) _____ is a line of thought in management which Stresses the interactive nature and interdependence in an organization.
a) System analysis b) System approach
c) Quantitative methods d) System programming

12) _____ is a use of system analysis and simulation to minimize complex of ecological system.
a) Environmental modeling b) Reality & Real system
c) Ecological modeling d) Conceptual model

13) An integrated system combines and optimize waste collective system by effective sorting followed by one or more options.
a) Material recycling
b) Biological treatment
c) Thermal treatment and sanitary landfill
d) All of above

14) _____ represent the total number of individuals in a habitat and also its potential for long term survival.
a) Population size b) Population age
c) Population dispersion d) Population density

Fourth Y. (B.Tech.) (Sem-I) (New) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Environmental Systems (197042716)

Day & Date: Thursday, 18-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question No. 2 is compulsory in Section I, and solve any two questions from the remaining.
2) Question No. 6 is compulsory in Section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.

Section – I

Q.2	**a)**	Explain what is building modeling.	**05**
	b)	Explain with neat sketch the scope of System approach.	**05**
Q.3	**a)**	Explain the characteristics of Integrated Waste Management.	**04**
	b)	Explain three basic models which are used in system approach.	**05**
Q.4	**a)**	Explain the characteristics of Population ecology.	**04**
	b)	Explain with neat sketch the model of sustainable waste management.	**05**
Q.5	**Write Short Notes**		
	a)	Concepts and principle of Population dynamics.	**05**
	b)	Benefits of Integrated waste Management.	**04**

Section – II

Q.6	**a)**	Explain the basic concept of Wastewater model.	**05**
	b)	Explain the equation of continuity for rectangular model.	**05**
Q.7	**a)**	Explain Linear programming and its applications in civil engineering.	**05**
	b)	Explain the salient features of Optimization.	**04**
Q.8	**a)**	Explain the pollutant standard index criteria.	**04**
	b)	Explain the wastewater treatment process (Aerobic Process).	**05**
Q.9	**Write short notes.**		
	a)	Point source Gaussian plume model.	**05**
	b)	Motor Vehicle Emission.	**04**

Day & Date: Thursday, 18-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options **14**

1) The _____ delivers the incoming flow rate and the concentration for sll components in wastewater model.
a) Inflow model b) Outflow model
c) Strategic flow model d) Dynamic flow model

2) _____ gives the concentration estimates within an order of magnitude for continuous releases over homogeneous terrain.
a) Source dispersion model b) Emission Model
c) Receptor model d) Gaussian plume model

3) _____ estimates temporal and spatial emission based on per unit of activity and meteorology.
a) Receptor model b) Emission model
c) Source dispersion model d) Plume Behavior

4) _____ helps to visualize and also helps to understand different terminologies associated with the solution of linear programming.
a) Graphical Method b) Simplex Method
c) Linear programming d) Stochastic programming

5) _____ is a mathematical technique suitable for optimization of multistage decision problems.
a) Dynamic programming b) Queuing theory
c) Design of Experiments d) Game Theory

6) _____ includes testing and experimentation models as a iterative process.
a) System approach b) System Programming
c) Statistical analysis d) System analysis

7) System approach provides the _____ scheme that makes involvement accessible.
a) Life cycle planning b) Life cycle integration
c) Decision making d) integrated Training

8) _____ is a line of thought in management which Stresses the interactive nature and interdependence in an organization.
a) System analysis b) System approach
c) Quantitative methods d) System programming

9) _____ is a use of system analysis and simulation to minimize complex of ecological system.
a) Environmental modeling b) Reality & Real system
c) Ecological modeling d) Conceptual model

10) An integrated system combines and optimize waste collective system by effective sorting followed by one or more options.
a) Material recycling
b) Biological treatment
c) Thermal treatment and sanitary landfill
d) All of above

11) _____ represent the total number of individuals in a habitat and also its potential for long term survival.
a) Population size b) Population age
c) Population dispersion d) Population density

12) _____ are the interfaces between inflow and outflow.
a) Venturimetr b) Orifice
c) Connectors d) Junction box

13) The _____ model provides easy access to data for the formation and implementation to effective solid waste management.
a) Integrated waste model
b) Municipal waste management
c) Sustainable waste management
d) Environmental waste management

14) _____ is a mathematics with the application of scientific methods and techniques to decision making problems for optimal solutions.
a) Linear programming b) Statistical Methods
c) Statistical analysis d) Operation research

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. 14

1) Unit power in a turbine is _____.
a) $P/H^{1/2}$ b) P/H
c) $P/H^{3/2}$ d) $P/H^{3/4}$

2) The pumped storage scheme is employed to supply water _____.
a) during the off-peak hours b) during the peak hours
c) system base load d) none of above

3) Minimum pressure occurs in flowing power tunnel at the time of _____.
a) load rejection b) load acceptance
c) head race d) fail race

4) The capacity of small hydro power plant are in order of _____.
a) 1-15 MW b) 15-20 MW
c) 20-50 MW d) 50-100 MW

5) The draft tube is provided to _____.
a) reduce the effect of water hammer
b) raise the water surface of the stream to create an artificial head
c) increase the artificial head on the water wheel
d) none of the above

6) The specific speed of water turbine is the speed at which the turbine _____ develops.
a) maximum horse power b) a minimum horse power
c) unit horse power at unit head d) unit horse power at all head

7) Annual depreciation of the plant is proportional to the earning capacity _____ of the plant void.
a) sinking fund depreciation b) straight line depreciation
c) reducing balance depreciation d) None of above

8) Water hammer "process in penstock result in _____.
a) pressure decreases
b) noise decreases
c) noise increases, pressure increases, velocity decreases
d) none

9) In hydro electric power station what is an enlarge body of water just above the intake and used as a regulating reservoir called as _____.
a) Penstock b) Spillways
c) Reservoir d) Fore bay

10) Jet ratio 'm' is defined as the ratio of _____.
a) Diameter of jet of water to diameter of pelton wheel
b) Velocity of vane to velocity of jet of water
c) Velocity of flow to velocity of jet of water
d) Diameter of pelton wheel to diameter of jet

11) Surge tank is necessarily provided _____.
a) long penstocks b) short length penstocks
c) surface penstocks d) embedded penstocks

12) The specific speeds of Pelton wheel, Francis and Kaplan turbines are in _____.
a) Increasing order
b) Decreasing order
c) Neither increasing nor decreasing order
d) None

13) For harnessing low variable water heads the suitable hydraulic turbine with reaction and adjustable vanes is _____.
a) Pelton b) Francis
c) Impeller d) Kaplan

14) The flow through penstocks and pressure conducts is generally _____.
a) laminar b) turbulent
c) both a) and b) d) none of these

4) Use of only non-programmable calculator is allowed.
5) Assume suitable data wherever necessary.

Section – I

Q.2 Solve Any Four. **16**

a) What do you understand by non-conventional sources of power generation? What is the scope of these sources in India?

b) Discuss the merits and demerits of Hydropower plants.

c) What are the various objectives of planning for water power development?

d) Common load shared by two stations base load plant with $60\ \text{MW}$ capacity and other beuing standby plant with $60\ \text{MW}$ capacity. The yearly out put for base load station is $250 \times 10^6\ \text{KWh}$, and for standby station is $24 \times 10^6\ \text{KWh}$. The peak load taken by standby station is $20\ \text{MW}$ which works for $2200\ \text{hrs}$ during the year. The base load station takes peak load as $35\ \text{MW}$. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) What do you understand by base load and peak load power plants?

Q.3 Solve Any Two. **12**

a) What do you understand by Run of river plants? What are the parts and arrangement of such plants? Draw a neat sketch.

b) A penstock, with an internal diameter 1.20 m. supplies water at a head equivalent to 17.0 kg/cm^2. There is a possibility of 20% in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be 1000 kg/cm^{2}and 85% resp. Find the wall thickness of penstock.

c) Enlist the different types of Draft tubes. Sketch any two and write advantages of them.

Section – II

Q.4 Solve Any Four. **16**

a) What are the advantages of reaction turbine over the pelton wheel turbine in respect of efficiency, size, cost and maintenance?

b) Explain the function of Anchor block and enlist the forces acting on it.

c) A power canal, bed width 15m, may be assumed to be rectangular in shape with a steady state of flow of 3m. The canal supplies water to a power house with three turbines, each turbine rated at a discharge of $30m^3$ /s. If the in the power house is suddenly thrown off so that two of the turbines have to be shut down, what would be the height of the surge in the canal.

d) A closed cycle p-s plant, with gross head of 400 m, has a head race tunnel 4.5 m diameter and 800m long. The flow velocity is 7.0 m/sec and friction factor f=0.02, if the overall efficiencies of pumping and generation are 86% and 90% resp. calculate the plant efficiency.

e) What do you understand by 'pump storage plant? What are the advantages and disadvantages of this power plant?

Q.5 Solve Any Two. **12**

a) What topographical features are in favour of adopting underground power plant? What are its types? Draw neat layout.

b) Write short note on

i) Peak and base load power plant

ii) Geothermal power plant

c) Describe how ocean tides one generated? also state the limitations of tidal power generation.

4) The flow through penstocks and pressure conducts is generally _____.
a) laminar b) turbulent
c) both a) and b) d) none of these

5) Unit power in a turbine is _____.
a) $P/H^{1/2}$ b) P/H
c) $P/H^{3/2}$ d) $P/H^{3/4}$

6) The pumped storage scheme is employed to supply water _____.
a) during the off-peak hours b) during the peak hours
c) system base load d) none of above

7) Minimum pressure occurs in flowing power tunnel at the time of _____.
a) load rejection b) load acceptance
c) head race d) fail race

8) The capacity of small hydro power plant are in order of _____.
a) 1-15 MW b) 15-20 MW
c) 20-50 MW d) 50-100 MW

9) The draft tube is provided to _____.
a) reduce the effect of water hammer
b) raise the water surface of the stream to create an artificial head
c) increase the artificial head on the water wheel
d) none of the above

10) The specific speed of water turbine is the speed at which the turbine _____ develops.
a) maximum horse power b) a minimum horse power
c) unit horse power at unit head d) unit horse power at all head

11) Annual depreciation of the plant is proportional to the earning capacity _____ of the plant void.
a) sinking fund depreciation b) straight line depreciation
c) reducing balance depreciation d) None of above

12) Water hammer "process in penstock result in _____.
a) pressure decreases
b) noise decreases
c) noise increases, pressure increases, velocity decreases
d) none

13) In hydro electric power station what is an enlarge body of water just above the intake and used as a regulating reservoir called as _____.
a) Penstock b) Spillways
c) Reservoir d) Fore bay

14) Jet ratio 'm' is defined as the ratio of _____.
a) Diameter of jet of water to diameter of pelton wheel
b) Velocity of vane to velocity of jet of water
c) Velocity of flow to velocity of jet of water
d) Diameter of pelton wheel to diameter of jet

Set R

Fourth Y. (B.Tech.) (Sem-I) (New) (Old) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Water Power Engineering (197042717)

Day & Date: Thursday, 18-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) All questions are compulsory.
2) Figures to the right indicates full marks.
3) Draw neat labelled diagrams whenever necessary.
4) Use of only non-programmable calculator is allowed.
5) Assume suitable data wherever necessary.

Section – I

Q.2 Solve Any Four. **16**

a) What do you understand by non-conventional sources of power generation? What is the scope of these sources in India?

b) Discuss the merits and demerits of Hydropower plants.

c) What are the various objectives of planning for water power development?

d) Common load shared by two stations base load plant with $60\ \text{MW}$ capacity and other beuing standby plant with $60\ \text{MW}$ capacity. The yearly out put for base load station is $250 \times 10^6\ \text{KWh}$, and for standby station is $24 \times 10^6\ \text{KWh}$. The peak load taken by standby station is $20\ \text{MW}$ which works for $2200\ \text{hrs}$ during the year. The base load station takes peak load as $35\ \text{MW}$. Calculate annual load factor, plant use factor, and capacity factor for both the stations.

e) What do you understand by base load and peak load power plants?

Q.3 Solve Any Two. **12**

a) What do you understand by Run of river plants? What are the parts and arrangement of such plants? Draw a neat sketch.

b) A penstock, with an internal diameter 1.20 m. supplies water at a head equivalent to 17.0 kg/cm^2. There is a possibility of 20% in the pressure due to transient conditions. The design stress and the efficiency of the joint may be assumed to be 1000 kg/cm^{2}and 85% resp. Find the wall thickness of penstock.

c) Enlist the different types of Draft tubes. Sketch any two and write advantages of them.

Section – II

Q.4 Solve Any Four. **16**

a) What are the advantages of reaction turbine over the pelton wheel turbine in respect of efficiency, size, cost and maintenance?

b) Explain the function of Anchor block and enlist the forces acting on it.

c) A power canal, bed width 15m, may be assumed to be rectangular in shape with a steady state of flow of 3m. The canal supplies water to a power house with three turbines, each turbine rated at a discharge of $30m^3$ /s. If the in the power house is suddenly thrown off so that two of the turbines have to be shut down, what would be the height of the surge in the canal.

d) A closed cycle p-s plant, with gross head of 400 m, has a head race tunnel 4.5 m diameter and 800m long. The flow velocity is 7.0 m/sec and friction factor f=0.02, if the overall efficiencies of pumping and generation are 86% and 90% resp. calculate the plant efficiency.

e) What do you understand by 'pump storage plant? What are the advantages and disadvantages of this power plant?

Q.5 Solve Any Two. **12**

a) What topographical features are in favour of adopting underground power plant? What are its types? Draw neat layout.

b) Write short note on

i) Peak and base load power plant

ii) Geothermal power plant

c) Describe how ocean tides one generated? also state the limitations of tidal power generation.

Water Power Engineering (197042717)

Day & Date: Thursday, 18-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book).
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.
5) Use of only non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) The specific speed of water turbine is the speed at which the turbine _____ develops.
a) maximum horse power b) a minimum horse power
c) unit horse power at unit head d) unit horse power at all head

2) Annual depreciation of the plant is proportional to the earning capacity _____ of the plant void.
a) sinking fund depreciation b) straight line depreciation
c) reducing balance depreciation d) None of above

3) Water hammer "process in penstock result in _____.
a) pressure decreases
b) noise decreases
c) noise increases, pressure increases, velocity decreases
d) none

4) In hydro electric power station what is an enlarge body of water just above the intake and used as a regulating reservoir called as _____.
a) Penstock b) Spillways
c) Reservoir d) Fore bay

5) Jet ratio 'm' is defined as the ratio of _____.
a) Diameter of jet of water to diameter of pelton wheel
b) Velocity of vane to velocity of jet of water
c) Velocity of flow to velocity of jet of water
d) Diameter of pelton wheel to diameter of jet

6) Surge tank is necessarily provided _____.
a) long penstocks b) short length penstocks
c) surface penstocks d) embedded penstocks

7) The specific speeds of Pelton wheel, Francis and Kaplan turbines are in _____.
a) Increasing order
b) Decreasing order
c) Neither increasing nor decreasing order
d) None

8) For harnessing low variable water heads the suitable hydraulic turbine with reaction and adjustable vanes is _____.
a) Pelton b) Francis
c) Impeller d) Kaplan

9) The flow through penstocks and pressure conducts is generally _____.
a) laminar b) turbulent
c) both a) and b) d) none of these

10) Unit power in a turbine is _____.
a) $P/H^{1/2}$ b) P/H
c) $P/H^{3/2}$ d) $P/H^{3/4}$

11) The pumped storage scheme is employed to supply water _____.
a) during the off-peak hours b) during the peak hours

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) The repair and rehabilitation of damaged or spalled concrete is done by removing the _____.
a) Loose concrete b) Collapsing
c) Breakage d) Bonding

2) The pH value of fresh concrete is around _____.
a) 10 b) 9
c) 8 d) 12.5

3) Mortar or concrete conveyed through pressure hose and applied pneumatically at high velocity on to a surface is called _____.
a) guniting b) grouting
c) sealing d) spraying

4) _____ is the main reason for crack generation in concrete.
a) Movement of humidity b) Sleep
c) Difference in temperature d) All of the above

5) _____ is not used in the underpinning work.
a) Heating method b) Frizzing method
c) Pit method d) All of the above

6) _____ type of plaster defect generates a series of hair cracks inside the plaster.
a) Crazing b) Blistering
c) Flaking d) Popping

7) _____ metal is used for making a foamed concrete.
a) Aluminum b) Zinc
c) a & b both d) None of the above

8) One of the testing equipment used for inspection of structural element is ____.
a) Strain Gauge b) Measuring Jar
c) Test Tubes d) None of these

9) The corrosion of reinforcement due to extreme exposure is common for structure located in _____.
a) Dry conditions b) Costal zones
c) Regional zones d) Hot condition

10) _____ is a similar phenomenon to explosion but the pieces collapse into the center of the object instead of being expelled.
a) Explosion b) An implosion
c) Both a and b d) None of the above

11) _____ is main purpose of test blasting.
a) To decide effectiveness of explosion
b) To decide a quality of explosion
c) To decide a size of explosion
d) To decide a cost of explosion

12) Remove a whole building or part of building in control way is known as _____.
a) restoration b) demolition
c) retrofitting d) maintenance

13) _____ equipment used for starting the explosion in explosive material.
a) Detonators b) Starting cap
c) Current switch d) None of the above

14) _____ factor does not affect the quantity of the explosive material.
a) Column size b) Column shape
c) Size of demolition d) Depth of the hole

Section – II

Q.4 Solve any one. **10**
- **a)** Explain with sketches retrofitting and jacketing method used in repairs of beams and columns.
- **b)** Explain in detail structural health monitoring.

Q.5 Solve any two. **18**
- **a)** Repairs for leakages in R.C slab.
- **b)** Repairs of marine structures.
- **c)** Demolition techniques used for dilapidated buildings.
- **d)** Repair techniques used in corroded slab.

Air & Noise Pollution and Control (197042813)

Day & Date: Monday 18-12-2023 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The prime factors in order to minimize air pollution problems by site selection are _____.
a) Potential effects of surrounding area
b) Clean air available
c) Meteorological factors and climate
d) Topographical features

2) Cyclone Separator works on the principle of _____.
a) Gravity Force b) Inertia Force
c) Centrifugal Force d) None of these

3) Acid Rain is caused by Oxides of _____.
a) Phosphorus and Carbon b) Sulphur and Nitrogen
c) Sulphur and Phosphorus d) Nitrogen and Carbon

4) _____ removes both gaseous and Particulate Contaminants.
a) Cyclone b) Gravitational settling Chamber
c) Electrostatic Precipitator d) Wet Scrubber

5) The _____ of a sound wave is the measure of the height of the wave.
a) Frequency b) Amplitude
c) Period d) Intensity

6) Noise pollution can be measured in _____.
a) Pa b) dB
c) Hz d) Hb

7) According to Noise Pollution Rule 2000, the night time noise for educational institute is _____.
a) 55 dB b) 45 dB
c) 60 dB d) None of these

8) Which gas is mainly produced due to incomplete burning of wood?
a) CO b) SO_2
c) NO_2 d) NO_3

9) The chimney is emitting particulate matter. Which of the following is the correct expression of the height of the chimney? Here 'Kp' represents the emission of particulate matter.

a) $\mathrm{HC} = 74\ \mathrm{K_p}^{0.27}$ b) $\mathrm{HC} = 14\ \mathrm{K_p}^{0.27}$

c) $\mathrm{HC} = 14\ \mathrm{K_p}^{0.47}$ d) $\mathrm{HC} = 74\ \mathrm{K_p}^{0.33}$

10) The major photochemical smog is _____.

a) Hydrogen peroxide b) Chlorofluorocarbon

c) Peroxyacetyl nitrate d) All of the above

11) Hb present in blood has 200 times more affinity towards _____ than O_2.

a) CO_2 b) CO

c) SO_3 d) O_3

12) The change of air temperature with height influence the upward lift of air pollutant discharge into atmosphere is also known as _____.

a) Subsidence inversion b) Sub adiabatic lapse rate

c) Adiabatic lapse rate d) Temperature gradient

13) The _____ of atmosphere influences the corrosive action of air pollutants and also indicates fog formation.

a) Moisture content b) Visibility

c) Solar Radiation d) Photo Chemical Smog

14) _____type of plume is emitted under extreme inversion condition.

a) Coning b) Fanning

c) Looping d) Lofting

Air & Noise Pollution and Control (197042813)

Day & Date: Monday 18-12-2023 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

Section – I

Q.2 **a)** Explain Common Air Pollutants and its sources in a tabular form. **05**

b) What are different zones of atmosphere? Explain with the help of neat graph. **05**

Q.3 **a)** Determine the effective stack height given by the following data. **05**

- Physical stack height = 200 m
- Inside diameter of stack = 1.02 m
- Air temperature = 12°C
- Barometric pressure = 1000 mbar
- Stack gas velocity = 8.75 m/sec
- Stack gas temperature = 139°C
- Wind speed = 4.5 m/sec

b) Write a short note on Kyoto Protocol and Montreal Protocol. **04**

Q.4 **a)** Explain meteorological factors influencing air pollution. **05**

b) Explain Gaussian Plume model with neat sketch. **04**

Q.5 **Write short notes on. (Any Three)** **09**

a) Green House Gas Effect
b) Global Warming
c) Air Pollution Indices
d) Photochemical Smog

Section – II

Q.6 **a)** Explain with neat sketch, principle and working operation of electrostatic Precipitator. **05**

b) Two air pollution equipment's (Gravity settling Chamber and Cyclone Separator) are connected in series. Efficiencies of Gravity settling Chamber and Cyclone Separator is 80% and 75% respectively. Determine overall efficiency of the system. **05**

Q.7	**a)**	Describe the sources and control of Noise Pollution.	**05**
	b)	Explain the basic concepts of acoustics of sound.	**04**
Q.8	**a)**	Explain the advantages and disadvantages of Cyclone Separator.	**05**
	b)	Explain the characteristics and its standards with respect to noise.	**04**

Q.9 Write short notes on (Any Three) **09**

a) Sound Pressure Level (SPL)
b) Noise pollution Indices
c) Write a short note on 'Packed Towers' with the help of neat diagram
d) Effects of Noise pollution

c) 5% d) 0%

3) The approximate value of the total shrinkage strain of concrete may be taken as _____.
a) 3.0 b) 0.3
c) 0.003 d) 0.0003

4) The workability of concrete by slump test is expressed as _____.
a) mm b) mm^2
c) mm^3 d) Unit less

5) Testing of hardened concrete can be done by _____.
a) Schmidt's Rebound Hammer b) Penetration technique
c) Dynamic Method d) All of these

6) Measurement of concrete workability is done by _____.
a) Compacting factor test b) Abrasion test
c) Soundness test d) Setting time test

7) Fineness of cement is done by the sieve _____.
a) 600μ b) 300μ
c) 150μ d) 90μ

Set Q

Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Advanced Concrete Technology (197042821)

Day & Date: Tuesday 19-12-2023 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.
5) Use of non-programmable calculator is allowed.

Section – I

Q.2 Explain the mechanism of action of retarders. **10**

Q.3 How would you improve the bond of fresh concrete to hardened concrete? **09**

Q.4 What are the factors which control the performance of HPC? **09**

Q.5 What method would you adopt to place the concrete under water? Explain in detail. **09**

Section – II

Q.6 Describe wet-process shotcreting. **10**

Q.7 Discuss crack propagation in concrete. **09**

Q.8 What are the special requirements for mix proportions of concrete which is to be pumped? **09**

Q.9 What is meant by jacketing of concrete sections? Describe the different types of jacketing. **09**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The minimum width of carriage way for a two lane bridge is _____.
a) 4.25m b) 10m
c) 6m d) 7.5m

2) _____ is the minimum grade of concrete for prestressed concrete bridges.
a) M-30 b) M-20
c) M-40 d) M-25

3) The minimum width of carriage way for a single lane bridge is _____.
a) 4.25m b) 6m
c) 10m d) 7.5m

4) As per IRC-21, minimum clear cover to any reinforcement bar is _____.
a) 40mm b) 25mm
c) 50mm d) 30mm

5) As per crack control criteria of IRC-21, the spacing of main reinforced bar shall not exceed _____.
a) 100mm b) 300mm
c) 200mm d) 150mm

6) Permissible direct compressive stress for M-20 concrete is _____.
a) 3.8 MPa b) 5.0 MPa
c) 7 MPa d) 6.2 MPa

7) Courbon's theory is applicable only when the ratio of span to width is _____.
a) Greater than 2 but less than 4 b) Greater than 4
c) Greater than 4 but less than 6 d) None of these

8) T- Beam bridges are most commonly adopted in the span of _____.
a) 5-8m b) 10-25m
c) 30-50m d) None of these

9) As per crack control criteria of IRC-21, the diameter of bar in slabs shall not exceed _____.
a) 36mm b) 32mm
c) 25mm d) 40mm

10) The minimum number of cross beams in a bridge should be _____.
a) 3 b) 5
c) 6 d) None of these

11) The minimum cement content for minor bridges is _____.
a) 250 kg/mm^3 b) 360 kg/mm^3
c) 400 kg/mm^3 d) 450 kg/mm^3

12) Span is called as economical span when _____.
a) Cost of substructure should be equal to cost of superstructure
b) Cost of substructure should be greater than cost of superstructure
c) Cost of substructure should be less than cost of superstructure
d) Does not depend on cost

13) Simply supported span requires _____.
a) Fixed bearing at both ends
b) Expansion bearing at both ends
c) Fixed bearing at one end and expansion bearing at the other
d) Either a or b, both are correct

14) Continuous girder requires _____.
a) Fixed bearing on all supports
b) Expansion bearing on all supports
c) Expansion bearing on all support except at one
d) Fixed bearing on all support except at one

Section – I

Q.2 **a)** Enlist the various loads to be considered for the analysis of bridges? Explain any one in detail. **05**

b) Give the detail classification of Bridges. **04**

Q.3 Design a solid deck slab for Two lane bridge with following data: **09**
a) Effective span - 7 m
b) Carriage way width - 7.5 m
c) Kerb - 600 × 275 on both side
d) Live load - IRC Class A (two lane)
e) Wearing coat - 100 mm thick
f) Use M-25 concrete and Fe- 415 steel
g) Use α = 2.68

Q.4 A RCC 'T' beam type bridge having deck slab of 200 mm thick, wearing coat of 100 mm thick, four longitudinal girders and five cross girders. Design the exterior longitudinal girder. Use following additional data, **10**
a) Carriage way width - 10 m
b) Span of bridge - 16 m
c) Live Load - IRC class AA Tracked
d) Kerb - 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder - 300 mm
f) Longitudinal Girder spacing - 300 m
g) Use M-25 concrete and Fe- 415 steel

Q.5 Design a slab panel having size of 3 m × 4.5 m. Consider IRC class AA tracked loading. Use Pigeaud's chart. Consider thickness of slab as 220 mm and wearing coat thickness as 85 mm. Use M-30 concrete and Fe-415 steel. Refer Fig 1 and 2 for Pigeuad's coefficient. **09**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.8 m, Height of pier upto springing level - 12 m,
C/C distance of bearing - 1.1 m, Side batter 1:14, HFL - 1.3 m below the bearing level, Span of bridge - 16 m, Self weight of the superstructure = 220 kN/m,
Live load - IRC class AA tracked, Material of pier = M20 concrete.

Q.7 Verify the suitability of abutment as shown in the fig 7.1. Use following data **09**
Density of soil - 18 kN/m^3, Friction angle of soil $(\emptyset) = 30°$.
Coefficient of friction - 0.5, Live load IRC class AA tracked

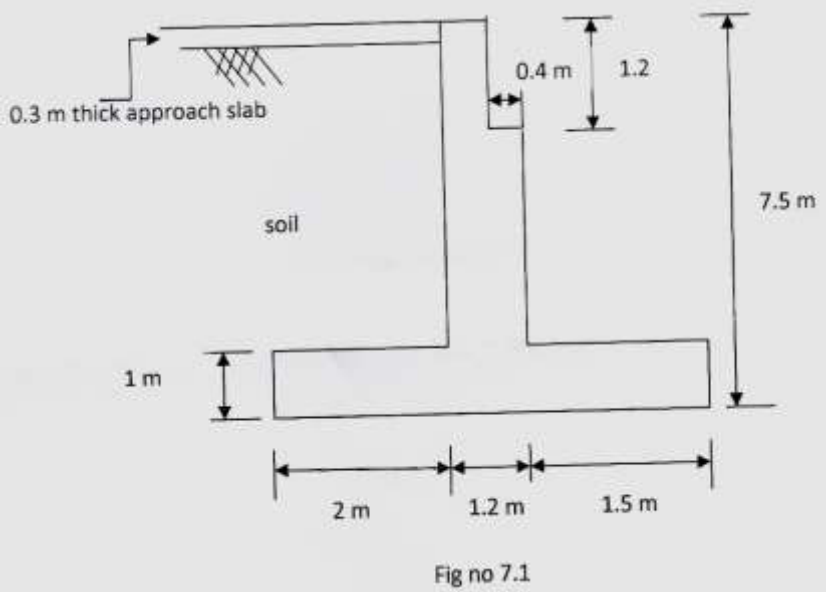

Fig no 7.1

Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 170 kN,
Vertical load (dynamic) = 50 kN,
Horizontal force = 90 kN
Modulus of rigidity of elastomer - 1.1 N/mm^2
coefficient of friction = 0.4

b) Write a note on inspection bridges. **04**

Q.9 **Write a note on following (Any three)** **09**

a) Types of foundation for bridges
b) Types of bridge pier with their suitability
c) Expansion joints
d) Instruments required for bridge inspection

Seat No.

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.8 m, Height of pier upto springing level - 12 m,
C/C distance of bearing - 1.1 m, Side batter 1:14, HFL - 1.3 m below the bearing level, Span of bridge - 16 m, Self weight of the superstructure = 220 kN/m,
Live load - IRC class AA tracked, Material of pier = M20 concrete.

Q.7 Verify the suitability of abutment as shown in the fig 7.1. Use following data **09**
Density of soil - 18 kN/m^3, Friction angle of soil $(\emptyset) = 30°$.
Coefficient of friction - 0.5, Live load IRC class AA tracked

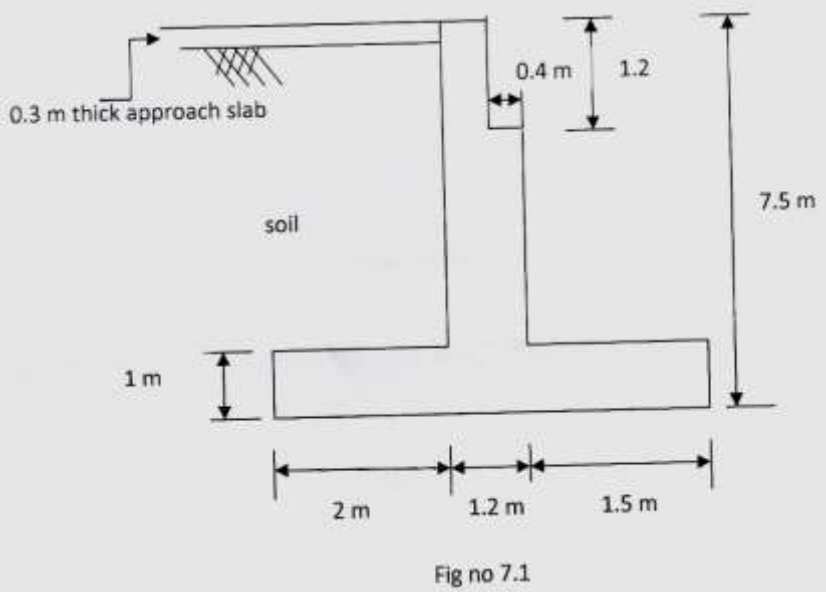

Fig no 7.1

Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 170 kN,
Vertical load (dynamic) = 50 kN,
Horizontal force = 90 kN
Modulus of rigidity of elastomer - 1.1 N/mm^2
coefficient of friction = 0.4

b) Write a note on inspection bridges. **04**

Q.9 **Write a note on following (Any three)** **09**

a) Types of foundation for bridges
b) Types of bridge pier with their suitability
c) Expansion joints
d) Instruments required for bridge inspection

Set **S**

Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Bridges (197042816)

Day & Date: Tuesday 19-12-2023 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No. 3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Permissible direct compressive stress for M-20 concrete is _____.
a) 3.8 MPa b) 5.0 MPa
c) 7 MPa d) 6.2 MPa

2) Courbon's theory is applicable only when the ratio of span to width is _____.
a) Greater than 2 but less than 4 b) Greater than 4
c) Greater than 4 but less than 6 d) None of these

3) T- Beam bridges are most commonly adopted in the span of _____.
a) 5-8m b) 10-25m
c) 30-50m d) None of these

4) As per crack control criteria of IRC-21, the diameter of bar in slabs shall not exceed _____.
a) 36mm b) 32mm
c) 25mm d) 40mm

5) The minimum number of cross beams in a bridge should be _____.
a) 3 b) 5
c) 6 d) None of these

6) The minimum cement content for minor bridges is _____.
a) 250 kg/mm^3 b) 360 kg/mm^3
c) 400 kg/mm^3 d) 450 kg/mm^3

7) Span is called as economical span when _____.
a) Cost of substructure should be equal to cost of superstructure
b) Cost of substructure should be greater than cost of superstructure
c) Cost of substructure should be less than cost of superstructure
d) Does not depend on cost

8) Simply supported span requires _____.
a) Fixed bearing at both ends
b) Expansion bearing at both ends
c) Fixed bearing at one end and expansion bearing at the other
d) Either a or b, both are correct

9) Continuous girder requires _____.
a) Fixed bearing on all supports
b) Expansion bearing on all supports
c) Expansion bearing on all support except at one
d) Fixed bearing on all support except at one

10) The minimum width of carriage way for a two lane bridge is _____.
a) 4.25m b) 10m
c) 6m d) 7.5m

11) _____ is the minimum grade of concrete for prestressed concrete bridges.
a) M-30 b) M-20
c) M-40 d) M-25

12) The minimum width of carriage way for a single lane bridge is _____.
a) 4.25m b) 6m
c) 10m d) 7.5m

13) As per IRC-21, minimum clear cover to any reinforcement bar is _____.
a) 40mm b) 25mm
c) 50mm d) 30mm

14) As per crack control criteria of IRC-21, the spacing of main reinforced bar shall not exceed _____.
a) 100mm b) 300mm
c) 200mm d) 150mm

Seat No.	

Set | S

Fourth Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Design of Bridges (197042816)

Day & Date: Tuesday 19-12-2023 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Question no. 4 is compulsory in section I, and solve any two questions from the remaining.
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever necessary and mention it clearly.

Section – I

Q.2 **a)** Enlist the various loads to be considered for the analysis of bridges? Explain any one in detail. **05**

b) Give the detail classification of Bridges. **04**

Q.3 Design a solid deck slab for Two lane bridge with following data: **09**
a) Effective span - 7 m
b) Carriage way width - 7.5 m
c) Kerb - 600 × 275 on both side
d) Live load - IRC Class A (two lane)
e) Wearing coat - 100 mm thick
f) Use M-25 concrete and Fe- 415 steel
g) Use α = 2.68

Q.4 A RCC 'T' beam type bridge having deck slab of 200 mm thick, wearing coat of 100 mm thick, four longitudinal girders and five cross girders. Design the exterior longitudinal girder. Use following additional data, **10**
a) Carriage way width - 10 m
b) Span of bridge - 16 m
c) Live Load - IRC class AA Tracked
d) Kerb - 600 mm wide, 400 mm deep
e) Web thickness for Longitudinal and cross girder - 300 mm
f) Longitudinal Girder spacing - 300 m
g) Use M-25 concrete and Fe- 415 steel

Q.5 Design a slab panel having size of 3 m × 4.5 m. Consider IRC class AA tracked loading. Use Pigeaud's chart. Consider thickness of slab as 220 mm and wearing coat thickness as 85 mm. Use M-30 concrete and Fe-415 steel. Refer Fig 1 and 2 for Pigeuad's coefficient. **09**

Section – II

Q.6 Verify the adequacy of pier for the following data: **10**
Top width of pier - 1.8 m, Height of pier upto springing level - 12 m,
C/C distance of bearing - 1.1 m, Side batter 1:14, HFL - 1.3 m below the bearing level, Span of bridge - 16 m, Self weight of the superstructure = 220 kN/m,
Live load - IRC class AA tracked, Material of pier = M20 concrete.

Q.7 Verify the suitability of abutment as shown in the fig 7.1. Use following data **09**
Density of soil - 18 kN/m^3, Friction angle of soil $(\emptyset) = 30°$.
Coefficient of friction - 0.5, Live load IRC class AA tracked

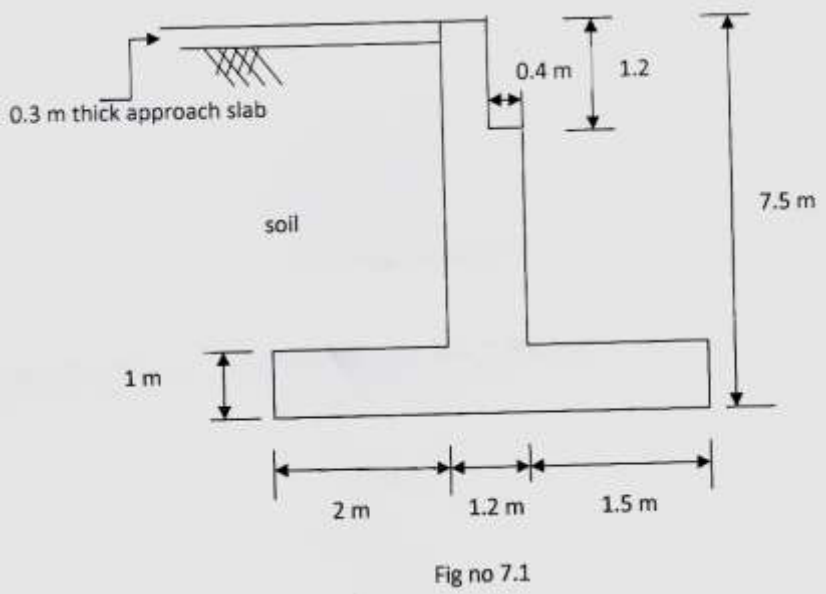

Fig no 7.1

Q.8 **a)** Design an elastomeric unreinforced bearing pad for following data **05**
Vertical load (sustained) = 170 kN,
Vertical load (dynamic) = 50 kN,
Horizontal force = 90 kN
Modulus of rigidity of elastomer - 1.1 N/mm^2
coefficient of friction = 0.4

b) Write a note on inspection bridges. **04**

Q.9 **Write a note on following (Any three)** **09**

a) Types of foundation for bridges
b) Types of bridge pier with their suitability
c) Expansion joints
d) Instruments required for bridge inspection

Fourth Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Railway & Harbour Engineering (197042801)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Once the head wore out during service, the rail could be inverted and reused. In which type of the rail this facility is available?
a) Double headed rail
b) Bull Headed rail
c) Flat footed rail
d) Both Bull headed and Double headed rails

2) For a sleeper density of (n+6), number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is: _____
a) 975 b) 918
c) 950 d) 980

3) Bearing plates are used to fix _____.
a) Flat footed rails to the wooden sleepers
b) Double headed rails to the wooden sleepers
c) Bull headed rails to the wooden sleepers
d) Flat footed rails to the cast iron sleepers

4) The standard length of rail for Broad Gauge and Meter Gauge are respectively, _____.
a) 12m and 12m b) 13m and 12m
c) 12m and 13m d) 13m and 13m

5) Longitudinal movement of rails with respect to sleepers is called?
a) Coning of wheels b) Creep of rails
c) Wear of rails d) Tilting of rails

6) The angle between the gauge faces of the stock rail and tongue rail is called?
a) Switch angle b) Angle of crossing
c) Angle of turnout d) None of these

7) Which one of the following types of steel is used in the manufacturing of metro and mono rails?
a) Mild Steel b) Cast steel
c) Manganese Steel d) Bessemer Steel

8) Match List-I (Signals) with List-II (Function) and select the correct answer using the code given below: _____.

List – I	List – II
A. Outer signal	1. Departure signal
B. Starter Signal	2. Reception signal
C. Repeater signal	3. Shunting signal
D. Disc signal	4. Co-acting signal

Codes :

	A	B	C	D
a)	3	4	1	2
b)	2	1	4	3
c)	3	1	4	2
d)	2	4	1	3

9) In type-II Windrose Diagram covers _____.

a) Direction and duration of Wind
b) Only Duration of Wind
c) Only Direction of Wind
d) Direction, duration and intensity of wind

10) Which one of the following instance of performance of aircraft is not considered for determining basic runway length?

a) Normal Landing Case
b) Normal take-off case
c) Engine failure case
d) Emergency landing case

11) The runway length after correcting for elevation and temperature is 2845m. If the effective gradient on runway is 0.5%, then the revised runway length will be: _____.

a) 2845m
b) 2910m
c) 3030m
d) 3130m

12) The phenomenon of movement and deposition of sand in a zig-zag style due to drifting of sand in the vicinity of coast is called: _____.

a) Littoral drift
b) Sedimentation
c) Beach drift
d) Trough action

13) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.

a) Dolphin
b) Wharf
c) Pier heads
d) Jetties

14) Slip is the space of water area between two _____.

a) Adjacent fenders
b) Adjacent piers
c) Adjacent jetties
d) Adjacent dolphins

Seat No.	

Set | P

Fourth Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Railway & Harbour Engineering (197042801)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 2 is compulsory and solve any one full question from remaining questions Q. No. 3 and 4.
2) Q. No. 5 is compulsory and solve any one full question from remaining questions Q. No. 6 and 7.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed & mention it clearly.

Section – I

Q.2 Answer any two questions. **10**

a) What do you understand by gauge? Mention the different gauges used on Indian Railways and its suitability.

b) Discuss the necessity and effects of coning of wheels and tilting of rails.

c) Draw a neat sketch of a left-hand-turn out and name its various components. Describe any one method of designing a turnout.

Q.3 Answer any three questions. **18**

a) Calculate the superelevation and the maximum permissible speed for a 2° BG transitioned curve on a high-speed route with a maximum sanctioned speed of 110 km/h. The speed for calculating the equilibrium superelevation as decided by the chief engineer is 80 km/h and the booked speed of goods trains is 50 km/h. Assume G= 1750mm and Radius=875m.

b) Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22tonne each can pull on a straight level track at a speed of 80 km/h. Also calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. Assume the coefficient of friction to be 0.2.

c) If a 8° curve track diverges from a main curve of 5° in an opposite direction in the layout of B. G. Yard, calculate the super elevation and the speed on the branch line, if the maximum speed permitted on the main line is 45 kmph. Assume any data required suitably. Use 30m arc length.

d) What is superelevation? Why is it necessary to provide superelevation on the curves of a railway track?

Q.4 Answer any three questions. **18**

a) What is meant by a crossing number and a crossing angle? How is crossing angle determined? Explain methods for the same.

b) Differentiate between the following:
1) Reception signals and departure signals
2) Semaphore signal and warner signal
3) Repeating signal and co-acting signal

c) Illustrate the working principle of key interlocking and mechanical interlocking with merits and de-merits.

d) Compare the various characteristics of steam, diesel and electric traction.

Section – II

Q.5 Answer any two questions. **10**

a) What are the imaginary surfaces? Explain any two imaginary surfaces with neat sketch.

b) What is a wind rose diagram? What are its types and explain any one with neat sketch?

c) What are the fenders? Why are they used? Describe various types of fenders with sketches.

Q.6 Answer any three questions. **18**

a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle of turn is 35° and the maximum turn-off speed is 80 kmph. Assume radius of entrance curve =731m, runway width=45m, taxiway width=22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m.

b) Define breakwater and list the different types of breakwaters. Explain any one with neat sketch.

c) What are dolphins? Describe their types.

d) Explain with neat sketches the limiting heights of objects in the approach and turning zone of an instrumental runway.

Q.7 Answer any three questions. **18**

a) Explain how the basic runway length is determined on the basis of the performance characteristics of jet and conventional engine aircrafts.

b) The length of a runway under standard conditions is 2100m. The airport is to be provided at elevation of 410m above the mean sea level. The airport reference temperature is 32°C. Determine the length of runway. Apply correctios for elevation and temperature as per ICAO and for gradient as per FAA specifications. The construction plan provides following data:

End to end of runway(m) 0-320	Grade (%)
0 to 320	+1.00
300 to 900	-0.50
900 to 1500	+0.50
1500 to 1800	+1.00
1800 to 2100	-0.50
2100 to 2700	-0.40
2700 to 3000	-0.10

c) Draw a neat sketch of dry dock (plan and section) and label all components, and explain the working principle of dry dock.

d) Determine the turning radius of the taxiway for a supersonic transport aircraft with a wheel base of 30m and tread of main loading gear as 7.2 m for a design turning speed of 60kmph. Assume co-efficient of friction between tyre and pavement surface as 0.13 and width of taxiway pavement as 22.50m.

3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) The runway length after correcting for elevation and temperature is 2845m. If the effective gradient on runway is 0.5%, then the revised runway length will be: _____.
a) 2845m b) 2910m
c) 3030m d) 3130m

2) The phenomenon of movement and deposition of sand in a zig-zag style due to drifting of sand in the vicinity of coast is called: _____.
a) Littoral drift b) Sedimentation
c) Beach drift d) Trough action

3) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.
a) Dolphin b) Wharf
c) Pier heads d) Jetties

4) Slip is the space of water area between two _____.
a) Adjacent fenders b) Adjacent piers
c) Adjacent jetties d) Adjacent dolphins

5) Once the head wore out during service, the rail could be inverted and reused. In which type of the rail this facility is available?
a) Double headed rail
b) Bull Headed rail
c) Flat footed rail
d) Both Bull headed and Double headed rails

6) For a sleeper density of (n+6), number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is: _____
a) 975 b) 918
c) 950 d) 980

7) Bearing plates are used to fix _____.
a) Flat footed rails to the wooden sleepers
b) Double headed rails to the wooden sleepers
c) Bull headed rails to the wooden sleepers
d) Flat footed rails to the cast iron sleepers

8) The standard length of rail for Broad Gauge and Meter Gauge are respectively, _____.
a) 12m and 12m b) 13m and 12m
c) 12m and 13m d) 13m and 13m

9) Longitudinal movement of rails with respect to sleepers is called?
a) Coning of wheels b) Creep of rails
c) Wear of rails d) Tilting of rails

10) The angle between the gauge faces of the stock rail and tongue rail is called?
a) Switch angle b) Angle of crossing
c) Angle of turnout d) None of these

11) Which one of the following types of steel is used in the manufacturing of metro and mono rails?
a) Mild Steel b) Cast steel
c) Manganese Steel d) Bessemer Steel

12) Match List-I (Signals) with List-II (Function) and select the correct answer using the code given below: _____.

List – I	List – II
A. Outer signal	1. Departure signal
B. Starter Signal	2. Reception signal
C. Repeater signal	3. Shunting signal
D. Disc signal	4. Co-acting signal

Codes :

	A	B	C	D
a)	3	4	1	2
b)	2	1	4	3
c)	3	1	4	2
d)	2	4	1	3

13) In type-II Windrose Diagram covers _____.
a) Direction and duration of Wind
b) Only Duration of Wind
c) Only Direction of Wind
d) Direction, duration and intensity of wind

14) Which one of the following instance of performance of aircraft is not considered for determining basic runway length?
a) Normal Landing Case b) Normal take-off case
c) Engine failure case d) Emergency landing case

Set R

Fourth Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
CIVIL ENGINEERING
Railway & Harbour Engineering (197042801)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 2 is compulsory and solve any one full question from remaining questions Q. No. 3 and 4.
2) Q. No. 5 is compulsory and solve any one full question from remaining questions Q. No. 6 and 7.
3) Figures to the right indicate full marks.
4) Assume suitable data wherever needed & mention it clearly.

Section – I

Q.2 Answer any two questions. **10**

a) What do you understand by gauge? Mention the different gauges used on Indian Railways and its suitability.

b) Discuss the necessity and effects of coning of wheels and tilting of rails.

c) Draw a neat sketch of a left-hand-turn out and name its various components. Describe any one method of designing a turnout.

Q.3 Answer any three questions. **18**

a) Calculate the superelevation and the maximum permissible speed for a 2° BG transitioned curve on a high-speed route with a maximum sanctioned speed of 110 km/h. The speed for calculating the equilibrium superelevation as decided by the chief engineer is 80 km/h and the booked speed of goods trains is 50 km/h. Assume G= 1750mm and Radius=875m.

b) Calculate the maximum permissible load that a BG locomotive with three pairs of driving wheels bearing an axle load of 22tonne each can pull on a straight level track at a speed of 80 km/h. Also calculate the reduction in speed if the train has to run on a rising gradient of 1 in 200. Assume the coefficient of friction to be 0.2.

c) If a 8° curve track diverges from a main curve of 5° in an opposite direction in the layout of B. G. Yard, calculate the super elevation and the speed on the branch line, if the maximum speed permitted on the main line is 45 kmph. Assume any data required suitably. Use 30m arc length.

d) What is superelevation? Why is it necessary to provide superelevation on the curves of a railway track?

Q.4 Answer any three questions. **18**

a) What is meant by a crossing number and a crossing angle? How is crossing angle determined? Explain methods for the same.

b) Differentiate between the following:
1) Reception signals and departure signals
2) Semaphore signal and warner signal
3) Repeating signal and co-acting signal

c) Illustrate the working principle of key interlocking and mechanical interlocking with merits and de-merits.

d) Compare the various characteristics of steam, diesel and electric traction.

Section – II

Q.5 Answer any two questions. **10**

a) What are the imaginary surfaces? Explain any two imaginary surfaces with neat sketch.

b) What is a wind rose diagram? What are its types and explain any one with neat sketch?

c) What are the fenders? Why are they used? Describe various types of fenders with sketches.

Q.6 Answer any three questions. **18**

a) Design an exit taxiway joining a runway and a parallel main taxiway. The total angle of turn is 35° and the maximum turn-off speed is 80 kmph. Assume radius of entrance curve =731m, runway width=45m, taxiway width=22.5m. Draw a neat sketch showing all the design elements. Assume the separation clearance as 217.75m.

b) Define breakwater and list the different types of breakwaters. Explain any one with neat sketch.

c) What are dolphins? Describe their types.

d) Explain with neat sketches the limiting heights of objects in the approach and turning zone of an instrumental runway.

Q.7 Answer any three questions. **18**

a) Explain how the basic runway length is determined on the basis of the performance characteristics of jet and conventional engine aircrafts.

b) The length of a runway under standard conditions is 2100m. The airport is to be provided at elevation of 410m above the mean sea level. The airport reference temperature is 32°C. Determine the length of runway. Apply correctios for elevation and temperature as per ICAO and for gradient as per FAA specifications. The construction plan provides following data:

End to end of runway(m) 0-320	Grade (%)
0 to 320	+1.00
300 to 900	-0.50
900 to 1500	+0.50
1500 to 1800	+1.00
1800 to 2100	-0.50
2100 to 2700	-0.40
2700 to 3000	-0.10

c) Draw a neat sketch of dry dock (plan and section) and label all components, and explain the working principle of dry dock.

d) Determine the turning radius of the taxiway for a supersonic transport aircraft with a wheel base of 30m and tread of main loading gear as 7.2 m for a design turning speed of 60kmph. Assume co-efficient of friction between tyre and pavement surface as 0.13 and width of taxiway pavement as 22.50m.

CIVIL ENGINEERING
Railway & Harbour Engineering (197042801)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 03:00 PM To 06:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) The angle between the gauge faces of the stock rail and tongue rail is called?
a) Switch angle b) Angle of crossing
c) Angle of turnout d) None of these

2) Which one of the following types of steel is used in the manufacturing of metro and mono rails?
a) Mild Steel b) Cast steel
c) Manganese Steel d) Bessemer Steel

3) Match List-I (Signals) with List-II (Function) and select the correct answer using the code given below: _____.

List – I	List – II
A. Outer signal	1. Departure signal
B. Starter Signal	2. Reception signal
C. Repeater signal	3. Shunting signal
D. Disc signal	4. Co-acting signal

Codes :

	A	B	C	D
a)	3	4	1	2
b)	2	1	4	3
c)	3	1	4	2
d)	2	4	1	3

4) In type-II Windrose Diagram covers _____.
a) Direction and duration of Wind
b) Only Duration of Wind
c) Only Direction of Wind
d) Direction, duration and intensity of wind

5) Which one of the following instance of performance of aircraft is not considered for determining basic runway length?
a) Normal Landing Case b) Normal take-off case
c) Engine failure case d) Emergency landing case

6) The runway length after correcting for elevation and temperature is 2845m. If the effective gradient on runway is 0.5%, then the revised runway length will be: _____.
a) 2845m b) 2910m
c) 3030m d) 3130m

7) The phenomenon of movement and deposition of sand in a zig-zag style due to drifting of sand in the vicinity of coast is called: _____.
a) Littoral drift b) Sedimentation
c) Beach drift d) Trough action

8) _____ is a structure constructed at the tip of a breakwater near the harbour entrance.
a) Dolphin b) Wharf
c) Pier heads d) Jetties

9) Slip is the space of water area between two _____.
a) Adjacent fenders b) Adjacent piers
c) Adjacent jetties d) Adjacent dolphins

10) Once the head wore out during service, the rail could be inverted and reused. In which type of the rail this facility is available?
a) Double headed rail
b) Bull Headed rail
c) Flat footed rail
d) Both Bull headed and Double headed rails

11) For a sleeper density of (n+6), number of sleepers required for constructing a Broad Gauge (BG) railway track of length 650m is: _____
a) 975 b) 918
c) 950 d) 980

12) Bearing plates are used to fix _____.
a) Flat footed rails to the wooden sleepers
b) Double headed rails to the wooden sleepers
c) Bull headed rails to the wooden sleepers
d) Flat footed rails to the cast iron sleepers

13) The standard length of rail for Broad Gauge and Meter Gauge are respectively, _____.
a) 12m and 12m b) 13m and 12m
c) 12m and 13m d) 13m and 13m

14) Longitudinal movement of rails with respect to sleepers is called?
a) Coning of wheels b) Creep of rails
c) Wear of rails d) Tilting of rails

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternative: **14**

1) Which of the following statements is correct about British rule in India?
a) The literacy rate was high during the British rule in India
b) The infant mortality rate was high during the British rule in India
c) The life expectancy rate was high during the British rule in India
d) The female literacy rate was high during the British rule in India

2) Which of the following was the main interest of the zamindar during the British rule in India?
a) to produce cash crops
b) to collect rent from the farmers
c) to improve the condition of the agricultural sector
d) to produce food crops

3) Which of the following is true for Inflation?
a) The value of money increases during Inflation
b) The value of money decreases during Inflation
c) The value of money stays the same during Inflation
d) None of the above

4) The primary sector within a country for the calculation of National Income includes _____.
a) Small scale industries b) Retail trading
c) Agriculture d) All of the above

5) Which of the following activities is not included in the calculation of the national income of a country?
a) A maid working for a family on a full-time basis
b) A lawyer conducting their law practice
c) A housewife performing housework
d) A dispensary rendering medical services

6) Which of the following is not a characteristic of the Indian economy on the eve of India's independence?
a) Small and fragmented land holdings
b) Use of outdated and old technology
c) Commercial farming
d) Low level of productivity

7) The purchasing power of money varies _____.
a) Directly with the volume of employment
b) Inversely with the price level
c) Directly with the interest rate
d) Directly with the price level

8) Recent industrial development of India is largely due to _____.
a) Rationalization of raw materials
b) Availability of skilled manpower
c) Liberalization of government policies
d) Increase in market demand

9) Elasticity of demand is a tendency of demand to _____.
a) Increase or decrease on the change of price
b) Increase on the rising of price
c) Decrease on the falling on price
d) Consistency of demand on rising and falling prices

10) Shares with a fixed rate of dividend that entitle their holders to priority payment over those who hold ordinary shares of a company are called _____.
a) Preference shares
b) Bull
c) Bear
d) Shareholder

11) The poverty line has been defined in the _____.
a) Seventh Five-Year Plan
b) Sixth Five-Year Plan
c) Eighth Five-Year Plan
d) Fifth Five-Year Plan

12) Value Added Tax (VAT) is _____.
a) Indirect tax levied at each stage of production and distribution, from the primary produce to the retailer
b) Tax calculated on the selling price, but in declaring the liability to the government, the seller is allowed to deduct any tax paid by him when he bought the goods
c) Both (a) and (b)
d) None of the above

13) Planning Commission was constituted in _____.
a) June 1949
b) October 1951
c) March 1950
d) None of these

14) Which of the following sectors of the economy is state-owned and its service sector is a public enterprise?
a) Mining
b) Education
c) Transportation
d) None of these

Day & Date: Tuesday, 26-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Stress concentration occurs due to _____
a) blow holes b) keyways and splines
c) machining scratches d) any one of the above

2) The residual stresses are caused due to _____
a) manufacturing methods like forging
b) machining methods like milling or grinding
c) cold working processes like rolling and extrusion
d) any one of the above

3) The ratio of tensile stress to tensile strain within elastic limit is called ____.
a) bulk modulus b) Poisson's ratio
c) modulus of rigidity d) modulus of elasticity

4) In cyclic loading, the effect of stress concentration is more serious in case of _____.
a) components made of brittle materials
b) components made of ductile materials
c) components made of brittle as well as ductile materials
d) none of the above

5) The type of spring used in door hinges is, _____.
a) helical extension spring b) multi-leaf spring
c) spiral spring d) helical torsion spring

6) The bending stress induced in a beam is _____.
a) maximum at the farthest fiber from neutral and zero at the neutral axis
b) uniform throughout the cross-section
c) zero at the farthest fiber from neutral axis and maximum at the neutral axis
d) zero at the neutral axis and zero at the farthest fiber and maximum at the mean distance

7) A river is specified by _____.
a) shank diameter b) length of rivet
c) type of head d) material of rivet

8) Multiple threads are used for _____.
a) high efficiency
b) high mechanical advantage
c) low efficiency for self-locking
d) high load carrying capacity

9) A transmission shaft subjected to bending and torsional moments should be designed on the basis of _____.
a) Rankine theory
b) Coulomb, Tresca and Guest theory
c) Huber von Mises theory
d) Goodman or Soderberg diagrams

10) A screw is specified by _____.
a) major diameter
b) minor diameter
c) pitch diameter
d) mean diameter

11) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is, _____.
a) tensile stress
b) compressive stress
c) bending stress
d) torsional shear stress

12) A V belt designated as B 4430 Lp has _____.
a) 4430 mm as diameter of small pulley
b) 4430 mm as nominal pitch length
c) 4430 mm as diameter of large pulley
d) 4430 mm as center distance between pulleys

13) Two springs of stiffness k_1 and k_2 are connected in series, the combined stiffness of the connection is given by _____.
a) $\frac{k_1 k_2}{k_1 + k_2}$
b) $\frac{k_1 k_2}{k_1 - k_2}$
c) $k_1 + k_2$
d) $\frac{k_1 + k_2}{k_1 k_2}$

14) A stud is _____.
a) screw with long threads
b) screw with circular head
c) screw with hexagonal head
d) headless screw with threads on both sides

Seat No.		Set	P

T. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Design of Machine Elements (BTN02501)

Day & Date: Tuesday, 26-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from both sections.
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Answer the following.

a) Explain Design Procedure for Knuckle joint with neat sketch. **06**

b) Define Factor of safety. Explain factor affecting on selection of Factor of safety and its physical significance. **05**

c) Explain any two theories of failure. **03**

Q.3 Answer the following. **08**

a) Explain the following terms;
i) Endurance limit
ii) Notch Sensitivity
iii) Cyclic Stress
iv) Stress concentration factor

b) Explain the modifying factors for endurance strength. **06**

Q.4 Answer the following.

a) It is required to select a flat-belt drive for a fan running at 350 rpm which is driven by a 10 kW, 1400 rpm motor. The belt drive is open-type and space is available for a center distance of 2 m approximately. Assume belt velocity as 18 m/s. The power transmitting capacity of the belt per mm width per ply at 180° arc of contact and at a belt velocity of 5.08 m/s is 0.0118 kW. The load correction factor can be taken as 1.2. Suggest preferred diameters (consider the nearest preferred value) for motor and fan pulleys and specify the standard width of 4 ply belt. **08**
(Refer the standard table given at the end of question paper)

b) Differentiate between Flat Belt Drive and V-Belt Drive **06**

Section II

Q.5 Answer the following.

a) A rotating shaft is made of steel FeE 580 (Syt = 580 N/mm^2). It is subjected to a steady torsional moment of 275 N-m and bending moment of 1250 N-m. Calculate the diameter of the shaft using maximum shear stress theory. (use factor of safety = 3). **07**

b) Explain design procedure for muff coupling with neat sketch. **04**

c) Explain failure modes for rivet joint. **03**

Q.6 Answer the following.

a) Explain series and parallel springs for finding the Stiffness of Spring. **06**

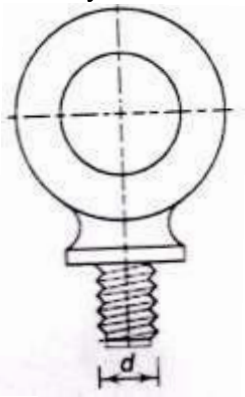
b) It is required to design helical compression spring subjected to a maximum force of 1250N. The deflection of the spring corresponding to the maximum force should be approximately 30 mm. The spring index can be taken as 6. The spring is made of patented and cold-drawn steel wire. The ultimate tensile strength and modulus of rigidity of the spring material are 1090 and 81370 N/mm^2 respectively. The permissible shear stress for the spring wire should be taken as 50% of the ultimate tensile strength. Consider the spring has square and ground end. Design the spring and calculate: **08**

i) wire diameter;
ii) mean coil diameter;
iii) number of active coils;
iv) total number of coils;
v) free length of the spring (assuming 1mm clearance between the adjacent coils);
vi) pitch of the coil.

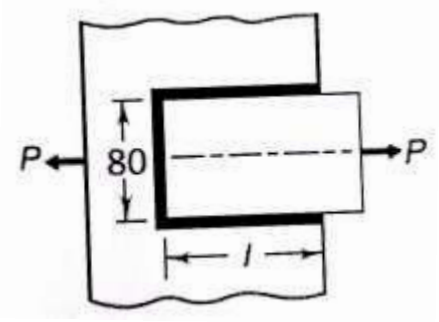
Q.7 Answer the following.

a) Derive the equation for Strength of transverse fillet welds. **04**

b) An electric motor weighing 12 kN is lifted by means of an eye bolt as shown in Fig. The eye bolt is screwed into the frame of the motor. The eye bolt has coarse threads. It is made of plain carbon steel 30C8 (Syt = 380 N/mm^2) and the factor of safety is 6. Determine the size of the bolt. **04**



c) A plate, 80 mm wide and 10 mm thick, is joined with another steel plate by means of single transverse and double parallel fillet welds, as shown in Fig. The joint is subjected to a maximum tensile force of 55 kN. The permissible tensile and shear stresses in the weld material are 75 and 50 N/mm^2 respectively. Determine the required length of each parallel fillet weld. Consider 15 mm of length for starting and stopping of the weld run. **06**



Arc *of contact factor* (F_d)

α_3 (Deg.)	120	130	140	150	160	170	180	190	200
F_d	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

Number of Ply	4
Standard width of belt	40,44,50,63,76,90,100,112,125,152

Preferred diameter of pullies	140,160,180,200,224,250,315,400,450, 500,560,630,710,800,900,1000,1120

Set **Q**

T. Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Design of Machine Elements (BTN02501)

Day & Date: Tuesday, 26-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Multiple threads are used for _____.
a) high efficiency b) high mechanical advantage
c) low efficiency for self-locking d) high load carrying capacity

2) A transmission shaft subjected to bending and torsional moments should be designed on the basis of _____.
a) Rankine theory
b) Coulomb, Tresca and Guest theory
c) Huber von Mises theory
d) Goodman or Soderberg diagrams

3) A screw is specified by _____.
a) major diameter b) minor diameter
c) pitch diameter d) mean diameter

4) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is, _____.
a) tensile stress b) compressive stress
c) bending stress d) torsional shear stress

5) A V belt designated as B 4430 Lp has _____.
a) 4430 mm as diameter of small pulley
b) 4430 mm as nominal pitch length
c) 4430 mm as diameter of large pulley
d) 4430 mm as center distance between pulleys

6) Two springs of stiffness k_1 and k_2 are connected in series, the combined stiffness of the connection is given by _____.
a) $\frac{k_1 k_2}{k_1 + k_2}$ b) $\frac{k_1 k_2}{k_1 - k_2}$
c) $k_1 + k_2$ d) $\frac{k_1 + k_2}{k_1 k_2}$

7) A stud is _____.
a) screw with long threads
b) screw with circular head
c) screw with hexagonal head
d) headless screw with threads on both sides

8) Stress concentration occurs due to _____
a) blow holes
b) keyways and splines
c) machining scratches
d) any one of the above

9) The residual stresses are caused due to _____
a) manufacturing methods like forging
b) machining methods like milling or grinding
c) cold working processes like rolling and extrusion
d) any one of the above

10) The ratio of tensile stress to tensile strain within elastic limit is called ____.
a) bulk modulus
b) Poisson's ratio
c) modulus of rigidity
d) modulus of elasticity

11) In cyclic loading, the effect of stress concentration is more serious in case of _____.
a) components made of brittle materials
b) components made of ductile materials
c) components made of brittle as well as ductile materials
d) none of the above

12) The type of spring used in door hinges is, _____.
a) helical extension spring
b) multi-leaf spring
c) spiral spring
d) helical torsion spring

13) The bending stress induced in a beam is _____.
a) maximum at the farthest fiber from neutral and zero at the neutral axis
b) uniform throughout the cross-section
c) zero at the farthest fiber from neutral axis and maximum at the neutral axis
d) zero at the neutral axis and zero at the farthest fiber and maximum at the mean distance

14) A river is specified by _____.
a) shank diameter
b) length of rivet
c) type of head
d) material of rivet

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is, _____.
a) tensile stress b) compressive stress
c) bending stress d) torsional shear stress

2) A V belt designated as B 4430 Lp has _____.
a) 4430 mm as diameter of small pulley
b) 4430 mm as nominal pitch length
c) 4430 mm as diameter of large pulley
d) 4430 mm as center distance between pulleys

3) Two springs of stiffness k_1 and k_2 are connected in series, the combined stiffness of the connection is given by _____.
a) $\frac{k_1 k_2}{k_1 + k_2}$ b) $\frac{k_1 k_2}{k_1 - k_2}$
c) $k_1 + k_2$ d) $\frac{k_1 + k_2}{k_1 k_2}$

4) A stud is _____.
a) screw with long threads
b) screw with circular head
c) screw with hexagonal head
d) headless screw with threads on both sides

5) Stress concentration occurs due to _____
a) blow holes b) keyways and splines
c) machining scratches d) any one of the above

6) The residual stresses are caused due to _____
a) manufacturing methods like forging
b) machining methods like milling or grinding
c) cold working processes like rolling and extrusion
d) any one of the above

7) The ratio of tensile stress to tensile strain within elastic limit is called ____.
a) bulk modulus b) Poisson's ratio
c) modulus of rigidity d) modulus of elasticity

8) In cyclic loading, the effect of stress concentration is more serious in case of _____.
a) components made of brittle materials
b) components made of ductile materials
c) components made of brittle as well as ductile materials
d) none of the above

9) The type of spring used in door hinges is, _____.
a) helical extension spring b) multi-leaf spring
c) spiral spring d) helical torsion spring

10) The bending stress induced in a beam is _____.
a) maximum at the farthest fiber from neutral and zero at the neutral axis
b) uniform throughout the cross-section
c) zero at the farthest fiber from neutral axis and maximum at the neutral axis
d) zero at the neutral axis and zero at the farthest fiber and maximum at the mean distance

11) A river is specified by _____.
a) shank diameter b) length of rivet
c) type of head d) material of rivet

12) Multiple threads are used for _____.
a) high efficiency b) high mechanical advantage
c) low efficiency for self-locking d) high load carrying capacity

13) A transmission shaft subjected to bending and torsional moments should be designed on the basis of _____.
a) Rankine theory
b) Coulomb, Tresca and Guest theory
c) Huber von Mises theory
d) Goodman or Soderberg diagrams

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The bending stress induced in a beam is _____.
a) maximum at the farthest fiber from neutral and zero at the neutral axis
b) uniform throughout the cross-section
c) zero at the farthest fiber from neutral axis and maximum at the neutral axis
d) zero at the neutral axis and zero at the farthest fiber and maximum at the mean distance

2) A river is specified by _____.
a) shank diameter b) length of rivet
c) type of head d) material of rivet

3) Multiple threads are used for _____.
a) high efficiency b) high mechanical advantage
c) low efficiency for self-locking d) high load carrying capacity

4) A transmission shaft subjected to bending and torsional moments should be designed on the basis of _____.
a) Rankine theory
b) Coulomb, Tresca and Guest theory
c) Huber von Mises theory
d) Goodman or Soderberg diagrams

5) A screw is specified by _____.
a) major diameter b) minor diameter
c) pitch diameter d) mean diameter

6) When the helical extension spring is subjected to axial tensile force, the type of stress induced in the spring wire is, _____.
a) tensile stress b) compressive stress
c) bending stress d) torsional shear stress

7) A V belt designated as B 4430 Lp has _____.
a) 4430 mm as diameter of small pulley
b) 4430 mm as nominal pitch length
c) 4430 mm as diameter of large pulley
d) 4430 mm as center distance between pulleys

8) Two springs of stiffness k_1 and k_2 are connected in series, the combined stiffness of the connection is given by _____.

a) $\frac{k_1 k_2}{k_1 + k_2}$ b) $\frac{k_1 k_2}{k_1 - k_2}$

c) $k_1 + k_2$ d) $\frac{k_1 + k_2}{k_1 k_2}$

9) A stud is _____.

a) screw with long threads
b) screw with circular head
c) screw with hexagonal head
d) headless screw with threads on both sides

10) Stress concentration occurs due to _____

a) blow holes b) keyways and splines
c) machining scratches d) any one of the above

11) The residual stresses are caused due to _____

a) manufacturing methods like forging
b) machining methods like milling or grinding
c) cold working processes like rolling and extrusion
d) any one of the above

12) The ratio of tensile stress to tensile strain within elastic limit is called ____.

a) bulk modulus b) Poisson's ratio
c) modulus of rigidity d) modulus of elasticity

13) In cyclic loading, the effect of stress concentration is more serious in case of _____.

a) components made of brittle materials
b) components made of ductile materials
c) components made of brittle as well as ductile materials
d) none of the above

Instructions: 1) Answer any two questions from both sections.
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Answer the following.

a) Explain Design Procedure for Knuckle joint with neat sketch. **06**

b) Define Factor of safety. Explain factor affecting on selection of Factor of safety and its physical significance. **05**

c) Explain any two theories of failure. **03**

Q.3 Answer the following. **08**

a) Explain the following terms;
i) Endurance limit
ii) Notch Sensitivity
iii) Cyclic Stress
iv) Stress concentration factor

b) Explain the modifying factors for endurance strength. **06**

Q.4 Answer the following.

a) It is required to select a flat-belt drive for a fan running at 350 rpm which is driven by a 10 kW, 1400 rpm motor. The belt drive is open-type and space is available for a center distance of 2 m approximately. Assume belt velocity as 18 m/s. The power transmitting capacity of the belt per mm width per ply at 180° arc of contact and at a belt velocity of 5.08 m/s is 0.0118 kW. The load correction factor can be taken as 1.2. Suggest preferred diameters (consider the nearest preferred value) for motor and fan pulleys and specify the standard width of 4 ply belt. **08**
(Refer the standard table given at the end of question paper)

b) Differentiate between Flat Belt Drive and V-Belt Drive **06**

Section II

Q.5 Answer the following.

a) A rotating shaft is made of steel FeE 580 (Syt = 580 N/mm^2). It is subjected to a steady torsional moment of 275 N-m and bending moment of 1250 N-m. Calculate the diameter of the shaft using maximum shear stress theory. (use factor of safety = 3). **07**

b) Explain design procedure for muff coupling with neat sketch. **04**

c) Explain failure modes for rivet joint. **03**

Q.6 Answer the following.

a) Explain series and parallel springs for finding the Stiffness of Spring. **06**

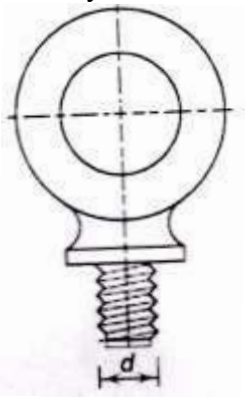
b) It is required to design helical compression spring subjected to a maximum force of 1250N. The deflection of the spring corresponding to the maximum force should be approximately 30 mm. The spring index can be taken as 6. The spring is made of patented and cold-drawn steel wire. The ultimate tensile strength and modulus of rigidity of the spring material are 1090 and 81370 N/mm^2 respectively. The permissible shear stress for the spring wire should be taken as 50% of the ultimate tensile strength. Consider the spring has square and ground end. Design the spring and calculate: **08**

i) wire diameter;
ii) mean coil diameter;
iii) number of active coils;
iv) total number of coils;
v) free length of the spring (assuming 1mm clearance between the adjacent coils);
vi) pitch of the coil.

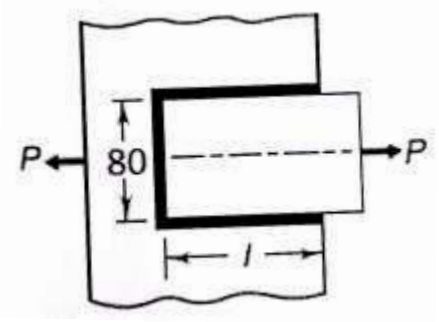
Q.7 Answer the following.

a) Derive the equation for Strength of transverse fillet welds. **04**

b) An electric motor weighing 12 kN is lifted by means of an eye bolt as shown in Fig. The eye bolt is screwed into the frame of the motor. The eye bolt has coarse threads. It is made of plain carbon steel 30C8 (Syt = 380 N/mm^2) and the factor of safety is 6. Determine the size of the bolt. **04**



c) A plate, 80 mm wide and 10 mm thick, is joined with another steel plate by means of single transverse and double parallel fillet welds, as shown in Fig. The joint is subjected to a maximum tensile force of 55 kN. The permissible tensile and shear stresses in the weld material are 75 and 50 N/mm^2 respectively. Determine the required length of each parallel fillet weld. Consider 15 mm of length for starting and stopping of the weld run. **06**



Arc *of contact factor* (F_d)

α_3 (Deg.)	120	130	140	150	160	170	180	190	200
F_d	1.33	1.26	1.19	1.13	1.08	1.04	1.00	0.97	0.94

Number of Ply	4
Standard width of belt	40,44,50,63,76,90,100,112,125,152

Preferred diameter of pullies	140,160,180,200,224,250,315,400,450, 500,560,630,710,800,900,1000,1120

T.Y. (B.Tech.) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
CAD-CAM-CAE (BTN02502)

Day & Date: Thursday, 28-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.
5) Use of scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Geometric modeling corresponds to _____.
a) Synthesis phase of CAD
b) Analysis phase of CAD
c) Synthesis and analysis phase of CAD
d) None of the above

2) Retrieval type and generative type are the types of _____.
a) FMS b) GT
c) CAPP d) CNC programming

3) Which of the following is the rapid prototyping method?
a) Stereo lithography b) Selective Laser Sintering
c) Fused Deposition Modeling d) All of these

4) In the following geometric modeling which is not 3D modeling?
a) Wireframe modeling b) Drafting
c) Surface modeling d) Solid Modeling

5) In any curve representation, the shape associated with control points is called as _____.
a) Uniform curve b) Rectangle
c) Circle d) Control polygon

6) _____ is the type of graphics standards.
a) PHIGS b) CORE
c) GKS d) All of these

7) Number of data point required to define cubic Bezier curve are _____.
a) 3 b) 4
c) 2 d) 5

8) DC Servo motors are used as drive motors in _____.
a) open loop control b) close loop control
c) both a) and b) d) none of the above

9) Which one of the following is not CNC controller?
a) SINUMERIK b) CINCINNATI
c) PEARSON d) FANUC

10) Following is the basic component of CNC machine?
a) Programme of instructions b) MCU
c) Machine tool d) All of the above

11) In numerical control systems, DNC stands for _____.
a) Dedicated Numerical Control b) Directional Numerical Control
c) Dynamic Numerical Control d) none of the above

12) NC machines used for drilling, boring, reaming, tapping is _____.
a) contouring type b) straight cut
c) point-to-point d) none of the above

13) Which type of tool magazines are generally used to handle large number of tools?
a) Drum type b) Chain type
c) Turret type d) Both a & b

14) The preparatory function used for circular clockwise interpolation function is _____.
a) G03 b) G02
c) G04 d) G01

Seat No.

MECHANICAL ENGINEERING
CAD-CAM-CAE (BTN02502)

Day & Date: Thursday, 28-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from in section - I.
2) Question No. 5 is compulsory and from the remaining attempt any one from Section - II.
3) Figures to the right indicate full marks.
4) Assume suitable data if necessary.
5) Use of scientific calculator is allowed.

Section – I

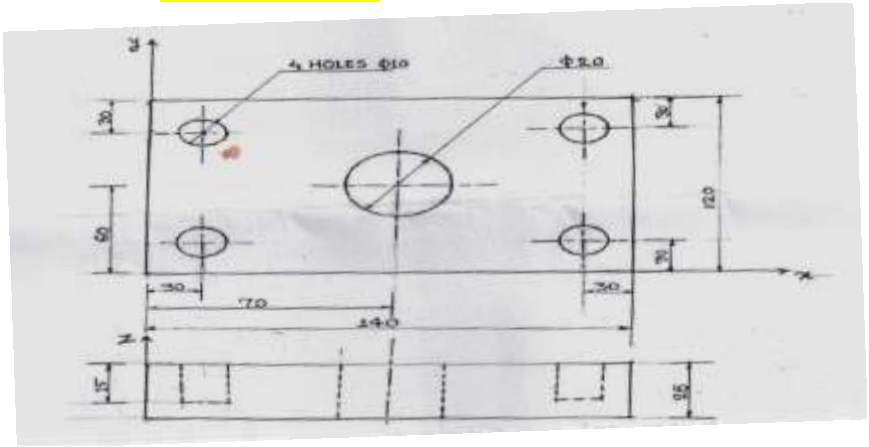
Q.2 **a)** Explain types of Geometrical modeling. **07**
b) Illustrate group technology with example. **07**

Q.3 **a)** Discuss different types of elements and nodes in Finite element method? **07**
b) Explain types of C.A.P.P with neat sketch. **07**

Q.4 **a)** Discuss Graphics workstation with neat sketch. **07**
b) Explain part classification and coding in detail. **07**

Section – II

Q.5 **a)** For following component make a part program on CNC machine. **10**
Work material: Mild steel, Tool materials: HSS,
Work size: 120 x 140 x 25.



b) Enlist G codes and M codes with its meaning. **04**

Q.6 **a)** Explain types of tool magazine with neat sketch. **07**
b) Enlist the different types of CNC machine tools and discuss any 02 with neat sketch. **07**

Q.7 **a)** Explain Canned cycle w.r.t CNC programming with example. **07**
b) Describe the elements of NC System. **07**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) Aluminum -Silicon alloys are given _____ treatment.
a) modification b) precipitation
c) stabilizing d) malleablising

2) Magnetic particle test can be done on _____.
a) brass b) aluminum alloys
c) all magnetic materials d) babbits

3) Retained austenite can be completely removed by _____.
a) sub zero treatment b) annealing
c) martempering d) none of these

4) Pearlite is product of _____ transformation.
a) monotectic b) eutectic
c) eutectoid d) peritectic

5) Stainless steel powder is frequently manufactured by _____ method.
a) reduction b) carbonyl
c) electro deposition d) atomization

6) Martensite is having _____ structure.
a) BCC b) FCC
c) HCP d) BCT

7) Which of the following doesn't give specification of steel?
a) AISI b) SAE
c) EN d) ASTM

8) 4.43% carbon steels undergo _____ transformation in Fe-Fe3C diagram.
a) Eutectic b) Eutectoid
c) Peritectic d) Monotectic

9) Eddy current testing is suitable to detect _____.
a) surface cracks
b) all types of cracks at any depth
c) sub surface cracks at shallow depth
d) none of these

10) Which of the following is austenite stabilizer, when added to steels?
a) silicon b) manganese
c) chromium d) cobalt

11) S-N Curve is related to _____ test.
a) creep b) fatigue
c) tensile d) impact

12) The medium used in gas nitriding is _____.
a) ammonia b) butane
c) propane d) none

13) Tin is having _____ structure.

MECHANICAL ENGINEERING
Metallurgy (BTN02503)

Day & Date: Saturday, 30-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to right indicate full marks.
3) Draw neat sketches wherever necessary.
4) Assume additional suitable data if necessary and state it clearly.

Section – I

Q.2 **a)** Draw Fe-Fe_3C equilibrium diagram. Label all the temperatures & constituents. **06**
b) With the help of above diagram, explain peritectic & eutectic reaction. **06**
c) Explain
1) A1 temperature **01**
2) A3 temperature **01**

Q.3 **a)** Give typical composition, properties & applications of the following. **12**
1) HSS
2) Stainless steel
3) HSLA steels
4) Spring steel
b) Explain modification treatment given to Al-Si system in brief. **02**

Q.4 **Answer the following.**
a) Compare between Gray Cast Iron & White Cast Iron **04**
b) Explain why Copper is an essential constituent of Babbitts. **03**
c) Draw neat sketch of Interstitial solid solution & Substitutional solid solution. **04**
d) What are composites? What are their applications? **03**

Section – II

Q.5 **a)** Draw a neat labeled TTT diagram for eutectoid steel. **04**
b) Compare Annealing & Normalizing. **04**
c) Explain the purposes of Tempering. **03**
d) Enlist various quenching media & their characteristics. **03**

Q.6 **a)** Compare Austempering & Martempering. **03**
b) Compare between Brinell & Rockwell hardness Tests. **04**
c) Explain why OHNS steels are subjected to subzero treatment. **03**
d) Draw the typical flow chart for manufacturing of self lubricated bearing by Powder metallurgy. **04**

Q.7	**a)**	Discuss various methods of Powder manufacturing.	**03**
	b)	Explain X-ray radiography test with neat sketch.	**04**
	c)	Explain Eddy current test with neat sketch.	**04**
	d)	Write a note on Tensile testing.	**03**

a) silicon b) manganese
c) chromium d) cobalt

4) S-N Curve is related to _____ test.
a) creep b) fatigue
c) tensile d) impact

5) The medium used in gas nitriding is _____.
a) ammonia b) butane
c) propane d) none

6) Tin is having _____ structure.
a) BCC b) HCP
c) BCT d) FCC

7) Which of the following is mechanical method of powder manufacturing?
a) Milling b) Reduction
c) Condensation d) None

8) Aluminum -Silicon alloys are given _____ treatment.
a) modification b) precipitation
c) stabilizing d) malleablising

9) Magnetic particle test can be done on _____.
a) brass b) aluminum alloys
c) all magnetic materials d) babbits

10) Retained austenite can be completely removed by _____.
a) sub zero treatment b) annealing
c) martempering d) none of these

11) Pearlite is product of _____ transformation.
a) monotectic b) eutectic
c) eutectoid d) peritectic

12) Stainless steel powder is frequently manufactured by _____ method.
a) reduction b) carbonyl
c) electro deposition d) atomization

13) Martensite is having _____ structure.
a) BCC b) FCC
c) HCP d) BCT

14) Which of the following doesn't give specification of steel?
a) AISI b) SAE
c) EN d) ASTM

Seat No.	

Set | Q

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Metallurgy (BTN02503)

Day & Date: Saturday, 30-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to right indicate full marks.
3) Draw neat sketches wherever necessary.
4) Assume additional suitable data if necessary and state it clearly.

Section – I

Q.2 **a)** Draw Fe-Fe_3C equilibrium diagram. Label all the temperatures & constituents. **06**
b) With the help of above diagram, explain peritectic & eutectic reaction. **06**
c) Explain
1) A1 temperature **01**
2) A3 temperature **01**

Q.3 **a)** Give typical composition, properties & applications of the following. **12**
1) HSS
2) Stainless steel
3) HSLA steels
4) Spring steel
b) Explain modification treatment given to Al-Si system in brief. **02**

Q.4 **Answer the following.**
a) Compare between Gray Cast Iron & White Cast Iron **04**
b) Explain why Copper is an essential constituent of Babbitts. **03**
c) Draw neat sketch of Interstitial solid solution & Substitutional solid solution. **04**
d) What are composites? What are their applications? **03**

Section – II

Q.5 **a)** Draw a neat labeled TTT diagram for eutectoid steel. **04**
b) Compare Annealing & Normalizing. **04**
c) Explain the purposes of Tempering. **03**
d) Enlist various quenching media & their characteristics. **03**

Q.6 **a)** Compare Austempering & Martempering. **03**
b) Compare between Brinell & Rockwell hardness Tests. **04**
c) Explain why OHNS steels are subjected to subzero treatment. **03**
d) Draw the typical flow chart for manufacturing of self lubricated bearing by Powder metallurgy. **04**

Q.7	**a)**	Discuss various methods of Powder manufacturing.	**03**
	b)	Explain X-ray radiography test with neat sketch.	**04**
	c)	Explain Eddy current test with neat sketch.	**04**
	d)	Write a note on Tensile testing.	**03**

Seat No.	

Set **R**

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov -2023
MECHANICAL ENGINEERING
Metallurgy (BTN02503)

Day & Date: Saturday, 30-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) S-N Curve is related to _____ test.
a) creep b) fatigue
c) tensile d) impact

2) The medium used in gas nitriding is _____.
a) ammonia b) butane
c) propane d) none

3) Tin is having _____ structure.
a) BCC b) HCP
c) BCT d) FCC

4) Which of the following is mechanical method of powder manufacturing?
a) Milling b) Reduction
c) Condensation d) None

5) Aluminum -Silicon alloys are given _____ treatment.
a) modification b) precipitation
c) stabilizing d) malleablising

6) Magnetic particle test can be done on _____.
a) brass b) aluminum alloys
c) all magnetic materials d) babbits

7) Retained austenite can be completely removed by _____.
a) sub zero treatment b) annealing
c) martempering d) none of these

8) Pearlite is product of _____ transformation.
a) monotectic b) eutectic
c) eutectoid d) peritectic

9) Stainless steel powder is frequently manufactured by _____ method.
a) reduction b) carbonyl
c) electro deposition d) atomization

10) Martensite is having _____ structure.
a) BCC b) FCC
c) HCP d) BCT

11) Which of the following doesn't give specification of steel?

a) AISI b) SAE
c) EN d) ASTM

12) 4.43% carbon steels undergo _____ transformation in Fe-Fe3C diagram.

a) Eutectic b) Eutectoid
c) Peritectic d) Monotectic

13) Eddy current testing is suitable to detect _____.

a) surface cracks
b) all types of cracks at any depth
c) sub surface cracks at shallow depth
d) none of these

14) Which of the following is austenite stabilizer, when added to steels?

a) silicon b) manganese
c) chromium d) cobalt

3) Figures to the right indicates full marks.
4) Assume data wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct answer: **14**

1) In outline (Operation) Process chart the following symbols are used
a) Operation and inspection b) Operation and transportation
c) Operation and storage d) none of these

2) If Observed time is 20 min and performance rating is 130 then Normal time is _____.
a) 20 min b) 25 min
c) 16.5 min d) 26 min

3) Productivity can be improved by
a) Increasing the input b) Decreasing the output
c) Decreasing the input d) Both a & b

4) Space available in vertical and horizontal direction is most effectively utilized is known as principle of _____
a) Flexibility b) Minimum waste
c) Cubic space utilization d) Minimum distance

5) Delay occurs when
a) Someone stops the process
b) Product waits for next operation
c) Production is continues
d) Both a & b

6) The following subject(s) is (are) related to 'Ergonomics'
a) Anthropology b) Physiology
c) Psychology d) all of the above

7) Check list method is a type of
a) Job evaluation b) Merit rating
c) Incentive scheme d) Method study

8) Product type layout is used in
a) Ship building b) Sugar industry
c) Automobile industry d) Textile industry

9) _____ is based on film analysis

a) Flow process chart b) String diagram
c) Operation process chart d) SIMO chart

10) The following is not a job evaluation method_____

a) Factor comparison method b) Point method
c) Ranking method d) Assessment method

11) The height of the top of the work bench should be _____ the height of the elbow of the workmen.

a) Above b) Below
c) At d) All of these

12) Following technique of work measurement is based on statistics

a) Time study b) Work sampling
c) Standard data d) Analytical estimating

13) Time for tool grinding is considered in

a) Contingency allowance b) Personal allowance
c) Policy allowance d) Fatigue allowance

14) In which type of layout the machines are arranged in the sequence as required by the product?

a) Process layout b) Product layout
c) Fixed position layout d) Combination layout

c) Fixed position layout d) Combination layout

10) In outline (Operation) Process chart the following symbols are used
a) Operation and inspection b) Operation and transportation
c) Operation and storage d) none of these

11) If Observed time is 20 min and performance rating is 130 then Normal time is _____.
a) 20 min b) 25 min
c) 16.5 min d) 26 min

12) Productivity can be improved by
a) Increasing the input b) Decreasing the output
c) Decreasing the input d) Both a & b

13) Space available in vertical and horizontal direction is most effectively utilized is known as principle of _____
a) Flexibility b) Minimum waste
c) Cubic space utilization d) Minimum distance

14) Delay occurs when
a) Someone stops the process
b) Product waits for next operation
c) Production is continues
d) Both a & b

SLR-GF-116

Seat No.		Set	S

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Industrial Engineering (BTN02504)

Day & Date: Monday, 01-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Use of scientific calculator is allowed.
3) Figures to right indicate full marks.
4) Assume additional suitable data if necessary and state it clearly.

Section – I

Q.2	**a)**	What is method study? Explain the method study procedure in detail.	**07**
	b)	Define productivity? Discuss factors affecting productivity and ways to improve productivity.	**07**
Q.3	**a)**	What are different types of recording techniques? Explain operation process chart with suitable example.	**07**
	b)	Discuss ergonomical considerations at work place design and explain environmental factors in ergonomics.	**07**
Q.4	**a)**	Explain multiple activity chart	**06**
	b)	**Write short notes (Any two each 4 Marks)** i) Therbligs ii) Two handed process chart iii) Types of displays.	**08**

Section – II

Q.5	**a)**	Discuss advantages and disadvantages of facility location in urban and rural areas	**07**
	b)	What is job evaluation? List job evaluation methods and explain any one in detail.	**07**
Q.6	**a)**	Discuss the factors affecting plant location.	**07**
	b)	What is performance rating? Explain the performance rating methods	**07**
Q.7	**a)**	Explain various types of layout	**06**
	b)	**Write short note on (Any two each 4 Marks)** i) Principles and objectives of plant layout ii) Allowances iii) Merit rating	**08**

Seat No.

T. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Tool Engineering (BTN02515)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book).
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 A) Choose the correct answer: **06**

1) In metal cutting operation, maximum heat (i.e. 80-85%) is generated in ____.
   a) the shear zone b) the chip-tool interface zone
   c) the tool-work interface zone d) none of the above

2) Tool signature consists of _____ elements of geometry.
   a) Two b) Four
   c) Five d) Seven

3) EOQ it is necessary for deciding _____.
   a) B.E.P b) Economic Order
   c) Inventory carry cost d) All the above

4) A device, in which a component is held and located for a specific operation and bushes are integrated that guide the tool, is called as _____.
   a) jig b) fixture
   c) both a) and b) d) none of the above

5) Total elements in press tool _____.
   a) 7 b) 8
   c) 9 d) 10

6) For blanking operation clearance is provided on _____.
   a) Die b) Punch
   c) Die & Punch d) none of the above

B) Attempt the following multiple choice correct answer type questions. 08

7) In metal cutting while drawing merchant circle number of assumptions as follows _____.
   a) The cutting velocity remains constant
   b) Continuous chip without built up edge
   c) No constant cutting velocity
   d) Continuous chip with built up edge

8) In Jig or fixture diamond pin locater is used when _____.
   a) There is two already machined parallel holes in work piece
   b) Two or more than two parallel holes in work piece
   c) One hole is already machined in work piece
   d) No hole is exist in the work piece

9) In press tool the main purpose of punch holder _____.
   a) to guide punch
   b) to guide strip
   c) to strip out the material
   d) to hold the punch

10) In jig or fixture V locater is used for _____.
   a) Clamping round job
   b) Locate the flat job
   c) Locating round job
   d) No use of V locater

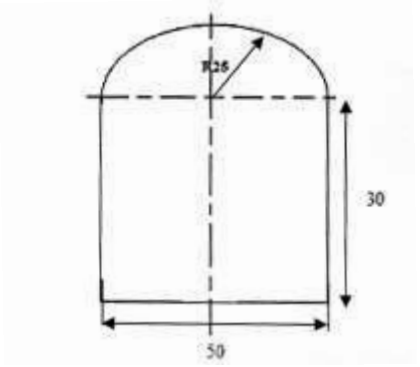
T. Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Tool Engineering (BTN02515)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 2 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 3, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.

Section – I

Q.2 a) Design a press tool for the component shown in fig-I giving following details. **14**
i) Cutting force
ii) Clearance between punch and die
iii) Stripping force and no of bolts and bolt size need for die clamping
iv) Strip layout and % material utilization.

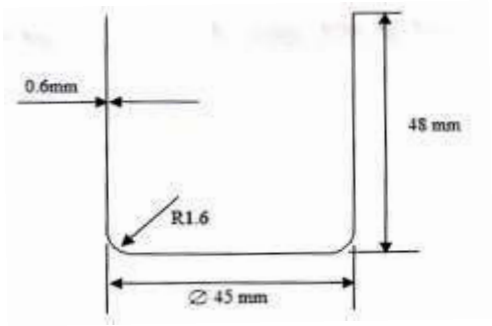


Material: - C45
Thickness = 5mm
Shear strength = 42 kg/ mm^2

Also draw one sectional view of assembly of press tool and part name.

OR

b) Design a draw tool for given component Fig-II also calculate the following (draw one sectional view of assembly)
i) Blank size
ii) No of draws
iii) draw ratio
iv) drawing force
v) Blank force
vi) die and punch clearance



Material: - CRCA
Material Thickness:- 0.6
Yield strength = 42 kg/ mm^2

Q.3 **a)** The following observations were made during on orthogonal cutting operation. **04**

i) rake angle - 20°
ii) shear angle - 29.54°
iii) cutting force - 300N
iv) feed force - 120N
v) cutting velocity = 102 m/min

Determine

i) shear strain
ii) work done in shear

b) Sketch and explain in brief about types of chips in metal cutting. **03**

Q.4 **a)** While turning die 22 mm bar at 300 rpm. With H.S.S. tool a tool life of 8 min. when same bar was Turned at 240 rpm. What will be tool life at same speed? Where n = 0.108. **03**

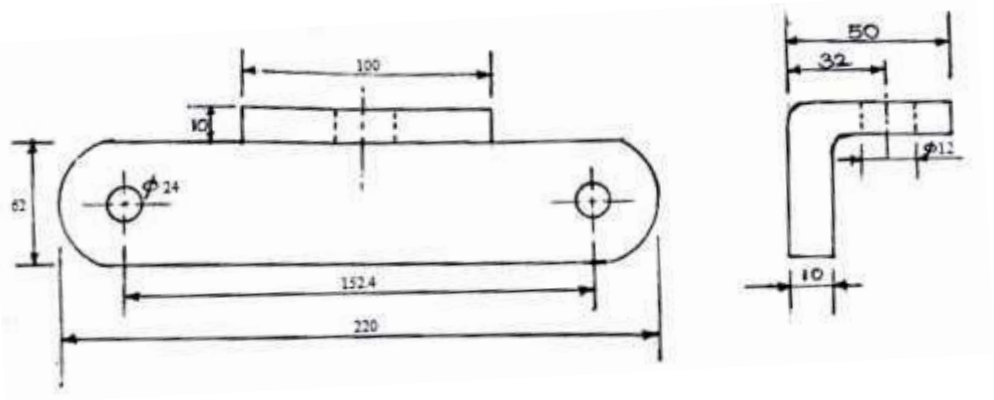
b) List types of tool materials and explain in brief any two materials. **04**

Q.5 **Writes a short note on (Any Two)** **07**

a) Press tool stripper
b) Types of coolant in metal cutting
c) Orthogonal & oblique cutting

Section – II

Q.6 **a)** Design drill jig for drilling die 12 hole draw one view of sectional assembly with parts name. **14**



OR

b) Design milling fixture for milling 100 x 10 face draw one view of sectional assembly with parts name.

Q.7 **a)** Explain in brief about break even analysis. **04**

b) Explain in brief about geometry of Drill. **03**

Q.8 **a)** With neat sketch explain in brief about any two indexing devices used in jig or fixture. **04**

b) List type of bush (drill bush) used in jig and explain in brief used of each drill bush. **03**

Q.9 **Write short notes on (Any Two)** **07**

a) Types of jig & its application

b) Effect of tool geometry on tool life

c) Setting block in fixture

Seat No.

4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 A) Choose the correct answer: **06**

1) A device, in which a component is held and located for a specific operation and bushes are integrated that guide the tool, is called as _____.
   a) jig b) fixture
   c) both a) and b) d) none of the above

2) Total elements in press tool _____.
   a) 7 b) 8
   c) 9 d) 10

3) For blanking operation clearance is provided on _____.
   a) Die b) Punch
   c) Die & Punch d) none of the above

4) In metal cutting operation, maximum heat (i.e. 80-85%) is generated in ____.
   a) the shear zone b) the chip-tool interface zone
   c) the tool-work interface zone d) none of the above

5) Tool signature consists of _____ elements of geometry.
   a) Two b) Four
   c) Five d) Seven

6) EOQ it is necessary for deciding _____.
   a) B.E.P b) Economic Order
   c) Inventory carry cost d) All the above

B) Attempt the following multiple choice correct answer type questions. 08

7) In Jig or fixture diamond pin locater is used when _____.
   a) There is two already machined parallel holes in work piece
   b) Two or more than two parallel holes in work piece
   c) One hole is already machined in work piece
   d) No hole is exist in the work piece

8) In press tool the main purpose of punch holder _____.
   a) to guide punch b) to guide strip
   c) to strip out the material d) to hold the punch

9) In jig or fixture V locater is used for _____.
   a) Clamping round job b) Locate the flat job
   c) Locating round job d) No use of V locater

10) In metal cutting while drawing merchant circle number of assumptions as follows _____.
   a) The cutting velocity remains constant
   b) Continuous chip without built up edge
   c) No constant cutting velocity
   d) Continuous chip with built up edge

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 A) Choose the correct answer: **06**

1) For blanking operation clearance is provided on _____.
   a) Die b) Punch
   c) Die & Punch d) none of the above

2) In metal cutting operation, maximum heat (i.e. 80-85%) is generated in ____.
   a) the shear zone b) the chip-tool interface zone
   c) the tool-work interface zone d) none of the above

3) Tool signature consists of _____ elements of geometry.
   a) Two b) Four
   c) Five d) Seven

4) EOQ it is necessary for deciding _____.
   a) B.E.P b) Economic Order
   c) Inventory carry cost d) All the above

5) A device, in which a component is held and located for a specific operation and bushes are integrated that guide the tool, is called as _____.
   a) jig b) fixture
   c) both a) and b) d) none of the above

6) Total elements in press tool _____.
   a) 7 b) 8
   c) 9 d) 10

B) Attempt the following multiple choice correct answer type questions. 08

7) In jig or fixture V locater is used for _____.
   a) Clamping round job
   b) Locate the flat job
   c) Locating round job
   d) No use of V locater

8) In metal cutting while drawing merchant circle number of assumptions as follows _____.
   a) The cutting velocity remains constant
   b) Continuous chip without built up edge
   c) No constant cutting velocity
   d) Continuous chip with built up edge

9) In Jig or fixture diamond pin locater is used when _____.
   a) There is two already machined parallel holes in work piece
   b) Two or more than two parallel holes in work piece
   c) One hole is already machined in work piece
   d) No hole is exist in the work piece

T.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Industrial Hydraulics & Pneumatics (BTN02516)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.
5) Draw suitable diagrams wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. **14**

1) Metallic seals are suitable for _____.
a) High pressure b) High temperature
c) Extremely low temperature d) All of the given

2) Linear actuators convert _____.
a) Kinetic energy of fluid into mechanical energy
b) Mechanical energy into pressure energy
c) Kinetic energy of fluid into pressure energy
d) Pressure energy of fluid into mechanical energy

3) Which of the following is a non-positive displacement pump?
a) Gear pump b) Vane pump
c) Centrifugal pump d) Reciprocating pump

4) Weight loaded accumulator can be used in _____.
a) Horizontal position b) Vertical position
c) Inclined position d) In any position

5) Pressure relief valve is normally _____type valve.
a) Open b) Closed
c) Open or closed d) none of these

6) In case of meter-in circuit, heat generated due to throttling is fed to the _____.
a) Oil reservoir b) Actuator
c) Both Oil reservoir & Actuator d) None of these

7) In Regenerative circuit for a double acting cylinder, _____ type of direction control valve is used.
a) 3/2 b) 4/2
c) 3/3 d) None of the above

8) For air motors, input is _____.
a) Low pressure air b) High pressure air
c) Both (a) & (b) d) None of these

9) Quick exhaust valve is used for _____.
a) Single acting cylinder b) Double acting cylinder
c) Single/Double acting cylinder d) None of these

10) Time delay valve consists of _____.
a) Air chamber
b) Flow control valve with check valve
c) 3/2 Direction Control Valve
d) All of these

11) In fire hazardous area, which of the following system is preferred?
a) Electrical b) Hydraulic
c) Pneumatic d) none of these

12) Mostly FRL unit is used at _____.
a) Compressor outlet b) Compressor inlet
c) At outlet of actuator d) None of the above

13) Mostly in railways _____ brakes are used.
a) Hydraulic b) Pneumatic
c) Both d) none of these

14) For controlling speed of forward stroke of the piston of pneumatic cylinder _____ should be preferred.
a) meter in circuit b) meter out circuit
c) time delay circuit d) None of these

Set P

T.Y. (B.Tech.) (Sem-I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Industrial Hydraulics & Pneumatics (BTN02516)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve ANY 2 questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data if required & state it clearly.

Section – I

Q.2	**a)**	Enlist advantages & limitations of hydraulic systems.	**05**
	b)	Explain construction & working of gear pump.	**05**
	c)	Draw & explain a hydraulic circuit containing accumulator.	**04**
Q.3	**a)**	Explain different types of seals used in hydraulic system.	**05**
	b)	Explain construction & working of 3/2 Direction Control Valve.	**05**
	c)	Draw symbols of Pressure Relief Valve & Hydraulic Motor.	**04**
Q.4	**a)**	Explain construction & working of a non-return type of flow control valve.	**05**
	b)	Explain meter out circuit with neat sketch.	**05**
	c)	Write a note on types of intensifiers.	**04**

Section – II

Q.5	**a)**	Explain pneumatic braking system.	**05**
	b)	Explain the principle of working of lubricator in pneumatic system.	**05**
	c)	Differentiate between hydraulic & pneumatic system.	**04**
Q.6	**a)**	Explain selection criterion for an air compressor.	**05**
	b)	Explain construction & working of Quick Exhaust Valve.	**05**
	c)	Write a note on pneumatic power tools.	**04**
Q.7	**a)**	Explain construction & working of pressure regulator.	**05**
	b)	Explain construction & working of 3/2 seat type direction control valve.	**05**
	c)	Draw symbols of FRL unit & air compressor.	**04**

MECHANICAL ENGINEERING
Industrial Hydraulics & Pneumatics (BTN02516)

Day & Date: Wednesday, 17-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book. Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.
5) Draw suitable diagrams wherever necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the given options. 14

1) For air motors, input is _____.
a) Low pressure air b) High pressure air
c) Both (a) & (b) d) None of these

2) Quick exhaust valve is used for _____.
a) Single acting cylinder b) Double acting cylinder
c) Single/Double acting cylinder d) None of these

3) Time delay valve consists of _____.
a) Air chamber
b) Flow control valve with check valve
c) 3/2 Direction Control Valve
d) All of these

4) In fire hazardous area, which of the following system is preferred?
a) Electrical b) Hydraulic
c) Pneumatic d) none of these

5) Mostly FRL unit is used at _____.
a) Compressor outlet b) Compressor inlet
c) At outlet of actuator d) None of the above

6) Mostly in railways _____ brakes are used.
a) Hydraulic b) Pneumatic
c) Both d) none of these

7) For controlling speed of forward stroke of the piston of pneumatic cylinder _____ should be preferred.
a) meter in circuit b) meter out circuit
c) time delay circuit d) None of these

8) Metallic seals are suitable for _____.
a) High pressure b) High temperature
c) Extremely low temperature d) All of the given

9) Linear actuators convert _____.
a) Kinetic energy of fluid into mechanical energy
b) Mechanical energy into pressure energy
c) Kinetic energy of fluid into pressure energy
d) Pressure energy of fluid into mechanical energy

10) Which of the following is a non-positive displacement pump?
a) Gear pump b) Vane pump
c) Centrifugal pump d) Reciprocating pump

11) Weight loaded accumulator can be used in _____.
a) Horizontal position b) Vertical position
c) Inclined position d) In any position

12) Pressure relief valve is normally _____type valve.
a) Open b) Closed
c) Open or closed d) none of these

13) In case of meter-in circuit, heat generated due to throttling is fed to the _____.
a) Oil reservoir b) Actuator
c) Both Oil reservoir & Actuator d) None of these

14) In Regenerative circuit for a double acting cylinder, _____ type of direction control valve is used.
a) 3/2 b) 4/2
c) 3/3 d) None of the above

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Zero crossing of Laplacian represents location of corner in an image.
a) True b) False

2) Silhouette is obtained with front light source.
a) True b) False

3) With Harris corner detector, corner is detected when _____.
a) both eigenvalues of cross correlation matrix are zeros
b) one of the eigenvalue of cross correlation matrix is zero
c) both eigenvalues of cross correlation matrix are significant
d) none of the above

4) The process in which small part of image is compared with large image and located in large image, is called _____.
a) pattern recognition b) template matching
c) region growing d) split and merge technique

5) If path traced by end effector of robot arm is complex and continuous, then robot programming should be done by following approach _____.
a) manual lead through b) powered lead through
c) textual programming method d) none of the above

6) In the context of camera, the term CCD stands for _____.
a) Charge coupled device b) Charge creating device
c) Closed circuit device d) None of the above

7) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera
c) Vidicon Camera d) None of the above

8) Bin picking application of robot involves _____.
a) Identification and Servoing b) Identification and inspection
c) Inspection and Servoing d) None of the above

9) Seam tracking in continuous arc welding is an example of _____.
a) Visual servoing and navigation b) Inspection
c) Identification d) Inspection and identification

10) The application in which the purpose of machine vision system is to recognize and classify an object is called _____.
a) Inspection b) Identification
c) Visual servoing and navigation d) None of the above

11) Which of the following is a robot programming language?
a) SAIL b) MAIL
c) RAIL d) TAIL

12) An image which contains two distinct intensity levels between black and white is a _____ image.
a) Colour b) Grayscale
c) Binary d) Monochrome

13) The process of _____ is a technique which relates the location of pixels in the image array to the points in the scene.
a) Camera calibration b) Camera orientation
c) Camera adaptation d) Camera adjustment

14) The acronym AGV stands for _____.

a) pattern recognition b) template matching
c) region growing d) split and merge technique

9) If path traced by end effector of robot arm is complex and continuous, then robot programming should be done by following approach _____.
a) manual lead through b) powered lead through
c) textual programming method d) none of the above

10) In the context of camera, the term CCD stands for _____.
a) Charge coupled device b) Charge creating device
c) Closed circuit device d) None of the above

11) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera
c) Vidicon Camera d) None of the above

12) Bin picking application of robot involves _____.
a) Identification and Servoing b) Identification and inspection
c) Inspection and Servoing d) None of the above

13) Seam tracking in continuous arc welding is an example of _____.
a) Visual servoing and navigation b) Inspection
c) Identification d) Inspection and identification

14) The application in which the purpose of machine vision system is to recognize and classify an object is called _____.
a) Inspection b) Identification
c) Visual servoing and navigation d) None of the above

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Machine Vision (BTN02518)

Day & Date: Friday, 05-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

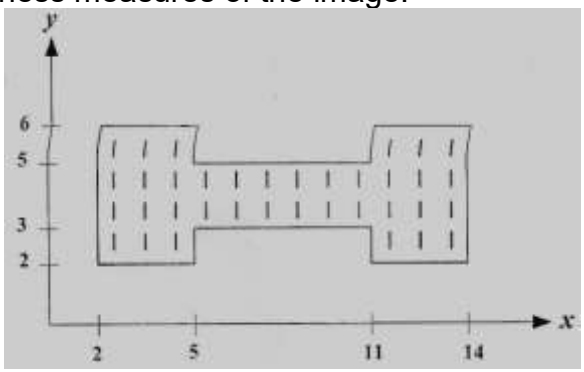
Instructions: 1) Solve any two questions from each section.
2) Figures to right indicate full marks.
3) Assume suitable data if necessary.
4) Use of non-programmable scientific calculator is allowed.

Section – I

Q.2 **a)** Draw neat sketch of block diagram of Machine Vision system. **07**
b) Explain with neat sketch flash type AD converter. **07**

Q.3 **a)** What do you understand by image segmentation? Discuss two techniques of image segmentation. **08**
b) Discuss in detail image thresholding. **06**

Q.4 **a)** Determine the area, minimum aspect ratio, the diameter, perimeter, centroid and thinness measures of the image. **10**



b) Why do we need image processing? Explain. **04**

Section – II

Q.5 **a)** Explain the working of Harris corner detector. **07**
b) Draw neat sketch of CMOS image sensor and explain its working. **07**

Q.6 **a)** Explain in detail camera calibration. **07**
b) Explain in brief offline programming, teach through method and walkthrough method. **07**

Q.7 **Write a short note on (any three)** **14**
a) Inspection application of machine vision in robotics.
b) Visual servoing and navigation application of machine vision in robotics.
c) Template matching
d) Image representation

MECHANICAL ENGINEERING
Machine Vision (BTN02518)

Day & Date: Friday, 05-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary.
5) Use of non-programmable scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) In the context of camera, the term CCD stands for _____.
a) Charge coupled device b) Charge creating device
c) Closed circuit device d) None of the above

2) Charge to voltage converter for Individual pixel is employed in _____.
a) CCD camera b) CMOS camera
c) Vidicon Camera d) None of the above

3) Bin picking application of robot involves _____.
a) Identification and Servoing b) Identification and inspection
c) Inspection and Servoing d) None of the above

4) Seam tracking in continuous arc welding is an example of _____.
a) Visual servoing and navigation b) Inspection
c) Identification d) Inspection and identification

5) The application in which the purpose of machine vision system is to recognize and classify an object is called _____.
a) Inspection b) Identification
c) Visual servoing and navigation d) None of the above

6) Which of the following is a robot programming language?
a) SAIL b) MAIL
c) RAIL d) TAIL

7) An image which contains two distinct intensity levels between black and white is a _____ image.
a) Colour b) Grayscale
c) Binary d) Monochrome

8) The process of _____ is a technique which relates the location of pixels in the image array to the points in the scene.
a) Camera calibration b) Camera orientation
c) Camera adaptation d) Camera adjustment

9) The acronym AGV stands for _____.
a) Automatic Guided Vehicle b) Automated Guided Vehicle
c) Automated Gliding Vehicle d) Automatic Gliding Vehicle

10) Zero crossing of Laplacian represents location of corner in an image.
a) True b) False

11) Silhouette is obtained with front light source.
a) True b) False

12) With Harris corner detector, corner is detected when _____.
a) both eigenvalues of cross correlation matrix are zeros
b) one of the eigenvalue of cross correlation matrix is zero
c) both eigenvalues of cross correlation matrix are significant
d) none of the above

13) The process in which small part of image is compared with large image and located in large image, is called _____.
a) pattern recognition b) template matching
c) region growing d) split and merge technique

14) If path traced by end effector of robot arm is complex and continuous, then robot programming should be done by following approach _____.
a) manual lead through b) powered lead through
c) textual programming method d) none of the above

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data if required.
5) Use of scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) In the process of Selective Laser Sintering, raw material used is in the form of _____.
a) Machining Wax b) Foam Core
c) Powder d) Rubber

2) What is the first step in the design process?
a) Make a prototype
b) Identify the problem or the need
c) Market your idea
d) Test and retest

3) Choose the correct sequence to generate prototype.
a) 3D CAD data - CAD solid model - STL file - RP prototype
b) CAD solid model - 3D CAD data - RP prototype - STL file
c) STL file - 3D CAD data - CAD solid model - RP prototype
d) 3D CAD data - STL file - CAD solid model - RP prototype

4) From following, the alternative name for Rapid Prototyping is _____.
a) Additive Manufacturing b) Layer Manufacturing
c) Direct CAD Manufacturing d) all of the above

5) Process of converting STL file model in to layers is called _____ in RP.
a) chopping b) slicing
c) cutting d) trimming

6) Full form of STL is _____.
a) Straight-lithography b) Streto-lithography
c) Stereo-lithography d) Straight-lipsography

7) In the ____ process, one starts with a single block of solid material larger than the final size of the desired object and material is removed until the desired shape is reached.
a) Subtractive process b) Additive process
c) Formative process d) all of above

8) Which of the following is typically the most expensive type of 3D printer?
a) SLA b) SLM
c) FDM d) None of the above

9) Which printer melts metal?
a) SLS b) SLM
c) SLA d) FDM

10) SLA printer's package material is in a _____.
a) Chain b) Spool
c) Cartridge d) None of the above

11) What material is not used in 3D printing?
a) Nylon b) ABS
c) PLA d) PVC

12) Which file type is most commonly exported from CAD software?
a) SLDRT b) JPG
c) STL d) X3G

13) Process of forming metal powder by directing molten metal through an orifice after which it is break into small particle using high pressure fluid is known as?
a) Atomization b) Reduction
c) Crushing d) Electrolysis

14) In Fused Deposition Modelling, the raw material is used in the form of _____.
a) Wax b) Wire
c) Powder d) All of above mentioned

3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) The aerobic digestion of sewage is used to produce _____.
a) Biomass b) Bio fuels
c) Synthetic fuels d) Metal articles

2) Furnace wall heat loss does not depend on _____.
a) Temperatures of external wall surfaces
b) Velocity of air around the furnace
c) Thermal conductivity of wall brick
d) Material of stock to be heated

3) The main objective of energy management is to _____.
a) Minimize energy cost
b) Minimum environmental effects
c) Maintain optimum energy procurement and utilization
d) Only a and b

4) Name the Act, which is proposed to bring the qualitative transformation of the electricity sector: _____.
a) Regulatory Commission Act 1998
b) Indian Electricity Act 1910
c) Supply Act 1948
d) Electricity Act 2003

5) Which of the following is a disadvantage of renewable energy?
a) High pollution b) Available only in few places
c) High running cost d) Unreliable supply

6) Which of the following energy has the greatest potential among all the sources of renewable energy?
a) Solar energy b) Wind Energy
c) Thermal energy d) Hydro-electrical energy

7) Energy management is a key component of _____.
a) Environmental management b) Carbon management
c) Nitrogen management d) Water management

8) Load factor during a period is _____.
a) Average Load / Installed Capacity
b) Average Load / Maximum Load
c) Maximum Load / Average Load
d) Maximum Load / Installed Capacity

9) Which of the following is commercial energy source?
a) Electricity b) Coal
c) Oil d) All the above

10) Major advantage of waste heat recovery in industry is _____.
a) reduction in pollution b) increase in efficiency
c) both a & b d) none of the above

11) The objective of energy management includes _____.
a) Minimizing energy costs
b) Minimizing waste
c) Minimizing environmental degradation
d) All the above

12) The monitor and control of energy management system is done by using ____.
a) MATLAB b) SCADA
c) AUTO - CAED d) All of these

13) Common energy source in Indian villages is: _____.
a) Electricity b) Coal
c) Sun d) Wood and animal dung

14) The fourth largest producer of coal and lignite in the world is _____.
a) USA b) Russia
c) India d) China

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Energy Conservation, Management and Audit (BTN02520)

Day & Date: Friday,05-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to right indicate full marks.
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2 Solve:
a) Explain energy consumption pattern of India and global industry. **07**
b) Write a short note on commercial energy and non-commercial energy. **07**

Q.3 Solve:
a) Justify “Energy Audit is important for Indian Industry”. **07**
b) Why Pre-audit and Post-audit is important during Energy audit? **07**

Q.4 Answer the following questions. (Any Four) **14**
a) Principles of Energy Management
b) Discuss responsibilities of Energy Auditor.
c) Relation between Environment and Energy
d) Standard Energy Audit Report Format
e) Need of Energy Audit in India

Section – II

Q.5 Solve
a) Explain Energy Conservation opportunities in Boiler. **07**
b) Explain Energy Conservation opportunities in Steam System. **07**

Q.6 Solve
a) Write short notes on IRR (Internal Rate of Return) with formula. **07**
b) What is need of waste heat recovery? **07**

Q.7 Write short notes. (Any Four). **14**
a) Write short notes on Time Value of Money.
b) Energy saving through waste heat recovery.
c) Explain Energy performance assessment and efficiency improvement of Heat Exchanger.
d) Explain efficiency improvement of Fan and Blowers.
e) Explain Different Financial Analysis Techniques.

Seat No.

T. Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Energy Conservation, Management and Audit (BTN02520)

Day & Date: Friday,05-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) Load factor during a period is _____.
a) Average Load / Installed Capacity
b) Average Load / Maximum Load
c) Maximum Load / Average Load
d) Maximum Load / Installed Capacity

2) Which of the following is commercial energy source?
a) Electricity b) Coal
c) Oil d) All the above

3) Major advantage of waste heat recovery in industry is _____.
a) reduction in pollution b) increase in efficiency
c) both a & b d) none of the above

4) The objective of energy management includes _____.
a) Minimizing energy costs
b) Minimizing waste
c) Minimizing environmental degradation
d) All the above

5) The monitor and control of energy management system is done by using ____.
a) MATLAB b) SCADA
c) AUTO - CAED d) All of these

6) Common energy source in Indian villages is: _____.
a) Electricity b) Coal
c) Sun d) Wood and animal dung

7) The fourth largest producer of coal and lignite in the world is _____.
a) USA b) Russia
c) India d) China

8) The aerobic digestion of sewage is used to produce _____.
a) Biomass b) Bio fuels
c) Synthetic fuels d) Metal articles

9) Furnace wall heat loss does not depend on _____.
a) Temperatures of external wall surfaces
b) Velocity of air around the furnace
c) Thermal conductivity of wall brick
d) Material of stock to be heated

10) The main objective of energy management is to _____.
a) Minimize energy cost
b) Minimum environmental effects
c) Maintain optimum energy procurement and utilization
d) Only a and b

11) Name the Act, which is proposed to bring the qualitative transformation of the electricity sector: _____.
a) Regulatory Commission Act 1998
b) Indian Electricity Act 1910
c) Supply Act 1948
d) Electricity Act 2003

12) Which of the following is a disadvantage of renewable energy?
a) High pollution
b) Available only in few places
c) High running cost
d) Unreliable supply

13) Which of the following energy has the greatest potential among all the sources of renewable energy?
a) Solar energy
b) Wind Energy
c) Thermal energy
d) Hydro-electrical energy

14) Energy management is a key component of _____.
a) Environmental management
b) Carbon management
c) Nitrogen management
d) Water management

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) An EV only needs one of the following maintenance jobs done. Which is it?
a) Oil change b) Belt replacement
c) New spark plugs d) Brake pad inspections

2) Which sentence best describes a parallel hybrid vehicle?
a) The engine is directly connected to the transmission
b) The electric motor is directly connected to the transmission
c) Both of the above
d) None of the above

3) Select the cycle use in a Hybrid Engine.
a) Otto b) Diesel
c) Atkinson d) Isentropic

4) A _____ is a vehicle that can run on just the engine, just the batteries, or a combination of the two.
a) Mild Hybrid b) Full Hybrid
c) Fuel Cell d) Assist Hybrid

5) "The wheels are driven by both the engine and the motor"
Select the type of Hybrid System according to above description.
a) Series Hybrid b) Parallel Hybrid
c) Plug-in Hybrid d) Series-parallel Hybrid

6) A vehicle traveling at a particular speed in air encounters a force resisting its motion. This force is referred to as _____.
a) aerodynamic drag b) rolling resistance
c) grading resistance d) none of the above

7) The electric motor in a hybrid car can also act as: _____.
a) cooling fan b) fuel pump
c) generator d) compressor

8) Which of these is a purpose of the power-split device?
a) To split electrical energy into mechanical energy
b) To allow both the engine and electric motor to propel the vehicle
c) To recharge the battery while braking
d) To recharge the brakes while driving

9) The rotating part of DC Motor is called as _____.
a) Stator b) Rotor
c) Poles d) Pole Shoes

10) In regenerative braking _____.
a) The kinetic energy of the motor shaft is converted into electrical energy
b) Electrical energy is converted into kinetic energy
c) Mechanical Energy converted into Kinetic Energy
d) None of the above

11) Which of the following is an advantage of electric traction over the other methods of traction?
a) Faster acceleration b) No pollution problems
c) Better braking action d) All of the above

12) The most common and mature power sources candidates suitable for EVs are _____.
a) Batteries b) Super Capacitors
c) Fuel Cells d) All of the above

13) Which of the following is not an advantage of BLDC motor over conventional DC motor?
a) Less maintenance
b) Long life
c) No risk of explosion or possibility of RF radiation
d) Low cost

14) HEV stands for _____.
a) Hybrid Electronic Vehicle b) Hybrid Electrical vehicle
c) Hybrid Environmental Vehicle d) None of the above

6) Which sentence best describes a parallel hybrid vehicle?
a) The engine is directly connected to the transmission
b) The electric motor is directly connected to the transmission
c) Both of the above
d) None of the above

7) Select the cycle use in a Hybrid Engine.
a) Otto b) Diesel
c) Atkinson d) Isentropic

8) A _____ is a vehicle that can run on just the engine, just the batteries, or a combination of the two.
a) Mild Hybrid b) Full Hybrid
c) Fuel Cell d) Assist Hybrid

9) "The wheels are driven by both the engine and the motor"
Select the type of Hybrid System according to above description.
a) Series Hybrid b) Parallel Hybrid
c) Plug-in Hybrid d) Series-parallel Hybrid

10) A vehicle traveling at a particular speed in air encounters a force resisting its motion. This force is referred to as _____.
a) aerodynamic drag b) rolling resistance
c) grading resistance d) none of the above

11) The electric motor in a hybrid car can also act as: _____.
a) cooling fan b) fuel pump
c) generator d) compressor

12) Which of these is a purpose of the power-split device?
a) To split electrical energy into mechanical energy
b) To allow both the engine and electric motor to propel the vehicle
c) To recharge the battery while braking
d) To recharge the brakes while driving

13) The rotating part of DC Motor is called as _____.
a) Stator b) Rotor
c) Poles d) Pole Shoes

14) In regenerative braking _____.
a) The kinetic energy of the motor shaft is converted into electrical energy
b) Electrical energy is converted into kinetic energy
c) Mechanical Energy converted into Kinetic Energy
d) None of the above

T.Y. (B. Tech) (Sem - I) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Introduction to Electric and Hybrid Electric Vehicles (BTN02521)

Day & Date: Friday, 05-01-2024 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to right indicate full marks.
3) Assume suitable data if necessary.
4) Use of non-programmable calculator is allowed.

Section – I

Q.2	**a)**	Explain in short history of Electric vehicle.	**05**
	b)	Explain the concept of range Anxiety.	**05**
	c)	Explain battery cost reduction strategy.	**04**
Q.3	**a)**	Write a note on Electric Motor characteristics.	**05**
	b)	What are the environmental benefits of hybrid vehicles?	**05**
	c)	What is tractive effort and explain the tractive effort in electric vehicles?	**04**
Q.4	**a)**	Explain key components of a Plug-In Hybrid Electric Car with neat sketch.	**05**
	b)	Explain the parallel hybrid electric drive train with neat sketch.	**05**
	c)	Write a note on mass analysis and packaging.	**04**

Section – II

Q.5	**a)**	Explain the working of Synchronous Motor.	**05**
	b)	Construction and Working principle of DC Motors.	**05**
	c)	How is the speed and torque of DC motor controlled?	**04**
Q.6	**a)**	What is a Chopper Circuit? Explain its principle of operation.	**05**
	b)	Explain VFD and inverters in EV.	**05**
	c)	Write a note on regeneration efficiency.	**04**
Q.7	**a)**	What are drive cycles? How they are developed?	**05**
	b)	Write a short note on energy efficiency and standard drive cycle.	**05**
	c)	Explain construction of electric compact sedan.	**04**

MECHANICAL ENGINEERING
Introduction to Electric and Hybrid Electric Vehicles (BTN02521)

Day & Date: Friday, 05-01-2024 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No. 3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever needed and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. **14**

1) A vehicle traveling at a particular speed in air encounters a force resisting its motion. This force is referred to as _____.
a) aerodynamic drag b) rolling resistance
c) grading resistance d) none of the above

2) The electric motor in a hybrid car can also act as: _____.
a) cooling fan b) fuel pump
c) generator d) compressor

3) Which of these is a purpose of the power-split device?
a) To split electrical energy into mechanical energy
b) To allow both the engine and electric motor to propel the vehicle
c) To recharge the battery while braking
d) To recharge the brakes while driving

4) The rotating part of DC Motor is called as _____.
a) Stator b) Rotor
c) Poles d) Pole Shoes

5) In regenerative braking _____.
a) The kinetic energy of the motor shaft is converted into electrical energy
b) Electrical energy is converted into kinetic energy
c) Mechanical Energy converted into Kinetic Energy
d) None of the above

6) Which of the following is an advantage of electric traction over the other methods of traction?
a) Faster acceleration b) No pollution problems
c) Better braking action d) All of the above

7) The most common and mature power sources candidates suitable for EVs are _____.
a) Batteries b) Super Capacitors
c) Fuel Cells d) All of the above

8) Which of the following is not an advantage of BLDC motor over conventional DC motor?
a) Less maintenance
b) Long life
c) No risk of explosion or possibility of RF radiation
d) Low cost

9) HEV stands for _____.
a) Hybrid Electronic Vehicle
b) Hybrid Electrical vehicle
c) Hybrid Environmental Vehicle
d) None of the above

10) An EV only needs one of the following maintenance jobs done. Which is it?
a) Oil change
b) Belt replacement
c) New spark plugs
d) Brake pad inspections

11) Which sentence best describes a parallel hybrid vehicle?
a) The engine is directly connected to the transmission
b) The electric motor is directly connected to the transmission
c) Both of the above
d) None of the above

12) Select the cycle use in a Hybrid Engine.
a) Otto
b) Diesel
c) Atkinson
d) Isentropic

13) A _____ is a vehicle that can run on just the engine, just the batteries, or a combination of the two.
a) Mild Hybrid
b) Full Hybrid
c) Fuel Cell
d) Assist Hybrid

14) "The wheels are driven by both the engine and the motor"
Select the type of Hybrid System according to above description.
a) Series Hybrid
b) Parallel Hybrid
c) Plug-in Hybrid
d) Series-parallel Hybrid

MCQ/Objective Type Questions

Duration: 20 Minutes Marks: 10

Q.1 Choose the correct alternatives from the options. **10**

1) Law of demand must fail in case of _____.
a) Normal goods b) Giffen goods
c) Inferior goods d) None of these

2) All things remain equal, if input prices increase _____.
a) Demand will increase b) Supply will increase
c) Supply will decrease d) Demand will decrease

3) "Wealth of Nations" was written by _____.
a) Adam Smith b) Prof. J. M. Keynes
c) Prof. J. N. Keynes d) Alfred Marshall

4) During the period of inflation debtors benefit more than creditors because _____
a) They have to pay less amount
b) Real worth of debt increased
c) Real worth of debt decreases
d) They have to pay more amount

5) In a mixed economy which sector(s) is / are found _____
a) Private only
b) Public only
c) None
d) Bothe (a) public and (b) private

6) Gross National Income – Depreciation =_____
a) Net National Income b) Disposable income
c) Net Domestic income d) Personal income

7) Fiscal policy is connected with _____
a) Issue of currency
b) Export and imports
c) Public revenue and expenditure
d) Controls of money supply

8) Which of the following is international trade?

a) Trade between countries
b) Trade between regions
c) Trade between provinces
d) Both (b) and (c)

9) Who is the 'lender of the last resort' in the banking structure of India?

a) State Bank of India
b) Reserve Bank of India
c) EXIM Bank of India
d) Union Bank of India

10) Micro and Macro are not two independent approaches to economic analysis but they are complementary to each other.

a) False
b) True
c) Partly true
d) Partly False

MCQ/Objective Type Questions

Duration: 20 Minutes Marks: 10

Q.1 Choose the correct alternatives from the given options. 10

1) The term 'Intellectual Property Rights' covers _____.
a) Copyrights b) Know-how
c) Trade dress d) All of these

2) The following cannot be exploited by assigning or by licensing the rights to others _____.
a) Patents b) Designs
c) Trademark d) All of these

3) Intellectual Property Rights (IPR) protects the use of information and ideas that are of _____.
a) Ethical value b) Moral value
c) Social value d) Commercial value

4) Trade mark _____.
a) is represented graphically
b) is capable of distinguishing the goods or services of one person from those of others
c) may include shapes of goods or combination of colors
d) All of the above

5) In India, the literary work is protected until _____.
a) Lifetime of author
b) 25 years after the death of author
c) 40 years after the death of author
d) 60 years after the death of author

6) Who fills the invention disclosure form (IDF)?
a) Inventor b) Patent Attorney
c) Assignee d) Patent Searcher

7) What is copyright meant for?
a) Film work b) Books
c) Essay d) All of these

8) What is the term of Patent?

a) 35 years b) 25 years

c) 20 years d) 15 years

9) Statutory requirement of “Abstract” is provided in _____ of Indian patents act,1970 and rules 2003.

a) Section 11(4) and Rule 18(7) b) Section 7(4) and Rule 9(7)

c) Section 21(4) and Rule 26 (7) d) Section 10(4) and Rule 13(7)

2) When danger or stress is perceived/experienced, this response occurs in the body _____.
a) Exhaustion b) Adaption
c) Fight-or-flight d) Resistance

3) Which factors improve coping?
a) Social support b) Optimism
c) Perceived control d) All of the above

4) Which of the following statements is true?
a) Moodiness is a cognitive symptom of stress
b) Moodiness is an emotional symptom of stress
c) Poor judgment is an emotional symptom of stress
d) Agitation is cognitive symptom of stress

5) Which of the following statements is true?
a) The stress response is nonspecific
b) Different kinds of stressors produce exactly the same response
c) Different people respond to the same stressor differently
d) All of the above

6) When is a person more likely to have difficulty in coping with a stressful situation?
a) When he is over the age of fifty
b) When he expects a positive outcome
c) When he thinks he does not have control over the situation
d) When he has a good social support network

7) Aches, shallow breathing and sweating, frequent colds are _____.
a) Physical symptoms of stress
b) Behavioral symptoms of stress
c) Emotional symptoms of stress
d) Cognitive symptoms of stress

8) What thoughts come to the mind when you're under negative stress?
a) You think that you can cope with the situation
b) You think that you cannot cope with the situation
c) You think that everything will get fine eventually
d) You think that you will get help immediately

9) Which of the following are the physical symptoms of anxiety?
a) Racing heart b) Sweaty palms
c) Flushed cheeks d) All of the above

10) Which of the following is true about 'deep breathing relaxation technique'?
a) It can be self-taught
b) It releases tension from the body and clears your mind
c) You have to do this under-water
d) Only 'a' & 'b' are true

MCQ/Objective Type Questions

Duration: 20 Minutes Marks:10

Q.1 Choose amongst the alternatives. **10**

1) Which of the following statements is true?
a) The stress response is nonspecific
b) Different kinds of stressors produce exactly the same response
c) Different people respond to the same stressor differently
d) All of the above

2) When is a person more likely to have difficulty in coping with a stressful situation?
a) When he is over the age of fifty
b) When he expects a positive outcome
c) When he thinks he does not have control over the situation
d) When he has a good social support network

3) Aches, shallow breathing and sweating, frequent colds are _____.
a) Physical symptoms of stress
b) Behavioral symptoms of stress
c) Emotional symptoms of stress
d) Cognitive symptoms of stress

4) What thoughts come to the mind when you're under negative stress?
a) You think that you can cope with the situation
b) You think that you cannot cope with the situation
c) You think that everything will get fine eventually
d) You think that you will get help immediately

5) Which of the following are the physical symptoms of anxiety?
a) Racing heart b) Sweaty palms
c) Flushed cheeks d) All of the above

6) Which of the following is true about 'deep breathing relaxation technique'?
a) It can be self-taught
b) It releases tension from the body and clears your mind
c) You have to do this under-water
d) Only 'a' & 'b' are true

7) Which of the following are stress busters?
a) Trying to find something funny in a difficult situation
b) Developing a support network
c) Taking a mindful walk
d) All of the above

8) When danger or stress is perceived/experienced, this response occurs in the body _____.
a) Exhaustion
b) Adaption
c) Fight-or-flight
d) Resistance

9) Which factors improve coping?
a) Social support
b) Optimism
c) Perceived control

Q.1 Choose the correct alternatives from the options. 10

1) Many complex social problems exist in the _____.
a) Industry/ Business b) Society
c) Home d) None of the above

2) Ethics is the word that refers to _____.
a) Human tendency b) Morals, values and beliefs
c) Only values d) Psychology

3) Work ethics is defined as a _____.
a) Motivation
b) Set of attitudes concerned with the value of work
c) Attitude
d) Values

4) What is Integrity?
a) Unity of thought b) Word and deed
c) Open mindedness d) All of these

5) Ethical issues that can affect an engineer's professional and personal life are termed as _____.
a) Macro ethics b) Micro ethics
c) Morals d) Rights

6) One of the basic desires of every human being is to be always _____.
a) Happy b) Sad
c) Laugh d) Earn Money

7) Value and skills should go hand in hand _____.
a) True b) False
c) Cannot tell d) Wrong question

8) _____ are the basic Human aspirations.
a) Money b) Relationship without money
c) Physical facility d) Continuous happiness

9) Human values are essential for _____.

a) living in harmony with self, each other and nature
b) making life easier and happy
c) living with family and friends
d) making money to fulfill desires

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Maximum tangential force that the tooth can transmit without bending failure _____.
a) Beam strength b) Wear Strength
c) Dynamic load d) Effective

2) Permissible bending stress for gear tooth is usually taken as _____.
a) One half of ultimate tensile strength
b) One third of surface endurance strength
c) One half of surface endurance strength
d) One third of ultimate tensile strength

3) The form factor of a spur gear tooth depends upon _____.
a) circular pitch b) pressure angle
c) number of teeth d) None of these

4) In helical gears, the distance between similar faces of adjacent teeth along a helix on the pitch cylinders normal to the teeth, is called _____.
a) Normal pitch b) Axial pitch
c) Diametral pitch d) Module

5) In worm gears the relationship between lead angle (λ) and helix angle (Ψ) is _____.
a) $\lambda - \Psi = 90°$ b) $\lambda + \Psi = 90°$
c) $\lambda - \Psi = 180°$ d) None of these

6) If the worm helix angle is 30°, then the worm should have at least _____ threads.
a) 5 b) 6
c) 7 d) 8

7) When bevel gears having equal teeth and equal pitch angles connect two shafts whose axes intersect at right angle, then they are known as _____.
a) angular bevel gears b) crown bevel gears
c) internal bevel gears d) Mitre bevel gears

8) If b denotes the face width and Ao denotes the cone distance, then the bevel factor is written as _____.

a) b/Ao b) 1 - (b/Ao)

c) b/2Ao d) None of these

9) The brakes commonly used on motor cars is _____.

a) shoe brake b) band brake

c) band and block brake d) internally expanding brake

10) The material used for brake lining should have _____ coefficient of friction.

a) zero b) high

c) low d) none of these

11) The device which permits the connection and disconnection of shaft is _____.

a) flywheel b) gear box

c) clutch d) none of these

12) The rolling contact bearings are known as _____.

a) Plastic bearings b) Antifriction bearings

c) Both a and b d) None of these

13) If bearing is designated as 6205, the last two digits multiplied by five indicates _____.

a) Bearing width b) Ball diameter

c) No. of balls d) Bore diameter

14) In the ball bearing, the cage is provided to _____.

a) facilitate slipping of balls b) to reduce friction

c) maintain balls at fixed distance d) none of these

Seat No.	

Set | P

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Transmission System Design (BTN02601)

Day & Date: Monday, 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.

Section – I

Q.2 **a)** Define the following: **03**
1) Beam strength of gear tooth
2) Wear strength of gear tooth
3) Gear ratio

b) What are the various types of gear tooth failures? State their causes and remedies. **04**

c) It is required to design a pair of spur gears with 20° full depth involute teeth. The input shaft rotates at 720 rpm and receives 5 kW power through flexible coupling. The speed of the output shaft is 144 rpm. The pinion and gears are made up of steel having a S_{ut} of 410 N/mm^2. The service factor for the application is 1.25. For the preliminary calculations, assume pitch line velocity as 5 m/s and factor of safety as 2 against bending failure. The Lewis form factor Y = 0.308 for 18 teeth. Determine first preference module, if Cv = 6/(6+V). **07**

Q.3 **a)** Differentiate between the helical and the spur gears. **03**

b) For a pair of helical gears, 4 kW power at 720 rpm is supplied to pinion A through its shaft. The normal module is 5 mm and normal pressure angle is 20°. The pinion has right-handed teeth while the gear has left hand teeth. The helix angle is 25°. The number of teeth on the pinion and gear are 20 and 30, respectively. Determine the components of the tooth force. **04**

c) The following data is given for the pair of helical gears made up of steel: **07**
Normal module = 5 mm
Face Width = 50 mm
No. of teeth on the Pinion = 30
No. of teeth on the Gear = 60
Center distance = 245 mm
Normal pressure angle = 20°
Speed of Pinion = 1000 rpm
Permissible bending stress = 150 N/mm^2
Surface Hardness = 300 BHN
Determine:
1) Helix angle
2) Beam Strength
3) Wear Strength

Table 1: Lewis form factor for 20° full depth involute system.

z	Y	z	Y
30	0.358	37	0.380
31	0.364	39	0.386
33	0.367	40	0.389
35	0.373	45	0.399

Q.4 **a)** Define the following terms: **03**
1) Lead Angle
2) Helix Angle
3) Diametral Quotient

b) A worm gear box with an effective surface area of 1.5 m^2 is operating in still air with a heat transfer coefficient of 15 W/m^2°C. The temperature rise of the lubricating oil above the atmospheric temperature is limited to 50°C. The worm gears are designated as, 1/30/10/8 The worm shaft is rotating at 1440 rpm and the normal pressure angle is 20°. Calculate power transmitting capacity based on the thermal considerations. Assume $\mu = 0.024$. **05**

c) 1 kW power at 720 rpm is supplied to the worm shaft. The number of starts for threads of the worm is four with a 50 mm pitch circle diameter. The worm wheel has 30 teeth with a 5 mm module. The normal pressure angle is 20°. Take the coefficient of friction as 0.035. Calculate efficiency of the worm gear drive and the power lost in friction. **06**

Section – II

Q.5 **a)** Draw a neat sketch of Bevel Gears and show various forces acting on them. **03**

b) A pair of straight bevel gears is made up of Grey Cast Iron FG200, (E = 114000 N/mm^2). The surface endurance strength is 90 N/mm^2. The number of teeth on the pinion and gear are 30 and 40, respectively. The module and face width are 6 mm and 50 mm, respectively. The pressure angle is 20°. Determine the wear strength of the tooth. **04**

c) A pair of straight bevel gears is mounted on shafts which are intersecting at right angles. The number of teeth on the pinion and the gear are 20 & 28, respectively. The pressure angle is 20°. The pinion shaft is connected to the electric motor developing 6 kW rated power at 1440 rpm. The pinion and gear are made up of the steel (Sut = 600 N/mm^2) and heat treated to a surface hardness of 330 BHN. The module and face width are 4 mm and 20 mm respectively. Determine: **07**
1) Beam strength
2) Wear Strength and
3) Static load

Take Lewis form factor of Y = 0.320 for 20 teeth.

Q.6 **a)** Distinguish between the rolling contact bearing and the sliding contact bearing. **03**

b) Explain Hydrodynamic bearing with a neat sketch. **05**

c) A ball bearing is operating on a work cycle consisting of three parts: a radial load of 5000 N at 1400 rpm for one quarter cycle, a radial load of 6000 N at 700 rpm for one half cycle and a radial load of 3000 N at 1400 rpm. for the remaining one quarter cycle. The expected life of bearing is 12,000 Hrs. Calculate the **06**

1) Average speed
2) Equivalent load
3) Life in million revolutions and
4) Dynamic load carrying capacity of the bearing

Q.7 **a)** Explain with neat sketch single block/shoe brake. **03**

b) In a particular application, the radial load acting on a ball bearing is 6 kN and the expected life for 90% of the bearings is 9000 h. Calculate the dynamic load carrying capacity of the bearing, when the shaft rotates at 1450 rpm. **04**

c) A plate clutch having a single driving plate with contact surfaces on each side required to transmit 110 kW at 1250 rpm. The outer diameter of the contact surfaces is to be 300 mm. The coefficient of friction is 0.4. **07**

1) Assuming uniform pressure of 0.17 N/mm^2; determine the inner diameter of the friction surfaces.
2) Assuming the same dimensions and same total axial thrust, determine the maximum torque that can be transmitted and maximum intensity of pressure when uniform wear conditions have been reached.

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Transmission System Design (BTN02601)

Day & Date: Monday, 18-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) If b denotes the face width and Ao denotes the cone distance, then the bevel factor is written as _____.
a) b/Ao b) 1 - (b/Ao)
c) b/2Ao d) None of these

2) The brakes commonly used on motor cars is _____.
a) shoe brake b) band brake
c) band and block brake d) internally expanding brake

3) The material used for brake lining should have _____ coefficient of friction.
a) zero b) high
c) low d) none of these

4) The device which permits the connection and disconnection of shaft is _____.
a) flywheel b) gear box
c) clutch d) none of these

5) The rolling contact bearings are known as _____.
a) Plastic bearings b) Antifriction bearings
c) Both a and b d) None of these

6) If bearing is designated as 6205, the last two digits multiplied by five indicates _____.
a) Bearing width b) Ball diameter
c) No. of balls d) Bore diameter

7) In the ball bearing, the cage is provided to _____.
a) facilitate slipping of balls b) to reduce friction
c) maintain balls at fixed distance d) none of these

8) Maximum tangential force that the tooth can transmit without bending failure _____.
a) Beam strength b) Wear Strength
c) Dynamic load d) Effective

9) Permissible bending stress for gear tooth is usually taken as _____.
a) One half of ultimate tensile strength
b) One third of surface endurance strength
c) One half of surface endurance strength
d) One third of ultimate tensile strength

10) The form factor of a spur gear tooth depends upon _____.
a) circular pitch b) pressure angle
c) number of teeth d) None of these

11) In helical gears, the distance between similar faces of adjacent teeth along a helix on the pitch cylinders normal to the teeth, is called _____.
a) Normal pitch b) Axial pitch
c) Diametral pitch d) Module

12) In worm gears the relationship between lead angle (λ) and helix angle (Ψ) is _____.
a) $\lambda - \Psi = 90°$ b) $\lambda + \Psi = 90°$
c) $\lambda - \Psi = 180°$ d) None of these

13) If the worm helix angle is 30°, then the worm should have at least _____ threads.
a) 5 b) 6
c) 7 d) 8

14) When bevel gears having equal teeth and equal pitch angles connect two shafts whose axes intersect at right angle, then they are known as _____.
a) angular bevel gears b) crown bevel gears
c) internal bevel gears d) Mitre bevel gears

Set | Q

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Transmission System Design (BTN02601)

Day & Date: Monday, 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.

Section – I

Q.2 **a)** Define the following: **03**
1) Beam strength of gear tooth
2) Wear strength of gear tooth
3) Gear ratio

b) What are the various types of gear tooth failures? State their causes and remedies. **04**

c) It is required to design a pair of spur gears with 20° full depth involute teeth. The input shaft rotates at 720 rpm and receives 5 kW power through flexible coupling. The speed of the output shaft is 144 rpm. The pinion and gears are made up of steel having a S_{ut} of 410 N/mm^2. The service factor for the application is 1.25. For the preliminary calculations, assume pitch line velocity as 5 m/s and factor of safety as 2 against bending failure. The Lewis form factor Y = 0.308 for 18 teeth. Determine first preference module, if Cv = 6/(6+V). **07**

Q.3 **a)** Differentiate between the helical and the spur gears. **03**

b) For a pair of helical gears, 4 kW power at 720 rpm is supplied to pinion A through its shaft. The normal module is 5 mm and normal pressure angle is 20°. The pinion has right-handed teeth while the gear has left hand teeth. The helix angle is 25°. The number of teeth on the pinion and gear are 20 and 30, respectively. Determine the components of the tooth force. **04**

c) The following data is given for the pair of helical gears made up of steel: **07**
Normal module = 5 mm
Face Width = 50 mm
No. of teeth on the Pinion = 30
No. of teeth on the Gear = 60
Center distance = 245 mm
Normal pressure angle = 20°
Speed of Pinion = 1000 rpm
Permissible bending stress = 150 N/mm^2
Surface Hardness = 300 BHN
Determine:
1) Helix angle
2) Beam Strength
3) Wear Strength

Table 1: Lewis form factor for 20° full depth involute system.

z	Y	z	Y
30	0.358	37	0.380
31	0.364	39	0.386
33	0.367	40	0.389
35	0.373	45	0.399

Q.4 **a)** Define the following terms: **03**
1) Lead Angle
2) Helix Angle
3) Diametral Quotient

b) A worm gear box with an effective surface area of 1.5 m^2 is operating in still air with a heat transfer coefficient of 15 $W/m^2°C$. The temperature rise of the lubricating oil above the atmospheric temperature is limited to 50°C. The worm gears are designated as, 1/30/10/8 The worm shaft is rotating at 1440 rpm and the normal pressure angle is 20°. Calculate power transmitting capacity based on the thermal considerations. Assume $\mu = 0.024$. **05**

c) 1 kW power at 720 rpm is supplied to the worm shaft. The number of starts for threads of the worm is four with a 50 mm pitch circle diameter. The worm wheel has 30 teeth with a 5 mm module. The normal pressure angle is 20°. Take the coefficient of friction as 0.035. Calculate efficiency of the worm gear drive and the power lost in friction. **06**

Section – II

Q.5 **a)** Draw a neat sketch of Bevel Gears and show various forces acting on them. **03**

b) A pair of straight bevel gears is made up of Grey Cast Iron FG200, (E = 114000 N/mm^2). The surface endurance strength is 90 N/mm^2. The number of teeth on the pinion and gear are 30 and 40, respectively. The module and face width are 6 mm and 50 mm, respectively. The pressure angle is 20°. Determine the wear strength of the tooth. **04**

c) A pair of straight bevel gears is mounted on shafts which are intersecting at right angles. The number of teeth on the pinion and the gear are 20 & 28, respectively. The pressure angle is 20°. The pinion shaft is connected to the electric motor developing 6 kW rated power at 1440 rpm. The pinion and gear are made up of the steel (Sut = 600 N/mm^2) and heat treated to a surface hardness of 330 BHN. The module and face width are 4 mm and 20 mm respectively. Determine: **07**
1) Beam strength
2) Wear Strength and
3) Static load

Take Lewis form factor of Y = 0.320 for 20 teeth.

Q.6 **a)** Distinguish between the rolling contact bearing and the sliding contact bearing. **03**

b) Explain Hydrodynamic bearing with a neat sketch. **05**

c) A ball bearing is operating on a work cycle consisting of three parts: a radial load of 5000 N at 1400 rpm for one quarter cycle, a radial load of 6000 N at 700 rpm for one half cycle and a radial load of 3000 N at 1400 rpm. for the remaining one quarter cycle. The expected life of bearing is 12,000 Hrs. Calculate the **06**

1) Average speed
2) Equivalent load
3) Life in million revolutions and
4) Dynamic load carrying capacity of the bearing

Q.7 **a)** Explain with neat sketch single block/shoe brake. **03**

b) In a particular application, the radial load acting on a ball bearing is 6 kN and the expected life for 90% of the bearings is 9000 h. Calculate the dynamic load carrying capacity of the bearing, when the shaft rotates at 1450 rpm. **04**

c) A plate clutch having a single driving plate with contact surfaces on each side required to transmit 110 kW at 1250 rpm. The outer diameter of the contact surfaces is to be 300 mm. The coefficient of friction is 0.4. **07**

1) Assuming uniform pressure of 0.17 N/mm^2; determine the inner diameter of the friction surfaces.
2) Assuming the same dimensions and same total axial thrust, determine the maximum torque that can be transmitted and maximum intensity of pressure when uniform wear conditions have been reached.

Instrumentation and Control Engineering (BTN02602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume data wherever necessary.
5) Use of a non-programmable scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. **14**

1) The most common type of RTD is made of: _____.
a) Copper b) Nickel
c) Platinum d) Aluminum

2) The primary component of a dead weight pressure gauge is the _____.
a) Diaphragm b) Bourdon Tube
c) Pressure Transducer d) Weight and Piston Assembly

3) Which of the following temperature scale is based on the freezing point and boiling point of water at standard atmospheric pressure?
a) Centigrade and Fahrenheit b) Kelvin and Rankine
c) Thermodynamic d) International

4) An LVDT operates on the principle of _____.
a) Capacitance b) Inductance
c) Resistance d) Piezoelectricity

5) Stroboscopes work based on the principle of _____.
a) Reflection b) Refraction
c) Persistence of Vision d) Polarization

6) In a hydraulic load cell, the load is applied on _____.
a) Piston b) Diaphragm
c) Bellows d) None of the above

7) What is the primary principle of operation for a strain gauge load cell?
a) Piezoelectric effect b) Hooke's law
c) Pascal's law d) Faraday's law

8) An example of the closed-loop control system is _____.
a) Automatic washing machine b) Automatic Toaster
c) Cruise control in a car d) None of the above

9) In the block diagram reduction technique, the transfer function of series-connected blocks can be obtained by _____.
a) Adding the transfer functions
b) Subtracting the transfer functions
c) Multiplying the transfer functions
d) Dividing the transfer functions

10) The Integral (I) control mode helps to eliminate _____.
a) Steady state error
b) Transient response
c) Oscillations
d) Noise

11) The root locus plot shows the movement of the system's poles as a function of _____.
a) Time
b) Frequency
c) Gain or parameter variation
d) Damping ratio

12) If a system has 2 asymptotes, then the angle of asymptotes are _____.
a) 90° and 270°
b) 90° and 180°
c) 180° and 270°
d) 180° and 360°

13) Two poles at the origin contribute _____ to the overall phase angle plot.
a) -90°
b) +90°
c) -180°
d) +180°

14) In magnitude plot, the slope changes at _____.
a) Gain crossover frequency
b) Phase crossover frequency
c) Every corner frequency
d) Zero dB magnitude

Seat No.	

Set **P**

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Instrumentation and Control Engineering (BTN02602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from each section.
2) Figures to the right indicate full marks.
3) Use of a non-programmable scientific calculator is allowed.
4) Assume suitable data if necessary and state it clearly.
5) Use university graph paper and semi-log paper if required.

Section – I

Q.2 **a)** Enlist all the static characteristics of the instrument. Explain any 5 of them. **07**
b) Explain with a neat diagram, the working of LVDT. **07**

Q.3 **a)** What is a Dynamometer? Explain the working of Eddy current dynamometer. **07**
b) Discuss the working of the Turbine meter with a neat diagram. **07**

Q.4 **a)** Discuss in detail the working of the Pneumatic Load cell with a neat diagram. **07**
b) Distinguish between RTD and Thermistor. **07**

Section – II

Q.5 **a)** What is block diagram representation? Explain any four rules of block diagram algebra with diagrams for each rule. **07**
b) A feedback control system has an open-loop transfer function given by **07**

$$G(s)H(s) = \frac{K}{s(s+3)(s^2+2s+2)}$$

Sketch the root locus as K is varied from 0 to ∞ and comment on the stability of the system.

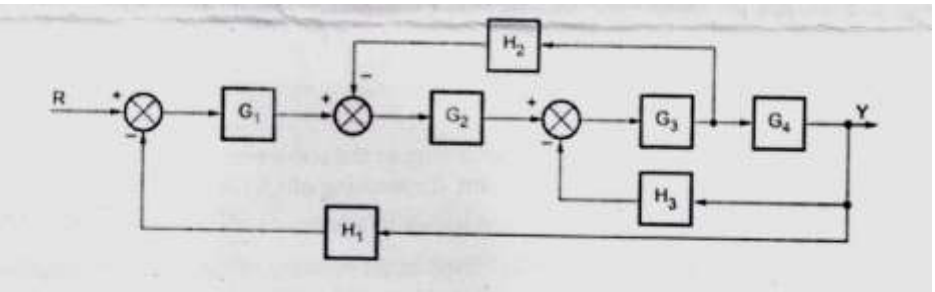
Q.6 **a)** What are the steps to construct root locus? Explain them. **07**
b) Sketch the Bode Plot for **07**

$$G(s) = \frac{10(s+10)}{s(s+2)(s+5)}$$

Determine the Gain crossover frequency and Phase crossover frequency, Gain margin and Phase margin.

Q.7 **a)** Explain the nature of Bode Plots for Poles and Zeros at the origin. **07**

b) Determine the overall transfer function of the system shown in fig. given below using block diagram reduction rules. **07**



Seat No.

2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) The LMTD of a counter flow condenser as compared to that of a parallel flow condenser will be _____.
a) more b) less
c) exactly equal d) cannot be predicted

2) Thermal conductivity of nonmetals _____ with rise in temperature.
a) decreases b) increases
c) remains same d) unpredictable

3) The gray body is one for which _____.
a) emissivity is constant b) emissivity equals reflectivity
c) emissivity equals absorptivity d) emissivity equals transmissivity

4) When the thickness of insulation on a pipe exceeds the critical value _____.
a) the heat flow rate increases
b) the heat flow rate decreases
c) the heat flow rate remains constant
d) none of the above

5) The free convection heat transfer is significantly affected by _____.
a) Reynolds number b) Fourier number
c) Grashoff number d) Nusselt

6) The critical radius of a hollow cylinder having thermal conductivity k and ho as convective heat transfer coefficient of outer fluid is given by _____.
a) ho/k b) $2k/ho$
c) k/ho d) $ho/2k$

7) In a counter flow heat exchanger, the heat capacities for hot and cold fluids are equal, if NTU is equal to 0.5 then the effectiveness of heat exchanger is _____.
a) 0.2 b) 0.5
c) 0.33 d) 1.0

8) _____number gives the ratio of kinematic viscosity to thermal diffusivity.

a) Nusselt b) Fourier

c) Prandtl d) Biot

9) Dropwise condensation usually occurs on _____.

a) Glazed surface b) Smooth surface

c) Oily surface d) Coated surface

10) For a white body _____.

a) $\alpha = 1, \rho = 0, \tau = 0$ b) $\alpha = 0, \rho = 1, \tau = 0$

c) $\alpha = 0, \rho = 0, \tau = 1$ d) $\alpha = 0, \rho = 0, \tau = 0$

11) In fins parameter 'm' equals to _____.

a) $(hp/kA)^2$ b) $(kA/hp)^2$

c) $(kA/hp)^{1/2}$ d) $(hp/kA)^{1/2}$

12) The overall heat transfer co-efficient is used in case of _____.

a) Conduction b) Convection

c) Radiation d) Conduction and convection

13) Which of the following has the lowest thermal conductivity?

a) air b) water

c) brick d) copper

14) Which of the following forms of water have the highest value of thermal conductivity?

a) boiling water b) steam

c) solid ice d) melting ice

Heat Transfer (BTN02603)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.
5) Use of scientific calculator is allowed.

Section – I

Q.2 Attempt the following questions.

a) Derive an expression for critical radius of insulation for cylinder. **05**

b) Explain the effect of temperature on thermal conductivity of solids, liquids and gases. **04**

c) A mild steel tank of wall thickness 10 mm contains water at 90°C. A thermal conductivity of mild Steel is 50 W/m °C and heat transfer coefficient for inside and outside of the tank are 2800 W/m^2 °C and 11 W/m^2 °C respectively. If atmospheric temperature is 20°C. Calculate - **05**
1) Rate of heat loss per m^2 of the tank
2) Temperature of outside surface of tank

Q.3 Attempt the following questions.

a) Derive an expression for temperature distribution equation and heat flow rate through a fin considering uniform cross section for a fin with finite length and insulated tip. **05**

b) Derive an expression of steady state one dimensional heat conduction equation for a cylinder without heat generation. **05**

c) A person is found dead to police at 5 pm in a room whose temperature is 20°C. The temperature of body is measured to be 25°C when found and heat transfer coefficient is estimated to be 8 W/m^2 °C. Considering human body as a cylinder of 30 cm diameter and 1.75 m long calculate actual time of death of person. Take thermo physical properties of body as thermal conductivity (k) = 6.08 W/m K, density 900 Kg/m^3 specific heat (C_p) = 4000 J/Kg K. (Assume healthy person body temperature = 37°C) **04**

Q.4 Attempt the following questions.

a) Explain the following: **04**
1) Steffan Boltzmann law
2) Emissivity

b) A refractory material has emissivity 0.415 at 1460 K and it is exposed to black furnace walls at 1500 K. What is the rate of gain of heat radiation per meter square area? **05**

c) State planks law of radiation and hence derive Wien's displacement law using planks law. **05**

Section – II

Q.5 Attempt the following question.

a) Derive an expression for LMTD of parallel flow heat exchanger. **05**

b) In a counter flow double pipe heat exchanger superheated steam is used to heat water at the rate of 10500 Kg/hr. The steam enters the heat exchanger at 180°C and leaves at 130°C. The inlet and outlet temperature of water are 30°C and 80°C respectively. If overall heat transfer coefficient is 814 W/m^2 °C and Specific heat of water is C_p = 4.187 KJ/Kg K **05**

Calculate -

1) Rate of heat transfer
2) The surface area of heat exchanger

c) Explain construction, working and applications of heat pipe. **04**

Q.6 Attempt the following questions.

a) Using dimensional analysis show that $Nu = f(Re.Pr)$ for forced convection. **05**

b) A cylinder of 8 cm diameter and 15 cm length having surface temperature 50°C expressed vertically in water at 15°C. Find the heat transfer rate from cylinder. The properties of water at 32.5°C are density (ρ) = 995.7 Kg/m^3, specific heat (C_p) = 4.18 KJ/Kg °C, Thermal conductivity (k) = 0.615 W/m K, dynamic viscosity $(\mu) = 0.798 \times 10^{-3}$ Kg/ms, kinematic viscosity $(v) = 0.805 \times 10^{-6}$ m^2/sec. (Use empirical correlation as $\mathrm{Nu} = 0.13\ (\mathrm{Gr.Pr})^{1/3}$) **05**

c) Explain fouling factor in heat exchanger. **04**

Q.7 Attempt the following questions.

a) Explain with neat sketch boiling curve and its different regimes. **05**

b) Explain mechanism of convection and its types. **04**

c) Explain the classification of heat exchanger. **05**

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) _____number gives the ratio of kinematic viscosity to thermal diffusivity.
a) Nusselt b) Fourier
c) Prandtl d) Biot

2) Dropwise condensation usually occurs on _____.
a) Glazed surface b) Smooth surface
c) Oily surface d) Coated surface

3) For a white body _____.
a) $\alpha = 1, \rho = 0, \tau = 0$ b) $\alpha = 0, \rho = 1, \tau = 0$
c) $\alpha = 0, \rho = 0, \tau = 1$ d) $\alpha = 0, \rho = 0, \tau = 0$

4) In fins parameter 'm' equals to _____.
a) $(hp/kA)^2$ b) $(kA/hp)^2$
c) $(kA/hp)^{1/2}$ d) $(hp/kA)^{1/2}$

5) The overall heat transfer co-efficient is used in case of _____.
a) Conduction b) Convection
c) Radiation d) Conduction and convection

6) Which of the following has the lowest thermal conductivity?
a) air b) water
c) brick d) copper

7) Which of the following forms of water have the highest value of thermal conductivity?
a) boiling water b) steam
c) solid ice d) melting ice

8) The LMTD of a counter flow condenser as compared to that of a parallel flow condenser will be _____.
a) more b) less
c) exactly equal d) cannot be predicted

9) Thermal conductivity of nonmetals _____ with rise in temperature.
a) decreases b) increases
c) remains same d) unpredictable

10) The gray body is one for which _____.
a) emissivity is constant
b) emissivity equals reflectivity
c) emissivity equals absorptivity
d) emissivity equals transmissivity

11) When the thickness of insulation on a pipe exceeds the critical value _____.
a) the heat flow rate increases
b) the heat flow rate decreases
c) the heat flow rate remains constant
d) none of the above

12) The free convection heat transfer is significantly affected by _____.
a) Reynolds number
b) Fourier number
c) Grashoff number
d) Nusselt

13) The critical radius of a hollow cylinder having thermal conductivity k and ho as convective heat transfer coefficient of outer fluid is given by _____.
a) ho/k
b) $2k/ho$
c) k/ho
d) $ho/2k$

14) In a counter flow heat exchanger, the heat capacities for hot and cold fluids are equal, if NTU is equal to 0.5 then the effectiveness of heat exchanger is _____.
a) 0.2
b) 0.5
c) 0.33
d) 1.0

Set Q

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Heat Transfer (BTN02603)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary and mention it clearly.
4) Use of non-programmable calculator is allowed.
5) Use of scientific calculator is allowed.

Section – I

Q.2 Attempt the following questions.

a) Derive an expression for critical radius of insulation for cylinder. **05**

b) Explain the effect of temperature on thermal conductivity of solids, liquids and gases. **04**

c) A mild steel tank of wall thickness 10 mm contains water at 90°C. A thermal conductivity of mild Steel is 50 W/m °C and heat transfer coefficient for inside and outside of the tank are 2800 W/m^2 °C and 11 W/m^2 °C respectively. If atmospheric temperature is 20°C. Calculate - **05**
1) Rate of heat loss per m^2 of the tank
2) Temperature of outside surface of tank

Q.3 Attempt the following questions.

a) Derive an expression for temperature distribution equation and heat flow rate through a fin considering uniform cross section for a fin with finite length and insulated tip. **05**

b) Derive an expression of steady state one dimensional heat conduction equation for a cylinder without heat generation. **05**

c) A person is found dead to police at 5 pm in a room whose temperature is 20°C. The temperature of body is measured to be 25°C when found and heat transfer coefficient is estimated to be 8 W/m^2 °C. Considering human body as a cylinder of 30 cm diameter and 1.75 m long calculate actual time of death of person. Take thermo physical properties of body as thermal conductivity (k) = 6.08 W/m K, density 900 Kg/m^3 specific heat (C_p) = 4000 J/Kg K. (Assume healthy person body temperature = 37°C) **04**

Q.4 Attempt the following questions.

a) Explain the following: **04**
1) Steffan Boltzmann law
2) Emissivity

b) A refractory material has emissivity 0.415 at 1460 K and it is exposed to black furnace walls at 1500 K. What is the rate of gain of heat radiation per meter square area? **05**

c) State planks law of radiation and hence derive Wien's displacement law using planks law. **05**

Section – II

Q.5 Attempt the following question.

a) Derive an expression for LMTD of parallel flow heat exchanger. **05**

b) In a counter flow double pipe heat exchanger superheated steam is used to heat water at the rate of 10500 Kg/hr. The steam enters the heat exchanger at 180°C and leaves at 130°C. The inlet and outlet temperature of water are 30°C and 80°C respectively. If overall heat transfer coefficient is 814 W/m^2 °C and Specific heat of water is C_p = 4.187 KJ/Kg K **05**

Calculate -

1) Rate of heat transfer
2) The surface area of heat exchanger

c) Explain construction, working and applications of heat pipe. **04**

Q.6 Attempt the following questions.

a) Using dimensional analysis show that $Nu = f(Re.Pr)$ for forced convection. **05**

b) A cylinder of 8 cm diameter and 15 cm length having surface temperature 50°C expressed vertically in water at 15°C. Find the heat transfer rate from cylinder. The properties of water at 32.5°C are density (ρ) = 995.7 Kg/m^3, specific heat (C_p) = 4.18 KJ/Kg °C, Thermal conductivity (k) = 0.615 W/m K, dynamic viscosity $(\mu) = 0.798 \times 10^{-3}$ Kg/ms, kinematic viscosity $(v) = 0.805 \times 10^{-6}$ m^2/sec. (Use empirical correlation as $\mathrm{Nu} = 0.13\ (\mathrm{Gr.Pr})^{1/3}$) **05**

c) Explain fouling factor in heat exchanger. **04**

Q.7 Attempt the following questions.

a) Explain with neat sketch boiling curve and its different regimes. **05**

b) Explain mechanism of convection and its types. **04**

c) Explain the classification of heat exchanger. **05**

Seat No.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) _____ involves establishing the amount of work to be done & the time when each element of the work will start.
a) Planning b) Routing
c) Scheduling d) Organizing

2) Which of the following is not an element of management process?
a) Pricing b) Staffing
c) Planning d) Controlling

3) In _____ concept product enjoys the supreme importance.
a) Selling b) Marketing
c) Manufacturing d) Business

4) 'Span of control' is decided under _____.
a) Controlling function b) Budget control
c) Planning for project d) Organizing

5) Organization structure is primarily concerned with _____ and _____ of tasks and authority.
a) Allocation and Delegation
b) Allocation and apportionment
c) Reporting and delegating
d) Setting standards and delegation

6) _____ leaders uses his or her power very little, if at all, giving subordinates a high degree of independence in their operations.
a) Autocratic b) Democratic
c) The free rein d) Ideal

7) Which motivational theory considers mainly the 'Hierarchy of needs'?
a) 'X' theory b) 'Y' theory
c) Maslow theory d) Carrot & Stick theory

8) Quality is defined as the _____ for use.

a) Fitness b) Standard
c) Requirement d) Availability

9) The quality of design is concerned with the _____ for the manufacture of the product.

a) Exactness of specification b) Fitness of specification
c) Correctness of specification d) Tightness of specification

10) The statistician who invented the control chart for use in industrial quality control was: _____.

a) Deming b) Taguchi
c) Pareto d) Shewhart

11) The chart that aggregates poor quality outcomes to show management which are the most important problems is the: _____.

a) C chart b) Pareto chart
c) R chart d) X-bar chart

12) The items are subjected to _____ test must be inspected by sampling inspection

a) Quality b) Destructive
c) Production d) Single

13) 'AQL' Stands for _____.

a) Average quality level b) Acceptance quality level
c) Average quality limit d) Acceptance quality limit

14) LTPD stands for _____.

a) Lot Tolerance Perfect Defective
b) Lot Tolerance Percent Defective
c) Lot Tolerable Percent Defective
d) Lot Tolerance Piece Defective

Section – I

Q.2 **a)** Explain the system approach to management process. **05**
b) Explain the functions of marketing department. **04**

Q.3 **a)** What is planning? Explain steps in planning. **05**
b) What are the types of organization structures? Explain any one with all details. **05**

Q.4 **a)** Define Leadership. Explain four extreme styles. **05**
b) What is motivation? Explain Maslow's theory of motivation. **04**

Q.5 **Write short note on (Any Three)** **09**
a) Channel of distribution
b) Social responsibilities in management
c) Methods of Departmentation
d) Various types of communications
e) Motivation techniques

Section – II

Q.6 **a)** Define quality and state the dimensions of quality. **05**
b) Explain quality cost its control. **05**

Q.7 **a)** Explain cause and effect diagram and Pareto analysis with suitable example. **05**
b) Make a List of quality gurus. Explain any one's contribution in the field of quality. **04**

Q.8 **a)** In a manufacturing process the number of defectives found in the inspection of 10 lots of 400 items each are given below: **05**

Lot. No.	No. of Defectives
1	2
2	5
3	6
4	8
5	3
6	4
7	1
8	3
9	5
10	7

Determine the trial control limits for “np” chart & draw P chart for the same.

b) What is acceptance sampling? Explain sampling plans with examples. **04**

Q.9 **Write short note on (Any Three)** **09**

a) Need of Environment management system
b) Steps in quality control
c) Continuous process improvement
d) X bar chart
e) Six Sigma

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Quality is defined as the _____ for use.
a) Fitness b) Standard
c) Requirement d) Availability

2) The quality of design is concerned with the _____ for the manufacture of the product.
a) Exactness of specification b) Fitness of specification
c) Correctness of specification d) Tightness of specification

3) The statistician who invented the control chart for use in industrial quality control was: _____.
a) Deming b) Taguchi
c) Pareto d) Shewhart

4) The chart that aggregates poor quality outcomes to show management which are the most important problems is the: _____.
a) C chart b) Pareto chart
c) R chart d) X-bar chart

5) The items are subjected to _____ test must be inspected by sampling inspection
a) Quality b) Destructive
c) Production d) Single

6) 'AQL' Stands for _____.
a) Average quality level b) Acceptance quality level
c) Average quality limit d) Acceptance quality limit

7) LTPD stands for _____.
a) Lot Tolerance Perfect Defective
b) Lot Tolerance Percent Defective
c) Lot Tolerable Percent Defective
d) Lot Tolerance Piece Defective

8) _____ involves establishing the amount of work to be done & the time when each element of the work will start.

a) Planning b) Routing
c) Scheduling d) Organizing

9) Which of the following is not an element of management process?

a) Pricing b) Staffing
c) Planning d) Controlling

10) In _____ concept product enjoys the supreme importance.

a) Selling b) Marketing
c) Manufacturing d) Business

11) 'Span of control' is decided under _____.

a) Controlling function b) Budget control
c) Planning for project d) Organizing

12) Organization structure is primarily concerned with _____ and _____ of tasks and authority.

a) Allocation and Delegation
b) Allocation and apportionment
c) Reporting and delegating
d) Setting standards and delegation

13) _____ leaders uses his or her power very little, if at all, giving subordinates a high degree of independence in their operations.

a) Autocratic b) Democratic
c) The free rein d) Ideal

14) Which motivational theory considers mainly the 'Hierarchy of needs'?

a) 'X' theory b) 'Y' theory
c) Maslow theory d) Carrot & Stick theory

Seat No.	

Set **Q**

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Industrial & Quality Management (BTN02604)

Day & Date: Thursday, 21-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question no. 3 is compulsory in section I, and solve any two questions from the remaining. (Q. No. 2, 4 & 5)
2) Question no. 6 is compulsory in section II, and solve any two questions from the remaining. (Q. No. 7, 8 & 9)
3) Figures to the right indicate full marks.
4) Draw neat-labelled diagrams wherever necessary.
5) Use of log table and calculators is allowed.

Section – I

Q.2 **a)** Explain the system approach to management process. **05**
b) Explain the functions of marketing department. **04**

Q.3 **a)** What is planning? Explain steps in planning. **05**
b) What are the types of organization structures? Explain any one with all details. **05**

Q.4 **a)** Define Leadership. Explain four extreme styles. **05**
b) What is motivation? Explain Maslow's theory of motivation. **04**

Q.5 **Write short note on (Any Three)** **09**
a) Channel of distribution
b) Social responsibilities in management
c) Methods of Departmentation
d) Various types of communications
e) Motivation techniques

Section – II

Q.6 **a)** Define quality and state the dimensions of quality. **05**
b) Explain quality cost its control. **05**

Q.7 **a)** Explain cause and effect diagram and Pareto analysis with suitable example. **05**
b) Make a List of quality gurus. Explain any one's contribution in the field of quality. **04**

Q.8 **a)** In a manufacturing process the number of defectives found in the inspection of 10 lots of 400 items each are given below: **05**

Lot. No.	No. of Defectives
1	2
2	5
3	6
4	8
5	3
6	4
7	1
8	3
9	5
10	7

Determine the trial control limits for “np” chart & draw P chart for the same.

b) What is acceptance sampling? Explain sampling plans with examples. **04**

Q.9 **Write short note on (Any Three)** **09**

a) Need of Environment management system
b) Steps in quality control
c) Continuous process improvement
d) X bar chart
e) Six Sigma

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Which of the following is not project management goal?
a) Keeping overall costs within budget
b) Delivering the software to the customer at the agreed time
c) Maintaining a happy and well-functioning development team
d) Avoiding customer complaints

2) Risk is usually _____ as the project progress.
a) Increases b) Reduces
c) Remained same d) None of the above

3) The PERT in project management means program evaluation and _____ technique.
a) Resource b) Reconciliation
c) Reconsideration d) Review

4) Assembling project team and assigning their responsibilities are done during which phase of a project management?
a) Initiation b) Planning
c) Execution d) Closure

5) The basic nature of a project is a/an _____ one.
a) Permanent b) Temporary
c) a) and b) d) None of the above

6) Which from the following statement (s) is/are NOT true?
I) Projects have defined objectives
II) Programs have a larger scope than projects
III) The projects and programs in a portfolio must be directly related
a) I only b) II only
c) III only d) II and III only

7) Which of these is not one of the constraints of a project?
a) Scope b) Resources
c) Team d) Budget

8) Which from the following represents the correct project cycle?
a) Planning → Initiating → Executing → Closing
b) Planning → Executing → Initiating → Closing
c) Initiating → Planning → Executing → Closing
d) Initiating → Executing → Planning → Closing

9) Which of the following statements is true?
a) PERT is considered as a deterministic approach and CPM is a probabilistic technique
b) PERT is considered as a probabilistic techniques and CPM is considered as a deterministic approach
c) PERT and CPM are both probabilistic techniques
d) PERT and CPM are both considered as deterministic approaches

10) Which is the first stage in the project management model?
a) Understanding the project environment
b) Project definition
c) Project control
d) Project planning

11) Typical kinds of costs found in a project include _____.
a) Direct costs
b) Project overhead costs
c) General and administrative costs
d) a, b, and c are all included

12) There is _____ correlation between project complexity and project risk.
a) an unknown
b) a positive
c) no
d) a negative

13) What is considered to be the most useful skill for a project manager who works in a matrix environment in order to achieve project goals?
a) Leadership skill
b) Influencing
c) Conflict management skill
d) Time management

14) Reasons why estimating time and cost are important include all of the following except: _____.
a) To schedule work
b) To determine how long the project should take and cost
c) To develop cash flow needs
d) All of the above are valid reasons

II) Programs have a larger scope than projects
III) The projects and programs in a portfolio must be directly related

a) I only b) II only
c) III only d) II and III only

11) Which of these is not one of the constraints of a project?

a) Scope b) Resources
c) Team d) Budget

12) Which from the following represents the correct project cycle?

a) Planning → Initiating → Executing → Closing
b) Planning → Executing → Initiating → Closing
c) Initiating → Planning → Executing → Closing
d) Initiating → Executing → Planning → Closing

13) Which of the following statements is true?

a) PERT is considered as a deterministic approach and CPM is a probabilistic technique
b) PERT is considered as a probabilistic techniques and CPM is considered as a deterministic approach
c) PERT and CPM are both probabilistic techniques
d) PERT and CPM are both considered as deterministic approaches

14) Which is the first stage in the project management model?

a) Understanding the project environment
b) Project definition
c) Project control
d) Project planning

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Project Management (BTN02608)

Day & Date: Friday, 22-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Figures to the right indicates full marks.
3) Make suitable assumptions wherever necessary and state them clearly.
4) Draw neat diagram wherever necessary.

Section – I

Q.2	**a)**	Define project management and discuss its characteristics.	**05**
	b)	Explain the project management process	**05**
	c)	Write Short note on Monte Carlo Simulation.	**04**
Q.3	**a)**	Define Risk Management and Explain the Role of risk Management in overall project management.	**05**
	b)	Elaborate the steps in risk management.	**05**
	c)	Explain the role of project manager.	**04**
Q.4	**a)**	Explain different cost estimating methods.	**05**
	b)	Describe the Project Budgeting.	**05**
	c)	Write a short note on Return on Investment.	**04**

Section – II

Q.5	**a)**	Explain the Project planning process in detail.	**05**
	b)	Explain the significance of CPM and PERT in Project Management.	**05**
	c)	Write a short note on project life cycle.	**04**
Q.6	**a)**	Describe the process of project performance measurement.	**05**
	b)	Explain purpose of project execution & control process.	**05**
	c)	Write a short note on work break down structure (WBS).	**04**
Q.7	**a)**	Explain the scope of MS Projects in Project Management.	**05**
	b)	Explain the benefits & challenges of performance measurement and evaluation.	**05**
	c)	Write a short note on Project Management Information System (PMIS).	**04**

Day & Date: Friday, 22-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make Suitable assumptions wherever necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Which from the following statement (s) is/are NOT true?
I) Projects have defined objectives
II) Programs have a larger scope than projects
III) The projects and programs in a portfolio must be directly related
a) I only b) II only
c) III only d) II and III only

2) Which of these is not one of the constraints of a project?
a) Scope b) Resources
c) Team d) Budget

3) Which from the following represents the correct project cycle?
a) Planning → Initiating → Executing → Closing
b) Planning → Executing → Initiating → Closing
c) Initiating → Planning → Executing → Closing
d) Initiating → Executing → Planning → Closing

4) Which of the following statements is true?
a) PERT is considered as a deterministic approach and CPM is a probabilistic technique
b) PERT is considered as a probabilistic techniques and CPM is considered as a deterministic approach
c) PERT and CPM are both probabilistic techniques
d) PERT and CPM are both considered as deterministic approaches

5) Which is the first stage in the project management model?
a) Understanding the project environment
b) Project definition
c) Project control
d) Project planning

6) Typical kinds of costs found in a project include _____.
a) Direct costs
b) Project overhead costs
c) General and administrative costs
d) a, b, and c are all included

7) There is _____ correlation between project complexity and project risk.
a) an unknown
b) a positive
c) no
d) a negative

8) What is considered to be the most useful skill for a project manager who works in a matrix environment in order to achieve project goals?
a) Leadership skill
b) Influencing
c) Conflict management skill
d) Time management

9) Reasons why estimating time and cost are important include all of the following except: _____.
a) To schedule work
b) To determine how long the project should take and cost
c) To develop cash flow needs
d) All of the above are valid reasons

10) Which of the following is not project management goal?
a) Keeping overall costs within budget
b) Delivering the software to the customer at the agreed time
c) Maintaining a happy and well-functioning development team
d) Avoiding customer complaints

11) Risk is usually _____ as the project progress.
a) Increases
b) Reduces
c) Remained same
d) None of the above

12) The PERT in project management means program evaluation and _____ technique.
a) Resource
b) Reconciliation
c) Reconsideration
d) Review

13) Assembling project team and assigning their responsibilities are done during which phase of a project management?
a) Initiation
b) Planning
c) Execution
d) Closure

14) The basic nature of a project is a/an _____ one.
a) Permanent
b) Temporary
c) a) and b)
d) None of the above

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicate full marks.
4) Make suitable assumption if required.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) MVP stands for _____.
a) Most viable product b) Maximum viable product
c) Minimum viable product d) None of above

2) During brain storming sessions, people should promote _____.
a) Criticizing b) Free Thinking
c) Rewarding Ideas d) All of the above

3) Rashmi is creating a new product for Engineering college students. She takes a design thinking approach. Her first step is, addressing who she is creating the product for? And conducts research on understanding the market. What is this step in the design thinking process?
a) Define b) Ideate
c) Empathise d) Prototype

4) Design Thinking is: _____
a) Thinking about design
b) Designing ways in which people think
c) Asking users to solve problems
d) Defining, framing and solving problems from users' perspectives

5) In which of the following type the manufacturing cost may go up?
a) Standardization b) Simplification
c) Diversification d) All of the above

6) The necessity to know the environment in which the product will be used is termed as _____.
a) Design Situation b) Design Analysis
c) Aesthetics d) Ergonomics

7) What are the steps of Design Thinking Process?
a) Understand > Draw > Ideate > Create > Test
b) Empathise > Define > Ideate > Prototype > Test
c) Empathise > Design > Implement > Produce > Test
d) Understand > Define > Ideate > Produce > Try

8) The purpose of _____ is to generate large number of ideas.
a) Idea Screening
b) Brain Storming
c) Concept development and Testing
d) Marketing Strategy Development

9) Which of the following statement is not correct?
a) Creativity is originality in any art
b) Thinking is not required for creativity
c) Creativity is new consequence of a work performed
d) None of the above

10) The _____ function plays the lead role in defining the physical form of the product to best meet customer needs.
a) Design b) Manufacturing
c) Marketing d) None of the above

11) Fear of _____ blocks creativity.
a) Making Mistakes b) Being Criticised
c) Being Alone d) All of the Above

12) You are conducting user research for a project to design a coffee sipper, which of the following details you would not take off users?
a) Daily coffee intake b) Hand measurement
c) Disability while standing d) Economic

13) Rahul gets an opportunity to design mask for specially-abled children. They are deaf and use hearing aid. Rahul designs beautiful mask with good colour combination and cartoon printed on it, but design will not serve the purpose because it was like normal mask with ear looping elastic. Which stage did Rahul go wrong in design?
a) Empathize b) Prototype
c) Ideate d) Test

14) The principles of good design are _____.
a) color, depth, form, line, shape, space, texture, and value.
b) balance, contrast, emphasis, proportion, repetition, simplicity, space, and unity.
c) All of the above
d) None of the above

Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Which of the following is an additive used for saving base plastic material?
a) Fillers b) Pigments
c) Plastisizers d) None of these

2) Polymers are large chain molecules having a high molecular weight in the range of _____.
a) 104 to 107 b) 103 to 107
c) 105 to 108 d) 102 to 108

3) In Addition, polymerization reaction the polymer is formed in a _____ step.
a) Single b) Double
c) Three d) None of these

4) The process which measured quantity of preform or charge of thermoset polymer material is heated in the pot and it is transferred into the mould cavity is _____.
a) Injection molding b) Transfer Molding
c) Blow Molding d) Rotational Molding

5) _____ moulding is used to produce overhead hollow plastic water storage tanks.
a) Rotational Moulding b) Injection moulding
c) Compression moulding d) Transfer moulding

6) The complicated joints are produced by _____.
a) High frequency Induction Welding
b) Hot gas Welding
c) Hot tool Welding
d) Both b) and c)

7) In _____ welding method, the workpieces to be joined are irradiated with a stream of neutrons.
a) Infrared b) Nuclear
c) Hot gas d) Heated tool

8) Outer corner radius should be normally _____ Times the wall thickness.
a) 1.5 b) 2.5
c) 5.5 d) 0.5

9) Design of _____ is the most important design aspect in Plastic part design.
a) Corner b) Wall Thickness
c) Rib d) Hole

10) Which of the following is the type of compression mould?
a) Semi-automatic open flash mould
b) Hand compression mould
c) Semi-automatic Semi positive mould
d) All of the above

11) The excess material flows out of the cavity and forms a thin layer of plastic film is called as _____.
a) Flash b) Sink marks
c) Wastage d) None of these

12) The major factor in Injection cycle speed is _____.
a) The type of thermoplastic
b) The temperature of the plastic
c) Injection speed and pressure
d) Efficiency of the cooling system

13) Cooling time is directly proportional to the _____.
a) Heaviest wall thickness b) Thermal diffusivity
c) Both a and b d) None of these

14) Which of the following is the most effective cooling channel?
a) Parallel b) Series
c) Both a and b d) None of these

Seat No.	

Set **P**

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Plastic Engineering (BTN02610)

Day & Date: Friday, 22-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any TWO questions from each section.
2) Figures to the right indicates full marks.
3) Assume suitable data wherever necessary and state it clearly.

Section – I

Q.2 **a)** Differentiate between Thermoplastic material and Thermosetting Plastic Material. **04**
b) Explain Polymer degradation with its different types. **06**
c) What are the applications of plastics in the agriculture and packaging sector? **04**

Q.3 **a)** Explain with a neat sketch an Extrusion Moulding Process for plastics. **05**
b) Write a short note on “High Frequency Induction Welding Method”. **05**
c) With a neat sketch. Explain the Rotational moulding process. **04**

Q.4 **a)** Discuss on Tolerances and Allowances of molded plastic parts. **04**
b) Write design aspects of Wall thickness and Corners in plastic parts. **06**
c) Explain design rules related to Holes or Opening in the plastics. **04**

Section – II

Q.5 **a)** Design a compression mould for a machine component shown in Fig. which is made up of phenol formaldehyde, thermoset plastic. **07**
Take bulk factor = 3, Compression pressure = 180 kg./cm^2,
density = 2 g/cm^3

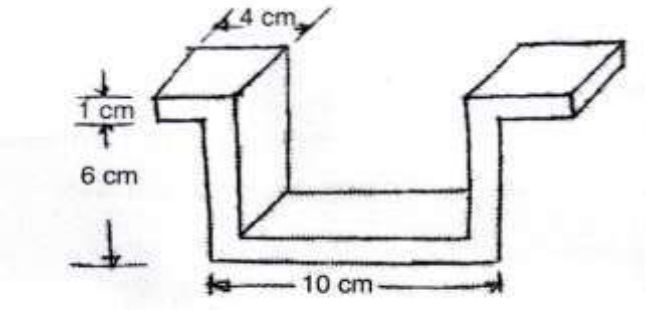

Fig. 5 A

b) Enlist different types of Transfer moulding process. Explain Pot type and Plunger type transfer molding process with neat sketches. **07**

Q.6 **a)** Draw a neat sketch of Injection mould used in Injection moulding process and explain function of each component/element present in it. **06**
b) Differentiate between Semi automatic and Automatic Injection molding process. **04**

	c)	What are the types of ejection systems for injection moulding? Explain any one in detail.	**04**
Q.7	**a)**	Give the brief classification of Cooling systems used in Injection moulding. Explain Baffled straight hole system with neat sketch.	**05**
	b)	The maximum wall thickness of polypropylene material is 40 mm. If thermal conductivity of the material is 0.22 w/mK, density is 946 kg/m^3, Specific heat is 1.68 KJ/Kg.K then find out the time required for cooling of Injection mould.	**04**
	c)	Water entering at 40°C to the cooling system provided to mould is leaving at 60°C. If the total heat absorbed per hour is 20000 kJ, then find out the amount of water circulated per hour (k = 30.5).	**05**

3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) Where should the centre of gravity of the rail section be located?
a) Near to the bottom of the rail
b) Close to the upper portion
c) Close to the mid height
d) Can be anywhere between the section

2) Which of the following is not a component of the rail?
a) Head b) Web
c) Ballast d) Foot

3) Why is the foot made wide?
a) To avoid corrosion b) To avoid overturning
c) For making it cost efficient d) For easy manufacturing

4) Where does maximum lateral wear of rail occur?
a) On curves b) On flat gradient
c) On steep gradient d) Same everywhere

5) What causes wheel burns?
a) Slipping of wheel on rail surface
b) Falling of metal chunks
c) Manufacturing defects
d) High speed

6) The longitudinal movement of the rails in a track is technically known as _____.
a) Buckling b) Hogging
c) Creeping d) Cracking

7) The intrinsic swaying motion appearing in railway vehicles due to the vehicles forward speed and the wheel rail contact is known as _____.
a) Swaging b) Hunting
c) Slipping d) Creeping

8) The self propelled vehicle used for hauling railroad cars on track is _____.
a) Trailer b) Wagons
c) Engine d) Locomotive

9) Which of the following is a cause of derailment of a vehicle?
a) Overturning b) Wheel climbing
c) Displacement of track d) All of the above

10) Which of the following is a type of transversal load acting on track?
a) Axle load b) Wheel weight
c) Guidance force d) None of the above

11) What is the effect of longitudinal acceleration force on wheel set?
a) Tension in front of wheel set and compression behind it.
b) Compression in front of wheel set and tension behind it.
c) Compression on both the sides of wheel set.
d) Tension on both the sides of wheel set.

12) Which of the following is a type of quasi- static vertical load acting on the track?
a) Wheel load b) Car body weight
c) Cross wind d) Daily traffic load

13) The grip between wheel and the rail is known as _____.
a) Traction b) Adhesion
c) Breaking d) Acceleration

14) Which one of the following is used as extra rail to prevent derailment?
a) Stock rail b) Guard rail
c) Tongue rail d) Wing rail

c) Compression on both the sides of wheel set.
d) Tension on both the sides of wheel set.

5) Which of the following is a type of quasi- static vertical load acting on the track?
a) Wheel load b) Car body weight
c) Cross wind d) Daily traffic load

6) The grip between wheel and the rail is known as _____.
a) Traction b) Adhesion
c) Breaking d) Acceleration

7) Which one of the following is used as extra rail to prevent derailment?
a) Stock rail b) Guard rail
c) Tongue rail d) Wing rail

8) Where should the centre of gravity of the rail section be located?
a) Near to the bottom of the rail
b) Close to the upper portion
c) Close to the mid height
d) Can be anywhere between the section

9) Which of the following is not a component of the rail?
a) Head b) Web
c) Ballast d) Foot

10) Why is the foot made wide?
a) To avoid corrosion b) To avoid overturning
c) For making it cost efficient d) For easy manufacturing

11) Where does maximum lateral wear of rail occur?
a) On curves b) On flat gradient
c) On steep gradient d) Same everywhere

12) What causes wheel burns?
a) Slipping of wheel on rail surface
b) Falling of metal chunks
c) Manufacturing defects
d) High speed

13) The longitudinal movement of the rails in a track is technically known as _____.
a) Buckling b) Hogging
c) Creeping d) Cracking

14) The intrinsic swaying motion appearing in railway vehicles due to the vehicles forward speed and the wheel rail contact is known as _____.
a) Swaging b) Hunting
c) Slipping d) Creeping

Set Q

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Railway Transportation System (BTN02611)

Day & Date: Friday,22-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from each section.
2) Figures to the right indicate full marks
3) Assume suitable data if necessary and mention it clearly.

Section – I

Q.2	**a)**	Explain with neat sketch fundamental functional principles of vehicle running on a straight path.	**07**
	b)	Explain the lateral behavior of vehicle with conventional bogies.	**07**
Q.3	**a)**	Explain behavior of single railway wheel set moving in curves.	**07**
	b)	Write short note on distinctive features of railway systems.	**07**
Q.4	**a)**	Define the term derailment of railway vehicle. Explain factors affecting derailment.	**07**
	b)	Describe the term derailment with wheel climb.	**07**

Section – II

Q.5	**a)**	Explain static vertical loads acting on the track.	**07**
	b)	Explain the term forces due to vehicle oscillations.	**07**
Q.6	**a)**	Explain dynamic vertical loads acting on the track.	**07**
	b)	Explain total transversal force acting on the track.	**07**
Q.7	**a)**	With neat sketch explain the concept of longitudinal rail creep forces.	**07**
	b)	Define traction forces and explain different types of it.	**07**

Seat No.		Set	R

T.Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Railway Transportation System (BTN02611)

Day & Date: Friday, 22-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data if necessary and mention it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) What is the effect of longitudinal acceleration force on wheel set?
a) Tension in front of wheel set and compression behind it.
b) Compression in front of wheel set and tension behind it.
c) Compression on both the sides of wheel set.
d) Tension on both the sides of wheel set.

2) Which of the following is a type of quasi- static vertical load acting on the track?
a) Wheel load b) Car body weight
c) Cross wind d) Daily traffic load

3) The grip between wheel and the rail is known as _____.
a) Traction b) Adhesion
c) Breaking d) Acceleration

4) Which one of the following is used as extra rail to prevent derailment?
a) Stock rail b) Guard rail
c) Tongue rail d) Wing rail

5) Where should the centre of gravity of the rail section be located?
a) Near to the bottom of the rail
b) Close to the upper portion
c) Close to the mid height
d) Can be anywhere between the section

d) Cracking

11) The intrinsic swaying motion appearing in railway vehicles due to the vehicles forward speed and the wheel rail contact is known as _____.
a) Swaging
b) Hunting
c) Slipping
d) Creeping

12) The self propelled vehicle used for hauling railroad cars on track is _____.
a) Trailer
b) Wagons
c) Engine
d) Locomotive

13) Which of the following is a cause of derailment of a vehicle?
a) Overturning
b) Wheel climbing
c) Displacement of track
d) All of the above

14) Which of the following is a type of transversal load acting on track?
a) Axle load
b) Wheel weight
c) Guidance force
d) None of the above

3) Figures to the right indicates full marks.
4) Assume data wherever necessary.
5) Use of non-programmable scientific calculator is allowed

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative. **14**

1) The Integral (I) controller mode adjusts the controller output based on the _____.
a) Error between set point and process variable
b) Rate of change of error
c) Accumulated error over time
d) None of the above

2) Which of the following specifications is not a transient response specification?
a) Peak time b) Settling time
c) Rise time d) Bandwidth

3) Which of the following best describes a transfer function?
a) A mathematical representation of a system's input-output relationship
b) A statistical analysis on experimental results
c) A graphical representation of data
d) A descriptive narrative about a scientific concept

4) What is the advantage of on-off control?
a) Precise and accurate control
b) Works well for systems with complex dynamics
c) Easy to implement and cost-effective
d) Handles non-linear processes effectively

5) What does the derivative component of PID control do?
a) Reduces steady state error
b) Minimizes overshoot and oscillations
c) Improves stability
d) Adjusts controller gain

6) In _____ space scheme, the trajectory is specified in terms of end effector configurations.
a) Joint
b) Cartesian
c) Both a and b
d) None of the above

7) Which of the following factors are considered in trajectory planning?
a) Robot's kinematics and dynamics
b) Time and energy consumption
c) Obstacles and workspace constraints
d) All of the above

8) Which of the following sensors can be used for obstacle detection in robotics?
a) Cameras
b) LIDAR
c) Proximity sensors
d) All of the above

9) _____ method of path planning creates a field or gradient across the robot's map that directs the robot to the goal position.
a) Road map
b) Potential field
c) Cell decomposition
d) All of these

10) Which type of actuator is commonly used in applications that require rapid motion and lightweight design?
a) Hydraulic
b) Pneumatic
c) Electric
d) None of the above

11) What is the role of teach pendant in lead through programming?
a) It is a handheld device used to manually control the robot's movement.
b) It is a communication interface that connects the robot to external device.
c) It is a software tool for visualizing and editing robot programs.
d) It is a safety mechanism that stops the robot when an obstacle is detected

12) What is the purpose of considering ergonomics in workcell design?
a) To minimize the footprint of workcell
b) To maximize the productivity of robot
c) To optimize the use of available resources
d) To ensure well-being and safety of human operator

13) What is the primary purpose of AGVs in industrial applications?
a) Quality control and inspection
b) Robotic assembly and welding
c) Material handling and transportation
d) Inventory management

14) What is the primary advantage of mobile robots?
a) Performs tasks in dynamic and changing environments
b) Require minimal maintenance and calibration
c) Less expensive as compared to other robots
d) Have a higher payload capacity

Day & Date: Saturday, 23-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume data wherever necessary.
5) Use of non-programmable scientific calculator is allowed

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Select the correct alternative. **14**

1) In _____ space scheme, the trajectory is specified in terms of end effector configurations.
a) Joint b) Cartesian
c) Both a and b d) None of the above

2) Which of the following factors are considered in trajectory planning?
a) Robot's kinematics and dynamics
b) Time and energy consumption
c) Obstacles and workspace constraints
d) All of the above

3) Which of the following sensors can be used for obstacle detection in robotics?
a) Cameras b) LIDAR
c) Proximity sensors d) All of the above

4) _____ method of path planning creates a field or gradient across the robot's map that directs the robot to the goal position.
a) Road map b) Potential field
c) Cell decomposition d) All of these

5) Which type of actuator is commonly used in applications that require rapid motion and lightweight design?
a) Hydraulic b) Pneumatic
c) Electric d) None of the above

6) What is the role of teach pendant in lead through programming?
a) It is a handheld device used to manually control the robot's movement.
b) It is a communication interface that connects the robot to external device.
c) It is a software tool for visualizing and editing robot programs.
d) It is a safety mechanism that stops the robot when an obstacle is detected

7) What is the purpose of considering ergonomics in workcell design?
a) To minimize the footprint of workcell
b) To maximize the productivity of robot
c) To optimize the use of available resources
d) To ensure well-being and safety of human operator

8) What is the primary purpose of AGVs in industrial applications?
a) Quality control and inspection
b) Robotic assembly and welding
c) Material handling and transportation
d) Inventory management

9) What is the primary advantage of mobile robots?
a) Performs tasks in dynamic and changing environments
b) Require minimal maintenance and calibration
c) Less expensive as compared to other robots
d) Have a higher payload capacity

10) The Integral (I) controller mode adjusts the controller output based on the _____.
a) Error between set point and process variable
b) Rate of change of error
c) Accumulated error over time
d) None of the above

11) Which of the following specifications is not a transient response specification?
a) Peak time
b) Settling time
c) Rise time
d) Bandwidth

12) Which of the following best describes a transfer function?
a) A mathematical representation of a system's input-output relationship
b) A statistical analysis on experimental results
c) A graphical representation of data
d) A descriptive narrative about a scientific concept

13) What is the advantage of on-off control?
a) Precise and accurate control
b) Works well for systems with complex dynamics
c) Easy to implement and cost-effective
d) Handles non-linear processes effectively

14) What does the derivative component of PID control do?
a) Reduces steady state error
b) Minimizes overshoot and oscillations
c) Improves stability
d) Adjusts controller gain

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Industrial Networks and Controllers (BTN02612)

Day & Date: Saturday, 23-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from each section.
2) Figures to the right indicate full marks.
3) Use of non-programmable scientific calculator is allowed.
4) Assume suitable data if necessary and state it clearly.

Section – I

Q.2	**a)**	Draw a generalized block diagram for Robot Joint Control and explain all the components of the same.	**07**
	b)	Draw a block diagram of a control system and explain all the components.	**07**
Q.3	**a)**	Explain the working of the on-off control mode. Enlist its advantages and limitations.	**07**
	b)	What is integral control mode? Explain its working with advantages and limitations.	**07**
Q.4	**a)**	Derive the trajectory equation of cartesian straight-line motion.	**07**
	b)	Enlist obstacle and collision avoidance algorithms. Explain any one of them.	**07**

Section – II

Q.5	**a)**	Distinguish between hydraulic and electric actuators.	**07**
	b)	Draw a block diagram of a DC servomotor and explain its working.	**07**
Q.6	**a)**	How are the robot cell layouts classified? Explain robot-centred cell layout.	**07**
	b)	Discuss in detail walkthrough programming methods of robot.	**07**
Q.7	**a)**	Define AGVs. Discuss any 3 applications of AGVs.	**07**
	b)	How are mobile robots classified? Explain the navigation techniques in mobile robots.	**07**

3) Figures to the right indicates full marks.
4) Assume data wherever necessary.
5) Use of scientific calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) Which additive manufacturing technology uses a digital light projector to cure liquid resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

2) Which additive manufacturing technology extrudes thermoplastic filament layer by layer to build a 3D object?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

3) Which design approach focuses on optimizing the design for efficient manufacturing and assembly?
a) Design for 3D Printing
b) Design for Manufacturing and Assembly
c) Core DFM for 3D Printing
d) Design Tools for 3D Printing

4) What is one of the objectives of Design for 3D Printing?
a) Maximizing production planning and control
b) Minimizing the use of additive manufacturing technologies
c) Optimizing design for efficient manufacturing and assembly
d) Implementing traditional manufacturing techniques in 3D printing

5) Which type of software is used for creating the 3D models that will be printed?
a) Slicing/CAM software
b) Printer Control/Client software
c) 3D Modeling/CAD software
d) Rendering software

6) What is the purpose of slicing software in 3D printing?
   a) Creating 3D models
   b) Controlling the 3D printer
   c) Transforming 3D models into printable instructions
   d) Visualizing the final printed object

7) Which software is responsible for controlling the 3D printer during the printing process?
   a) Slicing/CAM software
   b) Printer Control/Client software
   c) 3D Modeling/CAD software
   d) Simulation software

8) What is the purpose of 3D scanning?
   a) Creating 3D models for virtual reality
   b) Capturing real-world objects and converting them into digital 3D models
   c) Controlling the 3D printer during the printing process
   d) Transforming 2D images into 3D representations

9) Which technology is used to create digital models for 3D printing?
   a) Computer-Aided Design (CAD)
   b) Virtual Reality (VR)
   c) Augmented Reality (AR)
   d) Artificial Intelligence (Al)

10) What is the main advantage of using layers in 3D printing?
   a) It makes the printing process faster
   b) It allows for more precise and complex designs
   c) It reduces the cost of materials
   d) It allows for a smoother surface finish

11) How are 3D printing processes classified?
   a) By the type of material used
   b) By the size of the object being printed
   c) By the number of colors in the design
   d) By the speed of the printing process

12) What is the purpose of software in 3D printing?
   a) To create a physical object from a digital design
   b) To choose the color and texture of the final product
   c) To determine the size and shape of the final product
   d) To program the printer's hardware

13) What is an STL file?
   a) A file format used in 2D printing
   b) A file format used in 3D printing
   c) A file format used in video editing
   d) A file format used in music production

14) Which additive manufacturing technology uses a UV laser to cure photopolymer resin layer by layer?

a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer. **14**

1) How are 3D printing processes classified?
a) By the type of material used
b) By the size of the object being printed
c) By the number of colors in the design
d) By the speed of the printing process

2) What is the purpose of software in 3D printing?
a) To create a physical object from a digital design
b) To choose the color and texture of the final product
c) To determine the size and shape of the final product
d) To program the printer's hardware

3) What is an STL file?
a) A file format used in 2D printing
b) A file format used in 3D printing
c) A file format used in video editing
d) A file format used in music production

4) Which additive manufacturing technology uses a UV laser to cure photopolymer resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

5) Which additive manufacturing technology uses a digital light projector to cure liquid resin layer by layer?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

6) Which additive manufacturing technology extrudes thermoplastic filament layer by layer to build a 3D object?
a) Stereolithography (SLA)
b) Digital Light Processing (DLP)
c) Fused Deposition Modeling (FDM)
d) Selective Laser Sintering (SLS)

7) Which design approach focuses on optimizing the design for efficient manufacturing and assembly?
a) Design for 3D Printing
b) Design for Manufacturing and Assembly
c) Core DFM for 3D Printing
d) Design Tools for 3D Printing

8) What is one of the objectives of Design for 3D Printing?
a) Maximizing production planning and control
b) Minimizing the use of additive manufacturing technologies
c) Optimizing design for efficient manufacturing and assembly
d) Implementing traditional manufacturing techniques in 3D printing

9) Which type of software is used for creating the 3D models that will be printed?
a) Slicing/CAM software
b) Printer Control/Client software

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct answer: **14**

1) The mean temperature of heat addition can be increased by _____.
a) increasing the amount of heat supplied at high temperatures
b) decreasing the amount of heat added at low temperatures
c) both of the mentioned
d) none of the mentioned

2) Which cycle is idealized cycle for the spark ignition internal combustion engines?
a) Otto cycle b) Diesel cycle
c) Dual cycle d) Bryton cycle

3) In diesel cycle heat rejection occurs at _____.
a) Reversible constant volume process
b) Reversible constant pressure process
c) Irreversible constant volume process
d) Irreversible constant pressure process

4) Which of the following energy has the greatest potential among all the sources of renewable energy?
a) Solar energy b) Wind Energy
c) Thermal energy d) Hydro-electrical energy

5) What is total amount of solar energy received by earth and atmosphere?
a) 3.8 X 1024 J/year b) 9.2 X 1024 J/year
c) 5.4 X 1024 J/year d) 2.1 X 1024 J/year

6) Which is most common source of energy from which electricity is produced?
a) Hydroelectricity b) Wind energy
c) Coal d) Solar energy

7) Thermocouple is a _____.
a) Primary device b) Secondary transducer
c) Tertiary transducer d) None of the mentioned

8) Which of the following element is used as a thermocouple in nuclear reactor?
a) Boron b) Platinum
c) Copper d) Iron

9) Which of the following converts' energy from the combustion of fuel directly to the electrical energy?
a) Ni-Cd cell b) Dynamo
c) Fuel cell d) Electrolytic cell

10) Which of the following is continuously replaced in a fuel cell?
a) Oxidiser b) Fuel
c) Both fuel and oxidizer d) None of the above

11) Operation of thermocouple Is governed by _____.
a) Peltier effect b) Seebeck effect
c) Thomson effect d) All of the mentioned

12) The term photo voltaic comes from _____.
a) Spanish b) Greek
c) German d) English

13) When the source of light is not sun light then the photo voltaic cell is used as _____.
a) Photo diode b) Photo voltaic cell
c) Photo detector d) Photo transmitter

14) The region where the electrons and holes diffused across the junction is called _____.
a) Depletion Junction b) Depletion region
c) Depletion space d) Depletion boundary

Set P

T. Y. (B. Tech) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Energy Conversion Systems (BTN02614)

Day & Date: Saturday, 23-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each Section.
2) Assume suitable data if required.
3) Use of scientific calculator is allowed.

Section – I

Q.2 Solve:
a) Drive an expression of Carnot cycle. **07**
b) Drive an expression of Brayton cycle. **07**

Q.3 Solve:
a) Classify in details of different types of Batteries. **07**
b) Explain in details construction and working of Lithium Ion Batteries. **07**

Q.4 Solve:
a) Describe Thermionic convertor with neat sketches. **07**
b) Write a short note on types of Thermoelectric Convertor. **07**

Section – II

Q.5 Solve:
a) Describe the Application, Advantages & Drawbacks of Fuel cells. **07**
b) Write Short note on Performance of Fuel cell. **07**

Q.6 Solve:
a) What are different types of energy storage technologies. Explain mechanical energy storage technology with neat sketch. **07**
b) Write short note on Electrical Energy. **07**

Q.7 Solve:
a) Explain Construction and working of solar cell with neat sketch. **07**
b) Describe in details Construction and working of solar photovoltaic cell. **07**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Objective Type. (Each question carries one mark) **14**

1) Number of cells connected in series provide a _____.
a) High current carrying capacity b) Higher Voltage
c) Higher power d) None of the above

2) Specific Gravity of an electrolyte in a single cell or a battery is always _____.
a) Equal to 1.0 b) Greater than 1.0
c) Less than 1.0 d) None of the above

3) Storage batteries are rated according to _____.
a) Ambient Temperature b) Discharge Rate
c) a and b d) None of the above

4) _____ avoids the direct contact of the positive and negative plate in a lithium-ion battery?
a) Electrolyte b) Separator
c) Load d) Rectifier

5) Which is the electrolyte used in Li-ion battery?
a) Lead dioxide b) Lithium-based gel
c) Sulfur dioxide d) Cobalt

6) Which of the following statement is true for the movement of electrons concerning the direction of current?
a) Same as the direction of current
b) Opposite direction of current
c) Does not depend on the direction of current
d) No movement of electrons

7) It is noticed that during charging _____.
a) There is a rise in voltage
b) Energy is absorbed by the cell
c) Specific gravity of H_2SO_4 is increased
d) All of the above

8) Overcharging _____.
a) Produces excessive gassing
b) Loosens the active material
c) Increases the temperature resulting in buckling of plates
d) All of the above

9) Under charging _____.
a) Reduces specific gravity of the electrolyte
b) Increases specific gravity of the electrolyte
c) Produces excessive gassing
d) Increases the temperature

10) Each cell has a vent cap _____.
a) To allow gases out when the cell is on charge
b) To add water to the cell if needed
c) To check the level of electrolyte
d) To do all above functions

11) Cell short circuit results in _____.
a) Low specific gravity electrolyte b) Abnormal high-temperature
c) Reduced gassing on charge d) All of the above

12) Internal resistance of a cell is reduced to by _____.
a) Using vent plug to permit gas formed during discharge
b) Increasing the plate area
c) Putting plates very close together
d) All of the above

13) Which of the following circuit is used for cooling of the lithium-ion battery?
a) Air conditioning b) Heater circuit
c) Ignition circuit d) EGR circuit

14) What is the maximum operating temperature in degree centigrade above which the lithium-ion battery should not be operated?
a) 10 b) 20
c) 30 d) 40

a) High current carrying capacity b) Higher Voltage
c) Higher power d) None of the above

6) Specific Gravity of an electrolyte in a single cell or a battery is always _____.
a) Equal to 1.0 b) Greater than 1.0
c) Less than 1.0 d) None of the above

7) Storage batteries are rated according to _____.
a) Ambient Temperature b) Discharge Rate
c) a and b d) None of the above

8) _____ avoids the direct contact of the positive and negative plate in a lithium-ion battery?
a) Electrolyte b) Separator
c) Load d) Rectifier

9) Which is the electrolyte used in Li-ion battery?
a) Lead dioxide
b) Lithium-based gel
c) Sulfur dioxide
d) Cobalt

10) Which of the following statement is true for the movement of electrons concerning the direction of current?
a) Same as the direction of current
b) Opposite direction of current
c) Does not depend on the direction of current
d) No movement of electrons

11) It is noticed that during charging _____.
a) There is a rise in voltage
b) Energy is absorbed by the cell
c) Specific gravity of H_2SO_4 is increased
d) All of the above

12) Overcharging _____.
a) Produces excessive gassing
b) Loosens the active material
c) Increases the temperature resulting in buckling of plates
d) All of the above

13) Under charging _____.
a) Reduces specific gravity of the electrolyte
b) Increases specific gravity of the electrolyte
c) Produces excessive gassing
d) Increases the temperature

14) Each cell has a vent cap _____.
a) To allow gases out when the cell is on charge
b) To add water to the cell if needed
c) To check the level of electrolyte
d) To do all above functions

T.Y. (B.Tech.) (Sem-II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Battery Technology and Charging Infrastructure (BTN02615)

Day & Date: Saturday, 23-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Question 1 is objective type and is compulsory.
2) Solve any two questions from Section-I and Section-II.
3) Figures to the right indicates full marks.

Section – I

Q.2 **a)** **Define the following:** **07**
1) State of charge
2) C-Rate
3) Specific Energy Density
4) Life cycles
5) Depth of Discharge
6) Usable capacity
7) Energy capacity

b) Explain parameters for EV battery selection. **07**

Q.3 **a)** Explain LMO and LTO battery chemistries. **07**
b) Explain various cell failures. **07**

Q.4 **a)** Explain Lithium-Polymer battery with neat sketch. **07**
b) Explain Lithium-air battery with neat sketch. **07**

Section – II

Q.5 **a)** Explain Battery Pack Development Process. **07**
b) Explain forces acting on battery pack with neat sketch. **07**

Q.6 **a)** Explain battery pack temperature considerations. **07**
b) Explain why thermal management of battery pack is important. **07**

Q.7 **a)** Explain battery leasing charges and investment by EO. **07**
b) Explain on-board, off-board chargers and slow and fast chargers. **07**

T.Y. (B.Tech.) (Sem - II) (New) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Battery Technology and Charging Infrastructure (BTN02615)

Day & Date: Saturday, 23-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book. Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Objective Type. (Each question carries one mark) **14**

1) Which of the following statement is true for the movement of electrons concerning the direction of current?
a) Same as the direction of current
b) Opposite direction of current
c) Does not depend on the direction of current
d) No movement of electrons

2) It is noticed that during charging _____.
a) There is a rise in voltage
b) Energy is absorbed by the cell
c) Specific gravity of H_2SO_4 is increased
d) All of the above

3) Overcharging _____.
a) Produces excessive gassing
b) Loosens the active material
c) Increases the temperature resulting in buckling of plates
d) All of the above

4) Under charging _____.
a) Reduces specific gravity of the electrolyte
b) Increases specific gravity of the electrolyte
c) Produces excessive gassing
d) Increases the temperature

5) Each cell has a vent cap _____.
a) To allow gases out when the cell is on charge
b) To add water to the cell if needed
c) To check the level of electrolyte
d) To do all above functions

6) Cell short circuit results in _____.
a) Low specific gravity electrolyte b) Abnormal high-temperature
c) Reduced gassing on charge d) All of the above

7) Internal resistance of a cell is reduced to by _____.
a) Using vent plug to permit gas formed during discharge
b) Increasing the plate area
c) Putting plates very close together
d) All of the above

8) Which of the following circuit is used for cooling of the lithium-ion battery?
a) Air conditioning b) Heater circuit
c) Ignition circuit d) EGR circuit

9) What is the maximum operating temperature in degree centigrade above which the lithium-ion battery should not be operated?
a) 10 b) 20
c) 30 d) 40

10) Number of cells connected in series provide a _____.
a) High current carrying capacity b) Higher Voltage
c) Higher power d) None of the above

11) Specific Gravity of an electrolyte in a single cell or a battery is always _____.
a) Equal to 1.0 b) Greater than 1.0
c) Less than 1.0 d) None of the above

12) Storage batteries are rated according to _____.
a) Ambient Temperature b) Discharge Rate
c) a and b d) None of the above

13) _____ avoids the direct contact of the positive and negative plate in a lithium-ion battery?
a) Electrolyte b) Separator
c) Load d) Rectifier

14) Which is the electrolyte used in Li-ion battery?
a) Lead dioxide b) Lithium-based gel
c) Sulfur dioxide d) Cobalt

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) The product of diametric pitch and circular pitch is equal to _____.
a) 2π b) $2/\pi$
c) π d) None of the above

2) The breakdown of the oil film in gear causes _____.
a) Abrasive wear b) Destructive pitting
c) Scoring d) Creep

3) Dynamic load acting on a gear depends upon _____.
a) Tooth error b) Number of teeth
c) Speed d) All of the above

4) In helical gears, the distance between similar faces of adjacent teeth along a helix on the pitch cylinders normal to the teeth, is called _____.
a) Normal pitch b) Axial pitch
c) Diametric pitch d) Module

5) For designing a cylinder with ductile material having both ends open _____.
a) Clavarino's equation is used b) Birnies equation is used
c) Lame's equation is used d) Any equation can be used

6) A cylinder is considered thin when the ratio of its inner diameter to wall thickness is _____.
a) less than 15 b) more than 15
c) more than 20 d) less than 20

7) When the design tolerance is slightly greater than $(\pm 3\hat{\sigma})$?
a) the percentage of rejected components is inevitable
b) there is virtually no rejection provided that the manufacturing process is centred
c) there is no rejection even if the manufacturing process is slightly off-center
d) none of the above

8) The bevel factor is given as _____.
a) $\mathrm{b/L}$ b) $\mathrm{b/2L}$
c) $1 - \mathrm{b/2L}$ d) $1 - \mathrm{b/L}$

9) When bevel gears having equal teeth and equal pitch angles connect two shafts intersecting at 90° then they are known as _____.

a) Angular bevel gears b) Crown bevel gears
c) Internal bevel gears d) Mitre gears

10) The worm wheel should be _____.

a) Embeddable and conformable b) Hard and conformable
c) Hard and embeddable d) None of the above

11) Number of starts on the worm depends upon _____.

a) Speed of the worm b) Speed of the worm wheel
c) Velocity reduction d) Number of teeth on the worm wheel

12) In a bearing no. 6205, the digit 2 designates _____.

a) Bore size b) Series of bearing
c) Type of bearing d) None of these

13) The reliability of ball bearings for rated life is _____.

a) 50% b) 90%
c) 99% d) 10%

14) When length of bearing is greater than the diameter of the journal it is called as _____.

a) Short bearing b) Long bearing
c) Square bearing d) All of these

Seat No.		Set	P

MECHANICAL ENGINEERING
Machine Design – II (197041601)

Day & Date: Monday 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any Two questions from each section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions wherever necessary and state them clearly.
4) Draw neat diagram wherever necessary.

Section – I

Q.2 **a)** Differentiate between Spur gears and Helical Gears **03**

b) Outline the various types of gear tooth failures and explain the causes and remedies for the same. **04**

c) A pair of parallel helical gears consists of a 20 teeth pinion meshing with a 100 teeth gear. The pinion rotates at 720 rpm. The normal pressure angle is 20°, while the helix angle is 25°. The face width is 40 mm and the normal module is 4 mm. The pinion as well as the gear is made of steel 40C8 (Sut = 600 N/mm^2) and heat treated to a surface hardness of 300 BHN. The service factor and the factor of safety are 1.5 and 2 respectively. Assume that the velocity factor accounts for the dynamic load and calculate the power transmitting capacity of gears. Y27 = 0.3475. **07**

Q.3 **a)** It is required to design a pair of spur gears with 20° full-depth involute teeth based on the Lewis equation. The velocity factor is to be used to account for dynamic load. The pinion shaft is connected to a 10 kW, 1440 rpm motor. The starting torque of the motor is 150% of the rated torque. The speed reduction is 4:1. The pinion as well as the gear is made of plain carbon steel 40C8 (Sut = 600 N/mm^2). The factor of safety can be taken as 1.5. Design the gears, specify their dimensions. Assume number of teeth on pinion as 18. **07**

b) The piston rod of a hydraulic cylinder exerts an operating force of 10 kN. The friction due to piston packing and stuffing box is equivalent to 10% of the operating force. The pressure in the cylinder is 10 MPa. The cylinder is made of cast iron FG200 and the factor of safety is 5. Determine the diameter and the thickness of the cylinder. **04**

c) Explain types of end closures. **03**

Q.4 **a)** It has been observed from a sample of 200 bearing bushes that the internal diameters are normally distributed with a mean of 30.010 mm and a standard deviation of 0.008 mm. The upper and lower limits for the internal diameter, as specified by the designer, are 30.02 and 30.00 mm respectively. Calculate the percentage of rejected bushes. **07**

b) What do you mean by Autofrettage? Explain the methods of autofrettage. **05**

c) Define Beam Strength and Wear Strength for spur gears. **02**

Section – II

Q.5 **a)** A pair of bevel gears transmitting 7.5 kW at 300 rpm having pitch circle diameters of pinion and gear as 200 mm and 150 mm. The face width is 40 mm. The pressure angle is 20°. Determine the components of the resultant gear tooth force and draw a free-body diagram of forces acting on the pinion and the gear. **07**

b) Derive expression for beam strength of bevel gear. **07**

Q.6 **a)** A pair of worm and worm wheel is designated as 3/60/10/6. The worm is transmitting 5 kW power at 1440 rpm to the worm wheel. The coefficient of friction is 0.1 and the normal pressure angle is 20°. Determine the components of the gear tooth force acting on the worm and the worm wheel. **07**

b) Derive expression for efficiency of worm gear drive. **04**

c) Explain the working principle of Hydrodynamic Journal Bearing **03**

Q.7 **a)** Explain the procedure for selection of bearing from Manufacturers catalogue. **04**

b) A single-row deep groove ball bearing has a dynamic load capacity of 40500 N and operates on the following work cycle: **06**

i) radial load of 5000 N at 500 rpm for 25% of the time;

ii) radial load of 10000 N at 700 rpm for 50% of the time;

iii) radial load of 7000 N at 400 rpm for the remaining 25% of the time.

Calculate the expected life of the bearing in hours.

c) Write a short note on Bearing materials for sliding contact bearings. **04**

Assume number of teeth on pinion as 18. **07**

b) The piston rod of a hydraulic cylinder exerts an operating force of 10 kN. The friction due to piston packing and stuffing box is equivalent to 10% of the operating force. The pressure in the cylinder is 10 MPa. The cylinder is made of cast iron FG200 and the factor of safety is 5. Determine the diameter and the thickness of the cylinder. **04**

c) Explain types of end closures. **03**

Q.4 **a)** It has been observed from a sample of 200 bearing bushes that the internal diameters are normally distributed with a mean of 30.010 mm and a standard deviation of 0.008 mm. The upper and lower limits for the internal diameter, as specified by the designer, are 30.02 and 30.00 mm respectively. Calculate the percentage of rejected bushes. **07**

b) What do you mean by Autofrettage? Explain the methods of autofrettage. **05**

c) Define Beam Strength and Wear Strength for spur gears. **02**

Section – II

Q.5	**a)**	A pair of bevel gears transmitting 7.5 kW at 300 rpm having pitch circle diameters of pinion and gear as 200 mm and 150 mm. The face width is 40 mm. The pressure angle is 20°. Determine the components of the resultant gear tooth force and draw a free-body diagram of forces acting on the pinion and the gear.	**07**
	b)	Derive expression for beam strength of bevel gear.	**07**
Q.6	**a)**	A pair of worm and worm wheel is designated as 3/60/10/6. The worm is transmitting 5 kW power at 1440 rpm to the worm wheel. The coefficient of friction is 0.1 and the normal pressure angle is 20°. Determine the components of the gear tooth force acting on the worm and the worm wheel.	**07**
	b)	Derive expression for efficiency of worm gear drive.	**04**
	c)	Explain the working principle of Hydrodynamic Journal Bearing	**03**
Q.7	**a)**	Explain the procedure for selection of bearing from Manufacturers catalogue.	**04**
	b)	A single-row deep groove ball bearing has a dynamic load capacity of 40500 N and operates on the following work cycle: i) radial load of 5000 N at 500 rpm for 25% of the time; ii) radial load of 10000 N at 700 rpm for 50% of the time; iii) radial load of 7000 N at 400 rpm for the remaining 25% of the time. Calculate the expected life of the bearing in hours.	**06**
	c)	Write a short note on Bearing materials for sliding contact bearings.	**04**

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Machine Design – II (197041601)

Day & Date: Monday 18-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in Answer Book Page No.3 (starting page of the Answer Book). Each question carry one mark.
2) Don't forget to mention Question Paper Set (P/Q/R/S) at the top of the same page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions wherever necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct alternatives from the options. 14

1) A cylinder is considered thin when the ratio of its inner diameter to wall thickness is _____.
a) less than 15 b) more than 15
c) more than 20 d) less than 20

2) When the design tolerance is slightly greater than $(\pm 3\hat{\sigma})$?
a) the percentage of rejected components is inevitable
b) there is virtually no rejection provided that the manufacturing process is centred
c) there is no rejection even if the manufacturing process is slightly off-center
d) none of the above

3) The bevel factor is given as _____.
a) $\mathrm{b/L}$ b) $\mathrm{b/2L}$
c) $1 - \mathrm{b/2L}$ d) $1 - \mathrm{b/L}$

4) When bevel gears having equal teeth and equal pitch angles connect two shafts intersecting at 90° then they are known as _____.
a) Angular bevel gears b) Crown bevel gears
c) Internal bevel gears d) Mitre gears

5) The worm wheel should be _____.
a) Embeddable and conformable b) Hard and conformable
c) Hard and embeddable d) None of the above

6) Number of starts on the worm depends upon _____.
a) Speed of the worm b) Speed of the worm wheel
c) Velocity reduction d) Number of teeth on the worm wheel

7) In a bearing no. 6205, the digit 2 designates _____.
a) Bore size b) Series of bearing
c) Type of bearing d) None of these

8) The reliability of ball bearings for rated life is _____.

a) 50% b) 90%
c) 99% d) 10%

9) When length of bearing is greater than the diameter of the journal it is called as _____.

a) Short bearing b) Long bearing
c) Square bearing d) All of these

10) The product of diametric pitch and circular pitch is equal to _____.

a) 2π b) $2/\pi$
c) π d) None of the above

11) The breakdown of the oil film in gear causes _____.

a) Abrasive wear b) Destructive pitting
c) Scoring d) Creep

12) Dynamic load acting on a gear depends upon _____.

a) Tooth error b) Number of teeth
c) Speed d) All of the above

13) In helical gears, the distance between similar faces of adjacent teeth along a helix on the pitch cylinders normal to the teeth, is called _____.

a) Normal pitch b) Axial pitch
c) Diametric pitch d) Module

14) For designing a cylinder with ductile material having both ends open _____.

a) Clavarino's equation is used b) Birnies equation is used
c) Lame's equation is used d) Any equation can be used

Seat No.		Set	S

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Machine Design – II (197041601)

Day & Date: Monday 18-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any Two questions from each section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions wherever necessary and state them clearly.
4) Draw neat diagram wherever necessary.

Section – I

Q.2 **a)** Differentiate between Spur gears and Helical Gears **03**

b) Outline the various types of gear tooth failures and explain the causes and remedies for the same. **04**

c) A pair of parallel helical gears consists of a 20 teeth pinion meshing with a 100 teeth gear. The pinion rotates at 720 rpm. The normal pressure angle is 20°, while the helix angle is 25°. The face width is 40 mm and the normal module is 4 mm. The pinion as well as the gear is made of steel 40C8 (Sut = 600 N/mm^2) and heat treated to a surface hardness of 300 BHN. The service factor and the factor of safety are 1.5 and 2 respectively. Assume that the velocity factor accounts for the dynamic load and calculate the power transmitting capacity of gears. Y27 = 0.3475. **07**

Q.3 **a)** It is required to design a pair of spur gears with 20° full-depth involute teeth based on the Lewis equation. The velocity factor is to be used to account for dynamic load. The pinion shaft is connected to a 10 kW, 1440 rpm motor. The starting torque of the motor is 150% of the rated torque. The speed reduction is 4:1. The pinion as well as the gear is made of plain carbon steel 40C8 (Sut = 600 N/mm^2). The factor of safety can be taken as 1.5. Design the gears, specify their dimensions. Assume number of teeth on pinion as 18. **07**

b) The piston rod of a hydraulic cylinder exerts an operating force of 10 kN. The friction due to piston packing and stuffing box is equivalent to 10% of the operating force. The pressure in the cylinder is 10 MPa. The cylinder is made of cast iron FG200 and the factor of safety is 5. Determine the diameter and the thickness of the cylinder. **04**

c) Explain types of end closures. **03**

Q.4 **a)** It has been observed from a sample of 200 bearing bushes that the internal diameters are normally distributed with a mean of 30.010 mm and a standard deviation of 0.008 mm. The upper and lower limits for the internal diameter, as specified by the designer, are 30.02 and 30.00 mm respectively. Calculate the percentage of rejected bushes. **07**

b) What do you mean by Autofrettage? Explain the methods of autofrettage. **05**

c) Define Beam Strength and Wear Strength for spur gears. **02**

Section – II

Q.5	**a)**	A pair of bevel gears transmitting 7.5 kW at 300 rpm having pitch circle diameters of pinion and gear as 200 mm and 150 mm. The face width is 40 mm. The pressure angle is 20°. Determine the components of the resultant gear tooth force and draw a free-body diagram of forces acting on the pinion and the gear.	**07**
	b)	Derive expression for beam strength of bevel gear.	**07**
Q.6	**a)**	A pair of worm and worm wheel is designated as 3/60/10/6. The worm is transmitting 5 kW power at 1440 rpm to the worm wheel. The coefficient of friction is 0.1 and the normal pressure angle is 20°. Determine the components of the gear tooth force acting on the worm and the worm wheel.	**07**
	b)	Derive expression for efficiency of worm gear drive.	**04**
	c)	Explain the working principle of Hydrodynamic Journal Bearing	**03**
Q.7	**a)**	Explain the procedure for selection of bearing from Manufacturers catalogue.	**04**
	b)	A single-row deep groove ball bearing has a dynamic load capacity of 40500 N and operates on the following work cycle: i) radial load of 5000 N at 500 rpm for 25% of the time; ii) radial load of 10000 N at 700 rpm for 50% of the time; iii) radial load of 7000 N at 400 rpm for the remaining 25% of the time. Calculate the expected life of the bearing in hours.	**06**
	c)	Write a short note on Bearing materials for sliding contact bearings.	**04**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. **14**

1) In a rotameter, the flow is inferred from _____.
a) Force balance on float b) Direction of flow
c) Position of float d) Colour change

2) Which temperature sensor operates on the principle of Seebeck effect?
a) Thermocouple b) RTD
c) Thermistor d) All of the above

3) Which of the following temperature scale is based on the freezing point and boiling point of water at standard atmospheric pressure?
a) Centigrade and Fahrenheit b) Kelvin and Rankine
c) Thermodynamic d) International

4) An LVDT is a type of _____.
a) Analog-to-Digital converter b) Capacitive sensor
c) Digital-to-Analog converter d) Inductive Sensor

5) A hot wire anemometer measure _____.
a) Temperature b) Pressure
c) Flow velocity d) Humidity

6) In a hydraulic load cell, the load is applied on _____.
a) Piston b) Diaphragm
c) Bellows d) None of the above

7) Which of the following devices is used to measure force based on the deformation of a circular ring?
a) Strain gauge b) Dynamometer
c) Proving ring d) Pneumatic load cell

8) An example of open-loop control system is _____.
a) Automatic washing machine
b) Thermostat-controlled heating system
c) Cruise control in a car
d) None of the above

9) In the block diagram reduction technique, the transfer function of series-connected blocks can be obtained by _____.
a) Adding the transfer functions
b) Subtracting the transfer functions
c) Multiplying the transfer functions
d) Dividing the transfer functions

10) The derivative (D) controller mode adjusts the controller output based on the _____.
a) Error between Set point and process variable
b) Accumulated error over time
c) Rate of change of the error
d) None of the above

11) Angle of departure in a root locus is to be calculated if a system has _____.
a) Real Poles b) Real Zeros
c) Complex Conjugate Poles d) Complex Conjugate Zeros

12) If a system has 3 asymptotes, then the angle of asymptotes are _____.
a) 60°, 180° and 300° b) 90°, 180° and 270°
c) 30°, 150° and 270° d) 0°, 180° and 360°

13) A bode plot is a graphical representation of _____.
a) Magnitude and Phase of the frequency response
b) Time response of a system
c) Impulse response of a system
d) None of the above

14) In the magnitude plot, the slope changes at _____.
a) Gain crossover frequency b) Phase crossover frequency
c) Every corner frequency d) Zero dB magnitude

c) 30°, 150° and 270° d) 0°, 180° and 360°

8) A bode plot is a graphical representation of _____.
a) Magnitude and Phase of the frequency response
b) Time response of a system
c) Impulse response of a system
d) None of the above

9) In the magnitude plot, the slope changes at _____.
a) Gain crossover frequency b) Phase crossover frequency
c) Every corner frequency d) Zero dB magnitude

10) In a rotameter, the flow is inferred from _____.
a) Force balance on float b) Direction of flow
c) Position of float d) Colour change

11) Which temperature sensor operates on the principle of Seebeck effect?
a) Thermocouple b) RTD
c) Thermistor d) All of the above

12) Which of the following temperature scale is based on the freezing point and boiling point of water at standard atmospheric pressure?
a) Centigrade and Fahrenheit b) Kelvin and Rankine
c) Thermodynamic d) International

13) An LVDT is a type of _____.
a) Analog-to-Digital converter b) Capacitive sensor
c) Digital-to-Analog converter d) Inductive Sensor

14) A hot wire anemometer measure _____.
a) Temperature b) Pressure
c) Flow velocity d) Humidity

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Instrumentation & Control (197041602)

Day & Date: Tuesday,19-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from each section.
2) Figures to the right indicate full marks.
3) Use of a non-programmable scientific calculator is allowed.
4) Assume suitable data if necessary and state it clearly.
5) Use university graph paper and semi-log paper if required.

Section – I

Q.2 **a)** Explain with a neat diagram, the function of each element in the generalized measurement system. **07**

b) Discuss in detail the working of the Pneumatic Load cell with a neat diagram. **07**

Q.3 **a)** Explain with a neat diagram, the working of the Potentiometer. **07**

b) Derive the expression for the Gauge factor of the resistance strain gauge. **07**

Q.4 **a)** Discuss the working of a Hot wire anemometer with their modes of operation. **07**

b) Explain the construction and working of RTD. **07**

Section – II

Q.5 **a)** Explain the PI control mode, stating its characteristics. **07**

b) Sketch the root locus for system with unity feedback transfer function. **07**

$$G(s)H(s) = \frac{K(s+4)}{s(s^2+2s+2)}$$

Comment on the stability of the system.

Q.6 **a)** Discuss the rules to construct the root locus. **07**

b) For the unity feedback system with open-loop transfer function given by. **07**

$$G(s) = \frac{50}{s(s+2)(s+10)}$$

Sketch Bode Plot. Determine gain crossover frequency, phase crossover frequency, gain margin and phase margin.

Q.7 **a)** Explain the nature of Bode Plots for system gain "K". **07**

b) Determine the overall transfer function of the system shown in fig. given below using block diagram reduction rules. **07**

Heat Transfer (197041603)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No.1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Assume suitable data wherever necessary.
5) Use of non-programmable calculator, table, psychrometry chart are allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Choose the correct option from the following. **14**

1) Heat transfer from higher temperature to low temperature takes place according to _____.
a) Fourier law
b) First law of thermodynamics
c) Second law of thermodynamics
d) None of these

2) _____number is generally associated with natural convection heat transfer.
a) Prandtl b) Grashoff
c) Nusselt d) None of these

3) An automobile radiator is _____ type of heat exchanger.
a) Parallel flow b) Counter flow
c) Cross flow d) None of these

4) Lumped parameter analysis for transient heat condition is essentially valid for____.
a) Bi < 0.1 b) 0.1 < Bi < 0.5
c) 1 < Bi < 10 d) None of above

5) Heat transfer by radiation is encountered least in: _____.
a) Boiler furnace b) insulated steam pipe
c) electric bulb d) None of these

6) As the temperature increases the thermal conductivity of gas, _____.
a) increases b) decreases
c) remains constant d) none of these

7) When heat is Transferred by molecular collision, it is referred to as heat transfer by _____.
a) conduction b) convection
c) motion d) none of these

8) The concept of overall coefficient of heat transfer is used in heat transfer problems of _____.

a) conduction b) convection
c) conduction and convection d) all the three combined

9) Which of the following has maximum value of thermal conductivity?

a) aluminium b) wood
c) plastic d) none

10) Heat transfer by radiation mainly depends upon _____.

a) its temperature b) nature of the body
c) kind and extent of its surface d) all of the above

11) A perfect black body is one which _____.

a) is black in colour
b) reflects all heat
c) transmits all heat radiations
d) absorbs heat radiations of all wave lengths falling on it

12) Log mean temperature difference in case of counter flow compared to parallel flow will be _____.

a) same b) more
c) less d) depends on other factors

13) Stefan Boltzmann law is applicable for heat transfer by _____.

a) conduction
b) convection
c) radiation
d) conduction and radiation combined

14) A perfect black body is one which _____.

a) is black in colour
b) reflects all heat
c) transmits all heat radiations
d) absorbs heat radiations of all wave lengths falling on it

Heat Transfer (197041603)

Day & Date: Wednesday, 20-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Attempt any two questions from each section.
2) Figures to the right indicate full marks.
3) Assume suitable data wherever necessary.
4) Use of non-programmable calculator, table, psychrometry chart are allowed.

Section – I

Q.2 Attempt the following questions.

a) Define thermal conductivity. What are its units? Explain the effect of temperature on conductivity of solids. **04**

b) Derive an expression for steady state one dimensional heat flow through the hollow cylinder without heat generation. **05**

c) An exterior wall of a house consists of a 10.16 cm layer of common brick having thermal conductivity 0.7 W/mK. It is followed by a 3.8 cm layer of gypsum plaster with thermal conductivity 0.48 W/mK, What thickness of loosely packed rockwool insulation (k = 0.065 W/mK) should be added to reduce the heat loss through the wall by 80%? **05**

Q.3 Attempt the following questions.

a) Define fin efficiency and fin effectiveness and explain the effect of Biot number on the effectiveness of fin. **06**

b) A pin-fin 2.5 mm diameter is made of copper (k = 396 W/mK). It protrudes from a wall maintained at 95°C and placed in 25°C air. The convective heat transfer coefficient over the fin is 10 W/m^2K. Calculate the heat loss for the fin length 25 mm. **08**

Q.4 Attempt the following questions.

a) Using the dimensional analysis, for natural convection heat transfer, show that $N_u = f(G_r, P_r)$. **06**

b) Water is heated while flowing through 1.5 cm × 3.5 cm rectangular tube at velocity of 1.2 m/s. The inlet temperature of water is 40°C and tube wall is maintained at 80°C. Determine the length of tube required to raise temperature of water by 35°C, Use the following properties of water at T_{bm}. Density = 985.5 kg/m^3, Conductivity = 0.653 W/mK, kinematic viscosity = 0.517×10^{-6} m^2/s, specific heat = 4.19 kJ/kg K,
Use the correlation: $Nu = 0.023\ Re^{0.8}\ Pr^{0.33}$ **08**

Section – II

Q.5 Attempt the following.

a) Explain the concept of velocity boundary layer and thermal boundary layer with the help of neat sketch. **06**

b) Calculate the heat transfer coefficient for water flowing through 25 mm diameter tube at the rate of 1.5 kg/s, when Tbm = 40°C for a turbulent flow of liquid. Use the correlation: $Nu = 0.0243\ Re^{0.3}Pr^{0.4}$ **08**

Q.6 Attempt the following questions.

a) State Plancks law of radiation and hence derive Wiens displacement law. **06**

b) The filament of 7.5 W light bulb may be considered a black body radiating into a black enclosure at 70°C. The filament diameter is 0.1 mm and length are 50 mm. Considering the radiation, determine the filament temperature. **08**

Q.7 Attempt the following questions.

a) Explain the pool boiling curve with the help of neat sketch. **06**

b) Derive the relation for logarithmic mean temperature difference (LMTD) for counter flow heat exchanger. **08**

b) Calculate the heat transfer coefficient for water flowing through 25 mm diameter tube at the rate of 1.5 kg/s, when Tbm = 40°C for a turbulent flow of liquid. Use the correlation: $Nu = 0.0243\ Re^{0.3}Pr^{0.4}$ **08**

Q.6 Attempt the following questions.

a) State Plancks law of radiation and hence derive Wiens displacement law. **06**

b) The filament of 7.5 W light bulb may be considered a black body radiating into a black enclosure at 70°C. The filament diameter is 0.1 mm and length are 50 mm. Considering the radiation, determine the filament temperature. **08**

Q.7 Attempt the following questions.

a) Explain the pool boiling curve with the help of neat sketch. **06**

b) Derive the relation for logarithmic mean temperature difference (LMTD) for counter flow heat exchanger. **08**

T.Y. (B.Tech.) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Industrial & Quality Management (197041604)

Day & Date: Thursday, 21-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Assume suitable data if necessary.
4) Draw neat, suitable diagrams whenever required.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks: 14

Q.1 Solve MCQs (Each Correct answer-1 Mark) **14**

1) The Quality depends upon the _____ of a person in a given situations.
a) Vision b) Perspective
c) Standards of situation d) Thinking

2) In _____ style (referred to as impoverished management), managers concern themselves very little with either people or production and have minimum involvement in their jobs.
a) 1.1 b) 1.9
c) 9.9 d) 9.1

3) PDCA stands for _____.
a) Production, Duty, Cycle and Act
b) Plan, Design, Check and Act
c) Plan, Do, Check and Act
d) Production, Do, Check and Act

4) The consecutive points of variation on X or R chart tend to move steadily towards LCL or UCL the pattern of variation is called as _____.
a) Extreme b) Shifts
c) Trend d) Erratic Fluctuations

5) Six Sigma implies _____.
a) A statistical method
b) Teams are effective
c) 3 defects per million in output
d) A trouble-shooting method

6) QFD is a method for _____.
a) Controlling quality in production
b) Finding out what customer wants
c) Translating customer needs to product specifications
d) None of the above

7) Cause and Effect Diagram is also called as _____.
a) Pareto diagram b) Fishbone diagram
c) Histogram d) Scatter diagram

8) The Producer's risk is denoted by _____.
a) λ b) β
c) α d) ρ

9) Territorial departmentation is especially attractive to _____ firms.
a) Medium Scale b) Small Scale
c) All d) Large Scale

10) Self-esteem, status, affiliation with others, affection these comes under _____ needs.
a) Basics b) Primary
c) Third Level d) Secondary

11) Vroom theory may be stated as _____
a) Valance = Force * Expectancy
b) Force = Valance * Expectancy
c) Result = Balance * Expectancy
d) Expectancy = Valance * Force

12) To earn more profit, the cost of capital should be _____.
a) Maximized b) Minimized
c) Same d) Can't Say

13) _____ mangement called country club management.
a) 9.1 b) 9.9
c) 5.5 d) 1.9

14) _____ leaders use his or her power very little, if at all, giving subordinates a high degree of independence in their operations.
a) Autocratic b) The Free rein
c) Democartic d) Ideal

Industrial & Quality Management (197041604)

Day & Date: Thursday, 21-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Solve any two questions from both sections.
2) Figures to the right indicates full marks.
3) Assume suitable data if necessary.
4) Draw neat, suitable diagrams whenever required.

Section – I

Q.2 **a)** Explain the system approach to management. Explain in detail. **07**
b) Write importance of departmentation. Explain departmentation by customer with suitable example. **07**

Q.3 **a)** What is controlling and explain process of controlling? **07**
b) What is delegation of authority? Write guideline to overcome weak delegation. **07**

Q.4 **a)** Write note on Leadership behaviour and Styles. Explain four extreme styles. **07**
b) Explain function of Marketing management. **07**

Section – II

Q.5 **a)** Write note on Supplier partnership. **07**
b) What is acceptance sampling? Explain sampling plan and types of sampling plan. **07**

Q.6 **a)** Write note on Total Quality Management (TQM). **07**
b) Write note on quality cost and its control. **07**

Q.7 **a)** In a foundry shop, it is reported that 20% of the products produced are defective. The quality manager has identified following causes for defective production: **07**

1) Material - Non homogenous lots, uncontrolled composition from various sources etc.
2) Process - Temperature variation, delay in filling molds, uncontrolled cooling, cleaning not proper
3) Machines - not maintained, old
4) Labour - Unskilled, lack of training, unaware
5) Tools - No maintenance, workout

Draw the Cause effect diagram.

b) Write procedure for preparation of ‘C’ type control chart. **07**

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. 14

1) If any one factor of a project changes, _____ other factor (s) is/are likely to be affected.
a) all b) one
c) at least one d) at most one

2) A horizontal bar chart that shows project tasks against a calendar is called ___.
a) Milestone b) Goal
c) Gantt chart d) PERT chart

3) While assessing your project processes, you have identified some uncontrolled process variations. Which of the following would be the appropriate chart you may use for this purpose?
a) Pareto diagram b) PERT chart
c) Control chart d) HR personnel chart

4) Projects management is divided in _____ process groups.
a) 5 b) 7
c) 9 d) 11

5) The PERT in project management means program evaluation and _____ technique.
a) resource b) reconciliation
c) reconsideration d) review

6) Which one of the following statements is not true?
a) Risk register facilitates the review and monitoring of risks
b) Risk register facilitates the risk appetite
c) Risk register facilitates the recording of risk responses
d) Risk register facilitates the recording of risks

7) As the project progresses, the risk is usually _____.
a) Increases b) Reduces
c) Remained same d) None of the above

8) In which of the following approaches, Spreadsheets and project management software's are used to estimate cost?

a) Top Down Approach b) Bottom Up Approach
c) Parametric Approach d) Computerized Approach

9) The PERT in project management means program evaluation and technique _____.

a) Resource b) Reconciliation
c) Reconsideration d) Review

10) Scheduling used to determine: _____.

a) Overall project duration
b) Project cost estimating
c) the project management plan
d) sub-contractor's responsibilities

11) Which of the following is not required in Project performance evaluation?

a) Time b) Cost
c) Quality d) Resources

12) Which of the following is a plan that shows how money will be spent over a certain period of time?

a) Cost Allocation b) Budget
c) Financing d) Cost centers

13) Which one of the following is not considered in resource management?

a) Identifying resources
b) Influencing resources
c) Assigning resources to activities
d) Matching resources to the schedule

14) Assembling project team and assigning their responsibilities are done during which phase of a project management?

a) Initiation b) Planning
c) Execution d) Closure

Set Q

T.Y. (B. Tech) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Project Management (197041608)

Day & Date: Friday, 22-12-2023 Max. Marks: 56
Time: 10:00 AM To 01:00 PM

Instructions: 1) Answer any two questions from each section.
2) Figures to the right indicate full marks.
3) Make suitable assumptions if necessary and state them clearly.

Section – I

Q.2	**a)**	Define project management and explain the benefits of project management.	**05**
	b)	Explain the process of project management in detail.	**05**
	c)	Write Short note on Bottom-up estimating.	**04**
Q.3	**a)**	Define Risk Management and Explain the steps of risk management.	**05**
	b)	Explain the risk analysis in detail.	**05**
	c)	Explain the project life cycle.	**04**
Q.4	**a)**	Explain analogous estimating and Parametric estimating.	**05**
	b)	Describe the Resource allocation.	**05**
	c)	Write a short note on Payback period.	**04**

Section – II

Q.5	**a)**	Explain the need for Project planning.	**05**
	b)	Explain the CPM and PERT in detail.	**05**
	c)	Write a short note on design of Project Management Information System (PMIS).	**04**
Q.6	**a)**	Describe the project control process.	**05**
	b)	Explain the advantages and challenges of performance measurement and evaluation.	**05**
	c)	Write a short note on Development of project network.	**04**
Q.7	**a)**	Explain the opportunity for use of computers in Project Management.	**05**
	b)	Explain the significance of productivity in project performance.	**05**
	c)	Write a short note on Work Breakdown Structure (WBS).	**04**

Set **R**

T.Y. (B. Tech) (Sem - II) (Old) (CBCS) Examination: Oct/Nov-2023
MECHANICAL ENGINEERING
Project Management (197041608)

Day & Date: Friday, 22-12-2023 Max. Marks: 70
Time: 10:00 AM To 01:00 PM

Instructions: 1) Q. No. 1 is compulsory. It should be solved in the first 30 minutes in answer book Page no 03 (Starting page of the Answer Book). Each question carries one mark.
2) Don't forget to Mention question paper set (P/Q/R/S) on top of page.
3) Figures to the right indicates full marks.
4) Make suitable assumptions if necessary and state them clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes Marks:14

Q.1 Choose the correct alternatives from the given options. **14**

1) Which of the following is not required in Project performance evaluation?
a) Time b) Cost
c) Quality d) Resources

2) Which of the following is a plan that shows how money will be spent over a certain period of time?
a) Cost Allocation b) Budget
c) Financing d) Cost centers

3) Which one of the following is not considered in resource management?
a) Identifying resources
b) Influencing resources
c) Assigning resources to activities
d) Matching resources to the schedule

4) Assembling project team and assigning their responsibilities are done during which phase of a project management?
a) Initiation b) Planning
c) Execution d) Closure

5) If any one factor of a project changes, _____ other factor (s) is/are likely to be affected.
a) all b) one
c) at least one d) at most one

6) A horizontal bar chart that shows project tasks against a calendar is called ___.
a) Milestone b) Goal
c) Gantt chart d) PERT chart

7) While assessing your project processes, you have identified some uncontrolled process variations. Which of the following would be the appropriate chart you may use for this purpose?
a) Pareto diagram b) PERT chart
c) Control chart d) HR personnel chart

8) Projects management is divided in _____ process groups.
a) 5 b) 7
c) 9 d) 11

9) The PERT in project management means program evaluation and _____ technique.
a) resource b) reconciliation
c) reconsideration d) review

10) Which one of the following statements is not true?
a) Risk register facilitates the review and monitoring of risks
b) Risk register facilitates the risk appetite
c) Risk register facilitates the recording of risk responses
d) Risk register facilitates the recording of risks

11) As the project progresses, the risk is usually _____.
a) Increases b) Reduces
c) Remained same d) None of the above

12) In which of the following approaches, Spreadsheets and project management software's are used to estimate cost?
a) Top Down Approach b) Bottom Up Approach
c) Parametric Approach d) Computerized Approach

13) The PERT in project management means program evaluation and technique _____.
a) Resource b) Reconciliation
c) Reconsideration d) Review

14) Scheduling used to determine: _____.
a) Overall project duration
b) Project cost estimating
c) the project management plan
d) sub-contractor's responsibilities
